|                                                            |     |
|------------------------------------------------------------|-----|
| Foreword .....                                             | 6   |
| 1 Scope .....                                              | 7   |
| 2 References .....                                         | 7   |
| 3 Definitions, symbols and abbreviations .....             | 8   |
| 3.1 Definitions .....                                      | 8   |
| 3.2 Symbols .....                                          | 9   |
| 3.3 Abbreviations .....                                    | 9   |
| 4 UE radio access capability parameters .....              | 10  |
| 4.1 Supported max data rate .....                          | 10  |
| 4.1.1 General .....                                        | 10  |
| 4.1.2 Supported max data rate for DL/UL .....              | 10  |
| 4.1.3 Void .....                                           | 12  |
| 4.1.4 Total layer 2 buffer size for DL/UL .....            | 12  |
| 4.1.5 Supported max data rate for SL .....                 | 13  |
| 4.1.6 Total layer 2 buffer size for NR SL .....            | 13  |
| 4.2 UE Capability Parameters .....                         | 14  |
| 4.2.1 Introduction .....                                   | 14  |
| 4.2.2 General parameters .....                             | 17  |
| 4.2.3 SDAP Parameters .....                                | 23  |
| 4.2.4 PDCP Parameters .....                                | 24  |
| 4.2.5 RLC parameters .....                                 | 26  |
| 4.2.6 MAC parameters .....                                 | 27  |
| 4.2.6.1 <i>MAC-Parameters</i> .....                        | 27  |
| 4.2.6.2 <i>MAC-ParametersPerBand</i> .....                 | 31  |
| 4.2.7 Physical layer parameters .....                      | 32  |
| 4.2.7.1 <i>BandCombinationList</i> parameters .....        | 32  |
| 4.2.7.2 <i>BandNR</i> parameters .....                     | 46  |
| 4.2.7.2a <i>SharedSpectrumChAccessParamsPerBand</i> .....  | 170 |
| 4.2.7.2b <i>FR2-2-AccessParamsPerBand</i> .....            | 175 |
| 4.2.7.3 <i>CA-ParametersEUTRA</i> .....                    | 178 |
| 4.2.7.4 <i>CA-ParametersNR</i> .....                       | 179 |
| 4.2.7.5 <i>FeatureSetDownlink</i> parameters .....         | 262 |
| 4.2.7.6 <i>FeatureSetDownlinkPerCC</i> parameters .....    | 277 |
| 4.2.7.7 <i>FeatureSetUplink</i> parameters .....           | 284 |
| 4.2.7.8 <i>FeatureSetUplinkPerCC</i> parameters .....      | 306 |
| 4.2.7.9 <i>MRDC-Parameters</i> .....                       | 314 |
| 4.2.7.10 <i>Phy-Parameters</i> .....                       | 319 |
| 4.2.7.11 Other PHY parameters .....                        | 338 |
| 4.2.7.12 <i>NRDC-Parameters</i> .....                      | 340 |
| 4.2.7.13 <i>CarrierAggregationVariant</i> .....            | 341 |
| 4.2.7.14 <i>Phy-ParametersSharedSpectrumChAccess</i> ..... | 342 |
| 4.2.8 Void .....                                           | 343 |
| 4.2.9 <i>MeasAndMobParameters</i> .....                    | 344 |
| 4.2.9a <i>MeasAndMobParametersMRDC</i> .....               | 358 |
| 4.2.10 Inter-RAT parameters .....                          | 361 |
| 4.2.10.1 Void .....                                        | 362 |
| 4.2.10.2 Void .....                                        | 362 |
| 4.2.11 Void .....                                          | 362 |
| 4.2.12 Void .....                                          | 362 |
| 4.2.13 IMS Parameters .....                                | 362 |
| 4.2.14 RRC buffer size .....                               | 362 |
| 4.2.15 IAB Parameters .....                                | 362 |
| 4.2.15.1 Mandatory IAB-MT features .....                   | 362 |
| 4.2.15.1a Mandatory mobile IAB-MT features .....           | 367 |
| 4.2.15.2 General Parameters .....                          | 367 |

|             |                                                                       |     |
|-------------|-----------------------------------------------------------------------|-----|
| 4.2.15.3    | SDAP Parameters .....                                                 | 367 |
| 4.2.15.4    | PDCCP Parameters .....                                                | 367 |
| 4.2.15.5    | BAP Parameters .....                                                  | 368 |
| 4.2.15.6    | MAC Parameters .....                                                  | 368 |
| 4.2.15.7    | Physical layer parameters .....                                       | 368 |
| 4.2.15.7.1  | BandNR parameters .....                                               | 368 |
| 4.2.15.7.2  | Phy-Parameters .....                                                  | 369 |
| 4.2.15.8    | MeasAndMobParameters Parameters .....                                 | 370 |
| 4.2.15.9    | MR-DC Parameters .....                                                | 370 |
| 4.2.15.10   | NRDC Parameters .....                                                 | 371 |
| 4.2.16      | Sidelink Parameters .....                                             | 372 |
| 4.2.16.1    | Sidelink Parameters in NR .....                                       | 372 |
| 4.2.16.1.1  | Sidelink General Parameters .....                                     | 372 |
| 4.2.16.1.2  | Sidelink PDCCP Parameters .....                                       | 373 |
| 4.2.16.1.3  | Sidelink RLC Parameters .....                                         | 374 |
| 4.2.16.1.4  | Sidelink MAC Parameters .....                                         | 374 |
| 4.2.16.1.5  | Other PHY parameters .....                                            | 375 |
| 4.2.16.1.6  | <i>BandSidelink</i> Parameters .....                                  | 376 |
| 4.2.16.1.6a | <i>SharedSpectrumChAccessParamsSidelinkPerBand</i> Parameters .....   | 389 |
| 4.2.16.1.7  | <i>BandCombinationListSidelinkEUTRA-NR</i> Parameters .....           | 391 |
| 4.2.16.2    | Sidelink Parameters in E-UTRA .....                                   | 393 |
| 4.2.16.2.0  | General .....                                                         | 393 |
| 4.2.16.2.1  | <i>BandSideLinkEUTRA</i> parameters .....                             | 394 |
| 4.2.17      | SON parameters .....                                                  | 394 |
| 4.2.18      | UE-based performance measurement parameters .....                     | 395 |
| 4.2.19      | High speed parameters .....                                           | 396 |
| 4.2.20      | Application layer measurement parameters .....                        | 397 |
| 4.2.21      | RedCap Parameters .....                                               | 397 |
| 4.2.21.1    | Definition of RedCap UE .....                                         | 397 |
| 4.2.21.2    | General parameters .....                                              | 398 |
| 4.2.21.3    | PDCCP parameters .....                                                | 399 |
| 4.2.21.4    | RLC parameters .....                                                  | 399 |
| 4.2.21.5    | MeasAndMobParameters .....                                            | 399 |
| 4.2.21.6    | Physical layer parameters .....                                       | 400 |
| 4.2.21.6.1  | <i>BandNR</i> parameters .....                                        | 400 |
| 4.2.21.7    | SON parameters .....                                                  | 402 |
| 4.2.22      | eRedCap Parameters .....                                              | 403 |
| 4.2.22.1    | Definition of eRedCap UE .....                                        | 403 |
| 4.2.22.2    | General parameters .....                                              | 404 |
| 4.2.23      | NCR Parameters .....                                                  | 405 |
| 4.2.23.1    | Mandatory NCR-MT features .....                                       | 405 |
| 4.2.23.2    | General Parameters .....                                              | 411 |
| 4.2.23.3    | SDAP Parameters .....                                                 | 411 |
| 4.2.23.4    | PDCCP Parameters .....                                                | 411 |
| 4.2.23.5    | RLC Parameters .....                                                  | 411 |
| 4.2.23.6    | Physical layer Parameters .....                                       | 412 |
| 4.2.23.6.1  | Phy-Parameters .....                                                  | 412 |
| 4.2.23.6.2  | <i>BandNR parameters</i> .....                                        | 412 |
| 4.2.24      | Aerial UE Parameters .....                                            | 413 |
| 4.2.25      | AI/ML Parameters .....                                                | 414 |
| 5           | Optional features without UE radio access capability parameters ..... | 414 |
| 5.1         | PWS features .....                                                    | 414 |
| 5.2         | UE receiver features .....                                            | 415 |
| 5.3         | RRC connection .....                                                  | 415 |
| 5.4         | Other features .....                                                  | 416 |
| 5.5         | Sidelink Features .....                                               | 417 |
| 5.6         | RRM measurement features .....                                        | 418 |
| 5.7         | MDT and SON features .....                                            | 420 |
| 5.8         | Extended DRX features .....                                           | 421 |
| 5.9         | Sidelink Relay Features .....                                         | 421 |
| 5.10        | MBS features .....                                                    | 422 |

|                                                                                                                                     |                                                                                      |            |
|-------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------|------------|
| 5.11                                                                                                                                | Idle/inactive measurement for voice fallback features .....                          | 422        |
| 5.12                                                                                                                                | NCR features .....                                                                   | 422        |
| 6                                                                                                                                   | Conditionally mandatory features without UE radio access capability parameters ..... | 423        |

# Foreword

This Technical Specification has been produced by the 3rd Generation Partnership Project (3GPP).

The contents of the present document are subject to continuing work within the TSG and may change following formal TSG approval. Should the TSG modify the contents of the present document, it will be re-released by the TSG with an identifying change of release date and an increase in version number as follows:

Version x.y.z

where:

- x the first digit:
  - 1 presented to TSG for information;
  - 2 presented to TSG for approval;
  - 3 or greater indicates TSG approved document under change control.
- y the second digit is incremented for all changes of substance, i.e. technical enhancements, corrections, updates, etc.
- z the third digit is incremented when editorial only changes have been incorporated in the document.

---

# 1 Scope

The present document defines the NR UE Radio Access Capability Parameters.

---

## 2 References

The following documents contain provisions which, through reference in this text, constitute provisions of the present document.

- References are either specific (identified by date of publication, edition number, version number, etc.) or non-specific.
- For a specific reference, subsequent revisions do not apply.
- For a non-specific reference, the latest version applies. In the case of a reference to a 3GPP document (including a GSM document), a non-specific reference implicitly refers to the latest version of that document *in the same Release as the present document*.

## 3 Definitions, symbols and abbreviations

### 3.1 Definitions

For the purposes of the present document, the terms and definitions given in TR 21.905 [1] and the following apply. A term defined in the present document takes precedence over the definition of the same term, if any, in TR 21.905 [1].

**eRedCap UE:** a UE with enhanced reduced capabilities as specified in clause 4.2.22.1.

**Fallback band combination:** A Uu band combination that would result from another Uu band combination (parent band combination) by releasing at least one SCell or uplink configuration of SCell, or SCG, or SUL. A PC5 band combination that would result from another PC5 band combination (parent band combination) by releasing at least one sidelink carrier. An intra-band non-contiguous band combination is not considered to be a fallback band combination of an intra-band contiguous band combination. A fallback band combination supports the same channel bandwidth(s) for each carrier as its parent band combination(s).

**Fallback per band feature set:** A feature set per band that has same or lower capabilities than the reported capabilities from the reported feature set per band for a given band.

**Fallback per CC feature set:** A feature set per CC that has same or lower capabilities than the capabilities of UE (e.g. supported MIMO layers, BW, modulation order) while keeping the numerology the same from the reported feature set per CC for a given carrier per band. The *supportedMinBandwidthDL/supportedMinBandwidthUL* defines the lower bound of the bandwidth supported by the UE.

**RedCap UE:** The UE with reduced capabilities as specified in clause 4.2.21.1.

**SON report(s):** A SON report corresponds to one report from UE such as Random Access report, Radio Link Failure report, Connection Establishment Failure report, Mobility History Information report, Successful Handover report, and Successful PSCell change report.

**Switching SCell (sSCell):** The SCell configured with cross-carrier scheduling to PCell/PSCell.

## 3.2 Symbols

For the purposes of the present document, the following symbols apply:

|                   |                                      |
|-------------------|--------------------------------------|
| MaxDLDataRate:    | Maximum DL data rate                 |
| MaxDLDataRate_MN: | Maximum DL data rate in the MN       |
| MaxDLDataRate_SN: | Maximum DL data rate in the SN       |
| MaxULDataRate:    | Maximum UL data rate                 |
| MaxSLtxDataRate:  | Maximum SL data rate in transmission |
| MaxSLrxDataRate:  | Maximum SL data rate in reception    |

## 3.3 Abbreviations

For the purposes of the present document, the abbreviations given in TR 21.905 [1] and the following apply. An abbreviation defined in the present document takes precedence over the definition of the same abbreviation, if any, in TR 21.905 [1].

|        |                                               |
|--------|-----------------------------------------------|
| A-CSI  | Aperiodic-CSI                                 |
| AI/ML  | Artificial Intelligence/Machine Learning      |
| ATG    | Air To Ground                                 |
| BAP    | Backhaul Adaptation Protocol                  |
| BC     | Band Combination                              |
| BPS    | Body Proximity Sensing                        |
| BT     | Bluetooth                                     |

## 4 UE radio access capability parameters

### 4.1 Supported max data rate

#### 4.1.1 General

The DL, UL and SL max data rate supported by the UE is calculated by band or band combinations supported by the UE. A UE supporting NR (NR SA, MR-DC) shall support the calculated DL and UL max data rate defined in 4.1.2. A UE supporting NR sidelink communication shall support the calculated SL max data rate defined in 4.1.5.

#### 4.1.2 Supported max data rate for DL/UL

For NR, the approximate data rate for a given number of aggregated carriers in a band or band combination is computed as follows.

$$\text{data rate (in Mbps)} = 10^{-6} \cdot \sum_{j=1}^J \left( v_{\text{Layers}}^{(j)} \cdot Q_m^{(j)} \cdot f^{(j)} \cdot R_{\text{max}} \cdot \frac{N_{\text{PRB}}^{BW(j),\mu} \cdot 12}{T_s^{\mu}} \cdot (1 - OH^{(j)}) \right)$$

wherein

J is the number of aggregated component carriers in a band or band combination

$R_{\text{max}} = 948/1024$

For the j-th CC,

$v_{\text{Layers}}^{(j)}$  is the maximum number of supported layers given by *maxNumberMIMO-LayersPDSCH* for downlink and maximum of *maxNumberMIMO-LayersCB-PUSCH* and *maxNumberMIMO-LayersNonCB-PUSCH* for uplink.

$Q_m^{(j)}$  is the maximum supported modulation order given by *supportedModulationOrderDL* for downlink and *supportedModulationOrderUL* for uplink.

$f^{(j)}$  is the scaling factor given by *scalingFactor* or *scalingFactor-1024QAM-FR1* and can take the values 1, 0.8, 0.75, and 0.4.

$\mu$  is the numerology (as defined in TS 38.211 [6])

$T_s^\mu$  is the average OFDM symbol duration in a subframe for numerology  $\mu$ , i.e.  $T_s^\mu = \frac{10^{-3}}{14 \cdot 2^\mu}$ . Note that normal cyclic prefix is assumed.

$N_{PRB}^{BW(j),\mu}$  is the maximum RB allocation in bandwidth  $BW^{(j)}$  with numerology  $\mu$ , as defined in 5.3 TS 38.101-1 [2], 5.3 TS 38.101-2 [3], and 5.3 TS 38.101-5 [34], where  $BW^{(j)}$  is the UE supported maximum bandwidth in the given band or band combination.

$OH^{(j)}$  is the overhead and takes the following values

- 0.14, for frequency range FR1 for DL
- 0.18, for frequency range FR2 for DL
- 0.08, for frequency range FR1 for UL
- 0.10, for frequency range FR2 for UL

NOTE 1: Only one of the UL or SUL carriers (the one with the higher data rate) is counted for a cell operating SUL.

NOTE 2: For UL Tx switching between carriers, only the supported MIMO layer combination across carriers that results in the highest combined data rate is counted for the carriers in the supported maximum UL data rate.

The approximate maximum data rate can be computed as the maximum of the approximate data rates computed using the above formula for each of the supported band or band combinations. For the CCs where UE supports *pdsch-1024QAM-2MIMO-FR1-r17* for the concerned band, data rate shall be derived as maximum what UE would support if using 1024 QAM (when *mcs-Table-r17* or *mcs-TableDCI-1-2-r17* is configured) or 256 QAM.

For single carrier NR SA operation and except for UEs supporting *supportOfERedCap-r18*, the UE shall support a data rate for the carrier that is no smaller than the data rate computed using the above formula, with  $J = 1$  CC and component  $\nu_{Layers}^{(j)} \cdot Q_m^{(j)} \cdot f^{(j)}$  is no smaller than 4.

NOTE 3: As an example, the value 4 in the component above can correspond to  $\nu_{Layers}^{(j)} = 1$ ,  $Q_m^{(j)} = 4$  and  $f^{(j)} = 1$ .

For single carrier NR SA operation and for UEs supporting *supportOfERedCap-r18*, the UE shall support a data rate for the carrier that is the data rate computed using the above formula, with  $J = 1$  CC and:

if the UE supports *eRedCapNotReducedBB-BW-r18*:

- component  $\nu_{Layers}^{(j)} \cdot Q_m^{(j)} \cdot f^{(j)}$  is 0.75 if  $\nu_{Layers}^{(j)} = 1$ , or;
  - component  $\nu_{Layers}^{(j)} \cdot Q_m^{(j)} \cdot f^{(j)}$  is 0.8 if  $\nu_{Layers}^{(j)} = 2$ ;
- else:
- component  $\nu_{Layers}^{(j)} \cdot Q_m^{(j)} \cdot f^{(j)}$  is 3.2, and;;
  - $N_{PRB}^{BW(j),\mu}$  is 25 if  $\mu = 0$  or, 12 if  $\mu = 1$ ;

For EUTRA in case of MR-DC, the approximate data rate for a given number of aggregated carriers in a band or band combination is computed as follows.

$$\text{Data rate (in Mbps)} = 10^{-3} \cdot \sum_{j=1}^J TBS_j$$

wherein

$J$  is the number of aggregated EUTRA component carriers in MR-DC band combination

$TBS_j$  is the total maximum number of DL-SCH transport block bits received or the total maximum number of UL-SCH transport block bits transmitted, within a 1ms TTI for  $j$ -th CC, as derived from TS 36.213 [19] based on the UE supported maximum MIMO layers for the  $j$ -th CC, and based on the maximum modulation order for the  $j$ -th CC and number of PRBs based on the bandwidth of the  $j$ -th CC according to indicated UE capabilities.

The approximate maximum data rate can be computed as the maximum of the approximate data rates computed using the above formula for each of the supported band or band combinations.

For MR-DC, the approximate maximum data rate is computed as the sum of the approximate maximum data rates from NR and EUTRA.

### 4.1.3 Void

### 4.1.4 Total layer 2 buffer size for DL/UL

The total layer 2 buffer size is defined as the sum of the number of bytes that the UE is capable of storing in the RLC transmission windows and RLC reception and reassembly windows and also in PDCP reordering windows for all radio bearers.

The required total layer 2 buffer size in MR-DC is the maximum value of the calculated values based on the following equations:

- $\text{MaxULDataRate\_MN} * \text{RLCRTT\_MN} + \text{MaxULDataRate\_SN} * \text{RLCRTT\_SN} + \text{MaxDLDataRate\_SN} * \text{RLCRTT\_SN} + \text{MaxDLDataRate\_MN} * (\text{RLCRTT\_SN} + X2/Xn \text{ delay} + \text{Queuing in SN})$
- $\text{MaxULDataRate\_MN} * \text{RLCRTT\_MN} + \text{MaxULDataRate\_SN} * \text{RLCRTT\_SN} + \text{MaxDLDataRate\_MN} * \text{RLCRTT\_MN} + \text{MaxDLDataRate\_SN} * (\text{RLCRTT\_MN} + X2/Xn \text{ delay} + \text{Queuing in MN})$

Otherwise it is calculated by  $\text{MaxDLDataRate} * \text{RLC RTT} + \text{MaxULDataRate} * \text{RLC RTT}$ .

NOTE: Additional L2 buffer required for preprocessing of data is not taken into account in above formula.

The required total layer 2 buffer size is determined as the maximum total layer 2 buffer size of all the calculated ones for each band combination and the applicable Feature Set combination in the supported MR-DC or NR band combinations. The RLC RTT for NR cell group corresponds to the smallest SCS numerology supported in the band combination and the applicable Feature Set combination.

wherein

$X2/Xn \text{ delay} + \text{Queuing in SN} = 25\text{ms}$  if SCG is NR, and  $55\text{ms}$  if SCG is EUTRA

$X2/Xn \text{ delay} + \text{Queuing in MN} = 25\text{ms}$  if MCG is NR, and  $55\text{ms}$  if MCG is EUTRA

RLC RTT for EUTRA cell group =  $75\text{ms}$

RLC RTT for NR cell group is defined in Table 4.1.4-1

**Table 4.1.4-1: RLC RTT for NR cell group per SCS**

| SCS (kHz) | RLC RTT (ms) |
|-----------|--------------|
| 15KHz     | 50           |
| 30KHz     | 40           |
| 60KHz     | 30           |
| 120KHz    | 20           |
| 480KHz    | 20           |
| 960KHz    | 20           |

### 4.1.5 Supported max data rate for SL

For NR sidelink, the approximate data rate is computed as follows.

$$\text{data rate (in Mbps)} = 10^{-6} \cdot \nu_{Layers} \cdot Q_m \cdot f \cdot R_{max} \cdot \frac{N_{PRB}^{BW,\mu} \cdot 12}{T_s^\mu} \cdot (1 - OH)$$

wherein

$R_{max} = 948/1024$ ,

$\nu_{Layers}$  is the the maximum number of supported layers for sidelink transmission (or reception) given by UE capability on supporting rank 2 PSSCH transmission and *rankTwoReception*,

$Q_m$  is the maximum supported modulation order between 6 or 8 given by *sl-Tx-256QAM* and *sl-Rx-256QAM*,

$f$  is the scaling factor for sidelink transmission and reception given by *scalingFactorTxSidelink* and *scalingFactorRxSidelink* respectively, as specified in TS 36.331 [17] and TS 38.331 [9], and can take the values 1, 0.8, 0.75, and 0.4.

$\mu$  is the numerology (as defined in TS 38.211 [6])

$T_s^\mu$  is the average OFDM symbol duration in a subframe for numerology  $\mu$ , i.e.  $T_s^\mu = \frac{10^{-3}}{14 \cdot 2^\mu}$ . Note that

normal cyclic prefix is assumed.

$N_{PRB}^{BW,\mu}$  is the maximum possible RB allocation in bandwidth BW for PSSCH, where BW is the UE supported maximum bandwidth in the given band or band combination,

$OH$  is the overhead and takes the following values

0.217, for frequency range FR1 for SL  
0.25, for frequency range FR2 for SL

### 4.1.6 Total layer 2 buffer size for NR SL

The total layer 2 buffer size for NR sidelink communication is defined as the sum of the number of bytes that the UE is capable of storing in the RLC transmission windows and RLC reception and reassembly windows and also in PDCP reordering windows for all radio bearers for NR sidelink communication.

The required total layer 2 buffer size for NR sidelink communication is the maximum value of the calculated values based on the following equations:

$$MaxSLtxDataRate * RLC RTT + MaxSLrxDataRate * RLC RTT.$$

NOTE: Additional L2 buffer required for preprocessing of data is not taken into account in above formula.

The required total layer 2 buffer size for NR sidelink communication is determined as the maximum total layer 2 buffer size of all the calculated ones for each band combination and the applicable Feature Set combination in the supported NR sidelink band combinations. The RLC RTT for NR sidelink communication corresponds to the smallest SCS numerology supported in the band combination and the applicable Feature Set combination.

wherein

RLC RTT for NR sidelink communication is defined in Table 4.1.6-1

**Table 4.1.6-1: RLC RTT for NR sidelink communication per SCS**

| SCS (kHz) | RLC RTT (ms) |
|-----------|--------------|
| 15KHz     | 200          |
| 30KHz     | 100          |
| 60KHz     | 50           |
| 120KHz    | 25           |

## 4.2 UE Capability Parameters

### 4.2.1 Introduction

The following clauses define the UE radio access capability parameters. Only parameters for which there is the possibility for UEs to signal different values are considered as UE radio access capability parameters. Therefore, mandatory features without capability parameters that are the same for all UEs are not listed here.

The network needs to respect the signalled UE radio access capability parameters when configuring the UE and when scheduling the UE.

For capabilities that required to be set consistently for all FDD-FR1 bands (i.e. capabilities that are supposed to be per UE), the UE shall also set capability values for all SUL bands with same values for FDD-FR1 bands if SUL band is supported by the UE.

The UE may support different functionalities between FDD and TDD, and/or between FR1 and FR2. The UE shall indicate the UE capabilities as follows. In the table of UE capability parameter in subsequent clauses, "Yes" in the column by "FDD-TDD DIFF" and "FR1-FR2 DIFF" indicates the UE capability field can have a different value for between FDD and TDD or between FR1 and FR2 and "No" indicates if it cannot. "(Incl FR2-2 DIFF)" in the column by "FR1-FR2 DIFF" indicates the UE capability field can have a different value for between FR2-1 and FR2-2. Regarding to the per UE capabilities that are FDD/TDD differentiated (i.e. capabilities indicated as "Yes" in the column by "FDD-TDD DIFF"), the corresponding capabilities indicated by the FDD capability is applied to SUL/SDL if SUL/SDL band is supported by the UE. "FD" in the column indicates to refer the associated field description. "FR1 only" or "FR2 only" in the column indicates the associated feature is only supported in FR1 or FR2 and "TDD only" indicates the associated feature is only supported in TDD and not applicable to SUL/SDL carriers. "N/A" in the column indicates it is not applicable to the feature (e.g. the signalling supports the UE to have different values between FDD and TDD or between FR1 and FR2).

- 1> set all fields of UE-NR/MRDC-Capability except fdd-Add-UE-NR/MRDC/Sidelink-Capabilities, tdd-Add-UE-NR/MRDC/Sidelink-Capabilities, fr1-Add-UE-NR/MRDC-Capabilities and fr2-Add-UE-NR/MRDC-Capabilities, to include the values applicable for all duplex mode(s) and frequency range(s) that the UE supports;
- 1> if UE supports both FDD (or SUL/SDL) and TDD and if (some of) the UE capability fields have a different value for FDD (or SUL/SDL) and TDD:
  - 2> if for FDD (and, if the UE supports SUL/SDL, for SUL/SDL), the UE supports additional functionality compared to what is indicated by the previous fields of UE-NR/MRDC-Capability/SidelinkParameters:
    - 3> include field fdd-Add-UE-NR/MRDC/Sidelink-Capabilities and set it to include fields reflecting the additional functionality applicable for FDD;
  - 2> if for TDD, the UE supports additional functionality compared to what is indicated by the previous fields of UE-NR/MRDC-Capability/SidelinkParameters:
    - 3> include field tdd-Add-UE-NR/MRDC/Sidelink-Capabilities and set it to include fields reflecting the additional functionality applicable for TDD;
- 1> if UE supports both FR1 and FR2 and if (some of) the UE capability fields have a different value for FR1 and FR2:
  - 2> if for FR1, the UE supports additional functionality compared to what is indicated by the previous fields of UE-NR/MRDC-Capability:

- 3> include field fr1-Add-UE-NR/MRDC-Capabilities and set it to include fields reflecting the additional functionality applicable for FR1;
- 2> if for FR2, the UE supports additional functionality compared to what is indicated by the previous fields of UE-NR/MRDC-Capability:
- 3> include field fr2-Add-UE-NR/MRDC-Capabilities and set it to include fields reflecting the additional functionality applicable for FR2;

NOTE 1: The fields which indicate "shall be set to 1" or "shall be set to *supported*" in the following tables means these features are purely mandatory and are assumed they are the same as mandatory without capability signalling.

NOTE 2: For the case where the UE is allowed to support different functionality between FDD and TDD and between FR1 and FR2 according to the specification, the UE capability indication is clarified in Annex B.

NOTE 2a: In this release of the specification, if the UE is allowed to support different functionalities between FDD and TDD, and/or between FR1 and FR2, these functionalities are signalled per band with the text "UE shall set the capability value consistently for all FDD-FR1 bands, all TDD-FR1 bands, all TDD-FR2-1 bands and all TDD-FR2-2 bands respectively".

For optional features, the UE radio access capability parameter indicates whether the feature has been implemented and successfully tested. For mandatory features with the UE radio access capability parameter, the parameter indicates whether the feature has been successfully tested. In the table of UE capability parameter in subsequent clauses, "Yes" in the column by "M" indicates the associated feature is mandatory and "No" indicates the associated feature is optional. "CY" in the column indicates the associated feature is conditional mandatory and the condition is described in the field description and the associated feature is considered mandatory with capability parameter, when the described condition is satisfied. "FD" in the column indicates to refer the associated field description. Some parameters in subsequent clauses are not related to UE features and in the case, "N/A" is indicated in the column.

UE capability parameters have hierarchical structure. In the table of UE capability parameter in subsequent clauses, "Per" indicates the level the associated parameter is included. "UE" in the column indicates the associated parameter is signalled per UE, "Band" indicates it is signalled per band, "BC" indicates it is signalled per band combination, "FS" indicates it is signalled per feature set (per band per band combination), "FSPC" indicates it is signalled per feature set per component carrier (per CC per band per band combination), and "FD" in the column indicates to refer the associated field description. "Per band and per band combination" indicates a UE capability parameter defined in both per band and per band combination with same feature components.

For a capability with same comprised parameter(s) defined "per band and per band combination":

- When the UE signals "per BC" but does not signal "per band" capability on some subset of the bands in the CA combination, the UE does not support the capability/comprised parameter(s) in the band without "per band" capability.
- When the UE signals "per band" but does not include "per BC" for a certain BC, the UE supports the capability/comprised parameter(s) as indicated in the "per band" without further per BC limitations. The UE shall also support the signalled "per band" capabilities in any CA combination composed of the respective band.
- When the UE signals both "per band" and "per BC" capability, if capability/ comprised parameter(s) is not counted across CCs, the minimum capability between "per BC" capability and "per band" capability is applied to a band for which the UE capability is signalled; if the comprised parameter(s) is counted across CCs and CA is not configured, the "per band" capability is applied regardless of reported "per BC" capability; if the comprised parameter(s) is counted across CCs of intra-band CA (all CCs over the CA are within the same band) and/or inter-band CA (all CCs over the CA are associated with more than one band), the "per band" capability is applied across CCs within the corresponding intra-band CA, the "per BC" capability is applied across CCs within the corresponding inter-band CA.

For "per band and per band combination" capabilities with prerequisite capability in "per band and per band combination", the UE shall indicate support of the prerequisite capability in the corresponding band/BC, respectively.

NOTE 3: Unless otherwise specified, for dependent capabilities with prerequisite capability in a finer granularity, the UE should indicate support of the prerequisite capability in at least one finer granularity. And the dependent capability is supported only in the finer granularity where the prerequisite capability is supported, e.g. a UE indicating support of *supportNewDMRS-Port-r16* (dependent capability which is defined per band) should indicate at least one band combination where *singleDCI-SDM-scheme-r16* (prerequisite capability which is defined per feature set) is supported in the corresponding band. In this case, *supportNewDMRS-Port-r16* is considered supported only in the corresponding band of the band combination where *singleDCI-SDM-scheme-r16* is supported.

## 4.2.2 General parameters

| Definitions for parameters                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | Per | M   | FDD-TDD DIFF | FR1-FR2 DIFF |
|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----|-----|--------------|--------------|
| <b>accessStratumRelease</b><br>Indicates the access stratum release the UE supports as specified in TS 38.331 [9].                                                                                                                                                                                                                                                                                                                                                                                         | UE  | Yes | No           | No           |
| <b>airToGroundNetwork-r18</b><br>Indicates whether the UE supports air to ground network access. If the UE indicates this capability the UE shall support the following ATG essential features, e.g., acquiring ATG cell specific SIB22 and ATG cell specific P-Max.                                                                                                                                                                                                                                       | UE  | No  | No           | FR1 only     |
| <b>crossCarrierSchedulingConfigurationRelease-r17</b><br>Indicates whether the UE supports using <i>crossCarrierSchedulingConfigRelease</i> to release the configurations configured by <i>crossCarrierSchedulingConfig</i> .                                                                                                                                                                                                                                                                              | UE  | No  | No           | No           |
| <b>delayBudgetReporting</b><br>Indicates whether the UE supports delay budget reporting as specified in TS 38.331 [9].                                                                                                                                                                                                                                                                                                                                                                                     | UE  | No  | No           | No           |
| <b>dl-DedicatedMessageSegmentation-r16</b><br>Indicates whether the UE supports reception of segmented DL RRC messages.                                                                                                                                                                                                                                                                                                                                                                                    | UE  | No  | No           | No           |
| <b>drx-Preference-r16</b><br>Indicates whether the UE supports providing its preference of a cell group on DRX parameters for power saving in RRC_CONNECTED, as specified in TS 38.331 [9].                                                                                                                                                                                                                                                                                                                | UE  | No  | No           | No           |
| <b>drx-PreferenceCellDTX-DRX-r19</b><br>Indicates whether the UE supports providing its preference of a cell group on DRX parameters for power saving and its preference on cell DTX/DRX related parameters for PCell in RRC_CONNECTED, as specified in TS 38.331 [9].                                                                                                                                                                                                                                     | UE  | No  | No           | No           |
| <b>gNB-SideRTT-BasedPDC-r17</b><br>Indicates whether the UE supports gNB-side RTT-based PDC, as specified in TS 38.300 [28]. A UE supporting this feature shall also support <i>rtt-BasedPDC-CSI-RS-ForTracking-r17</i> and/or <i>rtt-BasedPDC-PRS-r17</i> .                                                                                                                                                                                                                                               | UE  | No  | No           | No           |
| <b>hardSatelliteSwitchResyncNTN-r18</b><br>Indicates whether UE supports hard satellite switch with re-sync, as specified in TS 38.331 [9].<br>A UE supporting this feature shall also indicate the support of <i>nonTerrestrialNetwork-r17</i> .<br>When UE supports this feature and does not support <i>softSatelliteSwitchResyncNTN-r18</i> , this UE is able to perform hard satellite switch with re-sync in a network supporting soft satellite switch with re-sync, as specified in TS 38.331 [9]. | UE  | No  | No           | No           |
| <b>inactiveState</b><br>Indicates whether the UE supports RRC_INACTIVE as specified in TS 38.331 [9]. This capability is not applicable to NCR-MT.                                                                                                                                                                                                                                                                                                                                                         | UE  | Yes | No           | No           |
| <b>inactiveStateNTN-r17</b><br>Indicates whether the UE supports RRC_INACTIVE in NTN as specified in TS 38.331 [9]. It is mandated if the UE indicates the support of <i>nonTerrestrialNetwork-r17</i> .                                                                                                                                                                                                                                                                                                   | UE  | CY  | No           | No           |
| <b>inactiveStatePO-Determination-r17</b><br>Indicates whether the UE supports to use the same i_s to determine PO in RRC_INACTIVE state as in RRC_IDLE state.                                                                                                                                                                                                                                                                                                                                              | UE  | No  | No           | No           |
| <b>inDeviceCoexInd-r16</b><br>Indicates whether the UE supports reporting of affected NR carrier frequencies in IDC assistance information as specified in TS 38.331 [9].                                                                                                                                                                                                                                                                                                                                  | UE  | No  | No           | No           |

| <b>partialFR2-FallbackRX-Req</b><br>Indicates whether the UE meets only a partial set of the UE minimum receiver requirements for the eligible FR2 fallback band combinations as defined in Clause 4.2 of TS 38.101-2 [3] and Clause 4.2 of TS 38.101-3 [4]. If not indicated, the UE shall meet all the UE minimum receiver requirements for all the FR2 fallback combinations in TS 38.101-2 [3] and TS 38.101-3 [4]. The UE shall support configuration of any of the FR2 fallback band combinations regardless of the presence or the absence of this field. | UE | No | No | No       |
| <b>ra-InsteadCG-SDT-r18</b><br>Indicates whether the UE supports the selection of RACH resources instead of configured grant type 1 resource when triggering resume for MO-SDT or MT-SDT and next configured grant type 1 resource is too far, as specified in TS 38.331 [9]. A UE supporting this feature shall also indicate the support of <i>cg-SDT-r17</i> , or <i>mt-CG-SDT-r18</i> .                                                                                                                                                                      | UE | No | No | No       |
| <b>ra-SDT-r17</b><br>Indicates whether the UE supports initiating MO-SDT procedure (i.e., transmission of data and/or signalling over allowed radio bearers in RRC_INACTIVE state) via Random Access procedure (i.e., RA-SDT) with 4-step RA type and if UE supports <i>twoStepRACH-r16</i> , with 2-step RA type, as specified in TS 38.331 [9].                                                                                                                                                                                                                | UE | No | No | No       |
| <b>ra-SDT-NTN-r17</b><br>Indicates whether the UE supports initiating MO-SDT procedure (i.e., transmission of data and/or signalling over allowed radio bearers in RRC_INACTIVE state) in NTN via Random Access procedure (i.e., RA-SDT) with 4-step RA type and if UE supports <i>twoStepRACH-r16</i> for NTN, with 2-step RA type, as specified in TS 38.331 [9]. A UE supporting this feature shall also indicate the support of <i>nonTerrestrialNetwork-r17</i> .                                                                                           | UE | No | No | No       |
| <b>redirectAtResumeByNAS-r16</b><br>Indicates whether the UE supports reception of <i>redirectedCarrierInfo</i> in an <i>RRCRelease</i> message in response to an <i>RRCResumeRequest</i> or <i>RRCResumeRequest1</i> which is triggered by the NAS layer, as specified in TS 38.331 [9].                                                                                                                                                                                                                                                                        | UE | No | No | No       |
| <b>reducedCP-Latency</b><br>Indicates whether the UE supports reduced control plane latency as defined in TS 38.331 [9].                                                                                                                                                                                                                                                                                                                                                                                                                                         | UE | No | No | No       |
| <b>referenceTimeProvision-r16</b><br>Indicates whether the UE supports provision of <i>referenceTimeInfo</i> in <i>DLInformationTransfer</i> message and in SIB9 and reference time information preference indication via assistance information, as specified in TS 38.331 [9].                                                                                                                                                                                                                                                                                 | UE | No | No | No       |
| <b>releasePreference-r16</b><br>Indicates whether the UE supports providing its preference assistance information to transition out of RRC_CONNECTED for power saving, as specified in TS 38.331 [9].                                                                                                                                                                                                                                                                                                                                                            | UE | No | No | No       |
| <b>requirementTypeIndication-r18</b><br>Indicates whether the UE supports network controlled indication of the MTTD/MRTD and RF requirements by <i>nonCollocatedTypeMRDC-r18</i> for TDD-TDD inter-band EN-DC with overlapping or partially overlapping bands as specified in TS 38.331 [9]. This field is only applicable to the UE indicating <i>interBandMRDC-WithOverlapDL-Bands-r16</i> .                                                                                                                                                                   | UE | No | No | FR1 only |
| <b>resumeAfterSDT-Release-r18</b><br>Indicates whether the UE supports immediate RRC connection resume procedure triggering after receiving <i>RRCRelease</i> message with a <i>resumeIndication</i> included during an ongoing SDT procedure, as specified in TS 38.331 [9]. The UE indicating support of this feature shall also support any of <i>ra-SDT-r17</i> , <i>ra-SDT-NTN-r17</i> , <i>cg-SDT-r17</i> , <i>mt-SDT-r18</i> , <i>mt-SDT-NTN-r18</i> or <i>mt-CG-SDT-r18</i> .                                                                            | UE | No | No | No       |
| <b>resumeWithStoredMCG-SCells-r16</b><br>Indicates whether the UE supports not deleting the stored MCG SCell configuration when initiating the resume procedure.                                                                                                                                                                                                                                                                                                                                                                                                 | UE | No | No | No       |
| <b>resumeWithStoredSCG-r16</b><br>Indicates whether the UE supports not deleting the stored SCG configuration when initiating resume. The UE which indicates support for <i>resumeWithStoredSCG-r16</i> shall also indicate support for <i>resumeWithSCG-Config-r16</i> .                                                                                                                                                                                                                                                                                        | UE | No | No | No       |
| <b>resumeWithSCG-Config-r16</b><br>Indicates whether the UE supports (re-)configuration of an SCG during the resume procedure.                                                                                                                                                                                                                                                                                                                                                                                                                                   | UE | No | No | No       |
| <b>sib19-Support-r18</b><br>Indicates whether the UE in RRC_CONNECTED in a TN cell supports reception of SIB19 to acquire satellite assistance information for NTN access. A UE supporting this feature shall also indicate the support of <i>nonTerrestrialNetwork-r17</i> .                                                                                                                                                                                                                                                                                    | UE | No | No | No       |

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |    |     |    |          |
|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----|-----|----|----------|
| <b>sliceInfoforCellReselection-r17</b><br>Indicates whether the UE supports slice-based cell reselection information in SIB and on RRC release for slice-based cell reselection in RRC_IDLE and RRC_INACTIVE as defined in TS 38.304 [21].                                                                                                                                                                                                                                                                                            | UE | No  | No | No       |
| <b>splitSRB-WithOneUL-Path</b><br>Indicates whether the UE supports UL transmission via MCG path and DL reception via either MCG path or SCG path, as specified for the split SRB in TS 37.340 [7]. The UE shall not set the FDD/TDD specific fields for this capability (i.e. it shall not include this field in <i>UE-MRDC-CapabilityAddXDD-Mode</i> ).                                                                                                                                                                             | UE | No  | No | No       |
| <b>softSatelliteSwitchResyncNTN-r18</b><br>Indicates whether UE supports soft satellite switch with re-sync, as specified in TS 38.331 [9].<br>A UE supporting this feature shall also indicate support of <i>hardSatelliteSwitchResyncNTN-r18</i> .                                                                                                                                                                                                                                                                                  | UE | No  | No | No       |
| <b>splitDRB-withUL-Both-MCG-SCG</b><br>Indicates whether the UE supports UL transmission via both MCG path and SCG path for the split DRB as specified in TS 37.340 [7]. The UE shall not set the FDD/TDD specific fields for this capability (i.e. it shall not include this field in <i>UE-MRDC-CapabilityAddXDD-Mode</i> ).                                                                                                                                                                                                        | UE | Yes | No | No       |
| <b>srb3</b><br>Indicates whether the UE supports SRB3 which is a direct SRB between the SN and the UE as specified in TS 37.340 [7]. The UE shall not set the FDD/TDD specific fields for this capability (i.e. it shall not include this field in <i>UE-MRDC-CapabilityAddXDD-Mode</i> ). This field is not applied to NE-DC.                                                                                                                                                                                                        | UE | Yes | No | No       |
| <b>srb-SDT-NTN-r17</b><br>Indicates whether the UE supports the usage of signalling radio bearer SRB2 for MO-SDT (over RA-SDT or CG-SDT) or MT-SDT (over RA or CG-SDT) in NTN, as specified in TS 38.331 [9].<br><br>A UE supporting this feature shall also indicate support of <i>ra-SDT-NTN-r17</i> , <i>cg-SDT-r17</i> , <i>mt-SDT-NTN-r18</i> or <i>mt-CG-SDT-r18</i> in NTN bands. A UE supporting this feature shall also indicate the support of <i>nonTerrestrialNetwork-r17</i> .                                           | UE | No  | No | No       |
| <b>srb-SDT-r17</b><br>Indicates whether the UE supports the usage of signalling radio bearer SRB2 for MO-SDT (over RA-SDT or CG-SDT) or MT-SDT (over RA or CG-SDT), as specified in TS 38.331 [9].<br><br>A UE supporting this feature shall also indicate support of <i>ra-SDT-r17</i> , <i>cg-SDT-r17</i> , <i>mt-SDT-r18</i> or <i>mt-CG-SDT-r18</i> .                                                                                                                                                                             | UE | No  | No | No       |
| <b>ul-GapFR2-Pattern-r17</b><br>Indicates FR2 UL gap pattern(s) supported by the UE for NR SA, for NR-DC without FR2-FR2 band combination, for NE-DC, and for (NG)EN-DC, if UE supports a band in FR2. The leading / leftmost bit (bit 0) corresponds to the FR2 UL gap pattern 0, the next bit corresponds to the FR2 UL gap pattern 1, as specified in TS 38.133 [5] and so on. The UE shall set at least one of the bits to 1 for FR2 UL gap pattern 1 and 3, if the UE indicates support for <i>ul-GapFR2-r17</i> in an FR2 band. | UE | CY  | No | FR2 only |
| <b>ul-RRC-MaxCapaSegments-r17</b><br>Indicates whether the UE supports uplink RRC segmentation of <i>UECapabilityInformation</i> according to the network indication <i>rrc-MaxCapaSegAllowed</i> as specified in TS 38.331 [9].                                                                                                                                                                                                                                                                                                      | UE | No  | No | No       |
| <b>ul-RRC-Segmentation-r16</b><br>Indicates whether the UE supports uplink RRC segmentation of <i>UECapabilityInformation</i> according to the network indication <i>rrc-SegAllowed</i> as specified in TS 38.331 [9].                                                                                                                                                                                                                                                                                                                | UE | No  | No | No       |
| <b>ul-TrafficInfo-r18</b><br>Indicates whether UE supports sending UE assistance information with UL traffic information, including at least one of jitter range, burst arrival time, data burst periodicity and PDU Set and PSI identification, as specified in TS 38.331 [9].                                                                                                                                                                                                                                                       | UE | No  | No | No       |

4.2.3 SDAP Parameters

| Definitions for parameters                                                      | Per | M  | FDD-TDD DIFF |
|---------------------------------------------------------------------------------|-----|----|--------------|
| <b>as-ReflectiveQoS</b><br>Indicates whether the UE supports AS reflective QoS. | UE  | No | No           |

## 4.2.4 PDCP Parameters

| Definitions for parameters                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | Per | M   | FDD-TDD DIFF |
|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----|-----|--------------|
| <b>continueEHC-Context-r16</b><br>Indicates that the UE supports EHC context continuation operation where the UE keeps the established EHC context(s) upon PDCP re-establishment, as specified in TS 38.323 [16].                                                                                                                                                                                                                                                                                                                            | UE  | No  | No           |
| <b>continueROHC-Context</b><br>Defines whether the UE supports ROHC context continuation operation where the UE does not reset the current ROHC context upon PDCP re-establishment, as specified in TS 38.323 [16].                                                                                                                                                                                                                                                                                                                          | UE  | No  | No           |
| <b>ehc-r16</b><br>Indicates that the UE supports Ethernet header compression and decompression using EHC protocol, as specified in TS 38.323 [16]. The UE indicating this capability and indicating support for at least one ROHC profile, shall support simultaneous configuration of EHC and ROHC on different DRBs/multicast MRBs.                                                                                                                                                                                                        | UE  | No  | No           |
| <b>extendedDiscardTimer-r16</b><br>Indicates whether the UE supports the additional values of PDCP discard timer. The supported additional values are 0.5ms, 1ms, 2ms, 4ms, 6ms and 8ms, as specified in TS 38.331 [9].                                                                                                                                                                                                                                                                                                                      | UE  | No  | No           |
| <b>jointEHC-ROHC-Config-r16</b><br>Indicates whether the UE supports simultaneous configuration of EHC and ROHC protocols for the same DRB/multicast MRB.                                                                                                                                                                                                                                                                                                                                                                                    | UE  | No  | No           |
| <b>maxNumberROHC-ContextSessions</b><br>Defines the maximum number of ROHC header compression context sessions supported by the UE across all DRBs and multicast MRBs, excluding context sessions that leave all headers uncompressed.                                                                                                                                                                                                                                                                                                       | UE  | No  | No           |
| <b>maxNumberEHC-Contexts-r16</b><br>Defines the maximum number of Ethernet header compression contexts supported by the UE across all DRBs and multicast MRBs and across UE's EHC compressor and EHC decompressor. The indicated number defines the number of contexts in addition to CID = "all zeros" as specified in TS 38.323 [16].                                                                                                                                                                                                      | UE  | No  | No           |
| <b>outOfOrderDelivery</b><br>Indicates whether UE supports out of order delivery of data to upper layers by PDCP.                                                                                                                                                                                                                                                                                                                                                                                                                            | UE  | No  | No           |
| <b>pdcp-DuplicationMCG-OrSCG-DRB</b><br>Indicates whether the UE supports CA-based PDCP duplication over MCG or SCG DRB as specified in TS 38.323 [16].                                                                                                                                                                                                                                                                                                                                                                                      | UE  | No  | No           |
| <b>pdcp-DuplicationMoreThanTwoRLC-r16</b><br>Defines whether the UE supports PDCP duplication with more than two RLC entities as specified in TS 38.323 [16]. The UE supporting this feature supports secondary RLC entity(ies) activation and deactivation based on duplication RLC Activation/Deactivation MAC CE as specified in TS 38.321 [8]. A UE supporting this feature shall also support <i>pdcp-DuplicationMCG-OrSCG-DRB</i> , <i>pdcp-DuplicationSplitDRB</i> , <i>pdcp-DuplicationSplitSRB</i> and <i>pdcp-DuplicationSRB</i> . | UE  | No  | No           |
| <b>pdcp-DuplicationSplitDRB</b><br>Indicates whether the UE supports PDCP duplication over split DRB as specified in TS 38.323 [16].                                                                                                                                                                                                                                                                                                                                                                                                         | UE  | No  | No           |
| <b>pdcp-DuplicationSplitSRB</b><br>Indicates whether the UE supports PDCP duplication over split SRB1/2 as specified in TS 38.323 [16].                                                                                                                                                                                                                                                                                                                                                                                                      | UE  | No  | No           |
| <b>pdcp-DuplicationSRB</b><br>Indicates whether the UE supports CA-based PDCP duplication over SRB1/2 and/or, if (NG)EN-DC or NR-DC is supported, SRB3 as specified in TS 38.323 [16].                                                                                                                                                                                                                                                                                                                                                       | UE  | No  | No           |
| <b>psi-BasedDiscard-r18</b><br>Indicates whether the UEs supports PSI based discard (i.e. <i>discardTimerForLowImportance-r18</i> configuration, as specified in TS 38.331 [9]). UE supporting <i>psi-BasedDiscard-r18</i> shall also support the ability to identify PDU sets and PSI for UL XR traffic.                                                                                                                                                                                                                                    | UE  | No  | No           |
| <b>shortSN</b><br>Indicates whether the UE supports 12 bit length of PDCP sequence number.                                                                                                                                                                                                                                                                                                                                                                                                                                                   | UE  | Yes | No           |

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |    |    |    |

| <p><b>supportedROHC-Profiles</b><br/>         Defines which ROHC profiles from the list below are supported by the UE:</p> <ul style="list-style-type: none"> <li>- 0x0000 ROHC No compression (RFC 5795)</li> <li>- 0x0001 ROHC RTP/UDP/IP (RFC 3095, RFC 4815)</li> <li>- 0x0002 ROHC UDP/IP (RFC 3095, RFC 4815)</li> <li>- 0x0003 ROHC ESP/IP (RFC 3095, RFC 4815)</li> <li>- 0x0004 ROHC IP (RFC 3843, RFC 4815)</li> <li>- 0x0006 ROHC TCP/IP (RFC 6846)</li> <li>- 0x0101 ROHC RTP/UDP/IP (RFC 5225)</li> <li>- 0x0102 ROHC UDP/IP (RFC 5225)</li> <li>- 0x0103 ROHC ESP/IP (RFC 5225)</li> <li>- 0x0104 ROHC IP (RFC 5225)</li> </ul> <p>A UE that supports one or more of the listed ROHC profiles shall support ROHC profile 0x0000 ROHC uncompressed (RFC 5795).<br/>         An IMS voice capable UE shall indicate support of ROHC profiles 0x0000, 0x0001, 0x0002 and be able to compress and decompress headers of PDCP SDUs at a PDCP SDU rate corresponding to supported IMS voice codecs.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | UE | No | No |
| <p><b>supportOfPDU-SetDiscard-r18</b><br/>         Indicates whether the UE supports PDU set based discard operation (i.e. <i>pdu-SetDiscard-r18</i> configuration, as specified in TS 38.331 [9]).<br/>         UE supporting this feature shall also support the ability to identify PDU sets for UL XR traffic.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | UE | No | No |
| <p><b>supportOfSN-GapReport-r18</b><br/>         Indicates whether the UE supports PDCP SN gap reporting as specified in TS 38.323 [16] and TS 38.331 [9].</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | UE | No | No |
| <p><b>udc-r17</b><br/>         Indicates whether the UE supports the uplink data compression operation as specified in TS 38.323 [16]. The capability signalling comprises of the following parameters:</p> <ul style="list-style-type: none"> <li>- <i>standardDictionary-r17</i> indicates whether the UE supports UL data compression with SIP static dictionary as defined in TS 38.323 [16].</li> <li>- <i>operatorDictionary-r17</i> indicates whether the UE supports UL data compression with operator defined dictionary. In this release, the UE can only support one operator defined dictionary. If the UE supports operator defined dictionary, the UE shall report <i>versionOfDictionary-r17</i> and <i>associatedPLMN-ID-r17</i> of the stored operator defined dictionary as defined in TS 38.331 [9]. This parameter is not required to be present if the UE is in VPLMN. The <i>associatedPLMN-ID-r17</i> is only associated to the operator defined dictionary which has no relationship with UE's HPLMN ID.</li> <li>- <i>continueUDC-r17</i> indicates whether the UE supports continuation of uplink data compression protocol operation where the UE does not reset the buffer upon PDCP re-establishment, as specified in TS 38.323 [16].</li> <li>- <i>supportOfBufferSize-r17</i> indicates which compression buffer size the UE supports as specified in TS 38.323 [16]. Value <i>kbyte4</i> means the UE supports 4096 bytes for compression buffer per UDC DRB. Value <i>kbyte8</i> means the UE supports 8192 bytes for compression buffer per UDC DRB.</li> </ul> <p>A UE that supports the uplink data compression operation shall support 2048 bytes for compression buffer per UDC DRB and support up to 2 UDC DRBs.</p> | UE | No | No |
| <p><b>uplinkOnlyROHC-Profiles</b><br/>         Indicates the ROHC profile(s) that are supported in uplink-only ROHC operation by the UE.</p> <ul style="list-style-type: none"> <li>- 0x0006 ROHC TCP (RFC 6846)</li> </ul> <p>A UE that supports uplink-only ROHC profile(s) shall support ROHC profile 0x0000 ROHC uncompressed (RFC 5795).</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | UE | No | No |

## 4.2.5 RLC parameters

| Definitions for parameters                                                                                                                                                                                                  | Per | M   | FDD-TDD DIFF |
|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----|-----|--------------|
| <b>am-WithShortSN</b><br>Indicates whether the UE supports AM DRB with 12 bit length of RLC sequence number.                                                                                                                | UE  | Yes | No           |
| <b>extendedT-PollRetransmit-r16</b><br>Indicates whether the UE supports the additional values of <i>T-PollRetransmit timer</i> . The supported additional values are 1ms, 2ms, 3ms and 4ms, as specified in TS 38.331 [9]. | UE  | No  | No           |
| <b>extendedT-StatusProhibit-r16</b><br>Indicates whether the UE supports the additional values of <i>T-StatusProhibit timer</i> . The supported additional values are 1ms, 2ms, 3ms and 4ms, as specified in TS 38.331 [9]. | UE  | No  | No           |
| <b>remainingTimeBasedPolling-r19</b><br>Indicates whether the UE supports remaining-time-based RLC polling at the transmitting side of an AM RLC entity, as specified in TS 38.322 [36] and TS 38.323 [16].                 | UE  | No  | No           |
| <b>remainingTimeBasedRetransmission-r19</b><br>Indicates whether the UE supports remaining-time-based RLC retransmission at the transmitting side of an AM RLC entity, as specified in TS 38.322 [36] and TS 38.323 [16].   | UE  | No  | No           |
| <b>rxRLC-Discard-r19</b><br>Indicates whether the UE supports detecting of discard of AMD PDU(s) based on timer <i>t-RxDiscard</i> at the receiving side of an AM RLC entity, as specified in TS 38.322 [36].               | UE  | No  | No           |
| <b>txRLC-StopReTxDiscardedSDU-r19</b><br>Indicates whether the UE supports stopping RLC transmission and retransmission of discarded SDUs at the transmitting side of an AM RLC entity, as specified in TS 38.322 [36].     | UE  | No  | No           |
| <b>um-WithLongSN</b><br>Indicates whether the UE supports UM DRB with 12 bit length of RLC sequence number.                                                                                                                 | UE  | Yes | No           |
| <b>um-WithShortSN</b><br>Indicates whether the UE supports UM DRB with 6 bit length of RLC sequence number.                                                                                                                 | UE  | Yes | No           |

## 4.2.6 MAC parameters

### 4.2.6.1 MAC-Parameters

| Definitions for parameters                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | Per | M  | FDD-TDD DIFF | FR1-FR2 DIFF          |

| <b>additionalBS-Table-r18</b><br>Indicates whether the UE supports using the refined buffer size table for BSR and, if <i>delayStatusReport-r18</i> is supported, DSR, as specified in TS 38.321 [8] and TS 38.331 [9].                                                                                                                                                                                                                                                                                                                                                                                                                                               | UE  | No | No           | No                    |
| <b>autonomousTransmission-r16</b><br>Indicates whether the UE supports autonomous transmission of the MAC PDU generated for a deprioritized configured uplink grant as specified in TS 38.321 [8]. A UE supporting this feature shall also support <i>lch-priorityBasedPrioritization-r16</i> .                                                                                                                                                                                                                                                                                                                                                                       | UE  | No | No           | No                    |
| <b>cg-RetransmissionMonitoringDisabling-r18</b><br>Indicates whether the UE supports disabling <i>drx-HARQ-RTT-TimerUL</i> for PUSCH transmissions using configured grants corresponding to a <i>ConfiguredGrantConfig</i> as specified in TS 38.321 [8] and TS 38.331 [9].<br>A UE supporting this feature shall also indicate support of at least one of <i>configuredUL-GrantType1</i> , <i>configuredUL-GrantType2</i> , <i>configuredUL-GrantType1-v1650</i> , <i>configuredUL-GrantType2-v1650</i> , <i>configuredUL-GrantType1-r16</i> , <i>configuredUL-GrantType2-r16</i> .                                                                                  | UE  | No | No           | No                    |
| <b>delayStatusReport-r18</b><br>Indicates whether the UE supports the delay status report of the buffered data as specified in TS 38.321 [8], TS 38.331 [9], TS 38.323 [16] and TS 38.322 [36].                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | UE  | No | No           | No                    |
| <b>delayStatusReportNonDelayReportingData-r19</b><br>Indicates whether the UE supports including non-delay-reporting data ahead of delay-reporting data in the data volume calculation for delay status report using reporting threshold(s), as specified in TS 38.321 [8], TS 38.331 [9], TS 38.323 [16] and TS 38.322 [36]. A UE supporting this feature shall also indicate support of <i>multipleEntryDelayStatusReport-r19</i> .                                                                                                                                                                                                                                 | UE  | No | No           | No                    |
| <b>directMCG-SCellActivation-r16, directMCG-SCellActivation-r17</b><br>Indicates whether the UE supports direct NR MCG SCell activation, as specified in TS 38.321 [8], upon SCell addition, upon reconfiguration with sync of the MCG, as specified in TS 38.331 [9].                                                                                                                                                                                                                                                                                                                                                                                                | UE  | No | No           | Yes (Incl FR2-2 DIFF) |
| <b>directMCG-SCellActivationResume-r16, directMCG-SCellActivationResume-r17</b><br>Indicates whether the UE supports direct NR MCG SCell activation, as specified in TS 38.321 [8], upon reception of an <i>RRCResume</i> message, as specified in TS 38.331 [9].                                                                                                                                                                                                                                                                                                                                                                                                     | UE  | No | No           | Yes (Incl FR2-2 DIFF) |
| <b>directSCellActivationWithTCI-r17</b><br>Indicates whether the UE supports direct NR SCell activation with activated TCI states configuration (i.e. <i>tci-ActivatedConfig</i> ).<br>A UE supporting this feature shall also indicate support of at least one of <i>directMCG-SCellActivation-r16</i> , <i>directMCG-SCellActivation-r17</i> , <i>directMCG-SCellActivationResume-r16</i> , <i>directMCG-SCellActivationResume-r17</i> , <i>directSCG-SCellActivation-r16</i> , <i>directSCG-SCellActivation-r17</i> , <i>directSCG-SCellActivationResume-r16</i> , and <i>directSCG-SCellActivationResume-r17</i> .                                                | UE  | No | No           | No                    |
| <b>directSCG-SCellActivation-r16, directSCG-SCellActivation-r17</b><br>Indicates whether the UE supports direct NR SCG SCell activation, as specified in TS 38.321 [8], upon SCell addition and upon reconfiguration with sync of the SCG, both performed via an <i>RRCReconfiguration</i> message received via SRB3 or contained in an <i>RRC(Connection)Reconfiguration</i> message received via SRB1, as specified in TS 38.331 [9] and TS 36.331 [17].<br>A UE indicating support of <i>directSCG-SCellActivation-r16</i> shall indicate support of EN-DC or support of NGEN-DC as specified in TS 36.331 [17] or support of NR-DC as specified in TS 38.331 [9]. | UE  | No | No           | Yes (Incl FR2-2 DIFF) |

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |    |    |     |                                    |

| <b>jointPrioritizationCG-Retx-Timer-r17</b><br>Indicates whether the UE supports simultaneous configuration of LCH based prioritization and <i>cg-RetransmissionTimer-r16</i> as specified in TS 38.321 [8]. A UE supporting this feature shall also support <i>lch-priorityBasedPrioritization-r16</i> and <i>configuredGrantWithReTx-r16</i> .                                                                                                                                                                                                                                                                                                                                    | UE | No  | No  | No |
| <b>lastTransmissionUL-r17</b><br>Indicates whether the UE supports starting the <i>drx-HARQ-RTT-TimerUL</i> after the end of the last transmission within a bundle as specified in TS 38.321 [8].                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | UE | No  | No  | No |
| <b>lch-PriorityBasedPrioritization-r16</b><br>Indicates whether the UE supports prioritization between overlapping grants and between scheduling request and overlapping grants based on LCH priority as specified in TS 38.321 [8].                                                                                                                                                                                                                                                                                                                                                                                                                                                | UE | No  | No  | No |
| <b>lch-ToConfiguredGrantMapping-r16</b><br>Indicates whether the UE supports restricting data transmission from a given LCH to a configured (sub-) set of configured grant configurations (see <i>allowedCG-List-r16</i> in <i>LogicalChannelConfig</i> in TS 38.331 [9]) as specified in TS 38.321 [8].                                                                                                                                                                                                                                                                                                                                                                            | UE | No  | No  | No |
| <b>lch-ToGrantPriorityRestriction-r16</b><br>Indicates whether the UE supports restricting data transmission from a given LCH to a configured (sub-) set of dynamic grant priority levels (see <i>allowedPHY-PriorityIndex-r16</i> in <i>LogicalChannelConfig</i> in TS 38.331 [9]) as specified in TS 38.321 [8].                                                                                                                                                                                                                                                                                                                                                                  | UE | No  | No  | No |
| <b>lch-ToSCellRestriction</b><br>Indicates whether the UE supports restricting data transmission from a given LCH to a configured (sub-) set of serving cells (see <i>allowedServingCells</i> in <i>LogicalChannelConfig</i> ). A UE supporting <i>pdcp-DuplicationMCG-OrSCG-DRB</i> or <i>pdcp-DuplicationSRB</i> (see <i>PDCP-Config</i> ) shall also support <i>lch-ToSCellRestriction</i> .                                                                                                                                                                                                                                                                                     | UE | No  | No  | No |
| <b>lcp-PriorityAdjustment-r19</b><br>Indicates whether the UE supports logical channel priority adjustment based on remaining time of buffered data, as specified in TS 38.321 [8].                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | UE | No  | No  | No |
| <b>lcp-Restriction</b><br>Indicates whether UE supports the selection of logical channels for each UL grant based on RRC configured restriction using RRC parameters <i>allowedSCS-List</i> , <i>maxPUSCH-Duration</i> , and <i>configuredGrantType1Allowed</i> as specified in TS 38.321 [8].                                                                                                                                                                                                                                                                                                                                                                                      | UE | No  | No  | No |
| <b>logicalChannelSR-DelayTimer</b><br>Indicates whether the UE supports the <i>logicalChannelSR-DelayTimer</i> as specified in TS 38.321 [8].                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | UE | No  | Yes | No |
| <b>longDRX-Cycle</b><br>Indicates whether UE supports long DRX cycle as specified in TS 38.321 [8].                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | UE | Yes | Yes | No |
| <b>mg-ActivationCommPRS-Meas-r17</b><br>Indicates whether UE supports preconfiguration of MGs in RRC signalling for PRS measurements and the use of DL MAC CE from the gNB, as specified in TS 38.321 [8], to activate/deactivate the preconfigured MG for PRS measurements.                                                                                                                                                                                                                                                                                                                                                                                                        | UE | No  | No  | No |
| <b>mg-ActivationRequestPRS-Meas-r17</b><br>Indicates whether UE supports preconfiguration of MGs in RRC signalling for PRS measurements and supports the use of UL MAC CE, as specified in TS 38.321 [8], to request the activation/deactivation of the preconfigured MG for PRS measurements. The UE can include this field only if the UE supports <i>mg-ActivationCommPRS-Meas-r17</i> .                                                                                                                                                                                                                                                                                         | UE | No  | No  | No |

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |    |     |     |          |
|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----|-----|-----|----------|
| <b>mTRP-PUSCH-PHR-Type1-Reporting-r17</b><br>Indicates whether UE supports reporting of Type 1 power headroom information only for the case where the Serving Cell is configured with multiple TRP PUSCH repetitions and the MAC entity this Serving Cell belongs to is configured with <i>twoPHRMode</i> as specified in TS 38.321[8].<br>This feature is mandatory if the UE supports <i>mTRP-PUSCH-twoPHR-Reporting-r17</i> for at least one frequency band. | UE | CY  | No  | No       |
| <b>multipleConfiguredGrants</b><br>Indicates whether UE supports more than one configured grant configurations (including both Type 1 and Type 2) in a cell group. For each cell, the UE supports at most one configured grant per BWP and the maximum number of configured grant configurations per cell group is 2. If absent, for each configured cell group, the UE only supports one configured grant configuration on one serving cell.                   | UE | No  | Yes | No       |
| <b>multipleEntryDelayStatusReport-r19</b><br>Indicates whether the UE supports the delay status report of the buffered data using reporting threshold(s), as specified in TS 38.321 [8], TS 38.331 [9], TS 38.323 [16] and TS 38.322 [36].                                                                                                                                                                                                                      | UE | No  | No  | No       |
| <b>multipleSR-Configurations</b><br>Indicates whether the UE supports 8 SR configurations per PUCCH cell group as specified in TS 38.321 [8].                                                                                                                                                                                                                                                                                                                   | UE | No  | Yes | No       |
| <b>non-IntegerDRX-r18</b><br>Indicates whether the UE supports non-integer DRX periodicity as specified in TS 38.331 [9] and TS 38.321 [8].                                                                                                                                                                                                                                                                                                                     | UE | No  | No  | No       |
| <b>recommendedBitRate</b><br>Indicates whether the UE supports the bit rate recommendation message from the gNB to the UE as specified in TS 38.321 [8].                                                                                                                                                                                                                                                                                                        | UE | No  | No  | No       |
| <b>recommendedBitRateMultiplier-r16</b><br>Indicates whether the UE supports the bit rate multiplier for recommended bit rate MAC CE as specified in TS 38.321 [8], clause 6.1.3.20. This field is only applicable if the UE supports <i>recommendedBitRate</i> .                                                                                                                                                                                               | UE | No  | No  | No       |
| <b>recommendedBitRateQuery</b><br>Indicates whether the UE supports the bit rate recommendation query message from the UE to the gNB as specified in TS 38.321 [8]. This field is only applicable if the UE supports <i>recommendedBitRate</i> .                                                                                                                                                                                                                | UE | No  | No  | No       |
| <b>secondaryDRX-Group-r16</b><br>Indicates whether UE supports secondary DRX group as specified in TS 38.321 [8].                                                                                                                                                                                                                                                                                                                                               | UE | No  | Yes | No       |
| <b>shortDRX-Cycle</b><br>Indicates whether UE supports short DRX cycle as specified in TS 38.321 [8].                                                                                                                                                                                                                                                                                                                                                           | UE | Yes | Yes | No       |
| <b>simultaneousSR-PUSCH-DiffPUCCH-groups-r17</b><br>Indicates whether the UE supports simultaneous transmission of SR and PUSCH in different PUCCH groups as specified in TS 38.321 [8].                                                                                                                                                                                                                                                                        | UE | No  | No  | No       |
| <b>singlePHR-P-r16</b><br>Indicates whether UE supports the P bit in single PHR MAC CE as specified in TS 38.321 [8].                                                                                                                                                                                                                                                                                                                                           | UE | No  | No  | No       |
| <b>skipUplinkTxDynamic</b><br>Indicates whether the UE supports skipping of UL transmission for an uplink grant indicated on PDCCH if no data is available for transmission as specified in TS 38.321 [8].                                                                                                                                                                                                                                                      | UE | No  | Yes | No       |
| <b>spCell-BFR-CBRA-r16</b><br>Indicates whether the UE supports sending BFR MAC CE for SpCell BFR as specified in TS 38.321 [8].                                                                                                                                                                                                                                                                                                                                | UE | No  | No  | No       |
| <b>srs-ResourceId-Ext-r16</b><br>Indicates whether the UE supports the extended 6-bit (Positioning) SRS resource ID in SP Positioning SRS Activation/Deactivation MAC CE, as specified in TS 38.321 [8].                                                                                                                                                                                                                                                        | UE | No  | No  | No       |
| <b>sr-TriggeredBy-TA-Report-r17</b><br>Indicates whether the UE supports triggering of SR when a TA report is triggered and there are no available UL-SCH resources. A UE supporting this feature shall also indicate the support of <i>nonTerrestrialNetwork-r17</i> .                                                                                                                                                                                         | UE | No  | No  | No       |

| <b><i>bandEUTRA</i></b><br>Defines supported EUTRA frequency band by EUTRA frequency band number, as specified in TS 36.101 [14].                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | Band | Yes | N/A          | N/A          |
| <b><i>bandList</i></b><br>Each entry of the list should include at least one bandwidth class for UL or DL.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | BC   | Yes | N/A          | N/A          |
| <b><i>bandNR</i></b><br>Defines supported NR frequency band by NR frequency band number, as specified in TS 38.101-1 [2] and TS 38.101-2 [3].                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | Band | Yes | N/A          | N/A          |
| <b><i>ca-BandwidthClassDL-EUTRA</i></b><br>Defines for DL, the class defined by the aggregated transmission bandwidth configuration and maximum number of component carriers supported by the UE, as specified in TS 36.101 [14]. When all FeatureSetEUTRA-DownlinkId:s in the corresponding FeatureSetsPerBand are zero, this field is absent.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | Band | No  | N/A          | N/A          |
| <b><i>ca-BandwidthClassDL-NR</i></b><br>Defines for DL, the class defined by the aggregated transmission bandwidth configuration and maximum number of component carriers supported by the UE, as specified in TS 38.101-1 [2] and TS 38.101-2 [3]. When all FeatureSetDownlinkId:s in the corresponding FeatureSetsPerBand are zero, this field is absent. For FR1, the value 'F' shall not be used as it is invalidated in TS 38.101-1 [2].                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | Band | No  | N/A          | N/A          |
| <b><i>ca-BandwidthClassDL-NR-r17</i></b><br>Defines for DL, additional FR2 CA bandwidth class (e.g., R, S, T, U ) as specified in TS 38.101-2 [3]. When all FeatureSetDownlinkId:s in the corresponding FeatureSetsPerBand are zero, this field is absent.<br><br>If this field is indicated for a band, the UE shall also set <i>ca-BandwidthClassDL-NR</i> (without suffix) to the highest bandwidth class from the same fallback group that it supports in this band combination and with the given bandwidth combination set ID in case that the bandwidth combination consists of a sub-set of carriers and the same or a sub-set of carrier bandwidths on those carriers with respect to the bandwidth combination corresponding to <i>ca-BandwidthClassDL-NR-r17</i> ; otherwise, it shall omit the <i>ca-BandwidthClassDL-NR</i> (without suffix) field.<br><br>NOTE: If the UE includes <i>ca-BandwidthClassDL-NR-r17</i> in a BandParameter the network ignores the <i>ca-BandwidthClassDL-NR</i> therein, if signalled. | Band | No  | N/A          | FR2 only     |
| <b><i>ca-BandwidthClassUL-EUTRA</i></b><br>Defines for UL, the class defined by the aggregated transmission bandwidth configuration and maximum number of component carriers supported by the UE, as specified in TS 36.101 [14]. When all FeatureSetEUTRA-UplinkId:s in the corresponding FeatureSetsPerBand are zero, this field is absent.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | Band | No  | N/A          | N/A          |
| <b><i>ca-BandwidthClassUL-NR</i></b><br>Defines for UL, the class defined by the aggregated transmission bandwidth configuration and maximum number of component carriers supported by the UE, as specified in TS 38.101-1 [2] and TS 38.101-2 [3]. When all FeatureSetUplinkId:s in the corresponding FeatureSetsPerBand are zero, this field is absent. For FR1, the value 'F' shall not be used as it is invalidated in TS 38.101-1 [2].                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | Band | No  | N/A          | N/A          |
| <b><i>ca-BandwidthClassUL-NR-r17</i></b><br>Defines for UL, additional FR2 CA bandwidth class (e.g., R, S, T, U ) as specified in TS 38.101-2 [3]. When all FeatureSetUplinkId:s in the corresponding FeatureSetsPerBand are zero, this field is absent.<br><br>If this field is indicated for a band, the UE shall also set <i>ca-BandwidthClassUL-NR</i> (without suffix) to the highest bandwidth class from the same fallback group that it supports in this band combination and with the given bandwidth combination set ID in case that the bandwidth combination consists of a sub-set of carriers and the same or a sub-set of carrier bandwidths on those carriers with respect to the bandwidth combination corresponding to <i>ca-BandwidthClassUL-NR-r17</i> ; otherwise, it shall omit the <i>ca-BandwidthClassUL-NR</i> (without suffix) field.<br><br>NOTE: If the UE includes <i>ca-BandwidthClassUL-NR-r17</i> in a BandParameter the network ignores the <i>ca-BandwidthClassUL-NR</i> therein, if signalled.   | Band | No  | N/A          | FR2 only     |

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |    |     |     |          |

| <b>ca-ParametersEUTRA</b><br>Contains the EUTRA part of band combination parameters for a given (NG)EN-DC/NE-DC band combination.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | BC | No  | N/A | N/A      |
| <b>ca-ParametersNR</b><br>Contains the NR band combination parameters for a given (NG)EN-DC/NE-DC and/or NR CA band combination.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | BC | No  | N/A | N/A      |
| <b>ca-ParametersNRDC</b><br>Indicates whether the UE supports NR-DC for the band combination. It contains the NR band combination parameters applicable across MCG and SCG. If the band combination includes both FR1 and FR2 bands, a UE indicating support for NR-DC shall support synchronous NR-DC configuration where all serving cells of the MCG are in FR1 and all serving cells of the SCG are in FR2.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | BC | No  | N/A | N/A      |
| <b>directSCellActivation-r19</b><br>Indicates whether the UE supports RRC based direct SCell activation at SCell addition in NR LB-CA via switching.<br>A UE supporting this feature shall also indicate support of <i>switchingPeriodForFDD-SDL-r19</i> .                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | BC | No  | N/A | FR1 only |
| <b>featureSetCombination</b><br>Indicates the feature set that the UE supports on the NR and/or MR-DC band combination by <i>FeatureSetCombinationId</i> .                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | BC | N/A | N/A | N/A      |
| <b>featureSetCombinationDAPS-r16</b><br>Indicates the feature set that the UE supports for DAPS handover on the NR band combination by <i>FeatureSetCombinationId</i> . A UE shall include this field if intra-frequency or inter-frequency DAPS handover is supported for this band combination. For a band entry where it indicates the support for intra-frequency DAPS handover, the UE shall include at least two CCs and shall support intra-frequency DAPS handover between any CC pair within the same band entry. If the number of CCs within a band combination is more than one and if inter-frequency DAPS handover is supported, UE shall support inter-frequency DAPS handover between every CC pair in the same or different band entries in the band combination, except for the CC pair within a band entry with bandwidth class A. A feature set including <i>intraFreqDAPS-r16</i> can only be referred to by <i>featureSetCombinationDAPS-r16</i> , not by <i>featureSetCombination</i> . A feature set without <i>intraFreqDAPS-r16</i> is only applied to inter-freq DAPS handover if it is referred to by <i>featureSetCombinationDAPS</i> . Both feature sets with and without <i>intraFreqDAPS-r16</i> can be referred to by the same <i>featureSetCombinationDAPS-r16</i> . | BC | N/A | N/A | N/A      |
| <b>featureSetCombinationLowBandSwitching-r19</b><br>Indicates the feature set that the UE supports for LB-LB carrier aggregation via switching by <i>FeatureSetCombinationId</i> . The UE including this field shall indicate support of <i>switchingPeriodForFDD-SDL-r19</i> .<br>This field shall only include feature sets for a single band pair (i.e., a FDD band and a SDL band) in this release of the specification.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | BC | No  | N/A | FR1 only |
| <b>intraBandConcurrentOperationPowerClass-r16</b><br>Indicates the power class, of a particular Uu band combination and the intra-band PC5 band combination(s) on which the UE supports transmission of PC5 simultaneous with Uu uplink (as indicated by <i>supportedTxBandCombListPerBC-Sidelink-r16</i> ). The leading/leftmost value corresponds to the band combination of the particular Uu band combination and the first intra-band PC5 band combination included in <i>BandCombinationListSidelinkEUTRA-NR</i> which is indicated with value 1 by <i>supportedTxBandCombListPerBC-Sidelink-r16</i> , the next value corresponds to the band combination of the particular Uu band combination and the second intra-band PC5 band combination included in <i>BandCombinationListSidelinkEUTRA-NR</i> which is indicated with value 1 by <i>supportedTxBandCombListPerBC-Sidelink-r16</i> and so on. If this power class is higher than the power class that the UE supports on the individual Uu or PC5 interface of this band combination, the latter determines maximum TX power available in each interface.                                                                                                                                                                                | BC | No  | N/A | N/A      |
| <b>mrdc-Parameters</b><br>Contains the band combination parameters for a given (NG)EN-DC/NE-DC band combination.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | BC | No  | N/A | N/A      |
| <b>ne-DC-BC</b><br>Indicates whether the UE supports NE-DC for the band combination.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | BC | No  | N/A | N/A      |

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |    |    |     |          |

| <b>powerClass, powerClass-v1610</b><br>Indicates power class the UE supports when operating according to this band combination. If the field is absent, the UE supports the default power class. If this power class is higher than the power class that the UE supports on the individual bands of this band combination ( <i>ue-PowerClass</i> in <i>BandNR</i> ), the latter determines maximum TX power available in each band. The UE sets the power class parameter only in band combinations that are applicable as specified in TS 38.101-1 [2] and TS 38.101-3 [4]. This capability is not applicable to IAB-MT or NCR-MT.                                                                                                                                                                                                                                                                                                                                                                                                                                                  | BC | No | N/A | FR1 only |
| <b>powerClassNRPart-r16</b><br>Indicates NR part power class the UE supports when operating according to this band combination.<br>This field only applies for MR-DC BCs containing only single CC or intra-band CA in NR side in this release.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | BC | No | N/A | FR1 only |
| <b>scalingFactorTxSidelink-r16, scalingFactorRxSidelink-r16</b><br>Indicates, for a particular Uu band combination, the scaling factor for the PC5 band combination(s) on which the UE supports transmission/reception of PC5 simultaneous with Uu uplink/downlink respectively (as indicated by <i>supportedTxBandCombListPerBC-Sidelink-r16</i> / <i>supportedRxBandCombListPerBC-Sidelink-r16</i> ). The leading / leftmost value corresponds to the first band combination included in <i>BandCombinationListSidelinkEUTRA-NR</i> which is indicated with value 1 by <i>supportedTxBandCombListPerBC-Sidelink-r16</i> / <i>supportedRxBandCombListPerBC-Sidelink-r16</i> , the next value corresponds to the second band combination included in <i>BandCombinationListSidelinkEUTRA-NR</i> which is indicated with value 1 by <i>supportedTxBandCombListPerBC-Sidelink-r16</i> / <i>supportedRxBandCombListPerBC-Sidelink-r16</i> and so on. For each value of <i>ScalingFactorSidelink-r16</i> , value f0p4 indicates the scaling factor 0.4, f0p75 indicates 0.75, and so on. | BC | No | N/A | N/A      |
| <b>scellDormancyWithinActiveTime-DCI-0-3-And-1-3-r18</b><br>Indicates whether the UE supports SCell dormancy indication sent within the active time on PCell with DCI format 0_3/1_3. One dormant BWP and one non-dormant BWP is supported per carrier. More than one non-dormant BWP per carrier is supported only if <i>upto4</i> in <i>bwp-SameNumerology</i> or <i>upto4</i> in <i>bwp-DiffNumerology</i> is also supported.<br><br>One dormant BWP and one non-dormant BWP are UE specific BWPs even for UEs not supporting <i>upto2</i> in <i>bwp-SameNumerology</i> or <i>upto4</i> in <i>bwp-SameNumerology</i> .<br><br>A UE supporting this feature shall also indicate support of CA and at least one of <i>multiCell-PDSCH-DCI-1-3-SameSCS-r18</i> , <i>multiCell-PDSCH-DCI-1-3-DiffSCS-r18</i> , <i>multiCell-PUSCH-DCI-0-3-SameSCS-r18</i> and <i>multiCell-PUSCH-DCI-0-3-DiffSCS-r18</i> .                                                                                                                                                                            | BC | No | N/A | N/A      |

| <p><b>simultaneousSRS-UplinkTxSwitch-r19</b><br/>Indicates whether the UE supports enhanced handling of simultaneous SRS carrier switching and uplink Tx switching.</p> <p>This feature indicates the switching time between carriers other than the SRS carrier switching source carrier and the SRS carrier switching target carrier. Value <i>max</i> indicates the switching time is the maximum between the uplink Tx switching time (refer to <i>ULTxSwitchingBandPair</i>) and SRS carrier switching times (refer to <i>srs-SwitchingTimeNR</i>). Value <i>sum</i> indicates the switching time is the sum of the uplink Tx switching time and the SRS carrier switching time.</p> <p>After SRS carrier switching, the UL Tx Switching state is determined according to TS 38.214 [12] Section 6.1.6. The prioritization rules between uplink carriers are determined according to TS 38.214 [12] Section 6.2.1.3.</p> <p>A UE supporting this feature shall also indicate the support of <i>srs-CarrierSwitch</i>.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | BC | No | N/A | N/A |
| <p><b>srs-AntennaSwitching3T3R-r19</b><br/>Indicates whether the UE supports 3T3R SRS Tx port switching with port 1003 disabled when 4 port SRS resources with port 1003 disabled are configured to the UE. The capability comprises the following parameters:</p> <ul style="list-style-type: none"> <li>- <i>entryNumberAffect-r19</i> indicates the lowest band entry number of the UL group that impacts the DL of this band entry;</li> <li>- <i>entryNumberSwitch-r19</i> indicates the lowest band entry of the UL group, which is defined as band entries with UL (see NOTE 1) that impact each other's UL (i.e. SRS TX port switching on any of the cells in the group will impact UL on all the cells in the group). This parameter is absent if an UL group contains only one band entry.</li> </ul> <p>For <i>entryNumberAffect-r19</i> and <i>entryNumberSwitch-r19</i>, value 1 means first entry, value 2 means second entry and so on. All DL and UL that switch together indicate the same entry number. The entry number is the band entry number in a band combination.</p> <p>A UE supporting this feature shall also indicate support of <i>supportedSRS-Resources</i>.</p> <p>NOTE 1: The band with UL includes a band associated with <i>FeatureSetUplinkId</i> set to 0 corresponding to the support of <i>SRS-SwitchingTimeNR</i>.</p> <p>NOTE 2: This feature can be signalled together with <i>srs-AntennaSwitching8T8R-r18</i>, <i>srs-AntennaSwitchingBeyond4RX-r17</i>, <i>supportedSRS-TxPortSwitch-v1610</i>, <i>supportedSRS-TxPortSwitch</i>, or <i>srs-AntennaSwitching3T6R-r19</i> to indicate SRS antenna switching downgrading capability for a UE with 4Rx, 6Rx or 8Rx.</p> <p>NOTE 3: '3T3R' is only applicable for the UE equipped with 4Rx, 6Rx, or 8Rx antenna ports.</p> | BC | No | N/A | N/A |
| <p><b>srs-AntennaSwitching3T6R-r19</b><br/>Indicates whether the UE supports 3T6R SRS Tx port switching with port 1003 disabled when 4 port SRS resources with port 1003 disabled are configured to the UE. |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |    |    |     |     |
|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----|----|-----|-----|
| <p><b>srs-AntennaSwitchingBeyond4Rx-r17</b><br/>Indicates whether the UE supports SRS Antenna switching for more than 4 Rx. The capability signalling comprises the following parameters:</p> <ul style="list-style-type: none"> <li>- <i>supportedSRS-TxPortSwitchBeyond4Rx-r17</i> indicates a combination of supported xTyRs. It includes 11-bit bitmap, where starting from the leading / leftmost bit (bit 0), each bit corresponds to {t1r1, t2r2, t1r2, t4r4, t2r4, t1r4, t2r6, t1r6, t4r8, t2r8, t1r8}. For any indicated value, x shall be equal to or smaller than the one associated with the largest y.</li> <li>- <i>entryNumberAffectBeyond4Rx-r17</i> indicates the lowest band entry number of the UL group (see <i>entryNumberSwitchBeyond4Rx-r17</i>) that impacts the DL of this band entry;</li> <li>- <i>entryNumberSwitchBeyond4Rx-r17</i> indicates the lowest band entry of the UL group, which is defined as band entries with UL (see NOTE 1) that impact each other's UL (i.e. SRS TX port switching on any of the cells in the group will impact UL on all the cells in the group). This parameter is absent if an UL group contains only one band entry.</li> </ul> <p>The UE indicating support of this shall indicate support of <i>srs-TxSwitch</i>.</p> <p>For <i>entryNumberAffectBeyond4Rx-r17</i> and <i>entryNumberSwitchBeyond4Rx-r17</i>, value 1 means first entry, value 2 means second entry and so on. The UE may include <i>entryNumberAffectBeyond4Rx-r17/entryNumberSwitchBeyond4Rx-r17</i> for a band entry even if all of the bits in the <i>supportedSRS-TxPortSwitchBeyond4Rx-r17</i> are set to 0 for that band entry. All DL and UL that switch together indicate the same entry number.</p> <p>The entry number is the band entry number in a band combination. The UE is restricted not to include fallback band combinations for the purpose of indicating different SRS antenna switching capabilities.</p> <p>NOTE 1: The band with UL includes a band associated with <i>FeatureSetUplinkId</i> set to 0 corresponding to the support of <i>SRS-SwitchingTimeNR</i>.</p> <p>NOTE 2: If reported for the same values of xTyR in <i>supportedSRS-TxPortSwitchBeyond4Rx-r17</i> as reported with <i>supportedSRS-TxPortSwitch/supportedSRS-TxPortSwitch-v1610</i>, the reported values for <i>entryNumberAffectBeyond4Rx-r17</i> and <i>entryNumberSwitchBeyond4Rx-r17</i> are not valid.</p> | BC | No | N/A | N/A |
| <p><b>srs-SwitchingAffectedBandsListNR-r17</b><br/>Indicates which other bands in the band combination are affected by the SRS switch and the dropping rules / timelines apply to the indicated bands when SRS carrier switching on target CC and other UL on source CC are overlapped in the same symbol. UE indicating support of this feature shall indicate support of <i>srs-CarrierSwitch</i>.</p> <p>NOTE: The UE shall include the same number of entries, and listed in the same order as in <i>srs-SwitchingTimesListNR</i>. For each inter-band "source-target" pair (as indicated by <i>srs-SwitchingTimesListNR</i>), the UE can indicate which other bands in the band combination are affected by the SRS switch. The UE shall set the BIT STRING to 0 for intra-band band pairs.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | BC | No | N/A | N/A |
| <p><b>srs-SwitchingSimultaneousList-r19</b><br/>Indicates whether the UE supports simultaneous SRS carrier switches. Two SRS carrier switches are considered to be simultaneous if the SRS transmission (including RF retuning time) in both CCs overlap in time.<br/>A UE supporting this feature shall also indicate support of <i>srs-CarrierSwitch</i>.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | BC | No | N/A | N/A |
| <p><b>SRS-SwitchingTimeNR</b><br/>Indicates the interruption time on DL/UL reception within a NR band pair during the RF retuning for switching between a carrier on one band and another (PUSCH-less) carrier on the other band to transmit SRS. <i>switchingTimeDL/ switchingTimeUL</i>: n0us represents 0 us, n30us represents 30us, and so on. <i>switchingTimeDL/ switchingTimeUL</i> is mandatory present if switching between the NR band pair is supported, otherwise the field is absent. It is signalled per pair of bands per band combination.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | FD | No | N/A | N/A |

| <b>SRS-SwitchingTimeEUTRA</b><br>Indicates the interruption time on DL/UL reception within a EUTRA band pair during the RF retuning for switching between a carrier on one band and another (PUSCH-less) carrier on the other band to transmit SRS. <i>switchingTimeDL/switchingTimeUL</i> : n0 represents 0 OFDM symbols, n0dot5 represents 0.5 OFDM symbols, n1 represents 1 OFDM symbol and so on. <i>switchingTimeDL/switchingTimeUL</i> is mandatory present if switching between the EUTRA band pair is supported, otherwise the field is absent. It is signalled per pair of bands per band combination.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | FD                                            | No                                            | N/A         | N/A              |             |                       |             |                            |             |                  |             |                       |                  |                                 |    |    |     |     |
| <b>srs-TxSwitch, srs-TxSwitch-v1610</b><br>Defines whether UE supports SRS for DL CSI acquisition as defined in clause 6.2.1.2 of TS 38.214 [12]. The capability signalling comprises of the following parameters: <ul style="list-style-type: none"><li>- <i>supportedSRS-TxPortSwitch</i> indicates SRS Tx port switching pattern supported by the UE, which is mandatory with capability signalling. The indicated UE antenna switching capability of 'xTyR' corresponds to a UE, capable of SRS transmission on 'x' antenna ports over total of 'y' antennas, where 'y' corresponds to all or subset of UE receive antennas, where 2T4R is two pairs of antennas. <i>supportedSRS-TxPortSwitch-v1610</i>, which is optional to report, indicates downgrading configuration of SRS Tx port switching pattern. If the UE indicates the support of downgrading configuration of SRS Tx port switching pattern using <i>supportedSRS-TxPortSwitch-v1610</i>, the UE shall report the values for this as below, based on what is reported in <i>supportedSRS-TxPortSwitch</i>.<table><tr><td><b><i>supportedSRS-TxPortSwitch</i></b></td><td><b><i>supportedSRS-TxPortSwitch-v1610</i></b></td></tr><tr><td><i>t1r2</i></td><td><i>t1r1-t1r2</i></td></tr><tr><td><i>t1r4</i></td><td><i>t1r1-t1r2-t1r4</i></td></tr><tr><td><i>t2r4</i></td><td><i>t1r1-t1r2-t2r2-t2r4</i></td></tr><tr><td><i>t2r2</i></td><td><i>t1r1-t2r2</i></td></tr><tr><td><i>t4r4</i></td><td><i>t1r1-t2r2-t4r4</i></td></tr><tr><td><i>t1r4-t2r4</i></td><td><i>t1r1-t1r2-t2r2-t1r4-t2r4</i></td></tr></table></li><li>- <i>txSwitchImpactToRx</i> indicates the lowest band entry number of the UL group (see <i>txSwitchWithAnotherBand</i>) that impacts the DL of this band entry;</li><li>- <i>txSwitchWithAnotherBand</i> indicates the lowest band entry of the UL group, which is defined as band entries with UL (see NOTE) that impact each other's UL (i.e. SRS TX port switching on any of the cells in the group will impact UL on all the cells in the group). This parameter is absent if an UL group contains only one band entry.</li></ul> <p>For <i>txSwitchImpactToRx</i> and <i>txSwitchWithAnotherBand</i>, value 1 means first entry, value 2 means second entry and so on. The UE may include <i>txSwitchImpactToRx</i> and <i>txSwitchWithAnotherBand</i> for a band entry even if <i>supportedSRS-TxPortSwitch</i> is set to 'notSupported' for that band entry. All DL and UL that switch together indicate the same entry number.</p> <p>The entry number is the band entry number in a band combination. The UE is restricted not to include fallback band combinations for the purpose of indicating different SRS antenna switching capabilities.</p> <p>NOTE: The band with UL includes a band associated with <i>FeatureSetUplinkId</i> set to 0 corresponding to the support of SRS-SwitchingTimeNR.</p> | <b><i>supportedSRS-TxPortSwitch</i></b>       | <b><i>supportedSRS-TxPortSwitch-v1610</i></b> | <i>t1r2</i> | <i>t1r1-t1r2</i> | <i>t1r4</i> | <i>t1r1-t1r2-t1r4</i> | <i>t2r4</i> | <i>t1r1-t1r2-t2r2-t2r4</i> | <i>t2r2</i> | <i>t1r1-t2r2</i> | <i>t4r4</i> | <i>t1r1-t2r2-t4r4</i> | <i>t1r4-t2r4</i> | <i>t1r1-t1r2-t2r2-t1r4-t2r4</i> | BC | FD | N/A | N/A |

| <b>supportedAggBW-FR2-r17</b><br>Indicates the supported maximum aggregated intra-band bandwidth for TDD DL CCs and TDD UL CCs respectively in the FR2 CA bands of the band combination. It is also applicable to fallback band combinations of FR2 CA except for a single CC (i.e. non-CA) case. It is only applicable to FR2 CA band with FBG5 R2-R12 BW classes. UE indicating this shall report at least one <i>featureSetPerDownlinkCC</i> and <i>featureSetPerUplinkCC</i> (if applicable) with 200 MHz, and the UE is expected to support any combination of 100/200MHz carriers associated with the reported BW class (and as per TS 38.101-2 [3]) as long as the aggregated bandwidth of the configured carriers by the network does not exceed <i>supportedAggBW-FR2-r17</i> .                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | BC                                            | No                                            | N/A         | FR2 only         |             |                       |             |                            |             |                  |             |                       |                  |                                 |    |    |     |     |

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |    |    |     |     |

| <p><b>supportedBandwidthCombinationSet</b></p> <p>Defines the supported bandwidth combination set for a band combination as defined in TS 38.101-1 [2], TS 38.101-2 [3] and TS 38.101-3 [4]. For NR SA CA, NR-DC, inter-band (NG)EN-DC without intra-band (NG)EN-DC component, inter-band NE-DC without intra-band NE-DC component and intra-band (NG)EN-DC/NE-DC with additional inter-band NR CA component, the field defines the bandwidth combinations for the NR part of the band combination. For intra-band (NG)EN-DC/NE-DC without additional inter-band NR and LTE CA component, the field indicates the supported bandwidth combination set applicable to intra-band (NG)EN-DC/NE-DC band combination. This field is not applicable to source and target cells in intra-frequency DAPS handover.</p> <p>Field encoded as a bit map, where bit N is set to "1" if UE supports Bandwidth Combination Set N for this band combination as defined in the TS 38.101-1 [2], TS 38.101-2 [3] and TS 38.101-3 [4]. The leading / leftmost bit (bit 0) corresponds to the Bandwidth Combination Set 0, the next bit corresponds to the Bandwidth Combination Set 1 and so on. It is mandatory if</p> <ul style="list-style-type: none"> <li>- the band combination has more than one NR carrier (at least one SCell in an NR cell group);</li> <li>- or is an intra-band (NG)EN-DC/NE-DC combination without additional inter-band NR and LTE CA component;</li> <li>- or both.</li> </ul> <p>The corresponding bits of Bandwidth Combination Set 4 and Bandwidth Combination Set 5 shall not both be set to "1" for the same band combination.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | BC | CY | N/A | N/A |
| <p><b>supportedBandwidthCombinationSetIntraENDC</b></p> <p>Defines the supported bandwidth combination set for a band combination that allows configuration of at least one EUTRA serving cell and at least one NR serving cell in the same band, as defined in the TS 38.101-3 [4], table 5.3B.1.2-1 and table 5.3B.1.3-1.</p> <ul style="list-style-type: none"> <li>- For intra-band (NG)EN-DC with additional inter-band CA component(s) of LTE and/or NR, the field defines the bandwidth combination set for the intra-band (NG)EN-DC component.</li> <li>- For intra-band NE-DC with additional inter-band CA component(s) of LTE and/or NR, the field defines the bandwidth combination set for the intra-band NE-DC component.</li> </ul> <p>Field encoded as a bit map, where bit N is set to "1" if UE supports Bandwidth Combination Set N for this band combination as defined in the TS 38.101-3 [4]. | <p><b>ULTxSwitchingBandPair-r16, ULTxSwitchingBandPair-v1700, ULTxSwitchingBandPair-v1900</b></p> <p>Indicates UE supports dynamic UL 1Tx-2Tx switching in case of inter-band CA, SUL, and (NG)EN-DC, UL 2Tx-2Tx switching and 3Tx UL switching in case of inter-band CA and SUL as defined in TS 38.214 [12], TS 38.101-1 [2] and TS 38.101-3 [4]. The capability signalling comprises of the following parameters:</p> <ul style="list-style-type: none"> <li>- <i>bandIndexUL1-r16</i> and <i>bandIndexUL2-r16</i> indicate the band pair on which UE supports dynamic UL Tx switching. <i>bandIndexUL1/bandIndexUL2 xx</i> refers to the xxth band entry in the band combination. UE shall indicate support for 2-layer UL MIMO capabilities on one of the indicated two bands in each FeatureSet entry supporting UL 1Tx-2Tx switching and indicate support for 2-layer UL MIMO capabilities on both bands in each FeatureSet entry supporting UL 2Tx-2Tx switching and/or 3Tx UL switching, and only the band where UE supports 2-layer UL MIMO capability can work as carrier2 as defined in TS 38.101-1 [2] and TS 38.101-3 [4].</li> <li>- <i>uplinkTxSwitchingPeriod-r16</i> indicates the length of UL Tx switching period of 1Tx-2Tx switching per pair of UL bands per band combination when dynamic UL Tx switching is configured, as specified in TS 38.101-1 [2] and TS 38.101-3 [4]. UE shall not report the value n210us for EN-DC band combinations. n35us represents 35 µs, n140us represents 140µs, and so on, as specified in TS 38.101-1 [2] and TS 38.101-3 [4].</li> <li>- <i>uplinkTxSwitchingPeriod2T2T-r17</i> indicates the length of UL Tx switching period of 2Tx-2Tx switching per pair of UL bands per band combination when dynamic UL Tx switching is configured, as specified in TS 38.101-1 [2] and TS 38.101-3 [4]. n35us represents 35 µs, n140us represents 140µs, and so on, as specified in TS 38.101-1 [2] and TS 38.101-3 [4].</li> <li>- <i>uplink3TxSwitchingPeriodUpTo2TPerBandDualUL-v1900</i> indicates the length of UL Tx switching period for dynamic Tx switching between 2 UL bands for 3Tx UE with up to 2Tx per band, as specified in TS 38.101-1 [2]. n35us represents 35 µs, n140us represents 140µs, and so on, as specified in TS 38.101-1 [2].</li> <li>- <i>uplinkTxSwitching-DL-Interruption-r16</i> indicates that DL interruption on the band will occur during UL Tx switching, as specified in TS 38.133 [5] and in TS 36.133 [27]. UE is not allowed to set this field for the band combination of SUL band+TDD band, for which no DL interruption is allowed.<br/>Field encoded as a bit map, where bit N is set to "1" if DL interruption on band N will occur during uplink Tx switching as specified in TS 38.133 [5] and in TS 36.133 [27]. The leading / leftmost bit (bit 0) corresponds to the first band of this band combination, the next bit corresponds to the second band of this band combination and so on. The capability is not applicable to the following band combinations, in which DL reception interruption is not allowed: <ul style="list-style-type: none"> <li>- TDD+TDD CA with the same UL-DL pattern</li> <li>- TDD+TDD EN-DC with the same UL-DL pattern</li> </ul> </li> <li>- <i>uplinkTxSwitching-DL-Interruption-DualUL-v1900</i> indicates that for the band where DL interruption is needed due to dynamic Tx switching between 2 UL bands for 3Tx UE with up to 2Tx per band, as specified in TS 38.133 [5]. UE is not allowed to set this field for the band combination of SUL band+TDD band, for which no DL interruption is allowed.<br/>Field encoded as a bit map, where bit N is set to "1" if DL interruption on band N will occur during uplink Tx switching as specified in TS 38.133 [5]. The leading / leftmost bit (bit 0) corresponds to the first band of this band combination, the next bit corresponds to the second band of this band combination and so on. The capability is not applicable to the following band combinations, in which DL reception interruption is not allowed: <ul style="list-style-type: none"> <li>- TDD+TDD CA with the same UL-DL pattern</li> </ul> </li> </ul> | BC | FD | N/A | FR1 only |
| <p><b>uplinkTxSwitching-OptionSupport-r16</b></p> <p>Indicates which option is supported for dynamic UL 1Tx-2Tx switching for inter-band UL CA and (NG)EN-DC. <i>switchedUL</i> represents option 1 as specified in TS 38.214 [12], <i>dualUL</i> represents option 2 as specified in TS 38.214 [12], <i>both</i> represents both option 1 and option2 as specified in TS 38.214 [12]. UE shall not report the value <i>both</i> for (NG)EN-DC case. The field is mandatory for inter-band UL CA and (NG)EN-DC case where UE supports dynamic UL 1Tx-2Tx switching. If this field is absent, the band pair reported in <i>supportedBandPairListNR-r16</i> is not valid for dynamic UL 1Tx-2Tx switching for inter-band UL CA.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | BC | CY | N/A | FR1 only |

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |    |    |     |          |

| <b><i>uplinkTxSwitching-OptionSupport2T2T-r17</i></b><br>Indicates which option is supported for dynamic UL 2Tx-2Tx switching for inter-band UL CA. <i>switchedUL</i> represents option 1 as specified in TS 38.214 [12], <i>dualUL</i> represents option 2 as specified in TS 38.214 [12], <i>both</i> represents both option 1 and option 2 as specified in TS 38.214 [12]. The field is mandatory for inter-band UL CA cases where UE supports dynamic UL 2Tx-2Tx switching. The UE indicating support of this feature shall indicate support of at least one common switching option between <i>uplinkTxSwitching-OptionSupport2T2T-r17</i> and <i>uplinkTxSwitching-OptionSupport-r16</i> .                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | BC | CY | N/A | FR1 only |
| <b><i>uplinkTxSwitching-PowerBoosting-r16</i></b><br>Indicates the support of 3dB boosting on the maximum output power for UE transmission under the operation state in which 2-port transmission can be supported on carrier2 in case of inter-band UL CA case where UE supports dynamic UL Tx switching. A UE shall only indicate this capability in case the UE supports power class 3 for inter-band UL CA for the band combination as defined in TS 38.101-1 [2].                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | BC | No | N/A | FR1 only |
| <b><i>UplinkTxSwitchingAdditionalPeriodDualUL-r18</i></b><br>Indicates the UL Tx switching period for switching between a band pair and another band pair or another band, as specified in TS 38.101-1 [2], when Rel-18 UL Tx switching is configured by <i>uplinkTxSwitchingMoreBands-r18</i> . <ul style="list-style-type: none"> <li>- <i>bandPairIndex1-r18/bandPairIndex2-r18</i> xx refers to the xxth band pair entry in the band pair list indicated by <i>ULTxSwitchingBandPair-r18</i>. The two band pairs consist of mutually exclusive bands.</li> <li>- <i>bandIndex-r18</i> xx refers to the xxth band entry in this band combination, which indicates a different band from those indicated by <i>bandPairIndex1-r18</i>.</li> <li>- <i>switchingAdditionalPeriodDualUL-r18</i> indicates the length of switching period for switching between one band pair indicated by <i>bandPairIndex1-r18</i> and another band pair indicated by <i>bandPairIndex2-r18</i> or another band indicated by <i>bandIndex-r18</i>. n35us represents 35 µs, n140us represents 140µs, and so on, as specified in TS 38.101-1 [2].</li> </ul> A UE supporting this feature shall also indicate the support of dualUL switching option for the band pair(s) indicated in <i>bandPairIndex1-r18/bandPairIndex2-r18</i> . | BC | No | N/A | FR1 only |

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |    |    |     |          |

| <p><b>ULTxSwitchingBandPair-r18, ULTxSwitchingBandPair-v1840</b></p> <p>Indicates UE supports Rel-18 dynamic UL Tx switching across up to 4 bands in case of inter-band CA, SUL as defined in TS 38.214 [12] and TS 38.101-1 [2]. The capability signalling comprises the following parameters:</p> <ul style="list-style-type: none"> <li>- <i>bandIndexUL1-r18</i> and <i>bandIndexUL2-r18</i> indicate the band pair on which UE supports dynamic UL Tx switching. <i>bandIndexUL1/bandIndexUL2</i> xx refers to the xxth UL band entry in the band combination. UE shall indicate support of 2-layer UL MIMO in <i>FeatureSet</i> on both bands for 2Tx-2Tx switching, or indicate support of 2-layer UL MIMO on one band and 1-layer MIMO on the other band for 1Tx-2Tx switching, or indicate support of 1-layer UL MIMO on both bands for 1Tx-1Tx switching.</li> <li>- <i>uplinkTxSwitchingOptionForBandPair-r18</i> indicates whether switchedUL or dualUL or both switching options is supported for a given band pair as specified in TS 38.214 [12].</li> <li>- <i>uplinkTxSwitchingPeriodForBandPair-r18</i> indicates the supported switching period. <ul style="list-style-type: none"> <li>- <i>switchingPeriodFor2T-r18</i> indicates the length of 2Tx-2Tx switching period. n35us represents 35 µs, n140us represents 140µs, and so on, as specified in TS 38.101-1 [2].</li> <li>- <i>switchingPeriodFor1T-r18</i> indicates the length of 1Tx-2Tx switching and/or 1Tx-1Tx switching period, as specified in TS 38.101-1 [2]. n35us represents 35 µs, n140us represents 140µs, and so on, as specified in TS 38.101-1 [2].</li> </ul> </li> <li>- <i>uplinkTxSwitching-DL-Interruption-r18</i> indicates that DL interruption on the band will occur during UL Tx switching, as specified in TS 38.133 [5]. UE is not allowed to set this field for the band combination of SUL band+TDD band, for which no DL interruption is allowed.<br/>Field encoded as a bit map, where bit N is set to "1" if DL interruption on band N will occur during uplink Tx switching as specified in TS 38.133 [5]. The leading / leftmost bit (bit 0) corresponds to the first band of this band combination, the next bit corresponds to the second band of this band combination and so on. The capability is not applicable to the following band combinations, in which DL reception interruption is not allowed: <ul style="list-style-type: none"> <li>- TDD+TDD CA with the same UL-DL pattern</li> </ul> </li> <li>- <i>SwitchingPeriodUnaffectedBandDualUL-r18</i> indicates for a given band pair {band X and band Y}, whether/how the switching period is to be applied on band Z (as well as band X and Y), when a UL Tx switching is triggered from band pair {band X and band Z} to band pair {band Y and band Z}, as defined in TS 38.101-1 [2]. If absent for band Z, the UE is not required to transmit on any UL bands during the switching period reported for the band pair of band X and band Y, as defined in TS 38.101-1 [2]. <ul style="list-style-type: none"> <li>- <i>bandIndexUnaffected-r18</i> xx indicates the band index of band Z and refers to the xxth UL band entry in the band combination.</li> <li>- <i>maintainedUL-Trans-r18</i> indicates that the UE is capable of uplink transmission on band Z and is not required to transmit on band X and Y during the switching period reported for the band pair of band X and band Y, as specified in TS 38.101-1 [2].</li> <li>- <i>periodOnULBands-r18</i> indicates the switching period to be applied on any UL bands as specified in TS 38.101-1 [2]. n35us represents 35 µs, n140us represents 140µs, and so on.</li> </ul> </li> <li>- <i>configured1T1T-OnTwoBands-r18</i> indicates the support of 2-band configuration of 1T-1T UL Tx switching using Rel-18 UL Tx switching configurations. This capability is applicable for a band pair where the UE reports no UL-MIMO on both bands and indicates support of switchedUL in <i>uplinkTxSwitchingOptionForBandPair-r18</i>.</li> </ul> | BC | FD | N/A | FR1 only |

| <b>antennaArrayType-r18</b><br>Indicates whether the UE supports the RF and RRM requirements with antenna array as specified in TS 38.101-1 [2] clause 6.1J, 7.1J and TS 38.133 [5]. If the field is absent, the RF and RRM requirements with omni-directional antenna applies as specified in TS 38.101-1 [2] clause 6.1J, 7.1J and TS 38.133 [5]. The UE indicating support of this feature shall also indicate support of <i>airToGroundNetwork-r18</i> . This field is only applicable for bands as specified for ATG in clause 5.2J of TS 38.101-1 [2].<br>A UE supporting this feature and CA shall also support <i>neighSCellMeasSkipping</i> (see TS 38.331 [9]).                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | Band | CY  | N/A      | FR1 only |
| <b>aperiodicBeamReport</b><br>Indicates whether the UE supports aperiodic 'CRI/RSRP' or 'SSBRI/RSRP' reporting on PUSCH. The UE provides the capability for the band number for which the report is provided (where the measurement is performed).                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | Band | Yes | N/A      | N/A      |
| <b>aperiodicCSI-RS-AdditionalBandwidth-r17</b><br>Indicates the UE supported TRS bandwidths for fast SCell activation, in addition to 52 RBs, for a 10MHz UE channel bandwidth. This field only applies for the BWPs configured with 52 RBs size and 15kHz SCS, in FDD bands and indicates the values:<br>Value <i>addBW-Set1</i> indicates 28, 32, 36, 40, 44, 48 RBs.<br>Value <i>addBW-Set2</i> indicates 32, 36, 40, 44, 48 RBs.<br><br>The UE can include this feature only if the UE indicates support of <i>aperiodicCSI-RS-FastSCellActivation-r17</i> .                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | Band | No  | FDD only | FR1 only |
| <b>aperiodicCSI-RS-FastSCellActivation-r17</b><br>Indicates whether the UE supports aperiodic CSI-RS for tracking for fast SCell activation, i.e.,<br>1) Aperiodic CSI-RS for tracking for fast SCell activation is triggered by enhanced SCell activation/deactivation MAC CE;<br>2) Aperiodic CSI-RS for tracking for fast SCell activation is triggered within the BWP indicated by <i>firstActiveDownlinkBWP-Id</i> for the SCell.<br><br>This field includes the following parameters:<br>- <i>maxNumberAperiodicCSI-RS-PerCC-r17</i> indicates the maximum number of aperiodic CSI-RS resource set configurations for tracking for fast SCell activation that can be configured to UE per CC in a reported band. Value n8 corresponds to 8, n16 corresponds to 16, and so on.<br><br>- <i>maxNumberAperiodicCSI-RS-AcrossCCs-r17</i> indicates the maximum number of aperiodic CSI-RS resource set configurations for tracking for fast SCell activation that can be configured to UE across CCs in a reported band. Value n8 corresponds to 8, n16 corresponds to 16, and so on.<br><br>NOTE:<br>- <i>maxNumberAperiodicCSI-RS-PerCC-r17</i> and <i>maxNumberAperiodicCSI-RS-AcrossCCs-r17</i> values refer to the number of RS configurations for fast SCell activation that can be indicated by the MAC CE.<br>- The NZP-CSI-RS configured as RS for tracking for fast SCell activation are not considered when counting the maximum NZP-CSI-RS configurations of CSI-RS and CSI-IM reception for CSI feedback. | Band | No  | N/A      | N/A      |
| <b>aperiodicTRS</b><br>Indicates whether the UE supports DCI triggering aperiodic TRS associated with periodic TRS.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | Band | No  | N/A      | Yes      |
| <b>asymmetricBandwidthCombinationSet</b><br>Defines the supported asymmetric channel bandwidth combination for the band as defined in the TS 38.101-1 [2] / TS 38.101-5 [34]. Field encoded as a bit map, where bit N is set to "1" if UE support asymmetric channel bandwidth combination set N for this band as defined in the TS 38.101-1 [2] / TS 38.101-5 [34]. The leading / leftmost bit (bit 0) corresponds to the asymmetric channel bandwidth combination set 1, the next bit corresponds to the asymmetric channel bandwidth combination set 2 and so on. UE shall support asymmetric channel bandwidth combination set 0 if defined for the band in the TS 38.101-1 [2]. If the field is absent, the UE supports asymmetric channel bandwidth combination set 0 if defined for the band in the TS 38.101-1 [2].                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | Band | No  | N/A      | N/A      |
| <b>bandNR</b><br>Defines supported NR frequency band by NR frequency band number, as specified in TS 38.101-1 [2], TS 38.101-2 [3], and TS 38.101-5 [34].                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | Band | Yes | N/A      | N/A      |

| <b>beamCorrespondenceWithoutUL-BeamSweeping</b><br>Indicates how UE supports FR2 beam correspondence as specified in TS 38.101-2 [3], clause 6.6. The UE that fulfils the beam correspondence requirement without the uplink beam sweeping (as specified in TS 38.101-2 [3], clause 6.6) shall set the field to <i>supported</i> . The UE that fulfils the beam correspondence requirement with the uplink beam sweeping (as specified in TS 38.101-2 [3], clause 6.6) shall not report this field.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | Band | Yes | N/A      | FR2 only |
| <b>beamManagementSSB-CSI-RS</b><br>Defines support of SS/PBCH and CSI-RS based RSRP measurements. The capability comprises signalling of <ul style="list-style-type: none"> <li>- <i>maxNumberSSB-CSI-RS-ResourceOneTx</i> indicates maximum total number of configured one port NZP CSI-RS resources and SS/PBCH blocks that are supported by the UE to measure L1-RSRP as specified in TS 38.215 [13] within a slot and across all serving cells (see NOTE). On FR2, it is mandatory to report <math>\geq 8</math>; On FR1, it is mandatory with capability signalling to report <math>\geq 8</math>.</li> <li>- <i>maxNumberCSI-RS-Resource</i> indicates maximum total number of configured NZP-CSI-RS resources that are supported by the UE to measure L1-RSRP as specified in TS 38.215 [13] across all serving cells (see NOTE). It is mandated to report at least n8 for FR1.</li> <li>- <i>maxNumberCSI-RS-ResourceTwoTx</i> indicates maximum total number of two ports NZP CSI-RS resources that are supported by the UE to measure L1-RSRP as specified in TS 38.215 [13] within a slot and across all serving cells (see NOTE).</li> <li>- <i>supportedCSI-RS-Density</i> indicates density of one RE per PRB for one port NZP CSI-RS resource for RSRP reporting, if supported. On FR2, it is mandatory to report either "three" or "oneAndThree"; On FR1, it is mandatory with capability signalling to report either "three" or "oneAndThree".</li> <li>- <i>maxNumberAperiodicCSI-RS-Resource</i> indicates maximum number of configured aperiodic CSI-RS resources across all serving cells (see NOTE). For FR1 and FR2, the UE is mandated to report at least n4.</li> </ul> NOTE: If the UE sets a value other than <i>n0</i> in an FR1 band, it shall set that same value in all FR1 bands. If the UE sets a value other than <i>n0</i> in an FR2 band, it shall set that same value in all FR2 bands. The UE supports a total number of resources equal to the maximum of the FR1 and FR2 value, but no more than the FR1 value across all FR1 serving cells and no more than the FR2 value across all FR2 serving cells. | Band | Yes | N/A      | FD       |
| <b>beamReportTiming, beamReportTiming-v1710</b><br>Indicates the number of OFDM symbols between the end of the last symbol of SSB/CSI-RS and the start of the first symbol of the transmission channel containing beam report. The UE provides the capability for the band number for which the report is provided (where the measurement is performed). The UE includes this field for each supported sub-carrier spacing.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | Band | Yes | N/A      | N/A      |

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |      |    |          |            |

| <p><b>beamSweepingFactorReduction-r18</b><br/>Indicates whether the UE supports beam sweeping factor reduction for FR2 unknown SCell activation.<br/>The capability comprises signalling of</p> <ul style="list-style-type: none"> <li>- <i>reduceForCellDetection</i> indicates reducing beam sweeping factor for cell detection if UE has full set (N=8) of beam sweeping during AGC settling part during FR2-1 unknown SCell activation procedure.</li> <li>- <i>reduceForSSB-L1-RSRP-Meas</i> indicates reducing beam sweeping factor for SSB based L1-RSRP measurement if UE has full set (N=8) of beam sweeping during AGC settling part during FR2-1 unknown SCell activation procedure.</li> </ul> <p>UE is required to meet the shortened SCell activation delay requirement in TS 38.133 [5] if the feature is supported.</p>                                                                                                                                                                                                            | Band | No | TDD only | FR2-1 only |
| <p><b>beamSwitchTiming, beamSwitchTiming-v1710</b><br/>Indicates the minimum number of OFDM symbols between the DCI triggering of aperiodic CSI-RS and aperiodic CSI-RS transmission. The number of OFDM symbols is measured from the end of the last symbol containing the indication to the start of the first symbol of CSI-RS. The UE includes this field for each supported sub-carrier spacing.<br/>NOTE: <i>beamSwitchTiming</i> of value (<i>sym224</i> or <i>sym336</i> for 60kHz and 120kHz SCS, <i>sym896</i> or <i>sym1344</i> for 480kHz SCS and <i>sym1792</i> or <i>sym2688</i> for 960kHz SCS) will be used to determine UE expectation/behaviour for aperiodic CSI-RS for tracking and latency requirements for L1-RSRP reporting as described in clause 5.1.6.1.1 of TS 38.214 [12], while UE behaviour/assumption regarding before or after beam switch timing is unspecified for measuring AP CSI-RS for CSI acquisition (without <i>trs-Info</i> and without repetition) and for beam management (with repetition 'off').</p> | Band | No | N/A      | FR2 only   |
| <p><b>beamSwitchTiming-r16, beamSwitchTiming-r17</b><br/>Indicates the minimum number of required OFDM symbols (<i>sym224</i>, <i>sym336</i> for 60kHz and 120kHz SCS, <i>sym896</i> or <i>sym1344</i> for 480kHz SCS and <i>sym1792</i> or <i>sym2688</i> for 960kHz SCS) between the DCI triggering aperiodic CSI-RS and the corresponding aperiodic CSI-RS transmission in a CSI-RS resource set configured with repetition 'ON' if <i>enableBeamSwitchTiming-r16</i> is configured.<br/>For CSI-RS configured with repetition "off", the UE applies beam switch time of <i>sym48</i> if <i>beamSwitchTiming-r16</i> is reported and <i>enableBeamSwitchTiming-r16</i> is configured. For CSI-RS configured without repetition and without <i>trs-info</i>, the UE applies beam switch time of <i>sym48</i> if <i>beamSwitchTiming-r16</i> is reported and <i>enableBeamSwitchTiming-r16</i> is configured.</p>                                                                                                                                 | Band | No | N/A      | FR2 only   |
| <p><b>bfd-Relaxation-r17</b><br/>Indicates whether the UE supports BFD relaxation criteria and requirement as specified in TS 38.133 [5]. UE shall set the capability value consistently for all FDD-FR1 bands, all TDD-FR1 bands, all TDD-FR2-1 bands and all TDD-FR2-2 bands respectively.<br/><br/>UE indicating support of this feature shall also indicate support of <i>maxNumberCSI-RS-BFD</i>, <i>maxNumberSSB-BFD</i> and <i>maxNumberCSI-RS-SSB-CBD</i>.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | Band | No | N/A      | N/A        |
| <p><b>bwp-DiffNumerology</b><br/>Indicates whether the UE supports BWP adaptation up to 4 BWPs with the different numerologies, via DCI and timer. Except for SUL, the UE only supports the same numerology for the active UL and DL BWP. For the UE that is capable of this feature but is not indicating <i>supportOfRedCap-r17</i> nor <i>supportOfERedCap-r18</i>, the bandwidth of a UE-specific RRC configured DL BWP includes the bandwidth of the CORESET#0 (if CORESET#0 is present) and SSB for PCell and PSCell (if configured). For the UE which is a (e)RedCap UE capable of this feature, the bandwidth of a UE-specific RRC configured DL BWP may not include the bandwidth of the CORESET#0 (if configured) and SSB for PCell. For SCell(s), the bandwidth of the UE-specific RRC configured DL BWP includes SSB, if there is SSB on SCell(s).</p>                                                                                                                                                                                 | Band | No | N/A      | N/A        |

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |      |    |     |     |
|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------|----|-----|-----|
| <b>bwp-SameNumerology</b><br>Indicates whether UE supports BWP adaptation (up to 2/4 BWPs) with the same numerology, via DCI and timer. Except for SUL, the UE only supports the same numerology for the active UL and DL BWP. For the UE that is capable of this feature but is not indicating <i>supportOfRedCap-r17</i> nor <i>supportOfERedCap-r18</i> , the bandwidth of a UE-specific RRC configured DL BWP includes the bandwidth of the CORESET#0 (if CORESET#0 is present) and SSB for PCell and PSCell (if configured). For the UE which is a (e)RedCap UE capable of this feature, the bandwidth of a UE-specific RRC configured DL BWP may not include the bandwidth of the CORESET#0 (if configured) and SSB for PCell. For SCell(s), the bandwidth of the UE-specific RRC configured DL BWP includes SSB, if there is SSB on SCell(s). | Band | No | N/A | N/A |
| <b>bwp-WithoutRestriction</b><br>Indicates support of BWP operation without bandwidth restriction. The Bandwidth restriction in terms of DL BWP for PCell and PSCell means that the bandwidth of a UE-specific RRC configured DL BWP may not include the bandwidth of CORESET #0 (if configured) and SSB. For SCell(s), it means that the bandwidth of DL BWP may not include SSB.                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | Band | No | N/A | N/A |
| <b>cancelOverlappingPUSCH-r16</b><br>Indicates whether UE supports the cancellation of the (repetition of the) PUSCHs transmission on all other intra-band serving cell(s). The cancellation of the (repetition of the) PUSCH transmission on a the set of intra-band serving cell(s) includes all symbols from the earliest symbol that is overlapping with the first cancelled symbol of the PUSCH on the serving cell for which the DCI format 2_4 is applicable to. If the UE supports this feature, the UE needs to report <i>pa-PhaseDiscontinuityImpacts</i> and <i>ul-CancellationSelfCarrier-r16</i> .                                                                                                                                                                                                                                      | Band | No | N/A | N/A |
| <b>cg-PUSCH-UTO-UCI-Ind-r18</b><br>Indicates whether the UE supports multiplexing of the unused transmission occasions UCI (UTO-UCI) on a CG-PUSCH.<br>The UE indicating support of this feature shall also indicate support of at least one of <i>configuredUL-GrantType1</i> , <i>configuredUL-GrantType1-v1650</i> , <i>configuredUL-GrantType2</i> , <i>configuredUL-GrantType2-v1650</i> .                                                                                                                                                                                                                                                                                                                                                                                                                                                      | Band | No | N/A | N/A |
| <b>cg-SDT-r17</b><br>Indicates whether the UE supports transmission of data and/or signalling over allowed radio bearers in RRC_INACTIVE state via configured grant type 1 (i.e. CG-SDT), as specified in TS 38.331 [9]. Except for NTN bands, UE shall set the capability value consistently for all FDD-FR1 bands, all TDD-FR1 bands and all TDD-FR2 bands respectively. For NTN, UE shall set the capability value consistently for all FDD-FR1 NTN bands and all FDD-FR2 NTN bands respectively. UE supports multiple CG-SDT configurations when a UE indicates the support of this feature and <i>activeConfiguredGrant-r16</i> ; otherwise UE only supports one CG-SDT configuration.                                                                                                                                                          | Band | No | N/A | N/A |
| <b>cg-SDT-PeriodicityExt-r18</b><br>Indicates whether the UE supports to extend the range of CG-SDT periodicities for MO-SDT and/or MT-SDT, as specified in TS 38.331 [9].<br>A UE supporting this feature shall also indicate the support of <i>ra-InsteadCG-SDT-r18</i> . A UE supporting this feature shall also indicate the support of <i>cg-SDT-r17</i> or <i>mt-CG-SDT-r18</i> .                                                                                                                                                                                                                                                                                                                                                                                                                                                              | Band | No | N/A | N/A |
| <b>channelBW-DL-IAB-r16</b><br>Indicates whether the IAB-MT supports channel bandwidth of 100 MHz for a given SCS in FR1 for DL or whether the IAB-MT supports channel bandwidth of 200 MHz for a given SCS in FR2 for DL.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | Band | No | N/A | N/A |
| <b>channelBW-DL-NCR-r18</b><br>Indicates whether the NCR-MT supports channel bandwidth of 100 MHz for a given SCS in FR1 for DL or whether the NCR-MT supports channel bandwidth of 200 MHz for a given SCS in FR2 for DL.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | Band | No | N/A | N/A |
| <b>channelBW-UL-IAB-r16</b><br>Indicates whether the IAB-MT supports channel bandwidth of 100 MHz for a given SCS in FR1 for UL or whether the IAB-MT supports channel bandwidth of 200 MHz for a given SCS in FR2 for UL.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | Band | No | N/A | N/A |

|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------|-----|-----|-----|
| <p>Indicates for each subcarrier spacing the UE supported channel bandwidths. Absence of the <i>channelBWs-DL</i> (without suffix) for a band or absence of specific <i>scs-XXkHz</i> entry for a supported subcarrier spacing means that the UE supports the channel bandwidths among [5, 10, 15, 20, 25, 30, 40, 50, 60, 80, 100] and [50, 100, 200] that were defined in clause 5.3.5 of TS 38.101-1 version 15.7.0 [2] and TS 38.101-2 version 15.7.0 [3] for the given band or the specific SCS entry. For IAB-MT, to determine whether the IAB-MT supports a channel bandwidth of 100 MHz, the network checks <i>channelBW-DL-IAB-r16</i>. For NCR-MT, to determine whether the NCR-MT supports a channel bandwidth of 100 MHz, the network checks <i>channelBW-DL-NCR-r18</i>.</p> <p>For FR1, the bits in <i>channelBWs-DL</i> (without suffix) starting from the leading / leftmost bit indicate 5, 10, 15, 20, 25, 30, 40, 50, 60 and 80MHz. For FR2, the bits in <i>channelBWs-DL</i> (without suffix) starting from the leading / leftmost bit indicate 50, 100 and 200MHz. The third / rightmost bit (for 200MHz) shall be set to 1, except for NTN bands. For IAB-MT and NCR-MT, the third / rightmost bit (for 200MHz) is ignored. To determine whether the IAB-MT supports a channel bandwidth of 200 MHz, the network checks <i>channelBW-DL-IAB-r16</i>. To determine whether the NCR-MT supports a channel bandwidth of 200 MHz, the network checks <i>channelBW-DL-NCR-r18</i>.</p> <p>For FR1, the leading/leftmost bit in <i>channelBWs-DL-v1590</i> indicates 70MHz, the second leftmost bit indicates 45MHz, the third leftmost bit indicates 35MHz, the fourth leftmost bit indicates 100MHz, the fifth leftmost bit indicates 7MHz, and all the remaining bits in <i>channelBWs-DL-v1590</i> shall be set to 0. The fourth leftmost bit (for 100MHz) is not applicable for bands n41, n48, n77, n78, n79 and n90 as defined in TS 38.101-1 [2]. For each band, (e)RedCap UEs shall indicate supporting the maximum of those channel bandwidths that are less than or equal to 20 MHz for FR1 and less than or equal to 100 Mhz for FR2, taking restrictions in TS 38.101-1 [2] and TS 38.101-2 [3] into consideration. For each band, NTN capable UEs shall indicate the supported channel bandwidths for FR1 and FR2, taking restrictions in TS 38.101-5 [34] into consideration.</p> <p>This feature is applicable only for FR1, FR2-1, FR1-NTN and FR2-NTN band, otherwise it is absent.</p>                                                                                                                                                                                |      |     |     |     |
| <p>NOTE: To determine whether the UE supports a specific SCS for a given band, the network validates the <i>supportedSubCarrierSpacingDL</i> and the <i>scs-60kHz</i>.</p> <p>To determine whether the UE supports a channel bandwidth of 90 MHz for the band combination with other bandwidth combination set than BCS5, the network may ignore this capability and validate instead the <i>channelBW-90mhz</i>, the <i>supportedBandwidthCombinationSet</i>, the <i>supportedBandwidthCombinationSetIntraENDC</i>, and <i>supportedBandwidthCombinationSetIntraENDC-v1790</i>. To determine whether the UE supports a channel bandwidth of 90 MHz for the band combination with BCS5, the network may ignore this capability and validate instead the <i>channelBW-90mhz</i>, the <i>supportedBandwidthCombinationSet</i>, the <i>supportedBandwidthCombinationSetIntraENDC</i>, <i>supportedAggBW-FR1-r17</i>, and <i>supportedBandwidthCombinationSetIntraENDC-v1790</i>. To determine whether the UE supports a channel bandwidth of 400 MHz, the network may ignore this capability and validate the <i>supportedBandwidthCombinationSet</i>, the <i>supportedBandwidthCombinationSetIntraENDC</i>, the <i>supportedBandwidthDL</i>, and <i>supportedBandwidthCombinationSetIntraENDC-v1790</i>. To determine whether the UE supports a channel bandwidth of 3MHz, the network may ignore this capability and validate instead the <i>support3MHz-ChannelBW-Symmetric-r18</i>, the <i>supportedBandwidthCombinationSet</i>, the <i>asymmetricBandwidthCombinationSet</i> (for a band supporting asymmetric channel bandwidth as defined in clause 5.3.6 of TS 38.101-1 [2] for TN or in clause 5.3.6 of TS 38.101-5 [34] for NTN), the <i>supportedBandwidthDL-v1840</i> and the <i>supportedMinBandwidthDL-v1840</i>.</p> <p>For serving cell(s) with other channel bandwidths:</p> <ul style="list-style-type: none"> <li>- If <i>supportedAggBW-FR1-r17</i> is reported, the network validates the <i>channelBWs-DL</i>, the <i>supportedBandwidthCombinationSet</i>, the <i>supportedBandwidthCombinationSetIntraENDC</i>, the <i>asymmetricBandwidthCombinationSet</i> (for a band supporting asymmetric channel bandwidth as defined in clause 5.3.6 of TS 38.101-1 [2]), <i>supportedBandwidthDL-v1780/supportedBandwidthDL-v1900</i>, <i>supportedMinBandwidthDL-r17/supportedMinBandwidthDL-v1900</i>, <i>supportedAggBW-FR1-r17</i>, and <i>supportedBandwidthCombinationSetIntraENDC-v1790</i>.</li> <li>- Otherwise, the network validates the <i>channelBWs-DL</i>, the <i>supportedBandwidthCombinationSet</i>, the <i>supportedBandwidthCombinationSetIntraENDC</i>, the</li> </ul> |      |     |     |     |

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |      |    |     |     |

|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------|-----|-----|-----|
| <p>Indicates for each subcarrier spacing the UE supported channel bandwidths. Absence of the <i>channelBWs-UL</i> (without suffix) for a band or absence of specific <i>scs-XXkHz</i> entry for a supported subcarrier spacing means that the UE supports the channel bandwidths among [5, 10, 15, 20, 25, 30, 40, 50, 60, 80, 100] and [50, 100, 200] that were defined in clause 5.3.5 of TS 38.101-1 version 15.7.0 [2] and TS 38.101-2 version 15.7.0 [3] for the given band or the specific SCS entry. For IAB-MT, to determine whether the IAB-MT supports a channel bandwidth of 100 MHz, the network checks <i>channelBW-UL-IAB-r16</i>. For NCR-MT, to determine whether the NCR-MT supports a channel bandwidth of 100 MHz, the network checks <i>channelBW-UL-NCR-r18</i>.</p> <p>For FR1, the bits in <i>channelBWs-UL</i> (without suffix) starting from the leading / leftmost bit indicate 5, 10, 15, 20, 25, 30, 40, 50, 60 and 80MHz. For FR2, the bits in <i>channelBWs-UL</i> (without suffix) starting from the leading / leftmost bit indicate 50, 100 and 200MHz. The third / rightmost bit (for 200MHz) shall be set to 1, except for NTN bands. For IAB-MT and NCR-MT, the third / rightmost bit (for 200MHz) is ignored. To determine whether the IAB-MT supports a channel bandwidth of 200 MHz, the network checks <i>channelBW-UL-IAB-r16</i>. To determine whether the NCR-MT supports a channel bandwidth of 200 MHz, the network checks <i>channelBW-UL-NCR-r18</i>.</p> <p>For FR1, the leading/leftmost bit in <i>channelBWs-UL-v1590</i> indicates 70 MHz, the second leftmost bit indicates 45MHz, the third leftmost bit indicates 35MHz, the fourth leftmost bit indicates 100MHz, the fifth leftmost bit indicates 7MHz, and all the remaining bits in <i>channelBWs-UL-v1590</i> shall be set to 0. The fourth leftmost bit (for 100MHz) is not applicable for bands n41, n48, n77, n78, n79 and n90 as defined in TS 38.101-1 [2]. For each band, (e)RedCap UEs shall indicate supporting the maximum of those channel bandwidths that are less than or equal to 20 MHz for FR1 and less than or equal to 100 Mhz for FR2, taking restrictions in TS 38.101-1 [2] and TS 38.101-2 [3] into consideration. For each band, NTN capable UEs shall indicate the supported channel bandwidths for FR1 and FR2, taking restrictions in TS 38.101-5 [34] into consideration.</p> <p>This feature is applicable only for FR1, FR2-1, FR1-NTN and FR2-NTN band, otherwise it is absent.</p>                                                                                                                           |      |     |     |     |
| <p>NOTE 1: To determine whether the UE supports a specific SCS for a given band, the network validates the <i>supportedSubCarrierSpacingUL</i> and the <i>scs-60kHz</i>.</p> <p>To determine whether the UE supports a channel bandwidth of 90 MHz for the band combination with other bandwidth combination set than BCS5, the network may ignore this capability and validate instead the <i>channelBW-90mhz</i>, the <i>supportedBandwidthCombinationSet</i>, the <i>supportedBandwidthCombinationSetIntraENDC</i>, and <i>supportedBandwidthCombinationSetIntraENDC-v1790</i>. To determine whether the UE supports a channel bandwidth of 90 MHz for the band combination with BCS5, the network may ignore this capability and validate instead the <i>channelBW-90mhz</i>, the <i>supportedBandwidthCombinationSet</i>, the <i>supportedBandwidthCombinationSetIntraENDC</i>, <i>supportedAggBW-FR1-r17</i>, and <i>supportedBandwidthCombinationSetIntraENDC-v1790</i>. To determine whether the UE supports a channel bandwidth of 400 MHz, the network may ignore this capability and validate the <i>supportedBandwidthCombinationSet</i>, the <i>supportedBandwidthCombinationSetIntraENDC</i>, the <i>supportedBandwidthUL</i>, and <i>supportedBandwidthCombinationSetIntraENDC-v1790</i>. To determine whether the UE supports a channel bandwidth of 3MHz, the network may ignore this capability and validate instead the <i>support3MHz-ChannelBW-Symmetric-r18</i>, <i>support3MHz-ChannelBW-Asymmetric-r18</i>, the <i>supportedBandwidthCombinationSet</i>, the <i>asymmetricBandwidthCombinationSet</i> (for a band supporting asymmetric channel bandwidth as defined in clause 5.3.6 of TS 38.101-1 [2]), the <i>supportedBandwidthUL-v1840</i> and the <i>supportedMinBandwidthUL-v1840</i>.</p> <p>For serving cell(s) with other channel bandwidths:</p> <ul style="list-style-type: none"> <li>- If <i>supportedAggBW-FR1-r17</i> is reported, the network validates the <i>channelBWs-UL</i>, the <i>supportedBandwidthCombinationSet</i>, the <i>supportedBandwidthCombinationSetIntraENDC</i>, the <i>asymmetricBandwidthCombinationSet</i> (for a band supporting asymmetric channel bandwidth as defined in clause 5.3.6 of TS 38.101-1 [2] for TN or in clause 5.3.6 of TS 38.101-5 [34] for NTN), <i>supportedBandwidthUL-v1780/supportedBandwidthUL-v1900</i>, <i>supportedMinBandwidthUL-r17/supportedMinBandwidthUL-v1900</i>, <i>supportedAggBW-FR1-r17</i>, and <i>supportedBandwidthCombinationSetIntraENDC-v1790</i>.</li> <li>- Otherwise, the network validates the <i>channelBWs-UL</i>, the</li> </ul> |      |     |     |     |

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |      |    |     |     |

The minimum of <i>maxNumberTxPortsPerResource</i> is 'p4';</li> <li>- <i>maxNumberResourcesPerBand</i> indicates the maximum number of resources across all CCs in a band;</li> <li>- <i>totalNumberTxPortsPerBand</i> indicates the total number of Tx ports across all CCs in a band. The minimum value of <i>totalNumberTxPortsPerBand</i> is 4.</li> </ul> <p>The UE supporting this feature shall indicate the support of individual codebook types in the reported mixed codebook combination among <i>fetype2basic-r17</i>, <i>etype2R1-r16</i>, <i>codebookComboParametersAddition-r16</i>, <i>supportedCSI-RS-ResourceList</i>, <i>fetype2R1-r17</i>, <i>fetype2R2-r17</i>.</p> |      |    |     |     |

**codebookComboParameterMultiTRP-r17**

Indicates the support of active CSI-RS resources and ports in the presence of multi-TRP CSI.

Indicates the support of active CSI-RS resources and ports for mixed codebook types in any slot. The UE reports supported active CSI-RS resources and ports for up to 4 mixed codebook combinations. The following are the possible mixed codebook combinations {Codebook1, Codebook2, Codebook3}:

- *nCJT-null-null* indicates {NCJT, NULL, NULL}
- *nCJT1SP-null-null* indicates {NCJT+Type 1 SP for sTRP, NULL, NULL}
- *nCJT-Type2-null-r16* indicates {NCJT, Type 2, Null}
- *nCJT-Type2PS-null-r16* indicates {NCJT, Type 2 with port selection, Null}
- *nCJT-eType2R1-null-r16* indicates {NCJT, eType 2 with R=1, Null}
- *nCJT-eType2R2-null-r16* indicates {NCJT, eType 2 with R=2, Null}
- *nCJT-eType2R1PS-null-r16* indicates {NCJT, eType 2 with R=1 and port selection, Null}
- *nCJT-eType2R2PS-null-r16* indicates {NCJT, eType 2 with R=2 and port selection, Null}
- *nCJT-Type2-Type2PS-r16* indicates {NCJT, Type 2, Type 2 with port selection}
- *nCJT1SP-Type2-null-r16* indicates {NCJT+Type 1 SP for sTRP, Type 2, Null}
- *nCJT1SP-Type2PS-null-r16* indicates {NCJT+Type 1 SP for sTRP, Type 2 with port selection, Null}
- *nCJT1SP-eType2R1-null-r16* indicates {NCJT+Type 1 SP for sTRP, eType 2 with R=1, Null}
- *nCJT1SP-eType2R2-null-r16* indicates {NCJT+Type 1 SP for sTRP, eType 2 with R=2, Null}
- *nCJT1SP-eType2R1PS-null-r16* indicates {NCJT+Type 1 SP for sTRP, eType 2 with R=1 and port selection, Null}
- *nCJT1SP-eType2R2PS-null-r16* indicates {NCJT+Type 1 SP for sTRP, eType 2 with R=2 and port selection, Null}
- *nCJT1SP-Type2-Type2PS-r16* indicates {NCJT+Type 1 SP for sTRP, Type 2, Type 2 with port selection}
- *nCJT-feType2PS-null-r17* indicates {NCJT, FeType II PS M=1, NULL}
- *nCJT-feType2PS-M2R1-null-r17* indicates {NCJT, FeType II PS M=2 R=1, NULL}
- *nCJT-feType2PS-M2R2-null-r17* indicates {NCJT, FeType II PS M=2 R=2, NULL}
- *nCJT-Type2-feType2-PS-M1-r17* indicates {NCJT, Type II, FeType II PS M=1}
- *nCJT-Type2-feType2-PS-M2R1-r17* indicates {NCJT, Type II, FeType II PS M=2 R=1}
- *nCJT-eType2R1-feType2-PS-M1-r17* indicates {NCJT, eType II R=1, FeType II PS M=1}
- *nCJT-eType2R1-feType2-PS-M2R1-r17* indicates {NCJT, eType II R=1, FeType II PS M=2 R=1}
- *nCJT1SP-feType2PS-null-r17* indicates {NCJT+Type 1 SP for sTRP, FeType II PS M=1, NULL}
- *nCJT1SP-feType2PS-M2R1-null-r17* indicates {NCJT+Type 1 SP for sTRP, FeType II PS M=2 R=1, NULL}
- *nCJT1SP-feType2PS-M2R2-null-r17* indicates {NCJT+Type 1 SP for sTRP, FeType II PS M=2 R=2, NULL}
- *nCJT1SP-Type2-feType2-PS-M1-r17* indicates {NCJT+Type 1 SP for sTRP, Type II, FeType II PS M=1}
- *nCJT1SP-Type2-feType2-PS-M2R1-r17* indicates {NCJT+Type 1 SP for sTRP, Type II, FeType II PS M=2 R=1}
- *nCJT1SP-eType2R1-feType2-PS-M1-r17* indicates {NCJT+Type 1 SP for sTRP, eType II R=1, FeType II PS M=1}
- *nCJT1SP-eType2R1-feType2-PS-M2R1-r17* indicates {NCJT+Type 1 SP for sTRP, eType II R=1, FeType II PS M=2 R=1}

For each mixed codebook supported by the UE, *supportedCSI-RS-ResourceListAdd-r16* indicates the list of supported CSI-RS resources in a band by referring to *codebookVariantsList*. The following parameters are included in *codebookVariantsList*:

- *maxNumberTxPortsPerResource* indicates the maximum number of Tx ports in a resource of a band combination.
- *maxNumberResourcesPerBand* indicates the maximum number of resources across all CCs in a band combination.
- *totalNumberTxPortsPerBand* indicates the total number of Tx ports across all CCs in a band combination.

NOTE 1: A CMR pair configured for NCJT will be counted as two activated resources, a CMR configured for sTRP will be counted as one activated resource for a triplet.

| <p>Indicates the UE support of additional codebooks and the corresponding parameters supported by the UE of Enhanced Type II Codebook (eType-II) with refinement for multi-TRP CJT.</p> <p>The basic features of eType-II codebook with refinement for multi-TRP CJT are included in <i>eType2CJT-r18</i>. This capability signalling comprises the following parameters:</p> <ul style="list-style-type: none"> <li>- <i>supportedCSI-RS-ResourceList-r18</i> indicates the list of supported CSI-RS resources across all CCs in a band by referring to <i>codebookVariantsList</i>. The following parameters are included in <i>codebookVariantsList</i>:</li> <li>- <i>maxNumberTxPortsPerResource</i> indicates the maximum number of Tx ports in one NZP CSI-RS resource associated with multi-TRP CJT;</li> <li>- <i>maxNumberResourcesPerBand</i> indicates the maximum total number of NZP CSI-RS resource associated with multi-TRP CJT;</li> <li>- <i>totalNumberTxPortsPerBand</i> indicates the total number of Tx ports of NZP CSI-RS resources associated with multi-TRP CJT.</li> <li>- <i>scalingfactor-r18</i> indicates the scaling factor X for CPU occupation counting for CJT etype-II codebook;</li> <li>- <i>maxNumberNZP-CSI-RS-MultiTRP-CJT-r18</i> indicates the maximum number of NZP CSI-RS resources in one NZP CSI-RS resource set associated with multi-TRP CJT.</li> </ul> <p>The UE indicating <i>eType2CJT-r18</i> shall support N=N_TRP only, N_L=1 only, support mode 2 for eType-II codebook refinement for multi-TRP CJT, support PMI subband R=1, support parameter combinations with L=2,4, support rank 1,2, and support frequency basis selection mode 2, i.e., common frequency basis selection among different TRPs.</p> <p>The UE indicating support of <i>eType2CJT-r18</i> shall also indicate support of <i>csi-ReportFramework</i> and <i>simultaneousCSI-ReportsAllCC</i>.</p> <p>NOTE 1: When NTRP=1 TRP is configured, OCPU =1. When NTRP&gt;1 TRPS are configured, OCPU = cell(X * NTRP).</p> <p>NOTE 2: A-CSI is supported, and whether UE supports SP-CSI on PUSCH is dependent on <i>sp-CSI-ReportPUSCH</i>.</p> <p>The UE optionally includes <i>eType2CJT-FD-IO-r18</i> to indicate whether the UE supports mode 1 for CJT eType-II codebook with FD basis selection integer frequency offset. This capability signalling comprises the list of supported NZP CSI-RS resources across all CCs in a band by referring to <i>codebookVariantsList</i>. The UE indicating <i>eType2CJT-FD-IO-r18</i> shall also support frequency basis selection mode 1, i.e., common frequency basis selection among different TRPs with FD basis selection integer frequency offset.</p> <p>The UE optionally indicates <i>eType2CJT-FD-FO-r18</i> to indicate whether the UE supports frequency basis selection mode 1 with FD basis selection fractional frequency offset for eType-II based CJT codebook. The UE indicating <i>eType2CJT-FD-FO-r18</i> shall also indicate support of <i>eType2CJT-FD-IO-r18</i>.</p> <p>The UE optionally indicates <i>eType2CJT-R2-r18</i> to indicate whether the UE supports eType-II codebook refinement for multi-TRP CJT with PMI subbands R=2. This capability signalling comprises the list of supported NZP CSI-RS resources with R=2 across all CCs in a band by referring to <i>codebookVariantsList</i> across all CCs.</p> <p>The UE optionally indicates <i>eType2CJT-PV-Beta-r18</i> to indicate whether the UE supports eType-II codebook refinement for multi-TRP CJT with parameter combination <math>pv=\{1/2, 1/2, 1/2, 1/2\}</math> and <math>\beta=1/2</math>.</p> <p>The UE optionally indicates <i>eType2CJT-2NN1N2-r18</i> to indicate whether the UE supports <math>2NN1N2 &gt; 32</math> for eType-II CJT codebook. The UE indicates the maximum number of ports across all TRPs for one CJT CSI measurement.</p> <p>The UE optionally indicates <i>eType2CJT-Rank3Rank4-r18</i> to indicate whether the UE supports eType-II codebook refinement for multi-TRP CJT with rank 3,4.</p> <p>The UE optionally indicates <i>eType2CJT-L6-r18</i> to indicate whether the UE supports eType-II codebook refinement for multi-TRP CJT with parameter combination with L=6. The UE supports this capability only for N_TRP=1.</p> <p>The UE optionally indicates <i>eType2CJT-NN-r18</i> to indicate whether the UE supports selection of <math>N \leq N\_TRP</math> CSI-RS resource by UE for multi-TRP CJT based on eType-II codebook.</p> <p>The UE optionally indicates <i>eType2CJT-NL-SD-r18</i> to indicate whether the UE supports <math>N\_L &gt; 1</math> combinations of number of SD basis across CSI-RS resources for CJT eType-II codebook. The UE indicates the maximum number of lists for spatial</p> |      |    |     |     |

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | Band | No | N/A | N/A |

This capability signalling comprises</p> |      |    |     |     |

**codebookParameterseType2DopplerExt-r19**

Indicates whether the UE supports extended eType-II Doppler codebook.

The basic features of extended eType-II Doppler codebook for 64 Tx ports by aggregating multiple NZP CSI-RS resource groups within 1 slot are included in *eType2Doppler-64PortExt-r19*. This capability signalling comprises the following parameters:

- *supportedCSI-RS-ResourceExtList-r19* indicates the list of supported CSI-RS resources across all CCs in a band by referring to *codebookVariantsListExt-r19*. The following parameters are included in *codebookVariantsListExt-r19*:
- *maxNumberResourcesPerBand-r19* indicates the maximum number of resources across all CCs in a band, simultaneously.
- *totalNumberTxPortsPerBand-r19* indicates the total number of Tx ports across all CCs in a band, simultaneously.
- *processingCapability-r19* indicates the supported processing capability. Value *cap1* indicates the processing capability reuses timeline of enhanced Type II Codebook (eType-II) based on doppler CSI and OCPU =  $Y \cdot \text{vectorLengthDD-r18} \cdot \text{ceil}(P/32)$  when P/SP-CSI-RS is configured for CMR, OCPU =  $Y \cdot K_{\text{DOPP}} \cdot \text{ceil}(P/32)$  when A-CSI-RS is configured for CMR. Value *cap2* indicates the processing capability scales the timeline of enhanced Type II Codebook (eType-II) based on doppler CSI by  $\text{ceil}(P/32)$  where P is the total number of ports across all the K aggregated CSI-RS resources and OCPU =  $Y \cdot \text{vectorLengthDD-r18}$ , when P/SP-CSI-RS is configured for CMR, OCPU =  $Y \cdot K_{\text{DOPP}}$ , when A-CSI-RS is configured for CMR. '*cap1*' is a higher capability than '*cap2*';
- *valueY-P-SP-CSI-RS-r19* indicates value of Y for CPU occupation when P/SP-CSI-RS is configured for CMR.
- *valueY-A-CSI-RS-r19* indicates value of Y for CPU occupation when A-CSI-RS is configured for CMR.
- *scalingfactor-r19* indicates scaling factor for active resource counting Kp.
- *maxNumberResource-r19* indicates the maximum number of CSI-RS resource in a resource group for aperiodic CSI-RS resource set or in a resource set for periodic CSI-RS resource set.
- *supportedCSI-RS-ResourceListPerCC-r19* indicates the list of supported CSI-RS resources per CC simultaneously in a band by referring to *codebookVariantsListExt-r19*. The following parameters are included in *codebookVariantsListExt-r19*:
- *maxNumberResourcesPerBand-r19* indicates the maximum number of resources per CC in a band, simultaneously.
- *totalNumberTxPortsPerBand-r19* indicates the total number of Tx ports across per CC in a band, simultaneously.

The UE indicating *eType2Doppler-64PortExt-r19* shall also support X=1 CQI based on the first/earliest slot of the CSI reporting window and the first/earliest predicted PMI (TDCQI='1-1'), support PMI subband R=1, support parameter combinations with L=2,4, support rank = 1,2, and support the size of DD-basis, *vectorLengthDD-r18* = 1.

A UE supporting this feature shall also indicate support of *eType2Doppler-r18*.

The UE optionally includes *eType2Doppler-48PortExt-r19* to indicate whether the UE supports extended eType-II Doppler codebook for 48 Tx ports by aggregating multiple NZP CSI-RS resource groups within 1 slot. This capability signalling comprises the following parameters:

- *supportedCSI-RS-ResourceExtList-r19* indicates the list of supported CSI-RS resources across all CCs in a band by referring to *codebookVariantsListExt-r19*. The following parameters are included in *codebookVariantsListExt-r19*:
- *maxNumberResourcesPerBand-r19* indicates the maximum number of resources across all CCs in a band, simultaneously.
- *totalNumberTxPortsPerBand-r19* indicates the total number of Tx ports across all CCs in a band, simultaneously.
- *processingCapability-r19* indicates the supported processing capability. Value *cap1* indicates the processing capability reuses timeline of enhanced Type II Codebook (eType-II) based on doppler CSI and OCPU =  $Y \cdot \text{vectorLengthDD-r18} \cdot \text{ceil}(P/32)$  when P/SP-CSI-RS is configured for CMR, OCPU =  $Y \cdot K_{\text{DOPP}} \cdot \text{ceil}(P/32)$  when A-CSI-RS is configured for CMR. Value *cap2* indicates the processing capability scales the timeline of enhanced Type II Codebook (eType-II) based on doppler CSI by  $\text{ceil}(P/32)$  where P is the total number of ports across all the K aggregated CSI-RS

**codebookParameterseType2Ext-r19**

Indicates whether the UE supports extended eType-II codebook.

The basic features of extended eType-II codebook for 64 Tx ports by aggregating multiple NZP CSI-RS resources within 1 slot are included in *eType2-64PortExt-r19*. This capability signalling comprises the following parameters:

- *supportedCSI-RS-ResourceExtList-r19* indicates the list of supported CSI-RS resources across all CCs in a band by referring to *codebookVariantsListExt-r19*. The following parameters are included in *codebookVariantsListExt-r19*:
  - *maxNumberResourcesPerBand-r19* indicates the maximum number of resources across all CCs in a band, simultaneously.
  - *totalNumberTxPortsPerBand-r19* indicates the total number of Tx ports across all CCs in a band, simultaneously.
- *processingCapability-r19* indicates the supported processing capability. Value *cap1* indicates the processing capability reuses *Z/Z'* values and  $O_{CPU} = \text{ceil}(P/32)$ . Value *cap2* indicates the processing capability scales the timeline *Z/Z'* by  $\text{ceil}(P/32)$  where P is the total number of ports across all the K aggregated CSI-RS resources and  $O_{CPU} = 1$ . '*cap1*' is a higher capability than '*cap2*'.
- *maxNumberResource-r19* indicates the maximum number of CSI-RS resource in a resource set.
- *supportedCSI-RS-ResourceListPerCC-r19* indicates the list of supported CSI-RS resources per CC simultaneously in a band by referring to *codebookVariantsListExt-r19*. The following parameters are included in *codebookVariantsListExt-r19*:
  - *maxNumberResourcesPerBand-r19* indicates the maximum number of resources per CC in a band, simultaneously.
  - *totalNumberTxPortsPerBand-r19* indicates the total number of Tx ports across per CC in a band, simultaneously.

The UE indicating *eType2-64PortExt-r19* shall also support parameter combination 1-6, support rank 1-2 and support R=1.

A UE supporting this feature shall also indicate support of *etype2R1-r16*.

The UE optionally includes *eType2-48PortExt-r19* to indicate whether the UE supports extended eType-II codebook for 48 Tx ports by aggregating multiple NZP CSI-RS resources within 1 slot. This capability signalling comprises the following parameters:

- *supportedCSI-RS-ResourceExtList-r19* indicates the list of supported CSI-RS resources across all CCs in a band by referring to *codebookVariantsListExt-r19*. The following parameters are included in *codebookVariantsListExt-r19*:
  - *maxNumberResourcesPerBand-r19* indicates the maximum number of resources across all CCs in a band, simultaneously.
  - *totalNumberTxPortsPerBand-r19* indicates the total number of Tx ports across all CCs in a band, simultaneously.
- *processingCapability-r19* indicates the supported processing capability. Value *cap1* indicates the processing capability reuses *Z/Z'* values and  $O_{CPU} = \text{ceil}(P/32)$ . Value *cap2* indicates the processing capability scales the timeline *Z/Z'* by  $\text{ceil}(P/32)$  where P is the total number of ports across all the K aggregated CSI-RS resources and  $O_{CPU} = 1$ . '*cap1*' is a higher capability than '*cap2*'.
- *maxNumberResource-r19* indicates the maximum number of CSI-RS resource in a resource set.
- *supportedCSI-RS-ResourceListPerCC-r19* indicates the list of supported CSI-RS resources per CC simultaneously in a band by referring to *codebookVariantsListExt-r19*. The following parameters are included in *codebookVariantsListExt-r19*:
  - *maxNumberResourcesPerBand-r19* indicates the maximum number of resources per CC in a band, simultaneously.
  - *totalNumberTxPortsPerBand-r19* indicates the total number of Tx ports across per CC in a band, simultaneously.

The UE optionally includes *eType2-128PortExt-r19* to indicate whether the UE supports extended eType-II codebook for 128 Tx ports by aggregating multiple NZP CSI-RS resources within 1 slot and 4 CSI-RS resources in a resource set. This capability signalling comprises the following parameters:

- *supportedCSI-RS-ResourceExtList-r19* indicates the list of supported CSI-RS resources across all CCs in a band by referring to

| <p>Indicates the UE support of additional codebooks and the corresponding parameters supported by the UE of Further Enhanced Type II Codebook (feType-II) with refinement for multi-TRP CJT.</p> <p>The basic features of feType-II codebook with refinement for multi-TRP CJT are included in <i>feType2CJT-r18</i>. This capability signalling comprises the following parameters:</p> <ul style="list-style-type: none"> <li>- <i>supportedCSI-RS-ResourceList-r18</i> indicates the list of supported CSI-RS resources across all CCs in a band by referring to <i>codebookVariantsList</i>. The following parameters are included in <i>codebookVariantsList</i>: <ul style="list-style-type: none"> <li>- <i>maxNumberTxPortsPerResource</i> indicates the maximum number of Tx ports in one NZP CSI-RS resource associated with multi-TRP CJT;</li> <li>- <i>maxNumberResourcesPerBand</i> indicates the maximum total number of NZP CSI-RS resource associated with multi-TRP CJT;</li> <li>- <i>totalNumberTxPortsPerBand</i> indicates the total number of Tx ports of NZP CSI-RS resources associated with multi-TRP CJT.</li> </ul> </li> <li>- <i>scalingfactor-r18</i> indicates the scaling factor X for CPU occupation counting for CJT fetype-II codebook.</li> <li>- <i>maxNumberNZP-CSI-RS-MultiTRP-CJT-r18</i> indicates the maximum number of NZP CSI-RS resources in one NZP CSI-RS resource set associated with multi-TRP CJT.</li> </ul> <p>The UE indicating <i>feType2CJT-r18</i> shall support N=N_TRP only, N_L=1 only, support mode 2 for FeType-II port selection codebook refinement for multi-TRP CJT, support PMI subband R=1, support parameter combinations with M=1, support rank 1,2, and support frequency basis selection mode 2, i.e., common frequency basis selection among different TRPs.</p> <p>The UE indicating support of <i>feType2CJT-r18</i> shall also indicate support of <i>csi-ReportFramework</i> and <i>simultaneousCSI-ReportsAllCC</i>.</p> <p>NOTE 1: When NTRP=1 TRP is configured, OCPU =1. When NTRP&gt;1 TRPS are configured, OCPU = cell(X * NTRP).</p> <p>NOTE 2: A-CSI is supported, and whether UE supports SP-CSI on PUSCH is dependent on <i>sp-CSI-ReportPUSCH</i>.</p> <p>NOTE 3: A UE that supports CSI enhancement for Rel 17 based type-II CJT must support this feature.</p> <p>The UE optionally includes <i>feType2CJT-FD-IO-r18</i> to indicate whether the UE supports FeType-II port selection codebook refinement for multi-TRP CJT with PMI subband R=1. This capability signalling comprises the list of supported NZP CSI-RS resources across all CCs in a band by referring to <i>codebookVariantsList</i>. The UE indicating <i>feType2CJT-FD-IO-r18</i> shall also support frequency basis selection mode 1, i.e., common frequency basis selection among different TRPs with FD basis selection integer frequency offset.</p> <p>The UE optionally indicates <i>feType2CJT-FD-FO-r18</i> to indicate whether the UE supports frequency basis selection mode 1 with FD basis selection fractional frequency offset for FeType-II port selection based CJT codebook. The UE indicating <i>feType2CJT-FD-FO-r18</i> shall also indicate support of <i>feType2CJT-FD-IO-r18</i>.</p> <p>The UE optionally indicates <i>eType2CJT-M2R1-r18</i> to indicate whether the UE supports FeType-II port selection codebook refinement for multi-TRP CJT with M=2 and PMI subband R=1. This capability signalling comprises the list of supported NZP CSI-RS resources with R=2 across all CCs in a band by referring to <i>codebookVariantsList</i>. The UE indicating <i>feType2CJT-M2R1-r18</i> shall also indicate support of <i>feType2CJT-r18</i> or <i>feType2CJT-FD-IO-r18</i>.</p> <p>The UE optionally indicates <i>feType2CJT-R2-r18</i> to indicate whether the UE supports FeType-II port selection codebook refinement for multi-TRP CJT with PMI subband R=2. This capability signalling comprises the list of supported NZP CSI-RS resources with R=2 across all CCs in a band by referring to <i>codebookVariantsList</i>. The UE indicating <i>feType2CJT-R2-r18</i> shall also indicate support of <i>feType2CJT-r18</i> or <i>feType2CJT-FD-IO-r18</i>.</p> <p>The UE optionally indicates <i>feType2CJT-2NN1N2-r18</i> to indicate whether the UE supports 2NN1N2 &gt;32 for FeType-II CJT codebook. The UE indicates the maximum number of ports across all TRPs for one CJT CSI measurement.</p> <p>The UE optionally indicates <i>feType2CJT-Rank3Rank4-r18</i> to indicate whether the UE supports FeType-II port selection codebook refinement for multi-TRP CJT with rank 3,4.</p> <p>The UE optionally indicates <i>feType2CJT-NN-r18</i> to indicate whether the UE supports selection of N &lt;= N_TRP CSI-RS resource by UE for multi-TRP CJT</p> |      |    |     |     |

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |      |    |     |     |

**codebookParametersfeType2Ext-r19**

Indicates whether the UE supports extended feType-II codebook.

The basic feature of extended feType-II codebook for 64 Tx ports by aggregating multiple NZP CSI-RS resources within 1 slot are included in *feType2-64PortExt-r19*. This capability signalling comprises the following parameters:

- *supportedCSI-RS-ResourceExtList-r19* indicates the list of supported CSI-RS resources across all CCs in a band by referring to *codebookVariantsListExt-r19*. The following parameters are included in *codebookVariantsListExt-r19*:
  - *maxNumberResourcesPerBand-r19* indicates the maximum number of resources across all CCs in a band, simultaneously.
  - *totalNumberTxPortsPerBand-r19* indicates the total number of Tx ports across all CCs in a band, simultaneously.
- *processingCapability-r19* indicates the supported processing capability. Value *cap1* indicates the processing capability reuses Z/Z' values and OCPU = ceil(P/32). Value *cap2* indicates the processing capability scales the timeline Z/Z' by ceil(P/32) where P is the total number of ports across all the K aggregated CSI-RS resources and OCPU = 1. '*cap1*' is a higher capability than '*cap2*'.
- *maxNumberResource-r19* indicates the maximum number of CSI-RS resource in a resource set.
- *supportedCSI-RS-ResourceListPerCC-r19* indicates the list of supported CSI-RS resources per CC simultaneously in a band by referring to *codebookVariantsListExt-r19*. The following parameters are included in *codebookVariantsListExt-r19*:
  - *maxNumberResourcesPerBand-r19* indicates the maximum number of resources per CC in a band, simultaneously.
  - *totalNumberTxPortsPerBand-r19* indicates the total number of Tx ports across per CC in a band, simultaneously.

The UE indicating *feType2-64PortExt-r19* shall also support parameter combination with M=1, support rank 1-2 and support R=1.

A UE supporting this feature shall also indicate support of *fetype2basic-r17*.

The UE optionally includes *feType2-48PortExt-r19* to indicate whether the UE supports extended feType-II codebook for 48 Tx ports by aggregating multiple NZP CSI-RS resources within 1 slot. This capability signalling comprises the following parameters:

- *supportedCSI-RS-ResourceExtList-r19* indicates the list of supported CSI-RS resources across all CCs in a band by referring to *codebookVariantsListExt-r19*. The following parameters are included in *codebookVariantsListExt-r19*:
  - *maxNumberResourcesPerBand-r19* indicates the maximum number of resources across all CCs in a band, simultaneously.
  - *totalNumberTxPortsPerBand-r19* indicates the total number of Tx ports across all CCs in a band, simultaneously.
- *processingCapability-r19* indicates the supported processing capability. Value *cap1* indicates the processing capability reuses Z/Z' values and OCPU = ceil(P/32). Value *cap2* indicates the processing capability scales the timeline Z/Z' by ceil(P/32) where P is the total number of ports across all the K aggregated CSI-RS resources and OCPU = 1. '*cap1*' is a higher capability than '*cap2*'.
- *maxNumberResource-r19* indicates the maximum number of CSI-RS resource in a resource set.
- *supportedCSI-RS-ResourceListPerCC-r19* indicates the list of supported CSI-RS resources per CC simultaneously in a band by referring to *codebookVariantsListExt-r19*. The following parameters are included in *codebookVariantsListExt-r19*:
  - *maxNumberResourcesPerBand-r19* indicates the maximum number of resources per CC in a band, simultaneously.
  - *totalNumberTxPortsPerBand-r19* indicates the total number of Tx ports across per CC in a band, simultaneously.

The UE optionally includes *feType2-M2R1Ext-r19* to indicate whether the UE supports parameter combinations with M=2 and R=1 for extended FeType-II port selection codebook for up to 64 ports. This capability indicates the list of supported CSI-RS resources across all CCs in a band by referring to *codebookVariantsListAggregate-r19*. The following parameters are included in

**codebookParametersType1MP-r19**

Indicates whether the UE supports enhanced Type-I MP codebook within 1 slot. The basic features of enhanced Type-I MP codebook for 64 ports within 1 slot are included in *enhType1MP64Ports-r19*. This capability signalling comprises the following parameters:

- *supportedCSI-RS-ResourceExtList-r19* indicates the list of supported CSI-RS resources across all CCs in a band by referring to *codebookVariantsListExt-r19*. The following parameters are included in *codebookVariantsListExt-r19*:
  - *maxNumberResourcesPerBand-r19* indicates the maximum number of resources across all CCs in a band, simultaneously.
  - *totalNumberTxPortsPerBand-r19* indicates the total number of Tx ports across all CCs in a band, simultaneously.
- *maxPanel-r19* indicates the supported maximum number of panels.
- *maxNumberResource-r19* indicates the maximum number of CSI-RS resource in a resource set.
- *processingCapability-r19* indicates the supported processing capability. Value *cap1* indicates the processing capability reuses  $Z/Z'$  values and  $OCPU = \text{ceil}(P/32)$ . Value *cap2* indicates the processing capability scales the timeline  $Z/Z'$  by  $\text{ceil}(P/32)$  where P is the total number of ports across all the K aggregated CSI-RS resources and  $OCPU = 1$ . '*cap1*' is a higher capability than '*cap2*'.
- *supportedCSI-RS-ResourceListPerCC-r19* indicates the list of supported CSI-RS resources per CC simultaneously in a band by referring to *codebookVariantsListExt-r19*. The following parameters are included in *codebookVariantsListExt-r19*:
  - *maxNumberResourcesPerBand-r19* indicates the maximum number of resources per CC in a band, simultaneously.
  - *totalNumberTxPortsPerBand-r19* indicates the total number of Tx ports across per CC in a band, simultaneously.

A UE supporting this feature shall also indicate support of *csi-ReportFramework*.

The UE optionally includes *enhType1MP48Ports-r19* to indicate whether the UE supports enhanced Type-I MP codebook for 48 ports within 1 slot. This capability signalling comprises the following parameters:

- *supportedCSI-RS-ResourceExtList-r19* indicates the list of supported CSI-RS resources across all CCs in a band by referring to *codebookVariantsListExt-r19*. The following parameters are included in *codebookVariantsListExt-r19*:
  - *maxNumberResourcesPerBand-r19* indicates the maximum number of resources across all CCs in a band, simultaneously.
  - *totalNumberTxPortsPerBand-r19* indicates the total number of Tx ports across all CCs in a band, simultaneously.
- *maxPanel-r19* indicates the supported maximum number of panels.
- *maxNumberResource-r19* indicates the maximum number of CSI-RS resource in a resource set.
- *processingCapability-r19* indicates the supported processing capability. Value *cap1* indicates the processing capability reuses  $Z/Z'$  values and  $OCPU = \text{ceil}(P/32)$ . Value *cap2* indicates the processing capability scales the timeline  $Z/Z'$  by  $\text{ceil}(P/32)$  where P is the total number of ports across all the K aggregated CSI-RS resources and  $OCPU = 1$ . '*cap1*' is a higher capability than '*cap2*'.
- *supportedCSI-RS-ResourceListPerCC-r19* indicates the list of supported CSI-RS resources per CC simultaneously in a band by referring to *codebookVariantsListExt-r19*. The following parameters are included in *codebookVariantsListExt-r19*:
  - *maxNumberResourcesPerBand-r19* indicates the maximum number of resources per CC in a band, simultaneously.
  - *totalNumberTxPortsPerBand-r19* indicates the total number of Tx ports across per CC in a band, simultaneously.

The UE optionally includes *enhType1MP128Ports-r19* to indicate whether the UE supports enhanced Type-I MP codebook for 128 ports within 1 slot and 4 CSI-RS resources in a resource set. This capability signalling comprises the following parameters:

- *supportedCSI-RS-ResourceExtList-r19* indicates the list of supported CSI-RS resources across all CCs in a band by referring to *codebookVariantsListExt-r19*. The following parameters are included in *codebookVariantsListExt-r19*:

| Band | No | N/A | N/A |
|------|----|-----|-----|
|------|----|-----|-----|

**codebookParametersType1SP-SchemeA-r19**

Indicates whether the UE supports enhanced Type-I SP codebook for Scheme-A by aggregating multiple NZP CSI-RS resources within one slot.

The basic feature of enhanced Type-I SP codebook for 64 ports Scheme-A are included in *enhType1SP64PortsSchemeA-r19*. This capability signalling comprises the following parameters:

- *supportedCSI-RS-ResourceExtList-r19* indicates the list of supported CSI-RS resources across all CCs in a band by referring to *codebookVariantsListExt-r19*. The following parameters are included in *codebookVariantsListExt-r19*:
  - *maxNumberResourcesPerBand-r19* indicates the maximum number of resources across all CCs in a band, simultaneously.
  - *totalNumberTxPortsPerBand-r19* indicates the total number of Tx ports across all CCs in a band, simultaneously.
- *maxRank-r19* indicates the supported maximum rank.
- *maxNumberResource-r19* indicates the maximum number of CSI-RS resource in a resource set.
- *processingCapability-r19* indicates the supported processing capability. Value *cap1* indicates the processing capability reuses  $Z/Z'$  values and  $O_{CPU} = \text{ceil}(P/32)$ . Value *cap2* indicates the processing capability scales the timeline  $Z/Z'$  by  $\text{ceil}(P/32)$  where P is the total number of ports across all the K aggregated CSI-RS resources and  $O_{CPU} = 1$ . '*cap1*' is a higher capability than '*cap2*'.
- *supportedCSI-RS-ResourceListPerCC-r19* indicates the list of supported CSI-RS resources per CC simultaneously in a band by referring to *codebookVariantsListExt-r19*. The following parameters are included in *codebookVariantsListExt-r19*:
  - *maxNumberResourcesPerBand-r19* indicates the maximum number of resources per CC in a band, simultaneously.
  - *totalNumberTxPortsPerBand-r19* indicates the total number of Tx ports across per CC in a band, simultaneously.

A UE supporting this feature shall also indicate support of *csi-ReportFramework*.

The UE optionally includes *enhType1SP48PortsSchemeA-r19* to indicate whether the UE supports enhanced Type-I SP codebook for Scheme-A with 48 Tx ports by aggregating multiple NZP CSI-RS resources within one slot. This capability signalling comprises the following parameters:

- *supportedCSI-RS-ResourceExtList-r19* indicates the list of supported CSI-RS resources across all CCs in a band by referring to *codebookVariantsListExt-r19*. The following parameters are included in *codebookVariantsListExt-r19*:
  - *maxNumberResourcesPerBand-r19* indicates the maximum number of resources across all CCs in a band, simultaneously.
  - *totalNumberTxPortsPerBand-r19* indicates the total number of Tx ports across all CCs in a band, simultaneously.
- *maxRank-r19* indicates the supported maximum rank.
- *maxNumberResource-r19* indicates the maximum number of CSI-RS resource in a resource set.
- *processingCapability-r19* indicates the supported processing capability. Value *cap1* indicates the processing capability reuses  $Z/Z'$  values and  $O_{CPU} = \text{ceil}(P/32)$ . Value *cap2* indicates the processing capability scales the timeline  $Z/Z'$  by  $\text{ceil}(P/32)$  where P is the total number of ports across all the K aggregated CSI-RS resources and  $O_{CPU} = 1$ . '*cap1*' is a higher capability than '*cap2*'.
- *supportedCSI-RS-ResourceListPerCC-r19* indicates the list of supported CSI-RS resources per CC simultaneously in a band by referring to *codebookVariantsListExt-r19*. The following parameters are included in *codebookVariantsListExt-r19*:
  - *maxNumberResourcesPerBand-r19* indicates the maximum number of resources per CC in a band, simultaneously.
  - *totalNumberTxPortsPerBand-r19* indicates the total number of Tx ports across per CC in a band, simultaneously.

The UE optionally includes *enhType1SP128PortsSchemeA-r19* to indicate whether the UE supports enhanced Type-I SP codebook for Scheme-A with 128 Tx ports by aggregating multiple NZP CSI-RS resources within one slot and 4 CSI-RS resources in a resource set. This capability signalling comprises the following parameters:

| Band | No | N/A | N/A |
|------|----|-----|-----|
|------|----|-----|-----|

**codebookParametersType1SP-SchemeB-r19**

Indicates whether the UE supports enhanced Type-I SP codebook for Scheme-B by aggregating multiple NZP CSI-RS resources within one slot.

The basic features of enhanced Type-I SP codebook for 64 ports Scheme-B are included in *enhType1SP64PortsSchemeB-r19*. This capability signalling comprises the following parameters:

- *supportedCSI-RS-ResourceExtList-r19* indicates the list of supported CSI-RS resources across all CCs in a band by referring to *codebookVariantsListExt-r19*. The following parameters are included in *codebookVariantsListExt-r19*:
  - *maxNumberResourcesPerBand-r19* indicates the maximum number of resources across all CCs in a band, simultaneously.
  - *totalNumberTxPortsPerBand-r19* indicates the total number of Tx ports across all CCs in a band, simultaneously.
- *maxRank-r19* indicates the supported maximum rank.
- *maxNumberResource-r19* indicates the maximum number of CSI-RS resource in a resource set.
- *processingCapability-r19* indicates the supported processing capability. Value *cap1* indicates the processing capability reuses  $Z/Z'$  values and  $O_{CPU} = \text{ceil}(P/32)$ . Value *cap2* indicates the processing capability scales the timeline  $Z/Z'$  by  $\text{ceil}(P/32)$  where P is the total number of ports across all the K aggregated CSI-RS resources and  $O_{CPU} = 1$ . '*cap1*' is a higher capability than '*cap2*'.
- *supportedCSI-RS-ResourceListPerCC-r19* indicates the list of supported CSI-RS resources per CC simultaneously in a band by referring to *codebookVariantsListExt-r19*. The following parameters are included in *codebookVariantsListExt-r19*:
  - *maxNumberResourcesPerBand-r19* indicates the maximum number of resources per CC in a band, simultaneously.
  - *totalNumberTxPortsPerBand-r19* indicates the total number of Tx ports across per CC in a band, simultaneously.

A UE supporting this feature shall also indicate support of *csi-ReportFramework*.

The UE optionally includes *enhType1SP48PortsSchemeB-r19* to indicate whether the UE supports enhanced Type-I SP codebook for Scheme-B with 48 Tx ports by aggregating multiple NZP CSI-RS resources within one slot. This capability signalling comprises the following parameters:

- *supportedCSI-RS-ResourceExtList-r19* indicates the list of supported CSI-RS resources across all CCs in a band by referring to *codebookVariantsListExt-r19*. The following parameters are included in *codebookVariantsListExt-r19*:
  - *maxNumberResourcesPerBand-r19* indicates the maximum number of resources across all CCs in a band, simultaneously.
  - *totalNumberTxPortsPerBand-r19* indicates the total number of Tx ports across all CCs in a band, simultaneously.
- *maxRank-r19* indicates the supported maximum rank.
- *maxNumberResource-r19* indicates the maximum number of CSI-RS resource in a resource set.
- *processingCapability-r19* indicates the supported processing capability. Value *cap1* indicates the processing capability reuses  $Z/Z'$  values and  $O_{CPU} = \text{ceil}(P/32)$ . Value *cap2* indicates the processing capability scales the timeline  $Z/Z'$  by  $\text{ceil}(P/32)$  where P is the total number of ports across all the K aggregated CSI-RS resources and  $O_{CPU} = 1$ . | <b>csi-ReportFrameworkExt-r16</b><br>Indicates whether the UE supports the extension of the maximum number of configured aperiodic CSI report settings for all codebook types. The capability signalling comprises the following:<br><i>maxNumberAperiodicCSI-PerBWP-ForCSI-ReportExt-r16</i> indicates the extended maximum number of aperiodic CSI report setting per BWP for CSI report. If present, the value of <i>maxNumberAperiodicCSI-PerBWP-ForCSI-Report-r16</i> shall replace the corresponding value in <i>csi-ReportFramework</i> .                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | Band | No  | N/A | N/A |
| <b>csi-RS-ForTracking</b><br>Indicates support of CSI-RS for tracking (i.e. TRS). This capability signalling comprises the following parameters: <ul style="list-style-type: none"> <li>- <i>maxBurstLength</i> indicates the TRS burst length. Value 1 indicates 1 slot and value 2 indicates both of 1 slot and 2 slots. In this release UE is mandated to report value 2;</li> <li>- <i>maxSimultaneousResourceSetsPerCC</i> indicates the maximum number of TRS resource sets per CC which the UE can track simultaneously;</li> <li>- <i>maxConfiguredResourceSetsPerCC</i> indicates the maximum number of TRS resource sets configured to UE per CC. It is mandated to report at least 8 for FR1 and 16 for FR2;</li> <li>- <i>maxConfiguredResourceSetsAllCC</i> indicates the maximum number of TRS resource sets configured to UE across CCs. If the UE includes the field in an FR1 band, it shall set the same value in all FR1 bands. If the UE includes the field in an FR2 band, it shall set the same value in all FR2 bands. The UE supports a total number of resources equal to the maximum of the FR1 and FR2 value, but no more than the FR1 value across all FR1 serving cells and no more than the FR2 value across all FR2 serving cells. The UE is mandated to report at least 16 for FR1 and 32 for FR2.</li> </ul> <p>The UE is mandated to report <i>csi-RS-ForTracking</i>.</p> | Band | Yes | N/A | N/A |
| <b>csi-RS-IM-ReceptionForFeedback</b><br>Indicates support of CSI-RS and CSI-IM reception for CSI feedback. This capability signalling comprises the following parameters: <ul style="list-style-type: none"> <li>- <i>maxConfigNumberNZP-CSI-RS-PerCC</i> indicates the maximum number of configured NZP-CSI-RS resources per CC;</li> <li>- <i>maxConfigNumberPortsAcrossNZP-CSI-RS-PerCC</i> indicates the maximum number of ports across all configured NZP-CSI-RS resources per CC;</li> <li>- <i>maxConfigNumberCSI-IM-PerCC</i> indicates the maximum number of configured CSI-IM resources per CC;</li> <li>- <i>maxNumberSimultaneousNZP-CSI-RS-PerCC</i> indicates the maximum number of simultaneous CSI-RS-resources per CC;</li> <li>- <i>totalNumberPortsSimultaneousNZP-CSI-RS-PerCC</i> indicates the total number of CSI-RS ports in simultaneous CSI-RS resources per CC.</li> </ul> <p>The UE is mandated to report <i>csi-RS-IM-ReceptionForFeedback</i>.</p>                                                                                                                                                                                                                                                                                                                                                                                                                            | Band | Yes | N/A | N/A |
| <b>csi-RS-ProcFrameworkForSRS</b><br>Indicates support of CSI-RS processing framework for SRS. This capability signalling comprises the following parameters: <ul style="list-style-type: none"> <li>- <i>maxNumberPeriodicSRS-AssocCSI-RS-PerBWP</i> indicates the maximum number of periodic SRS resources associated with CSI-RS per BWP;</li> <li>- <i>maxNumberAperiodicSRS-AssocCSI-RS-PerBWP</i> indicates the maximum number of aperiodic SRS resources associated with CSI-RS per BWP;</li> <li>- <i>maxNumberSP-SRS-AssocCSI-RS-PerBWP</i> indicates the maximum number of semi-persistent SRS resources associated with CSI-RS per BWP;</li> <li>- <i>simultaneousSRS-AssocCSI-RS-PerCC</i> indicates the number of SRS resources that the UE can process simultaneously in a CC, including periodic, aperiodic and semi-persistent SRS.</li> </ul>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | Band | No  | N/A | N/A |

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |      |    |     |          |

| <p><b><i>dmrs-BundlingRestart-r17</i></b><br/>Indicates whether the UE supports restarting DM-RS bundling after the events triggered by DCI or MAC CE that violate power consistency and phase continuity. The UE is considered to support the feature in a band of a band combination if the UE indicates support of the feature for the corresponding band and for the band combination.</p> <p>UE indicating support of this feature shall also indicate support of <i>maxDurationDMRS-Bundling-r17</i>.</p> <p>NOTE: Events which are triggered by DCI or MAC CE, but do not require UE capability to resume maintaining power consistency and/or phase continuity as specified in clause 6.1.7 of TS 38.214 [12] are excluded from this feature.</p> | Band | No | N/A | N/A      |
| <p><b><i>dmrs-PortEntrySingleDCI-SDM-r18</i></b><br/>Indicates whether the UE supports UL DMRS port entry {0, 2, 3} for single DCI based SDM scheme for Rel-15 DMRS port and/or Rel-18 DMRS port. A UE indicates supporting of this feature shall also indicate support of <i>pusch-CB-SingleDCI-STx2P-SDM-r18</i> or <i>pusch-NonCB-SingleDCI-STx2P-SDM-r18</i>.</p>                                                                                                                                                                                                                                                                                                                                                                                     | Band | No | N/A | FR2 only |
| <p><b><i>dynamicMulticastDCI-Format4-2-r17</i></b><br/>Indicates whether the UE supports DCI format 4_2 with CRC scrambled with G-RNTI for multicast in RRC_CONNECTED. A UE supporting this feature shall also indicate support of <i>dynamicMulticastPCell-r17</i>.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | Band | No | N/A | N/A      |
| <p><b><i>dynamicSlotRepetitionMulticastNTN-SharedSpectrumChAccess-r17</i></b><br/>Indicates the maximum number of supported dynamic slot-level repetitions for group-common PDSCH for multicast in RRC_CONNECTED for NTN and shared spectrum channel access. Value n8 corresponds to 8, and value n16 corresponds to 16. A UE supporting this feature shall also indicate support of <i>dynamicMulticastPCell-r17</i>.</p>                                                                                                                                                                                                                                                                                                                                | Band | No | N/A | N/A      |
| <p><b><i>dynamicSlotRepetitionMulticastTN-NonSharedSpectrumChAccess-r17</i></b><br/>Indicates the maximum number of supported dynamic slot-level repetitions for group-common PDSCH for multicast in RRC_CONNECTED for TN and non-shared spectrum channel access. Value n8 corresponds to 8, and value n16 corresponds to 16. UE shall set the capability value consistently for all FDD-FR1 bands, all TDD-FR1 bands, all TDD-FR2 bands respectively. A UE supporting this feature shall also indicate support of <i>dynamicMulticastPCell-r17</i>.</p>                                                                                                                                                                                                  | Band | No | N/A | N/A      |
| <p><b><i>dynamicWaveformSwitch-r18</i></b><br/>Indicates whether the UE supports dynamic waveform switching for DCI format 0_1/0_2 when configured with only 1 UL carrier in the band. If UE supporting this feature also supports <i>dci-Format1-2And0-2-r16</i>, the UE supports this feature with DCI format 0_2.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                  | Band | No | N/A | N/A      |
| <p><b><i>dynamicWaveformSwitchIntraCA-r18</i></b><br/>Indicates the maximum number of configured UL carriers for intra-band UL CA, which is supported by the UE when dynamic waveform switching for DCI format 0_1/0_2 feature is enabled on any of configured UL carriers in the band. A UE supporting this feature shall also indicate support of <i>dynamicWaveformSwitch-r18</i>.</p>                                                                                                                                                                                                                                                                                                                                                                 | Band | No | N/A | N/A      |
| <p><b><i>dynamicWaveformSwitchPHR-r18</i></b><br/>Indicates whether the UE supports reporting of power headroom information for an assumed PUSCH using target waveform different from waveform of actual PUSCH. A UE supporting this feature shall also indicate support of <i>dynamicWaveformSwitch-r18</i>.</p> <p>NOTE: A UE can be configured to use either the single entry PHR with assumed PUSCH MAC CE or the multiple entry PHR with assumed PUSCH MAC CE for a cell group if the UE indicates support for this feature in any one cell of the cell group.</p>                                                                                                                                                                                   | Band | No | N/A | N/A      |

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |      |    |     |          |

UE shall set the capability value consistently for all FDD bands and all TDD bands respectively as specified for ATG in clause 5.2J of TS 38.101-1 [2]. The inter-band location based conditional handover is supported only if the UE sets the capability value for the source PCell and the target PCell bands.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | Band | No | N/A      | FR1 only |

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |      |     |     |          |

| <p><b>locationBasedCondHandoverEMC-r18</b><br/>Indicates whether the UE supports location based conditional handover for an NTN Earth-moving cell, i.e. <i>condEventD2</i> as specified in TS 38.331 [9].<br/>A UE supporting this feature shall also indicate the support of <i>condHandover-r16</i> for NTN bands and the support of <i>nonTerrestrialNetwork-r17</i>. UE shall set the capability value consistently for all FDD-FR1 NTN bands and all FDD-FR2 NTN bands respectively. The inter-band location based conditional handover is supported only if the UE sets the capability value for the source PCell and the target PCell bands.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | Band | No  | N/A | N/A      |
| <p><b>lowerMSD-r18, lowerMSD-ENDC-r18</b><br/>Indicates whether the UE supports lower maximum sensitivity degradation when the band is the victim band with sensitivity degradation as specified in TS 38.101-1 clause 7.3A.7 [2] and TS 38.101-3 clause 7.3B.2.3.7 [4]. The victim band and associated aggressor band(s) are within at least one of inter-band CA or EN-DC band combinations supported by the UE. The lower maximum sensitivity degradation for the UE is applicable to all supported band combinations that include the victim and associated aggressor band(s). The lower MSD requirements apply to the victim and aggressor band(s) jointly, i.e. if <i>lowerMSD-r18</i> (or <i>lowerMSD-ENDC-r18</i>) is indicated with two aggressor bands, it does not apply to band pairs consisting of the victim band and only one of the aggressor bands.<br/>This feature includes following parameters:</p> <ul style="list-style-type: none"> <li>- <i>aggressorband1-r18</i> indicates the aggressor band which causes sensitivity degradation to the victim band. It is an NR band for inter-band CA band combination and LTE band for EN-DC band combination.</li> <li>- <i>aggressorband2-r18</i> indicates the additional aggressor band only when the sensitivity degradation to the victim band is caused by IMD of another two bands, i.e. <i>aggressorband1-r18</i> and <i>aggressorband2-r18</i> together (i.e. if <i>aggressorband2-r18</i> is the victim band, it does not have to be indicated).</li> <li>- <i>msd-Type-r18</i> indicates the MSD type, including harmonic, harmonic mixing, cross band isolation, IMD2, IMD3, IMD4, IMD5 and 'all'. Value 'all' indicates the MSD capability class is applicable for all MSD types defined in this release, which are applicable to the associated victim band/aggressor band(s).</li> <li>- <i>msd-PowerClass-r18</i> indicates the applicable power class applied for the aggressor band(s) of the CA configuration for the lower MSD capability class reported in <i>msd-Class-r18</i>.</li> <li>- <i>msd-Class-r18</i> indicates the lower MSD capability class as specified in 7.3A.7 in TS 38.101-1 [2] and in 7.3B.2.3.7 in TS 38.101-3 [4].</li> </ul> <p>The victim band and aggressor band(s) only consist of the bands requested by the network in <i>frequencyBandListFilter</i>.</p> | Band | No  | N/A | FR1 only |

| <b><i>ltm-SCG-IntraFreq-r18</i></b><br>Indicates whether the UE supports intra-frequency LTM for SCG with RACH as defined in TS 38.331 [9] and TS 38.321 [8]. UE shall set the capability value consistently for all FDD-FR1 bands, all TDD-FR1 bands, all TDD-FR2-1 bands and all TDD-FR2-2 bands respectively.<br>UE supporting this feature shall also indicate support for <i>ltm-BeamIndicationJointTCI-r18</i> or <i>ltm-BeamIndicationSeparateTCI-r18</i> .                                                                                                                                                                                                                                                                                                             | Band | No | N/A | N/A |
| <b><i>ltm-WithoutCSI-IM-r19</i></b><br>Indicates whether the UE supports CSI-RS measurement and CSI reporting for candidate cells without CSI-IM resource configuration.<br>A UE supporting this feature shall also indicate support of <i>ltm-CSI-RS-CSI-IM-Periodic-r19</i> or <i>ltm-CSI-RS-CSI-IM-SP-r19</i> .                                                                                                                                                                                                                                                                                                                                                                                                                                                             | Band | No | N/A | N/A |
| <b><i>maxDurationDMRS-Bundling-r17</i></b><br>Indicates whether the UE supports the maximum duration during which UE is able to maintain power consistency and phase continuity to support DM-RS bundling for PUSCH/PUCCH.<br><br>NOTE: DM-RS bundling is only applicable for UL transmissions with pi/2 BPSK, BPSK, and QPSK modulation orders for the corresponding physical channels.                                                                                                                                                                                                                                                                                                                                                                                       | Band | No | N/A | N/A |
| <b><i>maxDynamicSlotRepetitionForSPS-Multicast-r17</i></b><br>Indicates maximum number of dynamic slot-level repetitions for SPS group-common PDSCH for multicast. For TN, the UE shall set the capability value consistently for all FDD-FR1 bands, all TDD-FR1 bands and all TDD-FR2 bands, associated with supported shared and non-shared spectrum respectively. For NTN, UE shall set the capability value consistently for all FDD-FR1 NTN bands and all FDD-FR2 NTN bands respectively.<br><br>A UE that indicates support of this feature shall indicate support of <i>sps-Multicast-r17</i> .                                                                                                                                                                         | Band | No | N/A | N/A |
| <b><i>max-HARQ-ProcessNumber-r17</i></b><br>Indicates the maximal supported HARQ process numbers for UL and for DL respectively. For each value of <i>max-HARQ-ProcessNumber-r17</i> , value <i>u16d32</i> indicates the maximal supported HARQ process number is 16 for UL and 32 for DL, value <i>u32d16</i> indicates the maximal supported HARQ process number is 32 for UL and 16 for DL, value <i>u32d32</i> indicates the maximal supported HARQ process number is 32 for UL and 32 for DL. This field is only applicable for bands in Table 5.2.2-1 in TS 38.101-5 [34] and HAPS operation bands in clause 5.2 of TS 38.104 [35].                                                                                                                                      | Band | No | N/A | N/A |
| <b><i>maxMIMO-LayersForMulti-DCI-mTRP-r16</i></b><br>Indicates the interpretation of <i>maxNumberMIMO-LayersPDSCH</i> for multi-DCI based mTRP. If this field is included, <i>maxNumberMIMO-LayersPDSCH</i> is interpreted as the maximum number of layers per PDSCH for multi-DCI multi-TRP operation. If this field is not included, <i>maxNumberMIMO-LayersPDSCH</i> is interpreted as the maximum number of layers across two PDSCHs if having at least one RE overlapped, for multi-DCI multi-TRP operation. The UE that indicates support of this feature shall support <i>overlapPDSCHsFullyFreqTime-r16</i> .<br><br>NOTE 1: For data rate calculation in clause 4.1.2, if this feature is indicated, each multi-DCI based multi-TRP CC is counted two times toward J. | Band | No | N/A | N/A |
| <b><i>maxModulationOrderForMulticast-r17</i></b><br>Defines the maximal modulation order for multicast PDSCH in RRC_CONNECTED. If not reported, UE supports the same modulation order as unicast. <ul style="list-style-type: none"> <li>- For FR1, up to 1024QAM is supported.</li> <li>- For FR2, up to 256QAM is supported.</li> </ul> A UE supporting this feature shall also indicate support of <i>dynamicMulticastPCell-r17</i> .<br><br>NOTE: A UE shall support the corresponding mandatory maximum modulation for unicast.                                                                                                                                                                                                                                           | Band | No | N/A | N/A |

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |      |     |          |          |

| <b>maxNumberActivatedTCI-States-r16</b><br>Indicates maximum number of activated TCI states. This capability signalling includes the following: <ul style="list-style-type: none"> <li>- <i>maxNumberPerCORESET-Pool-r16</i> indicates maximal number of activated TCI states per <i>CORESETPoolIndex</i> per BWP per CC including data and control</li> <li>- <i>maxTotalNumberAcrossCORESET-Pool-r16</i> indicates maximal total number of activated TCI states across <i>CORESETPoolIndex</i> per BWP per CC including data and control</li> </ul> <p>The UE that indicates support of this feature shall support <i>multiDCI-MultiTRP-r16</i>.</p>                                                                                                                                           | Band | No  | N/A      | N/A      |
| <b>maxNumberCSI-RS-BFD</b><br>Indicates maximal number of CSI-RS resources across all CCs, and across MCG and SCG in case of NR-DC, for UE to monitor PDCCH quality. In this release, the maximum value that can be signalled is 16. If the UE includes the field in an FR1 band, it shall set the same value in all FR1 bands. If the UE includes the field in an FR2 band, it shall set the same value in all FR2 bands. The UE supports a total number of resources equal to the maximum of the FR1 and FR2 value, but no more than the FR1 value across all FR1 serving cells and no more than the FR2 value across all FR2 serving cells. It is mandatory with capability signalling for FR2 and optional for FR1.                                                                          | Band | CY  | N/A      | N/A      |
| <b>maxNumberCSI-RS-SSB-CBD</b><br>Defines maximal number of different CSI-RS [and/or SSB] resources across all CCs, and across MCG and SCG in case of NR-DC, for new beam identifications. In this release, the maximum value that can be signalled is 128. If the UE includes the field in an FR1 band, it shall set the same value in all FR1 bands. If the UE includes the field in an FR2 band, it shall set the same value in all FR2 bands. The UE supports a total number of resources equal to the maximum of the FR1 and FR2 value, but no more than the FR1 value across all FR1 serving cells and no more than the FR2 value across all FR2 serving cells. It is mandatory with capability signalling for FR2 and optional for FR1. The UE is mandated to report at least 32 for FR2. | Band | CY  | N/A      | N/A      |
| <b>maxNumberG-CS-RNTI-r17</b><br>Defines maximum number of G-CS-RNTIs for SPS multicast. For TN, the UE shall set the capability value consistently for all FDD-FR1 bands, all TDD-FR1 bands and all TDD-FR2 bands, associated with supported shared and non-shared spectrum respectively. For NTN, UE shall set the capability value consistently for all FDD-FR1 NTN bands and all FDD-FR2 NTN bands respectively. <p>A UE supporting this feature shall also indicate support of <i>sps-Multicast-r17</i>.</p>                                                                                                                                                                                                                                                                                | Band | No  | N/A      | N/A      |
| <b>maxNumberG-RNTI-r17</b><br>Defines maximum number of G-RNTIs for multicast in RRC_CONNECTED. For TN, the UE shall set the capability value consistently for all FDD-FR1 bands, all TDD-FR1 bands and all TDD-FR2 bands, associated with supported shared and non-shared spectrum respectively. For NTN, UE shall set the capability value consistently for all FDD-FR1 NTN bands and all FDD-FR2 NTN bands respectively. <p>A UE supporting this feature shall also indicate support of <i>dynamicMulticastPCell-r17</i>.</p> <p>For the UE indicating support of <i>multicastInactive-r18</i>, this capability is also applicable to multicast reception in RRC_INACTIVE, as specified in TS 38.331 [9].</p>                                                                                 | Band | No  | N/A      | N/A      |
| <b>maxNumber-NGSO-SatellitesPerCarrier-r17</b><br>Indicates the number of target NGSO satellites the UE can monitor per carrier. For serving carrier, the number of target NGSO satellites also includes the serving satellite. If this field is not included, the number of target satellites UE can monitor per carrier is 2. The value shall be larger than or equal to the reported value on <i>maxNumber-NGSO-SatellitesWithinOneSMTC-r17</i> .                                                                                                                                                                                                                                                                                                                                             | Band | No  | FDD only | FR1 only |
| <b>maxNumber-NGSO-SatellitesWithinOneSMTC-r17</b><br>Indicates the number of different NGSO satellites for target cells that the UE supports of simultaneous measurements within a SMTC with value n1 corresponds to 1, value n2 corresponds to 2 and so on.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | Band | No  | FDD only | FR1 only |
| <b>maxNumberNonGroupBeamReporting</b><br>Defines support of non-group based RSRP reporting using N_max RSRP values reported.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | Band | Yes | N/A      | N/A      |

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |      |    |     |          |

| <b>maxNumberPUSCH-TypeA-Repetition-r17</b><br>Indicates whether the UE supports the increased maximum number of PUSCH Type A repetitions to 32.<br><br>A UE that indicates support of this feature shall support <i>type1-PUSCH-RepetitionMultiSlots</i> , <i>type2-PUSCH-RepetitionMultiSlots</i> , <i>pusch-RepetitionTypeA-r16</i> or <i>pusch-RepetitionTypeA-v16c0</i> .<br><br>NOTE: For DG PUSCH, the number of repetitions is indicated in a TDRA list. A row index of the TDRA list is indicated by a DCI. For Type 1 CG PUSCH, the number of repetitions is indicated by <i>repK-v1710</i> . For Type 2 CG PUSCH, the number of repetitions is indicated in a TDRA list or by <i>repK-v1710</i> .               | Band | No | N/A | N/A      |
| <b>maxNumberRxBeam, maxNumberRxBeam-v1720</b><br>Defines whether UE supports receive beamforming switching using NZP CSI-RS resource. UE shall indicate a single value for the preferred number of NZP CSI-RS resource repetitions per CSI-RS resource set. Support of Rx beam switching is mandatory for FR2.                                                                                                                                                                                                                                                                                                                                                                                                            | Band | CY | N/A | N/A      |
| <b>maxNumberRxTxBeamSwitchDL, maxNumberRxTxBeamSwitchDL-v1710</b><br>Defines the number of Tx and Rx beam changes UE can perform on this band within a slot. UE shall report one value per each subcarrier spacing supported by the UE. In this release, the number of Tx and Rx beam changes for scs-15kHz and scs-30kHz are not included.                                                                                                                                                                                                                                                                                                                                                                               | Band | No | N/A | FR2 only |
| <b>maxNumberSCellBFR-r16</b><br>Defines the maximum number of SCells configured for SCell beam failure recovery simultaneously. The UE indicating support of this also indicates the capabilities of <i>maxNumberCSI-RS-BFD</i> , <i>maxNumberSSB-BFD</i> and <i>maxNumberCSI-RS-SSB-CBD</i> .                                                                                                                                                                                                                                                                                                                                                                                                                            | Band | No | N/A | N/A      |
| <b>maxNumberSSB-BFD</b><br>Defines maximal number of different SSBs across all CCs, and across MCG and SCG in case of NR-DC, for UE to monitor PDCCH quality. In this release, the maximum value that can be signalled is 16. If the UE includes the field in an FR1 band, it shall set the same value in all FR1 bands. If the UE includes the field in an FR2 band, it shall set the same value in all FR2 bands. The UE supports a total number of resources equal to the maximum of the FR1 and FR2 value, but no more than the FR1 value across all FR1 serving cells and no more than the FR2 value across all FR2 serving cells. It is mandatory with capability signalling for FR2 and optional for FR1.          | Band | CY | N/A | N/A      |
| <b>maxOutputPowerATG-r18</b><br>Indicates the maximum output power rating at maximum modulation order and full RB allocation as specified in clause 6.2J of TS 38.101-1 [2]. Value 1 indicates 23dBm, value 2 indicates 24dBm and so on. If present, the <i>ue-PowerClass</i> is not included, and default UE power class is not applicable. The UE indicating support of this feature shall also indicate support of <i>airToGroundNetwork-r18</i> . This field is only applicable for bands as specified for ATG in clause 5.2J of TS 38.101-1 [2].                                                                                                                                                                     | Band | CY | N/A | FR1 only |
| <b>maxPeriodicityCMR-r18</b><br>Indicates the maximum periodicity of periodic CSI-RS (in slots) UE can handle for Type-II-Doppler CSI report.<br>The UE supporting this feature shall also indicate support of at least one of <i>eType2Doppler-r18</i> and <i>feType2Doppler-r18</i> .<br>NOTE: A UE that supports at least one of <i>eType2Doppler-r18</i> and <i>feType2Doppler-r18</i> must signal this feature.                                                                                                                                                                                                                                                                                                      | Band | CY | N/A | N/A      |
| <b>maxUplinkDutyCycle-PC2-FR1</b><br>Indicates the maximum percentage of symbols during a certain evaluation period that can be scheduled for uplink transmission to ensure compliance with applicable electromagnetic energy absorption requirements provided by regulatory bodies. This field is applicable for FR1 power class 2 UE and also applicable for FR1 power class 1.5 UE as specified in clause 6.2.1 of TS 38.101-1 [2]. If the field and <i>maxUplinkDutyCycle-PC1dot5-MPE-FR1-r16</i> are both absent, 50% shall be applied as the upper limit of the UL duty cycle for power class 2. Value n60 corresponds to 60%, value n70 corresponds to 70% and so on. This capability is not applicable to IAB-MT. | Band | No | N/A | FR1 only |

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |      |    |     |          |

| <b><i>maxUplinkDutyCycle-FR2</i></b><br>Indicates the maximum percentage of symbols during 1s that can be scheduled for uplink transmission at the UE maximum transmission power, so as to ensure compliance with applicable electromagnetic power density exposure requirements provided by regulatory bodies. This field is applicable for all power classes UE in FR2 as specified in TS 38.101-2 [3]. Value n15 corresponds to 15%, value n20 corresponds to 20% and so on. If the field is absent or the percentage of uplink symbols transmitted within any 1s evaluation period is larger than <i>maxUplinkDutyCycle-FR2</i> , the UE behaviour is specified in TS 38.101-2 [3]. This capability is not applicable to IAB-MT.                                                                                                             | Band | No | N/A | FR2 only |
| <b><i>maxUplinkDutyCycle-PC1dot5-MPE-FR1-r16</i></b><br>Indicates the maximum percentage of symbols during a certain evaluation period that can be scheduled for uplink transmission to ensure compliance with applicable electromagnetic energy absorption requirements provided by regulatory bodies. This field is only applicable for FR1 power class 1.5 UE as specified in clause 6.2.1 of TS 38.101-1 [2]. If the field and <i>maxUplinkDutyCycle-PC2-FR1</i> are both absent, 25% shall be applied as the upper limit of the UL duty cycle for power class 1.5.                                                                                                                                                                                                                                                                          | Band | No | N/A | FR1 only |
| <b><i>measEnhCAInterFreqFR2-r18</i></b><br>Indicates whether the UE supports the RRM requirement for intra-band CA operation in connected mode to support FR2 high speed up to 350 km/h, as specified in TS 38.133 [5] and the RRM requirement for enhanced inter-frequency measurements in connected mode to support FR2 high speed up to 350 km/h, as specified in TS 38.133 [5].<br>A UE supporting this feature shall also indicate support of PC6 in <i>ue-PowerClass-v1700</i> .                                                                                                                                                                                                                                                                                                                                                           | Band | No | N/A | FR2 only |
| <b><i>measValidationReportEMR-r18</i></b><br>Indicates whether the UE supports measurement validation and report based on EMR measurement during connection setup/resume for fast CA/DC setup. UE shall set the capability value consistently for all FDD-FR1 bands, all TDD-FR1 bands, all TDD-FR2-1 bands and all TDD-FR2-2 bands respectively.<br>A UE supporting this feature shall also indicate support of <i>idleInactiveNR-MeasReport-r16</i> or <i>idleInactiveEUTRA-MeasReport-r16</i> .                                                                                                                                                                                                                                                                                                                                               | Band | No | N/A | N/A      |
| <b><i>measValidationReportReselectionMeasurements-r18</i></b><br>Indicates whether the UE supports measurement validation based on reselection measurements during IDLE/INACTIVE state and reporting for fast CA/DC setup. UE shall set the capability value consistently for all FDD-FR1 bands, all TDD-FR1 bands, all TDD-FR2-1 bands and all TDD-FR2-2 bands respectively.                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | Band | No | N/A | N/A      |
| <b><i>mixCodeBookSpatialAdaptation-r18</i></b><br>Indicates whether the UE supports active CSI-RS resources and ports for mixed codebook types in any slot. The following codebook combination is a possible mixed codebook combination {Type 1 Single Panel, Type 1 Multi Panel, Null } for UE supporting CSI feedback based on CSI report sub-configuration(s), each containing one port subset configuration.<br>A UE supporting this feature shall also indicate support of <i>spatialAdaptation-CSI-Feedback-r18</i> , or <i>spatialAdaptation-CSI-FeedbackPUSCH-r18</i> , or <i>spatialAdaptation-CSI-FeedbackPUCCH-r18</i> , or <i>spatialAdaptation-CSI-FeedbackAperiodic-r18</i> .<br>The UE supporting this feature shall indicate the support of <i>codebookComboParametersAddition-r16</i> and the support of multi-panel operation. | Band | No | N/A | N/A      |
| <b><i>mn-InitiatedCondPSCellChangeNRDC-r17</i></b><br>Indicates whether the UE supports MN initiated conditional PSCell change in NR-DC, which is configured by NR <i>conditionalReconfiguration</i> using MN configured measurement as triggering condition. The UE supporting this feature shall also support 2 trigger events for same execution condition in MN initiated conditional PSCell change in NR-DC. UE shall set the capability value consistently for all FDD-FR1 bands, all TDD-FR1 bands and all TDD-FR2 bands respectively.                                                                                                                                                                                                                                                                                                    | Band | No | N/A | N/A      |
| <b><i>modifiedMPR-Behaviour</i></b><br>Indicates whether UE supports modified MPR behaviour defined in TS 38.101-1 [2], TS 38.101-2 [3], and TS 38.101-5 [34].                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | Band | No | N/A | N/A      |

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |      |    |          |          |

| <p><b>nr-PDCCH-OverlapLTE-CRS-RE-r18</b><br/>Indicates whether the UE supports reception of NR PDCCH candidates that overlap with LTE CRS REs within an NR carrier using 15 kHz SCS. The UE is provided with LTE CRS RM pattern by configuration of one CRS rate matching pattern via <i>lte-CRS-ToMatchAround</i>. NR PDCCH that overlaps with LTE CRS REs is in Type-1 CSS with dedicated RRC configuration, Type-3 CSS, and/or USS that are monitored within the first 3 OFDM symbols of a slot. The capability signaling comprises the following parameters:</p> <ul style="list-style-type: none"> <li>- <i>overlapInRE-r18</i> indicates reception of an NR PDCCH candidate in REs that overlap with LTE CRS: Value <i>oneSymbolNoOverlap</i> indicates when at least one symbol of the NR PDCCH candidate and the DMRS for demodulation of the NR PDCCH candidate is not overlapped with LTE CRS, value <i>someOrAllSymOverlap</i> indicates when some or all of symbols of NR PDCCH candidate overlap with LTE CRS;</li> <li>- <i>overlapInSymbol-r18</i> indicates reception of NR PDCCH candidates that overlap with LTE CRS REs on the X-th symbols of an NR slot: Value <i>symbol2</i> indicates only 2nd symbol, value <i>symbol1And2</i> indicates 1st and 2nd symbols.</li> </ul> <p>A UE supporting this feature shall also indicate support of <i>rateMatchingLTE-CRS</i>.</p> <p>NOTE: This feature is supported by UE performing channel estimation with a regular Rel-15 DMRS pattern in frequency dimension, i.e., no change to UE assumption on PDCCH DMRS RE positions/pattern in a symbol that are used for the purpose of channel estimation.</p> | Band | No | N/A | FR1 only |

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |      |    |          |          |

| <b>overlapPDSCHsFullyFreqTime-r16</b><br>Indicates the maximal number of PDSCH scrambling sequences per serving cell when the UE supports PDSCHs with fully overlapping Resource Elements. The UE that indicates support of this feature shall support <i>multiDCI-MultiTRP-r16</i> .<br><br>Note: A UE may assume that its maximum receive timing difference between the DL transmissions from two TRPs is within a Cyclic Prefix                                                                                                                                                                                                                                                                                           | Band | No | N/A      | N/A      |
| <b>overlapPDSCHsInTimePartiallyFreq-r16</b><br>Indicates whether the UE supports PDSCHs with partially overlapping Resource Elements. The UE that indicates support of this feature shall support <i>overlapPDSCHsFullyFreqTime-r16</i> .                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | Band | No | N/A      | N/A      |
| <b>overlapRateMatchingEUTRA-CRS-r16</b><br>Indicates whether the UE supports two LTE-CRS overlapping rate matching patterns within a part of NR carrier using 15 kHz SCS overlapping with a LTE carrier. If the UE supports this feature, the UE needs to report <i>multipleRateMatchingEUTRA-CRS-r16</i> and <i>multiDCI-MultiTRP-r16</i> .                                                                                                                                                                                                                                                                                                                                                                                 | Band | No | N/A      | FR1 only |
| <b>overlapRateMatchingEUTRA-CRS-Patterns-3-4-Diff-CS-Pool-r18</b><br>Indicates whether the UE supports two LTE-CRS overlapping rate matching patterns configured by <i>lte-CRS-PatternList3-r18</i> and <i>lte-CRS-PatternList4-r18</i> with two different values of <i>coresetPoolIndex</i> within a part of NR carrier using 15 kHz SCS overlapping with an LTE carrier for the case when <i>crs-RateMatch-PerCORESETPoolIndex-16</i> is configured.<br>A UE supporting this feature shall also indicate support of <i>twoRateMatchingEUTRA-CRS-patterns-3-4-r18</i> and <i>multiDCI-MultiTRP-r16</i> .                                                                                                                    | Band | No | N/A      | FR1 only |
| <b>overlapUL-TransReduction-r18</b><br>Indicates whether the UE supports reducing the overlapping duration of the later of the two time-domain overlapping UL transmissions when the UE is not configured with UL STx2P for multi-DCI based multi-TRP operation with two TA enhancement.<br><br>A UE supporting this feature shall also indicate support of <i>multiDCI-IntraCellMultiTRP-TwoTA-r18</i> or <i>multiDCI-InterCellMultiTRP-TwoTA-r18</i> .<br><br>NOTE: If UE does not support this feature, UE does not expect the two UL transmissions to overlap (i.e., scheduling restriction is applied to avoid overlap between the two UL transmissions).                                                               | Band | No | N/A      | N/A      |
| <b>overlapUL-TransReductionEnh-r19</b><br>Indicates whether the UE supports reducing the overlapping duration of the later of the two time-domain overlapping UL transmissions when the UE is with two TA enhancement.<br>A UE supporting this feature shall also indicate support of <i>twoTA-IntraCellBM-r19</i> or <i>twoTA-InterCellBM-r19</i> .<br>NOTE: If UE does not support this feature, UE does not expect the two UL transmissions to overlap (i.e., scheduling restriction is applied to avoid overlap between the two UL transmissions).                                                                                                                                                                       | Band | No | N/A      | N/A      |
| <b>parallelMeasurementWithoutRestriction-r17</b><br>Indicates whether the UE supports measurements on cells belonging to different satellites as the serving cell in parallel with normal operation (i.e. data/control transmission and/or reception, and L1 measurements) of serving cell without scheduling restrictions. The feature is applicable only when the serving satellite is NGSO. If the serving cell belongs to GSO satellite, the scheduling restriction is not applied on the premise that a mixed type of satellites on the same frequency layer is not supported in this release. If not reported, for measurements in parallel with normal operation of serving cell scheduling restrictions shall apply. | Band | No | FDD only | FR1 only |
| <b>parallelPRS-MeasRRC-Inactive-r17</b><br>Indicates whether the UE supports performing RRM measurement and PRS measurement in parallel. UE shall set the capability value consistently for all FDD-FR1 bands, all TDD-FR1 bands, all TDD-FR2-1 bands and all TDD-FR2-2 bands respectively                                                                                                                                                                                                                                                                                                                                                                                                                                   | Band | No | N/A      | N/A      |
| <b>pathlossOffsetPHR-r19</b><br>Indicates whether the UE supports including PL offset in the calculation of Type 1 PHR based on actual PUSCH transmission and Type 1 PHR based on reference PUSCH.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | Band | No | N/A      | N/A      |
| <b>pathlossOffsetPRACH-JointTCI-r19</b><br>Indicates whether the UE supports applying path loss offset on PDCCH-order PRACH for joint DL/UL TCI state(s).<br>A UE supporting this feature shall also indicate support of <i>unifiedJointTCI-r17</i> .                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | Band | No | N/A      | FR1 only |

| <p>Indicates whether the UE supports power domain adaptation with CSI feedback based on CSI report sub-configuration(s) for periodic CSI reporting and single-panel type 1 codebook. The UE supports CSI feedback based on CSI report sub-configuration(s), each containing one power offset for periodic CSI reporting. This capability signalling comprises the following parameters:</p> <ul style="list-style-type: none"> <li>- <i>maxNumberLmax-r18</i> indicates the max number of sub-configurations Lmax in one CSI report configuration;</li> <li>- <i>maxNumberCSI-ResourcePerCC-r18</i> indicates the maximum number of simultaneous NZP-CSI-RS resources per CC.</li> <li>- <i>maxNumberTotalCSI-ResourcePerCC-r18</i> indicates the maximum number of total CSI-RS ports in simultaneous NZP-CSI-RS resources per CC.</li> <li>- <i>totalNumberCSI-Reporting-r18</i> indicates total number of periodic CSI reporting settings without sub-configurations plus the total number of sub-configurations across periodic CSI report settings with sub-configurations per BWP.</li> </ul> <p>NOTE 1: For <i>maxNumberCSI-ResourcePerCC-r18</i> and <i>maxNumberTotalCSI-ResourcePerCC-r18</i>, NZP-CSI-RS resource and CSI-RS ports are counted for reporting settings with and without sub-configurations.</p> <p>NOTE 2: If a UE reports more than one capability from <i>spatialAdaptation-CSI-Feedback-r18</i>, <i>spatialAdaptation-CSI-FeedbackPUSCH-r18</i>, <i>spatialAdaptation-CSI-FeedbackAperiodic-r18</i>, <i>spatialAdaptation-CSI-FeedbackPUCCH-r18</i>, <i>powerAdaptation-CSI-Feedback-r18</i>, <i>powerAdaptation-CSI-FeedbackPUSCH-r18</i>, <i>powerAdaptation-CSI-FeedbackAperiodic-r18</i>, <i>powerAdaptation-CSI-FeedbackPUCCH-r18</i> and if the UE is configured with CSI report settings with sub-configurations corresponding to a subset of the above reported features, then the supported maximum of NZP-CSI-RS resources/ports across all periodic, semi-persistent, aperiodic CSI report settings with sub-configurations corresponding to all of spatial and power domain adaptations and without sub-configurations is determined by the minimum of the reported values from that subset.</p> <p>NOTE 3: If a UE reports both <i>spatialAdaptation-CSI-Feedback-r18</i> and <i>powerAdaptation-CSI-Feedback-r18</i>, and if the UE is configured with CSI report settings with sub-configurations corresponding to both <i>spatialAdaptation-CSI-Feedback-r18</i> and <i>powerAdaptation-CSI-Feedback-r18</i>, then the supported total number of periodic CSI reporting settings without sub-configurations plus the total number of sub-configurations across periodic CSI report settings with sub-configurations per BWP is determined by the minimum of the reported values from both <i>spatialAdaptation-CSI-Feedback-r18</i> and <i>powerAdaptation-CSI-Feedback-r18</i>.</p> <p>NOTE 4: If CSI report configuration in active BWP of a CC includes report setting(s) with sub-configurations, values reported in this capability for the number of simultaneous NZP-CSI-RS resources and ports per CC are used for the CC instead of values reported in <i>csi-RS-IM-ReceptionForFeedback</i>. If CSI report configuration in active BWP of any CC includes report setting(s) with sub-configurations, values reported in this capability for the number of simultaneous NZP-CSI-RS resources and ports across all CCs are used instead of values reported in <i>csi-RS-IM-ReceptionForFeedback</i>.</p> <p>NOTE 5: For <i>totalNumberCSI-Reporting-r18</i>, if CSI report configuration in a BWP includes report setting(s) with sub-configurations, a value reported in this capability for the number of CSI reporting settings is used for the BWP instead of a value reported in <i>csi-ReportFramework</i>.</p> <p>A UE indicating support of this feature shall also indicate support of <i>csi-ReportFramework</i> and <i>powerAdaptation-CSI-FeedbackPerBC-r18</i>.</p> |      |    |     |     |

| <b>powerAdaptation-CSI-FeedbackAperiodic-r18</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | Band | No | N/A | N/A |

| <p>Indicates whether the UE supports power domain adaptation with CSI feedback based on CSI report sub-configuration(s) for semi-persistent CSI reporting on PUCCH and single-panel type 1 codebook. The UE supports CSI feedback based on CSI report sub-configuration(s), each containing one power offset for semi-persistent CSI reporting on PUCCH (or piggybacked on PUSCH). This capability signalling comprises the following parameters:</p> <ul style="list-style-type: none"> <li>- <i>maxNumberLmax-r18</i> indicates the max number of sub-configurations Lmax in one CSI report configuration;</li> <li>- <i>subReportCSI-r18</i> indicates N number of report of CSI sub-report(s) included in one SP-CSI report where each CSI sub-report corresponds to one sub-configuration.</li> <li>- <i>maxNumberCSI-ResourcePerCC-r18</i> indicates the maximum number of simultaneous NZP-CSI-RS resources per CC for SD-type 1 and/or SD-type 2.</li> <li>- <i>maxNumberTotalCSI-ResourcePerCC-r18</i> indicates the maximum number of total CSI-RS ports in simultaneous NZP-CSI-RS resources per CC for SD-type 1 and/or SD-type 2.</li> <li>- <i>totalNumberCSI-Reporting-r18</i> indicates total number of semi-persistent CSI reporting settings without sub-configurations plus the total number of sub-configurations across semi-persistent CSI report settings with sub-configurations per BWP.</li> </ul> <p>NOTE 1: For <i>maxNumberCSI-ResourcePerCC-r18</i> and <i>maxNumberTotalCSI-ResourcePerCC-r18</i>, NZP-CSI-RS resource and CSI-RS ports are counted for reporting settings with and without sub-configurations.</p> <p>NOTE 2: If a UE reports more than one capability from <i>spatialAdaptation-CSI-Feedback-r18</i>, <i>spatialAdaptation-CSI-FeedbackPUSCH-r18</i>, <i>spatialAdaptation-CSI-FeedbackAperiodic-r18</i>, <i>spatialAdaptation-CSI-FeedbackPUCCH-r18</i>, <i>powerAdaptation-CSI-Feedback-r18</i>, <i>powerAdaptation-CSI-FeedbackPUSCH-r18</i>, <i>powerAdaptation-CSI-FeedbackAperiodic-r18</i>, <i>powerAdaptation-CSI-FeedbackPUCCH-r18</i> and if the UE is configured with CSI report settings with sub-configurations corresponding to a subset of the above reported features, then the supported maximum of NZP-CSI-RS resources/ports across all periodic, semi-persistent, aperiodic CSI report settings with sub-configurations corresponding to all of spatial and power domain adaptations and without sub-configurations is determined by the minimum of the reported values from that subset.</p> <p>NOTE 3: If a UE reports more than one capability from <i>spatialAdaptation-CSI-FeedbackPUSCH-r18</i>, <i>spatialAdaptation-CSI-FeedbackPUCCH-r18</i>, <i>powerAdaptation-CSI-FeedbackPUSCH-r18</i> and <i>powerAdaptation-CSI-FeedbackPUCCH-r18</i> and if the UE is configured with CSI report settings with sub-configurations corresponding to a subset of the reported features, then the supported total number of semi-persistent CSI reporting settings without sub-configurations plus the total number of sub-configurations across semi-persistent CSI report settings with sub-configurations per BWP is determined by the minimum of the reported values from that subset.</p> <p>NOTE 4: If CSI report configuration in active BWP of a CC includes report setting(s) with sub-configurations, values reported in this capability for the number of simultaneous NZP-CSI-RS resources and ports per CC are used for the CC instead of values reported in <i>csi-RS-IM-ReceptionForFeedback</i>. If CSI report configuration in active BWP of any CC includes report setting(s) with sub-configurations, values reported in this capability for the number of simultaneous NZP-CSI-RS resources and ports across all CCs are used instead of values reported in <i>csi-RS-IM-ReceptionForFeedback</i>.</p> <p>NOTE 5: For <i>totalNumberCSI-Reporting-r18</i>, if CSI report configuration in a BWP includes report setting(s) with sub-configurations, a value reported in this capability for the number of CSI reporting settings is used for the BWP instead of a value reported in <i>csi-ReportFramework</i>.</p> <p>A UE indicating support of this feature shall also indicate support of <i>csi-ReportFramework</i>, <i>sp-CSI-ReportPUCCH</i> and <i>powerAdaptation-CSI-FeedbackPUCCH-PerBC-r18</i>.</p> |      |    |     |     |

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |      |    |          |          |

| <p><b>powerAdaptation-CSI-FeedbackPUSCH-r18</b></p> <p>Indicates whether the UE supports power domain adaptation with CSI feedback based on CSI report sub-configuration(s) for semi-persistent CSI reporting on PUSCH and single-panel type 1 codebook. The UE supports CSI feedback based on CSI report sub-configuration(s), each containing one power offset for semi-persistent CSI reporting. This capability signalling comprises the following parameters:</p> <ul style="list-style-type: none"> <li>- <i>maxNumberLmax-r18</i> indicates the max number of sub-configurations Lmax in one CSI report configuration;</li> <li>- <i>subReportCSI-r18</i> indicates N number of report of CSI sub-report(s) included in one SP-CSI report where each CSI sub-report corresponds to one sub-configuration.</li> <li>- <i>maxNumberCSI-ResourcePerCC-r18</i> indicates the maximum number of simultaneous NZP-CSI-RS resources per CC.</li> <li>- <i>maxNumberTotalCSI-ResourcePerCC-r18</i> indicates the maximum number of total CSI-RS ports in simultaneous NZP-CSI-RS resources per CC.</li> <li>- <i>totalNumberCSI-Reporting-r18</i> indicates total number of semi-persistent CSI reporting settings without sub-configurations plus the total number of sub-configurations across semi-persistent CSI report settings with sub-configurations per BWP.</li> </ul> <p>NOTE 1: For <i>maxNumberCSI-ResourcePerCC-r18</i> and <i>maxNumberTotalCSI-ResourcePerCC-r18</i>, NZP-CSI-RS resource and CSI-RS ports are counted for reporting settings with and without sub-configurations.</p> <p>NOTE 2: If a UE reports more than one capability from <i>spatialAdaptation-CSI-Feedback-r18</i>, <i>spatialAdaptation-CSI-FeedbackPUSCH-r18</i>, <i>spatialAdaptation-CSI-FeedbackAperiodic-r18</i>, <i>spatialAdaptation-CSI-FeedbackPUCCH-r18</i>, <i>powerAdaptation-CSI-Feedback-r18</i>, <i>powerAdaptation-CSI-FeedbackPUSCH-r18</i>, <i>powerAdaptation-CSI-FeedbackAperiodic-r18</i>, <i>powerAdaptation-CSI-FeedbackPUCCH-r18</i> and if the UE is configured with CSI report settings with sub-configurations corresponding to a subset of the above reported features, then the supported maximum of NZP-CSI-RS resources/ports across all periodic, semi-persistent, aperiodic CSI report settings with sub-configurations corresponding to all of spatial and power domain adaptations and without sub-configurations is determined by the minimum of the reported values from that subset.</p> <p>NOTE 3: If a UE reports more than one capability from <i>spatialAdaptation-CSI-FeedbackPUSCH-r18</i>, <i>spatialAdaptation-CSI-FeedbackPUCCH-r18</i>, <i>powerAdaptation-CSI-FeedbackPUSCH-r18</i> and <i>powerAdaptation-CSI-FeedbackPUCCH-r18</i> and if the UE is configured with CSI report settings with sub-configurations corresponding to a subset of the reported features, then the supported total number of semi-persistent CSI reporting settings without sub-configurations plus the total number of sub-configurations across semi-persistent CSI report settings with sub-configurations per BWP is determined by the minimum of the reported values from that subset.</p> <p>NOTE 4: If CSI report configuration in active BWP of a CC includes report setting(s) with sub-configurations, values reported in this capability for the number of simultaneous NZP-CSI-RS resources and ports per CC are used for the CC instead of values reported in <i>csi-RS-IM-ReceptionForFeedback</i>. If CSI report configuration in active BWP of any CC includes report setting(s) with sub-configurations, values reported in this capability for the number of simultaneous NZP-CSI-RS resources and ports across all CCs are used instead of values reported in <i>csi-RS-IM-ReceptionForFeedback</i>.</p> <p>NOTE 5: For <i>totalNumberCSI-Reporting-r18</i>, if CSI report configuration in a BWP includes report setting(s) with sub-configurations, a value reported in this capability for the number of CSI reporting settings is used for the BWP instead of a value reported in <i>csi-ReportFramework</i>.</p> <p>A UE indicating support of this feature shall also indicate support of <i>csi-ReportFramework</i>, <i>sp-CSI-ReportPUSCH</i> and <i>powerAdaptation-CSI-FeedbackPUSCH-PerBC-r18</i>.</p> | Band | No | N/A      | N/A      |
| <p><b>powerBoosting-pi2BPSK</b></p> <p>Indicates whether UE supports power boosting for pi/2 BPSK, when applicable as defined in 6.2 of TS 38.101-1 [2] / TS 38.101-5 [34]. It is mandatory with capability signalling. This capability is not applicable to IAB-MT.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | Band | CY | TDD only | FR1 only |

| <b><i>prach-CoverageEnh-r18</i></b><br>Indicates whether the UE supports {2, 4, 8} for the number of multiple PRACH transmissions with same Tx spatial filter.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | Band | No | N/A | N/A |
| <b><i>prach-Repetition-r18</i></b><br>Indicates whether the UE supports transmitting two PRACH repetitions when a gap between the last symbol of a PRACH repetition in the first slot and the first symbol of a PRACH repetition in the second slot is less than N symbols, where N=2 for $\mu=0$ or $\mu=1$ , N=4 for $\mu=2$ or $\mu=3$ , N=16 for $\mu=5$ , N=32 for $\mu=6$ , and $\mu$ is the SCS configuration for the UL BWP with the PRACH.<br>A UE supporting this feature shall also indicate support of <i>prach-CoverageEnh-r18</i> .                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | Band | No | N/A | N/A |
| <b><i>priorityIndicatorInDCI-Multicast-r17</i></b><br>Indicates whether the UE supports DL priority indication for multicast in DCI, comprised of the following functional components: <ul style="list-style-type: none"> <li>- Support of priority indicator field configured in DCI formats 4_2 with CRC scrambled with G-RNTI for multicast;</li> <li>- Supports two HARQ-ACK codebooks with different priorities to be simultaneously constructed different priorities for multicast and multicast at a UE.</li> </ul><br>For TN, the UE shall set the capability value consistently for all FDD-FR1 bands, all TDD-FR1 bands and all TDD-FR2 bands, associated with supported shared and non-shared spectrum respectively. For NTN, UE shall set the capability value consistently for all FDD-FR1 NTN bands and all FDD-FR2 NTN bands respectively.<br><br>A UE supporting this feature shall also indicate support of <i>ack-NACK-FeedbackForMulticast-r17</i> and <i>dynamicMulticastDCI-Format4-2-r17</i> . | Band | No | N/A | N/A |
| <b><i>priorityIndicatorInDCI-SPS-Multicast-r17</i></b><br>Indicates whether the UE supports priority indicator field configured in DCI format 4_2 for multicast HARQ-ACK feedback of SPS multicast.<br><br>For TN, the UE shall set the capability value consistently for all FDD-FR1 bands, all TDD-FR1 bands and all TDD-FR2 bands, associated with supported shared and non-shared spectrum respectively. For NTN, UE shall set the capability value consistently for all FDD-FR1 NTN bands and all FDD-FR2 NTN bands respectively.<br><br>A UE supporting this feature shall also indicate support of <i>ack-NACK-FeedbackForSPS-Multicast-r17</i> and <i>sps-MulticastDCI-Format4-2-r17</i> .                                                                                                                                                                                                                                                                                                                   | Band | No | N/A | N/A |
| <b><i>prs-MeasurementWithoutMG-r17</i></b><br>Indicates whether the UE supports using the threshold to compare the Rx time difference between the serving cell and a neighbour cell/TRP for PRS measurements, as defined in clause 9.9.1.2 of TS 38.133 [5], to determine whether the PRS from the non-serving cell satisfy the condition of PRS measurement outside MG. The UE can include this field only if the UE supports one of <i>prs-ProcessingWindowType1A-r17</i> , <i>prs-ProcessingWindowType1B-r17</i> and <i>prs-ProcessingWindowType2-r17</i> .                                                                                                                                                                                                                                                                                                                                                                                                                                                       | Band | No | N/A | N/A |

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |      |    |     |     |

| <p><b><i>prs-ProcessingCapabilityOutsideMGinPPW-r17</i></b><br/> Indicates the DL-PRS Processing Capability outside MG of each of the supported PRS Processing Window (PPW) Type in the case the UE supports multiple PPW Types in a band and comprises the following parameters:</p> <ul style="list-style-type: none"> <li>- <i>prsProcessingType-r17</i>: Indicates the PPW Type for which the <i>prs-ProcessingCapabilityOutsideMGinPPW-r17</i> are provided.</li> <li>- <i>ppw-dl-PRS-BufferType-r17</i>: Indicates DL-PRS buffering capability. Value 'type1' indicates sub-slot/symbol level buffering and value 'type2' indicates slot level buffering.</li> <li>- <i>ppw-durationOfPRS-Processing1-r17</i>: Indicates the duration of DL-PRS symbols N in units of ms a UE can process every T ms assuming maximum DL-PRS bandwidth provided in <i>ppw-maxNumOfDL-Bandwidth-r17</i> and comprises the following parameters: <ul style="list-style-type: none"> <li>- <i>ppw-durationOfPRS-ProcessingSymbolsN-r17</i>: This field specifies the values for N with values msDot125 indicates 0.125ms, msDot25 indicates 0.25ms, and so on</li> <li>- <i>ppw-durationOfPRS-ProcessingSymbolsT-r17</i>: This field specifies the values for T with values ms1 indicates 1ms, ms2 indicates 2ms, and so on.</li> </ul> </li> <li>- <i>ppw-durationOfPRS-Processing2-r17</i>: Indicates the duration of DL-PRS symbols N2 in units of ms a UE can process every T2 ms assuming maximum DL-PRS bandwidth provided in <i>ppw-maxNumOfDL-Bandwidth-r17</i> and comprises the following parameters: <ul style="list-style-type: none"> <li>- <i>ppw-durationOfPRS-ProcessingSymbolsN2-r17</i>: This field specifies the values for N2 with values msDot125 indicates 0.125ms, msDot25 indicates 0.25ms, and so on.</li> <li>- <i>ppw-durationOfPRS-ProcessingSymbolsT2-r17</i>: This field specifies the values for T2 with values ms4 indicates 4ms, ms5 indicates 5ms, and so on.</li> </ul> </li> <li>- <i>ppw-maxNumOfDL-PRS-ResProcessedPerSlot-r17</i>: Indicates the maximum number of DL PRS bandwidth in MHz, which is supported and reported by UE for PRS measurement outside MG within the PPW.</li> <li>- <i>ppw-maxNumOfDL-Bandwidth-r17</i>: Indicates the maximum number of DL PRS bandwidth in MHz for FR1 and FR2, which is supported and reported by UE for PRS measurement outside MG within the PPW.</li> </ul> <p>The UE can include this field only if the UE supports one of <i>prs-ProcessingWindowType1A-r17</i>, <i>prs-ProcessingWindowType1B-r17</i> and <i>prs-ProcessingWindowType2-r17</i>. Otherwise, the UE does not include this field.</p> <p>NOTE 1: A UE that supports one of <i>prs-ProcessingWindowType1A-r17</i>, <i>prs-ProcessingWindowType1B-r17</i> or <i>prs-ProcessingWindowType2-r17</i> shall always include the <i>prs-ProcessingCapabilityOutsideMGinPPW-r17</i>.</p> <p>NOTE 2: The (N, T) in <i>ppw-durationOfPRS-Processing1-r17</i> is interpreted as in (N,T) in <i>durationOfPRS-Processing-r16</i> in TS 37.355 [22], and the UE is expected to receive the DL-PRS within the PPW but the processing of the received DL-PRS may be outside a PPW</p> <p>NOTE 3: The (N2, T2) in <i>ppw-durationOfPRS-Processing2-r17</i> is interpreted such that the UE is capable of measuring up to N2 ms DL-PRS within a PPW and is capable of completing the DL-PRS processing within the PPW, e.g., if the time duration from the last symbol of the measured DL-PRS resource(s) inside the PPW to the end of PPW is not smaller than T2 ms.</p> <p>NOTE 4: A UE which supports <i>prs-ProcessingCapabilityOutsideMGinPPW-r17</i> shall support either <i>ppw-durationOfPRS-Processing1-r17</i> or <i>ppw-durationOfPRS-Processing2-r17</i>, but not both for each supported PPW type in a band.</p> | Band | No | N/A | N/A |
| <p><b><i>prs-ProcessingRRC-Inactive-r17</i></b><br/> Indicates whether the UE supports PRS processing in RRC_INACTIVE.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | Band | No | N/A | N/A |

| <p><b><i>simulTX-SRS-AntSwitchingIntraBandUL-CA-r16</i></b><br/> Indicates whether the UE support simultaneous transmission of SRS on different CCs for intra-band UL CA. The UE indicating support of this feature shall include at least one of the following capabilities:</p> <ul style="list-style-type: none"> <li>- <i>supportSRS-xTyR-xLessThanY-r16</i> indicates support transmission of SRS for xTyR (x&lt;y) based antenna switching and SRS for CB/NCB/BM on different CCs in overlapped symbol(s) for intra-band UL CA.</li> <li>- <i>supportSRS-xTyR-xEqualToY-r16</i> indicates support transmission of SRS for xTyR (x=y) based antenna switching and SRS for CB/NCB/BM on different CCs in overlapped symbol(s) for intra-band UL CA.</li> <li>- <i>supportSRS-AntennaSwitching-r16</i> Indicates whether the UE support simultaneous transmission of SRS for antenna switching on different CCs in overlapped symbol(s) for intra-band UL CA.</li> </ul> <p>NOTE: For simultaneously antenna switching and antenna switching SRS in intra-band CAs with bands whose UL are switched together according to the reported <i>supportSRS-AntennaSwitching-r16</i>, the UE expects the same configuration of xTyR across the different CCs and the SRS resources overlapped in time domain from UE perspective are from the same UE antenna ports.</p> | Band | No | N/A | N/A |
| <p><b><i>sn-InitiatedCondPSCellChangeNRDC-r17</i></b><br/> Indicates whether the UE supports SN initiated inter-SN conditional PSCell change in NR-DC, which is configured by NR <i>conditionalReconfiguration</i> using SN configured measurement as triggering condition. The UE supporting this feature shall also support 2 trigger events for same execution condition in SN initiated inter-SN conditional PSCell change in NR-DC. UE shall set the capability value consistently for all FDD-FR1 bands, all TDD-FR1 bands and all TDD-FR2 bands respectively.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | Band | No | N/A | N/A |

| <b><i>spatialAdaptation-CSI-Feedback-r18</i></b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | Band | No | N/A | N/A |

| <p>Indicates whether the UE supports spatial domain adaptation with CSI feedback based on CSI report sub-configuration(s) for periodic CSI reporting and single-panel type 1 codebook. This capability signalling comprises the following parameters:</p> <ul style="list-style-type: none"> <li>- <i>csiFeedbackType-r18</i> indicates CSI feedback based on CSI report sub-configuration(s), each containing one port subset configuration/list of CSI-RS resource IDs for periodic CSI reporting. Value <i>sdType1</i> indicates support of SD-type1, value <i>sdType2</i> indicates support of SD-type2, value <i>both</i> indicates support of both SD-type1 and SD-type2. If a UE reports <i>sdType1</i> or <i>both</i>, the UE shall also indicate support of <i>powerAdaptation-CSI-Feedback-r18</i> and <i>jointPowerSpatialAdaptation-r18</i>;</li> </ul> <p>NOTE 1: SD-type1 refers to all sub-configurations that contain one port subset.<br/>NOTE 2: SD-type2 refers to all sub-configurations that contain list of CSI-RS resource IDs.</p> <ul style="list-style-type: none"> <li>- <i>maxNumberLmax-r18</i> indicates the max number of sub-configurations Lmax in one CSI report configuration;</li> <li>- <i>maxNumberCSI-ResourcePerCC-r18</i> indicates the maximum number of simultaneous NZP-CSI-RS resources per CC for SD-type 1 and/or SD-type 2.</li> <li>- <i>maxNumberTotalCSI-ResourcePerCC-r18</i> indicates the maximum number of total CSI-RS ports in simultaneous NZP-CSI-RS resources per CC for SD-type 1 and/or SD-type 2.</li> <li>- <i>totalNumberCSI-Reporting-r18</i> indicates total number of periodic CSI reporting settings without sub-configurations plus the total number of sub-configurations across periodic CSI report settings with sub-configurations per BWP.</li> </ul> <p>NOTE 3: For <i>maxNumberCSI-ResourcePerCC-r18</i> and <i>maxNumberTotalCSI-ResourcePerCC-r18</i>, NZP-CSI-RS resource and CSI-RS ports are counted for reporting settings with and without sub-configurations.</p> <p>NOTE 4: If a UE reports more than one capability from <i>spatialAdaptation-CSI-Feedback-r18</i>, <i>spatialAdaptation-CSI-FeedbackPUSCH-r18</i>, <i>spatialAdaptation-CSI-FeedbackAperiodic-r18</i>, <i>spatialAdaptation-CSI-FeedbackPUCCH-r18</i>, <i>powerAdaptation-CSI-Feedback-r18</i>, <i>powerAdaptation-CSI-FeedbackPUSCH-r18</i>, <i>powerAdaptation-CSI-FeedbackAperiodic-r18</i>, <i>powerAdaptation-CSI-FeedbackPUCCH-r18</i> and if the UE is configured with CSI report settings with sub-configurations corresponding to a subset of the above reported features, then the supported maximum of NZP-CSI-RS resources/ports across all periodic, semi-persistent, aperiodic CSI report settings with sub-configurations corresponding to all of spatial and power domain adaptations and without sub-configurations is determined by the minimum of the reported values from that subset.</p> <p>NOTE 5: If a UE reports both <i>spatialAdaptation-CSI-Feedback-r18</i> and <i>powerAdaptation-CSI-Feedback-r18</i>, and if the UE is configured with CSI report settings with sub-configurations corresponding to both <i>spatialAdaptation-CSI-Feedback-r18</i> and <i>powerAdaptation-CSI-Feedback-r18</i>, then the supported total number of periodic CSI reporting settings without sub-configurations plus the total number of sub-configurations across periodic CSI report settings with sub-configurations per BWP is determined by the minimum of the reported values from both <i>spatialAdaptation-CSI-Feedback-r18</i> and <i>powerAdaptation-CSI-Feedback-r18</i>.</p> <p>NOTE 6: If a UE reports <i>both</i> for <i>csiFeedbackType-r18</i> and if the UE is configured with both CSI report setting(s) with sub-configurations corresponding to SD-type 1 and CSI report setting(s) with sub-configurations corresponding to SD-type 2, the supported total number of NZP-CSI-RS resources/ports for <i>maxNumberCSI-ResourcePerCC-r18</i> and <i>maxNumberTotalCSI-ResourcePerCC-r18</i> in <i>spatialAdaptation-CSI-Feedback-r18</i> and <i>maxNumberCSI-ResourceAcrossCC</i> and <i>maxNumberTotalCSI-ResourceAcrossCC-r18</i> in <i>spatialAdaptation-CSI-FeedbackPerBC-r18</i> is determined by the minimum of the reported values between SD-type 1 and SD-type 2.</p> <p>NOTE 7: If CSI report configuration in active BWP of a CC includes report setting(s) with sub-configurations, values reported in this capability for the number of simultaneous NZP-CSI-RS resources and ports per CC are used for the CC instead of values reported in <i>csi-RS-IM-ReceptionForFeedback</i>. If CSI report configuration in active BWP of any CC includes report setting(s) with sub-configurations, values reported in this capability for the number of simultaneous NZP-CSI-RS resources</p> |      |    |     |     |

| <b><i>spatialAdaptation-CSI-FeedbackAperiodic-r18</i></b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | Band | No | N/A | N/A |

----------------------------|------|----|-----|-----|
| <p>Indicates whether the UE supports spatial domain adaptation with CSI feedback based on CSI report sub-configuration(s) for aperiodic CSI reporting and single-panel type 1 codebook. This capability signalling comprises the following parameters:</p> <ul style="list-style-type: none"> <li>- <i>csiFeedbackType-r18</i> indicates CSI feedback based on CSI report sub-configuration(s), each containing one port subset configuration/list of CSI-RS resource IDs for periodic CSI reporting. Value <i>sdType1</i> indicates support of SD-type1, value <i>sdType2</i> indicates support of SD-type2, value <i>both</i> indicates support of both SD-type1 and SD-type2. If a UE reports <i>sdType1</i> or <i>both</i>, the UE shall also indicate support of <i>powerAdaptation-CSI-FeedbackAperiodic-r18</i> and <i>jointPowerSpatialAdaptation-r18</i>;</li> </ul> <p>NOTE 1: SD-type1 refers to all sub-configurations that contain one port subset.<br/>NOTE 2: SD-type2 refers to all sub-configurations that contain list of CSI-RS resource IDs.</p> <ul style="list-style-type: none"> <li>- <i>maxNumberLmax-r18</i> indicates the max number of sub-configurations Lmax in one CSI report configuration;</li> <li>- <i>subReportCSI-r18</i> indicates N number of report of CSI sub-report(s) included in one SP-CSI report where each CSI sub-report corresponds to one sub-configuration.</li> <li>- <i>maxNumberCSI-ResourcePerCC-r18</i> indicates the maximum number of simultaneous NZP-CSI-RS resources per CC for SD-type 1 and/or SD-type 2.</li> <li>- <i>maxNumberTotalCSI-ResourcePerCC-r18</i> indicates the maximum number of total CSI-RS ports in simultaneous NZP-CSI-RS resources per CC for SD-type 1 and/or SD-type 2.</li> <li>- <i>totalNumberCSI-Reporting-r18</i> indicates total number of aperiodic CSI reporting settings without sub-configurations plus the total number of sub-configurations across aperiodic CSI report settings with sub-configurations per BWP.</li> </ul> <p>NOTE 3: For <i>maxNumberCSI-ResourcePerCC-r18</i> and <i>maxNumberTotalCSI-ResourcePerCC-r18</i>, NZP-CSI-RS resource and CSI-RS ports are counted for reporting settings with and without sub-configurations.</p> <p>NOTE 4: If a UE reports more than one capability from <i>spatialAdaptation-CSI-Feedback-r18</i>, <i>spatialAdaptation-CSI-FeedbackPUSCH-r18</i>, <i>spatialAdaptation-CSI-FeedbackAperiodic-r18</i>, <i>spatialAdaptation-CSI-FeedbackPUCCH-r18</i>, <i>powerAdaptation-CSI-Feedback-r18</i>, <i>powerAdaptation-CSI-FeedbackPUSCH-r18</i>, <i>powerAdaptation-CSI-FeedbackAperiodic-r18</i>, <i>powerAdaptation-CSI-FeedbackPUCCH-r18</i> and if the UE is configured with CSI report settings with sub-configurations corresponding to a subset of the above reported features, then the supported maximum of NZP-CSI-RS resources/ports across all periodic, semi-persistent, aperiodic CSI report settings with sub-configurations corresponding to all of spatial and power domain adaptations and without sub-configurations is determined by the minimum of the reported values from that subset.</p> <p>NOTE 5: If a UE reports both <i>spatialAdaptation-CSI-FeedbackAperiodic-r18</i> and <i>powerAdaptation-CSI-FeedbackAperiodic-r18</i>, and if the UE is configured with CSI report settings with sub-configurations corresponding to both <i>spatialAdaptation-CSI-FeedbackAperiodic-r18</i> and <i>powerAdaptation-CSI-FeedbackAperiodic-r18</i>, then the supported total number of aperiodic CSI reporting settings without sub-configurations plus the total number of sub-configurations across aperiodic CSI report settings with sub-configurations per BWP is determined by the minimum of the reported values from both <i>spatialAdaptation-CSI-FeedbackAperiodic-r18</i> and <i>powerAdaptation-CSI-FeedbackAperiodic-r18</i>.</p> <p>NOTE 6: If a UE reports <i>both</i> for <i>csiFeedbackType-r18</i> and if the UE is configured with both CSI report setting(s) with sub-configurations corresponding to SD-type 1 and CSI report setting(s) with sub-configurations corresponding to SD-type 2, the supported total number of NZP-CSI-RS resources/ports for <i>maxNumberCSI-ResourcePerCC-r18</i> and <i>maxNumberTotalCSI-ResourcePerCC-r18</i> in <i>spatialAdaptation-CSI-Feedback-r18</i> and <i>maxNumberCSI-ResourceAcrossCC</i> and <i>maxNumberTotalCSI-ResourceAcrossCC-r18</i> in <i>spatialAdaptation-CSI-FeedbackPerBC-r18</i> is determined by the minimum of the reported values between SD-type 1 and SD-type 2.</p> <p>NOTE 7: If CSI report configuration in active BWP of a CC includes report setting(s) with sub-configurations, values reported in this capability for the number of simultaneous NZP-CSI-RS resources and ports per CC are used for the CC instead of values reported in <i>csi-RS-IM-ReceptionForFeedback</i>. If CSI report configuration in active BWP of any CC includes report setting(s) with sub-configurations, values reported in this capability for the number of simultaneous NZP-CSI-RS resources and ports across all CCs are used instead of values reported in <i>csi-RS-</i></p> |      |    |     |     |

| <b><i>spatialAdaptation-CSI-FeedbackPUCCH-r18</i></b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | Band | No | N/A | N/A |

| <p><b>spatialRelationsSRS-PosRRC-Inactive-r17</b><br/>Indicates whether the UE supports spatial relations for SRS for positioning in RRC_INACTIVE. The capability signalling comprises the following parameters:</p> <ul style="list-style-type: none"> <li>- <i>spatialRelation-SRS-PosBasedOnSSB-Serving-r16</i> indicates whether the UE supports spatial relation for SRS for positioning based on SSB from the serving cell in the same band. The UE indicating support of this feature shall also indicate support of <i>srs-PosResourcesRRC-Inactive-r17</i>;</li> <li>- <i>spatialRelation-SRS-PosBasedOnCSI-RS-Serving-r16</i> indicates whether the UE supports spatial relation for SRS for positioning based on CSI-RS from the serving cell in the same band. The UE indicating support of this feature shall also indicate support of <i>spatialRelation-SRS-PosBasedOnSSB-Serving-r16</i>;</li> <li>- <i>spatialRelation-SRS-PosBasedOnPRS-Serving-r16</i> indicates whether the UE supports spatial relation for SRS for positioning based on PRS from the serving cell in the same band. The UE indicating support of this feature shall also indicate support any of DL PRS Resources for DL AoD, DL PRS Resources for DL-TDOA or DL PRS Resources for Multi-RTT defined in TS 37.355 [22], or <i>srs-PosResourcesRRC-Inactive-r17</i>;</li> <li>- <i>spatialRelation-SRS-PosBasedOnSRS-r16</i> indicates whether the UE supports spatial relation for SRS for positioning based on SRS in the same band. The UE indicating support of this feature shall also indicate support of <i>srs-PosResourcesRRC-Inactive-r17</i>;</li> <li>- <i>spatialRelation-SRS-PosBasedOnSSB-Neigh-r16</i> indicates whether the UE supports spatial relation for SRS for positioning based on SSB from the neighbouring cell in the same band. The UE indicating support of this feature shall also indicate support of <i>spatialRelation-SRS-PosBasedOnSSB-Serving-r16</i>;</li> <li>- <i>spatialRelation-SRS-PosBasedOnPRS-Neigh-r16</i> indicates whether the UE supports spatial relation for SRS for positioning based on PRS from the neighbouring cell in the same band. The UE indicating support of this feature shall also indicate support of <i>spatialRelation-SRS-PosBasedOnPRS-Serving-r16</i>.</li> </ul> <p>NOTE: A PRS from a PRS-only TP is treated as PRS from a non-serving cell.</p> | Band | No | N/A | FR2 only |
| <p><b>sp-BeamReportPUCCH</b><br/>Indicates support of semi-persistent 'CRI/RSRP' or 'SSBRI/RSRP' reporting using PUCCH formats 2, 3 and 4 in one slot.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | Band | No | N/A | N/A      |

| <p><b>sps-MulticastMultiConfig-r17</b><br/>Indicates whether the UE supports up to 8 SPS group-common PDSCH configurations per CFR for multicast on PCell. The value indicates the maximum number of activated SPS group-common PDSCH configurations per CFR for multicast.</p> <p>The total number of SPS configurations for both multicast and unicast is no larger than 8 in a BWP of a serving cell. The total number of SPS configurations for both multicast and unicast in a cell group is no larger than 32.</p> <p>For TN, the UE shall set the capability value consistently for all FDD-FR1 bands, all TDD-FR1 bands and all TDD-FR2 bands, associated with supported shared and non-shared spectrum respectively. For NTN, UE shall set the capability value consistently for all FDD-FR1 NTN bands and all FDD-FR2 NTN bands respectively.</p> <p>A UE that indicates support of this feature shall indicate support of <i>sps-Multicast-r17</i>.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                    | Band | No | N/A | N/A |
| <p><b>sps-r16</b><br/>Indicates whether the UE support of up to 8 configured SPS configurations in a BWP of a serving cell and up to 32 configured SPS configurations in a cell group. This field includes the following parameters:</p> <ul style="list-style-type: none"> <li>- <i>maxNumberConfigsPerBWP-r16</i> indicates the maximum number of active SPS configurations in a BWP of a serving cell.</li> <li>- <i>maxNumberConfigsAllCC-r16</i> indicates the maximum number of active SPS configurations across all serving cells in a MAC entity, and across MCG and SCG in case of NR-DC.</li> </ul> <p>The UE can include this feature only if the UE indicates support of <i>downlinkSPS</i>.</p> <p>NOTE:</p> <ul style="list-style-type: none"> <li>- For all the reported bands in FR1, a same X1 value is reported for <i>maxNumberConfigsAllCC-r16</i>. For all the reported bands in FR2, a same X2 value is reported for <i>maxNumberConfigsAllCC-r16</i>.</li> <li>- The total number of active SPS configurations across all serving cells in FR1 is no greater than X1.</li> <li>- The total number of active SPS configurations across all serving cells in FR2 is no greater than X2.</li> <li>- If the CA have some serving cell(s) in FR1 and some serving cell(s) in FR2, the total number of active SPS configurations across all serving cells is no greater than max(X1, X2).</li> </ul> | Band | No | N/A | N/A |
| <p><b>sr-TriggeredSSSG-Switching-r19</b><br/>Indicates whether the UE supports to start PDCCH monitoring according to search space sets with a designated group index and to stop PDCCH monitoring according to search space sets with a group index other than the designated SSSG index from the first slot that is at least <math>P_{\text{switch}}</math> symbols after the last symbol of a PUCCH carrying an SR, if the UE is instructed to monitor PDCCH according to search space sets with the SSSG index other than the designated SSSG index before the transmission of PUCCH carrying the SR.</p> <p>NOTE: <math>P_{\text{switch}}</math> symbols is specified in Table 10.4-1 of TS 38.213 [11].</p> <p>The UE supporting this feature shall also indicate the support of <i>sssg-Switching-1BitInd-r17</i>.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | Band | No | N/A | N/A |
| <p><b>srs-AssocCSI-RS</b><br/>Parameters for the calculation of the precoder for SRS transmission based on channel measurements using associated NZP CSI-RS resource (srs-AssocCSI-RS) as described in clause 6.1.1.2 of TS 38.214 [12]. UE supporting this feature shall also indicate support of non-codebook based PUSCH transmission.</p> <p>This capability signalling includes list of the following parameters:</p> <ul style="list-style-type: none"> <li>- <i>maxNumberTxPortsPerResource</i> indicates the maximum number of Tx ports in a resource;</li> <li>- <i>maxNumberResourcesPerBand</i> indicates the maximum number of resources across all CCs within a band simultaneously;</li> <li>- <i>totalNumberTxPortsPerBand</i> indicates the total number of Tx ports across all CCs within a band simultaneously.</li> </ul>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | Band | No | N/A | N/A |

| <p><b><i>tci-StatePDSCH</i></b><br/>Defines support of TCI-States for PDSCH. The capability signalling comprises the following parameters:</p> <ul style="list-style-type: none"> <li>- <i>maxNumberConfiguredTCI-StatesPerCC</i> indicates the maximum number of configured TCI-states per CC for PDSCH. For FR2, the UE is mandated to set the value at least to 64 (i.e. value 128 is an optional value). For FR1, the UE is mandated to set these values at least to the maximum number of allowed SSBs in the supported band;</li> <li>- <i>maxNumberActiveTCI-PerBWP</i> indicates the maximum number of activated TCI-states per BWP per CC, including control and data. If a UE reports X active TCI state(s), it is not expected that more than X active QCL type D assumption(s) for any PDSCH and any CORESETs for a given BWP of a serving cell become active for the UE. The UE shall include this field.</li> </ul> <p>NOTE: the UE is required to track only the active TCI states.</p> <p>The UE is mandated to report <i>tci-StatePDSCH</i>.</p>                                                                                                 | Band | Yes | N/A | N/A      |
| <p><b><i>tci-StateSwitchInd-r18</i></b><br/>Indicates whether the UE supports enhanced one-shot large UL transmit timing adjustment requirement to support FR2-1 PC6 Ues and enhanced TCI state switching delay requirements based on [the cross-RRH TCI state indication for UE-specific PDCCH MAC CE] in HST FR2 scenario, as specified in TS 38.133 [5]. A UE supporting this feature shall also indicate support of PC6 in <i>ue-PowerClass-v1700</i>.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | Band | No  | N/A | FR2 only |
| <p><b><i>tci-JointTCI-UpdateMultiActiveTCI-PerCC-r18</i></b><br/>Indicates whether the UE supports unified TCI with joint DL/UL TCI update for single-DCI based intra-cell multi-TRP with multiple activated TCI codepoints per CC. The capability signalling comprises the following parameters:</p> <ul style="list-style-type: none"> <li>- <i>tci-StateInd-r18</i> indicates TCI state indication for update and activation. Value <i>withAssignment</i> corresponds to MAC-CE+DCI-based TCI state indication (use of monitored DCI formats 1_1 and if supported 1_2) with DL assignment, value <i>withoutAssignment</i> corresponds to MAC-CE+DCI-based TCI state indication (use of monitored DCI formats 1_1 and if supported 1_2) without DL assignment;</li> <li>- <i>maxNumberActiveJointTCI-PerCC-r18</i> indicates the maximum number of activated joint TCI states per CC.</li> </ul> <p>A UE supporting this feature shall also indicate support <i>tci-JointTCI-UpdateSingleActiveTCI-PerCC-r18</i> and <i>unifiedJointTCI-multiMAC-CE-r17</i>.</p> <p>NOTE: <i>defaultQCL-TwoTCI-r16</i> can be used to indicate support of two default beams</p> | Band | No  | N/A | N/A      |
| <p><b><i>tci-JointTCI-UpdateMultiActiveTCI-PerCC-PerCORESET-r18</i></b><br/>Indicates whether the UE supports unified TCI with joint DL/UL TCI update for multi-DCI based multi-TRP with multiple activated TCI codepoints per <i>CORESETPoolIndex</i> per CC. The capability indicates the maximum number of MAC-CE activated joint TCI states per <i>CORESETPoolIndex</i> per CC. The TCI state indication for update and activation includes:</p> <ul style="list-style-type: none"> <li>- MAC-CE+DCI-based TCI state indication (use of monitored DCI formats 1_1 and if supported 1_2) with DL assignment;</li> <li>- MAC-CE+DCI-based TCI state indication (use of monitored DCI formats 1_1 and if supported 1_2) without DL assignment.</li> </ul> <p>A UE supporting this feature shall also indicate support of <i>tci-JointTCI-UpdateSingleActiveTCI-PerCC-PerCORESET-r18</i> and <i>unifiedJointTCI-multiMAC-CE-r17</i>.</p>                                                                                                                                                                                                                          | Band | No  | N/A | N/A      |
| <p><b><i>tci-JointTCI-UpdateSingleActiveTCI-PerCC-r18</i></b><br/>Indicates whether the UE supports unified TCI with joint DL/UL TCI update for single-DCI based intra-cell multi-TRP with single activated TCI codepoint per CC. | <p><b>type1-PUSCH-RepetitionMultiSlots-v1650</b><br/>Indicates whether the UE supports Type 1 PUSCH transmissions with configured grant as specified in TS 38.214 [12] with UL-TWG-repK value equal to 2, 4, or 8 with a single repetition of the transport block within each slot, and redundancy version pattern as indicated by UL-TWG-RV-rep. A UE supporting this feature shall also support Type 1 PUSCH transmissions with configured grant as specified in TS 38.214 [12] with UL-TWG-repK value of one. This applies only to non-shared spectrum channel access. For shared spectrum channel access, <i>type1-PUSCH-RepetitionMultiSlots-r16</i> applies. Except for NTN bands, UE shall set the capability value consistently for all FDD-FR1 bands, all TDD-FR1 bands, all TDD-FR2-1 bands and all TDD-FR2-2 bands respectively. For NTN, UE shall set the capability value consistently for all FDD-FR1 NTN bands and all FDD-FR2 NTN bands respectively.</p> <p>The UE only includes <i>type1-PUSCH-RepetitionMultiSlots-v1650</i> if <i>type1-PUSCH-RepetitionMultiSlots</i> is absent</p> | Band | No | N/A | N/A |
| <p><b>type2-HARQ-Codebook-r17</b><br/>Indicates whether the UE supports Type-2 HARQ codebook enhancements when there are feedback-disabled HARQ processes. UE indicating support of this feature shall also indicate support of <i>harq-FeedbackDisabled-r17</i>. This field is only applicable for bands in Table 5.2.2-1 in TS 38.101-5 [34] and HAPS operation bands in clause 5.2 of TS 38.104 [35].</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | Band | No | N/A | N/A |
| <p><b>type2-PUSCH-RepetitionMultiSlots-v1650</b><br/>Indicates whether the UE supports Type 2 PUSCH transmissions with configured grant as specified in TS 38.214 [12] with UL-TWG-repK value equal to 2, 4, or 8 with a single repetition of the transport block within each slot, and redundancy version pattern as indicated by UL-TWG-RV-rep. A UE supporting this feature shall also support Type 2 PUSCH transmissions with configured grant as specified in TS 38.214 [12] with UL-TWG-repK value of one. This applies only to non-shared spectrum channel access. For shared spectrum channel access, <i>type2-PUSCH-RepetitionMultiSlots-r16</i> applies. Except for NTN bands, UE shall set the capability value consistently for all FDD-FR1 bands, all TDD-FR1 bands, all TDD-FR2-1 bands and all TDD-FR2-2 bands respectively. For NTN, UE shall set the capability value consistently for all FDD-FR1 NTN bands and all FDD-FR2 NTN bands respectively.</p> <p>The UE only includes <i>type2-PUSCH-RepetitionMultiSlots-v1650</i> if <i>type2-PUSCH-RepetitionMultiSlots</i> is absent</p> | Band | No | N/A | N/A |
| <p><b>type3-HARQ-Codebook-r17</b><br/>Indicates whether the UE supports Type-3 HARQ codebook enhancements when there are feedback-disabled HARQ processes. UE indicating support of this feature shall also indicate support of <i>harq-FeedbackDisabled-r17</i>. This field is only applicable for bands in Table 5.2.2-1 in TS 38.101-5 [34] and HAPS operation bands in clause 5.2 of TS 38.104 [35].</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | Band | No | N/A | N/A |
| <p><b>uei-ModeA-Event1-r19</b><br/>Indicates whether the UE supports Event-1 based measurement and report for Mode A that L1-RSRP of the current beam becomes worse than a configured threshold based on one event instance.<br/>NOTE: Regarding Event-1, QCL RS(s) in indicated TCI state(s) and resources configured for the configured RS(s) for new beam in the RS resource set of <i>uei-ModeA-Event2-r19</i> are also counted in <i>maxTotalResourcesForOneFreqRange-r16</i>, and <i>maxTotalResourcesForAcrossFreqRanges-r16</i>.<br/>A UE supporting this feature shall also indicate the support of <i>uei-ModeA-Event2-r19</i>.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                            | Band | No | N/A | N/A |

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |      |    |     |          |

| <b><i>supportedBandwidthCombinationSetEUTRA</i></b><br>Indicates the set of supported bandwidth combinations for the LTE part for inter-band (NG)EN-DC without intra-band (NG)EN-DC component, inter-band NE-DC without intra-band NE-DC component and intra-band (NG)EN-DC/NE-DC with additional inter-band LTE CA component. The field is encoded as a bit map, where bit N is set to "1" if UE support Bandwidth Combination Set N for this band combination. The leading / leftmost bit (bit 0) corresponds to the Bandwidth Combination Set 0, the next bit corresponds to the Bandwidth Combination Set 1 and so on. The UE shall neither include the field for a (NG)EN-DC/NE-DC combination which has only one LTE carrier, nor for a (NG)EN-DC/NE-DC combination which has more than one LTE carrier for which the UE only supports Bandwidth Combination Set 0 for the LTE part. If the inter-band (NG)EN-DC/NE-DC has more than one LTE carrier, the UE shall support of at least one bandwidth combination for the supported LTE part. | BC  | CY | N/A          | N/A          |

| <p><b><i>aiml-CSI-PredictionDopplerPerBC-r19</i></b></p> <p>The UE optionally includes <i>maxNumberOfAperiodic-CSI-RS-Resource-r19</i> to indicate the maximum number of aperiodic CSI-RS resources that can be configured in the same CSI report setting for eType-II doppler measurement for UE side inference of CSI prediction.</p> <p>The UE optionally includes <i>eType2DopplerR2-r19</i> to indicate whether the UE supports R=2 for eType-II doppler codebook for UE side inference of CSI prediction. This field includes the list of supported CSI-RS resources in a band combination by referring to <i>codebookVariantsList</i>. The following parameters are included for the supported CSI-RS resource:</p> <ul style="list-style-type: none"> <li>- <i>maxNumberTxPortsPerResource</i> indicates the maximum number of Tx ports in a resource of a band combination for inference. The minimum of <i>maxNumberTxPortsPerResource</i> is '4';</li> <li>- <i>totalNumberTxPortsPerBand</i> indicates the total number of Tx ports across all CCs in a band combination for inference. The minimum value of <i>totalNumberTxPortsPerBand</i> is '4';</li> </ul> <p>The UE optionally includes <i>eType2DopplerX1-r19</i> to indicate whether the UE supports X=1 based on first and last slot of <math>W_{\text{CSI}}</math>, for eType-II doppler codebook for UE side inference of CSI prediction (i.e., TDCQI = '1-2').</p> <p>The UE optionally includes <i>eType2DopplerX2-r19</i> to indicate whether the UE supports X=2 CQI based on 2 slots for eType-II doppler codebook for UE side inference of CSI prediction (i.e., TDCQI = '2').</p> <p>The UE optionally includes <i>eType2DopplerL-N4D1-r19</i> to indicate whether the UE supports <math>l = (n - n_{\text{CSI,ref}})</math> for CSI reference slot for eType-II doppler codebook for UE side inference of CSI prediction when <i>vectorLengthDD-r18</i> = 1 and <i>unitDurationDD-r18</i> &gt; 1, or when <i>vectorLengthDD-r18</i> &gt; 1.</p> <p>The UE optionally includes <i>eType2DopplerL6-r19</i> to indicate whether the UE supports L=6 for eType-II doppler codebook for UE side inference of CSI prediction.</p> <p>The UE optionally includes <i>eType2DopplerR3R4-r19</i> to indicate whether the UE supports rank equals 3 and 4 for eType-II doppler codebook for UE side inference of CSI prediction.</p> <p>The UE optionally includes <i>codebookComboParameterMixedTypePrediction-r19</i> to indicate the list of supported CSI-RS resources across all bands in a band combination by referring to <i>codebookVariantsList</i> for the mixed codebook types. For mixed codebook types, UE reports the support of active CSI-RS resources and ports for up to 2 mixed codebook combinations in any slot. The following parameters are included in <i>codebookVariantsList</i> for each codebook type:</p> <ul style="list-style-type: none"> <li>- <i>maxNumberTxPortsPerResource</i> indicates the maximum number of Tx ports in a resource across all bands within a band combination;</li> <li>- <i>maxNumberResourcesPerBand</i> indicates the maximum number of resources across all CCs within a band combination, simultaneously;</li> <li>- <i>totalNumberTxPortsPerBand</i> indicates the total number of Tx ports across all CCs within a band combination, simultaneously.</li> </ul> <p>NOTE 1: If a UE indicates one or more codebook combinations in <i>codebookComboParameterMixedTypePrediction-r19</i>, the usage of active CSI-RS resources and ports for multiple codebooks in any slot is allowed only within those combinations.</p> <p>NOTE 2: For coexisting of mixed codebooks in any slot, the supported values for these three parameters are determined in conjunction with <i>codebookComboParametersAdditionPerBC-r16</i>, <i>codebookComboParameterMixedTypePerBC-r17</i>, <i>codebookComboParameterMixedTypePrediction-r19</i> of <i>aiml-CSI-PredictionDopplerPerBC-r19</i>, and per-codebook capability <i>type1</i>, <i>type2</i> of <i>codebookParametersPerBC</i>, <i>etype2R1-r16</i> of <i>codebookParametersAdditionPerBC-r16</i>, and <i>fetype2basic-r17</i>, <i>fetype2R1-r17</i>, <i>fetype2R2-r17</i> of <i>codebookParametersfetype2PerBC-r17</i>.</p> <p>A UE supporting this feature shall also indicate support of <i>aiml-CSI-PredictionPerBC-r19</i>.</p> | BC | No | N/A | N/A |

| <p><b>codebookComboParametersAdditionPerBC-r16</b></p> <p>Indicates the list of supported CSI-RS resources across all bands in a band combination by referring to <i>codebookVariantsList</i> for the mixed codebook types. For mixed codebook types, UE reports support active CSI-RS resources and ports for up to 4 mixed codebook combinations in any slot. The following parameters are included in <i>codebookVariantsList</i> for each code book type:</p> <ul style="list-style-type: none"> <li>- <i>maxNumberTxPortsPerResource</i> indicates the maximum number of Tx ports in a resource across all bands within a band combination;</li> <li>- <i>maxNumberResourcesPerBand</i> indicates the maximum number of resources across all CCs within a band combination, simultaneously;</li> <li>- <i>totalNumberTxPortsPerBand</i> indicates the total number of Tx ports across all CCs within a band combination, simultaneously.</li> </ul> <p>For each band in a band combination, supported values for these three parameters are determined in conjunction with <i>codebookComboParametersAddition-r16</i> reported in <i>MIMO-ParametersPerBand</i>.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | BC | No | N/A | N/A |
| <p><b>CodebookComboParametersCJT-PerBC-r18</b></p> <p>Indicates the support of active CSI-RS resources and ports for mixed codebook types including Type-II-CJT in any slot.</p> <p>The UE reports supported active CSI-RS resources and ports for the following are the possible mixed codebook combinations {Codebook1, Codebook2, Codebook3}:</p> <ul style="list-style-type: none"> <li>- <i>cjt-Type1SP-eType2R1-null</i> indicates {Type I SP, eType-II-CJT R=1, NULL}</li> <li>- <i>cjt-Type1SP-eType2R2-null</i> indicates {Type I SP, eType-II-CJT R=2, NULL}</li> <li>- <i>cjt-Type1SP-feType2R1M1-null</i> indicates {Type I SP, FeType-II-CJT PS R=1 M=1, NULL}</li> <li>- <i>cjt-Type1SP-feType2R1M2-null</i> indicates {Type I SP, FeType-II-CJT PS R=1 M=2, NULL}</li> <li>- <i>cjt-Type1SP-feType2R2M2-null</i> indicates {Type I SP, FeType-II-CJT PS R=2 M=2, NULL}</li> <li>- <i>cjt-Type1MP-eType2R1-null</i> indicates {Type I MP, eType-II-CJT R=1, NULL}</li> <li>- <i>cjt-Type1MP-eType2R2-null</i> indicates {Type I MP, eType-II-CJT R=2, NULL}</li> <li>- <i>cjt-Type1MP-feType2R1M1-null</i> indicates {Type I MP, FeType-II-CJT PS R=1 M=1, NULL}</li> <li>- <i>cjt-Type1MP-feType2R1M2-null</i> indicates {Type I MP, FeType-II-CJT PS R=1 M=2, NULL}</li> <li>- <i>cjt-Type1MP-feType2R2M2-null</i> indicates {Type I MP, FeType-II-CJT PS R=2 M=2, NULL}</li> </ul> <p>For each mixed codebook supported by the UE, <i>supportedCSI-RS-ResourceListAdd-r16</i> indicates the list of supported CSI-RS resources across all CCs in a band combination by referring to <i>codebookVariantsList</i>. The following parameters are included in <i>codebookVariantsList</i>:</p> <ul style="list-style-type: none"> <li>- <i>maxNumberTxPortsPerResource</i> indicates the maximum number of Tx ports in a resource of a band combination. The minimum of <i>maxNumberTxPortsPerResource</i> is 'p4';</li> <li>- <i>maxNumberResourcesPerBand</i> indicates the maximum number of resources across all CCs in a band combination.</li> <li>- <i>totalNumberTxPortsPerBand</i> indicates the total number of Tx ports across all CCs in a band combination. The minimum value of <i>totalNumberTxPortsPerBand</i> is 4.</li> </ul> <p>A UE supporting this feature shall also indicate support of individual codebook types in the reported mixed codebook combination among <i>eType2CJT-r18</i>, <i>feType2CJT-r18</i>, Type I single panel codebook and Type I multi-panel codebook.</p> | BC | No | N/A | N/A |
| <p><b>codebookParametersAdditionPerBC-r16</b></p> <p>Indicates the list of supported CSI-RS resources across all bands in a band combination by referring to <i>codebookVariantsList</i> for the additional codebook types. The following parameters are included in <i>codebookVariantsList</i> for each code book type:</p> <ul style="list-style-type: none"> <li>- <i>maxNumberTxPortsPerResource</i> indicates the maximum number of Tx ports in a resource across all bands within a band combination;</li> <li>- <i>maxNumberResourcesPerBand</i> indicates the maximum number of resources across all CCs within a band combination, simultaneously;</li> <li>- <i>totalNumberTxPortsPerBand</i> indicates the total number of Tx ports across all CCs within a band combination, simultaneously.</li> </ul> <p>For each band in a band combination, supported values for these three parameters are determined in conjunction with <i>codebookParametersAddition-r16</i> reported in <i>MIMO-ParametersPerBand</i>.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | BC | No | N/A | N/A |

| <p>Indicates the UE support of additional codebooks and the corresponding parameters supported by the UE of Enhanced Type II Codebook (eType-II) with refinement for multi-TRP CJT.</p> <p>The basic features of eType-II codebook with refinement for multi-TRP CJT are included in <i>eType2CJT-r18</i>. This capability signalling comprises the following parameters:</p> <ul style="list-style-type: none"> <li>- <i>supportedCSI-RS-ResourceList-r18</i> indicates the list of supported CSI-RS resources across all CCs in a band combination by referring to <i>codebookVariantsList</i>. The following parameters are included in <i>codebookVariantsList</i>: <ul style="list-style-type: none"> <li>- <i>maxNumberTxPortsPerResource</i> indicates the maximum number of Tx ports in one NZP CSI-RS resource associated with multi-TRP CJT;</li> <li>- <i>maxNumberResourcesPerBand</i> indicates the maximum total number of NZP CSI-RS resource associated with multi-TRP CJT;</li> <li>- <i>totalNumberTxPortsPerBand</i> indicates the total number of Tx ports of NZP CSI-RS resources associated with multi-TRP CJT.</li> </ul> </li> <li>- <i>scalingfactor-r18</i> indicates the scaling factor X for CPU occupation counting for CJT etype-II codebook;</li> <li>- <i>maxNumberNZP-CSI-RS-MultiTRP-CJT-r18</i> indicates the maximum number of NZP CSI-RS resources in one NZP CSI-RS resource set associated with multi-TRP CJT.</li> </ul> <p>The UE indicating <i>eType2CJT-r18</i> shall support <math>N=N\_TRP</math> only, <math>N\_L=1</math> only, support mode 2 for eType-II codebook refinement for multi-TRP CJT, support PMI subband <math>R=1</math>, support parameter combinations with <math>L=2,4</math>, support rank 1,2, and support frequency basis selection mode 2, i.e., common frequency basis selection among different TRPs.</p> <p>The UE indicating support of <i>eType2CJT-r18</i> shall also indicate support of <i>csi-ReportFramework</i> and <i>simultaneousCSI-ReportsAllCC</i>.</p> <p>NOTE 1: When <math>NTRP=1</math> TRP is configured, <math>O_{CPU} = 1</math>. When <math>NTRP &gt; 1</math> TRPs are configured, <math>O_{CPU} = \text{ceil}(X * NTRP)</math>.</p> <p>NOTE 2: A-CSI is supported, and whether UE supports SP-CSI on PUSCH is dependent on <i>sp-CSI-ReportPUSCH</i>.</p> <p>The UE optionally includes <i>eType2CJT-FD-IO-r18</i> to indicate whether the UE supports mode 1 for CJT eType-II codebook with FD basis selection integer frequency offset. This capability signalling comprises the list of supported NZP CSI-RS resources across all CCs in a band combination by referring to <i>codebookVariantsList</i>. The UE indicating <i>eType2CJT-FD-IO-r18</i> shall also support frequency basis selection mode 1, i.e., common frequency basis selection among different TRPs with FD basis selection integer frequency offset.</p> <p>The UE optionally indicates <i>eType2CJT-FD-FO-r18</i> to indicate whether the UE supports FD basis selection fractional offset mode for Rel-16-based CJT codebook with mode1. The UE indicating <i>eType2CJT-FD-FO-r18</i> shall also indicate support of <i>eType2CJT-FD-IO-r18</i>.</p> <p>The UE optionally indicates <i>eType2CJT-R2-r18</i> to indicate whether the UE supports eType-II codebook refinement for multi-TRP CJT with PMI subbands <math>R=2</math>. This capability signalling comprises the list of supported NZP CSI-RS resources with <math>R=2</math> across all CCs in a band combination by referring to <i>codebookVariantsList</i> across all CCs.</p> <p>The UE optionally indicates <i>eType2CJT-PV-Beta-r18</i> to indicate whether the UE supports eType-II codebook refinement for multi-TRP CJT with parameter combination <math>p_v=\{1/2, 1/2, 1/2, 1/2\}</math> and <math>\beta=1/2</math>.</p> <p>The UE optionally indicates <i>eType2CJT-2NN1N2-r18</i> to indicate whether the UE supports <math>2NN1N2 &gt; 32</math> for eType-II CJT codebook. The UE indicates the maximum number of ports across all TRPs for one CJT CSI measurement.</p> <p>The UE optionally indicates <i>eType2CJT-Rank3Rank4-r18</i> to indicate whether the UE supports eType-II codebook refinement for multi-TRP CJT with rank 3,4.</p> <p>The UE optionally indicates <i>eType2CJT-L6-r18</i> to indicate whether the UE supports eType-II codebook refinement for multi-TRP CJT with parameter combination with <math>L=6</math>. The UE supports this capability only for <math>N\_TRP=1</math>. The UE indicating <i>eType2CJT-L6-r18</i> shall also indicate support of <i>eType2CJT-r18</i>.</p> <p>The UE optionally indicates <i>eType2CJT-NN-r18</i> to indicate whether the UE supports selection of <math>N \leq N\_TRP</math> CSI-RS resource by UE for multi-TRP CJT based on eType-II codebook.</p> |    |    |     |     |

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |    |    |     |     |

**codebookParameterseType2DopplerExtPerBC-r19**

Indicates whether the UE supports extended eType-II Doppler codebook.

The basic features of extended eType-II Doppler codebook for 64 Tx ports by aggregating multiple NZP CSI-RS resource groups within 1 slot are included in *eType2Doppler-64PortExt-r19*. This capability signalling comprises the following parameters:

- *supportedCSI-RS-ResourceExtList-r19* indicates the list of supported CSI-RS resources across all CCs in a band combination by referring to *codebookVariantsListExt-r19*. The following parameters are included in *codebookVariantsListExt-r19*:
- *maxNumberResourcesPerBand-r19* indicates the maximum number of resources across all CCs in a band combination, simultaneously.
- *totalNumberTxPortsPerBand-r19* indicates the total number of Tx ports across all CCs in a band combination, simultaneously.
- *processingCapability-r19* indicates the supported processing capability. Value *cap1* indicates the processing capability reuses timeline of enhanced Type II Codebook (eType-II) based on doppler CSI and OCPU =  $Y * \text{vectorLengthDD-r18} * \text{ceil}(P/32)$  when P/SP-CSI-RS is configured for CMR, OCPU =  $Y * K_{\text{DOPP}} * \text{ceil}(P/32)$  when A-CSI-RS is configured for CMR. Value *cap2* indicates the processing capability scales the timeline of enhanced Type II Codebook (eType-II) based on doppler CSI by  $\text{ceil}(P/32)$  where P is the total number of ports across all the K aggregated CSI-RS resources and OCPU =  $Y * \text{vectorLengthDD-r18}$ , when P/SP-CSI-RS is configured for CMR, OCPU =  $Y * K_{\text{DOPP}}$ , when A-CSI-RS is configured for CMR. '*cap1*' is a higher capability than '*cap2*'.
- *valueY-P-SP-CSI-RS-r19* indicates value of Y for CPU occupation when P/SP-CSI-RS is configured for CMR.
- *valueY-A-CSI-RS-r19* indicates value of Y for CPU occupation when A-CSI-RS is configured for CMR.
- *scalingfactor-r19* indicates scaling factor for active resource counting Kp.
- *maxNumberResource-r19* indicates the maximum number of CSI-RS resource in a resource group for aperiodic CSI-RS resource set or in a resource set for periodic CSI-RS resource set.
- *supportedCSI-RS-ResourceListPerCC-r19* indicates the list of supported CSI-RS resources per CC simultaneously in a band combination by referring to *codebookVariantsListExt-r19*. The following parameters are included in *codebookVariantsListExt-r19*:
- *maxNumberResourcesPerBand-r19* indicates the maximum number of resources per CC in a band combination, simultaneously.
- *totalNumberTxPortsPerBand-r19* indicates the total number of Tx ports across per CC in a band combination, simultaneously.

The UE indicating *eType2Doppler-64PortExt-r19* shall also support X=1 CQI based on the first/earliest slot of the CSI reporting window and the first/earliest predicted PMI (TDCQI='1-1'), support PMI subband R=1, support parameter combinations with L=2,4, support rank = 1,2, and support the size of DD-basis, *vectorLengthDD-r18* =1.

A UE supporting this feature shall also indicate support of *eType2Doppler-r18*.

The UE optionally includes *eType2Doppler-48PortExt-r19* to indicate whether the UE supports extended eType-II Doppler codebook for 48 Tx ports by aggregating multiple NZP CSI-RS resource groups within 1 slot. This capability signalling comprises the following parameters:

- *supportedCSI-RS-ResourceExtList-r19* indicates the list of supported CSI-RS resources across all CCs in a band combination by referring to *codebookVariantsListExt-r19*. The following parameters are included in *codebookVariantsListExt-r19*:
- *maxNumberResourcesPerBand-r19* indicates the maximum number of resources across all CCs in a band combination, simultaneously.
- *totalNumberTxPortsPerBand-r19* indicates the total number of Tx ports across all CCs in a band combination, simultaneously.
- *processingCapability-r19* indicates the supported processing capability. Value *cap1* indicates the processing capability reuses timeline of enhanced Type II Codebook (eType-II) based on doppler CSI and OCPU =  $Y * \text{vectorLengthDD-r18} * \text{ceil}(P/32)$  when P/SP-CSI-RS is configured for CMR, OCPU =  $Y * K_{\text{DOPP}} * \text{ceil}(P/32)$  when A-CSI-RS is configured for CMR. Value *cap2* indicates the processing capability scales the timeline of enhanced Type II Codebook (eType-II) based on doppler CSI by  $\text{ceil}(P/32)$  where P is the total number of ports across all the K aggregated CSI-RS

| <p>Indicates the UE support of additional codebooks and the corresponding parameters supported by the UE of Further Enhanced Type II Codebook (feType-II) with refinement for multi-TRP CJT.</p> <p>The basic features of feType-II codebook with refinement for multi-TRP CJT are included in <i>feType2CJT-r18</i>. This capability signalling comprises the following parameters:</p> <ul style="list-style-type: none"> <li>- <i>supportedCSI-RS-ResourceList-r18</i> indicates the list of supported CSI-RS resources across all CCs in a band combination by referring to <i>codebookVariantsList</i>. The following parameters are included in <i>codebookVariantsList</i>: <ul style="list-style-type: none"> <li>- <i>maxNumberTxPortsPerResource</i> indicates the maximum number of Tx ports in one NZP CSI-RS resource associated with multi-TRP CJT;</li> <li>- <i>maxNumberResourcesPerBand</i> indicates the maximum total number of NZP CSI-RS resource associated with multi-TRP CJT;</li> <li>- <i>totalNumberTxPortsPerBand</i> indicates the total number of Tx ports of NZP CSI-RS resources associated with multi-TRP CJT.</li> </ul> </li> <li>- <i>scalingfactor-r18</i> indicates the scaling factor X for CPU occupation counting for CJT fetype-II codebook;</li> <li>- <i>maxNumberNZP-CSI-RS-MultiTRP-CJT-r18</i> indicates the maximum number of NZP CSI-RS resources in one NZP CSI-RS resource set associated with multi-TRP CJT.</li> </ul> <p>The UE indicating <i>feType2CJT-r18</i> shall support N=N_TRP only, N_L=1 only, support mode 2 for FeType-II port selection codebook refinement for multi-TRP CJT, support PMI subband R=1, support parameter combinations with M=1, support rank 1,2, and support frequency basis selection mode 2, i.e., common frequency basis selection among different TRPs.</p> <p>The UE indicating support of <i>feType2CJT-r18</i> shall also indicate support of <i>csi-ReportFramework</i> and <i>simultaneousCSI-ReportsAllCC</i>.</p> <p>NOTE 1: When NTRP=1 TRP is configured, OCPU =1. When NTRP&gt;1 TRPS are configured, OCPU = ceil(X * NTRP).</p> <p>NOTE 2: A-CSI is supported, and whether UE supports SP-CSI on PUSCH is dependent on <i>sp-CSI-ReportPUSCH</i>.</p> <p>NOTE 3: A UE that supports CSI enhancement for Rel 17 based type-II CJT must support this feature.</p> <p>The UE optionally includes <i>feType2CJT-FD-IO-r18</i> to indicate whether the UE supports FeType-II port selection codebook refinement for multi-TRP CJT with PMI subband R=1. This capability signalling comprises the list of supported NZP CSI-RS resources across all CCs in a band combination by referring to <i>codebookVariantsList</i>. The UE indicating <i>feType2CJT-FD-IO-r18</i> shall also support frequency basis selection mode 1, i.e., common frequency basis selection among different TRPs with FD basis selection integer frequency offset.</p> <p>The UE optionally Indicates <i>feType2CJT-FD-FO-r18</i> to indicate whether the UE supports frequency basis selection mode 1 with FD basis selection fractional frequency offset for FeType-II port selection based CJT codebook. The UE indicating <i>feType2CJT-FD-FO-r18</i> shall also indicate support of <i>feType2CJT-FD-IO-r18</i>.</p> <p>The UE optionally Indicates <i>eType2CJT-M2R1-r18</i> to indicate whether the UE supports FeType-II port selection codebook refinement for multi-TRP CJT with M=2 and PMI subband R=1. This capability signalling comprises the list of supported NZP CSI-RS resources with R=2 across all CCs in a band combination by referring to <i>codebookVariantsList</i>. The UE indicating <i>feType2CJT-M2R1-r18</i> shall also indicate support of <i>feType2CJT-r18</i> or <i>feType2CJT-FD-IO-r18</i>.</p> <p>The UE optionally indicates <i>feType2CJT-R2-r18</i> to indicate whether the UE supports FeType-II port selection codebook refinement for multi-TRP CJT with PMI subband R=2. This capability signalling comprises the list of supported NZP CSI-RS resources with R=2 across all CCs in a band combination by referring to <i>codebookVariantsList</i>. The UE indicating <i>feType2CJT-R2-r18</i> shall also indicate support of <i>feType2CJT-r18</i> or <i>feType2CJT-FD-IO-r18</i>.</p> <p>The UE optionally indicates <i>feType2CJT-2NN1N2-r18</i> to indicate whether the UE supports 2NN1N2 &gt;32 for FeType-II CJT codebook. The UE indicates the maximum number of ports across all TRPs for one CJT CSI measurement.</p> <p>The UE optionally indicates <i>feType2CJT-Rank3Rank4-r18</i> to indicate whether the UE supports FeType-II port selection codebook refinement for multi-TRP CJT with rank 3,4.</p> <p>The UE optionally indicates <i>feType2CJT-NN-r18</i> to indicate whether the UE</p> |    |    |     |     |

| <p><b>codebookParametersfeType2DopplerCSI-PerBC-r18</b><br/>Indicates the UE support of additional codebooks and the corresponding parameters supported by the UE of Further Enhanced Type II Codebook (FeType-II) based on doppler CSI as specified in TS 38.214 [12].</p> <p>The basic features of FeType-II doppler codebook are included in <i>eType2Doppler-r18</i>. This capability signalling comprises the following parameters:</p> <ul style="list-style-type: none"> <li>- <i>supportedCSI-RS-ResourceList-r18</i> indicates the list of supported CSI-RS resources across all CCs in a band combination by referring to <i>codebookVariantsList</i>. The following parameters are included in <i>codebookVariantsList</i>;</li> <li>- <i>maxNumberTxPortsPerResource</i> indicates the maximum number of Tx ports in a resource of a band combination;</li> <li>- <i>maxNumberResourcesPerBand</i> indicates the maximum number of resources across all CCs within a band combination, simultaneously;</li> <li>- <i>totalNumberTxPortsPerBand</i> indicates the total number of Tx ports across all CCs within a band combination, simultaneously.</li> <li>- <i>valueY-A-CSI-RS-r18</i> indicates value of Y for CPU occupation (<math>O_{CPU} = Y \cdot K</math>), when A-CSI-RS is configured for CMR;</li> <li>- <i>scalingfactor-r18</i> indicates scaling factor for active resource counting Kp.</li> </ul> <p>The UE indicating <i>feType2Doppler-r18</i> shall support X=1 CQI based on the first/earliest slot of the CSI reporting window and the first/earliest predicted PMI, support FeType-II regular codebook refinement for predicted PMI with PMI subband R=1, support parameter combinations with M=1, support rank = 1,2, and support <i>vectorLengthDD-r18</i> = 1. A UE indicating this feature shall also indicate the support of <i>csi-ReportFramework</i>.</p> <p>The UE indicating support of <i>feType2Doppler-r18</i> shall also indicate support of <i>eType2Doppler-r18</i>, <i>csi-ReportFramework</i> and <i>simultaneousCSI-ReportsAllCC</i>.</p> <p>NOTE 1: <math>O_{CPU} = 4</math> when P/SP-CSI-RS is configured for CMR.<br/>NOTE 2: When K=12, <math>O_{CPU} = 8</math>.<br/>NOTE 3: Void.</p> <p>The UE optionally includes <i>maxNumberAperiodicCSI-RS-Resource-r18</i> to indicate the maximum number of aperiodic CSI-RS resources that can be configured in the same CSI report setting for FeType-II doppler measurement.</p> <p>The UE optionally includes <i>feType2DopplerM2R1-r18</i> to indicate whether the UE supports M=2 and R=1 for FeType-II doppler codebook. This capability signalling comprises the list of supported CSI-RS resources across all CCs in a band combination by referring to <i>codebookVariantsList</i>.</p> <p>The UE optionally includes <i>feType2DopplerR2-r18</i> to indicate whether the UE supports R=2 for FeType-II doppler codebook. This capability signalling comprises the list of supported CSI-RS resources across all CCs in a band combination by referring to <i>codebookVariantsList</i>.</p> <p>The UE optionally includes <i>feType2DopplerL-N4D1-r18</i> to indicate whether the UE supports support of <math>l = (n - n_{CSI,ref})</math> for CSI reference slot for FeType-II doppler codebook.</p> <p>The UE optionally includes <i>feType2DopplerR3R4-r18</i> to indicate whether the UE supports rank equals 3 and 4 for FeType-II doppler codebook.</p> <p>For <i>codebookVariantsList-r16</i> related to the feType-II:</p> <ul style="list-style-type: none"> <li>- The minimum of <i>maxNumberTxPortsPerResource</i> is 'p4';</li> <li>- The minimum of <i>maxNumberResourcesPerBand</i> is 2, except for <i>eType2DopplerR2-r18</i>;</li> <li>- The minimum value of <i>totalNumberTxPortsPerBand</i> is 4.</li> </ul> | BC | No | N/A | N/A |

**codebookParametersType1MP-PerBC-r19**

Indicates whether the UE supports enhanced Type-I MP codebook within 1 slot. The basic features of enhanced Type-I MP codebook for 64 ports within 1 slot are included in *enhType1MP64Ports-r19*. This capability signalling comprises the following parameters:

- *supportedCSI-RS-ResourceExtList-r19* indicates the list of supported CSI-RS resources across all CCs in a band combination by referring to *codebookVariantsListExt-r19*. The following parameters are included in *codebookVariantsListExt-r19*:
  - *maxNumberResourcesPerBand-r19* indicates the maximum number of resources across all CCs in a band combination, simultaneously.
  - *totalNumberTxPortsPerBand-r19* indicates the total number of Tx ports across all CCs in a band combination, simultaneously.
- *maxPanel-r19* indicates the supported maximum number of panels.
- *maxNumberResource-r19* indicates the maximum number of CSI-RS resource in a resource set.
- *processingCapability-r19* indicates the supported processing capability. Value *cap1* indicates the processing capability reuses *Z/Z'* values and  $OCPU = \text{ceil}(P/32)$ . Value *cap2* indicates the processing capability scales the timeline *Z/Z'* by  $\text{ceil}(P/32)$  where P is the total number of ports across all the K aggregated CSI-RS resources and  $OCPU = 1$ . '*cap1*' is a higher capability than '*cap2*'.
- *supportedCSI-RS-ResourceListPerCC-r19* indicates the list of supported CSI-RS resources per CC simultaneously in a band combination by referring to *codebookVariantsListExt-r19*. The following parameters are included in *codebookVariantsListExt-r19*:
  - *maxNumberResourcesPerBand-r19* indicates the maximum number of resources per CC in a band combination, simultaneously.
  - *totalNumberTxPortsPerBand-r19* indicates the total number of Tx ports across per CC in a band combination, simultaneously.

A UE supporting this feature shall also indicate support of *simultaneousCSI-ReportsAllCC*.

The UE optionally includes *enhType1MP48Ports-r19* to indicate whether the UE supports enhanced Type-I MP codebook for 48 ports within 1 slot. This capability signalling comprises the following parameters:

- *supportedCSI-RS-ResourceExtList-r19* indicates the list of supported CSI-RS resources across all CCs in a band combination by referring to *codebookVariantsListExt-r19*. The following parameters are included in *codebookVariantsListExt-r19*:
  - *maxNumberResourcesPerBand-r19* indicates the maximum number of resources across all CCs in a band combination, simultaneously.
  - *totalNumberTxPortsPerBand-r19* indicates the total number of Tx ports across all CCs in a band combination, simultaneously.
- *maxPanel-r19* indicates the supported maximum number of panels.
- *maxNumberResource-r19* indicates the maximum number of CSI-RS resource in a resource set.
- *processingCapability-r19* indicates the supported processing capability. Value *cap1* indicates the processing capability reuses *Z/Z'* values and  $OCPU = \text{ceil}(P/32)$ . Value *cap2* indicates the processing capability scales the timeline *Z/Z'* by  $\text{ceil}(P/32)$  where P is the total number of ports across all the K aggregated CSI-RS resources and  $OCPU = 1$ . '*cap1*' is a higher capability than '*cap2*'.
- *supportedCSI-RS-ResourceListPerCC-r19* indicates the list of supported CSI-RS resources per CC simultaneously in a band combination by referring to *codebookVariantsListExt-r19*. The following parameters are included in *codebookVariantsListExt-r19*:
  - *maxNumberResourcesPerBand-r19* indicates the maximum number of resources per CC in a band combination, simultaneously.
  - *totalNumberTxPortsPerBand-r19* indicates the total number of Tx ports across per CC in a band combination, simultaneously.

The UE optionally includes *enhType1MP128Ports-r19* to indicate whether the UE supports enhanced Type-I MP codebook for 128 ports within 1 slot and 4 CSI-RS resources in a resource set. This capability signalling comprises the following parameters:

- *supportedCSI-RS-ResourceExtList-r19* indicates the list of supported CSI-RS resources across all CCs in a band combination by referring to *codebookVariantsListExt-r19*. The following parameters are included in

**codebookParametersType1SP-SchemeA-PerBC-r19**

Indicates whether the UE supports enhanced Type-I SP codebook for Scheme-A by aggregating multiple NZP CSI-RS resources within one slot.

The basic feature of enhanced Type-I SP codebook for 64 ports Scheme-A are included in *enhType1SP64PortsSchemeA-r19*. This capability signalling comprises the following parameters:

- *supportedCSI-RS-ResourceExtList-r19* indicates the list of supported CSI-RS resources across all CCs in a band combination by referring to *codebookVariantsListExt-r19*. The following parameters are included in *codebookVariantsListExt-r19*:
  - *maxNumberResourcesPerBand-r19* indicates the maximum number of resources across all CCs in a band combination, simultaneously.
  - *totalNumberTxPortsPerBand-r19* indicates the total number of Tx ports across all CCs in a band combination, simultaneously.
- *maxRank-r19* indicates the supported maximum rank.
- *maxNumberResource-r19* indicates the maximum number of CSI-RS resource in a resource set.
- *processingCapability-r19* indicates the supported processing capability. Value *cap1* indicates the processing capability reuses  $Z/Z'$  values and  $O_{CPU} = \text{ceil}(P/32)$ . Value *cap2* indicates the processing capability scales the timeline  $Z/Z'$  by  $\text{ceil}(P/32)$  where P is the total number of ports across all the K aggregated CSI-RS resources and  $O_{CPU} = 1$ . '*cap1*' is a higher capability than '*cap2*'.
- *supportedCSI-RS-ResourceListPerCC-r19* indicates the list of supported CSI-RS resources per CC simultaneously in a band combination by referring to *codebookVariantsListExt-r19*. The following parameters are included in *codebookVariantsListExt-r19*:
  - *maxNumberResourcesPerBand-r19* indicates the maximum number of resources per CC in a band combination, simultaneously.
  - *totalNumberTxPortsPerBand-r19* indicates the total number of Tx ports across per CC in a band combination, simultaneously.

A UE supporting this feature shall also indicate support of *simultaneousCSI-ReportsAllCC*.

The UE optionally includes *enhType1SP48PortsSchemeA-r19* to indicate whether the UE supports enhanced Type-I SP codebook for Scheme-A with 48 Tx ports by aggregating multiple NZP CSI-RS resources within one slot. This capability signalling comprises the following parameters:

- *supportedCSI-RS-ResourceExtList-r19* indicates the list of supported CSI-RS resources across all CCs in a band combination by referring to *codebookVariantsListExt-r19*. The following parameters are included in *codebookVariantsListExt-r19*:
  - *maxNumberResourcesPerBand-r19* indicates the maximum number of resources across all CCs in a band combination, simultaneously.
  - *totalNumberTxPortsPerBand-r19* indicates the total number of Tx ports across all CCs in a band combination, simultaneously.
- *maxRank-r19* indicates the supported maximum rank.
- *maxNumberResource-r19* indicates the maximum number of CSI-RS resource in a resource set.
- *processingCapability-r19* indicates the supported processing capability. Value *cap1* indicates the processing capability reuses  $Z/Z'$  values and  $O_{CPU} = \text{ceil}(P/32)$ . Value *cap2* indicates the processing capability scales the timeline  $Z/Z'$  by  $\text{ceil}(P/32)$  where P is the total number of ports across all the K aggregated CSI-RS resources and  $O_{CPU} = 1$ . '*cap1*' is a higher capability than '*cap2*'.
- *supportedCSI-RS-ResourceListPerCC-r19* indicates the list of supported CSI-RS resources per CC simultaneously in a band combination by referring to *codebookVariantsListExt-r19*. The following parameters are included in *codebookVariantsListExt-r19*:
  - *maxNumberResourcesPerBand-r19* indicates the maximum number of resources per CC in a band combination, simultaneously.
  - *totalNumberTxPortsPerBand-r19* indicates the total number of Tx ports across per CC in a band combination, simultaneously.

The UE optionally includes *enhType1SP128PortsSchemeA-r19* to indicate whether the UE supports enhanced Type-I SP codebook for Scheme-A with 128 Tx ports by aggregating multiple NZP CSI-RS resources within one slot and 4 CSI-RS resources in a resource set. This capability signalling comprises the following

**codebookParametersType1SP-SchemeB-PerBC-r19**

Indicates whether the UE supports enhanced Type-I SP codebook for Scheme-B by aggregating multiple NZP CSI-RS resources within one slot.

The basic features of enhanced Type-I SP codebook for 64 ports Scheme-B are included in *enhType1SP64PortsSchemeB-r19*. This capability signalling comprises the following parameters:

- *supportedCSI-RS-ResourceExtList-r19* indicates the list of supported CSI-RS resources across all CCs in a band combination by referring to *codebookVariantsListExt-r19*. The following parameters are included in *codebookVariantsListExt-r19*:
  - *maxNumberResourcesPerBand-r19* indicates the maximum number of resources across all CCs in a band combination, simultaneously.
  - *totalNumberTxPortsPerBand-r19* indicates the total number of Tx ports across all CCs in a band combination, simultaneously.
- *maxRank-r19* indicates the supported maximum rank.
- *maxNumberResource-r19* indicates the maximum number of CSI-RS resource in a resource set.
- *processingCapability-r19* indicates the supported processing capability. Value *cap1* indicates the processing capability reuses  $Z/Z'$  values and  $O_{CPU} = \text{ceil}(P/32)$ . Value *cap2* indicates the processing capability scales the timeline  $Z/Z'$  by  $\text{ceil}(P/32)$  where P is the total number of ports across all the K aggregated CSI-RS resources and  $O_{CPU} = 1$ . '*cap1*' is a higher capability than '*cap2*'.
- *supportedCSI-RS-ResourceListPerCC-r19* indicates the list of supported CSI-RS resources per CC simultaneously in a band combination by referring to *codebookVariantsListExt-r19*. The following parameters are included in *codebookVariantsListExt-r19*:
  - *maxNumberResourcesPerBand-r19* indicates the maximum number of resources per CC in a band combination, simultaneously.
  - *totalNumberTxPortsPerBand-r19* indicates the total number of Tx ports across per CC in a band combination, simultaneously.

A UE supporting this feature shall also indicate support of *simultaneousCSI-ReportsAllCC*.

The UE optionally includes *enhType1SP48PortsSchemeB-r19* to indicate whether the UE supports enhanced Type-I SP codebook for Scheme-B with 48 Tx ports by aggregating multiple NZP CSI-RS resources within one slot. This capability signalling comprises the following parameters:

- *supportedCSI-RS-ResourceExtList-r19* indicates the list of supported CSI-RS resources across all CCs in a band combination by referring to *codebookVariantsListExt-r19*. The following parameters are included in *codebookVariantsListExt-r19*:
  - *maxNumberResourcesPerBand-r19* indicates the maximum number of resources across all CCs in a band combination, simultaneously.
  - *totalNumberTxPortsPerBand-r19* indicates the total number of Tx ports across all CCs in a band combination, simultaneously.
- *maxRank-r19* indicates the supported maximum rank.
- *maxNumberResource-r19* indicates the maximum number of CSI-RS resource in a resource set.
- *processingCapability-r19* indicates the supported processing capability. Value *cap1* indicates the processing capability reuses  $Z/Z'$  values and  $O_{CPU} = \text{ceil}(P/32)$ . Value *cap2* indicates the processing capability scales the timeline  $Z/Z'$  by  $\text{ceil}(P/32)$  where P is the total number of ports across all the K aggregated CSI-RS resources and  $O_{CPU} = 1$ . '*cap1*' is a higher capability than '*cap2*'.
- *supportedCSI-RS-ResourceListPerCC-r19* indicates the list of supported CSI-RS resources per CC simultaneously in a band combination by referring to *codebookVariantsListExt-r19*. The following parameters are included in *codebookVariantsListExt-r19*:
  - *maxNumberResourcesPerBand-r19* indicates the maximum number of resources per CC in a band combination, simultaneously.
  - *totalNumberTxPortsPerBand-r19* indicates the total number of Tx ports across per CC in a band combination, simultaneously.

The UE optionally includes *enhType1SP128PortsSchemeB-r19* to indicate whether the UE supports enhanced Type-I SP codebook for Scheme-B with 128 Tx ports by aggregating multiple NZP CSI-RS resources within one slot and 4 CSI-RS resources in a resource set. **codebookComboParameterMultiTRP-PerBC-r17**

Indicates the support of active CSI-RS resources and ports in the presence of multi-TRP CSI.

Indicates the support of active CSI-RS resources and ports for mixed codebook types in any slot. The UE reports supported active CSI-RS resources and ports for up to 4 mixed codebook combinations. The following are the possible mixed codebook combinations {Codebook1, Codebook2, Codebook3}:

- *nCJT-null-null* indicates {NCJT, NULL, NULL}
- *nCJT1SP-null-null* indicates {NCJT+Type 1 SP for sTRP, NULL, NULL}
- *nCJT-Type2-null-r16* indicates {NCJT, Type 2, Null}
- *nCJT-Type2PS-null-r16* indicates {NCJT, Type 2 with port selection, Null}
- *nCJT-eType2R1-null-r16* indicates {NCJT, eType 2 with R=1, Null}
- *nCJT-eType2R2-null-r16* indicates {NCJT, eType 2 with R=2, Null}
- *nCJT-eType2R1PS-null-r16* indicates {NCJT, eType 2 with R=1 and port selection, Null}
- *nCJT-eType2R2PS-null-r16* indicates {NCJT, eType 2 with R=2 and port selection, Null}
- *nCJT-Type2-Type2PS-r16* indicates {NCJT, Type 2, Type 2 with port selection}
- *nCJT1SP-Type2-null-r16* indicates {NCJT+Type 1 SP for sTRP, Type 2, Null}
- *nCJT1SP-Type2PS-null-r16* indicates {NCJT+Type 1 SP for sTRP, Type 2 with port selection, Null}
- *nCJT1SP-eType2R1-null-r16* indicates {NCJT+Type 1 SP for sTRP, eType 2 with R=1, Null}
- *nCJT1SP-eType2R2-null-r16* indicates {NCJT+Type 1 SP for sTRP, eType 2 with R=2, Null}
- *nCJT1SP-eType2R1PS-null-r16* indicates {NCJT+Type 1 SP for sTRP, eType 2 with R=1 and port selection, Null}
- *nCJT1SP-eType2R2PS-null-r16* indicates {NCJT+Type 1 SP for sTRP, eType 2 with R=2 and port selection, Null}
- *nCJT1SP-Type2-Type2PS-r16* indicates {NCJT+Type 1 SP for sTRP, Type 2, Type 2 with port selection}
- *nCJT-feType2PS-null-r17* indicates {NCJT, FeType II PS M=1, NULL}
- *nCJT-feType2PS-M2R1-null-r17* indicates {NCJT, FeType II PS M=2 R=1, NULL}
- *nCJT-feType2PS-M2R2-null-r17* indicates {NCJT, FeType II PS M=2 R=2, NULL}
- *nCJT-Type2-feType2-PS-M1-r17* indicates {NCJT, Type II, FeType II PS M=1}
- *nCJT-Type2-feType2-PS-M2R1-r17* indicates {NCJT, Type II, FeType II PS M=2 R=1}
- *nCJT-eType2R1-feType2-PS-M1-r17* indicates {NCJT, eType II R=1, FeType II PS M=1}
- *nCJT-eType2R1-feType2-PS-M2R1-r17* indicates {NCJT, eType II R=1, FeType II PS M=2 R=1}
- *nCJT1SP-feType2PS-null-r17* indicates {NCJT+Type 1 SP for sTRP, FeType II PS M=1, NULL}
- *nCJT1SP-feType2PS-M2R1-null-r17* indicates {NCJT+Type 1 SP for sTRP, FeType II PS M=2 R=1, NULL}
- *nCJT1SP-feType2PS-M2R2-null-r17* indicates {NCJT+Type 1 SP for sTRP, FeType II PS M=2 R=2, NULL}
- *nCJT1SP-Type2-feType2-PS-M1-r17* indicates {NCJT+Type 1 SP for sTRP, Type II, FeType II PS M=1}
- *nCJT1SP-Type2-feType2-PS-M2R1-r17* indicates {NCJT+Type 1 SP for sTRP, Type II, FeType II PS M=2 R=1}
- *nCJT1SP-eType2R1-feType2-PS-M1-r17* indicates {NCJT+Type 1 SP for sTRP, eType II R=1, FeType II PS M=1}
- *nCJT1SP-eType2R1-feType2-PS-M2R1-r17* indicates {NCJT+Type 1 SP for sTRP, eType II R=1, FeType II PS M=2 R=1}

For each mixed codebook supported by the UE, *supportedCSI-RS-ResourceListAdd-r16* indicates the list of supported CSI-RS resources in a band by referring to *codebookVariantsList*. The following parameters are included in *codebookVariantsList*:

- *maxNumberTxPortsPerResource* indicates the maximum number of Tx ports in a resource of a band combination.
- *maxNumberResourcesPerBand* indicates the maximum number of resources across all CCs in a band combination.
- *totalNumberTxPortsPerBand* indicates the total number of Tx ports across all CCs in a band combination.

NOTE 1: A CMR pair configured for NCJT will be counted as two activated resources, a CMR configured for sTRP will be counted as one activated resource for a triplet.

NOTE2: his capability is relevant only when UE is configured with NCJT CSI in at

BC

| <b>crossCarrierA-CSI-trigDiffSCS-r16</b><br>Indicates the UE support of handling cross-carrier aperiodic CSI report with aperiodic CSI-RS where triggering PDCCH and triggered CSI-RS resource are on different cells with different SCS. Value <i>higherA-CSI-SCS</i> indicates the UE support of PDCCH cell of lower SCS and CSI RS cell of higher SCS and value <i>lowerA-CSI-SCS</i> indicates the UE support of PDCCH cell of higher SCS and CSI RS cell of lower SCS, and value <i>both</i> indicates the support of both variations. A UE supporting this feature shall also indicate support of CSI-RS and CSI-IM reception for CSI feedback using <i>csi-RS-IM-ReceptionForFeedback</i>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | BC | No | N/A | N/A |
