| <p><b>csi-ReportingCrossPUCCH-Grp-r16</b><br/>Indicates the support of CSI reporting cross PUCCH group, comprised of the following functional components:</p> <ul style="list-style-type: none"> <li>- Support reporting CSI of an SCell belonging to secondary PUCCH group by PUSCH or PUCCH of active serving cells belonging to primary PUCCH group, for both during and after SCell activation procedure;</li> <li>- Support reporting CSI of an SCell belonging to primary PUCCH group by PUSCH or PUCCH of active serving cells belonging to secondary PUCCH group, for both during and after SCell activation procedure;</li> <li>- Support for P-CSI and A-CSI for cross-PUCCH group CSI reporting;</li> <li>- <i>computationTimeForA-CSI-r16</i> indicates the CSI computation time for A-CSI; if 'relaxed' is reported, the <i>additionalSymbols-r16</i> shall be reported to indicate for each supported SCS the required additional number of symbols in addition to existing Z and Z' for aperiodic CSI report for cross-PUCCH group CSI reporting (the same SCS set definition as in clause 5.4 of TS 38.214 [12]). The value <i>s14</i> indicates 14 symbols, and so on. For FR2-2 bands, the time relaxation values of the required additional number of symbols for SCS 480/960 kHz (<math>\mu=5</math> and <math>\mu=6</math>) are the same amount of absolute time as UE reported for SCS 120kHz (<math>\mu=3</math>).</li> <li>- <i>sp-CSI-ReportingOnPUCCH-r16</i> indicates whether the UE supports SP-CSI reporting on PUCCH for cross-PUCCH group CSI reporting;</li> <li>- <i>sp-CSI-ReportingOnPUSCH-r16</i> indicates whether the UE supports SP-CSI reporting on PUSCH for cross-PUCCH group CSI reporting;</li> <li>- <i>carrierTypePairList-r16</i> indicates one or multiple supported carrier type pairs(s). For each supported carrier type pair in <i>carrierTypePairList-r16</i>: <ul style="list-style-type: none"> <li>- <i>carrierForCSI-Measurement-r16</i> indicates the carrier type in a PUCCH group in which CSI measurement is performed;</li> <li>- <i>carrierForCSI-Reporting-r16</i> indicates the carrier type in the other PUCCH group in which CSI report is performed,</li> </ul> </li> <li>- where a carrier type is one of {<i>fr1-NonSharedTDD-r16</i>, <i>fr1-SharedTDD-r16</i>, <i>fr1-NonSharedFDD-r16</i>, <i>fr2-r16</i>}</li> </ul> <p>UE indicating support of this feature shall indicate <i>csi-ReportFramework</i> and indicate support of at least one of <i>twoPUCCH-Group</i>, <i>diffNumerologyAcrossPUCCH-Group</i> and <i>twoPUCCH-Grp-ConfigurationsList-r16</i>.</p> <p>NOTE 1: For a band combination with SUL, the SUL band is counted as one of the bands.</p> <p>NOTE 2: For a band combination with SDL, the SDL band is counted as one of the bands. SDL is indicated as 'FR1-NonSharedFDD' carrier type. Per UE capabilities that are TDD only are not applicable to SDL.</p> <p>NOTE 3: When the carrier type of NUL is indicated for PUCCH/PUSCH transmission location for CSI measurement or CSI reporting, the SUL in the same cell as in the NUL can also be configured for PUCCH/PUSCH transmission.</p> | BC | No  | N/A | N/A |
| <p><b>csi-RS-IM-ReceptionForFeedbackPerBandComb</b><br/>Indicates support of CSI-RS and CSI-IM reception for CSI feedback. This capability signalling comprises the following parameters:</p> <ul style="list-style-type: none"> <li>- <i>maxNumberSimultaneousNZP-CSI-RS-ActBWP-AllCC</i> indicates the maximum number of simultaneous CSI-RS resources (irrespective of the associated codebook type) in active BWPs across all CCs, and across MCG and SCG in case of NR-DC. The network applies this limit in addition to the limits signalled in <i>MIMO-ParametersPerBand-&gt;maxNumberSimultaneousNZP-CSI-RS-PerCC</i> and in <i>Phy-ParametersFRX-Diff-&gt;maxNumberSimultaneousNZP-CSI-RS-PerCC</i>;</li> <li>- <i>totalNumberPortsSimultaneousNZP-CSI-RS-ActBWP-AllCC</i> indicates the total number of CSI-RS ports in simultaneous CSI-RS resources (irrespective of the associated codebook type) in active BWPs across all CCs, and across MCG and SCG in case of NR-DC. The network applies this limit in addition to the limits signalled in <i>MIMO-ParametersPerBand-&gt;totalNumberPortsSimultaneousNZP-CSI-RS-PerCC</i> and in <i>Phy-ParametersFRX-Diff-&gt;totalNumberPortsSimultaneousNZP-CSI-RS-PerCC</i>.</li> </ul> <p>The UE is mandated to report <i>csi-RS-IM-ReceptionForFeedbackPerBandComb</i>.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | BC | Yes | N/A | N/A |

| <p><b><i>dmrs-BundlingPUSCH-RepTypeBPerBC-r17</i></b><br/>Indicates whether the UE supports DM-RS bundling for PUSCH repetition type B over consecutive symbols.</p> <p>UE indicating support of this feature shall also indicate support of <i>maxDurationDMRS-Bundling-r17</i> in at least one of the bands in the band combination and <i>pusch-RepetitionTypeB-r16</i>.</p> <p>This feature is applicable to following multiple carrier scenarios in addition to single carrier scenarios:</p> <ul style="list-style-type: none"> <li>- FR1+FR2 UL CA, FR1+FR2 DC, and EN-DC with NR on FR2. DMRS bundling configuration is limited to one uplink NR carrier in total on all FRs at a time.</li> <li>- FR1 inter-band DL CA with a "single" uplink band configured, meaning no switching to transmit SRS on another carrier.</li> <li>- DL CA with "additional" UL carrier configured with SRS only (i.e. no PUCCH/PUSCH configured).</li> <li>- FR1 inter-band UL CA with DMRS bundling.</li> <li>- SUL with DMRS bundling.</li> </ul> <p>For the last three scenarios listed above, DMRS bundling can be applied with the following conditions:</p> <ul style="list-style-type: none"> <li>- Concurrent transmissions scheduled/configured over multiple carriers are not expected by UE.</li> <li>- Only configuration of a single TAG.</li> <li>- Only applicable for the back-to-back case (i.e., zero gap between two transmissions within an actual TDW).</li> <li>- Only one band can be configured with DMRS bundling at a time.</li> </ul> <p>NOTE 1: Under the above conditions, phase continuity and power consistency within any actual TDW on one carrier is not impacted by operations on a different carrier.</p> <p>NOTE 2: Under the above conditions, the events defined in clause 6.1.7 of TS 38.214 [12] for the carrier with DMRS bundling are not triggered by any transmission within any actual TDW on the other carrier.</p> <p>NOTE 3: If the modulation scheme higher than QPSK is scheduled for transmission on any carrier configured with DMRS bundling, DMRS bundling is not applicable (i.e., the error case and up to UE implementation).</p> | BC | No | N/A | N/A |
| <p><b><i>dmrs-BundlingRestartPerBC-r17</i></b><br/>Indicates whether the UE supports restarting DM-RS bundling after the events triggered by DCI or MAC CE that violate power consistency and phase continuity.</p> <p>UE indicating support of this feature shall also indicate support of <i>maxDurationDMRS-Bundling-r17</i> in at least one of the bands in the band combination.</p> <p>NOTE: Events which are triggered by DCI or MAC CE, but do not require UE capability to resume maintaining power consistency and/or phase continuity as specified in clause 6.1.7 of TS 38.214 [12] are excluded from this feature.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | BC | No | N/A | N/A |
| <p><b><i>dualPA-Architecture</i></b><br/>For band combinations with single-band with UL CA, this field indicates the support of dual PA and dual LO frequencies for FR1, or dual LO frequencies for FR2. If absent in such band combinations, the UE supports single PA and single LO frequency for all the ULs for FR1, or single LO frequency for all the ULs for FR2. For other band combinations, this field is not applicable.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | BC | No | N/A | N/A |

| <p><b>interFreqDAPS-r16</b><br/>Indicates whether the UE supports inter-frequency handover, e.g. support of simultaneous DL reception of PDCCH and PDSCH from source and target cell. A UE indicating this capability shall also support inter-frequency synchronous DAPS handover, and single UL transmission for inter-frequency DAPS handover. The capability signalling comprises of the following parameters:</p> <ul style="list-style-type: none"> <li>- <i>interFreqAsyncDAPS-r16</i> indicates whether the UE supports asynchronous DAPS handover.</li> <li>- <i>interFreqDiffSCS-DAPS-r16</i> indicates whether the UE supports different SCSs in source PCell and inter-frequency target PCell in DAPS handover. The UE only includes this field if different SCSs can be supported in both UL and DL. If absent, the UE does not support either UL or DL SCS being different in DAPS handover.</li> <li>- <i>interFreqMultiUL-TransmissionDAPS-r16</i> indicates whether the UE supports simultaneous UL transmission in source PCell and target PCell during a DAPS handover. The UE can include this field only if any of <i>semiStaticPowerSharingDAPS-Mode1-r16</i>, <i>semiStaticPowerSharingDAPS-Mode2-r16</i> or <i>dynamicPowerSharingDAPS-r16</i> are included. Otherwise, the UE does not include this field.</li> <li>- <i>interFreqSemiStaticPowerSharingDAPS-Mode1-r16</i> indicates whether the UE supports semi-static UL power sharing mode 1 during DAPS handover between source and target cells of same FR.</li> <li>- <i>interFreqSemiStaticPowerSharingDAPS-Mode2-r16</i> indicates whether the UE supports semi-static UL power sharing mode 2 during DAPS handover between source and target cells of same FR. It is only applicable to DAPS Handover in synchronous scenarios. The UE only includes this field if <i>semiStaticPowerSharingDAPS-Mode1-r16</i> is included. Otherwise, the UE does not include this field.</li> <li>- <i>interFreqDynamicPowerSharingDAPS-r16</i> indicates the value of T offset (short or long) that the UE supports for dynamic UL power sharing during DAPS handover between source and target cells of same FR. The UE only include this field if <i>semiStaticPowerSharingDAPS-Mode1-r16</i> is included. Otherwise, the UE does not include this field.</li> <li>- <i>interFreqUL-TransCancellationDAPS-r16</i> indicates support of cancelling UL transmission to the source PCell for inter-frequency DAPS handover.</li> </ul> | BC | No | N/A | N/A |
| <p><b>interFreqL1-MeasConfig-r18</b><br/>Indicates whether UE supports inter-frequency L1-RSRP measurement and reporting based on SSB(s) of candidate cell(s), regardless whether the candidate cell(s) are inside or outside of the BC (unless the UE also indicates support of <i>l1m-interFreqL1-OnlyInBC-r18</i>).<br/>This capability signalling comprises of the following parameters:</p> <ul style="list-style-type: none"> <li>- <i>supportedMaxIntraInterFreqCellsConfig-r18</i> indicates the maximum number of RRC configured candidate cells for intra- and inter-frequency L1-RSRP measurement;</li> <li>- <i>supportedMaxIntraInterFreqCellsPerReport-r18</i> indicates maximum number of candidate cells in one report where a SSBRI-RSRP pair is used for each beam report for intra- and inter-frequency L1-RSRP measurement;</li> <li>- <i>supportedMaxIntraInterFreqBeamsPerCellReports-r18</i> indicates maximum number of candidate beams per candidate cell in one report where a SSBRI-RSRP pair is used for each beam report for intra- and inter-frequency L1-RSRP measurement;</li> <li>- <i>supportedMaxIntraInterFreqBeamsReports-r18</i> indicates maximum number of candidate cells beams in total across all cells in one report where a SSBRI-RSRP pair is used for each beam report for intra- and inter-frequency L1-RSRP measurement;</li> </ul> <p>UE supporting this feature shall also indicate support of <i>intraFreqL1-MeasConfig-r18</i>.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | BC | No | N/A | N/A |

| <p><b>maxNeighCellsPerFreqLayerL1-Meas-r18</b><br/>Indicates the number of neighbouring cells per frequency layer for L1-RSRP measurement.</p> <p>This capability signalling comprises of the following parameters:</p> <ul style="list-style-type: none"> <li>- <i>supportedMaxNeighCellsPerFreqLayersWithoutGaps-r18</i> indicates the max number of neighbour cells UE can measure for L1-RSRP per frequency layer for intra-frequency or inter-frequency without measurement gaps. A UE indicating support for this component shall also indicate support for <i>intraFreqL1-MeasConfig-r18</i> or <i>interFreqSSB-L1-MeasWithoutGaps-r18</i>.</li> <li>- <i>supportedMaxNeighCellsPerFreqLayersWithGaps-r18</i> indicates the max number of neighbour cells UE can measure for L1-RSRP per frequency layer for inter-frequency with measurement gaps. A UE indicating support for this component shall also indicate support for <i>lrm-InterFreqMeasGap-r18</i>.</li> </ul>                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | BC | No | N/A | N/A      |
| <p><b>maxNumberTAG-AcrossCC-r18</b><br/>Indicates the maximum number of TAGs across all CCs in a band combination when UE supports multi-DCI Multi-TRP operation with two TA enhancement.</p> <p>It is applied to NR CA, NR-DC, (NG)EN-DC/NE-DC and DAPS handover. For (NG)EN-DC/NE-DC, it indicates number of TAGs only for NR CG. The number of TAGs for the LTE MCG is signalled by existing LTE TAG capability signalling. For NR CA/NR-DC band combination, if the band combination comprised of more than one band entry (i.e., inter-band or intra-band non-contiguous band combination), it indicates that different timing advances on different band entries are supported. It is mandatory for the UE to support more than one TAG for NR-DC and it is mandatory for UE to support 2 TAGs for inter-frequency DAPS. For the mixed inter-band and intra-band NR CA/NR-DC band combination, if the network configures more non-contiguous UL serving cells than the number of supported TAG, the UE only supports the configuration where all UL CCs of the same frequency band are configured with the same Timing Advance Group ID.</p> <p>A UE supporting this feature shall indicate support of <i>multiDCI-IntraCellMultiTRP-TwoTA-r18</i> or <i>multiDCI-InterCellMultiTRP-TwoTA-r18</i>.</p> <p>NOTE: UE only supports the configuration where all UL CCs of the same frequency band are configured with up to 2 Timing Advance Group ID.</p> | BC | No | N/A | N/A      |
| <p><b>maxSSB-PerFreqLayerL1-Meas-r18</b><br/>Indicates the maximum number of SSB resources for L1-RSRP measurement per frequency layer UE can measure.</p> <p>This capability signalling comprises of the following parameters:</p> <ul style="list-style-type: none"> <li>- <i>supportedMaxSSB-PerFreqLayersWithoutGaps-r18</i> indicates the max number of SSB resources UE can measure for L1-RSRP per frequency layer for intra-frequency or inter-frequency without measurement gaps. LTM candidate cells and serving cells are counted regardless of whether SSB L1-RSRP measurement on serving cell is configured in <i>LTM-CSI-ResourceConfig-r18</i> or not. A UE indicating support for this component shall also indicate support for <i>intraFreqL1-MeasConfig-r18</i> or <i>interFreqSSB-L1-MeasWithoutGaps-r18</i>.</li> <li>- <i>supportedMaxSSB-PerFreqLayersWithGaps-r18</i> indicates the max number of SSB resources UE can measure for L1-RSRP per frequency layer for inter-frequency with measurement gaps. A UE indicating support for this component shall also indicate support for <i>lrm-InterFreqMeasGap-r18</i>.</li> </ul>                                                                                                                                                                                                                                                                                                      | BC | No | N/A | N/A      |
| <p><b>maxUplinkDutyCycle-interBandCA-PC2-r17</b><br/>Indicates the maximum average percentage of symbols during a certain evaluation period that can be scheduled for uplink transmission so as to ensure compliance with applicable electromagnetic energy absorption requirements provided by regulatory bodies. The average percentage of uplink symbols is specified in 6.2A.1.3, 6.2H.3.1 and 6.2L.3.1 in TS 38.101-1 [2] and the capability applies to the CA combinations listed in table 6.2A.1.3-1, 6.2H.3.1-1 and 6.2L.3.1-1 in TS 38.101-1 [2]. If the field is absent, UE may use P-MPR<sub>c</sub> as defined in 6.2.4 in TS 38.101-1 [2] if necessary.</p> <p>Value n50 corresponds to 50%, value n60 corresponds to 60% and so on.</p> <p>NOTE 1: Specific targeted UL duty cycle percentage is not assumed if the field is absent.</p> <p>NOTE 2: This field is applicable for both power class 2 and power class 1.5 inter-band UL CA.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | BC | No | N/A | FR1 only |

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |    |    |     |          |

| <p><b>nes-SD-Type1-SP-PerBC-r19</b></p> <p>Indicates whether the UE supports NES SD Type1 for Rel-19 Type-I single-panel codebook. The capability signalling comprises the following parameters:</p> <ul style="list-style-type: none"> <li>- <i>timeline-r19</i> indicates NES SD Type1 timeline from two timeline capabilities, for Type-I single-panel codebook. Value 'cap1' indicates reuse Z/Z' values (i.e., Z<sub>2</sub> and Z'<sub>2</sub>). Value 'cap2' indicates scaling timeline Z/Z' (i.e., Z<sub>2</sub> and Z'<sub>2</sub>) by <math>\lceil \max(\sum_{i=1}^M \mathbf{P}_i, \mathbf{P}) / 32 \rceil</math> where M is the number of sub-configurations that refer to the any of the K aggregated CSI-RS resources. 'cap1' is a higher capability than 'cap2';</li> <li>- <i>numOfPortCSI-Report-r19</i> indicates a combination of supported number of ports for CSI report sub-configuration. The <i>numOfPortCSI-Report-r19</i> is encoded as a bitmap, where starting from the leading / leftmost bit (bit 0), each bit corresponds to {2, 4, 8, 12, 16, 24, 32, 48, 64, 128}.</li> </ul> <p>A UE supporting this feature shall also indicate support of <i>codebookParametersType1SP-SchemeA-PerBC-r19</i>, <i>codebookParametersType1SP-SchemeB-PerBC-r19</i>, and <i>spatialAdaptation-CSI-FeedbackPerBC-r18</i>, <i>spatialAdaptation-CSI-FeedbackPUSCH-PerBC-r18</i>, <i>spatialAdaptation-CSI-FeedbackAperiodicPerBC-r18</i>, or <i>spatialAdaptation-CSI-FeedbackPUCCH-PerBC-r18</i>.</p> | BC | No | N/A | N/A      |
| <p><b>non-AlignedFrameBoundaries-r17</b></p> <p>Indicates whether UE supports carrier aggregation with non-aligned frame boundaries for PCell/PSCell and SCell configured with cross-carrier scheduling to PCell/PSCell (sSCell) in inter-band CA. The capability indicates the band pairs of the {PCell/PSCell SCS in kHz, sSCell SCS in kHz} combination which supports non-aligned frame boundary PCell/PSCell and SCell. The band-pair is encoded as a bitmap with size <math>L * (L - 1) / 2</math>, and bit N (leftmost bit is indexed as bit 0) is set to "1" if the UE supports non-frame boundary for PCell/PSCell and SCell for the band pair (x, y), where L is the number of band entries in the band combination, x and y are the indices of the band entry in the band combination (the first band entry is indexed as 0), <math>x &lt; y</math>, and <math>N = x * (2 * L - x - 1) / 2 + y - x - 1</math>.</p> <p>UE indicating support of this feature shall indicate support of <i>crossCarrierSchedulingSCell-SpCellTypeA-r17</i> or <i>crossCarrierSchedulingSCell-SpCellTypeB-r17</i>.</p>                                                                                                                                                                                                                                                                                                                                                                                                       | BC | No | N/A | FR1 only |
| <p><b>nonCodebook-CSI-RS-SRS-PerBC-r18</b></p> <p>Indicates the list of supported CSI-RS resources supporting association between CSI-RS and SRS for non-codebook case by referring to <i>codebookVariantsList</i>. | <p><b><i>pdccch-MonitoringCA-r18</i></b><br/>Indicates whether the UE supports capability on the number of CCs for monitoring a maximum number of BDs and non-overlapped CCEs per span when configured with DL CA with Rel-16 PDCCH monitoring capability on all the serving cells. This capability signalling comprises the following parameters:</p> <ul style="list-style-type: none"> <li>- <i>maxNumberOfMonitoringCC-r18</i> indicates the number of CCs for monitoring a maximum number of BDs and non-overlapped CCEs per span when configured with DL CA with Rel-16 PDCCH monitoring capability on all the serving cells;</li> <li>- <i>supportedSpanArrangement-r18</i> indicates the supported span arrangement for CA. Value <i>alignedOnly</i> indicates the supported span arrangement for CA is aligned spans only, value <i>alignedAndNonAligned</i> indicates the supported span arrangement for CA includes aligned spans and non-aligned spans.</li> </ul> <p>When a UE reports both <i>pdccch-MonitoringCA-r16</i> and this capability, the value reported in this capability is used if the configured span pattern of any serving cell satisfies <i>pdccch-MonitoringSpan2-2-r18</i>. Only one between <i>pdccch-MonitoringCA-r18</i> and <i>pdccch-MonitoringCA-NonAlignedSpan-r18</i> can be reported by UE.<br/>The UE supporting this feature shall also indicate support of <i>pdccch-Monitoring-r16</i> for (7,3) or (4,3) span based PDCCH monitoring and <i>pdccch-MonitoringSpan2-2-r18</i> for (2,2) span based PDCCH monitoring with additional restriction(s).</p> | BC | No | N/A | N/A |
| <p><b><i>pdccch-MonitoringCA-NonAlignedSpan-r16</i></b><br/>Indicates the number of CCs for monitoring a maximum number of blind detections and non-overlapped CCEs per span when configured with DL CA with Rel-16 PDCCH monitoring capability on all the serving cells in the case UE supports aligned span and non-aligned span. In the case of non-aligned span, when the configured number of CCs with Rel-16 PDCCH monitoring is larger than the UE reported value and PDCCH monitoring occasion(s) should be configured only on same symbol(s) every slot. UE indicating support of this feature shall also indicate support of <i>pdccch-Monitoring-r16</i>. Only one between <i>pdccch-MonitoringCA-r16</i> and <i>pdccch-MonitoringCA-NonAlignedSpan-r16</i> can be reported by UE.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | BC | No | N/A | N/A |
| <p><b><i>pdccch-MonitoringCA-NonAlignedSpan-r18</i></b><br/>Indicates whether the UE supports capability on the number of CCs for monitoring a maximum number of BDs and non-overlapped CCEs per span when configured with DL CA with <i>pdccch-MonitoringAnyOccasionsWithSpanGap</i> on all the serving cells with restriction for non-aligned span case.<br/>It also indicates whether the UE supports aligned span and non-aligned span. In case of non-aligned span when the configured number of cells with Rel-16 PDCCH monitoring capability is larger than the UE reported value, PDCCH monitoring occasion(s) should be configured only on same symbol(s) every slot<br/>The UE supporting this feature shall also indicate support of <i>pdccch-Monitoring-r16</i> for (7,3) or (4,3) span based PDCCH monitoring.<br/>The UE supporting this feature shall also indicate support of <i>pdccch-MonitoringSpan2-2-r18</i> for (2, 2) span based PDCCH monitoring with additional restriction(s).</p> <p>When a UE reports both <i>pdccch-MonitoringCA-NonAlignedSpan-r16</i> and capability, the value reported in this capability is used if the configured span pattern of any serving cell satisfies <i>pdccch-MonitoringSpan2-2-r18</i>.</p> <p>Only one between <i>pdccch-MonitoringCA-r18</i> and <i>pdccch-MonitoringCA-NonAlignedSpan-r18</i> can be reported by UE.</p>                                                                                                                                                                                                             | BC | No | N/A | N/A |

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |    |    |     |     |

| <p><b><i>powerAdaptation-CSI-FeedbackAperiodicPerBC-r18</i></b><br/> Indicates whether the UE supports power domain adaptation with CSI feedback based on CSI report sub-configuration(s) for aperiodic CSI reporting and single-panel type1 codebook. The UE supports CSI feedback based on CSI report sub-configuration(s), each containing one power offset for aperiodic CSI reporting. This capability signalling comprises the following parameters:</p> <ul style="list-style-type: none"> <li>- <i>maxNumberCSI-ResourceAcrossCC-r18</i> indicates the maximum number of simultaneous NZP-CSI-RS resources in active BWPs across all CCs within a band combination for SD-type1 and/or SD-type2;</li> <li>- <i>maxNumberPortsAcrossCC-r18</i> indicates index <i>N</i> of the maximum number of total CSI-RS ports in simultaneous NZP-CSI-RS resources in active BWPs across all CCs within a band combination for SD-type1 and/or SD-type2. The maximum number total CSI-RS ports in simultaneous NZP-CSI-RS resources is <math>N \times 8</math>, where <math>N = \{1..32\}</math>.</li> </ul> <p>NOTE 1: For <i>maxNumberCSI-ResourceAcrossCC-r18</i> and <i>maxNumberPortsAcrossCC-r18</i>, NZP-CSI-RS resource and CSI-RS ports are counted for reporting settings with and without sub-configurations.</p> <p>NOTE 2: If a UE reports more than one capability from <i>spatialAdaptation-CSI-FeedbackPerBC-r18</i>, <i>spatialAdaptation-CSI-FeedbackPUSCH-PerBC-r18</i>, <i>spatialAdaptation-CSI-FeedbackAperiodicPerBC-r18</i>, <i>spatialAdaptation-CSI-FeedbackPUCCH-PerBC-r18</i>, <i>powerAdaptation-CSI-FeedbackPerBC-r18</i>, <i>powerAdaptation-CSI-FeedbackPUSCH-PerBC-r18</i>, <i>powerAdaptation-CSI-FeedbackAperiodicPerBC-r18</i>, <i>powerAdaptation-CSI-FeedbackPUCCH-PerBC-r18</i> and if the UE is configured with CSI report settings with sub-configurations corresponding to a subset of the above reported features, then the supported maximum of NZP-CSI-RS resources/ports across all periodic, semi-persistent, aperiodic CSI report settings with sub-configurations corresponding to all of spatial and power domain adaptations and without sub-configurations is determined by the minimum of the reported values from that subset.</p> <p>NOTE 3: If a UE reports both <i>spatialAdaptation-CSI-FeedbackAperiodicPerBC-r18</i> and <i>powerAdaptation-CSI-FeedbackAperiodicPerBC-r18</i>, and if the UE is configured with CSI report settings with sub-configurations corresponding to both <i>spatialAdaptation-CSI-FeedbackAperiodicPerBC-r18</i> and <i>powerAdaptation-CSI-FeedbackAperiodicPerBC-r18</i>, then the supported total number of periodic CSI reporting settings without sub-configurations plus the total number of sub-configurations across periodic CSI report settings with sub-configurations per BWP is determined by the minimum of the reported values from both <i>spatialAdaptation-CSI-FeedbackAperiodicPerBC-r18</i> and <i>powerAdaptation-CSI-FeedbackAperiodicPerBC-r18</i>.</p> <p>NOTE 4: If CSI report configuration in active BWP of any CC includes report setting(s) with sub-configurations, values reported in this capability for the number of simultaneous NZP-CSI-RS resources and ports across all CCs are used instead of values reported in <i>csi-RS-IM-ReceptionForFeedbackPerBandComb</i>.</p> <p>A UE supporting this feature shall also indicate support of <i>csi-ReportFramework</i> and <i>powerAdaptation-CSI-FeedbackAperiodic-r18</i>.</p> | BC | No | N/A | N/A |

| <p>Indicates whether the UE supports power domain adaptation with CSI feedback based on CSI report sub-configuration(s) for periodic CSI reporting and single-panel type1 codebook. The UE supports CSI feedback based on CSI report sub-configuration(s), each containing one power offset for periodic CSI reporting. This capability signalling comprises the following parameters:</p> <ul style="list-style-type: none"> <li>- <i>maxNumberCSI-ResourceAcrossCC-r18</i> indicates the maximum number of simultaneous NZP-CSI-RS resources in active BWPs across all CCs within a band combination for SD-type1 and/or SD-type2;</li> <li>- <i>maxNumberPortsAcrossCC-r18</i> indicates index <i>N</i> of the maximum number of total CSI-RS ports in simultaneous NZP-CSI-RS resources in active BWPs across all CCs within a band combination for SD-type1 and/or SD-type2. The maximum number total CSI-RS ports in simultaneous NZP-CSI-RS resources is <math>N \times 8</math>, where <math>N = \{1..32\}</math>.</li> </ul> <p>NOTE 1: For <i>maxNumberCSI-ResourceAcrossCC-r18</i> and <i>maxNumberPortsAcrossCC-r18</i>, NZP-CSI-RS resource and CSI-RS ports are counted for reporting settings with and without sub-configurations.</p> <p>NOTE 2: If a UE reports more than one capability from <i>spatialAdaptation-CSI-FeedbackPerBC-r18</i>, <i>spatialAdaptation-CSI-FeedbackPUSCH-PerBC-r18</i>, <i>spatialAdaptation-CSI-FeedbackAperiodicPerBC-r18</i>, <i>spatialAdaptation-CSI-FeedbackPUCCH-PerBC-r18</i>, <i>powerAdaptation-CSI-FeedbackPerBC-r18</i>, <i>powerAdaptation-CSI-FeedbackPUSCH-PerBC-r18</i>, <i>powerAdaptation-CSI-FeedbackAperiodicPerBC-r18</i>, <i>powerAdaptation-CSI-FeedbackPUCCH-PerBC-r18</i> and if the UE is configured with CSI report settings with sub-configurations corresponding to a subset of the above reported features, then the supported maximum of NZP-CSI-RS resources/ports across all periodic, semi-persistent, aperiodic CSI report settings with sub-configurations corresponding to all of spatial and power domain adaptations and without sub-configurations is determined by the minimum of the reported values from that subset.</p> <p>NOTE 3: If a UE reports both <i>spatialAdaptation-CSI-FeedbackPerBC-r18</i> and <i>powerAdaptation-CSI-FeedbackPerBC-r18</i>, and if the UE is configured with CSI report settings with sub-configurations corresponding to both <i>spatialAdaptation-CSI-FeedbackPerBC-r18</i> and <i>powerAdaptation-CSI-FeedbackPerBC-r18</i>, then the supported total number of periodic CSI reporting settings without sub-configurations plus the total number of sub-configurations across periodic CSI report settings with sub-configurations per BWP is determined by the minimum of the reported values from both <i>spatialAdaptation-CSI-FeedbackPerBC-r18</i> and <i>powerAdaptation-CSI-FeedbackPerBC-r18</i>.</p> <p>NOTE 4: If CSI report configuration in active BWP of any CC includes report setting(s) with sub-configurations, values reported in this capability for the number of simultaneous NZP-CSI-RS resources and ports across all CCs are used instead of values reported in <i>csi-RS-IM-ReceptionForFeedbackPerBandComb</i>.</p> <p>A UE supporting this feature shall also indicate support of <i>csi-ReportFramework</i> and <i>powerAdaptation-CSI-Feedback-r18</i>.</p> |    |    |     |     |

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |    |    |     |     |
|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----|----|-----|-----|
| <p><b>powerAdaptation-CSI-FeedbackPUCCH-PerBC-r18</b></p> <p>Indicates whether the UE supports power domain adaptation with CSI feedback based on CSI report sub-configuration(s) for semi-persistent CSI reporting on PUCCH and single-panel type1 codebook. The UE also supports CSI feedback based on CSI report sub-configuration(s), each containing one power offset for semi-persistent CSI reporting on PUCCH (or piggybacked on PUSCH). This capability signalling comprises the following parameters:</p> <ul style="list-style-type: none"> <li>- <i>maxNumberCSI-ResourceAcrossCC-r18</i> indicates the maximum number of simultaneous NZP-CSI-RS resources in active BWPs across all CCs within a band combination;</li> <li>- <i>maxNumberPortsAcrossCC-r18</i> indicates index <i>N</i> of the maximum number of total CSI-RS ports in simultaneous NZP-CSI-RS resources in active BWPs across all CCs within a band combination. The maximum number total CSI-RS ports in simultaneous NZP-CSI-RS resources is <math>N \times 8</math>, where <math>N = \{1..32\}</math>.</li> </ul> <p>NOTE 1: For <i>maxNumberCSI-ResourceAcrossCC-r18</i> and <i>maxNumberPortsAcrossCC-r18</i>, NZP-CSI-RS resource and CSI-RS ports are counted for reporting settings with and without sub-configurations.</p> <p>NOTE 2: If a UE reports more than one capability from <i>spatialAdaptation-CSI-FeedbackPerBC-r18</i>, <i>spatialAdaptation-CSI-FeedbackPUSCH-PerBC-r18</i>, <i>spatialAdaptation-CSI-FeedbackAperiodicPerBC-r18</i>, <i>spatialAdaptation-CSI-FeedbackPUCCH-PerBC-r18</i>, <i>powerAdaptation-CSI-FeedbackPerBC-r18</i>, <i>powerAdaptation-CSI-FeedbackPUSCH-PerBC-r18</i>, <i>powerAdaptation-CSI-FeedbackAperiodicPerBC-r18</i>, <i>powerAdaptation-CSI-FeedbackPUCCH-PerBC-r18</i> and if the UE is configured with CSI report settings with sub-configurations corresponding to a subset of the above reported features, then the supported maximum of NZP-CSI-RS resources/ports across all periodic, semi-persistent, aperiodic CSI report settings with sub-configurations corresponding to all of spatial and power domain adaptations and without sub-configurations is determined by the minimum of the reported values from that subset.</p> <p>NOTE 3: If a UE reports more than one capability from <i>spatialAdaptation-CSI-FeedbackPUSCH-PerBC-r18</i>, <i>spatialAdaptation-CSI-FeedbackPUCCH-PerBC-r18</i>, <i>powerAdaptation-CSI-FeedbackPUSCH-PerBC-r18</i> and <i>powerAdaptation-CSI-FeedbackPUCCH-PerBC-r18</i> and if the UE is configured with CSI report settings with sub-configurations corresponding to a subset of the reported features, then the supported total number of semi-persistent CSI reporting settings without sub-configurations plus the total number of sub-configurations across semi-persistent CSI report settings with sub-configurations per BWP is determined by the minimum of the reported values from that subset.</p> <p>NOTE 4: If CSI report configuration in active BWP of any CC includes report setting(s) with sub-configurations, values reported in this capability for the number of simultaneous NZP-CSI-RS resources and ports across all CCs are used instead of values reported in <i>csi-RS-IM-ReceptionForFeedbackPerBandComb</i>.</p> <p>A UE supporting this feature shall also indicate support of <i>csi-ReportFramework</i>, <i>sp-CSI-ReportPUCCH</i> and <i>powerAdaptation-CSI-FeedbackPUCCH-r18</i>.</p> | BC | No | N/A | N/A |

| <p><b>powerAdaptation-CSI-FeedbackPUSCH-PerBC-r18</b><br/>Indicates whether the UE supports power domain adaptation with CSI feedback based on CSI report sub-configuration(s) for semi-persistent CSI reporting on PUSCH and single-panel type1 codebook. The UE also supports CSI feedback based on CSI report sub-configuration(s), each containing one power offset for semi-persistent CSI reporting. This capability signalling comprises the following parameters:</p> <ul style="list-style-type: none"> <li>- <i>maxNumberCSI-ResourceAcrossCC-r18</i> indicates the maximum number of simultaneous NZP-CSI-RS resources in active BWPs across all CCs within a band combination;</li> <li>- <i>maxNumberPortsAcrossCC-r18</i> indicates index <i>N</i> of the maximum number of total CSI-RS ports in simultaneous NZP-CSI-RS resources in active BWPs across all CCs within a band combination. The maximum number total CSI-RS ports in simultaneous NZP-CSI-RS resources is <math>N \times 8</math>, where <math>N = \{1..32\}</math>.</li> </ul> <p>NOTE 1: For <i>maxNumberCSI-ResourceAcrossCC-r18</i> and <i>maxNumberPortsAcrossCC-r18</i>, NZP-CSI-RS resource and CSI-RS ports are counted for reporting settings with and without sub-configurations.</p> <p>NOTE 2: If a UE reports more than one capability from <i>spatialAdaptation-CSI-FeedbackPerBC-r18</i>, <i>spatialAdaptation-CSI-FeedbackPUSCH-PerBC-r18</i>, <i>spatialAdaptation-CSI-FeedbackAperiodicPerBC-r18</i>, <i>spatialAdaptation-CSI-FeedbackPUCCH-PerBC-r18</i>, <i>powerAdaptation-CSI-FeedbackPerBC-r18</i>, <i>powerAdaptation-CSI-FeedbackPUSCH-PerBC-r18</i>, <i>powerAdaptation-CSI-FeedbackAperiodicPerBC-r18</i>, <i>powerAdaptation-CSI-FeedbackPUCCH-PerBC-r18</i> and if the UE is configured with CSI report settings with sub-configurations corresponding to a subset of the above reported features, then the supported maximum of NZP-CSI-RS resources/ports across all periodic, semi-persistent, aperiodic CSI report settings with sub-configurations corresponding to all of spatial and power domain adaptations and without sub-configurations is determined by the minimum of the reported values from that subset.</p> <p>NOTE 3: If a UE reports more than one capability from <i>spatialAdaptation-CSI-FeedbackPUSCH-PerBC-r18</i>, <i>spatialAdaptation-CSI-FeedbackPUCCH-PerBC-r18</i>, <i>powerAdaptation-CSI-FeedbackPUSCH-PerBC-r18</i> and <i>powerAdaptation-CSI-FeedbackPUCCH-PerBC-r18</i> and if the UE is configured with CSI report settings with sub-configurations corresponding to a subset of the reported features, then the supported total number of semi-persistent CSI reporting settings without sub-configurations plus the total number of sub-configurations across semi-persistent CSI report settings with sub-configurations per BWP is determined by the minimum of the reported values from that subset.</p> <p>NOTE 4: If CSI report configuration in active BWP of any CC includes report setting(s) with sub-configurations, values reported in this capability for the number of simultaneous NZP-CSI-RS resources and ports across all CCs are used instead of values reported in <i>csi-RS-IM-ReceptionForFeedbackPerBandComb</i>.</p> <p>A UE supporting this feature shall also indicate support of <i>csi-ReportFramework</i>, <i>sp-CSI-ReportPUSCH</i> and <i>powerAdaptation-CSI-FeedbackPUSCH-r18</i>.</p> | BC | No | N/A | N/A |
| <p><b>prioSCellPRACH-OverSP-PeriodicSRS-Support-r17</b><br/>Indicates whether the UE supports RRC configuration <i>prioSCellPRACH-OverSP-PeriodicSRS</i> as specified in TS 38.331 [9].</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | BC | No | N/A | N/A |
| <p><b>ptp-Retx-Multicast-r17</b><br/>Indicates whether the UE supports PTP retransmission for multicast on the same cell as multicast initial transmission.</p> <p>A UE supporting this feature shall also indicate support of <i>ack-NACK-FeedbackForMulticast-r17</i>.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | BC | No | N/A | N/A |

| <p><b>semiStaticPUCCH-CellSwitchSingleGroup-r17</b><br/>Indicates whether the UE supports semi-static PUCCH cell switching for a single PUCCH group only. The capability signalling comprises the following parameters:</p> <ul style="list-style-type: none"> <li>- <i>pucch-Group-r17</i> indicates for which PUCCH group the UE supports semi-static PUCCH cell switching using configured time-domain domain pattern of applicable PUCCH cell / carrier. Value <i>primaryGroupOnly</i> indicates that only primary PUCCH group can support PUCCH cell switch, value <i>secondaryGroupOnly</i> indicates that only secondary PUCCH group can support PUCCH cell switch, and value <i>eitherPrimaryOrSecondaryGroup</i> indicates that either primary or secondary PUCCH group can support PUCCH cell switch.</li> <li>- <i>pucch-Group-Config-r17</i> indicates one or multiple of supported carrier type pairs that can support PUCCH cell switch, with <i>fr1-FR1-NonSharedTDD-r17</i> indicating the carrier type pair (FR1 licensed TDD, FR1 licensed TDD), <i>fr2-FR2-NonSharedTDD-r17</i> indicating the carrier type pair (FR2 licensed TDD, FR2 licensed TDD), and <i>fr1-FR2-NonSharedTDD-r17</i> indicating the carrier type pair (FR1 licensed TDD, FR2 licensed TDD).</li> </ul> <p>NOTE: This feature applies to cells in the same TAG only. If UE supporting this FG also supports both <i>diffNumerologyWithinPUCCH-GroupSmallerSCS</i> and <i>diffNumerologyWithinPUCCH-GroupLargerSCS</i> or both <i>diffNumerologyWithinPUCCH-GroupSmallerSCS-CarrierTypes-r16</i> and <i>diffNumerologyWithinPUCCH-GroupLargerSCS-CarrierTypes-r16</i> or <i>maxUpTo3Diff-NumerologiesConfigSinglePUCCH-grp-r16</i> or <i>maxUpTo4Diff-NumerologiesConfigSinglePUCCH-grp-r16</i> when UE is not configured with two NR PUCCH groups, the UE supports the cases of both same and different numerologies between switchable cells. Otherwise, the UE supports the case of same numerology between switchable cells.</p> | BC | No  | TDD only | N/A |
| <p><b>semiStaticPUCCH-CellSwitchTwoGroups-r17</b><br/>Indicates whether the UE supports semi-static PUCCH cell switching for two PUCCH groups using configured time-domain domain pattern of applicable PUCCH cell / carrier. The capability indicates one or multiple of supported configuration(s) of {primary PUCCH group config, secondary PUCCH group config}. The capability signalling of each primary or secondary PUCCH group configuration indicates one or multiple of carrier type pairs that can support PUCCH cell switch, with <i>fr1-FR1-NonSharedTDD-r17</i> indicating the carrier type pair (FR1 licensed TDD, FR1 licensed TDD), <i>fr2-FR2-NonSharedTDD-r17</i> indicating the carrier type pair (FR2 licensed TDD, FR2 licensed TDD), and <i>fr1-FR2-NonSharedTDD-r17</i> indicating the carrier type pair (FR1 licensed TDD, FR2 licensed TDD).</p> <p>NOTE: This feature applies to cells in the same TAG only. If UE supporting this FG also supports both <i>diffNumerologyWithinPUCCH-GroupSmallerSCS</i> and <i>diffNumerologyWithinPUCCH-GroupLargerSCS</i> or both <i>diffNumerologyWithinPUCCH-GroupSmallerSCS-CarrierTypes-r16</i> and <i>diffNumerologyWithinPUCCH-GroupLargerSCS-CarrierTypes-r16</i>, the UE supports the cases of both same and different numerologies between switchable cells. Otherwise, the UE supports the case of same numerology between switchable cells.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | BC | No  | TDD only | N/A |
| <p><b>simultaneousCSI-ReportsAllCC</b><br/>Indicates whether the UE supports CSI report framework and the number of CSI report(s) which the UE can simultaneously process across all CCs, and across MCG and SCG in case of NR-DC. The CSI report comprises periodic, semi-persistent and aperiodic CSI and any latency classes and codebook types. The CSI report in <i>simultaneousCSI-ReportsAllCC</i> includes the beam report and CSI report. This parameter may further limit <i>simultaneousCSI-ReportsPerCC</i> in <i>MIMO-ParametersPerBand</i> and <i>Phy-ParametersFRX-Diff</i> for each band in a given band combination.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | BC | Yes | N/A      | N/A |

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |    |    |     |     |

| <b><i>simultaneousRxTxSUL</i></b><br>Indicates whether the UE supports simultaneous reception and transmission for a NR band combination including SUL. Mandatory/Optional support depends on band combination and captured in TS 38.101-1 [2].                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | BC | CY | N/A | N/A |
| <b><i>simultaneousRxTxSULPerBandPair</i></b><br>Indicates whether the UE supports simultaneous reception and transmission for a NR band combination including SUL for each band pair in the band combination. Encoded in the same manner as <i>simultaneousRxTxInterBandCAPerBandPair</i> . The UE does not include this field if the UE supports simultaneous transmission and reception for all applicable band pairs in the band combination (in which case <i>simultaneousRxTxSUL</i> is included) or does not support for any band pair in the band combination. It is mandatory for certain band pairs as specified in TS 38.101-1 [2]. The UE shall consistently set the bits which correspond to the same band pair.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | BC | CY | N/A | N/A |
| <b><i>simultaneousSRS-AssocCSI-RS-AI/CC</i></b><br>Indicates support of CSI-RS processing framework for SRS and the number of SRS resources that the UE can process simultaneously across all CCs, and across MCG and SCG in case of NR-DC, including periodic, aperiodic and semi-persistent SRS. This parameter may further limit <i>simultaneousSRS-AssocCSI-RS-PerCC</i> in <i>MIMO-ParametersPerBand</i> and <i>Phy-ParametersFRX-Diff</i> for each band in a given band combination.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | BC | No | N/A | N/A |
| <b><i>simulTX-SRS-AntSwitchingInterBandUL-CA-r16</i></b><br>Indicates whether the UE support simultaneous transmission of SRS on different CCs for inter-band UL CA. The UE indicating support of this feature shall include at least one of the following capabilities: <ul style="list-style-type: none"> <li>- <i>supportSRS-xTyR-xLessThanY-r16</i> indicates support transmission of SRS for xTyR (x&lt;y) based antenna switching and SRS for CB/NCB/BM on different CCs in overlapped symbol(s) for inter-band UL CA.</li> <li>- <i>supportSRS-xTyR-xEqualToY-r16</i> indicates support transmission of SRS for xTyR (x=y) based antenna switching and SRS for CB/NCB/BM on different CCs in overlapped symbol(s) for inter-band UL CA.</li> <li>- <i>supportSRS-AntennaSwitching-r16</i> Indicates whether the UE support simultaneous transmission of SRS for antenna switching on different CCs in overlapped symbol(s) for inter-band UL CA.</li> </ul> <p>NOTE: For simultaneously antenna switching and antenna switching SRS in inter-band CAs with bands whose UL are switched together according to the reported <i>supportSRS-AntennaSwitching-r16</i>, the UE expects the same configuration of xTyR across the different CCs and the SRS resources overlapped in time domain from UE perspective are from the same UE antenna ports.</p> | BC | No | N/A | N/A |
| <b><i>singlePUCCH-ConfigForMulticast-r17</i></b><br>Indicates whether the UE supports a <i>PUCCH-Config</i> for multicast HARQ-ACK feedback, separate from that of unicast configurations. <p>A UE supporting this feature shall also indicate support of <i>ack-NACK-FeedbackForMulticast-r17</i> or <i>nack-OnlyFeedbackForMulticast-r17</i>.</p> <p>NOTE: With <i>ack-NACK-FeedbackForMulticast-r17</i> or <i>nack-OnlyFeedbackForMulticast-r17</i> as prerequisite, this feature includes the case of ACK/NACK for multicast or NACK-only mode1 for multicast.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | BC | No | N/A | N/A |

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |    |    |     |     |
|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----|----|-----|-----|
| <p><b><i>spatialAdaptation-CSI-FeedbackAperiodicPerBC-r18</i></b><br/> Indicates whether the UE supports spatial domain adaptation with CSI feedback based on CSI report sub-configuration(s) for aperiodic CSI reporting and single-panel type1 codebook. This capability signalling comprises the following parameters:</p> <ul style="list-style-type: none"> <li>- <i>maxNumberCSI-ResourceAcrossCC-r18</i> indicates the maximum number of simultaneous NZP-CSI-RS resources in active BWPs across all CCs within a band combination for SD-type1 and/or SD-type2;</li> <li>- <i>maxNumberPortsAcrossCC-r18</i> indicates index <i>N</i> of the maximum number of total CSI-RS ports in simultaneous NZP-CSI-RS resources in active BWPs across all CCs within a band combination for SD-type1 and/or SD-type2. The maximum number total CSI-RS ports in simultaneous NZP-CSI-RS resources is <math>N \times 8</math>, where <math>N = \{1..32\}</math>.</li> </ul> <p>NOTE 1: For <i>maxNumberCSI-ResourceAcrossCC-r18</i> and <i>maxNumberPortsAcrossCC-r18</i>, NZP-CSI-RS resource and CSI-RS ports are counted for reporting settings with and without sub-configurations.</p> <p>NOTE 2: If a UE reports more than one capability from <i>spatialAdaptation-CSI-FeedbackPerBC-r18</i>, <i>spatialAdaptation-CSI-FeedbackPUSCH-PerBC-r18</i>, <i>spatialAdaptation-CSI-FeedbackAperiodicPerBC-r18</i>, <i>spatialAdaptation-CSI-FeedbackPUCCH-PerBC-r18</i>, <i>powerAdaptation-CSI-FeedbackPerBC-r18</i>, <i>powerAdaptation-CSI-FeedbackPUSCH-PerBC-r18</i>, <i>powerAdaptation-CSI-FeedbackAperiodicPerBC-r18</i>, <i>powerAdaptation-CSI-FeedbackPUCCH-PerBC-r18</i> and if the UE is configured with CSI report settings with sub-configurations corresponding to a subset of the above reported features, then the supported maximum of NZP-CSI-RS resources/ports across all periodic, semi-persistent, aperiodic CSI report settings with sub-configurations corresponding to all of spatial and power domain adaptations and without sub-configurations is determined by the minimum of the reported values from that subset.</p> <p>NOTE 3: If a UE reports both <i>spatialAdaptation-CSI-FeedbackAperiodicPerBC-r18</i> and <i>powerAdaptation-CSI-FeedbackAperiodicPerBC-r18</i>, and if the UE is configured with CSI report settings with sub-configurations corresponding to both <i>spatialAdaptation-CSI-FeedbackAperiodicPerBC-r18</i> and <i>powerAdaptation-CSI-FeedbackAperiodicPerBC-r18</i>, then the supported total number of aperiodic CSI reporting settings without sub-configurations plus the total number of sub-configurations across aperiodic CSI report settings with sub-configurations per BWP is determined by the minimum of the reported values from both <i>spatialAdaptation-CSI-FeedbackAperiodicPerBC-r18</i> and <i>powerAdaptation-CSI-FeedbackAperiodicPerBC-r18</i>.</p> <p>NOTE 4: If a UE reports <i>both</i> for <i>csiFeedbackType-r18</i> and if the UE is configured with both CSI report setting(s) with sub-configurations corresponding to SD-type 1 and CSI report setting(s) with sub-configurations corresponding to SD-type 2, the supported total number of NZP-CSI-RS resources/ports for <i>maxNumberCSI-ResourcePerCC-r18</i> and <i>maxNumberTotalCSI-ResourcePerCC-r18</i> in <i>spatialAdaptation-CSI-Feedback-r18</i> and <i>maxNumberCSI-ResourceAcrossCC</i> and <i>maxNumberTotalCSI-ResourceAcrossCC-r18</i> in <i>spatialAdaptation-CSI-FeedbackPerBC-r18</i> is determined by the minimum of the reported values between SD-type 1 and SD-type 2.</p> <p>NOTE 5: If CSI report configuration in active BWP of any CC includes report setting(s) with sub-configurations, values reported in this capability for the number of simultaneous NZP-CSI-RS resources and ports across all CCs are used instead of values reported in <i>csi-RS-IM-ReceptionForFeedbackPerBandComb</i>.</p> <p>A UE supporting this feature shall also indicate support of <i>csi-ReportFramework</i> and <i>spatialAdaptation-CSI-FeedbackAperiodic-r18</i>.</p> | BC | No | N/A | N/A |

| <p><b><i>spatialAdaptation-CSI-FeedbackPUCCH-PerBC-r18</i></b><br/> Indicates whether the UE supports spatial domain adaptation with CSI feedback based on CSI report sub-configuration(s) for semi-persistent CSI reporting on PUCCH (or piggybacked on PUSCH) and single-panel type1 codebook. This capability signalling comprises the following parameters:</p> <ul style="list-style-type: none"> <li>- <i>maxNumberCSI-ResourceAcrossCC-r18</i> indicates the maximum number of simultaneous NZP-CSI-RS resources in active BWPs across all CCs within a band combination;</li> <li>- <i>maxNumberPortsAcrossCC-r18</i> indicates index <i>N</i> of the maximum number of total CSI-RS ports in simultaneous NZP-CSI-RS resources in active BWPs across all CCs within a band combination. The maximum number total CSI-RS ports in simultaneous NZP-CSI-RS resources is <math>N \times 8</math>, where <math>N = \{1..32\}</math>.</li> </ul> <p>NOTE 1: For <i>maxNumberCSI-ResourceAcrossCC-r18</i> and <i>maxNumberPortsAcrossCC-r18</i>, NZP-CSI-RS resource and CSI-RS ports are counted for reporting settings with and without sub-configurations.</p> <p>NOTE 2: If a UE reports more than one capability from <i>spatialAdaptation-CSI-FeedbackPerBC-r18</i>, <i>spatialAdaptation-CSI-FeedbackPUSCH-PerBC-r18</i>, <i>spatialAdaptation-CSI-FeedbackAperiodicPerBC-r18</i>, <i>spatialAdaptation-CSI-FeedbackPUCCH-PerBC-r18</i>, <i>powerAdaptation-CSI-FeedbackPerBC-r18</i>, <i>powerAdaptation-CSI-FeedbackPUSCH-PerBC-r18</i>, <i>powerAdaptation-CSI-FeedbackAperiodicPerBC-r18</i>, <i>powerAdaptation-CSI-FeedbackPUCCH-PerBC-r18</i> and if the UE is configured with CSI report settings with sub-configurations corresponding to a subset of the above reported features, then the supported maximum of NZP-CSI-RS resources/ports across all periodic, semi-persistent, aperiodic CSI report settings with sub-configurations corresponding to all of spatial and power domain adaptations and without sub-configurations is determined by the minimum of the reported values from that subset.</p> <p>NOTE 3: If a UE reports more than one capability from <i>spatialAdaptation-CSI-FeedbackPUSCH-PerBC-r18</i>, <i>spatialAdaptation-CSI-FeedbackPUCCH-PerBC-r18</i>, <i>powerAdaptation-CSI-FeedbackPUSCH-PerBC-r18</i> and <i>powerAdaptation-CSI-FeedbackPUCCH-PerBC-r18</i> and if the UE is configured with CSI report settings with sub-configurations corresponding to a subset of the reported features, then the supported total number of semi-persistent CSI reporting settings without sub-configurations plus the total number of sub-configurations across semi-persistent CSI report settings with sub-configurations per BWP is determined by the minimum of the reported values from that subset.</p> <p>NOTE 4: If CSI report configuration in active BWP of any CC includes report setting(s) with sub-configurations, values reported in this capability for the number of simultaneous NZP-CSI-RS resources and ports across all CCs are used instead of values reported in <i>csi-RS-IM-ReceptionForFeedbackPerBandComb</i>.</p> <p>A UE supporting this feature shall also indicate support of <i>csi-ReportFramework</i>, <i>sp-CSI-ReportPUCCH</i> and <i>spatialAdaptation-CSI-FeedbackPUCCH-r18</i>.</p> | BC | No | N/A | N/A |

| <p><b><i>spatialAdaptation-CSI-FeedbackPUSCH-PerBC-r18</i></b><br/>Indicates whether the UE supports spatial domain adaptation with CSI feedback based on CSI report sub-configuration(s) for semi-persistent CSI reporting on PUSCH and single-panel type1 codebook. This capability signalling comprises the following parameters:</p> <ul style="list-style-type: none"> <li>- <i>maxNumberCSI-ResourceAcrossCC-r18</i> indicates the maximum number of simultaneous NZP-CSI-RS resources in active BWPs across all CCs within a band combination;</li> <li>- <i>maxNumberPortsAcrossCC-r18</i> indicates index N of the maximum number of total CSI-RS ports in simultaneous NZP-CSI-RS resources in active BWPs across all CCs within a band combination. The maximum number total CSI-RS ports in simultaneous NZP-CSI-RS resources is <math>N \times 8</math>, where <math>N = \{1..32\}</math>.</li> </ul> <p>NOTE 1: For <i>maxNumberCSI-ResourceAcrossCC-r18</i> and <i>maxNumberPortsAcrossCC-r18</i>, NZP-CSI-RS resource and CSI-RS ports are counted for reporting settings with and without sub-configurations.</p> <p>NOTE 2: If a UE reports more than one capability from <i>spatialAdaptation-CSI-FeedbackPerBC-r18</i>, <i>spatialAdaptation-CSI-FeedbackPUSCH-PerBC-r18</i>, <i>spatialAdaptation-CSI-FeedbackAperiodicPerBC-r18</i>, <i>spatialAdaptation-CSI-FeedbackPUCCH-PerBC-r18</i>, <i>powerAdaptation-CSI-FeedbackPerBC-r18</i>, <i>powerAdaptation-CSI-FeedbackPUSCH-PerBC-r18</i>, <i>powerAdaptation-CSI-FeedbackAperiodicPerBC-r18</i>, <i>powerAdaptation-CSI-FeedbackPUCCH-PerBC-r18</i> and if the UE is configured with CSI report settings with sub-configurations corresponding to a subset of the above reported features, then the supported maximum of NZP-CSI-RS resources/ports across all periodic, semi-persistent, aperiodic CSI report settings with sub-configurations corresponding to all of spatial and power domain adaptations and without sub-configurations is determined by the minimum of the reported values from that subset.</p> <p>NOTE 3: If a UE reports more than one capability from <i>spatialAdaptation-CSI-FeedbackPUSCH-PerBC-r18</i>, <i>spatialAdaptation-CSI-FeedbackPUCCH-PerBC-r18</i>, <i>powerAdaptation-CSI-FeedbackPUSCH-PerBC-r18</i> and <i>powerAdaptation-CSI-FeedbackPUCCH-PerBC-r18</i> and if the UE is configured with CSI report settings with sub-configurations corresponding to a subset of the reported features, then the supported total number of semi-persistent CSI reporting settings without sub-configurations plus the total number of sub-configurations across semi-persistent CSI report settings with sub-configurations per BWP is determined by the minimum of the reported values from that subset.</p> <p>NOTE 4: If CSI report configuration in active BWP of any CC includes report setting(s) with sub-configurations, values reported in this capability for the number of simultaneous NZP-CSI-RS resources and ports across all CCs are used instead of values reported in <i>csi-RS-IM-ReceptionForFeedbackPerBandComb</i>.</p> <p>A UE supporting this feature shall also indicate support of <i>csi-ReportFramework</i>, <i>sp-CSI-ReportPUSCH</i> and <i>spatialAdaptation-CSI-FeedbackPUSCH-r18</i>.</p> | BC | No | N/A | N/A |
| <p><b><i>stayOnTargetCC-SRS-CarrierSwitch-r17</i></b><br/>Indicates whether the UE supports staying on the target CC when remaining SRS resource set(s) for SRS carrier switching exists. UE indicating support of this feature shall indicate support of <i>srs-CarrierSwitch</i>.</p> <p>NOTE 1: When UE supports this capability, if the time period between the SRS resource sets is smaller than the total required RF switching time to the source CC and back to the target CC and a higher priority UL transmission and/or DL reception is not scheduled on the source CC in the time period between the two SRS resources sets, the UE stays in the target CC in the period between the SRS resource sets; otherwise, the UE switches back to the source CC after transmitting each SRS resource set.</p> <p>NOTE 2: If the UE does not indicate this capability, the UE switches back to source CC between the SRS resource sets.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | BC | No | N/A | N/A |

| <b>supportedMaxSSB-WithinSlotL1-Meas-r18</b><br>Indicates the max number of SSB resources for L1-RSRP measurement that UE can measure within a slot across candidate cells for intra- and inter-frequency without gap L1-RSRP measurement.<br>A UE indicating support for this feature shall also indicate support for <i>intraFreqL1-MeasConfig-r18</i> or <i>interFreqSSB-L1-MeasWithoutGaps-r18</i> .                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | BC | No | N/A | N/A |
| <b>supportedNumberTAG</b><br>Defines the number of timing advance groups supported by the UE. It is applied to NR CA, NR-DC, (NG)EN-DC/NE-DC and DAPS handover. For (NG)EN-DC/NE-DC, it indicates number of TAGs only for NR CG. The number of TAGs for the LTE MCG is signalled by existing LTE TAG capability signalling. For NR CA/NR-DC band combination, if the band combination comprised of more than one band entry (i.e., inter-band or intra-band non-contiguous band combination), it indicates that different timing advances on different band entries are supported. If absent, the UE supports only one TAG for the NR part. It is mandatory for the UE to support more than one TAG for NR-DC and it is mandatory for the UE to support 2 TAGs for inter-frequency DAPS. For the mixed inter-band and intra-band NR CA/NR-DC band combination, if the network configures more non-contiguous UL serving cells than the number of supported TAG, the UE only supports the configuration where all UL CCs of the same frequency band are configured with the same Timing Advance Group ID. | BC | CY | N/A | N/A |
| <b>tdcp-ReportPerBC-r18</b><br>Indicates whether the UE supports $Y=1$ delay value for TDCP report and amplitude report. The UE also supports to configure $K_{TRS} = 1$ TRS resource set. The basic delay value $\leq D_{basic} = 1$ slot.<br>This capability signalling comprises the following parameters: <ul style="list-style-type: none"> <li>- <i>valueX-r18</i> indicates CPU occupation (<math>O_{CPU}=(Y+1)*X</math>).</li> <li>- <i>maxNumberActiveResource-r18</i> indicates the index <math>N</math> of the maximum number of simultaneously active CSI-RS resources for TDCP across all CCs within a band combination. The maximum number of simultaneously active CSI-RS resources for TDCP across all CCs within a band combination is <math>N*2</math>, where <math>N = \{2..32\}</math>.</li> </ul> A UE supporting this feature shall also indicate support of <i>csi-ReportFramework</i> and <i>simultaneousCSI-ReportsAllCC</i> .<br><br>NOTE: Counting of simultaneously active CSI-RS resources follows existing specification TS 38.214 [12].                                   | BC | No | N/A | N/A |
| <b>tdcp-ResourcePerBC-r18</b><br>Indicates the number of CSI-RS resources for TDCP that the UE supports.<br>This capability signalling comprises the following parameters: <ul style="list-style-type: none"> <li>- <i>maxNumberConfigPerCC-r18</i> indicates the maximum number of configured CSI-RS resources for TDCP per CC.</li> <li>- <i>maxNumberConfigAcrossCC-r18</i> indicates the index <math>N</math> of maximum number of configured CSI-RS resources for TDCP across all CCs within a band combination. The maximum number of configured CSI-RS resources for TDCP across all CCs within a band combination is <math>N*2</math>, where <math>N = \{1..32\}</math>.</li> <li>- <i>maxNumberSimultaneousPerCC-r18</i> indicates the maximum number of simultaneously active CSI-RS resources for TDCP per CC.</li> </ul> A UE supporting this feature shall indicate support of <i>tdcp-Report-r18</i> .<br><br>NOTE: Counting of simultaneously active CSI-RS resources follows existing specification TS 38.214 [12].                                                                      | BC | No | N/A | N/A |

| <p><b>bwpOperationMeasWithoutInterrupt-r18</b><br/>Indicates whether the UE supports RLM/BM/BFD and gapless L3 intra-frequency measurements based on CD-SSB outside active BWP without interruptions. For the UE that is capable of this feature, the bandwidth of UE-specific RRC configured BWP need not include bandwidth of the CORESET#0 (if CORESET#0 is present) and CD-SSB for PCell; the bandwidth of UE-specific RRC configured BWP need not include bandwidth of the CORESET#0 (if CORESET#0 is present) and SSB indicated by <i>absoluteFrequencySSB</i> (either CD-SSB or NCD-SSB) for PCell (if configured); and the bandwidth of the UE-specific RRC configured BWP need not include CD-SSB for SCell (if configured). CD-SSB outside active DL BWP but within the bandwidth of the corresponding carrier(s) to be measured can be used as the QCL source for other reference signal. UE performs L3 intra-frequency measurements without gaps based on CD-SSB, where the CD-SSB is outside the active DL BWP but is within the bandwidth of the corresponding carrier(s) to be measured.</p> <p>NOTE 1: The CD-SSB is still within the bandwidth of the carrier configured by <i>SCS-SpecificCarrier</i> of <i>downlinkChannelBW-PerSCS-List</i> in <i>ServingCellConfig</i>.</p> <p>NOTE 2: If a UE is configured with more than one UE-specific DL BWP configurations, the CD-SSB is within the bandwidth of at least one of the UE-specific DL BWP configurations.</p> <p>NOTE 3: Void.</p> <p>NOTE 4: If a UE additionally indicates support of <i>NeedForGap</i> or <i>NeedForGapNCSG</i> and/or <i>NeedForInterruption</i>, the UE shall report no gap and no interruption/no NCSG for intra-frequency measurement.</p> <p>This capability is not applicable to RedCap or eRedCap UEs.</p> | FS | No | N/A | N/A |
| <p><b>cbgPDSCH-ProcessingType1-DifferentTB-PerSlot-r16</b><br/>Defines whether the UE capable of processing time capability 1 supports CBG based reception with one or with up to two or with up to four or with up to seven unicast PDSCHs per slot per CC.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | FS | No | N/A | N/A |

| <b>featureSetListPerDownlinkCC</b><br>Indicates which features the UE supports on the individual DL carriers of the feature set (and hence of a band entry that refer to the feature set) by <i>FeatureSetDownlinkPerCC-Id</i> . The order of the elements in this list is not relevant, i.e., the network may configure any of the carriers in accordance with any of the <i>FeatureSetDownlinkPerCC-Id</i> in this list. A fallback per CC feature set resulting from the reported feature set per DL CC is not signalled but the UE shall support it.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | FS | N/A | N/A | N/A      |
| <b>interCellCFRA-r19</b><br>Indicates whether the UE supports PDCCH ordered sent by one TRP triggers RACH procedure towards a different TRP based on CFRA for inter-cell without CORESETPoolIndex.<br>A UE supporting this feature shall also indicate support of <i>twoTA-InterCellIBM-r19</i> .                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | FS | N/A | N/A | N/A      |
| <b>intraBandFreqSeparationDL, intraBandFreqSeparationDL-v1620</b><br>Indicates DL frequency separation class the UE supports, which indicates a maximum frequency separation between lower edge of lowest CC and upper edge of highest CC in a frequency band, for intra-band non-contiguous CA. The UE sets the same value in the <i>FeatureSetDownlink</i> of each band entry within a band. The values mhzX correspond to the values XMHz defined in TS 38.101-2 [3]. It is mandatory to report for UE which supports DL intra-band non-contiguous CA in FR2.<br>If the UE sets the field <i>intraBandFreqSeparationDL-v1620</i> it shall set <i>intraBandFreqSeparationDL</i> (without suffix) to the nearest smaller value.                                                                                                                                                                                                                                                                                                                                                                                                                                                          | FS | CY  | N/A | FR2 only |
| <b>intraBandFreqSeparationDL-Only-r16</b><br>Indicates whether the UE supports frequency separation class of DL only extension. If present, the field extends the maximum frequency separation between the lower edge of lowest CC and the upper edge of highest CC in a frequency band that the UE supports according to <i>intraBandFreqSeparationDL</i> . The frequency range extension is either above or below the frequency range indicated by <i>intraBandFreqSeparationDL</i> and extends it in contiguous manner with no frequency gap, and the network may configure contiguous or non-contiguous downlink serving cells in that extended range. The UE sets the same value in the <i>FeatureSetDownlink</i> of each band entry within a band. The values mhzX correspond to the values XMHz defined in TS 38.101-2 [3]. The sum of <i>intraBandFreqSeparationDL</i> and <i>intraBandFreqSeparationDL-Only</i> shall not exceed 2400 MHz. If the UE sets this field, the sum of <i>intraBandFreqSeparationDL</i> and <i>intraBandFreqSeparationDL-Only</i> shall be larger than 1400 MHz.<br>A UE supporting this feature shall also support <i>intraBandFreqSeparationDL</i> . | FS | No  | N/A | FR2 only |

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |    |    |     |     |

|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----|----|-----|-----|
| <b><i>pdccch-Monitoring-r16</i></b><br>Indicates whether the UE supports PDCCH search space monitoring occasions in any symbol of the slot with minimum time separation between two consecutive transmissions of PDCCH with span up to two OFDM symbols for two OFDM symbols or span up to three OFDM symbols for four and seven OFDM symbols. The different value can be reported for PDSCH processing type 1 and PDSCH processing type 2, respectively. For each sub-carrier spacing, the leading / leftmost bit (bit 0) corresponds to the supported value set (X,Y) of (7,3). The next bit (bit 1) corresponds to the supported value set (X,Y) of (4,3). The rightmost bit (bit 2) corresponds to the supported value set (X,Y) of (2,2).                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | FS | No | N/A | N/A |
| <b><i>pdccch-MonitoringAnyOccasions</i></b><br>Defines the supported PDCCH search space monitoring occasions. withoutDCI-gap indicates whether the UE supports PDCCH search space monitoring occasions in any symbol of the slot for Type 1-PDCCH common search space configured by dedicated RRC signalling, for a Type 3-PDCCH common search space, or for a UE-specific search space with the capability of supporting at least 44, 36, 22, and 20 blind decodes in a slot for 15 kHz, 30 kHz, 60kHz, and 120 kHz subcarrier spacing values respectively. withDCI-gap indicates whether the UE supports PDCCH search space monitoring occasions in any symbol of the slot with minimum time separation of two OFDM symbols for 15 kHz, four OFDM symbols for 30 kHz, seven OFDM symbols for 60 kHz with NCP, and 14OFDM symbols for 120kHz between two consecutive transmissions of PDCCH scrambled with C-RNTI, MCS-C-RNTI, or CS-RNTI for Type 1-PDCCH common search space configured by dedicated RRC signalling, for a Type 3-PDCCH common search space, or for a UE-specific search space, with the capability of supporting at least 44, 36, 22, and 20 blind decodes in a slot for 15 kHz, 30 kHz, 60kHz, and 120 kHz subcarrier spacing values respectively. | FS | No | N/A | N/A |
| <b><i>pdccch-MonitoringAnyOccasionsWithSpanGap</i></b><br>Indicates whether the UE supports PDCCH search space monitoring occasions in any symbol of the slot with minimum time separation between two consecutive transmissions of PDCCH with span up to two OFDM symbols for two OFDM symbols or span up to three OFDM symbols for four and seven OFDM symbols. Value set1 indicates the supported value set (X,Y) is (7,3), value set2 indicates the supported value set (X,Y) is (4,3) and (7,3) and value set 3 indicates the supported value set (X,Y) is (2,2), (4,3) and (7,3).                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | FS | No | N/A | N/A |
| <b><i>pdccch-MonitoringMixed-r16</i></b><br>Indicates support of Rel-15 monitoring capability and <i>pdccch-Monitoring-r16</i> on different serving cells.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | FS | No | N/A | N/A |
| <b><i>pdccch-MonitoringMixed-r18</i></b><br>Indicates whether the UE support Rel-15 monitoring capability and <i>pdccch-Monitoring-r16</i> monitoring capability on different serving cells.<br><br>The UE supporting this feature shall also indicate support of <i>pdccch-Monitoring-r16</i> for (7,3) or (4,3) span based PDCCH monitoring.<br><br>The UE supporting this feature shall also indicate support of <i>pdccch-MonitoringSpan2-2-r18</i> for (2, 2) span based PDCCH monitoring with additional restriction(s).<br><br>When a UE reports both <i>pdccch-MonitoringMixed-r16</i> and this capability, the value reported in this capability is used if the configured span pattern of any serving cell satisfies <i>pdccch-MonitoringSpan2-2-r18</i> .                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | FS | No | N/A | N/A |
| <b><i>pdccch-MonitoringSpan2-2-r18</i></b><br>Indicates support of (2, 2) span-based PDCCH monitoring with the additional restriction that there is at least one OFDM symbol gap between two PDCCH monitoring occasions.<br>When a UE reports both <i>pdccch-Monitoring-r16</i> and this capability, the union of supported span patterns in <i>pdccch-Monitoring-r16</i> and this capability establishes the multiple combinations (X,Y) used to determine per-span BD/CCE limit as described in Clause 10 of TS 38.213 [11].                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | FS | No | N/A | N/A |

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |    |    |     |     |

| <p><b><i>pdccch-RACH-AffectedBands-TargetBandList-r18</i></b><br/>Indicates whether interruption may occur on DL slot(s) on serving cells due to PDCCH-ordered RACH transmission towards target bands, as specified in TS 38.133 [5], clause 8.2.2.2.20.</p> <p>The band entry of this feature set corresponds to the band of the serving cell(s) that may be affected during PDCCH-ordered RACH transmission toward target band. Each entry in the list corresponds to a target band for RACH transmission.</p> <p>The target bands only consist of the NR bands indicated in <i>appliedFreqBandListFilter</i>. They are listed in the same order as in <i>appliedFreqBandListFilter</i> and the first NR band entry correspond to the first entry on <i>appliedFreqBandListFilter</i> and so on. For those bands indicated in <i>appliedFreqBandListFilter</i> where the UE does not support PDCCH-ordered RACH towards target bands for LTM, it is up to UE implementation to select <i>noInterruption</i> or <i>interruption</i> for that element and this value is ignored, as UE does not report the support for the corresponding band in the capability <i>rach-EarlyTA-Measurement-r18</i>.<br/>A UE supporting this feature shall also indicate support of <i>rach-EarlyTA-Measurement-r18</i>.</p>                                                                                                                                                                                                                                                                                                            | FS | No | N/A | N/A |
| <p><b><i>pdccch-RACH-PrepTime-TargetBandList-r18</i></b><br/>Indicates the RF/BB preparation time for PDCCH ordered RACH of which the resources are not fully contained in any of UE's configured UL BWP(s) of active serving cells. If absent, the UE does not support PDCCH ordered RACH towards any target band if the PRACH bandwidth is outside of any configured UL BWP, as specified in TS 38.133 [5], clause 6.2.2C.2 .<br/>Each entry in the list corresponds to a target band for RACH transmission. If an entry is set to <i>notSupported</i>, the UE does not support PDCCH ordered RACH towards that target band if the PRACH bandwidth is outside of any configured UL BWP.<br/>The target bands only consist of the NR bands indicated in <i>appliedFreqBandListFilter</i>. They are listed in the same order as in <i>appliedFreqBandListFilter</i> and the first NR band entry correspond to the first entry on <i>appliedFreqBandListFilter</i> and so on.<br/>For the case where the PRACH bandwidth of target band is inside of the configured UL BWP, this capability is not applicable, and the RF/BB preparation time is according to TS 38.133 [5], clause 6.2.2C.2.<br/>A UE supporting this feature shall also indicate support of <i>rach-EarlyTA-Measurement-r18</i>. A UE that sets <i>pdccch-RACH-SwitchingTime-TargetBandList</i> to a value different from <i>notSupported</i> for a target band also sets <i>pdccch-RACH-PrepTime-TargetBandList</i> to a value different from <i>notSupported</i> for that target band.</p>                                                            | FS | No | N/A | N/A |
| <p><b><i>pdccch-RACH-Switching-TargetBandTimeList-r18</i></b><br/>Indicates the interruption length (Y ms) due to RF re-tuning for PDCCH ordered RACH of which the resources are not fully contained in any of UE's configured UL BWP(s) of active serving cells, if absent, the UE does not support PDCCH ordered RACH towards any target band if the PRACH bandwidth is outside of any configured UL BWP, as specified in TS 38.133 [5], clause 8.2.2.2.20.</p> <p>Each entry in the list corresponds to a target band for RACH transmission. If an entry is set to <i>notSupported</i>, the UE does not support PDCCH ordered RACH towards that target band if the PRACH bandwidth is outside of any configured UL BWP.<br/>The target bands only consist of the NR bands indicated in <i>appliedFreqBandListFilter</i>. They are listed in the same order as in <i>appliedFreqBandListFilter</i> and the first NR band entry correspond to the first entry on <i>appliedFreqBandListFilter</i> and so on.<br/>For the case where the PRACH bandwidth of target band is inside of the configured UL BWP, this capability is not applicable, and the interruption length (Y ms) due to RF re-tuning is according to TS 38.133 [5], clause 8.2.2.2.20.<br/>A UE supporting this feature shall also indicate support of <i>rach-EarlyTA-Measurement-r18</i>. A UE that sets <i>pdccch-RACH-PrepTime-TargetBandList</i> to a value different from <i>notSupported</i> for a target band also sets <i>pdccch-RACH-SwitchingTime-TargetBandList</i> to a value different from <i>notSupported</i> for that target band.</p> | FS | No | N/A | N/A |

| <b>rtt-BasedPDC-PRS-r17</b><br>Indicates whether the UE supports RTT-based Propagation delay compensation for time synchronization of the Uu interface based on DL PRS and SRS. The capability signalling comprises the following parameters: <ul style="list-style-type: none"> <li>- <i>maxNumberPRS-Resource-r17</i> indicates the maximum number of DL PRS Resources in DL PRS Resource Set for PDC, with value n16, n32, and n64 only applicable to FR2 bands.</li> <li>- <i>maxNumberPRS-ResourceProcessedPerSlot-r17</i> indicates the maximum number of DL PRS resources that UE can process in a slot.</li> </ul> A UE supporting this feature shall also indicate support of <i>supportedSRS-Resources</i> .                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | FS | No | N/A | N/A      |
| <b>scalingFactor</b><br>Indicates the scaling factor to be applied to the serving cell in the max data rate calculation when <i>mcs-Table-r17</i> and <i>mcs-TableDCI-1-2-r17</i> are not configured for the serving cell as defined in 4.1.2. Value f0p4 indicates the scaling factor 0.4, f0p75 indicates 0.75, and so on. If absent, the scaling factor 1 is applied to the band in the max data rate calculation.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | FS | No | N/A | N/A      |
| <b>scalingFactor-1024QAM-FR1-r17</b><br>Indicates the scaling factor to be applied to the serving cell in the max data rate calculation when <i>mcs-Table-r17</i> or <i>mcs-TableDCI-1-2-r17</i> is configured for the serving cell as defined in 4.1.2 when support of 1024-QAM for PDSCH is signalled for the band. Value f0p4 indicates the scaling factor 0.4, f0p75 indicates 0.75, and so on. If absent, the scaling factor 1 is applied to the band in the max data rate calculation.<br><br>UE indicating support of this feature shall also indicate support of <i>pdsch-1024QAM-FR1-r17</i> or <i>pdsch-1024QAM-2MIMO-FR1-r17</i> to the band.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | FS | No | N/A | FR1 only |
| <b>scellWithoutSSB</b><br>Defines whether the UE supports configuration of SCell that does not transmit SS/PBCH block for intra-band CA. This is conditionally mandatory with capability signalling for intra-band CA.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | FS | CY | N/A | N/A      |
| <b>scellWithoutSSB-InterBandCA-r18</b><br>Indicates whether the UE supports SCell without SS/PBCH block for inter-band CA. For each band within the band combination, UE indicates if it supports the inter-band SSB-less SCell operation with <i>supportOfSingleGroup</i> or <i>supportOfMultipleGroups</i> : <ul style="list-style-type: none"> <li>- For <i>supportOfSingleGroup</i>, the band indicated as '<i>referenceBand</i>' can be configured as the reference band for all other band(s) indicated as '<i>scellWithoutSSB</i>'. The band indicated as '<i>both</i>' can be configured as either a reference band or an SSB-less band. If the UE indicates "both" for any band, the UE shall not indicate '<i>referenceBand</i>' or '<i>scellWithoutSSB</i>' in any other band in the band combination.</li> <li>- For <i>supportOfMultipleGroups</i>, the band indicated as '<i>referenceBand1</i>' can be configured as the reference band for all other band(s) indicated as '<i>scellWithoutSSB1</i>', and the band indicated as '<i>referenceBand2</i>' can be configured as the reference band for all other band(s) indicated as '<i>scellWithoutSSB2</i>'.</li> </ul> If the field <i>scellWithoutSSB-InterBandCA-r18</i> is absent for a band, this band is not involved in the inter-band SSB-less SCell operation.<br>If the inter-band SSB-less SCell operation is supported between two bands, it is understood that there is no direction between the two bands, which means that the network can configure either band as the reference band and the other band as the SSB-less band. | FS | No | N/A | FR1 only |
| <b>searchSpaceSharingCA-DL</b><br>Defines whether the UE supports DL PDCCH search space sharing for carrier aggregation operation.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | FS | No | N/A | N/A      |
| <b>sfn-SchemeA-r17</b><br>Indicates whether the UE supports SFN scheme A for PDCCH scheduling SFN Scheme A PDSCH.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | FS | No | N/A | N/A      |
| <b>sfn-SchemeA-DynamicSwitching-r17</b><br>Indicates whether the UE supports dynamic switching between single-TRP and PDSCH SFN scheme A by TCI state field in DCI formats 1_1 and 1_2. | <p><b><i>intraSlotTDM-UnicastGroupCommonPDSCH-r17</i></b><br/>Indicates whether the UE supports Intra-slot TDM-ed unicast PDSCH and group-common PDSCH. The value indicates that for any two consecutive slots <math>n</math> and <math>n+1</math>, if there are more than 1 broadcast/multicast/unicast PDSCH in either slot, whether to require the minimum time separation (4 OFDM symbols for 30kHz and 7 OFDM symbols for 60kHz) between starting time of any two broadcast/multicast/unicast PDSCHs within the duration of these slots.</p> <p>This feature includes the following functional components:</p> <ul style="list-style-type: none"> <li>- Supports TDM between one unicast PDSCH and one group-common PDSCH in a slot;</li> <li>- Support TDM between <math>M</math> (<math>M&gt;1</math>) TDMed unicast PDSCHs and one group-common PDSCH in a slot per CC;</li> <li>- Support TDM among <math>N</math> (<math>N&gt;1</math>) group-common PDSCHs in a slot per CC;</li> <li>- Support TDM between <math>K</math> (<math>K&gt;1</math>) TDMed unicast PDSCHs and <math>L</math> (<math>L&gt;1</math>) TDMed group-common PDSCHs in a slot per CC;</li> <li>- The UE maximum number of TDMed PDSCH receptions capability in a slot per CC is kept based on <i>pdsch-ProcessingType1-DifferentTB-PerSlot</i>;</li> <li>- Up to one broadcast PDSCH is supported in a slot.</li> </ul> <p>A UE supporting this feature shall support broadcast reception as specified in clause 5.10 and/or indicate support of <i>dynamicMulticastPCell-r17</i>, and shall indicate support of <i>pdsch-ProcessingType1-DifferentTB-PerSlot</i>.</p> <p>NOTE1: Group-common PDSCH(s) are counted as unicast PDSCH(s).<br/>NOTE2: The max number of (<math>M+1</math>), <math>N</math>, (<math>K+L</math>) are determined based on the numbers reported by <i>pdsch-ProcessingType1-DifferentTB-PerSlot</i>.</p> | FSPC | No | N/A | N/A |
| <p><b><i>maxModulationOrderForMulticastDataRateCalculation-r17</i></b><br/>Defines the maximum modulation order used for maximum data rate calculation for multicast PDSCH in RRC_CONNECTED.</p> <ul style="list-style-type: none"> <li>- For FR1, up to 1024QAM is supported as maximum modulation order used for maximum data rate calculation for multicast PDSCH, with candidate values {qam256, qam1024}.</li> <li>- For FR2, up to 256QAM is supported as maximum modulation order used for maximum data rate calculation for multicast PDSCH, with candidate values {qam64, qam256}.</li> </ul> <p>A UE supporting this feature shall also indicate support of <i>dynamicMulticastPCell-r17</i>.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | FSPC | No | N/A | N/A |
| <p><b><i>maxNumberMIMO-LayersPDSCH, maxNumberMIMO-LayersPDSCH-v1900</i></b><br/>Defines the maximum number of spatial multiplexing layer(s) supported by the UE for DL reception. For single CC standalone NR, it is mandatory with capability signalling to support at least 4 MIMO layers in the bands where 4Rx is specified as mandatory for the given UE and at least 2 MIMO layers in FR2 (except for FR1-NTN and FR2-NTN). If <i>supportOf2RxXR</i> is indicated, for single CC standalone NR, it is mandatory with capability signalling to support 2 MIMO layers in the bands specified in Table 7.3.2-2b in TS 38.101-1 [2]. If absent, the UE does not support MIMO on this carrier.</p> <p>The <i>maxNumberMIMO-LayersPDSCH-v1900</i> is only included for FWA UE as defined in TS 38.101-1 [2]. The UE supporting <i>maxNumberMIMO-LayersPDSCH-v1900</i> shall also indicate support of <i>maxNumberMIMO-LayersPDSCH</i> for the corresponding component carrier. When <i>maxNumberMIMO-LayersPDSCH</i> and <i>maxNumberMIMO-LayersPDSCH-v1900</i> are reported together for a component carrier, the network which is able to decode <i>maxNumberMIMO-LayersPDSCH-v1900</i> ignores <i>maxNumberMIMO-LayersPDSCH</i>.</p> <p>For the bands where <i>pdsch-1024QAM-2MIMO-FR1-r17</i> is indicated, MIMO layers for 1024 QAM is the smaller value between 2 and <i>maxNumberMIMO-LayersPDSCH</i>.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | FSPC | CY | N/A | N/A |

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |      |    |     |          |

The total number of SPS configurations for both multicast and unicast in a cell group is no larger than 32.</p> <p>A UE supporting this feature shall also indicate support of <i>sps-MulticastSCell-r17</i>.</p>                                                                                                                                                                                                                        | FSPC | No | N/A      | N/A        |
| <p><b>support32-DL-HARQ-ProcessTN-r19</b><br/>Indicates whether the UE supports 32 HARQ processes in DL for TN in FR1 and FR2-1.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | FSPC | No | N/A      | N/A        |

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |      |    |     |     |
|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------|----|-----|-----|
| <p><b><i>supportedBandwidthDL</i></b>, <b><i>supportedBandwidthDL-v1710</i></b>, <b><i>supportedBandwidthDL-v1780</i></b>, <b><i>supportedBandwidthDL-v1840</i></b>, <b><i>supportedBandwidthDL-v1900</i></b></p> <p>Indicates maximum DL channel bandwidth supported for a given SCS that UE supports within a single CC (and in case of DAPS handover for the source or target cell), which is defined in Table 5.3.5-1 in TS 38.101-1 [2] / TS 38.101-5 [34] for FR1 and Table 5.3.5-1 in TS 38.101-2 [3] / Table 5.3.5-2 in TS 38.101-5 [34] for FR2. For FR1, all the bandwidths listed in TS 38.101-1 [2] / TS 38.101-5 [34], Table 5.3.5-1 for each band shall be mandatory with a single CC unless indicated optional. For FR2 (except for FR2-NTN), the set of mandatory CBW is 50, 100, 200 MHz. For FR2-NTN, the set of mandatory CBW is 50, 100 MHz. When this field is included in a band combination with a single band entry and a single CC entry (i.e. non-CA band combination), the UE shall indicate the maximum channel bandwidth for the band according to TS 38.101-1 [2], TS 38.101-2 [3], and TS 38.101-5 [34]. For FR2, <i>supportedBandwidthDL-v1710</i> is included if the maximum DL channel bandwidth supported by the UE within a single CC is greater than 400MHz. When the <i>supportedBandwidthDL</i> and the <i>supportedBandwidthDL-v1710</i> are reported together for a CC, the network which is able to decode the <i>supportedBandwidthDL-v1710</i> ignores the <i>supportedBandwidthDL</i>.</p> <p>When the <i>supportedBandwidthDL</i> and the <i>supportedBandwidthDL-v1840</i> are reported together for a CC, the network which is able to decode the <i>supportedBandwidthDL-v1840</i> ignores the <i>supportedBandwidthDL</i>.</p> <p>The UE may report a <i>supportedBandwidthDL</i> wider than the <i>channelBWs-DL</i>; this <i>supportedBandwidthDL</i> may not be included in the Table 5.3.5-1 of TS 38.101-1 [2] / TS 38.101-2[3] / TS 38.101-5 [34] and Table 5.3.5-2 of TS 38.101-5 [34] for the case that the UE is unable to report the actual supported bandwidth according to the Table 5.3.5-1 of TS 38.101-1 [2] / TS 38.101-2 [3] / TS 38.101-5 [34] and Table 5.3.5-2 of TS 38.101-5 [34]. For each band, (e)RedCap UEs shall indicate its maximum channel bandwidth, which is the maximum of those channel bandwidths that are less than or equal to 20 MHz for FR1 and less than or equal to 100 Mhz for FR2, taking restrictions in TS 38.101-1 [2] and TS 38.101-2 [3] into consideration. The <i>supportedBandwidthDL-v1780</i> is only applicable to Bandwidth Combination Set 5 (BCS5) of FR1 NR CA (including NR CA part of (NG)EN-DC and NE-DC) and FR1 NR-DC. If the UE reports <i>supportedAggBW-FR1-r17</i>, the UE shall report <i>supportedBandwidthDL-v1780</i>.</p> <p>NOTE: See the note in the field description of <i>channelBWs-DL</i> for the determination of supported DL channel bandwidth.</p> | FSPC | CY | N/A | N/A |

| <p><b>supportedCRS-InterfMitigation-r17</b><br/>Indicates whether the UE supports CRS interference mitigation (CRS-IM) in both DSS and non-DSS scenarios with overlapping spectrum for LTE and NR, which is defined in TS 38.101-4 [18]. The capability signalling contains the following:</p> <ul style="list-style-type: none"> <li>- <i>crs-IM-DSS-15kHzSCS-r17</i> indicates whether the UE supports neighbouring LTE cell CRS-IM in DSS scenario with NR 15 kHz SCS. UE can indicate support of this capability on the CC(s) in a band only if the UE indicates support of <i>rateMatchingLTE-CRS</i> on that band.</li> <li>- <i>crs-IM-nonDSS-15kHzSCS-r17</i> indicates whether the UE supports neighbouring LTE cell CRS-IM in non-DSS and 15 kHz NR SCS scenario, without the assistance of network signalling on LTE channel bandwidth.</li> <li>- <i>crs-IM-nonDSS-NWA-15kHzSCS-r17</i> indicates whether the UE supports neighbouring LTE cell CRS-IM in non-DSS and 15 kHz NR SCS scenario, with the assistance of network signalling on LTE channel bandwidth.</li> <li>- <i>crs-IM-nonDSS-30kHzSCS-r17</i> indicates whether the UE supports neighbouring LTE cell CRS-IM in non-DSS and 30 kHz NR SCS scenario, without the assistance of network signalling on LTE channel bandwidth.</li> <li>- <i>crs-IM-nonDSS-NWA-30kHzSCS-r17</i> indicates whether the UE supports neighbouring LTE cell CRS-IM in non-DSS and 30 kHz NR SCS scenario, with the assistance of network signalling on LTE channel bandwidth.</li> </ul> <p>For the UE supporting the capability of <i>crs-IM-DSS-15kHzSCS-r17</i>, the UE can perform CRS-IM without the assistant configuration information of neighbour LTE cells when <i>RateMatchPatternLTE-CRS</i> is configured for the serving cell, and if <i>lte-NeighCellsCRS-Assumptions-r17</i> is not configured.</p> <p>For the UE supporting the capability of <i>crs-IM-nonDSS-15kHzSCS-r17</i>, the UE can perform CRS-IM without the assistant configuration information of neighbour LTE cells with 15 kHz SCS when <i>RateMatchPatternLTE-CRS</i> is not configured for the serving cell, and if <i>MeasObjectEUTRA</i> is configured, the configured measurement gaps overlap with neighbour LTE cell PBCH position and <i>lte-NeighCellsCRS-Assumptions-r17</i> is not configured.</p> <p>For the UE supporting the capabilities of <i>crs-IM-nonDSS-30kHzSCS-r17</i>, the UE can perform CRS-IM without the assistant configuration information of neighbour LTE cells with 30 kHz SCS when <i>RateMatchPatternLTE-CRS</i> is not configured for the serving cell, and if <i>MeasObjectEUTRA</i> is configured, the configured measurement gaps overlap with neighbour LTE cell PBCH position and <i>lte-NeighCellsCRS-Assumptions-r17</i> is not configured.</p> <p>NOTE 1: In the DSS scenario, serving and neighbouring cells are both operating with dynamic spectrum sharing (DSS) of NR and LTE.</p> <p>NOTE 2: In the non-DSS scenario, serving cell is operating in NR, and neighbouring cells are operating in LTE.</p> | FSPC | No | No  | FR1 only |
| <p><b>supportedMinBandwidthDL-r17, supportedMinBandwidthDL-v1840, supportedMinBandwidthDL-v1900</b><br/>Indicates minimum DL channel bandwidth supported for a given SCS that UE supports within a single CC (and in case of intra-frequency DAPS handover for the source and target cells), which is defined in Table 5.3.5-1 in TS 38.101-1 [2] for FR1 and Table 5.3.5-1 in TS 38.101-2 [3] for FR2. This parameter is only applicable to the Bandwidth Combination Set 5 (BCS5). The UE shall indicate this parameter for at least one CC of a BCS5 band combination. This field does not restrict the bandwidths configured for a single CC (i.e. non-CA case).</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | FSPC | CY | N/A | N/A      |

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |      |    |     |     |

| <p><b>supportedModulationOrderDL</b></p> <p>Indicates the maximum supported modulation order to be applied for downlink in the carrier in the max data rate calculation as defined in 4.1.2. If included, the network may use a modulation order on this serving cell which is higher than the value indicated in this field as long as UE supports the modulation of higher value for downlink. If not included:</p> <ul style="list-style-type: none"> <li>- for FR1, the network uses the modulation order signalled per band i.e. <i>pdsch-1024QAM-FR1-r17</i> or <i>pdsch-1024QAM-2MIMO-FR1-r17</i> when <i>pdsch-1024QAM-FR1-r17</i> or <i>pdsch-1024QAM-2MIMO-FR1-r17</i> is signalled for the band, otherwise the network uses the modulation order signalled in <i>pdsch-256QAM-FR1</i>. The network uses the modulation order 64QAM if <i>pdsch-256QAM-FR1</i> is not signalled for the band for (e)RedCap UE, IAB-MT, or NCR-MT.</li> <li>- for FR2, the network uses the modulation order signalled per band i.e. <i>pdsch-256QAM-FR2</i> if signalled. If not signalled in a given band, the network shall use the modulation order 64QAM.</li> </ul> <p>In all the cases, it shall be ensured that the data rate does not exceed the max data rate (<i>DataRate</i>) and max data rate per CC (<i>DataRateCC</i>) according to TS 38.214 [12].</p> | FSPC | No | N/A | N/A |
| <p><b>supportedSubCarrierSpacingDL</b></p> <p>Defines the supported sub-carrier spacing for DL by the UE, as defined in clause 4.2-1 of TS 38.211 [6], indicating the UE supports simultaneous reception with same or different numerologies in CA. Support of simultaneous reception with same numerology for intra-band NR CA including both contiguous and non-contiguous is mandatory with capability in both FR1 and FR2. Support of simultaneous reception with two different numerologies between FR1 band(s) and FR2 band(s) in DL is mandatory with capability if UE supports inter-band NR CA including both FR1 band(s) and FR2 band(s). Optional for other cases. Support of simultaneous reception of with different numerologies in CA for other cases is optional.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | FSPC | CY | N/A | N/A |

| <b><i>scalingFactor</i></b><br>Indicates the scaling factor to be applied to the band in the max data rate calculation as defined in 4.1.2. Value f0p4 indicates the scaling factor 0.4, f0p75 indicates 0.75, and so on. If absent, the scaling factor 1 is applied to the band in the max data rate calculation.                                                                                                                                                                                                                                        | FS  | No  | N/A          | N/A          |
| <b><i>cbgPUSCH-ProcessingType1-DifferentTB-PerSlot-r16</i></b><br>Defines whether the UE capable of processing time capability 1 supports CBG based transmission with one or with up to two or with up to four or with up to seven unicast PUSCHs per slot per CC.                                                                                                                                                                                                                                                                                        | FS  | No  | N/A          | N/A          |
| <b><i>cbgPUSCH-ProcessingType2-DifferentTB-PerSlot-r16</i></b><br>Defines whether the UE capable of processing time capability 2 supports CBG based transmission with one or with up to two or with up to four or with up to seven unicast PUSCHs per slot per CC.                                                                                                                                                                                                                                                                                        | FS  | No  | N/A          | N/A          |
| <b><i>crossCarrierSchedulingProcessing-DiffSCS-r16</i></b><br>Indicates the UE cross carrier scheduling processing capability for UL carrier aggregation processing up to X unicast DCI scheduling for UL per scheduled CC. X is based on pair of (scheduling CC SCS, scheduled CC SCS) where a pair of (15,120), (15,60), (30,120) kHz SCS can have X = {1,2,4} while a pair of (15,30), (30,60), (60,120) kHz SCS can have X = {2}, and X applies per slot of scheduling CC.                                                                            | FS  | No  | N/A          | N/A          |
| <b><i>dynamicSwitchSUL</i></b><br>Indicates whether the UE supports supplemental uplink with dynamic switch (DCI based selection of PUSCH carrier). The UE supports this among a carrier on a band X and a band Y if it sets this capability parameter for both band X and band Y.                                                                                                                                                                                                                                                                        | FS  | No  | N/A          | N/A          |
| <b><i>extendedDC-LocationReport-r17</i></b><br>Indicates whether the UE supports extended DC location reporting (based on indicated default DC location) for at least 2 UL CCs in one band. A UE that supports this feature also supports extended DC location reporting for 1 UL CC in one band.                                                                                                                                                                                                                                                         | FS  | No  | N/A          | N/A          |
| <b><i>featureSetListPerUplinkCC</i></b><br>Indicates which features the UE supports on the individual UL carriers of the feature set (and hence of a band entry that refer to the feature set) by <i>FeatureSetUplinkPerCC-Id</i> . The order of the elements in this list is not relevant, i.e., the network may configure any of the carriers in accordance with any of the <i>FeatureSetUplinkPerCC-Id</i> in this list. A fallback per CC feature set resulting from the reported feature set per UL CC is not signalled but the UE shall support it. | FS  | N/A | N/A          | N/A          |

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |    |    |     |          |
|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----|----|-----|----------|
| <b>interSubslotFreqHopping-PUCCH-r17</b><br>Indicates whether the UE supports inter-subslot frequency hopping for PUCCH repetitions comprised of the following functional components: <ul style="list-style-type: none"> <li>- Inter-subslot frequency hopping for PUCCH repetition operation of PUCCH Formats 0, 1, 2, 3 and 4 for 7OS slot-based PUCCH configurations;</li> <li>- Inter-subslot frequency hopping for PUCCH repetition operation of PUCCH Format 0 and Format 2 for 2OS slot-based PUCCH configurations.</li> </ul> <p>The UE indicating support of this feature shall also indicate the support of <i>pucch-Repetition-F0-1-2-3-4-RRC-Config-r17</i>.</p>                                                                                  | FS | No | N/A | N/A      |
| <b>intraBandFreqSeparationUL, intraBandFreqSeparationUL-v1620</b><br>Indicates UL frequency separation class the UE supports, which indicates a maximum frequency separation between lower edge of lowest CC and upper edge of highest CC in a frequency band, for intra-band non-contiguous CA. The UE sets the same value in the FeatureSetUplink of each band entry within a band. The values mhzX corresponds to the values XMHz defined in TS 38.101-2 [3]. It is mandatory to report for UE which supports UL non-contiguous CA in FR2. If the UE sets the field <i>intraBandFreqSeparationUL-v1620</i> it shall set <i>intraBandFreqSeparationUL</i> (without suffix) to the nearest smaller value.                                                    | FS | CY | N/A | FR2 only |
| <b>intraFreqDAPS-UL-r16</b><br>Indicates whether UE supports enhanced uplink capabilities for intra-frequency DAPS handover. The UE only includes this capability signalling if <i>intraFreqDAPS-r16</i> is included in the <i>FeatureSetDownlink</i> for the same <i>FeatureSet</i> . The capability signalling comprises of the following parameter: <ul style="list-style-type: none"> <li>- <i>intraFreqTwoTAGs-DAPS-r16</i> indicates whether the UE supports different timing advance groups in source PCell and intra-frequency target PCell. It is mandatory with capability signalling.</li> </ul>                                                                                                                                                   | FS | No | N/A | N/A      |
| <b>maxDelayValueBeyondD-Basic-r18</b><br>Indicates whether the UE supports maximum delay value larger than D_basic = 1 slot. Value <i>s/2</i> denotes 2 slots, value <i>s/3</i> denotes 3 slots, value <i>s/4</i> denotes 4 slots, value <i>s/5</i> denotes 5 slots, value <i>s/6</i> denotes 6 slots, value <i>s/10</i> denotes 10 slots. A UE supporting this feature shall also indicate support of <i>tdcp-Report-r18</i> .<br>NOTE: 10 slots is only applicable for SCS >= 30 kHz, and 6 slots is maximum for SCS = 15 kHz.                                                                                                                                                                                                                              | FS | No | N/A | N/A      |
| <b>maxNumberTDCP-PerBWP-r18</b><br>Indicates the maximum number of <i>CSI-ReportConfig</i> with <i>reportQuantity</i> configured as " <i>tdcp</i> ", configured with <i>resourcesForChannelMeasurement</i> linked to a same BWP ID.<br>A UE supporting this feature shall also indicate support of <i>tdcp-Report-r18</i> .                                                                                                                                                                                                                                                                                                                                                                                                                                   | FS | No | N/A | N/A      |
| <b>maxNumberTRS-ResourceSet-r18</b><br>Indicates the maximum number of TRS resource sets in a single CSI-RS resource setting.<br>A UE supporting this feature shall also indicate support of <i>tdcp-Report-r18</i> .                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | FS | No | N/A | N/A      |
| <b>mTRP-PUCCH-IntraSlot-r17</b><br>Indicates whether the UE supports PUCCH repetition scheme 3 (intra-slot repetition) with sequential mapping for repetitions larger than 2 and cyclic mapping for 2 repetitions by indicating the supported PUCCH formats for this scheme. The UE indicating this feature shall also support up to two PUCCH power control parameter sets/spatial relation info per PUCCH resource.<br>Power control parameter sets feature is applicable to FR1 only (without spatial relation info) and spatial relation info is applicable to FR2 only.                                                                                                                                                                                  | FS | No | N/A | N/A      |
| <b>mTRP-PUSCH-TypeA-CB-r17</b><br>Indicates the support of multi-TRP PUSCH repetition based on codebook with PUSCH repetition type A. The value indicates the supported number of SRS resources in one SRS resource set.<br><br>This feature includes the following features: <ul style="list-style-type: none"> <li>- sequential mapping for repetitions larger than 2.</li> <li>- cyclic mapping for 2 repetitions.</li> <li>- two SRS resource sets with usage set to 'codebook'.</li> </ul> <p>The UE indicating support of this feature shall also indicate the support of <i>mimo-CB-PUSCH</i>. If the value of supported number of SRS resources is 4 then the UE shall also indicate support of <i>ul-FullPwrMode2-MaxSRS-ResInSet</i> set to n4.</p> | FS | No | N/A | N/A      |

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |    |    |     |          |

| <b><i>pusch-ProcessingType2</i></b><br>Indicates whether the UE supports PUSCH processing capability 2. The UE supports it only if all serving cells are self-scheduled and if all serving cells in one band on which the network configured processingType2 use the same subcarrier spacing. This capability signalling comprises the following parameters for each sub-carrier spacing supported by the UE. <ul style="list-style-type: none"> <li>- <i>fallback</i> indicates whether the UE supports PUSCH processing capability 2 when the number of configured carriers is larger than <i>numberOfCarriers</i> for a reported value of <i>differentTB-PerSlot</i>. If <i>fallback</i> = 'sc', UE supports capability 2 processing time on lowest cell index among the configured carriers in the band where the value is reported, if <i>fallback</i> = 'cap1-only', UE supports only capability 1, in the band where the value is reported;</li> <li>- <i>differentTB-PerSlot</i> indicates whether the UE supports processing type 2 for 1, 2, 4 and/or 7 unicast PUSCHs for different transport blocks per slot per CC; and if so, it indicates up to which number of CA serving cells the UE supports that number of unicast PUSCHs for different TBs. The UE shall include at least one of <i>numberOfCarriers</i> for 1, 2, 4 or 7 transport blocks per slot in this field if <i>pusch-ProcessingType2</i> is indicated.</li> </ul> | FS | No | N/A | FR1 only |
| <b><i>pusch-RepetitionTypeB-r16, pusch-RepetitionTypeB-v16d0</i></b><br>Indicates whether the UE supports PUSCH repetition type B, as specified in 6.1.2 of TS 38.214 [12].<br>The <i>maxNumberPUSCH-Tx-r16</i> in <i>pusch-RepetitionTypeB-r16</i> indicates the supported maximum number of PUSCH transmissions within a slot for all TB(s) for processing capability 1 if <i>pusch-ProcessingType2</i> is not included, or for both processing capability 1 and processing capability 2 if <i>pusch-ProcessingType2</i> is included. The <i>maxNumberPUSCH-Tx-Cap1-r16</i> and <i>maxNumberPUSCH-Tx-Cap2-r16</i> in <i>pusch-RepetitionTypeB-v16d0</i> are for processing capability 1 and processing capability 2 separately, which are only included when different values are supported for the processing capabilities. The <i>maxNumberPUSCH-Tx-r16</i> will be ignored by the network if the <i>pusch-RepetitionTypeB-v16d0</i> is included.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | FS | No | N/A | N/A      |
| <b><i>pusch-SeparationWithGap</i></b><br>Indicates whether the UE supports separation of two unicast PUSCHs with a gap, applicable to Sub-carrier spacings of 15 kHz, 30 kHz and 60 kHz only. For any two consecutive slots <i>n</i> and <i>n+1</i> , if there are more than 1 unicast PUSCH in either slot, the minimum time separation between starting time of any two unicast PUSCHs within the duration of these slots is 2 OFDM symbols for 15kHz, 4 OFDM symbols for 30kHz and 7 OFDM symbols for 60kHz.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | FS | No | N/A | N/A      |
| <b><i>rach-EarlyTA-BandList-r18</i></b><br>Indicates whether the UE supports simultaneous transmission to handle the overlap between UL transmission on serving cell(s) and PRACH on candidate cell(s). A UE supporting this feature shall also indicate support of <i>rach-EarlyTA-Measurement-r18</i> .<br>Each source-target pair indicates the band pair between the band under UE's current band combination and the target band for RACH transmission.<br>The target bands only consist of the NR bands indicated in <i>appliedFreqBandListFilter</i> . They are listed in the same order as in <i>appliedFreqBandListFilter</i> and the first NR band entry correspond to the first entry on <i>appliedFreqBandListFilter</i> and so on.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | FS | No | N/A | N/A      |
| <b><i>searchSpaceSharingCA-UL</i></b><br>Defines whether the UE supports UL PDCCH search space sharing for carrier aggregation operation.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | FS | No | N/A | N/A      |
| <b><i>semiStaticHARQ-ACK-CodebookSub-SlotPUCCH-r17</i></b><br>Indicates whether the UE supports Semi-static (Type 1) HARQ-ACK codebook for sub-slot based PUCCH configuration.<br>A UE supporting this feature shall also indicate support of <i>semiStaticHARQ-ACK-Codebook</i> and <i>multiPUCCH-r16</i> .                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | FS | No | N/A | N/A      |

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |    |    |     |     |
|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----|----|-----|-----|
| <p><b><i>simultaneous-2-1-HARQ-ACK-CB-r18</i></b></p> <p>Indicates whether the UE supports two HARQ-ACK codebooks with different priorities to be simultaneously constructed with the restriction up to one sub-slot based HARQ-ACK codebook. This capability also indicates support of separate PUCCH configuration for different HARQ-ACK codebooks, 2-level priority of HARQ-ACK for dynamically scheduled PDSCH and SPS PDSCH, a DCI format 1_3 scheduling PDSCH with different HARQ-ACK priorities when only DCI format 0_3/1_3 is configured per BWP, separate configuration of parameters <i>pdsch-HARQ-ACK-Codebook</i>, <i>uci-OnPUSCH</i> and <i>codeBlockGroupTransmission</i> for different HARQ-ACK codebooks, maximum number of actual PUCCH transmissions for HARQ-ACK within a slot and intra-UE multiplexing/prioritization of UL overlapping channels/signals with two priority levels for HARQ-ACK.</p> <p>The supported maximum number of actual PUCCH transmissions for HARQ-ACK within a slot is indicated by <i>sub-SlotConfig-NCP-r16</i> for NCP for 2-symbol*7 sub-slot configuration, and <i>sub-SlotConfig-ECP-r16</i> for ECP for 2-symbol*6 sub-slot configuration. For <i>sub-SlotConfig-NCP-r16</i> and <i>sub-SlotConfig-ECP-r16</i>, if a UE also supports <i>twoHARQ-ACK-Codebook-type1-r16</i>, the UE reports the same values as in <i>twoHARQ-ACK-Codebook-type1-r16</i>.</p> <p>If a UE reports both <i>multiPUCCH-r16</i> and this capability, it can support two slot-based HARQ-ACK codebooks, and one slot-based and one-sub-slot-based HARQ-ACK codebooks. If a UE reports this capability but not <i>multiPUCCH-r16</i>, it can only support two slot-based HARQ-ACK codebooks.</p> <p>The number of PUCCHs for CSI reporting per slot is not impacted compared with Rel-15 by introducing the new HARQ-ACK CBs.</p> <p><i>simultaneous-2-1-HARQ-ACK-CB-r18</i> is applied to the sub-slot HARQ-ACK codebook and only 1 actual PUCCH transmission for HARQ-ACK within a slot for slot-based HARQ-ACK codebook is assumed. It is indicated for 2-symbol*7 sub-slot configuration. For 7-symbol*2 sub-slot configuration, the value of <i>simultaneous-2-1-HARQ-ACK-CB-r18</i> is {2} for both NCP and ECP cases.</p> <p>The value indicated in <i>simultaneous-2-1-HARQ-ACK-CB-r18</i> has no meaning for "slot-based + slot based".</p> <p>A UE supporting this feature shall also indicate support of at least one of <i>multiCell-PDSCH-DCI-1-3-SameSCS-r18</i> and <i>multiCell-PDSCH-DCI-1-3-DiffSCS-r18</i>.</p> | FS | No | N/A | N/A |

| <b><i>simultaneous-2-1-HARQ-ACK-CB-Diff-r19</i></b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | FS | No | N/A | N/A |
|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----|----|-----|-----|
| <p>Indicates whether the UE supports two HARQ-ACK codebooks with different priorities to be simultaneously constructed with the restriction up to one sub-slot based HARQ-ACK codebook with different SCS and/or different carrier type. This capability also indicates support of separate PUCCH configuration for different HARQ-ACK codebooks, 2-level priority of HARQ-ACK for dynamically scheduled PDSCH and SPS PDSCH, a DCI format 1_3 scheduling PDSCH with different HARQ-ACK priorities when only DCI format 0_3/1_3 is configured per BWP, separate configuration of parameters <i>pdsch-HARQ-ACK-Codebook</i>, <i>uci-OnPUSCH</i> and <i>codeBlockGroupTransmission</i> for different HARQ-ACK codebooks, maximum number of actual PUCCH transmissions for HARQ-ACK within a slot and intra-UE multiplexing/prioritization of UL overlapping channels/signals with two priority levels for HARQ-ACK.</p> <p>The supported maximum number of actual PUCCH transmissions for HARQ-ACK within a slot is indicated by <i>sub-SlotConfig-NCP-r16</i> for NCP for 2-symbol*7 sub-slot configuration, and <i>sub-SlotConfig-ECP-r16</i> for ECP for 2-symbol*6 sub-slot configuration. For <i>sub-SlotConfig-NCP-r16</i> and <i>sub-SlotConfig-ECP-r16</i>, if a UE also supports <i>twoHARQ-ACK-Codebook-type1-r16</i>, the UE reports the same values as in <i>twoHARQ-ACK-Codebook-type1-r16</i>.</p> <p>If a UE reports both <i>multiPUCCH-r16</i> and this capability, it can support two slot-based HARQ-ACK codebooks, and one slot-based and one-sub-slot-based HARQ-ACK codebooks. If a UE reports this capability but not <i>multiPUCCH-r16</i>, it can only support two slot-based HARQ-ACK codebooks.</p> <p>The number of PUCCHs for CSI reporting per slot is not impacted compared with Rel-15 by introducing the new HARQ-ACK CBs.</p> <p><i>simultaneous-2-1-HARQ-ACK-CB-Diff-r19</i> is applied to the sub-slot HARQ-ACK codebook and only 1 actual PUCCH transmission for HARQ-ACK within a slot for slot-based HARQ-ACK codebook is assumed. It is indicated for 2-symbol*7 sub-slot configuration. For 7-symbol*2 sub-slot configuration, the value of <i>simultaneous-2-1-HARQ-ACK-CB-Diff-r19</i> is {2} for both NCP and ECP cases.</p> <p>The value indicated in <i>simultaneous-2-1-HARQ-ACK-CB-Diff-r19</i> has no meaning for "slot-based + slot based".</p> <p>A UE supporting this feature shall also indicate support of <i>multiCell-PDSCH-DCI-1-3-DiffSCS-DiffCC-r19</i>.</p> |    |    |     |     |

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |    |    |     |     |

| <b>ul-FullPwrMode-3Port-r19</b><br>Indicates whether the UE supports full-power Mode 0 for codebook-based for 3 Tx operation.<br>A UE supporting this feature shall also indicate support of <i>codebook-3TxPUSCH-SingleTRP-r19</i> .<br>NOTE: If a UE does not support this feature, Rel-15 power scaling procedures apply.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | FS | No | N/A | N/A |
| <b>ul-FullPwrMode-r16</b><br>Indicates the UE support of UL full power transmission mode of <i>fullpower</i> as specified in clause 7.1 of TS 38.213 [11]. If the UE indicates this capability the UE also indicates the support of codebook based PUSCH MIMO transmission using <i>mimo-CB-PUSCH</i> and the support of PUSCH codebook coherency subset using <i>pusch-TransCoherence</i> .                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | FS | No | N/A | N/A |
| <b>ul-FullPwrMode1-r16</b><br>Indicates the UE support of UL full power transmission mode of <i>fullpowerMode1</i> . If the UE indicates this capability the UE also indicates the support of codebook based PUSCH MIMO transmission using <i>mimo-CB-PUSCH</i> and the support of PUSCH codebook coherency subset using <i>pusch-TransCoherence</i> .                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | FS | No | N/A | N/A |
| <b>ul-FullPwrMode2-MaxSRS-ResInSet-r16</b><br>Indicates the UE support of the maximum number of SRS resources in one SRS resource set with usage set to 'codebook' for uplink full power Mode 2 operation. If the UE indicates this capability the UE also indicates the support of codebook based PUSCH MIMO transmission using <i>mimo-CB-PUSCH</i> and the support of PUSCH codebook coherency subset using <i>pusch-TransCoherence</i> . A UE supports this feature shall support at least full power operation with single port.                                                                                                                                                                                                                                                                                                                                                                                                                        | FS | No | N/A | N/A |
| <b>ul-FullPwrMode2-SRSConfig-diffNumSRSPorts-r16</b><br>Indicates the UE supported SRS configuration with different number of antenna ports per SRS resource for uplink full power Mode 2 operation. The possible different number of antenna ports that can be configured for a SRS resource are as follow: <ul style="list-style-type: none"> <li>- value <i>p1-2</i> means that each SRS resource can be configured with 1 port or 2 ports</li> <li>- value <i>p1-4</i> means that each SRS resource can be configured with 1 port or 4 ports</li> <li>- value <i>p1-2-4</i> means that each SRS resource can be configured with 1 port or 2 ports or 4 ports</li> </ul><br>UE indicates support of this feature shall also indicate support of <i>ul-FullPwrMode2-MaxSRS-ResInSet</i> .<br><br>NOTE: The values <i>p1-2</i> , <i>p1-4</i> or <i>p1-2-4</i> can be used if <i>ul-FullPwrMode2-MaxSRS-ResInSet</i> is reported as <i>n2</i> or <i>n4</i> . | FS | No | N/A | N/A |

**ul-FullPwrMode2-TPMIGroup-r16**

Indicates the UE supported TPMI group(s) which delivers full power. The capability signalling comprises the following values:

- *twoPorts-r16* indicates a 2-bit bitmap, where the leading / leftmost bit (bit 0) corresponds to {TPMI index = 0}. The next bit (bit 1) corresponds to {TPMI index = 1} and the TPMI index is as specified in Table 6.3.1.5-1 of TS 38.211 [6]
- *fourPortsNonCoherent-r16* indicates the TPMI groups {G0-3}
- *fourPortsPartialCoherent-r16* indicates the TPMI groups {G0-6}

UE indicates support of this feature shall also indicate support of *ul-FullPwrMode2-MaxSRS-ResInSet*.

Definition of G0~G6 can be found in the table below:

| ID | TPMI groups                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |

NOTE 1: When a full coherent UE operates in mode 2, it reports TPMIs the same as a partial-coherent UE.

NOTE 2: For 4 port partial-coherent or full-coherent UE, UE can report: 2-port {2-bit bitmap} and one of 4-port non-coherent {G0~G3} and one of 4-port partial-coherent {G0~G6}  
 For 4 port non-coherent UE, UE can report: 2-port {2-bit bitmap} and one of 4-port non-coherent {G0~G3}  
 For 2 port UE, UE can report: 2-port {2-bit bitmap}

NOTE 3: A UE that supports this feature must report at least one of the values.

| <p><b>codebookParameter8TxPUSCH-r18</b><br/>Indicates whether the UE supports codebook-based 8Tx PUSCH.</p> <p>The basic features of 8Tx PUSCH codebook are included in <i>codebook-8TxBasic-r18</i>. This capability signalling comprises the following parameters:</p> <ul style="list-style-type: none"> <li>- <i>maxNumberPUSCH-MIMO-Layer-r18</i> defines the maximum number of PUSCH MIMO layers for codebook based PUSCH;</li> <li>- <i>maxNumberSRS-Resource-r18</i> defines the maximum number of 8 port SRS resources per SRS resource set with usage set to 'codebook' for codebook-based 8Tx PUSCH;</li> <li>- <i>srs-8TxPorts-r18</i> defines SRS 8 Tx ports codebook. Value 'noTDM' indicates noTDM. Value 'both' indicates TDM and noTDM. This parameter only applies to <i>codebook2-8TxPUSCH-r18</i>, <i>codebook3-8TxPUSCH-r18</i>, and <i>codebook4-8TxPUSCH-r18</i>.</li> </ul> <p>A UE that supports <i>codebook-8TxBasic-r18</i> must support of at least one of <i>codebook1-8TxPUSCH-r18</i>, <i>codebook2-8TxPUSCH-r18</i>, <i>codebook3-8TxPUSCH-r18</i>, and <i>codebook4-8TxPUSCH-r18</i>.</p> <ul style="list-style-type: none"> <li>- <i>codebook1-8TxPUSCH-r18</i> comprises the following parameters: <ul style="list-style-type: none"> <li>- <i>codebookN1N4-r18</i> indicates whether the UE supports (N1, N2) codebook-based 8Tx PUSCH codebook1. Value <i>ng1n4n1</i> corresponds to (4,1) codebook, value <i>ng1n2n2</i> corresponds to (2,2) codebook, value <i>both</i> corresponds to both codebooks;</li> <li>- <i>srs-8TxPorts-r18</i> defines SRS 8 Tx ports codebook1 codebook. Value 'noTDM' indicates noTDM. Value 'both' indicates TDM and noTDM.</li> </ul> </li> <li>- <i>codebook2-8TxPUSCH-r18</i> indicates whether the UE supports codebook-based 8Tx PUSCH codebook2;</li> <li>- <i>codebook3-8TxPUSCH-r18</i> indicates whether the UE supports codebook-based 8Tx PUSCH codebook3;</li> <li>- <i>codebook4-8TxPUSCH-r18</i> indicates whether the UE supports codebook-based 8Tx PUSCH codebook4.</li> </ul> <p>The UE optionally indicates <i>ul-FullPwrTransMode0-r18</i> to indicate whether the UE supports UL full power transmission mode of fullpower when UE is capable of 8 Tx codebook based PUSCH operation.</p> <p>The UE optionally indicates <i>ul-FullPwrTransMode1-r18</i> to indicate whether the UE supports UL full power transmission mode of fullpowerMode1 when UE is capable of 8 Tx codebook based PUSCH operation.</p> <p>The UE optionally indicates <i>ul-FullPwrTransMode2-r18</i> to indicate whether the UE supports UL full power transmission mode of fullpowerMode2 when UE is capable of 8 Tx codebook based PUSCH operation. The UE indicates the maximum number of SRS resources in one SRS resource set with usage set to 'codebook' for 8Tx codebook based PUSCH for Mode 2.</p> <p>NOTE 1: A UE that supports <i>ul-FullPwrTransMode2-r18</i> supports at least full power operation with single port.</p> <p>The UE optionally indicates <i>ul-SRS-TransMode2-r18</i> to indicate whether the UE supports SRS configurations with different number of antenna ports per SRS resource for Mode 2. The UE indicates a 3-bit bitmap, where the leading / leftmost bit (bit 0) corresponds to whether SRS resource can be configured with 1 port. The next bit (bit 1) corresponds to whether SRS resource can be configured with 2 ports. The rightmost bit (bit 2) corresponds to whether SRS resource can be configured with 4 ports.</p> <p>A UE supporting <i>ul-SRS-TransMode2-r18</i> shall also indicate support of <i>ul-FullPwrTransMode2</i>.</p> <p>NOTE 2: An SRS resource set supported by the UE for uplink full power Mode 2 must contain at least an 8 port SRS resource.</p> <p>NOTE 3: Any of the above values of <i>ul-SRS-TransMode2-r18</i> can be used if <i>ul-FullPwrTransMode2-r18</i> is reported as value <i>n2</i> or <i>n4</i>.</p> <p>The UE optionally indicates <i>tpmi-FullPwrCodebook2-r18</i> to indicate which TPMI group(s) delivers full power when UE is capable of and configured with 8 Tx codebook based PUSCH operation with codebook2. Value <i>first</i> indicates the TPMI group corresponding to only the antenna port group 0. Value <i>second</i> indicates the TPMI group corresponding to only the antenna port group 1. Antenna port group is defined in Table 6.3.1.5-8 of TS 38.211 [6].</p> <p>A UE supporting <i>tpmi-FullPwrCodebook2-r18</i> shall also indicate support of <i>ul-FullPwrTransMode2</i></p> | FSPC | No | N/A | N/A |

| <p><b>pusch-NonCB-SingleDCI-STx2P-SFN-r18</b><br/> Indicates whether the UE supports: 1) Dynamic switching by DCI 0_1/0_2 between single-DCI STx2P SFN and sTRP, 2) 1 PTRS port for single-DCI based STx2P SFN scheme for PUSCH noncodebook, 3) Support of two SRS resource sets with usage set to 'noncodebook'. The feature also comprises following parameters:</p> <ul style="list-style-type: none"> <li>- <i>maxNumberSRS-ResourcePerSet-r18</i> indicates the maximum number of SRS resources in one SRS resource set;</li> <li>- <i>maxNumberLayerPerSet-r18</i> indicates the maximum number of MIMO layers of each SRS resource set for NCB PUSCH with SFN scheme;</li> <li>- <i>maxNumberSimulSRS-OneResourcePerSet-r18</i> indicates the maximum number of simultaneous transmitted SRS resources from one SRS resource set in one symbol;</li> <li>- <i>maxNumberSimulSRS-TwoResourcePerSet-r18</i> indicates the maximum number of simultaneous transmitted SRS resources from two SRS resource sets in one symbol.</li> </ul> <p>A UE indicating support of this feature shall also indicate support of <i>maxNumberMIMO-LayersNonCB-PUSCH</i> and <i>mimo-NonCB-PUSCH</i>.</p>         | FSPC | No | N/A | FR2 only |
| <p><b>support32-UL-HARQ-ProcessTN-r19</b><br/> Indicates whether the UE supports 32 HARQ processes in UL for TN in FR1 and FR2-1.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | FSPC | No | N/A | N/A      |

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |      |    |     |     |
|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------|----|-----|-----|
| <p><b><i>supportedBandwidthUL, supportedBandwidthUL-v1710, supportedBandwidthUL-v1780, supportedBandwidthUL-v1840, supportedBandwidthUL-v1900</i></b></p> <p>Indicates maximum UL channel bandwidth supported for a given SCS that UE supports within a single CC (and in case of DAPS handover for the source or target cell), which is defined in Table 5.3.5-1 in TS 38.101-1 [2] / TS 38.101-5 [34] for FR1 and Table 5.3.5-1 in TS 38.101-2 [3] / Table 5.3.5-2 in TS 38.101-5 [34] for FR2. For FR1, all the bandwidths listed in TS 38.101-1 [2] / TS 38.101-5 [34], Table 5.3.5-1 for each band shall be mandatory with a single CC unless indicated optional. For FR2 (except for FR2-NTN), the set of mandatory CBW is 50, 100, 200 MHz. For FR2-NTN, the set of mandatory CBW is 50, 100 MHz. When this field is included in a band combination with a single band entry and a single CC entry (i.e. non-CA band combination), the UE shall indicate the maximum channel bandwidth for the band according to TS 38.101-1 [2], TS 38.101-2 [3], and TS 38.101-5 [34]. For FR2, <i>supportedBandwidthUL-v1710</i> is included if the maximum UL channel bandwidth supported by the UE within a single CC is greater than 400MHz. When the <i>supportedBandwidthUL</i> and the <i>supportedBandwidthUL-v1710</i> are reported together for a CC, the network which is able to decode the <i>supportedBandwidthUL-v1710</i> ignores the <i>supportedBandwidthUL</i>. When the <i>supportedBandwidthUL</i> and the <i>supportedBandwidthUL-v1840</i> are reported together for a CC, the network which is able to decode the <i>supportedBandwidthUL-v1840</i> ignores the <i>supportedBandwidthUL</i>.</p> <p>The UE may report a <i>supportedBandwidthUL</i> wider than the <i>channelBWs-UL</i>; this <i>supportedBandwidthUL</i> may not be included in the Table 5.3.5-1 of TS 38.101-1 [2] / TS 38.101-2 [3] / TS 38.101-5 [34] and Table 5.3.5-2 of TS 38.101-5 [34], for the case that the UE is unable to report the actual supported bandwidth according to the Table 5.3.5-1 of TS 38.101-1 [2] / TS 38.101-2 [3] / TS 38.101-5 [34] and Table 5.3.5-2 of TS 38.101-5 [34]. For each band, (e)RedCap UEs shall indicate its maximum channel bandwidth, which is the maximum of those channel bandwidths that are less than or equal to 20 MHz for FR1 and less than or equal to 100 Mhz for FR2, taking restrictions in TS 38.101-1 [2] and TS 38.101-2 [3] into consideration. The <i>supportedBandwidthUL-v1780</i> is only applicable to Bandwidth Combination Set 5 (BCS5) of FR1 NR CA (including NR CA part of (NG)EN-DC and NE-DC) and FR1 NR-DC. If the UE reports <i>supportedAggBW-FR1-r17</i>, the UE shall report <i>supportedBandwidthUL-v1780</i>.</p> <p>NOTE: See the note in the field description of <i>channelBWs-UL</i> for the determination of supported UL channel bandwidth.</p> | FSPC | CY | N/A | N/A |
| <p><b><i>supportedMinBandwidthUL-r17, supportedMinBandwidthUL-v1840, supportedMinBandwidthUL-v1900</i></b></p> <p>Indicates minimum UL channel bandwidth supported for a given SCS that UE supports within a single CC (and in case of intra-frequency DAPS handover for the source and target cells), which is defined in Table 5.3.5-1 in TS 38.101-1 [2] for FR1 and Table 5.3.5-1 in TS 38.101-2 [3] for FR2. This parameter is only applicable to the Bandwidth Combination Set 5 (BCS5). The UE shall indicate this parameter for at least one CC of a BCS5 band combination. This field does not restrict the bandwidths configured for a single CC (i.e. non-CA case).</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | FSPC | CY | N/A | N/A |
| <p><b><i>supportedModulationOrderUL</i></b></p> <p>Indicates the maximum supported modulation order to be applied for uplink in the carrier in the max data rate calculation as defined in 4.1.2. If included, the network may use a modulation order on this serving cell which is higher than the value indicated in this field as long as UE supports the modulation of higher value for uplink. If not included,</p> <ul style="list-style-type: none"> <li>for FR1 and FR2, the network uses the modulation order signalled per band i.e. <i>pusch-256QAM</i> if signalled. If not signalled in a given band, the network shall use the modulation order 64QAM.</li> </ul> <p>In all the cases, it shall be ensured that the data rate does not exceed the max data rate (<i>DataRate</i>) and max data rate per CC (<i>DataRateCC</i>) according to TS 38.214 [12].</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | FSPC | No | N/A | N/A |

| <b>supportedSubCarrierSpacingUL</b><br>Defines the supported sub-carrier spacing for UL by the UE, as defined in 4.2-1 of TS 38.211 [6], indicating the UE supports simultaneous transmission with same or different numerologies in CA, or indicating the UE supports different numerologies on NR UL and SUL within one cell. Support of simultaneous transmissions with same numerology for intra-band NR CA including both contiguous and non-contiguous is mandatory with capability in both FR1 and FR2. Support of simultaneous transmission with two different numerologies between FR1 band(s) and FR2 band(s) in UL is mandatory with capability if UE supports inter-band NR CA including both FR1 band(s) and FR2 band(s). Support of simultaneous transmission with different numerologies in CA for other cases is optional.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | FSPC | CY | N/A | N/A      |

| <b>singleUL-Transmission</b><br>Indicates that the UE does not support simultaneous UL transmissions as defined in TS 38.101-3 [4]. The UE may only include this field for certain band combinations defined in TS 38.101-3 [4]. If included for a particular band combination, the field applies to all fallback band combinations of this band combination that are defined in TS 38.101-3 [4] as being allowed to include this field and does not apply to any other fallback band combinations defined in TS 38.101-3 [4].<br>The UE shall include this field for band combinations containing a band pair for which single UL transmission is the only specified operation mode in TS 38.101-3 [4] and if the UE supports UL on both bands. Otherwise, this feature is optional. | BC | FD | N/A | N/A      |
| <b>spCellPlacement</b><br>Indicates whether the UE supports a SpCell on FR1-FDD, FR1-TDD and/or FR2-TDD depending on which additional SCells of other frequency range(s) / duplex mode(s) are configured. It is applicable to SCG of (NG)EN-DC and MCG of NE-DC, where UL is configured on more than one of FR1-FDD, FR1-TDD and FR2-TDD in a cell group. If not included, the UE supports SpCell on any serving cell with UL in supported band combinations.                                                                                                                                                                                                                                                                                                                         | UE | No | N/A | N/A      |
| <b>tdm-Pattern</b><br>Indicates whether the UE supports the <i>tdm-PatternConfig</i> for <i>single UL-transmission</i> associated functionality, as specified in TS 36.331 [17]. Support is conditionally mandatory in (NG)EN-DC for UEs that do not support <i>dynamicPowerSharingENDC</i> and for UEs that indicate single UL transmission for any (NG)EN-DC BC. Support is conditionally mandatory in NE-DC for UEs that do not support <i>dynamicPowerSharingNE-DC</i> and for UEs that indicate single UL transmission for any NE-DC BC. The feature is optional otherwise.                                                                                                                                                                                                      | BC | CY | N/A | FR1 only |
| <b>tdm-restrictionDualTX-FDD-endc-r16</b><br>Indicates whether the UE supports TDM restriction to LTE FDD PCell in (NG)EN-DC for dual UL transmission operation when <i>tdm-PatternConfig2-R16</i> is configured, as specified in TS 36.331 [17]. UE indicates support this feature shall also indicate support of <i>tdm-Pattern</i> .                                                                                                                                                                                                                                                                                                                                                                                                                                               | BC | No | N/A | FR1 only |
| <b>tdm-restrictionFDD-endc-r16</b><br>Indicates whether the UE supports TDM restriction to LTE FDD PCell for single UL-transmission associated functionality when <i>tdm-PatternConfig2-R16</i> is configured, as specified in TS 36.331 [17]. This is applicable for FDD (NG)EN-DC. UE indicates support this feature shall also indicate support of <i>tdm-Pattern</i> .                                                                                                                                                                                                                                                                                                                                                                                                            | BC | No | N/A | FR1 only |
| <b>tdm-restrictionTDD-endc-r16</b><br>Indicates whether the UE supports TDM restriction to LTE TDD PCell for single UL-transmission associated functionality when <i>tdm-PatternConfig2-R16</i> is configured, as specified in TS 36.331 [17]. This is applicable for synchronous TDD-TDD (NG)EN-DC.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | BC | No | N/A | FR1 only |
| <b>ul-SharingEUTRA-NR</b><br>Indicates whether the UE supports (NG)EN-DC/NE-DC with EUTRA-NR coexistence in UL sharing via TDM only, FDM only, or both TDM and FDM from UE perspective as specified in TS 38.101-3 [4].                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | BC | No | N/A | FR1 only |
| <b>ul-SwitchingTimeEUTRA-NR</b><br>Indicates support of switching type between LTE UL and NR UL for (NG)EN-DC/NE-DC with LTE-NR coexistence in UL sharing from UE perspective as defined in clause 6.3B of TS 38.101-3 [4]. It is mandatory to report switching time type 1 or type 2 if UE reports <i>ul-SharingEUTRA-NR</i> is <i>tdm</i> or <i>both</i> .                                                                                                                                                                                                                                                                                                                                                                                                                          | BC | CY | N/A | FR1 only |

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |    |    |     |     |

| <b>configuredUL-GrantType1</b><br>Indicates whether the UE supports Type 1 PUSCH transmissions with configured grant as specified in TS 38.214 [12] with UL-TWG-repK value of one. This applies only to non-shared spectrum channel access. For shared spectrum channel access, <i>configuredUL-GrantType1-r16</i> applies.                                                                                                                                                                                                                                                  | UE | No  | No | No  |
| <b>configuredUL-GrantType2</b><br>Indicates whether the UE supports Type 2 PUSCH transmissions with configured grant as specified in TS 38.214 [12] with UL-TWG-repK value of one. This applies only to non-shared spectrum channel access. For shared spectrum channel access, <i>configuredUL-GrantType2-r16</i> applies.                                                                                                                                                                                                                                                  | UE | No  | No | No  |
| <b>cqi-4-BitsSubbandTN-NonSharedSpectrumChAccess-r17</b><br>Indicates whether the UE supports subband CQI reporting with 4 bits per subband for TN and non-shared spectrum channel access. In this release, the same value shall be indicated for the frequency ranges.                                                                                                                                                                                                                                                                                                      | UE | No  | No | Yes |
| <b>cqi-TableAlt</b><br>Indicates whether UE supports the CQI table with target BLER of $10^{-5}$ .                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | UE | No  | No | Yes |
| <b>cri-RI-CQI-WithoutNon-PMI-PortInd-r16</b><br>Indicates whether UE supports <i>CSI-ReportConfig</i> with the <i>reportQuantity</i> set to ' <i>cri-RI-CQI</i> ' and the <i>non-PMI-PortIndication</i> is not configured.<br><br>UE indicating support of this feature shall also indicate support of <i>csi-ReportFramework</i> .                                                                                                                                                                                                                                          | UE | No  | No | Yes |
| <b>crossSlotScheduling-r16</b><br>Indicates whether UE supports dynamic indication of applicable minimum scheduling restriction by DCI format 0_1 and 1_1, and the minimum scheduling offset for PDSCH and aperiodic CSI-RS triggering offset (K0), and PUSCH (K2), and the extended value range for aperiodic CSI-RS triggering offset. Support of this feature is reported for licensed and unlicensed bands, respectively. When this field is reported, either of <i>non-SharedSpectrumChAccess-r16</i> or <i>sharedSpectrumChAccess-r16</i> shall be reported, at least. | UE | No  | No | No  |
| <b>csi-ReportFramework</b><br>See <i>csi-ReportFramework</i> in 4.2.7.2. For a band combination comprised of FR1 and FR2 bands, this parameter, if present, limits the corresponding parameter in <i>MIMO-ParametersPerBand</i> .                                                                                                                                                                                                                                                                                                                                            | UE | Yes | No | N/A |
| <b>csi-ReportFrameworkExt-r16</b><br>See <i>csi-ReportFramework</i> in 4.2.7.2. For a band combination comprised of FR1 and FR2 bands, this parameter, if present, limits the corresponding parameter in <i>MIMO-ParametersPerBand</i> .                                                                                                                                                                                                                                                                                                                                     | UE | No  | No | N/A |
| <b>csi-ReportWithoutCQI</b><br>Indicates whether UE supports CSI reporting with report quantity set to 'CRI/RI/i1' as defined in clause 5.2.1.4 of TS 38.214 [12].                                                                                                                                                                                                                                                                                                                                                                                                           | UE | No  | No | Yes |
| <b>csi-ReportWithoutPMI</b><br>Indicates whether UE supports CSI reporting with report quantity set to 'CRI/RI/CQI' as defined in clause 5.2.1.4 of TS 38.214 [12].                                                                                                                                                                                                                                                                                                                                                                                                          | UE | No  | No | Yes |
| <b>csi-RS-CFRA-ForHO</b><br>Indicates whether the UE can perform reconfiguration with sync using a contention free random access with 4-step RA type on PRACH resources that are associated with CSI-RS resources of the target cell. This applies only to non-shared spectrum channel access. For shared spectrum channel access, <i>csi-RS-CFRA-ForHO-r16</i> applies.                                                                                                                                                                                                     | UE | No  | No | No  |

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |    |     |     |          |

| <b>pucch-F1-3-4WithoutFH</b><br>Indicates whether the UE supports transmission of a PUCCH format 1, 3 or 4 without frequency hopping. When included, the UE does not support PUCCH formats 1, 3 and 4 without frequency hopping. When not included, the UE supports the PUCCH formats 1, 3 and 4 without frequency hopping.                                                                                                                                                                                                                                                                                                                                  | UE | Yes | No       | Yes      |
| <b>interleavingVRB-ToPRB-PDSCH</b><br>Indicates whether the UE supports receiving PDSCH with interleaved VRB-to-PRB mapping as specified in TS 38.211 [6].                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | UE | Yes | No       | No       |
| <b>interSlotFreqHopping-PUSCH</b><br>Indicates whether the UE supports inter-slot frequency hopping for PUSCH transmissions.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | UE | No  | No       | No       |
| <b>intraSlotFreqHopping-PUSCH</b><br>Indicates whether the UE supports intra-slot frequency hopping for PUSCH transmission, except for PUSCH scheduled by PDCCH in the Type1-PDCCH common search space before RRC connection establishment.                                                                                                                                                                                                                                                                                                                                                                                                                  | UE | Yes | No       | Yes      |
| <b>jointPowerSpatialAdaptation-r18</b><br>Indicates whether the UE supports joint operation of power domain and spatial domain adaptation.<br>A UE supporting this feature shall also indicate one of the following capabilities: { <i>spatialAdaptation-CSI-Feedback-r18</i> and <i>powerAdaptation-CSI-Feedback-r18</i> }, or { <i>spatialAdaptation-CSI-FeedbackPUSCH-r18</i> and <i>powerAdaptation-CSI-FeedbackPUSCH-r18</i> }, or { <i>spatialAdaptation-CSI-FeedbackPUCCH-r18</i> and <i>powerAdaptation-CSI-FeedbackPUCCH-r18</i> }, or { <i>spatialAdaptation-CSI-FeedbackAperiodic-r18</i> and <i>powerAdaptation-CSI-FeedbackAperiodic-r18</i> }. | UE | No  | No       | No       |

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |    |     |    |          |
|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----|-----|----|----------|
| <b><i>maxHARQ-ProcessNumberATG-r18</i></b><br>Indicates the maximal supported HARQ process numbers for UL and for DL respectively. For each value of <i>maxHARQ-ProcessNumberATG-r18</i> , value u16d32 indicates the maximal supported HARQ process number is 16 for UL and 32 for DL, value u32d16 indicates the maximal supported HARQ process number is 32 for UL and 16 for DL, value u32d32 indicates the maximal supported HARQ process number is 32 for UL and 32 for DL. The UE indicating support of this feature shall also indicate support of <i>airToGroundNetwork-r18</i> .<br>NOTE: This capability is applicable only for bands defined in Clause 5.2J in TS 38.101-1 [2].                                                                   | UE | No  | No | FR1 only |
| <b><i>maxLayersMIMO-Adaptation-r16</i></b><br>Indicates whether the UE supports the network configuration of <i>maxMIMO-Layers</i> per DL BWP. If the UE supports this feature, the UE needs to report <i>maxLayersMIMO-Indication</i> .                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | UE | No  | No | Yes      |
| <b><i>maxLayersMIMO-Indication</i></b><br>Indicates whether the UE supports the network configuration of <i>maxMIMO-Layers</i> as specified in TS 38.331 [9].                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | UE | Yes | No | No       |
| <b><i>maxNumberPathlossRS-update-r16</i></b><br>Indicates the maximum number of configured pathloss reference RSs for PUSCH/PUCCH/SRS by RRC that the UE can support for MAC-CE based pathloss reference RS update.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | UE | No  | No | No       |
| <b><i>maxNumberSearchSpaces</i></b><br>Indicates whether the UE supports up to 10 search spaces in an SCell per BWP.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | UE | No  | No | No       |
| <b><i>maxNumberSRS-PosPathLossEstimateAllServingCells-r16</i></b><br>Indicates the maximum number of pathloss estimates that the UE can simultaneously maintain for all the SRS resource sets for positioning across all cells in addition to the up to four pathloss estimates that the UE maintains per serving cell for the PUSCH/PUCCH/SRS transmissions. The UE shall include this field if the UE supports any of <i>olpc-SRS-PosBasedOnPRS-Serving-r16</i> , <i>olpc-SRS-PosBasedOnSSB-Neigh-r16</i> and <i>olpc-SRS-PosBasedOnPRS-Neigh-r16</i> . Otherwise, the UE does not include this field;                                                                                                                                                      | UE | No  | No | No       |
| <b><i>maxNumberSRS-PosSpatialRelationsAllServingCells-r16</i></b><br>Indicates the maximum number of maintained spatial relations for all the SRS resource sets for positioning across all serving cells in addition to the spatial relations maintained spatial relations per serving cell for the PUSCH/PUCCH/SRS transmissions. It is only applied for FR2. The UE can include this field only if the UE supports any of <i>spatialRelation-SRS-PosBasedOnSSB-Serving-r16</i> , <i>spatialRelation-SRS-PosBasedOnCSI-RS-Serving-r16</i> , <i>spatialRelation-SRS-PosBasedOnPRS-Serving-r16</i> , <i>spatialRelation-SRS-PosBasedOnSSB-Neigh-r16</i> or <i>spatialRelation-SRS-PosBasedOnPRS-Neigh-r16</i> . Otherwise, the UE does not include this field; | UE | No  | No | FR2 only |

| <p><b>maxTotalResourcesForOneFreqRange-r16</b><br/>Indicates the maximum total number of SSB/CSI-RS/CSI-IM resources for beam management, pathloss measurement, BFD, RLM and new beam identification for one frequency range that the UE supports.<br/>The capability signalling includes the following:</p> <ul style="list-style-type: none"> <li>- <i>maxNumberResWithinSlotAcrossCC-OneFR-r16</i> indicates maximum total number of SSB/CSI-RS/CSI-IM resources configured to measure within a slot across all CCs in one frequency range for any of L1-RSRP measurement, L1-SINR measurement, pathloss measurement, BFD, RLM and new beam identification</li> <li>- <i>maxNumberResAcrossCC-OneFR-r16</i> indicates maximum total number of SSB/CSI-RS/CSI-IM resources configured across all CCs in one frequency range for any of L1-RSRP measurement, L1-SINR measurement, pathloss measurement, BFD, RLM and new beam identification.</li> </ul> <p>gNB takes into conjunction of this feature and the features <i>beamManagementSSB-CSI-RS</i>, <i>maxNumberCSI-RS-BFD</i>, <i>maxNumberSSB-BFD</i> and <i>maxNumberCSI-RS-SSB-CBD</i> when configuring SSB/CSI-RS/CSI-IM resources for beam management, pathloss measurement, BFD, RLM and new beam identification across one frequency range.</p> <p>NOTE 1: The reference slot duration is the shortest slot duration defined for the reported FR supported by the UE.</p> <p>NOTE 2: For RS configured for new beam identification, they are always counted regardless of beam failure event.</p> <p>NOTE 3: The <i>maxNumberResWithinSlotAcrossCC-AcrossFR-r16</i> only counts those in active BWP but the <i>maxNumberResAcrossCC-AcrossFR-r16</i> counts all configured including both active and inactive BWP.</p> <p>NOTE 4: The "configured to measure" RS is counted within the duration of a reference slot in which the corresponding reference signals are transmitted.</p> <p>NOTE 5: Regarding the "configured to measure" RS counting</p> <ul style="list-style-type: none"> <li>- (basic usage 1): If one resource is used for one or multiple of BFD/RLM, it is counted as one.</li> <li>- (basic usage 2): If one resource is used for one or multiple of New Beam Identification/PL-RS/L1-RSRP, add 1. <ul style="list-style-type: none"> <li>- L1-RSRP measurement includes cases associated with reports with <i>reportQuantity</i> set to '<i>ssb-Index-RSRP</i>', '<i>cri-RSRP</i>' or with <i>reportQuantity</i> set to '<i>none</i>' and <i>CSI-RS-ResourceSet</i> with <i>trs-Info</i> not configured.</li> <li>- If one resource is used for L1-SINR in addition to basic usage 1 &amp; 2, add N if referred N times by one or more CSI Reporting settings with <i>reportQuantity-r16</i> = '<i>ssb-Index-SINR-r16</i>' or '<i>cri-SINR-r16</i>'.</li> </ul> </li> </ul> | UE | No | No | Yes      |
| <p><b>monitoringDCI-SameSearchSpace-r16</b><br/>Indicates whether the UE supports monitoring both DCI format 0_1/1_1 and DCI format 0_2/1_2 in the same search space. If the UE supports this feature, the UE needs to report <i>dci-Format1-2And0-2-r16</i>.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | UE | No | No | No       |
| <p><b>mTRP-PDCCH-singleSpan-r17</b><br/>Indicates the support of PDCCH repetition for PDCCH monitoring with a single span of three contiguous OFDM symbols that is within the first four OFDM symbols in a slot. It is applicable to 15kHz SCS only.</p> <p>The UE indicating support of this feature shall also indicate support of <i>pdcc-MonitoringSingleSpanFirst4Sym-r16</i> and <i>mTRP-PDCCH-Repetition-r17</i>.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | UE | No | No | FR1 only |
| <p><b>multiPDSCH-PerSlotType1-CB-Support-r17</b><br/>Indicates whether the UE supports RRC configuration <i>multiPDSCH-PerSlotType1-CB-r17</i> as specified in TS 38.331 [9].</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | UE | No | No | No       |
| <p><b>multipleCORESET</b><br/>Indicates whether the UE supports configuration of up to two PDCCH CORESETs per BWP in addition to the CORESET with CORESET-ID 0 in the BWP. If this is not supported, the UE supports one PDCCH CORESET per BWP in addition to the CORESET with CORESET-ID 0 in the BWP. It is mandatory with capability signalling for FR2 and optional for FR1.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | UE | CY | No | Yes      |

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |    |     |          |            |

| <b><i>pdccch-BlindDetectionCA</i></b><br>Indicates PDCCH blind decoding capabilities supported by the UE for CA with more than 4 CCs as specified in TS 38.213 [11]. The field value is from 4 to 16.<br><br>NOTE: FR1-FR2 differentiation is not allowed in this release, although the capability signalling is supported for FR1-FR2 differentiation.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | UE | No  | No | No       |
| <b><i>pdccch-BlindDetectionMCG-UE</i></b><br>Indicates PDCCH blind decoding capabilities supported for MCG when in NR-DC. The field value is from 1 to 15. The UE sets the value in accordance with the constraints specified in TS 38.213 [11].<br>Additionally, if the UE does not report <i>pdccch-BlindDetectionCA</i> , and if X is the maximum number of CCs supported by the UE across all NR-DC band combinations then there is at least one parameter pair (X1, X2) such that $X1 + X2 = X$ and the UE supports at least one NR-DC band combination with X1 CCs in MCG and X2 CCs in SCG and for which $X1 \leq \text{pdccch-BlindDetectionMCG-UE}$ and $X2 \leq \text{pdccch-BlindDetectionSCG-UE}$ .                                                                                                                                                                                                                                                                                                                                                                                      | UE | No  | No | Yes      |
| <b><i>pdccch-BlindDetectionSCG-UE</i></b><br>Indicates PDCCH blind decoding capabilities supported for SCG when in NR-DC. The field value is from 1 to 15. The UE sets the value in accordance with the constraints specified in TS 38.213 [11].<br>Additionally, if the UE does not report <i>pdccch-BlindDetectionCA</i> , and if X is the maximum number of CCs supported by the UE across all NR-DC band combinations then there is at least one parameter pair (X1, X2) such that $X1 + X2 = X$ and the UE supports at least one NR-DC band combination with X1 CCs in MCG and X2 CCs in SCG and for which $X1 \leq \text{pdccch-BlindDetectionMCG-UE}$ and $X2 \leq \text{pdccch-BlindDetectionSCG-UE}$ .                                                                                                                                                                                                                                                                                                                                                                                      | UE | No  | No | Yes      |
| <b><i>pdccch-MonitoringAnyOccasionsWithSpanGapCrossCarrierSch-r16</i></b><br>Indicates how the UE supports <i>pdccch-MonitoringAnyOccasionsWithSpanGap</i> in case of cross-carrier scheduling with different SCSs in the scheduling cell and the scheduled cell.<br><br>Value 'mode2' indicates <i>pdccch-MonitoringAnyOccasionsWithSpanGap</i> is supported for the band of the scheduling/triggering/indicating cell.<br>Value 'mode3' indicates <i>pdccch-MonitoringAnyOccasionsWithSpanGap</i> is supported in both the band of the scheduled/triggered/indicated cell and the band of the scheduling/triggering/indicating cell.<br><br>UE indicating support of these feature indicates support of <i>pdccch-MonitoringAnyOccasionsWithSpanGap</i> and <i>crossCarrierSchedulingDL-DiffSCS-r16</i> .<br><br>NOTE: For <i>pdccch-MonitoringAnyOccasionsWithSpanGap</i> , the supported set (set1, set2 or set 3) for cross-carrier scheduling with the different SCSs in the scheduling cell and the scheduled cell is still based on the indicated value for the band of the scheduling cell. | UE | No  | No | No       |
| <b><i>pdccch-MonitoringSingleSpanFirst4Sym-r16</i></b><br>Indicates whether the UE supports receiving PDCCH in a search space configured to be monitored within a single span of any three contiguous OFDM symbols that are within the first four OFDM symbols in a slot with the capability of supporting at least 44 blind decodes in a slot for 15 kHz subcarrier spacing.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | UE | No  | No | FR1 only |
| <b><i>pdsch-256QAM-FR1</i></b><br>Indicates whether the UE supports 256QAM modulation scheme for PDSCH for FR1 as defined in 7.3.1.2 of TS 38.211 [6].<br>It is optional for (e)RedCap UEs, IAB-MT, and NCR-MT, and mandatory with capability signalling for other UEs.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | UE | CY  | No | FR1 only |
| <b><i>pdsch-MappingTypeA</i></b><br>Indicates whether the UE supports receiving PDSCH using PDSCH mapping type A with less than seven symbols. This field shall be set to <i>supported</i> .                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | UE | Yes | No | No       |
| <b><i>pdsch-MappingTypeB</i></b><br>Indicates whether the UE supports receiving PDSCH using PDSCH mapping type B.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | UE | Yes | No | No       |
| <b><i>pdsch-RepetitionMultiSlots</i></b><br>Indicates whether the UE supports receiving PDSCH scheduled by DCI format 1_1 when configured with <i>pdsch-AggregationFactor</i> > 1, as defined in 5.1.2.1 of TS 38.214 [12]. This applies only to non-shared spectrum channel access. For shared spectrum channel access, <i>pdsch-RepetitionMultiSlots-r16</i> applies.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | UE | No  | No | No       |

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |    |     |    |          |
|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----|-----|----|----------|
| <b><i>pdsch-RE-MappingFR1-PerSymbol/pdsch-RE-MappingFR1-PerSlot</i></b><br>Indicates the maximum number of supported PDSCH Resource Element (RE) mapping patterns for FR1, each described as a resource (including NZP/ZP CSI-RS, CRS, CORESET and SSB) or bitmap. The number of patterns coinciding in a symbol in a CC and in a slot in a CC are limited by the respective capability parameters. Value n10 means 10 RE mapping patterns and n16 means 16 RE mapping patterns, and so on. The UE shall set the fields <i>pdsch-RE-MappingFR1-PerSymbol</i> and <i>pdsch-RE-MappingFR1-PerSlot</i> to at least n10 and n16, respectively. In the exceptional case that the UE does not include the fields, the network may anyway assume that the UE supports the required minimum values. | UE | Yes | No | FR1 only |
| <b><i>pdsch-RE-MappingFR2-PerSymbol/pdsch-RE-MappingFR2-PerSlot</i></b><br>Indicates the maximum number of supported PDSCH Resource Element (RE) mapping patterns for FR2, each described as a resource (including NZP/ZP CSI-RS, CORESET and SSB) or bitmap. The number of patterns coinciding in a symbol in a CC and in a slot in a CC are limited by the respective capability parameters. Value n6 means 6 RE mapping patterns and n16 means 16 RE mapping patterns, and so on. The UE shall set the fields <i>pdsch-RE-MappingFR2-PerSymbol</i> and <i>pdsch-RE-MappingFR2-PerSlot</i> to at least n6 and n16, respectively. In the exceptional case that the UE does not include the fields, the network may anyway assume that the UE supports the required minimum values.         | UE | Yes | No | FR2 only |
| <b><i>precoderGranularityCORESET</i></b><br>Indicates whether the UE supports receiving PDCCH in CORESETs configured with CORESET-precoder-granularity equal to the size of the CORESET in the frequency domain as specified in TS 38.211 [6].                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | UE | No  | No | No       |
| <b><i>pre-EmptIndication-DL</i></b><br>Indicates whether the UE supports interrupted transmission indication for PDSCH reception based on reception of DCI format 2_1 as defined in TS 38.213 [11]. This applies only to non-shared spectrum channel access. For shared spectrum channel access, <i>pre-EmptIndication-DL-r16</i> applies.                                                                                                                                                                                                                                                                                                                                                                                                                                                  | UE | No  | No | No       |
| <b><i>priorityIndicationDL-r18</i></b><br>Indicates whether the UE supports priority indicator field configured in DCI formats 1_3 and (1_1 or 1_2) in a BWP when configured to monitor both DCI formats 1_3 and (1_1 or 1_2) in the BWP.<br>A UE supporting this feature shall also indicate support of <i>simultaneous-2-1-HARQ-ACK-CB-r18</i> .                                                                                                                                                                                                                                                                                                                                                                                                                                          | UE | No  | No | No       |

| <b><i>pusch-Repetition-CG-SDT-r17</i></b><br>Indicates whether the UE supports PUSCH repetitions for CG-SDT, as defined in TS 38.214 [12]. A UE supporting this feature shall also indicate the support of <i>type1-PUSCH-RepetitionMultiSlots</i> or <i>pusch-RepetitionTypeB-r16</i> . When UE indicates <i>type1-PUSCH-RepetitionMultiSlots</i> and <i>pusch-Repetition-CG-SDT-r17</i> , the UE supports PUSCH repetition for type A. When UE indicates <i>pusch-RepetitionTypeB-r16</i> and <i>pusch-Repetition-CG-SDT-r17</i> , UE supports PUSCH repetition for type B. For MO-SDT, a UE can include this feature only if the UE indicates the support of <i>cg-SDT-r17</i> . For MT-SDT, a UE can include this feature only if the UE indicates the support of <i>mt-CG-SDT-r18</i> and <i>mt-SDT-r18/mt-SDT-NTN-r18</i> . | UE | No  | No | No  |
| <b><i>pusch-RepetitionMultiSlots</i></b><br>Indicates whether the UE supports transmitting PUSCH scheduled by DCI format 0_1 when configured with <i>pusch-AggregationFactor</i> > 1, as defined in clause 6.1.2.1 of TS 38.214 [12]. This applies only to non-shared spectrum channel access. For shared spectrum channel access, <i>pusch-RepetitionMultiSlots-r16</i> applies.                                                                                                                                                                                                                                                                                                                                                                                                                                                 | UE | Yes | No | No  |
| <b><i>pucch-Repetition-F1-3-4</i></b><br>Indicates whether the UE supports transmission of a PUCCH format 1 or 3 or 4 over multiple slots with the repetition factor 2, 4 or 8. This applies only to non-shared spectrum channel access. For shared spectrum channel access, <i>pucch-Repetition-F1-3-4-r16</i> applies.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | UE | Yes | No | No  |
| <b><i>pusch-HalfPi-BPSK</i></b><br>Indicates whether the UE supports $\pi/2$ -BPSK modulation scheme for PUSCH as defined in 6.3.1.2 of TS 38.211 [6]. It is mandatory with capability signalling for FR1 and FR2. This capability is not applicable to IAB-MT.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | UE | Yes | No | Yes |
| <b><i>pusch-LBRM</i></b><br>Indicates whether the UE supports limited buffer rate matching in UL as specified in TS 38.212 [10].                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | UE | No  | No | Yes |
| <b><i>pusch-RepetitionTypeA-r16</i></b><br>Indicates whether the UE supports the dynamic indication of the number of repetitions for PUSCH transmission as specified in TS 38.214 [12], clause 6.1.2.1. Support of this field is reported for shared spectrum channel access and non-shared spectrum channel access, respectively. UE indicating support of this feature shall support of at least one of <i>type2-PUSCH-RepetitionMultiSlots</i> and <i>pusch-RepetitionMultiSlots</i> for shared spectrum and non-shared spectrum respectively.                                                                                                                                                                                                                                                                                 | UE | No  | No | No  |
| <b><i>ra-Type0-PUSCH</i></b><br>Indicates whether the UE supports resource allocation Type 0 for PUSCH as specified in TS 38.214 [12].                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | UE | No  | No | No  |
| <b><i>rateMatchingCtrlResrcSetDynamic</i></b><br>Indicates whether the UE supports dynamic rate matching for DL control resource set.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | UE | Yes | No | No  |
| <b><i>rateMatchingResrcSetDynamic</i></b><br>Indicates whether the UE supports receiving PDSCH with resource mapping that excludes the REs corresponding to resource sets configured with RB-symbol level granularity indicated by <i>bitmaps</i> (see <i>patternType</i> in <i>RateMatchPattern</i> in TS 38.331[9]) based on dynamic indication in the scheduling DCI as specified in TS 38.214 [12].                                                                                                                                                                                                                                                                                                                                                                                                                           | UE | No  | No | No  |
| <b><i>rateMatchingResrcSetSemi-Static</i></b><br>Indicates whether the UE supports receiving PDSCH with resource mapping that excludes the REs corresponding to resource sets configured with RB-symbol level granularity indicated by <i>bitmaps</i> and <i>controlResourceSet</i> (see <i>patternType</i> in <i>RateMatchPattern</i> in TS 38.331[9]) following the semi-static configuration as specified in TS 38.214 [12].                                                                                                                                                                                                                                                                                                                                                                                                   | UE | Yes | No | No  |

| <b>semiOpenLoopCSI</b><br>Indicates whether UE supports CSI reporting with report quantity set to 'CRI/RI/I1/CQI' as defined in clause 5.2.1.4 of TS 38.214 [12].                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | UE | No  | No       | Yes      |
| <b>semiStaticHARQ-ACK-Codebook</b><br>Indicates whether the UE supports HARQ-ACK codebook constructed by semi-static configuration.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | UE | Yes | No       | No       |
| <b>simultaneousTCI-ActMultipleCC-r16</b><br>Indicates the UE support of simultaneous TCI state activation across multiple CCs. If the UE indicates support of this for a FR, the UE shall support this on the supported bands of the indicated FR where the UE reports the support of TCI-states for PDSCH using <i>tc-StatePDSCH</i> .                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | UE | No  | No       | Yes      |
| <b>simultaneousSpatialRelationMultipleCC-r16</b><br>Indicates the UE support of simultaneous spatial relation across multiple CCs for aperiodic and semi-persistent SRS. The UE indicating support of this also indicates the capabilities of maximum and active supported spatial relations for the supported FR2 bands using <i>maxNumberConfiguredSpatialRelations</i> and <i>maxNumberActiveSpatialRelations</i> .                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | UE | No  | No       | FR2 only |
| <b>slotBasedDynamicPUCCH-Rep-r17</b><br>Indicates whether the UE supports both slot based dynamic PUCCH repetition and slot based dynamic repetition indication for PUCCH formats 0/1/2/3/4.<br><br>UE indicating support of this feature shall also indicate support of <i>pucch-Repetition-F1-3-4</i> or <i>pucch-Repetition-F0-2-r17</i> .                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | UE | No  | No       | No       |
| <b>spatialBundlingHARQ-ACK</b><br>Indicates whether the UE supports spatial bundling of HARQ-ACK bits carried on PUCCH or PUSCH per PUCCH group. With spatial bundling, two HARQ-ACK bits for a DL MIMO data is bundled into a single bit by logical "AND" operation.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | UE | Yes | No       | No       |
| <b>spatialRelationUpdateAP-SRS-r16</b><br>Indicates the UE support of spatial relation update for AP-SRS using MAC CE. The UE indicating support of this also indicates the capabilities of supported SRS resources and maximum supported spatial relations for the supported FR2 bands using <i>supportedSRS-Resources</i> and <i>maxNumberConfiguredSpatialRelations</i> .                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | UE | No  | No       | FR2 only |
| <b>spCellPlacement</b><br>Indicates whether the UE supports a SpCell on FR1-FDD, FR1-TDD and/or FR2-TDD depending on which additional SCells of other frequency range(s) / duplex mode(s) are configured. It is applicable to NR SA and NR-DC (both MCG and SCG), where UL is configured on more than one of FR1-FDD, FR1-TDD and FR2-TDD in a cell group. If not included, the UE supports SpCell on any serving cell with UL in supported band combinations.                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | UE | No  | No       | No       |
| <b>sps-HARQ-ACK-Deferral-r17</b><br>Indicates whether the UE supports SPS HARQ-ACK deferral in case of TDD collision comprised of the following functional components:<br><ul style="list-style-type: none"> <li>- Identify HARQ-ACK bits of active SPS configurations for deferral in the initial PUCCH slot;</li> <li>- Determination of the target PUCCH slot for SPS HARQ-ACK deferral;</li> <li>- Multiplexing and transmission of deferred SPS HARQ-ACK information in the target PUCCH slot;</li> <li>- Handling of the collision for the same HARQ process due to deferred SPS HARQ-ACK.</li> </ul><br>Support of this feature is reported for licensed and unlicensed bands, respectively. When this field is reported, either of <i>non-SharedSpectrumChAccess-r17</i> or <i>sharedSpectrumChAccess-r17</i> shall be reported, at least.<br>A UE supporting this feature shall also indicate support of <i>downlinkSPS</i> . | UE | No  | TDD only | No       |
| <b>sp-CSI-IM</b><br>Indicates whether the UE supports semi-persistent CSI-IM.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | UE | No  | No       | Yes      |
| <b>sp-CSI-ReportPUCCH</b><br>Indicates whether UE supports semi-persistent CSI reporting using PUCCH formats 2, 3 and 4. This applies only to non-shared spectrum channel access. | <b>type2-PUSCH-RepetitionMultiSlots</b><br>Indicates whether the UE supports Type 2 PUSCH transmissions with configured grant as specified in TS 38.214 [12] with UL-TWG-repK value equal to 2, 4, or 8 with a single repetition of the transport block within each slot, and redundancy version pattern as indicated by UL-TWG-RV-rep. A UE supporting this feature shall also support Type 2 PUSCH transmissions with configured grant as specified in TS 38.214 [12] with UL-TWG-repK value of one. This applies only to non-shared spectrum channel access. For shared spectrum channel access, <i>type2-PUSCH-RepetitionMultiSlots-r16</i> applies.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | UE | No  | No  | No       |

| <b><i>appliedFreqBandListFilter</i></b><br>Mirrors the <i>FreqBandList</i> that the NW provided in the capability enquiry, if any. The UE filtered the band combinations in the <i>supportedBandCombinationList</i> in accordance with this <i>appliedFreqBandListFilter</i> .                                                                                                                                                                                                                                                                     | UE   | No  | No           | No           |
| <b><i>cjtc-DdReportHighAccuracy-r19</i></b><br>Indicates whether the UE supports high accuracy reporting for CJTC delay offset reporting as defined in TS 38.133 [5] clause 10.<br>A UE supporting this feature shall also indicate support of at least one of <i>cjtc-DdReport-r19</i> for at least one band and <i>cjtc-DdReportPerBC-r19</i> for at least one BC.                                                                                                                                                                               | UE   | No  | No           | FR1 only     |
| <b><i>cjtc-FO-ReportHighAccuracy-r19</i></b><br>Indicates whether the UE supports high accuracy reporting for CJTC frequency offset reporting as defined in TS 38.133 [5] clause 10.<br>A UE supporting this feature shall also indicate support of at least one of <i>cjtc-FO-Report-r19</i> for at least one band and <i>cjtc-FO-ReportPerBC-r19</i> for at least one BC.                                                                                                                                                                        | UE   | No  | No           | FR1 only     |
| <b><i>downlinkSetEUTRA</i></b><br>Indicates the features that the UE supports on the DL carriers corresponding to one EUTRA band entry in a band combination by FeatureSetEUTRA-DownlinkId. The FeatureSetEUTRA-DownlinkId = 0 means that the UE does not support a EUTRA DL carrier in this band of a band combination.                                                                                                                                                                                                                           | Band | N/A | N/A          | N/A          |
| <b><i>downlinkSetNR</i></b><br>Indicates the features that the UE supports on the DL carriers corresponding to one NR band entry in a band combination by FeatureSetDownlinkId. The FeatureSetDownlinkId = 0 means that the UE does not support a DL carrier in this band of a band combination. A fallback per band feature set resulting from the reported DL feature set that has fallback per CC feature set is not signalled but the UE shall support it.                                                                                     | Band | N/A | N/A          | N/A          |
| <b><i>extendedBand-n77-r16</i></b><br>This field is only applicable for UEs that indicate support for band n77. If present, the UE supports the restriction to 3450 - 3550 MHz and 3700 - 3980 MHz ranges of band n77 in the USA as specified in Note 12 of Table 5.2-1 in TS 38.101-1 [2]. If absent, the UE supports only restriction to the 3700 - 3980 MHz range of band n77 in the USA. A UE that indicates this field shall also support NS value 55 as specified in TS 38.101-1 [2]. A UE supporting NS value 55 shall indicate this field. | UE   | No  | No           | No           |
| <b><i>extendedBand-n77-2-r17</i></b><br>This field is only applicable for UEs that indicate support for band n77. If present, the UE supports the restriction to 3450 - 3650 MHz and 3650 - 3980 MHz ranges of band n77 in Canada as specified in Note 12 of Table 5.2-1 in TS 38.101-1 [2]. If absent, the UE supports only restriction to the 3450 - 3650 MHz range of band n77 in Canada. A UE that indicates this field shall also support NS value 57 as specified in TS 38.101-1 [2]. A UE supporting NS value 57 shall indicate this field. | UE   | No  | No           | No           |
| <b><i>featureSetCombinations</i></b><br>Pools of feature sets that the UE supports on the NR or MR-DC band combinations.                                                                                                                                                                                                                                                                                                                                                                                                                           | UE   | N/A | No           | No           |
| <b><i>featureSets</i></b><br>Pools of downlink and uplink features sets as well as a pool of FeatureSetCombination elements. A FeatureSetCombination refers to the IDs of the feature set(s) that the UE supports in that FeatureSetCombination. The BandCombination entries in the BandCombinationList then indicate the ID of the FeatureSetCombination that the UE supports for that band combination.                                                                                                                                          | UE   | N/A | No           | No           |
| <b><i>naics-Capability-List</i></b><br>Indicates that UE in MR-DC supports NAICS as defined in TS 36.331 [17].                                                                                                                                                                                                                                                                                                                                                                                                                                     | UE   | No  | No           | No           |
| <b><i>receivedFilters</i></b><br>Contains all filters requested with UE-CapabilityRequestFilterNR from version 15.6.0 onwards.                                                                                                                                                                                                                                                                                                                                                                                                                     | UE   | No  | No           | No           |

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |      |     |     |     |
|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------|-----|-----|-----|
| <b>supportedBandCombinationList</b><br>Defines the supported NR and/or MR-DC band combinations by the UE. For each band combination the UE identifies the associated feature set combination by featureSetCombinations index referring to featureSetCombination. A fallback band combination resulting from the reported CA and MR-DC band combination is not signalled but the UE shall support it. For intra-band non-contiguous CA band combinations, the UE only includes one band combination, and exclude the others for which the presence of uplink CA bandwidth class in the band combination entry is different. One band combination entry can also indicate support of any other possible permutations in the presence of uplink CA bandwidth class where a paired downlink CA bandwidth class is the same or where the number of UL CCs is smaller than the one of paired DL CCs expressed by the CA bandwidth class, as specified in TS 36.306 [15]. For these band combinations not included in the capability, the supported feature set is the same as the ones for the band combination included in the UE capability. | UE   | Yes | No  | No  |
| <b>supportedBandCombinationListNE-DC-Only</b><br>Defines the supported NE-DC only type of band combinations by the UE.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | UE   | No  | No  | No  |
| <b>supportedBandCombinationList-UplinkTxSwitch-r16</b><br>Defines the NR inter-band UL CA, SUL and/or EN-DC band combinations where UE supports dynamic UL Tx switching. UE only includes this field if requested by the network. All fallback band combinations resulting from the reported band combination, which include at least one band pair supporting dynamic UL Tx switching as indicated in <i>ULTxSwitchingBandPair</i> , shall be supported by the UE.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | UE   | No  | No  | No  |
| <b>supportedBandListNR</b><br>Includes the supported NR bands as defined in TS 38.101-1 [2], TS 38.101-2 [3], and TS 38.101-5 [34].                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | UE   | Yes | No  | No  |
| <b>uplinkSetEUTRA</b><br>Indicates the features that the UE supports on the UL carriers corresponding to one EUTRA band entry in a band combination by FeatureSetEUTRA-UplinkId. The FeatureSetUplinkId = 0 means that the UE does not support a UL carrier in this band of a band combination.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | Band | N/A | N/A | N/A |
| <b>uplinkSetNR</b><br>Indicates the features that the UE supports on the UL carriers corresponding to one NR band entry in a band combination by FeatureSetUplinkId. The FeatureSetUplinkId = 0 means that the UE does not support a UL carrier in this band of a band combination. A fallback per band feature set resulting from the reported UL feature set that has fallback per CC feature set is not signalled but the UE shall support it.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | Band | N/A | N/A | N/A |

## 4.2.7.12 NRDC-Parameters

| Definitions for parameters                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | Per | M  | FDD-TDD DIFF | FR1-FR2 DIFF |
|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----|----|--------------|--------------|
| <b>asyncNRDC-r16</b><br>Indicates whether the UE supports asynchronous NR-DC with MRTD and MTTD as specified in clause 7.5 and 7.6 of TS 38.133 [5]. If the band combination is comprised of a single band entry for more than two carriers, the UE shall support any permutations of carriers to CGs. If the band combination is comprised of at least two band entries, the carriers corresponding to a band entry shall belong to only one cell group.<br>If the band combination includes both FR1 and FR2 bands, a UE indicating this capability shall support asynchronous NR-DC configuration where all serving cells of the MCG are in FR1 and all serving cells of the SCG are in FR2. | BC  | No | No           | No           |
| <b>condPSCellAdditionNRDC-r17</b><br>Indicates whether the UE supports conditional PSCell addition in NR-DC. The UE supporting this feature shall also support 2 trigger events for same execution condition in conditional PSCell addition in NR-DC.                                                                                                                                                                                                                                                                                                                                                                                                                                           | BC  | No | No           | No           |
| <b>intraFR-NR-DC-PwrSharingMode1-r16</b><br>Indicates whether the UE supports intra-FR NR-DC with semi-static power sharing mode1 between MCG and SCG cells of same frequency range as defined in TS 38.213 [11]. If this field is absent, the UE does not support intra-FR NR-DC. In case MCG and SCG have cells in different frequency ranges, this field indicates the support of power sharing only between MCG and SCG cells with UL in FR1.                                                                                                                                                                                                                                               | BC  | No | No           | FR1 only     |
| <b>intraFR-NR-DC-PwrSharingMode2-r16</b><br>Indicates whether the UE supports semi-static power sharing mode2 between MCG and SCG cells of same frequency range for synchronous intra-FR NR-DC as defined in TS 38.213 [11]. The UE indicating the support of this also indicates the support of <i>intraFR-NR-DC-PwrSharingMode1-r16</i> . In case MCG and SCG have cells in different frequency ranges, this field indicates the support of power sharing only between MCG and SCG cells with UL in FR1.                                                                                                                                                                                      | BC  | No | No           | FR1 only     |
| <b>intraFR-NR-DC-DynamicPwrSharing-r16</b><br>Indicates the UE support of dynamic power sharing for intra-FR NR-DC between MCG and SCG cells of same frequency range with long or short offset as specified in TS 38.213 [11]. The UE indicating the support of this also indicates the support of <i>intraFR-NR-DC-PwrSharingMode1-r16</i> . In case MCG and SCG have cells in different frequency ranges, this field indicates the support of power sharing only between MCG and SCG cells with UL in FR1.                                                                                                                                                                                    | BC  | No | No           | FR1 only     |
| <b>scg-ActivationDeactivationNRDC-r17</b><br>Indicates whether the UE supports activation (with or without RACH) and deactivation on SCG in NR-DC, upon SCG addition and upon reconfiguration of the SCG, as specified in TS 38.331 [9]. A UE supporting this feature shall indicate support of NR-DC as specified in TS 38.331 [9]. For the UE supporting this feature, it is mandatory to report <i>maxNumberCSI-RS-BFD</i> and <i>maxNumberSSB-BFD</i> for all NR bands of this band combination where the UE supports SpCell.                                                                                                                                                               | BC  | No | No           | No           |
| <b>scg-ActivationDeactivationResumeNRDC-r17</b><br>Indicates whether the UE supports activation (with or without RACH) and deactivation on SCG in NR-DC, upon reception of an <i>RRCReconfiguration</i> included in an <i>RRCResume</i> message, as specified in TS 38.331 [9]. A UE supporting this feature shall indicate support of NR-DC and of <i>resumeWithSCG-Config-r16</i> as specified in TS 38.331 [9]. For the UE supporting this feature, it is mandatory to report <i>maxNumberCSI-RS-BFD</i> and <i>maxNumberSSB-BFD</i> for all NR bands of this band combination where the UE supports SpCell.                                                                                 | BC  | No | No           | No           |
| <b>sfn-SyncNRDC</b><br>Indicates the UE supports NR-DC only with SFN and frame synchronization between PCell and PSCell. If not included by the UE supporting NR-DC, the UE supports NR-DC with slot-level synchronization without condition on SFN and frame synchronization. In this release of the specification, the UE shall not report this UE capability.                                                                                                                                                                                                                                                                                                                                | UE  | No | No           | No           |

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |    |    |    |    |
|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----|----|----|----|
| <p><b>supportedCellGrouping-r16</b></p> <p>Indicates which NR-DC cell groupings the UE supports for the given NR-DC band combination, i.e., mapping of serving cells to MCG and SCG, and the operation mode (synchronous or asynchronous), as requested by the network via <i>requestedCellGrouping-r16</i>.</p> <p>The bitmap reported in this field refers to the cell grouping IDs that the network requested in <i>requestedCellGrouping-r16</i>. The first (leftmost) bit corresponds to ID#0 (i.e. the first element in <i>requestedCellGrouping-r16</i>), the second bit corresponds to ID#1 (i.e. the second element in <i>requestedCellGrouping-r16</i>) and so on.</p> <p>NOTE: Irrespective of the indicated <i>supportedCellGrouping-r16</i>, the UE shall also support NR-DC where all FR1 serving cells are in the MCG and all FR2 serving cells are in the SCG, as described in <i>ca-ParametersNRDC</i>.</p> | BC | No | No | No |

| <b>bestCellChangeReport-r18</b><br>Indicates whether the UE supports the sending of the measurement report if the measured first best cell changed as specified in TS 38.331 [9].                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | UE  | No | No           | No           |
| <b>cellIndividualOffsetPerMeasEvent-r18</b><br>Indicates whether the UE supports the configuration of a cell individual offset per measurement event within <i>reportConfigNR</i> or <i>reportConfigInterRAT</i> as specified in TS 38.331 [9].                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | UE  | No | No           | No           |
| <b>cli-RSSI-Meas-r16</b><br>Indicates whether the UE can perform CLI RSSI measurements as specified in TS 38.215 [13] and supports periodical reporting and measurement event triggering as specified in TS 38.331 [9]. If the UE supports this feature, the UE needs to report <i>maxNumberCLI-RSSI-r16</i> . If this parameter is indicated for FR1 and FR2 differently, each indication corresponds to the frequency range of measurement resources to be measured.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | UE  | No | TDD only     | Yes          |
| <b>cli-SRS-RSRP-Meas-r16</b><br>Indicates whether the UE can perform SRS RSRP measurements as specified in TS 38.215 [13] and supports periodical reporting and measurement event triggering based on SRS-RSRP as specified in TS 38.331 [9]. If the UE supports this feature, the UE needs to report <i>maxNumberCLI-SRS-RSRP-r16</i> and <i>maxNumberPerSlotCLI-SRS-RSRP-r16</i> . If this parameter is indicated for FR1 and FR2 differently, each indication corresponds to the frequency range of measurement resources to be measured.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | UE  | No | TDD only     | Yes          |
| <b>cltm-EarlyTA-Indication-r19</b><br>Indicates whether the UE supports early TA MAC CE reception for CLTM by indicating the maximum number of TA values that the UE can store.<br>A UE supporting this feature shall also indicate support of at least one of <i>cltm-ExecutionConditionL3-r19</i> or <i>cltm-ExecutionConditionL1-r19</i> and support of <i>rach-EarlyTA-Measurement-r18</i> for at least one band.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | UE  | No | No           | No           |
| <b>cltm-ExecutionConditionL1-r19</b><br>Indicates whether the UE supports the evaluation of LTM conditions evaluation based on L1 measurements. The UE supporting this feature shall also indicate support of <i>ltm-MCG-IntraFreq-r18</i> for at least one band. A UE supporting this feature shall also indicate support of <i>intraFreqL1-MeasConfig-r18</i> for at least one band combination.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | UE  | No | No           | No           |
| <b>cltm-ExecutionConditionL3-r19</b><br>Indicates whether the UE supports the evaluation of LTM conditions evaluation based on L3 measurements, by indicating the maximum number of trigger events for the same execution condition. A UE supporting this feature shall also indicate support of <i>ltm-MCG-IntraFreq-r18</i> for at least one band.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | UE  | No | No           | No           |
| <b>concurrentMeasCRS-InsideBWP-EUTRA-r18</b><br>Indicates whether the UE supports concurrent inter-RAT measurement on EUTRAN cell in non-DSS and PDCCH or PDSCH reception from the serving cell with a different numerology.<br>A UE supporting this feature shall also indicate support of <i>eutra-NoGapMeasurementInsideBWP-r18</i> or <i>eutra-NoGapMeasurementOutsideBWP-r18</i> .                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | UE  | No | No           | FR1 only     |
| <b>concurrentMeasGap-r17</b><br>Indicates whether the UE supports the concurrent measurements gaps as specified in TS 38.133 [5]. The capability signalling comprises the following parameters: <ul style="list-style-type: none"> <li>- <i>concurrentPerUE-OnlyMeasGap-r17</i> indicates whether the UE supports more than 1 per-UE measurement gap configurations (i.e. gap combination configuration id = 2 as specified in TS 38.133 [5]), or</li> <li>- <i>concurrentPerUE-PerFRCombMeasGap-r17</i> indicates whether the UE supports all concurrent gap combination configurations as specified in TS 38.133 [5] including support of more than 1 per-UE measurement gap configurations. For UE capable of Rel-15 per-FR gap (<i>independentGapConfig</i>), this field indicates whether the UE supports more than 1 per-FR gap measurement gap configurations in an FR, or simultaneous 1 per UE measurement gap plus 1 per-FR measurement gap configurations in an FR, or more than 1 per-UE measurement gap configurations (i.e. gap combination configuration id = 2 as specified in TS 38.133 [5]).</li> </ul> | UE  | No | No           | No           |

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |    |     |    |     |

| <b>concurrentMeasGapEUTRA-r17</b><br>Indicates whether the UE support the configurations of E-UTRAN measurement objectives associated with more than 1 concurrent measurement gaps as specified in TS 38.133 [5]. The UE indicating support of this feature shall also indicate support of <i>concurrentMeasGap-r17</i> .                                                                                                                                                                                                                                                                                                                                   | UE | No  | No | No  |
| <b>concurrentMeasGapsNCSG-r18</b><br>Indicates whether the UE supports multiple per-UE (or per-FR) measurement gap patterns with at least one per-UE (or per-FR) NCSG as specified in TS 38.133 [5]. A UE supporting this feature shall also indicate support of <i>nr-NeedForGapNCSG-Reporting-r17</i> and <i>concurrentMeasGap-r17</i> .                                                                                                                                                                                                                                                                                                                  | UE | No  | No | No  |
| <b>concurrentMeasGapsPreMG-r18</b><br>Indicates whether the UE supports multiple per-UE (or per-FR) measurement gap patterns with at least one per-UE (or per-FR) Pre-MG as specified in TS 38.133 [5]. A UE supporting this feature shall also indicate support of <i>concurrentMeasGap-r17</i> and one of <i>preconfiguredNW-ControlledMeasGap-r17</i> and <i>preconfiguredUE-AutonomousMeasGap-r17</i> .                                                                                                                                                                                                                                                 | UE | No  | No | No  |
| <b>condHandoverFDD-TDD-r16</b><br>Indicates whether the UE supports conditional handover between FDD and TDD cells. The parameter can only be set if <i>condHandover-r16</i> is set for both FDD and TDD. The UE that indicates support of this feature shall also indicate support of <i>handoverFDD-TDD</i> .                                                                                                                                                                                                                                                                                                                                             | UE | No  | No | No  |
| <b>condHandoverFR1-FR2-r16</b><br>Indicates whether the UE supports conditional handover HO between FR1 and FR2. The parameter can only be set if <i>condHandover-r16</i> is set for both FR1 and FR2. The UE that indicates support of this feature shall also indicate support of <i>handoverFR1-FR2</i> .                                                                                                                                                                                                                                                                                                                                                | UE | No  | No | No  |
| <b>condHandoverWithSCG-NRDC-r17</b><br>Indicates whether the UE supports conditional handover with NR SCG configuration for NR-DC. The UE indicating support of this feature shall also indicate the support of <i>condHandover-r16</i> and support of at least one NR-DC band combination.                                                                                                                                                                                                                                                                                                                                                                 | UE | No  | No | No  |
| <b>csi-RS-RLM</b><br>Indicates whether the UE can perform radio link monitoring procedure based on measurement of CSI-RS as specified in TS 38.213 [11] and TS 38.133 [5]. If the UE supports this feature, the UE needs to report <i>maxNumberResource-CSI-RS-RLM</i> . This applies only to non-shared spectrum channel access. For shared spectrum channel access, <i>csi-RS-RLM-r16</i> applies.                                                                                                                                                                                                                                                        | UE | Yes | No | Yes |
| <b>csi-RSRP-AndRSRQ-MeasWithSSB</b><br>Indicates whether the UE can perform CSI-RSRP and CSI-RSRQ measurement as specified in TS 38.215 [13], where CSI-RS resource is configured with an associated SS/PBCH. If this parameter is indicated for FR1 and FR2 differently, each indication corresponds to the frequency range of measured target cell. If the UE supports this feature, the UE needs to report <i>maxNumberCSI-RS-RRM-RS-SINR</i> . This applies only to non-shared spectrum channel access. For shared spectrum channel access, <i>csi-RS-RLM-r16</i> applies.                                                                              | UE | No  | No | Yes |
| <b>csi-RSRP-AndRSRQ-MeasWithoutSSB</b><br>Indicates whether the UE can perform CSI-RSRP and CSI-RSRQ measurement as specified in TS 38.215 [13], where CSI-RS resource is configured for a cell that transmits SS/PBCH block and without an associated SS/PBCH block. If this parameter is indicated for FR1 and FR2 differently, each indication corresponds to the frequency range of measured target cell. If the UE supports this feature, the UE needs to report <i>maxNumberCSI-RS-RRM-RS-SINR</i> . This applies only to non-shared spectrum channel access. For shared spectrum channel access, <i>csi-RSRP-AndRSRQ-MeasWithoutSSB-r16</i> applies. | UE | No  | No | Yes |
| <b>csi-SINR-Meas</b><br>Indicates whether the UE can perform CSI-SINR measurements based on configured CSI-RS resources as specified in TS 38.215 [13]. If this parameter is indicated for FR1 and FR2 differently, each indication corresponding to the frequency range of measured target cell. If the UE supports this feature, the UE needs to report <i>maxNumberCSI-RS-RRM-RS-SINR</i> . This applies only to non-shared spectrum channel access. For shared spectrum channel access, <i>csi-SINR-Meas-r16</i> applies.                                                                                                                               | UE | No  | No | Yes |
| <b>deriveSSB-IndexFromCellInterNon-NCSG-r17</b><br>Indicates whether the UE supports configuration of <i>deriveSSB-IndexFromCellInter-r17</i> in <i>MeasObjectNR</i> . This field applies to NR SA, MN configured measurements when NR-DC or NE-DC is configured, and SN configured measurements when NR-DC or (NG)EN-DC is configured. UE supporting this feature is required to                                                                                                                                                                                                                                                                           | UE | No  | No | No  |

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |    |    |    |    |

| meet the measurement requirements in TS 38.133 [5]. This field applies only to non-NCSG capable UEs (i.e. UEs not supporting <i>ncsg-MeasGapNR-Patterns-r17</i> ).                                                                                                                                                                                                                                                                                                                                                                                                                                                 |    |    |    |    |
| <b>dynamicCollision-r18</b><br>Indicates whether the UE supports RRM requirements for handling dynamic collisions between a Pre-MG and another measurement gap or Pre-MG. A UE supporting this feature shall also indicate support of <i>concurrentMeasGapsPreMG-r18</i> .                                                                                                                                                                                                                                                                                                                                         | UE | No | No | No |
| <b>enterAndLeaveCellReport-r18</b><br>Indicates whether the UE supports the report of cell(s) that meet the event leaving condition and the report of cell(s) that meet the event entering condition as defined in TS 38.331 [9] clause 5.5.4.2.                                                                                                                                                                                                                                                                                                                                                                   | UE | No | No | No |
| <b>eutra-AutonomousGaps-r16</b><br>Defines whether the UE supports, upon configuration of <i>useAutonomousGaps</i> by the network, acquisition of relevant information from a neighbouring E-UTRA cell by reading the SI of the neighbouring cell using autonomous gap and reporting the acquired information to the network as specified in TS 38.331 [9] when MR-DC is not configured.                                                                                                                                                                                                                           | UE | No | No | No |
| <b>eutra-AutonomousGaps-NEDC-r16</b><br>Defines whether the UE supports, upon configuration of <i>useAutonomousGaps</i> by the network, acquisition of relevant information from a neighbouring E-UTRA cell by reading the SI of the neighbouring cell using autonomous gap and reporting the acquired information to the network as specified in TS 38.331 [9] when NE-DC is configured.                                                                                                                                                                                                                          | UE | No | No | No |
| <b>eutra-AutonomousGaps-NRDC-r16</b><br>Defines whether the UE supports, upon configuration of <i>useAutonomousGaps</i> by the network, acquisition of relevant information from a neighbouring E-UTRA cell by reading the SI of the neighbouring cell using autonomous gap and reporting the acquired information to the network as specified in TS 38.331 [9] when NR-DC is configured.                                                                                                                                                                                                                          | UE | No | No | No |
| <b>eutra-CGI-Reporting</b><br>Defines whether the UE supports acquisition of relevant CGI-information from a neighbouring E-UTRA cell by reading the SI of the neighbouring cell and reporting the acquired information to the network as specified in TS 38.331 [9] when the (NG)EN-DC and NE-DC are not configured or, when consistent DRX is configured in NR-DC. The consistent DRX configuration implies that MN and SN have the same DRX cycle and on-duration configured by MN completely contains on-duration configured by SN. It is mandated if the UE supports EUTRA. It is optional for (e)RedCap UEs. | UE | CY | No | No |
| <b>eutra-CGI-Reporting-HSDN-r19</b><br>Defines whether the UE supports acquisition of HSDN cell information from a neighbouring E-UTRA cell by reading the SI of the neighbouring cell and reporting the acquired information to the network as specified in TS 38.331 [9].                                                                                                                                                                                                                                                                                                                                        | UE | No | No | No |

| <b>handoverLTE-EPC, handoverLTE-EPC-r17</b><br>Indicates whether the UE supports HO to EUTRA connected to EPC. It is mandated if the UE supports EUTRA connected to EPC.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | UE | CY | Yes | Yes<br>(Incl<br>FR2-2<br>DIFF) |
| <b>idleInactiveNR-MeasReport-r16, idleInactiveNR-MeasReport-r17</b><br>Indicates whether the UE supports configuration of NR SSB measurements in RRC_IDLE/RRC_INACTIVE and reporting of the corresponding results upon network request as specified in TS 38.331 [9]. If this parameter is indicated for FR1 and FR2 differently, each indication corresponds to the frequency range of measured target cell.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | UE | No | No  | Yes<br>(Incl<br>FR2-2<br>DIFF) |
| <b>idleInactiveNR-MeasBeamReport-r16</b><br>Indicates whether the UE supports beam level measurements in RRC_IDLE/RRC_INACTIVE and reporting of the corresponding beam measurement results upon network request as specified in TS 38.331 [9]. A UE supports this feature shall also support <i>idleInactiveNR-MeasReport-r16</i> . If this parameter is indicated for FR1 and FR2 differently, each indication corresponds to the frequency range of measured target cell.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | UE | No | No  | Yes                            |
| <b>idleInactiveEUTRA-MeasReport-r16</b><br>Indicates whether the UE supports configuration of E-UTRA measurements in RRC_IDLE/RRC_INACTIVE and reporting of the corresponding results upon network request as specified in TS 38.331 [9].                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | UE | No | No  | No                             |
| <b>idleInactive-ValidityArea-r16</b><br>Indicates whether the UE supports configuration of a validity area for NR measurements in RRC_IDLE/RRC_INACTIVE as specified in TS 38.331 [9].                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | UE | No | No  | No                             |
| <b>increasedNumberofCSIRSPerMO-r16</b><br>Indicates support of up to 192 CSI-RS resource for L3 mobility configuration per measurement object configured with <i>associatedSSB</i> . If this parameter is indicated for FR1 and FR2 differently, each indication corresponds to the frequency range of the cells to be measured within <i>MeasObjectNR</i> .                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | UE | No | No  | Yes                            |
| <b>independentGapConfig</b><br>This field indicates whether the UE supports two independent measurement gap configurations for FR1 and FR2 specified in clause 9.1.2 of TS 38.133 [5], in NR standalone (when included in <i>measAndMobParameters</i> ), in NR-DC (when included in <i>measAndMobParametersNRDC</i> ), and in (NG)EN-DC and NE-DC (when included in <i>measAndMobParametersMRDC</i> ). The field in <i>measAndMobParametersMRDC</i> also indicates whether the UE supports the FR2 inter-RAT measurement without gaps when (NG)EN-DC is not configured.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | UE | No | No  | No                             |
| <b>independentGapConfig-maxCC-r17</b><br>This field indicates whether the UE supports two independent measurement gap configurations for FR1 and FR2 as specified in clause 9.1.2 of TS 38.133 [5] while the number of configured serving cells is less than or equal to the indicated number.<br><br>The capability signalling includes the following parameters:<br><ul style="list-style-type: none"> <li>- <i>fr1-Only-r17</i> indicates the maximum number of configured serving cells when only NR FR1 serving cells are configured</li> <li>- <i>fr2-Only-r17</i> indicates the maximum number of configured serving cells when only NR FR2 serving cells are configured</li> <li>- <i>fr1-AndFR2-r17</i> indicates the maximum number of configured serving cells when both NR FR1 and NR FR2 serving cells are configured</li> </ul><br>The absence of the <i>fr1-Only-r17</i> or <i>fr2-Only-r17</i> field indicates that per-FR gap is not supported when only FR1 or FR2 serving cells are configured. Absence of the <i>fr1-AndFR2</i> field indicates that per-FR-gap is not supported when both FR1 and FR2 serving cells are configured. Value "1" for <i>fr1-Only-r17</i> or <i>fr2-Only-r17</i> indicates support of the per-FR gap when only PCell is configured (no additional CC). Value "2" for <i>fr1-Only-r17</i> or <i>fr2-Only-r17</i> indicates support of the per-FR gap when PCell and 1 additional CC are configured, and so on. Value "1" or "2" for <i>fr1-AndFR2-r17</i> indicates the support of per-FR gap when PCell and "1" additional CC are configured.<br><br>UE indicating support of this feature in <i>UE-NR-Capability</i> shall not indicate support of <i>independentGapConfig</i> in <i>UE-NR-Capability</i> . | UE | No | No  | No                             |
| <b>independentGapConfigPRS-r17</b><br>Indicates whether the UE supports two independent measurement gap configurations for FR1 and FR2 for PRS measurement, as specified in clause 9.1.2 of TS 38.133 [5].                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | UE | No | No  | No                             |

| <b><i>intraAndInterF-MeasAndReport</i></b><br>Indicates whether the UE supports NR intra-frequency and inter-frequency measurements and at least periodical reporting. This field only applies to SN configured measurement when (NG)EN-DC is configured. For NR SA, MN and SN configured measurement when NR-DC is configured, and MN configured measurement when NE-DC is configured, this feature is mandatory supported.                                                                                                                                                                             | UE | Yes | Yes | No  |
| <b><i>intraF-NeighMeasForSCellWithoutSSB</i></b><br>Indicates whether the UE supports the configuration of <i>servingCellMO</i> for SCell that does not transmit SS/PBCH block. A UE supporting this feature shall also support NR intra-frequency measurements on neighbour cells based on <i>servingCellMO</i> associated with SCell that does not transmit SS/PBCH block. A UE supporting this feature shall also indicate support of <i>scellWithoutSSB</i> or <i>scellWithoutSSB-InterBandCA-r18</i> or both.                                                                                       | UE | No  | No  | No  |
| <b><i>interFrequencyMeas-NoGap-r16</i></b><br>Indicates whether the UE can perform inter-frequency SSB based measurements without measurement gaps if the SSB is completely contained in the active BWP of the UE as specified in TS 38.133 [5]. If this parameter is indicated for FR1 and FR2 differently, each indication corresponds to the frequency range of cells to be measured.                                                                                                                                                                                                                 | UE | No  | No  | Yes |
| <b><i>interSatMeas-r17</i></b><br>Indicates whether the UE supports inter-satellite measurement as specified in TS 38.331 [9]. It is mandatory if the UE supports <i>nonTerrestrialNetwork-r17</i> .                                                                                                                                                                                                                                                                                                                                                                                                     | UE | CY  | No  | No  |
| <b><i>I3-MeasUnknownSCellActivation-r18</i></b><br>Indicates whether the UE supports reporting valid L3 measurement results triggered by the unknown SCell activation command<br>UE is required to meet the shortened SCell activation delay requirement in TS 38.133 [5] if the feature is supported, including single SCell activation, single PUCCH SCell activation, and multiple SCell activation with/without PUCCH SCell.                                                                                                                                                                         | UE | No  | No  | No  |
| <b><i>Itm-EventMeasAndReport-r19</i></b><br>Indicates whether the UE supports performing and reporting of measurements based on LTM events (including event LTM2/LTM3/LTM4/LTM5) as specified in TS 38.321 [8].                                                                                                                                                                                                                                                                                                                                                                                          | UE | No  | No  | No  |
| <b><i>Itm-FastUE-Processing-r18</i></b><br>Indicates the reduced $T_{LTM\_processing}$ delay of the UE during cell switch.<br>The capability signalling includes the following parameters: <ul style="list-style-type: none"> <li>- <i>fr1-r18</i> indicates the reduced <math>T_{LTM\_processing}</math> for cell switch from FR1 to FR1.</li> <li>- <i>fr2-r18</i> indicates the reduced <math>T_{LTM\_processing}</math> for cell switch from FR2 to FR2.</li> <li>- <i>fr1-AndFR2-r18</i> indicates the reduced <math>T_{LTM\_processing}</math> for cell switch from FR1/FR2 to FR2/FR1.</li> </ul> | UE | No  | No  | No  |
| <b><i>Itm-InterFreq-r18</i></b><br>Indicates UE supports inter-frequency MCG LTM on all the bands where the UE indicates support of <i>Itm-MCG-IntraFreq-r18</i> or inter-frequency SCG LTM on all the bands where the UE indicates support of <i>Itm-SCG-IntraFreq-r18</i> respectively.<br>A UE supporting this feature shall also indicate support of <i>Itm-MCG-IntraFreq-r18</i> or <i>Itm-SCG-IntraFreq-r18</i> .                                                                                                                                                                                  | UE | No  | No  | No  |
| <b><i>Itm-interFreqL1-OnlyInBC-r18</i></b><br>When included, for each BC in which the UE indicates support of <i>interFreqL1-MeasConfig-r18</i> , the UE only supports inter-frequency L1-RSRP measurement and reporting based on SSB(s) of LTM candidate cell(s) that are inside the BC. When not included, the description in <i>interFreqL1-MeasConfig-r18</i> is applicable.<br><br>A UE supporting this feature shall also indicate support of <i>interFreqL1-MeasConfig-r18</i> .                                                                                                                  | UE | No  | No  | No  |
| <b><i>Itm-InterFreqMeasGap-r18</i></b><br>Indicates whether the UE supports SSB based inter-frequency L1-RSRP measurements with measurement gaps for LTM.<br>A UE supporting this feature shall also indicate support of <i>interFreqL1-MeasConfig-r18</i> .                                                                                                                                                                                                                                                                                                                                             | UE | No  | No  | No  |
| <b><i>Itm-KeyUpdateMCG-r19</i></b><br>Indicates whether the UE supports security key change during MCG LTM cell switch execution.<br>A UE supporting this feature shall also indicate support of <i>Itm-MCG-IntraFreq-r18</i> in at least one band.                                                                                                                                                                                                                                                                                                                                                      | UE | No  | No  | No  |

| <p><b>maxNumberPerSlotCLI-SRS-RSRP-r16</b><br/>Defines the maximum number of SRS-RSRP measurement resources per slot for SRS-RSRP measurement. If the UE supports <i>cli-SRS-RSRP-Meas-r16</i>, the UE shall report this capability.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | UE | CY | TDD only | No         |
| <p><b>maxNumberResource-CSI-RS-RLM</b><br/>Defines the maximum number of CSI-RS resources within a slot per spCell for CSI-RS based RLM. UE indicating support of this feature shall also indicate support of <i>csi-RS-RLM</i> or <i>ssb-AndCSI-RS-RLM</i>. If UE supports any of <i>csi-RS-RLM</i> and <i>ssb-AndCSI-RS-RLM</i>, UE shall report this capability.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | UE | CY | No       | Yes        |
| <p><b>measSequenceConfig-r18</b><br/>Indicates whether the UE supports configuration of <i>measSequence-r18</i> in <i>MeasObjectNR</i> and <i>MeasObjectEUTRA</i> for recommended sequence for intra/inter-RAT intra/inter-frequency measurement.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | UE | No | No       | No         |
| <p><b>multiCarrierSingleReportWithoutGap-r19</b><br/>Indicates whether the UE supports serving cell and neighbour cells measurement and report on one serving carrier per-band for intra-frequency measurements without measurement gap if multiple serving carriers are configured in a same band.<br/>A UE supporting this feature shall meet the corresponding enhanced requirements in TS 38.133 [5] Clause 9.2.3.2, 9.1.5.1.1, 9.1.5.1.2, 9.1.5.1.3, and 9.1.5.1.4</p>                                                                                                                                                                                                                                                                                                                                                                                                | UE | No | No       | FR2-1 only |
| <p><b>ncsg-MeasGapNR-Patterns-r17</b><br/>Indicates whether the UE supports NR-only NCSG patterns. The left most bit in the bitmap corresponds to NCSG pattern #0 and the right most bit in the bitmap corresponds to NCSG pattern #23. A bit in the bitmap is set to 1 if the corresponding pattern is supported by the UE. NCSG patterns #0 to #23 are as specified in TS 38.133 [5].</p> <p>NCSG patterns #2 and #3 are mandatory (i.e. the corresponding bits in the bitmap is set to 1) if the UE includes this field. NCSG patterns #17 and #18 are mandatory (i.e. the corresponding bits in the bitmap is set to 1) if UE includes this field and supports a FR2 band. UEs supporting this shall indicate support of <i>nr-NeedForGapNCSG-Reporting-r17</i>.</p>                                                                                                   | UE | No | No       | No         |
| <p><b>ncsg-MeasGapPatterns-r17</b><br/>Indicates whether the UE supports NCSG patterns. The left most bit in the bitmap corresponds to NCSG pattern #0 and the right most bit in the bitmap corresponds to NCSG pattern #23. A bit in the bitmap is set to 1 if the corresponding pattern is supported by the UE. NCSG patterns #0 to #23 are as specified in TS 38.133 [5].</p> <p>NCSG patterns #0 and #1 are mandatory (i.e. the corresponding bits in the bitmap is set to 1) if the UE includes this field. NCSG patterns #13 and #14 are mandatory (i.e. the corresponding bits in the bitmap is set to 1) if UE supports <i>ncsg-MeasGapPerFR-r17</i> or if the UE is NCSG capable and supports FR2 band in standalone mode. UEs supporting this shall indicate support of <i>nr-NeedForGapNCSG-Reporting-r17</i> or <i>eutra-NeedForGapNCSG-Reporting-r17</i>.</p> | UE | No | No       | No         |
| <p><b>ncsg-MeasGapPerFR-r17</b><br/>Indicates whether the UE supports per-FR NCSG. UEs supporting this shall indicate support of <i>nr-NeedForGapNCSG-Reporting-r17</i>.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | UE | No | No       | No         |

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |    |     |    |          |
|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----|-----|----|----------|
| <b><i>nscg-SymbolLevelScheduleRestrictionInter-r17</i></b><br>Indicates whether the UE supports performing measurement with NCSG based on flag <i>deriveSSB-IndexFromCell-inter</i> and meeting the following requirements that the scheduling restriction in FR2 serving cell during NCSG ML is on SSB symbol level. UEs supporting this shall indicate support of <i>nr-NeedForGapNCSG-Reporting-r17</i> .                                                                                                                                                                                             | UE | No  | No | FR2 only |
| <b><i>nr-AutonomousGaps-r16</i></b><br>Defines whether the UE supports, upon configuration of <i>useAutonomousGaps</i> by the network, acquisition of relevant information from a neighbouring NR cell by reading the SI of the neighbouring cell using autonomous gap and reporting the acquired information to the network as specified in TS 38.331 [9] when MR-DC is not configured. If this parameter is indicated for FR1 and FR2 differently, each indication corresponds to the frequency range of measured target cell.                                                                         | UE | No  | No | Yes      |
| <b><i>nr-AutonomousGaps-ENDC-r16</i></b><br>Defines whether the UE supports, upon configuration of <i>useAutonomousGaps</i> by the network, acquisition of relevant information from a neighbouring NR cell by reading the SI of the neighbouring cell using autonomous gap and reporting the acquired information to the network as specified in TS 38.331 [9] when (NG)EN-DC is configured. If this parameter is indicated for FR1 and FR2 differently, each indication corresponds to the frequency range of measured target cell.                                                                    | UE | No  | No | Yes      |
| <b><i>nr-AutonomousGaps-NEDC-r16</i></b><br>Defines whether the UE supports, upon configuration of <i>useAutonomousGaps</i> by the network, acquisition of relevant information from a neighbouring NR cell by reading the SI of the neighbouring cell using autonomous gap and reporting the acquired information to the network as specified in TS 38.331 [9] when NE-DC is configured. If this parameter is indicated for FR1 and FR2 differently, each indication corresponds to the frequency range of measured target cell.                                                                        | UE | No  | No | Yes      |
| <b><i>nr-AutonomousGaps-NRDC-r16</i></b><br>Defines whether the UE supports, upon configuration of <i>useAutonomousGaps</i> by the network, acquisition of relevant information from a neighbouring NR cell by reading the SI of the neighbouring cell using autonomous gap and reporting the acquired information to the network as specified in TS 38.331 [9] when NR-DC is configured. If this parameter is indicated for FR1 and FR2 differently, each indication corresponds to the frequency range of measured target cell.                                                                        | UE | No  | No | Yes      |
| <b><i>nr-CGI-Reporting</i></b><br>Defines whether the UE supports acquisition of relevant CGI-information from a neighbouring intra-frequency or inter-frequency NR cell by reading the SI of the neighbouring cell and reporting the acquired information to the network as specified in TS 38.331 [9] when (NG)EN-DC and NE-DC are not configured or, when consistent DRX is configured in NR-DC. The consistent DRX configuration implies that MN and SN have the same DRX cycle and on-duration configured by MN completely contains on-duration configured by SN. It is optional for (e)RedCap UEs. | UE | CY  | No | No       |
| <b><i>nr-CGI-Reporting-ENDC</i></b><br>Defines whether the UE supports acquisition of relevant CGI-information from a neighbouring intra-frequency or inter-frequency NR cell by reading the SI of the neighbouring cell and reporting the acquired information to the network as specified in TS 38.331 [9] when the (NG)EN-DC is configured.                                                                                                                                                                                                                                                           | UE | Yes | No | No       |
| <b><i>nr-CGI-Reporting-HSDN-r19</i></b><br>Defines whether the UE supports acquisition of HSDN cell information from a neighbouring intra-frequency or inter-frequency NR HSDN cell by reading the SI of the neighbouring cell and reporting the acquired information to the network as specified in TS 38.331 [9].                                                                                                                                                                                                                                                                                      | UE | No  | No | No       |
| <b><i>nr-CGI-Reporting-NEDC</i></b><br>Defines whether the UE supports acquisition of relevant information from a neighbouring intra-frequency or inter-frequency NR cell by reading the SI of the neighbouring cell and reporting the acquired information to the network as specified in TS 38.331 [9] when the NE-DC is configured.                                                                                                                                                                                                                                                                   | UE | Yes | No | No       |
| <b><i>nr-CGI-Reporting-NPN-r16</i></b><br>Defines whether the UE supports acquisition of NPN-relevant CGI-information from a neighbouring intra-frequency or inter-frequency NR NPN cell by reading the SI of the neighbouring cell and reporting the acquired information to the network as specified in TS 38.331 [9]. If UE supports NPN, UE shall report this capability. It is optional for (e)RedCap UEs.                                                                                                                                                                                          | UE | CY  | No | No       |

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |    |     |          |          |
|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----|-----|----------|----------|
| <b>nr-CGI-Reporting-NRDC</b><br>Defines whether the UE supports acquisition of relevant information from a neighbouring intra-frequency or inter-frequency NR cell by reading the SI of the neighbouring cell and reporting the acquired information to the network as specified in TS 38.331 [9] when the NR-DC is configured wherein MN and SN have different DRX cycles, or on-duration configured by MN does not contain on-duration configured by SN if the DRX cycles are the same.                                                                                                       | UE | Yes | No       | No       |
| <b>nr-NeedForGapNCSG-Reporting-r17</b><br>Indicates whether the UE supports reporting of the NCSG and measurement gap requirement information for SSB based measurement in the UE response to a network configuration RRC message as specified in TS 38.331 [9].                                                                                                                                                                                                                                                                                                                                | UE | No  | No       | No       |
| <b>nr-NeedForGap-Reporting-r16</b><br>Indicates whether the UE supports reporting the measurement gap requirement information for NR target in the UE response to a network configuration RRC message.                                                                                                                                                                                                                                                                                                                                                                                          | UE | No  | No       | No       |
| <b>nr-NeedForInterruptionReport-r18</b><br>Indicates whether the UE supports reporting the interruption requirement information for SSB based measurement towards NR target without gap in the UE response to a network configuration RRC message. The UE supporting this feature shall also indicate support of <i>nr-NeedForGap-Reporting-r16</i> .                                                                                                                                                                                                                                           | UE | No  | No       | No       |
| <b>ntn-NeighbourCellInfoSupport-r18</b><br>Indicates whether the UE supports configuration of <i>ntn-NeighbourCellInfo-r18</i> in <i>MeasObjectNR</i> for dedicated ephemeris. A UE supporting this feature shall also indicate the support of <i>nonTerrestrialNetwork-r17</i> .                                                                                                                                                                                                                                                                                                               | UE | No  | No       | No       |
| <b>parallelMeasurementGap-r17</b><br>Indicates whether the UE supports 2 parallel measurement gaps for NTN SSB based RRM measurements. If a UE does not include this field but includes <i>nonTerrestrialNetwork-r17</i> , the UE supports 1 measurement gap for NTN SSB based RRM measurements. If this parameter is indicated, a UE shall also support that two parallel measurement gaps with the same gap type can be associated to one frequency layer. A UE supporting this feature shall also indicate the support of <i>nonTerrestrialNetwork-r17</i> .                                 | UE | No  | FDD only | FR1 only |
| <b>parallelSMTC-r17</b><br>Indicates whether the UE supports NTN SSB based RRM measurements on target cells belonging to 4 SMTC-s on a single frequency carrier. If a UE does not include this field but includes <i>nonTerrestrialNetwork-r17</i> , the UE supports NTN SSB based RRM measurements on target cells belonging to 2 SMTC-s on a single frequency carrier.                                                                                                                                                                                                                        | UE | No  | FDD only | FR1 only |
| <b>periodicEUTRA-MeasAndReport</b><br>Indicates whether the UE supports periodic EUTRA measurement and reporting. It is mandated if the UE supports EUTRA.                                                                                                                                                                                                                                                                                                                                                                                                                                      | UE | CY  | No       | No       |
| <b>pcellT312-r16</b><br>Indicates whether the UE supports T312 based fast failure recovery for PCell.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | UE | No  | No       | No       |
| <b>preconfiguredUE-AutonomousMeasGap-r17</b><br>Indicates whether the UE supports the preconfigured measurement gap with UE-autonomous mechanism for activation and deactivation as specified in TS 38.133 [5].                                                                                                                                                                                                                                                                                                                                                                                 | UE | No  | No       | No       |
| <b>preconfiguredNW-ControlledMeasGap-r17</b><br>Indicates whether the UE supports the preconfigured measurement gap with network-controlled mechanism for activation and deactivation as specified in TS 38.133 [5].                                                                                                                                                                                                                                                                                                                                                                            | UE | No  | No       | No       |
| <b>rach-LessHandoverInterFreq-r18</b><br>Indicates whether the UE supports inter-frequency RACH-less handover. The UE supports inter-frequency RACH-less handover on all the bands where the UE indicates support for <i>rach-LessHandoverCG-r18</i> or <i>rach-LessHandoverDG-r18</i> . If the UE does not support <i>rach-LessHandoverInterFreq-r18</i> but indicates support of <i>rach-LessHandoverCG-r18</i> or <i>rach-LessHandoverDG-r18</i> , the UE only supports intra-frequency RACH-less handover with configured grant or dynamic grant, respectively, on the corresponding bands. | UE | No  | No       | No       |
| <b>reportAddNeighMeasForPeriodic-r16</b><br>Defines whether the UE supports periodic reporting of best neighbour cells per serving frequency, as defined in TS 38.331 [9]. It is optional for (e)RedCap UEs.                                                                                                                                                                                                                                                                                                                                                                                    | UE | CY  | No       | No       |
| <b>reportClosestReferenceLocations-r19</b><br>Indicates whether the UE supports reporting closest reference location(s) as specified in TS 38.331 [9]. A UE supporting this feature shall also indicate the support of <i>nonTerrestrialNetwork-r17</i> .                                                                                                                                                                                                                                                                                                                                       | UE | No  | No       | No       |

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |    |    |     |     |
|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----|----|-----|-----|
| <b>secondBestCellChangeReport-r18</b><br>Indicates whether the UE supports the sending of the measurement report if more than one of two best cells changed as specified in TS 38.331 [9].                                                                                                                                                                                                                                                                                                                                                                                | UE | No | No  | No  |
| <b>serviceLinkPropDelayDiffReporting-r17</b><br>Indicates whether the UE supports the reporting of service link propagation delay difference between serving cell and neighbour cell(s). A UE supporting this feature shall also indicate the support of <i>nonTerrestrialNetwork-r17</i> .                                                                                                                                                                                                                                                                               | UE | No | No  | No  |
| <b>sftd-MeasPSCell</b><br>Indicates whether the UE supports SFTD measurements between the PCell and a configured PSCell. If this capability is included in UE-MRDC-Capability, it indicates that the UE supports SFTD measurement between PCell and PSCell in (NG)EN-DC. If this capability is included in UE-NR-Capability, it indicates that the UE supports SFTD measurement between PCell and PSCell in NR-DC.                                                                                                                                                        | UE | No | Yes | No  |
| <b>sftd-MeasPSCell-NEDC</b><br>Indicates whether the UE supports SFTD measurement between the NR PCell and a configured E-UTRA PSCell in NE-DC.                                                                                                                                                                                                                                                                                                                                                                                                                           | UE | No | Yes | No  |
| <b>sftd-MeasNR-Cell</b><br>Indicates whether the SFTD measurement with and without measurement gaps between the EUTRA PCell and the NR cells is supported by the UE which is capable of EN-DC/NGEN-DC when EN-DC/NGEN-DC is not configured. The SFTD measurement without gaps can be used when the UE supports at least one EN-DC band combination consisting of the set of the current E-UTRA serving frequencies and the NR frequency where SFTD measurement is configured. In UE-NR-Capability, this field is not used, and UE does not include the field.             | UE | No | Yes | No  |
| <b>sftd-MeasNR-Neigh</b><br>Indicates whether the inter-frequency SFTD measurement with and without measurement gaps between the NR PCell and inter-frequency NR neighbour cells is supported by the UE when MR-DC is not configured. The SFTD measurement without gaps can be used when the UE supports at least one DC or CA band combination consisting of the set of the current NR serving frequencies and the NR frequency where SFTD measurement is configured.                                                                                                    | UE | No | Yes | No  |
| <b>sftd-MeasNR-Neigh-DRX</b><br>Indicates whether the inter-frequency SFTD measurement using DRX off period between the NR PCell and the inter-frequency NR neighbour cells is supported by the UE when MR-DC is not configured.                                                                                                                                                                                                                                                                                                                                          | UE | No | Yes | No  |
| <b>shortMeasInterval-r18</b><br>Indicates whether the UE supports using SSB periodicity instead of SMTC periodicity for the measurement interval during unknown SCell activation when the SMTC is only configured in measurement object for enhanced unknown SCell activation requirement and performing L1-RSRP measurement in non-DRX mode even DRX is configured during unknown SCell activation.<br>UE is required to meet the shortened SCell activation delay requirement in TS 38.133 [5] if the feature is supported.                                             | UE | No | No  | No  |
| <b>simultaneousRxDataSSB-DiffNumerology</b><br>Indicates whether the UE supports concurrent intra-frequency measurement on serving cell or neighbouring cell and PDCCH or PDSCH reception from the serving cell with a different numerology as defined in clause 8 and 9 of TS 38.133 [5].                                                                                                                                                                                                                                                                                | UE | No | No  | Yes |
| <b>simultaneousRxDataSSB-DiffNumerology-Inter-r16</b><br>Indicates whether the UE supports concurrent SSB based inter-frequency measurement without measurement gap on neighbouring cell and PDCCH or PDSCH reception from the serving cell with a different numerology as defined in clause 8 and 9 of TS 38.133 [5]. UE indicates support of this indicates support of <i>interFrequencyMeas-NoGap-r16</i> . If this parameter is indicated for FR1 and FR2 differently, each indication corresponds to the frequency range where the SSB and PDCCH/PDSCH are received. | UE | No | No  | Yes |

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |    |     |    |            |

| <p><b>skipSSB-L1-RSRP-Meas-r19</b><br/>Indicates whether the UE supports to skip SSB based L1-RSRP measurement for candidate cell CSI-RS-based L1-RSRP measurement.<br/>Value '<i>neighbour</i>' indicates the UE supports skipping SSB-based L1-RSRP during neighbouring cell CSI-RS-based L1-RSRP measurement. Value '<i>both</i>' indicates the UE supports skipping SSB-based L1-RSRP during both neighbouring cell and serving cell CSI-RS-based L1-RSRP measurement.</p> <p>If a UE indicates '<i>neighbour</i>', CSI-RS resources from neighbour cell do not need to be Type-D QCL'ed with the associated SSB for L1 measurement, but shall be Type-D QCL'ed with the associated SSB for L3 measurement. CSI-RS resources configured for LTM L1-RSRP measurement from serving cell shall be Type-D QCL'ed with SSB for L1-RSRP measurement, or another CSI-RS in resource set configured with repetition ON.</p> <p>If a UE indicates '<i>both</i>', CSI-RS resources from neighbour cell do not need to be Type-D QCL'ed with the associated SSB for L1 measurement, but shall be Type-D QCL'ed with the associated SSB for L3 measurement. CSI-RS resources configured for LTM L1-RSRP measurement from serving cell do not need to be Type-D QCL'ed with SSB for L1-RSRP measurement, or another CSI-RS in resource set configured with repetition ON.</p> <p>If a UE does not support this feature, CSI-RS resources from neighbour cell shall be Type-D QCL'ed with the associated SSB for L1 measurement. CSI-RS resources configured for LTM L1-RSRP measurement from serving cell shall be Type-D QCL'ed with SSB for L1-RSRP measurement, or another CSI-RS in resource set configured with repetition ON.</p> <p>A UE supporting this feature shall also indicate support of <i>intraFreqL1-MeasConfigPeriodicCSI-RS-r19</i>.</p> | UE | No  | No | FR2-1 only |
| <p><b>speedStateDetection-r19</b><br/>Indicates whether the UE supports mobility state detection and speed dependent measurement related parameters as specified in TS 38.331 [9]</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | UE | No  | No | No         |
| <p><b>ssb-RLM</b><br/>Indicates whether the UE can perform radio link monitoring procedure based on measurement of SS/PBCH block as specified in TS 38.213 [11] and TS 38.133 [5]. This field shall be set to <i>supported</i>. This applies only to non-shared spectrum channel access. For shared spectrum channel access, <i>ssb-RLM-DynamicChAccess-r16</i> or <i>ssb-RLM-Semi-StaticChAccess-r16</i> applies.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | UE | Yes | No | No         |
| <p><b>ssb-AndCSI-RS-RLM</b><br/>Indicates whether the UE can perform radio link monitoring procedure based on measurement of SS/PBCH block and CSI-RS as specified in TS 38.213 [11] and TS 38.133 [5]. UE indicating support of this feature shall also indicate support of <i>ssb-RLM</i> and <i>csi-RS-RLM</i>. If the UE supports this feature, the UE needs to report <i>maxNumberResource-CSI-RS-RLM</i>. This applies only to non-shared spectrum channel access. For shared spectrum channel access, <i>ssb-AndCSI-RS-RLM-r16</i> applies.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | UE | No  | No | No         |
| <p><b>ss-SINR-Meas</b><br/>Indicates whether the UE can perform SS-SINR measurement as specified in TS 38.215 [13]. If this parameter is indicated for FR1 and FR2 differently, each indication corresponds to the frequency range of measured target cell. This applies only to non-shared spectrum channel access. For shared spectrum channel access, <i>ss-SINR-Meas-r16</i> applies.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | UE | No  | No | Yes        |
| <p><b>supportedGapPattern</b><br/>Indicates measurement gap pattern(s) optionally supported by the UE for NR SA, for NR-DC, for NE-DC and for independent measurement gap configuration on FR2 in (NG)EN-DC. The leading / leftmost bit (bit 0) corresponds to the gap pattern 2, the next bit corresponds to the gap pattern 3, as specified in TS 38.133 [5] and so on. The UE shall set the bits corresponding to the measurement gap pattern 13, 14, 17, 18 and 19 to 1 if the UE is an NR standalone capable UE that supports a band in FR2 or if the UE is an (NG)EN-DC capable UE that supports <i>independentGapConfig</i> and supports a band in FR2.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | UE | CY  | No | No         |
| <p><b>supportedGapPattern-r16</b><br/>Indicates measurement gap pattern(s) optionally supported by the UE for NR SA, for NR-DC for PRS measurement and NR/E-UTRA RRM measurement. The leading / leftmost bit (bit 0) corresponds to the gap pattern 24, the next bit corresponds to the gap pattern 25, as specified in TS 38.133 [5]. The applicability of the gap patterns 24 and 25 is defined in clause 9.1.2 of TS 38.133 [5]. A UE that indicates support of this capability shall indicate support of <i>NR-DL-PRS-ProcessingCapability-r16</i> defined in TS 37.355 [22].</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | UE | No  | No | No         |

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |    |    |          |          |

4.2.10.1 Void

4.2.10.2 Void

4.2.11 Void

4.2.12 Void

## 4.2.13 IMS Parameters

| Definitions for parameters                                                                                                                                                                                                                                                                                                                                                        | Per | M  | FDD-TDD DIFF | FR1-FR2 DIFF          |
|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----|----|--------------|-----------------------|
| <b>voiceFallbackIndicationEPS-r16</b><br>Indicates whether the UE supports <i>voiceFallbackIndication</i> in <i>RRCRelease</i> and <i>MobilityFromNRCommand</i> . If this field is included, the UE shall support IMS voice over NR and IMS voice over E-UTRA via EPC.                                                                                                            | UE  | No | No           | No                    |
| <b>voiceOverEUTRA-5GC</b><br>Indicates whether the UE supports IMS voice over E-UTRA via 5GC. It is mandated to the UE if the UE is capable of IMS voice over E-UTRA via 5GC. Otherwise, the UE does not include this field. If this field is included and the UE is capable of E-UTRA with EPC, the UE shall support IMS voice over E-UTRA via EPC.                              | UE  | No | No           | No                    |
| <b>voiceOverNR, voiceOverNR-r17</b><br>Indicates whether the UE supports IMS voice over NR. It is mandated to the UE if the UE is capable of IMS voice over NR (including SNPN if the UE is SNPN capable). Otherwise, the UE does not include this field. If this field is included and the UE is capable of E-UTRA with EPC, the UE shall support IMS voice over E-UTRA via EPC. | UE  | No | No           | Yes (Incl FR2-2 DIFF) |
| <b>voiceOverSCG-BearerEUTRA-5GC</b><br>Indicates whether the UE supports IMS voice over SCG bearer of NE-DC.                                                                                                                                                                                                                                                                      | UE  | No | No           | N/A                   |

NOTE: In this release of specification, IMS voice over split bearer is not supported for NR-DC, NE-DC, and L2 multi-path relay.

## 4.2.14 RRC buffer size

The RRC buffer size is defined as the maximum overall RRC configuration size that the UE is required to store. The RRC buffer size is 45Kbytes.

## 4.2.15 IAB Parameters

## 4.2.15.1 Mandatory IAB-MT features

Table 4.2.15.1-1, Table 4.2.15.1-2 and Table 4.2.15.1-3 capture feature groups, which are mandatory for an IAB-MT. In addition, it is mandatory for an IAB-MT which is not a mobile IAB-MT to support the following features:

- Cell barring based on *iab-Support*, as specified in TS 38.331 [9].
- Inclusion of *iab-NodeIndication*, as specified in TS 38.331 [9].

All other feature groups or components of the feature groups as captured in TR 38.822 [24] as well as capabilities specified in this specification are optional for an IAB-MT, unless indicated otherwise.

**Table 4.2.15.1-1: Layer-1 mandatory features for IAB-MT**

| Features                                             | Index | Feature group                                    | Components                                                                                                                                                                                                                                                                                                                                                                                                                    | Additional information                                                     |

#### 4.2.15.1a Mandatory mobile IAB-MT features

Mobile IAB-MT shall apply the same capabilities as IAB-MT unless indicated otherwise. In addition, it is mandatory for mobile IAB-MT to support the following features:

- Acquisition of *gNB-ID-Length* from SIB1, as specified in TS 38.331 [9].
- Cell barring based on *mobileIAB-Support*, as specified in TS 38.331 [9].
- Inclusion of *mobileIAB-NodeIndication*, as specified in TS 38.331 [9].

All IAB-MT features and corresponding capabilities related to MR-DC and BAP header rewriting are not used by the mobile IAB-MT.

#### 4.2.15.2 General Parameters

| Definitions for parameters                                                                                                                                                                        | Per    | M  | FDD-TDD DIFF | FR1-FR2 DIFF |
|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------|----|--------------|--------------|
| <b><i>bh-RLF-DetectionRecovery-Indication-r17</i></b><br>Indicates whether the IAB-MT supports BH RLF detection indication and BH RLF recovery indication handling as specified in TS 38.340 [23] | IAB-MT | No | No           | No           |
| <b><i>bh-RLF-Indication-r16</i></b><br>Indicates whether the IAB-MT supports BH RLF indication handling as specified in TS 38.331 [9] and in TS 38.340 [23]                                       | IAB-MT | No | No           | No           |
| <b><i>directSN-AdditionFirstRRC-IAB-r16</i></b><br>Indicates whether the IAB-MT supports direct SN addition in the first RRC connection reconfiguration after RRC connection establishment.       | IAB-MT | No | No           | No           |

#### 4.2.15.3 SDAP Parameters

| Definitions for parameters                                                                                                                                  | Per    | M  | FDD-TDD DIFF | FR1-FR2 DIFF |
|-------------------------------------------------------------------------------------------------------------------------------------------------------------|--------|----|--------------|--------------|
| <b><i>sdap-QoS-IAB-r16</i></b><br>Indicates whether the IAB-MT supports flow-based QoS and multiple flows to 1 DRB mapping, as specified in TS 37.324 [25]. | IAB-MT | No | No           | No           |
| <b><i>sdapHeaderIAB-r16</i></b><br>Indicates whether the IAB-MT supports UL SDAP header and SDAP End-marker, as specified in TS 37.324 [25].                | IAB-MT | No | No           | No           |

#### 4.2.15.4 PDCP Parameters

| Definitions for parameters                                                                                                                                                 | Per    | M  | FDD-TDD DIFF | FR1-FR2 DIFF |
|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------|----|--------------|--------------|
| <b><i>drb-IAB-r16</i></b><br>Indicates whether the IAB-MT supports DRB configuration including split DRB with one UL path, (de)ciphering on DRB and PDCP status reporting. | IAB-MT | No | No           | No           |
| <b><i>non-DRB-IAB-r16</i></b><br>Indicates whether the IAB-MT supports SRB2 configuration without a DRB, as specified in TS 38.331 [9].                                    | IAB-MT | No | No           | No           |

## 4.2.15.5 BAP Parameters

| Definitions for parameters                                                                                                                                                                                                                                              | Per    | M  | FDD-TDD DIFF | FR1-FR2 DIFF |
|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------|----|--------------|--------------|
| <b><i>bapHeaderRewriting-Rerouting-r17</i></b><br>Indicates whether the IAB-MT supports BAP header rewriting for inter-donor-DU rerouting, as specified in TS 38.340 [23] and TS 38.300 [28]. IAB-donor-DUs can belong to the same or different IAB-donor CUs.          | IAB-MT | No | No           | No           |
| <b><i>bapHeaderRewriting-Routing-r17</i></b><br>Indicates whether the IAB-MT supports BAP header rewriting for inter-donor CU partial migration, inter-donor-CU RLF recovery and inter-donor-CU topology redundancy, as specified in TS 38.340 [23] and TS 38.300 [28]. | IAB-MT | No | No           | No           |
| <b><i>flowControlBH-RLC-ChannelBased-r16</i></b><br>Indicates whether the IAB-MT supports flow control procedures and flow control feedback per backhaul RLC channel, as specified in TS 38.340 [23].                                                                   | IAB-MT | No | No           | No           |
| <b><i>flowControlRouting-ID-Based-r16</i></b><br>Indicates whether the IAB-MT supports flow control procedures and flow control feedback per Routing ID, as specified in TS 38.340 [23].                                                                                | IAB-MT | No | No           | No           |

## 4.2.15.6 MAC Parameters

| Definitions for parameters                                                                                                                                                                                                                                                                                       | Per    | M  | FDD-TDD DIFF | FR1-FR2 DIFF |
|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------|----|--------------|--------------|
| <b><i>lcg-ExtensionIAB-r17</i></b><br>Indicates whether the IAB-MT supports extended logical channel group as specified in TS 38.321 [8]. A UE supporting this feature shall also support Extended Buffer Status Report formats and Extended Pre-emptive BSR formats (if <i>preEmptiveBSR-r16</i> is supported). | IAB-MT | No | No           | No           |
| <b><i>lcid-ExtensionIAB-r16</i></b><br>Indicates whether the IAB-MT supports extended Logical Channel ID space using two-octet eLCID, as specified in TS 38.321 [8].                                                                                                                                             | IAB-MT | No | No           | No           |
| <b><i>preEmptiveBSR-r16</i></b><br>Indicates whether the IAB-MT supports Pre-emptive BSR as specified in TS 38.321 [8].                                                                                                                                                                                          | IAB-MT | No | No           | No           |

## 4.2.15.7 Physical layer parameters

## 4.2.15.7.1 BandNR parameters

| Definitions for parameters                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | Per  | M  | FDD-TDD DIFF | FR1-FR2 DIFF |
|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------|----|--------------|--------------|
| <b><i>handoverIntraF-IAB-r16</i></b><br>Indicates whether the IAB-MT supports intra-frequency HO. It indicates the support for intra-frequency HO from the corresponding duplex mode if this capability is included in <i>fdd-Add-UE-NR-Capabilities</i> or <i>tdd-Add-UE-NR-Capabilities</i> . It indicates the support for intra-frequency HO in the corresponding frequency range if this capability is included in <i>fr1-Add-UE-NR-Capabilities</i> or <i>fr2-Add-UE-NR-Capabilities</i> . IAB-MT shall set the capability value consistently for all FDD-FR1 bands, all TDD-FR1 bands and all TDD-FR2 bands respectively. | Band | No | N/A          | N/A          |
| <b><i>multipleTCI</i></b><br>Indicates whether IAB-MT supports more than one TCI state configurations per CORESET. UE is only required to track one active TCI state per CORESET. UE is required to support minimum between 64 and number of configured TCI states indicated by <i>tcI-StatePDSCH</i> .                                                                                                                                                                                                                                                                                                                         | Band | No | N/A          | N/A          |
| <b><i>rasterShift7dot5-IAB-r16</i></b><br>Indicates whether the IAB-MT supports 7.5kHz UL raster shift in the indicated band.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | Band | No | N/A          | N/A          |

## 4.2.15.7.2

## Phy-Parameters

| Definitions for parameters                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | Per    | M  | FDD-TDD DIFF | FR1-FR2 DIFF |
|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------|----|--------------|--------------|
| <b>case6-TimingAlignmentReception-IAB-r17</b><br>Indicates whether the IAB-MT supports case 6 timing alignment reception and signalling to the parent-node that case 6 timing mode is required for simultaneous transmission as specified in TS 38.213 [11].                                                                                                                                                                                                                                                                                              | IAB-MT | No | No           | No           |
| <b>case7-TimingAlignmentReception-IAB-r17</b><br>Indicates whether the IAB-MT supports case 7 timing offset indication reception and case 7 timing at parent-node indication reception as specified in TS 38.213 [11].                                                                                                                                                                                                                                                                                                                                    | IAB-MT | No | No           | No           |
| <b>dft-S-OFDM-WaveformUL-IAB-r16</b><br>Indicates whether the IAB-MT supports DFT-S-OFDM waveform for UL and transform precoding for single-layer PUSCH.                                                                                                                                                                                                                                                                                                                                                                                                  | IAB-MT | No | No           | No           |
| <b>dci-25-AI-RNTI-Support-IAB-r16</b><br>Indicates the support of monitoring DCI Format 2_5 scrambled by AI-RNTI for indication of soft resource availability to an IAB node as specified in TS 38.212 [10].                                                                                                                                                                                                                                                                                                                                              | IAB-MT | No | No           | No           |
| <b>directionalCollisionDC-IAB-r17</b><br>Indicates the support for directional collision handling between MCG and SCG cell(s) of the dual parent nodes for simultaneous operation in inter-donor and/or intra-donor DC operation.                                                                                                                                                                                                                                                                                                                         | IAB-MT | No | No           | No           |
| <b>dl-tx-PowerAdjustment-IAB-r17</b><br>Indicates the support of desired DL Tx power adjustment reporting and DL Tx power adjustment reception.                                                                                                                                                                                                                                                                                                                                                                                                           | IAB-MT | No | No           | No           |
| <b>desired-ul-tx-PowerAdjustment-r17</b><br>Indicates the support of Desired IAB-MT PSD range reporting.                                                                                                                                                                                                                                                                                                                                                                                                                                                  | IAB-MT | No | No           | No           |
| <b>fdm-SoftResourceAvailability-DynamicIndication-r17</b><br>Indicates the support of monitoring DCI Format 2_5 scrambled by AI-RNTI for indication of FDM soft resource availability to an IAB-node.                                                                                                                                                                                                                                                                                                                                                     | IAB-MT | No | No           | No           |
| <b>guardSymbolReportReception-IAB-r16</b><br>Indicates the support of DesiredGuardSymbols reporting and ProvidedGuardSymbols reception as specified in TS 38.213 [11].                                                                                                                                                                                                                                                                                                                                                                                    | IAB-MT | No | No           | No           |
| <b>guardSymbolReportReception-IAB-r17</b><br>Indicates the support of extended DesiredGuardSymbols reporting and ProvidedGuardSymbols reception to new switching scenarios case#6 and case#7 as specified in TS 38.213 [11].<br><br>UE indicating support of this feature shall also indicate support of one or more of <i>case6-TimingAlignmentReception-IAB-r17</i> and <i>case7-TimingAlignmentReception-IAB-r17</i> .<br>NOTE: If an IAB node does not support a certain timing mode (Case 6, Case 7), the reported/provided values shall be ignored. | IAB-MT | No | No           | No           |
| <b>pdsch-MappingTypeA</b><br>Indicates whether the IAB-MT supports receiving PDSCH using PDSCH mapping type A with less than seven symbols.                                                                                                                                                                                                                                                                                                                                                                                                               | IAB-MT | No | No           | No           |
| <b>pucch-F2-WithFH</b><br>Indicates whether the IAB-MT supports transmission of a PUCCH format 2 (2 OFDM symbols in total) with frequency hopping in a slot.                                                                                                                                                                                                                                                                                                                                                                                              | IAB-MT | No | No           | Yes          |
| <b>pucch-F3-WithFH</b><br>Indicates whether the IAB-MT supports transmission of a PUCCH format 3 (4~14 OFDM symbols in total) with frequency hopping in a slot.                                                                                                                                                                                                                                                                                                                                                                                           | IAB-MT | No | No           | Yes          |
| <b>restricted-IAB-DU-BeamReception-r17</b><br>Indicates the support of restricted IAB-DU beam reception.                                                                                                                                                                                                                                                                                                                                                                                                                                                  | IAB-MT | No | No           | No           |
| <b>recommended-IAB-MT-BeamTransmission-r17</b><br>Indicates the support of recommended IAB-MT beam transmission for DL and UL beam.                                                                                                                                                                                                                                                                                                                                                                                                                       | IAB-MT | No | No           | No           |
| <b>separateSMTC-InterIAB-Support-r16</b><br>Indicates the support of up to 4 SMTCs configurations per frequency location, including IAB-specific SMTC window periodicities.                                                                                                                                                                                                                                                                                                                                                                               | IAB-MT | No | No           | No           |
| <b>separateRACH-IAB-Support-r16</b><br>Indicates the support of separate RACH configurations including new IAB-specific offset and scaling factors.                                                                                                                                                                                                                                                                                                                                                                                                       | IAB-MT | No | No           | No           |
| <b>t-DeltaReceptionSupport-IAB-r16</b><br>Indicates the support of T_delta reception for case 1 OTA timing alignment as specified in TS 38.213 [11].                                                                                                                                                                                                                                                                                                                                                                                                      | IAB-MT | No | No           | No           |

|                                                                                                                                                                                                                          |        |    |    |    |
|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------|----|----|----|
| <b><i>ul-flexibleDL-SlotFormatSemiStatic-IAB-r16</i></b><br>Indicates the support of semi-static configuration/indication of UL-Flexible-DL slot formats for IAB-MT resources.                                           | IAB-MT | No | No | No |
| <b><i>ul-flexibleDL-SlotFormatDynamics-IAB-r16</i></b><br>Indicates the support of dynamic indication of UL-Flexible-DL slot formats for IAB-MT resources.                                                               | IAB-MT | No | No | No |
| <b><i>updated-T-DeltaRangeReception-r17</i></b><br>Indicates the support of updated T_Delta range reception.<br>UE indicating support of this feature shall also support <i>case6-TimingAlignmentReception-IAB-r17</i> . | IAB-MT | No | No | No |

| <b><i>eventA-MeasAndReport</i></b><br>Indicates whether the IAB-MT supports NR measurements and events A triggered reporting as specified in TS 38.331 [9].                                                                                                                                                                                                                                                                                                                               | IAB-MT | Yes | Yes          | No           |
| <b><i>handoverInterF</i></b><br>Indicates whether the IAB-MT supports inter-frequency HO. It indicates the support for inter-frequency HO from the corresponding duplex mode if this capability is included in <i>fdd-Add-UE-NR-Capabilities</i> or <i>tdd-Add-UE-NR-Capabilities</i> . It indicates the support for inter-frequency HO from the corresponding frequency range if this capability is included in <i>fr1-Add-UE-NR-Capabilities</i> or <i>fr2-Add-UE-NR-Capabilities</i> . | IAB-MT | No  | Yes          | Yes          |
| <b><i>mfb-IAB-r16</i></b><br>Indicates whether the IAB-MT supports multiple frequency band indication.                                                                                                                                                                                                                                                                                                                                                                                    | IAB-MT | No  | No           | No           |
| <b><i>intraAndInterF-MeasAndReport</i></b><br>Indicates whether the IAB-MT supports NR intra-frequency and inter-frequency measurements and at least periodical reporting.                                                                                                                                                                                                                                                                                                                | IAB-MT | Yes | Yes          | No           |

#### 4.2.15.9 MR-DC Parameters

| Definitions for parameters                                                                                                                                                                                                                      | Per    | M  | FDD-TDD DIFF | FR1-FR2 DIFF |
|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------|----|--------------|--------------|
| <b><i>f1c-OverEUTRA-r16</i></b><br>Indicates whether the IAB-MT supports F1-C signalling over <i>DLInformationTransfer</i> and <i>ULInformationTransfer</i> messages via MN when IAB-MT operates in EN-DC mode, as specified in TS 36.331 [17]. | IAB-MT | No | No           | No           |
| <b><i>scg-DRB-NR-IAB-r16</i></b><br>Indicates whether the IAB-MT supports SCG DRB with NR PDCP when IAB-MT operates in EN-DC mode.                                                                                                              | IAB-MT | No | No           | No           |
| <b><i>interNR-MeasEUTRA-IAB-r16</i></b><br>Indicates whether the IAB-MT supports NR measurement and reports while in EUTRA connected and event B1-based measurement and reports while in EUTRA connected.                                       | IAB-MT | No | No           | No           |

## 4.2.15.10 NRDC Parameters

| Definitions for parameters                                                                                                                                                                                                                                                                                                                                          | Per    | M  | FDD-TDD DIFF | FR1-FR2 DIFF |
|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------|----|--------------|--------------|
| <b><i>f1c-OverNR-RRC-r17</i></b><br>Indicates whether the IAB-MT supports F1-C signalling over DLInformationTransfer and ULInformationTransfer messages via MN when IAB-MT operates in NR-DC and MN is the non-F1-termination node or via SN when IAB-MT operates in NR-DC and SN is the non-F1-termination node, as specified in TS 38.401 [33] and TS 37.340 [7]. | IAB-MT | No | No           | No           |
| <b><i>simultaneousRxTx-IAB-MultipleParents-r17</i></b><br>Indicates the support of simultaneous transmission and reception of an IAB-node from multiple parent nodes.                                                                                                                                                                                               | BC     | No | No           | No           |

## 4.2.16 Sidelink Parameters

### 4.2.16.1 Sidelink Parameters in NR

#### 4.2.16.1.1 Sidelink General Parameters

| Definitions for parameters                                                                                                                                                                                                                                                                                                             | Per | M   | FDD-TDD DIFF | FR1-FR2 DIFF |
|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----|-----|--------------|--------------|
| <b><i>accessStratumReleaseSidelink-r16</i></b><br>Indicates the access stratum release for NR sidelink communication the UE supports as specified in TS 38.331 [9].                                                                                                                                                                    | UE  | Yes | No           | No           |
| <b><i>multipathRelayUE-N3C-r18</i></b><br>Indicates whether L2 multi-path relay UE operation using non-3GPP connection is supported by the UE.                                                                                                                                                                                         | UE  | No  | No           | No           |
| <b><i>multipathRemoteUE-ExtN3C-r19</i></b><br>Indicates whether L2 multi-path remote UE operation using one or more relay UE(s) via non-3GPP connection is supported by the UE.                                                                                                                                                        | UE  | No  | No           | No           |
| <b><i>multipathRemoteUE-N3C-r18</i></b><br>Indicates whether L2 multi-path remote UE operation using non-3GPP connection is supported by the UE.                                                                                                                                                                                       | UE  | No  | No           | No           |
| <b><i>multipathRemoteUE-PC5L2-r18</i></b><br>Indicates whether L2 multi-path remote UE operation using PC5 connection is supported by the UE. A UE supporting this feature shall also indicate support of <i>remoteUE-Operation-L2-r17</i> .                                                                                           | UE  | No  | No           | No           |
| <b><i>pdcp-DuplicationMoreThanOneUuRLC-r18</i></b><br>Indicates whether L2 multi-path remote UE supports PDCP duplication with more than one RLC entity over Uu interface in L2 multi-path relay. A UE supporting this feature shall also indicate support of <i>multipathRemoteUE-PC5L2-r18</i> or <i>multipathRemoteUE-N3C-r18</i> . | UE  | No  | No           | No           |
| <b><i>pdcp-CADuplicationDirectpath-DRB-r18</i></b><br>Indicates whether L2 multi-path remote UE supports CA-based PDCP duplication over DRB using Uu interface in L2 multi-path relay. A UE supporting this feature shall also indicate support of <i>pdcp-DuplicationMoreThanOneUuRLC-r18</i> .                                       | UE  | No  | No           | No           |
| <b><i>pdcp-CADuplicationDirectpath-SRB-r18</i></b><br>Indicates whether L2 multi-path remote UE supports CA-based PDCP duplication over SRB1/2 using Uu interface in L2 multi-path relay. A UE supporting this feature shall also indicate support of <i>pdcp-DuplicationMoreThanOneUuRLC-r18</i> .                                    | UE  | No  | No           | No           |
| <b><i>pdcp-DuplicationMP-SplitDRB-r18</i></b><br>Indicates whether L2 multi-path remote UE supports PDCP duplication over split DRB in L2 multi-path relay. A UE supporting this feature shall also indicate support of <i>multipathRemoteUE-PC5L2-r18</i> or <i>multipathRemoteUE-N3C-r18</i> .                                       | UE  | No  | No           | No           |
| <b><i>pdcp-DuplicationMP-SplitSRB-r18</i></b><br>Indicates whether L2 multi-path remote UE supports PDCP duplication over split SRB1/2 in L2 multi-path relay. A UE supporting this feature shall also indicate support of <i>multipathRemoteUE-PC5L2-r18</i> or <i>multipathRemoteUE-N3C-r18</i> .                                    | UE  | No  | No           | No           |
| <b><i>directpathRLF-RecoveryViaSRB1-r18</i></b><br>Indicates whether L2 multi-path remote UE supports recovery from direct path RLF via split SRB1 using either PC5 connection or non-3GPP connection (if supported) in TS 38.331 [9].                                                                                                 | UE  | No  | No           | No           |
| <b><i>posSIB-ForwardingSupported-r18</i></b><br>Indicates whether the UE, when operating as an NR L2 sidelink relay UE, supports forwarding of posSIBs. The UE capable of operation as an NR L2 sidelink relay UE shall set this field to <i>supported</i> if it is capable of obtaining posSIBs.                                      | UE  | CY  | No           | No           |
| <b><i>relayUE-MH-OperationL2-r19</i></b><br>Indicates whether NR L2 multihop sidelink relay UE operation is supported by the UE. A UE supporting this feature shall also indicate support of <i>relayUE-Operation-L2-r17</i> .                                                                                                         | UE  | No  | No           | No           |
| <b><i>relayUE-Operation-L2-r17</i></b><br>Indicates whether NR L2 sidelink relay UE operation is supported by the UE. A UE supporting this feature shall also indicate support of <i>supportedBandCombinationListSL-RelayDiscovery-r17</i> .                                                                                           | UE  | No  | No           | No           |
| <b><i>relayUE-U2U-OperationL2-r18</i></b><br>Indicates whether L2 U2U sidelink relay UE operation is supported by the UE. A UE supporting this feature shall also indicate support of <i>supportedBandCombinationListSL-U2U-RelayDiscovery-r18</i> .                                                                                   | UE  | No  | No           | No           |

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |    |    |    |    |
|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----|----|----|----|
| <b>remoteUE-IndirectPathAddChangeToldInActiveRelay-r18</b><br>Indicates whether L2 multi-path remote UE supports indirect path addition or indirect path change with target relay UE in RRC_IDLE or RRC_INACTIVE state. A UE supporting this feature shall also indicate support of <i>multipathRemoteUE-PC5L2-r18</i> or <i>multipathRemoteUE-N3C-r18</i> .                                                                                                                                                                                                                                                                                                                                                                                                                | UE | No | No | No |
| <b>remoteUE-MH-OperationL2-r19</b><br>Indicates whether NR L2 multihop sidelink remote UE operation is supported by the UE. A UE supporting this feature shall also indicate support of <i>remoteUE-Operation-L2-r17</i> . A UE acting as the intermediate relay UE also indicates support of this capability.                                                                                                                                                                                                                                                                                                                                                                                                                                                              | UE | No | No | No |
| <b>remoteUE-Operation-L2-r17</b><br>Indicates whether NR L2 sidelink remote UE operation is supported by the UE. A UE supporting this feature shall also indicate support of <i>supportedBandCombinationListSL-RelayDiscovery-r17</i> .                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | UE | No | No | No |
| <b>remoteUE-PathSwitchToldInActiveRelay-r17</b><br>Indicates whether L2 sidelink remote UE supports direct to indirect path switch with target relay in RRC_IDLE or RRC_INACTIVE state. A UE supporting this feature shall also indicate support of <i>remoteUE-Operation-L2-r17</i> .                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | UE | No | No | No |
| <b>remoteUE-U2N-PathSwitchOperationL2-r18</b><br>Indicates whether enhanced NR L2 U2N remote UE operation for intra-gNB path switch and inter-gNB path switch including separate SL-RSRP and SD-RSRP threshold configurations for events X1 and X2 is supported by the UE. A UE supporting this feature shall also indicate support of <i>remoteUE-Operation-L2-r17</i> .                                                                                                                                                                                                                                                                                                                                                                                                   | UE | No | No | No |
| <b>remoteUE-U2U-OperationL2-r18</b><br>Indicates whether L2 U2U sidelink remote UE operation is supported by the UE. A UE supporting this feature shall also indicate support of <i>supportedBandCombinationListSL-U2U-RelayDiscovery-r18</i> .                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | UE | No | No | No |
| <b>sfn-DFN-OffsetSupported-r18</b><br>Indicates whether the UE, when operating as an NR L2 sidelink relay UE, supports indication of the offset between SFN and DFN timelines.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | UE | No | No | No |
| <b>sl-PRS-CommonProcCapabilityPerUE-r18</b><br>Indicates the common SL-PRS processing capability, and comprises the following parameters:<br><ul style="list-style-type: none"> <li>- <i>maxNumOfActiveSL-PRS-Resources-r18</i>: Maximum number of active SL PRS resources across all configured RPs across all bands in a slot assuming maximum SL PRS bandwidth in MHz, which is supported and reported by UE;</li> <li>- <i>maxNumOfSlotsWithActiveSL-PRS-Resources-r18</i>: Maximum number of slots with active SL PRS resources across all configured RPs across all bands assuming maximum SL PRS bandwidth in MHz, which is supported and reported by UE.</li> </ul> A UE supporting this feature shall also support <i>sl-PRS-CommonProcCapabilityPerBand-r18</i> . | UE | No | No | No |
| <b>splitDRB-WithUL-BothDirectIndirect-r18</b><br>Indicates whether L2 multi-path remote UE supports UL PDCP split transmission via both direct path and indirect path for split DRB. A UE supporting this feature shall also indicate support of <i>multipathRemoteUE-PC5L2-r18</i> or <i>multipathRemoteUE-N3C-r18</i> .                                                                                                                                                                                                                                                                                                                                                                                                                                                   | UE | No | No | No |

#### 4.2.16.1.2 Sidelink PDCP Parameters

| Definitions for parameters                                                                                                                               | Per | M  | FDD-TDD DIFF | FR1-FR2 DIFF |
|----------------------------------------------------------------------------------------------------------------------------------------------------------|-----|----|--------------|--------------|
| <b>outOfOrderDeliverySidelink-r16</b><br>Indicates whether UE supports out of order delivery of data to upper layers by PDCP for sidelink.               | UE  | No | No           | No           |
| <b>pdcp-DuplicationDRB-sidelink-r18</b><br>Indicates whether the UE supports CA-based duplication over sidelink DRB as specified in TS 38.323 [16].      | UE  | No | No           | No           |
| <b>pdcp-DuplicationSRB-sidelink-r18</b><br>Indicates whether the UE supports CA-based duplication over sidelink SRB1/2/3 as specified in TS 38.323 [16]. | UE  | No | No           | No           |

## 4.2.16.1.3 Sidelink RLC Parameters

| Definitions for parameters                                                                                                                   | Per | M  | FDD-TDD DIFF | FR1-FR2 DIFF |
|----------------------------------------------------------------------------------------------------------------------------------------------|-----|----|--------------|--------------|
| <b><i>am-WithLongSN-Sidelink-r16</i></b><br>Indicates whether the UE supports AM DRB with 18 bit length of RLC sequence number for sidelink. | UE  | No | No           | No           |
| <b><i>um-WithLongSN-Sidelink-r16</i></b><br>Indicates whether the UE supports UM DRB with 12 bit length of RLC sequence number for sidelink. | UE  | No | No           | No           |

## 4.2.16.1.4 Sidelink MAC Parameters

| Definitions for parameters                                                                                                                                                                                                                                                                 | Per | M  | FDD-TDD DIFF | FR1-FR2 DIFF |
|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----|----|--------------|--------------|
| <b><i>drx-OnSidelink-r17</i></b><br>Indicates whether UE supports sidelink DRX for unicast, groupcast and broadcast.                                                                                                                                                                       | UE  | No | No           | No           |
| <b><i>lcp-RestrictionSidelink-r16</i></b><br>Indicates whether UE supports the selection of logical channels for each SL grant based on RRC configured restriction.                                                                                                                        | UE  | No | No           | No           |
| <b><i>logicalChannelSR-DelayTimerSidelink-r16</i></b><br>Indicates whether the UE supports the logicalChannelSR-DelayTimer as specified in TS 38.321 [8] for sidelink logical channel(s).                                                                                                  | UE  | No | Yes          | No           |
| <b><i>multipleSR-ConfigurationsSidelink-r16</i></b><br>Indicates whether the UE supports 8 SR configurations per PUCCH cell group as specified in TS 38.321 [8] for sidelink.                                                                                                              | UE  | No | Yes          | No           |
| <b><i>multipleConfiguredGrantsSidelink-r16</i></b><br>Indicates whether UE supports 8 sidelink configured grant configurations (including both Type 1 and Type 2) in a resource pool. If absent, for each resource pool, the UE only supports one sidelink configured grant configuration. | UE  | No | No           | No           |
| <b><i>sl-LBT-FailureDetectionRecovery-r18</i></b><br>Indicates whether the UE supports sidelink consistent LBT detection and recovery, as specified in TS 38.321 [8], for shared spectrum channel access.                                                                                  | UE  | No | No           | No           |

## 4.2.16.1.5

## Other PHY parameters

| Definitions for parameters                                                                                                                                                                                                                                                                                                                                                                                                                                                 | Per | M  | FDD-TDD DIFF | FR1-FR2 DIFF |
|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----|----|--------------|--------------|
| <b><i>p0-OLPC-Sidelink-r17</i></b><br>Indicates whether the UE supports the use of P0 parameters (i.e. <i>dl-P0-PSSCH-PSCCH-r17</i> , <i>sl-P0-PSSCH-PSCCH-r17</i> , <i>dl-P0-PSBCH-r17</i> , <i>dl-P0-PSFCH-r17</i> ) for sidelink open loop power control.                                                                                                                                                                                                               | UE  | No | No           | No           |
| <b><i>supportedBandCombinationListSidelinkEUTRA-NR-r16</i></b><br>Defines the supported NR sidelink communication and/or V2X sidelink communication band combinations by the UE. A fallback band combination resulting from the reported sidelink band combination shall be supported by the UE. The UE does not include this field if the UE capability is requested by E-UTRAN (see TS 36.331 [17]) and the network request includes the field <i>eutra-nr-only</i> .    | UE  | No | No           | No           |
| <b><i>supportedBandCombinationListSidelinkNR-r16</i></b><br>Defines the supported joint NR sidelink communication band combinations by the UE. A fallback band combination resulting from the reported sidelink band combination shall be supported by the UE.                                                                                                                                                                                                             | UE  | No | No           | No           |
| <b><i>supportedBandCombinationListSL-NonRelayDiscovery-r17</i></b><br>Defines the supported band combinations of NR sidelink non-relay discovery message transmission and reception by the UE.                                                                                                                                                                                                                                                                             | UE  | No | No           | No           |
| <b><i>supportedBandCombinationListSL-RelayDiscovery-r17</i></b><br>Defines the supported band combinations of NR sidelink relay discovery message transmission and reception by the UE. This parameter is used by the remote UE and relay UE, and for the case of L2 and L3 relay.                                                                                                                                                                                         | UE  | No | No           | No           |
| <b><i>supportedBandCombinationListSL-U2U-RelayDiscovery-r18</i></b><br>Defines the supported band combinations of NR U2U sidelink relay discovery message transmission and reception by the UE. This parameter is used by the remote UE and relay UE, and for the case of L2 and L3 relay.                                                                                                                                                                                 | UE  | No | No           | No           |
| <b><i>supportedBandListSidelink-r16</i></b><br>Indicates frequency bands supported for NR sidelink communications and parameters supported for each frequency band, as specified in 4.2.16.1.6. If a band is included in <i>supportedBandCombinationListSL-NonRelayDiscovery-r17</i> , <i>supportedBandCombinationListSL-RelayDiscovery-r17</i> or <i>supportedBandCombinationListSL-U2U-RelayDiscovery-r18</i> , the band supports non-relay/relay NR sidelink discovery. | UE  | No | No           | No           |

## 4.2.16.1.6

*BandSidelink* Parameters

| Definitions for parameters                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | Per  | M  | FDD-TDD DIFF | FR1-FR2 DIFF |

| <p><b>sl-CA-Communication-r18</b><br/>Indicates whether the UE supports NR SL communication with SL CA. This capability signalling comprises the following parameters:</p> <ul style="list-style-type: none"> <li>- <i>numberOfCarriers-r18</i> indicates the number of SL carriers that a UE supports for transmitting/receiving PSCCH/PSSCH/PSFCH simultaneously. The maximum number of simultaneous PSCCH/PSSCH TX equal to <i>numberOfCarriers-r18</i>, 1 TX per carrier;</li> <li>- <i>numberOfPSCCH-DecodeValueZ-r18</i> indicates the number of value Z for PSCCH decoding. The UE can receive <math>Z^*</math> floor (<math>N_{RB,i}/10</math> RBs) PSCCH in a slot on <math>i^{th}</math> carrier of the carriers.</li> <li>- <i>totalBandwidth-r18</i> indicates the total bandwidth that a UE can aggregate.</li> </ul> <p>For the number of non-overlapped PRBs over aggregated SL carriers, the UE can attempt to decode <math>N_{RB,i}</math> non-overlapping RBs in a slot on <math>i^{th}</math> carrier of the carriers. <math>N_{RB,i}</math> is the number of RBs defined per channel bandwidth of <math>i^{th}</math> carrier in TS 38.101-1 [2] Table 5.3.2-1 for FR1. The UE can adjust the transmission power of the PSCCH/PSSCH/PSFCH across aggregated carriers such that its total transmission power does not exceed the maximum transmission power.</p> <p>A UE supporting this feature shall also indicate support of <i>sl-TransmissionMode2-r16</i> and <i>psfch-FormatZeroSidelink-r16</i>.</p> <p>NOTE: This feature is supported only in a band indicated with the PC5 interface in TS 38.101-1 [2] Table 5.2E.1A-1 for FR1.</p> | Band | No | N/A | N/A |
| <p><b>sl-CA-PSFCH-r18</b><br/>Indicates whether the UE supports PSFCH for SL CA. This capability comprises the following parameters:</p> <ul style="list-style-type: none"> <li>- <i>rx-PSFCH-Resource-r18</i> indicates the number of PSFCH resources that a UE supports to receive in a slot over all aggregated SL carriers. A UE is capable of receiving at least one PSFCH resource on each of the aggregated carriers in a slot. It is up to UE implementation which PSFCH(s) to receive;</li> <li>- <i>tx-PSFCH-Resource-r18</i> indicates the number of PSFCH resources that a UE supports to transmit in a slot over all aggregated SL carriers according to PSFCH procedures. A UE is capable of transmitting at least one PSFCH resource on each of the aggregated carriers.</li> </ul> <p>A UE supporting this feature shall also indicate support of <i>sl-CA-Communication-r18</i>.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | Band | No | N/A | N/A |
| <p><b>sl-CA-Synchronization-r18</b><br/>Indicates whether the UE supports transmitting S-SSB on one selected or all candidate synchronization carriers with the same sync reference from Set-B and receiving S-SSB from all candidate synchronization carriers with the same sync reference from Set-B. The UE can adjust the transmission power of the S-SSB across aggregated carriers such that its total transmission power does not exceed the maximum transmission power.</p> <p>A UE supporting this feature shall also indicate support of <i>sl-CA-Communication-r18</i> and <i>sync-Sidelink-r16</i>.</p> <p>NOTE 1: Option of UE selection of one selected SL synchronization carrier with the same sync reference from Set-B is not based on limited Tx capability.</p> <p>NOTE 2: Receiving S-SSB from all candidate synchronization carriers with the same sync reference from Set-B does not require simultaneous reception of S-SSB on all candidate synchronization carriers with the same sync reference from Set-B.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | Band | No | N/A | N/A |
| <p><b>sl-DynamicSharingTxRx-r18</b><br/>Indicates whether the UE supports avoidance of NR PSCCH/PSSCH/PSFCH overlapping with EUTRA SL resources in dynamic resource pool sharing using LTE sidelink resource reservation information in NR mode2 resource (re)selection. The UE also supports NR sidelink TXs and RXs in a resource pool in 15kHz and 30kHz SCSs and uses the SCS that is (pre)configured for a SL BWP. This does not imply that two different SCSs can be (pre)configured simultaneously in a SL BWP. A UE supporting this feature shall also indicate support of <i>sl-TransmissionMode2-r16</i>, <i>psfch-FormatZeroSidelink-r16</i> and short-term time-scale TDM for in-device coexistence.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | Band | No | N/A | N/A |

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |      |    |     |     |

| <p><b>sl-Reception-r16</b></p> <p>Indicates whether receiving NR sidelink communication is supported. If supported, this parameter indicates the support of the capabilities and includes the parameters as follows:</p> <ul style="list-style-type: none"> <li>- UE can receive NR PSCCH/PSSCH.</li> <li>- <i>harq-RxProcessSidelink</i>, which indicates the number of sidelink HARQ processes across all links that the UE supports for NR PSSCH reception. Value n16 corresponds to 16, n24 corresponds to 24, and so on.</li> <li>- <i>pscch-RxSidelink</i>, which indicates the number of PSCCH that the supports for reception in a slot. Value value1 corresponds to floor (<math>N_{RB} / 10</math> RBs), value2 corresponds to <math>2 * \text{floor} (N_{RB} / 10 \text{ RBs})</math>;</li> <li>- UE can attempt to decode <math>N_{RB}</math> non-overlapping RBs per slot.</li> <li>- UE supports reception of PSSCH according to the 64QAM MCS table.</li> <li>- UE supports PT-RS reception in FR2.</li> <li>- <i>scs-CP-PatternRxSidelink</i>, which indicates the subcarrier spacing with normal CP and the corresponding channel bandwidth that the UE supports for NR sidelink communication reception. Value scs-15kHz corresponds to 15kHz, scs-30kHz corresponds to 30kHz, and so on. It is mandatory for UE to support reception using 30 kHz subcarrier spacing with normal CP in FR1, and 120 kHz subcarrier spacing with normal CP FR2. For FR1, the bits in scs-XXkHz starting from the leading / leftmost bit indicate 5, 10, 15, 20, 25, 30, 40, 50, 60, 70, 80, 90 and 100MHz. For FR2, the bits in scs-XXkHz starting from the leading / leftmost bit indicate 50, 100 and 200MHz. This capability is not required to be signalled in a band indicated with only the PC5 interface in TS 38.101-1 [2], Table 5.2E.1-1. Otherwise, it is mandatory. For a band indicated with only the PC5 interface in 38.101-1 [2], Table 5.2E.1-1, UE supports reception using 30 kHz subcarrier spacing with normal CP in FR1, 120 kHz subcarrier spacing with normal CP in FR2.</li> <li>- <i>extendedCP-RxSidelink</i>, which indicates whether the UE supports 60 kHz subcarrier spacing with extended CP length for NR sidelink communication reception. This capability is not required to be signalled in a band indicated with only the PC5 interface in TS 38.101-1 [2], Table 5.2E.1-1. Otherwise, it is mandatory.</li> <li>- UE supports 14-symbol SL slot with all DMRS patterns corresponding to number of PSSCH symbols = {12, 9} for slots with and without PSFCH. If UE signals support of extended CP, support 12-symbol SL slot with all DMRS patterns corresponding to number of PSSCH symbols = {10,7} for slots with and without PSFCH.</li> </ul> <p>NOTE 1: <math>N_{RB}</math> is the number of RBs defined per channel bandwidth by RAN4 in TS 38.101-1 [2], Table 5.3.2-1 for FR1 and TS 38.101-2 [3], Table 5.3.2.-1 for FR2.</p> <p>NOTE 2: Configuration by NR Uu is not required to be supported in a band indicated with only the PC5 interface in TS 38.101-1 [2] Table 5.2E.1-1.</p> <p>Support of this feature is mandatory if UE supports NR sidelink.<br/>If a band is included in <i>supportedBandCombinationListSL-NonRelayDiscovery-r17</i>, <i>supportedBandCombinationListSL-RelayDiscovery-r17</i> or <i>supportedBandCombinationListSL-U2U-RelayDiscovery-r18</i>, it indicates whether receiving non-relay/relay NR sidelink discovery is supported.</p> | Band | CY | N/A | N/A      |

**sl-TransmissionMode1-r16**

Indicates whether transmitting NR sidelink mode 1 scheduled by Uu is supported. If supported, this parameter indicates the support of the capabilities and includes the parameters as follows:

- UE can transmit PSCCH/PSSCH using configured grant type 1. For NR sidelink mode 1 scheduled by NR Uu, UE can additionally transmit PSCCH/PSSCH using dynamic scheduling or configured grant type 2. Up to 8 configured grants can be configured for a UE.
- *harq-TxProcessModeOneSidelink*, which indicates the number of sidelink HARQ processes across all links that the UE supports for NR PSSCH transmission using mode 1, including those for configured grants. Value *n8* corresponds to 8, *n16* corresponds to 16, and so on.
- UE can transmit PSSCH according to the normal 64QAM MCS OFDM table.
- UE supports PT-RS transmission in FR2.
- For NR sidelink mode 1 scheduled by NR Uu, UE can monitor DCI format 3\_0 for NR sidelink dynamic scheduling and configured grant type 2 on the same carrier as sidelink.
- *scs-CP-PatternTxSidelinkModeOne*, which indicates the subcarrier spacing with normal CP and the corresponding bandwidth that the UE supports for NR sidelink communication transmission using NR sidelink mode 1. Value *scs-15kHz* corresponds to 15kHz, *scs-30kHz* corresponds to 30kHz, and so on. For FR1, the bits in *scs-XXkHz* starting from the leading / leftmost bit indicate 5, 10, 15, 20, 25, 30, 40, 50, 60, 70, 80, 90 and 100MHz. For FR2, the bits in *scs-XXkHz* starting from the leading / leftmost bit indicate 50, 100 and 200MHz. For a band indicated with only the PC5 interface in TS 38.101-1 [2], Table 5.2E.1-1, UE supports transmission using at least 30 kHz subcarrier spacing with normal CP in FR1, at least 120 kHz subcarrier spacing with normal CP in FR2. Otherwise, the reported subcarrier spacing with normal CP and the corresponding bandwidth that the UE supports shall be the same as reported for UL via *channelBWs-UL*.
- *extendedCP-TxSidelink*, which indicates whether the UE supports 60 kHz subcarrier spacing with extended CP length for NR sidelink communication transmission using mode 1. For a band indicated with only the PC5 interface in TS 38.101-1 [2], Table 5.2E.1-1, the reported subcarrier spacing with normal CP and the corresponding bandwidth that the UE supports shall be the same as reported for UL via *channelBWs-UL*.
- UE supports 14-symbol SL slot with all DMRS patterns corresponding to the number of PSSCH symbols = {12, 9} for slots with and without PSFCH. If UE signals support of extended CP, support 12-symbol SL slot with all DMRS patterns corresponding to the number of PSSCH symbols = {10,7} for slots with and without PSFCH.
- UE supports downlink pathloss based open loop power control for NR sidelink mode 1 scheduled by NR Uu if the band is not indicated with only the PC5 interface in TS 38.101-1 [2], Table 5.2E.1-1. Otherwise, it is not supported.
- *harq-ReportOnPUCCH*, which indicates whether UE supports reporting sidelink HARQ-ACK to gNB via PUCCH and PUSCH when it is operating in NR sidelink mode 1, for NR sidelink mode 1 scheduled by NR Uu, if the band is indicated with only the PC5 interface in TS 38.101-1 [2], Table 5.2E.1-1. Otherwise, it is mandatory.

NOTE: Random selection in the exceptional pool is supported.

Support of this feature is mandatory if UE supports NR sidelink in licensed spectrum where gNB is operating on or managing that spectrum, except for A2X services. If a band is included in *supportedBandCombinationListSL-NonRelayDiscovery-r17*, *supportedBandCombinationListSL-RelayDiscovery-r17* or *supportedBandCombinationListSL-U2U-RelayDiscovery-r18*, it indicates whether receiving non-relay/relay NR sidelink discovery is supported.

| <p>Indicates whether transmitting NR sidelink mode 2 is supported. If supported, this parameter indicates the support of the capabilities and includes the parameters as follows:</p> <ul style="list-style-type: none"> <li>- UE can transmit PSCCH/PSSCH using NR sidelink mode 2 configured by NR Uu or preconfiguration.</li> <li>- <i>harq-TxProcessModeTwoSidelink</i>, which indicates the number of sidelink HARQ processes across all links that the UE supports for NR PSSCH transmission using mode 2. Value n8 corresponds to 8, n16 corresponds to 16.</li> <li>- UE can transmit PSSCH according to the normal 64QAM MCS table.</li> <li>- UE supports PT-RS transmission in FR2.</li> <li>- UE can perform mode 2 sensing and resource allocation operations</li> <li>- <i>scs-CP-PatternTxSidelinkModeTwo</i>, which indicates UE can transmit using the subcarrier spacing and CP length it reports in <i>sl-Reception-r16</i>. This capability is not required to be signalled in a band indicated with only the PC5 interface in TS 38.101-1 [2], Table 5.2E.1-1. Otherwise, it is mandatory. For a band indicated with only the PC5 interface in TS 38.101-1 [2], Table 5.2E.1-1, UE supports transmission using 30 kHz subcarrier spacing with normal CP in FR1, 120 kHz subcarrier spacing with normal CP in FR2.</li> <li>- UE supports 14-symbol SL slot with all DMRS patterns corresponding to the number of PSSCH symbols = {12, 9} for slots with and without PSFCH. If UE signals support of extended CP, support 12-symbol SL slot with all DMRS patterns corresponding to the number of PSSCH symbols = {10,7} for slots with and without PSFCH.</li> <li>- <i>dl-openLoopPC-Sidelink</i>, which indicates whether UE supports DL pathloss based open loop power control when mode 2 is configured by NR Uu, if the band is indicated with only the PC5 interface in TS 38.101-1 [2], Table 5.2E.1-1. Otherwise, it is mandatory.</li> </ul> <p>This field is only applicable if the UE supports <i>sl-Reception-r16</i>.</p> <p>NOTE 1: Random selection in the exceptional pool is supported.</p> <p>NOTE 2: Configuration by NR Uu is not required to be supported in a band indicated with only the PC5 interface in TS 38.101-1 [2] Table 5.2E.1-1.</p> <p>Support of this feature is mandatory if UE supports NR sidelink.</p> |      |    |     |     |

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |      |    |     |          |
|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------|----|-----|----------|
| <p><b><i>sl-TransmissionMode2-RandomResourceSelection-r17</i></b><br/>Indicates transmitting NR sidelink mode 2 with random resource selection is supported. If supported, this parameter indicates the support of the capabilities and includes the parameters as follows:</p> <ul style="list-style-type: none"> <li>- UE can transmit PSCCH/PSSCH using NR sidelink mode 2 with random resource selection configured by NR Uu or preconfiguration.</li> <li>- <i>harq-TxProcessModeTwoSidelink-r17</i>, which indicates the number of sidelink HARQ processes across all links that the UE supports for NR PSSCH transmission using mode 2. Value n8 corresponds to 8, n16 corresponds to 16.</li> <li>- UE can transmit PSSCH according to the normal 64QAM MCS table.</li> <li>- UE supports PT-RS transmission in FR2.</li> <li>- <i>scs-CP-PatternTxSidelinkModeTwo-r17</i>, which indicates the subcarrier spacing with normal CP and the corresponding bandwidth that the UE supports for NR sidelink communication transmission using NR sidelink mode 2 with random resource selection. Value scs-15kHz corresponds to 15kHz, scs-30kHz corresponds to 30kHz, and so on. For FR1, the bits in scs-XXkHz starting from the leading / leftmost bit indicate 5, 10, 15, 20, 25, 30, 40, 50, 60, 70, 80, 90 and 100MHz. For FR2, the bits in scs-XXkHz starting from the leading / leftmost bit indicate 50, 100 and 200MHz. UE can transmit using the subcarrier spacing and CP length it reports in <i>sl-Reception-r16</i>. This capability is not required to be signalled in a band indicated with only the PC5 interface in TS 38.101-1 [2], Table 5.2E.1-1. Otherwise, it is mandatory. For a band indicated with only the PC5 interface in TS 38.101-1 [2], Table 5.2E.1-1, UE supports transmission using 30 kHz subcarrier spacing with normal CP in FR1, 120 kHz subcarrier spacing with normal CP in FR2.</li> <li>- <i>extendedCP-Mode2Random-r17</i>, which indicates whether the UE supports 60 kHz subcarrier spacing with extended CP length for NR sidelink communication transmission using mode 2 with random resource selection.</li> <li>- UE supports 14-symbol SL slot with all DMRS patterns corresponding to the number of PSSCH symbols = {12, 9} for slots with and without PSFCH. If UE signals support of extended CP, support 12-symbol SL slot with all DMRS patterns corresponding to the number of PSSCH symbols = {10,7} for slots with and without PSFCH.</li> <li>- <i>dl-openLoopPC-Sidelink-r17</i>, which indicates whether UE supports DL pathloss based open loop power control when mode 2 is configured by NR Uu, if the band is indicated with only the PC5 interface in TS 38.101-1 [2], Table 5.2E.1-1. Otherwise, it is mandatory.</li> </ul> <p>UE supporting this feature shall support receiving NR sidelink of S-SSB or indicate support of <i>sync-Sidelink-r16</i> or <i>sync-Sidelink-v1710</i>.<br/>If a band is included in <i>supportedBandCombinationListSL-NonRelayDiscovery-r17</i>, <i>supportedBandCombinationListSL-RelayDiscovery-r17</i> or <i>supportedBandCombinationListSL-U2U-RelayDiscovery-r18</i>, it indicates whether transmitting NR sidelink mode 2 with random resource selection is supported for non-relay/relay NR sidelink discovery.</p> <p>NOTE 1: Configuration by NR Uu is not required to be supported in a band indicated with only the PC5 interface in TS 38.101-1 [2] Table 5.2E.1-1.</p> <p>NOTE 2: If UE reports more than one features of <i>sl-TransmissionMode2-r16</i>, <i>sl-TransmissionMode2-PartialSensing-r17</i> and <i>sl-TransmissionMode2-RandomResourceSelection-r17</i>, the reported value of <i>harq-TxProcessModeTwoSidelink</i> in each feature is the total number of SL processes and the same among those features.</p> <p>NOTE 3: Random selection in the exceptional pool is supported.</p> | Band | No | N/A | N/A      |
| <p><b><i>sl-Tx-256QAM-r16</i></b><br/>Indicates UE can transmit PSSCH according to the 256QAM MCS table. This field is only applicable if the UE supports at least one of <i>sl-TransmissionMode1-r16</i> and <i>sl-TransmissionMode2-r16</i>.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | Band | No | N/A | FR1 only |
| <p><b><i>sl-UE-COT-Sharing-r18</i></b><br/>Indicates whether the UE supports using <i>ue-ToUE-COT-SharingED-Threshold-r18</i> for Type 1 channel access for UE to UE COT sharing and indicating COT sharing information in SCI. The capability is only expected for a band where shared spectrum channel access must be used.<br/>A UE supporting this feature shall also indicate support of <i>sl-DynamicChannelAccess-r18</i>.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | Band | No | N/A | N/A      |

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |      |    |     |     |

| <b><i>rx-Sidelink-r16</i></b><br>Indicates whether the UE supports sidelink reception on the band.<br>For NR sidelink, this field is only applicable if the UE supports <i>sl-Reception-r16</i> on the band.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | Band | No | N/A          | N/A          |
| <b><i>rx-sidelinkPSFCH-r17</i></b><br>Indicates whether UE can receive PSFCH with HARQ-ACK information in NR sidelink and also the maximum number of PSFCH(s) resources N in a slot. If UE reports more than one of <i>psfch-FormatZeroSidelink-r16</i> , <i>rx-sidelinkPSFCH-r17</i> and <i>rx-IUC-Scheme2-Mode2Sidelink-r17</i> , the reported value N is the total number and the same among <i>psfch-FormatZeroSidelink-r16</i> , <i>rx-sidelinkPSFCH-r17</i> and <i>rx-IUC-Scheme2-Mode2Sidelink-r17</i> .<br><br>UE supporting this feature shall support receiving NR sidelink of S-SSB and at least one of <i>sl-TransmissionMode1-r16</i> or <i>sl-TransmissionMode2-r16</i> or <i>sl-TransmissionMode2-RandomResourceSelection-r17</i> or <i>sl-TransmissionMode2-PartialSensing-r17</i> .<br><br>NOTE: Configuration by NR Uu is not required to be supported in a band indicated with only the PC5 interface in TS 38.101-1 [2] Table 5.2E.1-1. | FS   | No | N/A          | N/A          |
| <b><i>sl-CrossCarrierScheduling-r16</i></b><br>Indicates whether the UE supports monitoring DCI format 3_0 on a different carrier from sidelink for NR sidelink dynamic scheduling and configured grant type 2. If the UE indicates support for <i>sl-TransmissionMode1-r16</i> in a band indicated with only the PC5 interface in Table 5.2E.1-1 of TS 38.101-1 [2], the UE shall indicate that <i>sl-CrossCarrierScheduling-r16</i> is supported for a band combination with that band.<br>For NR sidelink, this field is only applicable if the UE supports <i>sl-TransmissionMode1-r16</i> on the band.                                                                                                                                                                                                                                                                                                                                                 | Band | No | N/A          | N/A          |

| <b><i>sl-TransmissionMode2-PartialSensing-r17</i></b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | FS | No | N/A | N/A |

| <p>Indicates transmitting NR sidelink mode 2 with partial sensing is supported. If supported, this parameter indicates the support of the capabilities and includes the parameters as follows:</p> <ul style="list-style-type: none"> <li>- UE can transmit PSCCH/PSSCH using NR sidelink mode 2 with partial sensing configured by NR Uu or preconfiguration.</li> <li>- <i>harq-TxProcessModeTwoSidelink-r17</i>, which indicates the number of sidelink HARQ processes across all links that the UE supports for NR PSSCH transmission using mode 2. Value n8 corresponds to 8, n16 corresponds to 16.</li> <li>- UE can transmit PSSCH according to the normal 64QAM MCS table.</li> <li>- UE supports PT-RS transmission in FR2.</li> <li>- UE can perform periodic-based partial sensing and resource allocation operation.</li> <li>- UE can perform contiguous partial sensing and resource allocation operation.</li> <li>- <i>scs-CP-PatternTxSidelinkModeTwo-r17</i>, the subcarrier spacing with normal CP and the corresponding bandwidth that the UE supports for NR sidelink communication transmission using NR sidelink mode 2 with partial sensing. Value <i>scs</i>-15kHz corresponds to 15kHz, <i>scs</i>-30kHz corresponds to 30kHz, and so on. For FR1, the bits in <i>scs</i>-XXkHz starting from the leading / leftmost bit indicate 5, 10, 15, 20, 25, 30, 40, 50, 60, 70, 80, 90 and 100MHz. For FR2, the bits in <i>scs</i>-XXkHz starting from the leading / leftmost bit indicate 50, 100 and 200MHz. This capability is not required to be signalled in a band indicated with only the PC5 interface in TS 38.101-1 [2], Table 5.2E.1-1. Otherwise, it is mandatory. For a band indicated with only the PC5 interface in TS 38.101-1 [2], Table 5.2E.1-1, UE supports transmission using 30 kHz subcarrier spacing with normal CP in FR1, 120 kHz subcarrier spacing with normal CP in FR2.</li> <li>- <i>extendedCP-Mode2PartialSensing-r17</i>, which indicates whether the UE supports 60 kHz subcarrier spacing with extended CP length for NR sidelink communication transmission using mode 2 with partial sensing.</li> <li>- UE supports 14-symbol SL slot with all DMRS patterns corresponding to the number of PSSCH symbols = {12, 9} for slots with and without PSFCH. If UE signals support of extended CP, support 12-symbol SL slot with all DMRS patterns corresponding to the number of PSSCH symbols = {10,7} for slots with and without PSFCH.</li> <li>- <i>dl-openLoopPC-Sidelink-r17</i>, which indicates whether UE supports DL pathloss based open loop power control when mode 2 is configured by NR Uu, if the band is indicated with only the PC5 interface in TS 38.101-1 [2], Table 5.2E.1-1. Otherwise, it is mandatory.</li> </ul> <p>UE supporting this feature shall support receiving NR sidelink of S-SSB or indicate support of <i>sync-Sidelink-r16</i> or <i>sync-Sidelink-v1710</i>.</p> <p>If a band combination is included in <i>supportedBandCombinationListSL-NonRelayDiscovery-r17</i>, <i>supportedBandCombinationListSL-RelayDiscovery-r17</i> or <i>supportedBandCombinationListSL-U2U-RelayDiscovery-r18</i>, it indicates whether transmitting NR sidelink mode 2 with partial sensing is supported for non-relay/relay NR sidelink discovery.</p> <p>NOTE 1: Configuration by NR Uu is not required to be supported in a band indicated with only the PC5 interface in TS 38.101-1 [2] Table 5.2E.1-1.</p> <p>NOTE 2: If UE reports more than one feature of <i>sl-TransmissionMode2-r16</i>, <i>sl-TransmissionMode2-PartialSensing-r17</i> and <i>sl-TransmissionMode2-RandomResourceSelection-r17</i>, the reported value of <i>harq-TxProcessModeTwoSidelink</i> in each FG is the total number of SL processes and the same among those FGs.</p> <p>NOTE 3: Random selection in the exceptional pool is supported.</p> |    |    |     |     |

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |      |    |     |     |

| <b><i>gnb-ScheduledMode3SidelinkEUTRA-r16</i></b><br>Indicates whether transmitting V2X sidelink communication mode 3 scheduled by NR Uu is supported. If supported, this parameter indicates the support of the capabilities and includes the parameters as follows: <ul style="list-style-type: none"> <li>- the UE can be scheduled by gNB using DCI format 3_1 for V2X sidelink mode 3 transmission.</li> <li>- <i>gnb-ScheduledMode3DelaySidelinkEUTRA</i>, which indicates the minimum value UE supports for the additional time indicated in the NR DCI scheduling V2X sidelink mode 3. Value ms0 corresponds to 0 ms, ms0dot25 corresponds to 0.25 ms, and so on.</li> </ul> This field is only applicable if the UE supports V2X sidelink communication. | Band | No | N/A          |
| <b><i>gnb-ScheduledMode4SidelinkEUTRA-r16</i></b><br>Indicates whether the UE can be scheduled by gNB for V2X sidelink mode 4 transmission. This field is only applicable if the UE supports V2X sidelink communication.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | Band | No | N/A          |

## 4.2.17 SON parameters

| Definitions for parameters                                                                                                                                                                                                         | Per | M  | FDD-TDD DIFF | FR1-FR2 DIFF |
|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----|----|--------------|--------------|
| <b><i>onDemandSI-Report-r17</i></b><br>Indicates whether the UE supports delivery of on-Demand SI information upon request from the network as specified in TS 38.331 [9].                                                         | UE  | No | No           | No           |
| <b><i>pscell-MHI-Report-r17</i></b><br>Indicates whether the UE supports the storage of PSCell mobility history information and the reporting in <i>UEInformationResponse</i> message as specified in TS 38.331 [9].               | UE  | No | No           | No           |
| <b><i>rach-Report-r16</i></b><br>Indicates whether the UE supports delivery of RA report upon request from the network.                                                                                                            | UE  | No | No           | No           |
| <b><i>rlfReportCHO-r17</i></b><br>Indicates whether the UE supports RLF-Report for conditional handover.                                                                                                                           | UE  | No | No           | No           |
| <b><i>rlfReportCondHandoverWithCandSCG-r19</i></b><br>Indicates whether the UE supports RLF-Report for conditional handover with candidate SCG. A UE supporting this feature shall also indicate support <i>rlfReportCHO-r17</i> . | UE  | No | No           | No           |
| <b><i>rlfReportDAPS-r17</i></b><br>Indicates whether the UE supports RLF-Report for DAPS handover.                                                                                                                                 | UE  | No | No           | No           |
| <b><i>rlfReportLTM-r19</i></b><br>Indicates whether the UE supports RLF-Report for MCG LTM.                                                                                                                                        | UE  | No | No           | No           |
| <b><i>spr-Report-r18</i></b><br>Indicates whether the UE supports the storage and delivery of Successful PSCell Change/Addition Report upon request from the network.                                                              | UE  | No | No           | No           |
| <b><i>success-HO-Report-r17</i></b><br>Indicates whether the UE supports the storage and delivery of Successful Handover Report upon request from the network as specified in TS 38.331 [9].                                       | UE  | No | No           | No           |
| <b><i>successIRAT-HO-Report-r18</i></b><br>Indicates whether the UE supports the storage and delivery of Successful Handover Report for Handover from NR to E-UTRA, upon request from the network.                                 | UE  | No | No           | No           |
| <b><i>twoStepRACH-Report-r17</i></b><br>Indicates whether the UE supports the storage and delivery of 2-step RACH related information upon request from the network as specified in TS 38.331 [9].                                 | UE  | No | No           | No           |

## 4.2.18 UE-based performance measurement parameters

| Definitions for parameters                                                                                                                                                                                                                                                                                                                                                                                   | Per | M  | FDD-TDD DIFF | FR1-FR2 DIFF |
|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----|----|--------------|--------------|
| <b>barometerMeasReport-r16</b><br>Indicates whether the UE supports uncompensated barometric pressure measurement reporting upon request from the network.                                                                                                                                                                                                                                                   | UE  | No | No           | No           |
| <b>earlyMeasLog-r17</b><br>Indicates whether the UE supports the storage of Early Measurement Logging in logged measurements and the reporting upon request from the network as specified in TS 38.331 [9].                                                                                                                                                                                                  | UE  | No | No           | No           |
| <b>excessPacketDelay-r17</b><br>Indicates whether the UE supports the UL PDCP excess packet delay measurement per DRB as specified in TS 38.314 [26]. A UE that supports the UL PDCP excess packet delay measurement shall also support the measurement configuration and reporting as specified in TS 38.331 [9].                                                                                           | UE  | No | No           | No           |
| <b>geoAreaScopeChecking-r19</b><br>Indicates whether the UE supports geographic area scope checking for logged MDT. A UE supporting this feature shall also indicate support of <i>loggedMeasurements-r16</i> and <i>nonTerrestrialNetwork-r17</i> .                                                                                                                                                         | UE  | No | No           | No           |
| <b>gnss-Location-r16</b><br>Indicates whether the UE is equipped with a GNSS or A-GNSS receiver that may be used to provide detailed or (for NTN case only) coarse location information along with SON, MDT, and NTN related measurements in RRC_CONNECTED, RRC_IDLE and RRC_INACTIVE state. A UE shall set this field to <i>supported</i> if it indicates the support of <i>nonTerrestrialNetwork-r17</i> . | UE  | CY | No           | No           |
| <b>immMeasBT-r16</b><br>Indicates whether the UE supports Bluetooth measurements in RRC_CONNECTED state.                                                                                                                                                                                                                                                                                                     | UE  | No | No           | No           |
| <b>immMeasWLAN-r16</b><br>Indicates whether the UE supports WLAN measurements in RRC_CONNECTED state.                                                                                                                                                                                                                                                                                                        | UE  | No | No           | No           |
| <b>loggedMDT-PNI-NPN-r18</b><br>Indicates whether the UE supports Logged MDT for PNI-NPN(s).                                                                                                                                                                                                                                                                                                                 | UE  | No | No           | No           |
| <b>loggedMDT-Slicing-r19</b><br>Indicates whether the UE supports Logged MDT for Slicing.                                                                                                                                                                                                                                                                                                                    | UE  | No | No           | No           |

| <b>ul-MeasurementReportAppLayer-Seg-r17</b><br>Indicates whether the UE supports RRC segmentation of the MeasurementReportAppLayer message in UL over SRB4 and SRB5 (if supported), as specified in TS 38.331 [9].                                                                                                                                                                                                                                                                                                     | UE  | No | No           | No           |

## 4.2.21 RedCap Parameters

### 4.2.21.1 Definition of RedCap UE

RedCap UE is the UE with reduced capability:

- The maximum bandwidth is 20 MHz for FR1, and is 100 MHz for FR2. UE features and corresponding capabilities related to UE bandwidths wider than 20 MHz in FR1 or wider than 100 MHz in FR2 are not supported by RedCap UEs;

- The mandatory support (with capability signalling, *enhancedChannelRaster-r18*) of the channel raster as specified in TS 38.101-1 [2], clause 5.4I, for all bands supported by the UE;
- The maximum mandatory supported DRB number is 8;
- The mandatory supported PDCP SN length is 12 bits while 18 bits being optional;
- The mandatory supported RLC AM SN length is 12 bits while 18 bits being optional;
- For FR1, 1 DL MIMO layer if 1 Rx branch is supported, and 2 DL MIMO layers if 2 Rx branches are supported; for FR2, either 1 or 2 DL MIMO layers can be supported, while 2 Rx branches are always supported. For FR1 and FR2, UE features and corresponding capabilities related to more than 2 UE Rx branches or more than 2 DL MIMO layers, as well as UE features and capabilities related to more than 1 UE Tx branch or more than 1 UL MIMO layer are not supported by RedCap UEs;
- CA, MR-DC, DAPS, CPAC, IAB (i.e., the RedCap UE is not expected to act as IAB node), and NCR (i.e., the RedCap UE is not expected to act as NCR-MT) related UE features and corresponding capabilities are not supported by RedCap UEs. All other feature groups or components of the feature groups as captured in TR 38.822 [24] as well as capabilities specified in this specification remain applicable for RedCap UEs same as other UEs, unless indicated otherwise.

#### 4.2.21.2 General parameters

| Definitions for parameters                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | Per | M  | FDD-TDD DIFF |

## 4.2.22 eRedCap Parameters

### 4.2.22.1 Definition of eRedCap UE

eRedCap UE is the UE with reduced peak data rate and, with or without reduced baseband bandwidth in FR1:

- The maximum bandwidth is 20 MHz for FR1. UE features and corresponding capabilities related to UE bandwidths wider than 20 MHz in FR1 are not supported by eRedCap UEs. eRedCap UEs do not support operation in FR2 and in FR1 60kHz SCS.
- The mandatory support (with capability signalling, *enhancedChannelRaster-r18*) of the channel raster as specified in TS 38.101-1 [2], clause 5.4I, for all bands supported by the UE;
- The maximum mandatory supported DRB number is 8;
- The mandatory supported PDCP SN length is 12 bits while 18 bits being optional;
- The mandatory supported RLC AM SN length is 12 bits while 18 bits being optional;
- 1 DL MIMO layer if 1 Rx branch is supported, and 2 DL MIMO layers if 2 Rx branches are supported. UE features and corresponding capabilities related to more than 2 UE Rx branches or more than 2 DL MIMO layers, as well as UE features and capabilities related to more than 1 UE Tx branch or more than 1 UL MIMO layer are not supported by eRedCap UEs;
- CA, MR-DC, DAPS, CPAC, IAB (i.e., the eRedCap UE is not expected to act as IAB node), and NCR (i.e., the eRedCap UE is not expected to act as NCR-MT) related UE features and corresponding capabilities are not supported by eRedCap UEs. All other feature groups or components of the feature groups as captured in TR 38.822 [24] as well as capabilities specified in this specification remain applicable for eRedCap UEs same as other UEs, unless indicated otherwise.

4.2.22.2 General parameters

| Definitions for parameters                                                                                                                                                                                                                                                                                                                                                                             | Per | M  | FDD-TDD<br>DIFF | FR1-<br>FR2<br>DIFF |

## 4.2.23 NCR Parameters

### 4.2.23.1 Mandatory NCR-MT features

Table 4.2.23.1-1, Table 4.2.23.1-2 and Table 4.2.23.1-3 capture feature groups, which are mandatory for an NCR-MT. In addition, it is mandatory for an NCR-MT to support the following features:

- Cell barring based on *ncr-Support*, as specified in TS 38.331 [9].

- Inclusion of *ncr-NodeIndication*, as specified in TS 38.331 [9].

CA, MR-DC, handover (e.g. CHO, DAPS, CPAC, etc), unlicensed band, HPUE Duty cycle, MPR related UE features and corresponding capabilities are not supported by an NCR-MT. 7.5kHz UL raster shift is not applicable to NCR-MT. All other feature groups or components of the feature groups as captured in TR 38.822 [24] as well as capabilities specified in this specification are optional for an NCR-MT, unless indicated otherwise.

Table 4.2.23.1-1: Layer-1 mandatory features for NCR-MT

| Features                                             | Index | Feature group                                    | Components                                                                                                                                                                                                                                                                                                                                                                                                                    |

**Table 4.2.23.1-3: RF and RRM mandatory features for NCR-MT**

| Features            | Index | Feature group                      | Components                         |
|---------------------|-------|------------------------------------|------------------------------------|
| 1. System parameter | 1-3   | 64QAM for PUSCH                    | 64QAM for PUSCH                    |
| 2. UE RF            | 2-10  | Multiple frequency band indication | Multiple frequency band indication |

## 4.2.23.2 General Parameters

| Definitions for parameters                                                                                                                                                                                                                                                                                                                | Per    | M  | FDD-TDD DIFF | FR1-FR2 DIFF |
|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------|----|--------------|--------------|
| <b><i>inactiveStateNCR-r18</i></b><br>Indicates whether the NCR-MT supports RRC_INACTIVE as specified in TS 38.331 [9].                                                                                                                                                                                                                   | NCR-MT | No | No           | No           |
| <b><i>supportedNumberOfDRBs-NCR-r18</i></b><br>Indicates the number of DRB that NCR-MT supports. If absent, NCR-MT does not support DRB. If absent, NCR-MT also does not support SDU discard in PDCP and RLC, and counter check in RRC.<br>Value <i>n1</i> indicates support of 1 DRB, value <i>n16</i> indicates the support of 16 DRBs. | NCR-MT | No | No           | No           |

## 4.2.23.3 SDAP Parameters

| Definitions for parameters                                                                                                                                  | Per    | M  | FDD-TDD DIFF | FR1-FR2 DIFF |
|-------------------------------------------------------------------------------------------------------------------------------------------------------------|--------|----|--------------|--------------|
| <b><i>sdap-HeaderNCR-r18</i></b><br>Indicates whether the NCR-MT supports UL SDAP header and SDAP End-marker, as specified in TS 37.324 [25].               | NCR-MT | No | No           | No           |
| <b><i>sdap-QoS-NCR-r18</i></b><br>Indicates whether the NCR-MT supports flow-based QoS and multiple flows to 1 DRB mapping, as specified in TS 37.324 [25]. | NCR-MT | No | No           | No           |

## 4.2.23.4 PDCP Parameters

| Definitions for parameters                                                                                   | Per    | M  | FDD-TDD DIFF | FR1-FR2 DIFF |
|--------------------------------------------------------------------------------------------------------------|--------|----|--------------|--------------|
| <b><i>longSN-NCR-r18</i></b><br>Indicates whether the NCR-MT supports 18 bit length of PDCP sequence number. | NCR-MT | No | No           | No           |

## 4.2.23.5 RLC Parameters

| Definitions for parameters                                                                                                     | Per    | M  | FDD-TDD DIFF | FR1-FR2 DIFF |
|--------------------------------------------------------------------------------------------------------------------------------|--------|----|--------------|--------------|
| <b><i>am-WithLongSN-NCR-r18</i></b><br>Indicates whether the NCR-MT supports AM DRB with 18 bit length of RLC sequence number. | NCR-MT | No | No           | No           |

## 4.2.23.6 Physical layer Parameters

## 4.2.23.6.1 Phy-Parameters

| Definitions for parameters                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | Per    | M  | FDD-TDD DIFF | FR1-FR2 DIFF |
|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------|----|--------------|--------------|
| <b><i>ncr-AdaptiveBeamBackhaulAndC-Link-r18</i></b><br>Indicates whether NCR supports backhaul link beam determination based on predefined rule.<br>The UE indicating support of this feature shall also indicate support of <i>timeDurationForQCL</i> , <i>tci-StatePDSCH</i> and <i>additionalActiveTCI-StatePDCCH</i> .                                                                                                                                                                                         | NCR-MT | No | No           | No           |
| <b><i>ncr-AperiodicBeamInd-AccessLink-r18</i></b><br>Indicates whether NCR supports aperiodic beam indication for access link. The UE indicates the value of supported slot-offset for reference slot. The value is selected based on the SCS of the PDCCH received by the NCR-MT. If 0 is reported, the NCR expects that the time resource in <i>NCR-AperiodicFwdConfig</i> of the aperiodic beam indication is at least after the end of time resource for PDCCH carrying the DCI for aperiodic beam indication. | NCR-MT | No | No           | No           |
| <b><i>ncr-BackhaulBeamInd-r18</i></b><br>Indicates whether NCR supports dedicated signalling for backhaul link beam indication.<br>The UE indicating support of this feature shall also indicate support of <i>ncr-AdaptiveBeamBackhaulAndC-Link-r18</i> .                                                                                                                                                                                                                                                         | NCR-MT | No | No           | No           |
| <b><i>ncr-dft-S-OFDM-WaveformUL-r18</i></b><br>Indicates whether the NCR-MT supports DFT-S-OFDM waveform for UL and transform precoding for single-layer PUSCH.                                                                                                                                                                                                                                                                                                                                                    | NCR-MT | No | No           | No           |
| <b><i>ncr-Semi-PersistentBeamInd-AccessLink-r18</i></b><br>Indicates whether NCR supports semi-persistent beam indication for access link, priority flag for semi-persistent indication and MAC CE override of the RRC configured of the beam index(es) at activation of semi-persistent beam indication.                                                                                                                                                                                                          | NCR-MT | No | No           | No           |
| <b><i>ncr-SimultaneousUL-BackhaulAndC-Link-r18</i></b><br>Indicates whether NCR supports simultaneous UL transmission of backhaul link and C-link.                                                                                                                                                                                                                                                                                                                                                                 | NCR-MT | No | No           | No           |

## 4.2.23.6.2 BandNR parameters

| Definitions for parameters                                                                                                                                       | Per  | M  | FDD-TDD DIFF | FR1-FR2 DIFF |
|------------------------------------------------------------------------------------------------------------------------------------------------------------------|------|----|--------------|--------------|
| <b><i>ncr-PDSCH-64QAM-FR2-r18</i></b><br>Indicates whether the NCR-MT supports 64QAM modulation scheme for PDSCH for FR2 as defined in 7.3.1.2 of TS 38.211 [6]. | Band | No | N/A          | FR2 only     |

## 4.2.24 Aerial UE Parameters

| Definitions for parameters                                                                                                                                                                                                                                                                                                                                                                                            | Per | M  | FDD-TDD DIFF | FR1-FR2 DIFF |
|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----|----|--------------|--------------|
| <b><i>aerialUE-Capability-r18</i></b><br>Indicates whether the UE supports aerial UE communication as described in TS 38.300 [28] clause 16.18.                                                                                                                                                                                                                                                                       | UE  | No | No           | No           |
| <b><i>altitudeMeas-r18</i></b><br>Indicates whether the UE supports altitude based measurement reporting as specified in TS 38.331 [9]. It is mandatory if the UE supports <i>aerialUE-Capability-r18</i> .                                                                                                                                                                                                           | UE  | CY | No           | No           |
| <b><i>altitudeBasedSSB-ToMeasure-r18</i></b><br>Indicates whether the UE supports altitude based <i>ssb-ToMeasure</i> as specified in TS 38.331 [9].                                                                                                                                                                                                                                                                  | UE  | No | No           | No           |
| <b><i>condEventAxHy-r19</i></b><br>Indicates whether the UE supports condEvents A3H1, A3H2, A5H1, and A5H2 as specified in TS 38.331 [9]. A UE supporting this feature shall also indicate support of <i>eventAxHy-r18</i> .                                                                                                                                                                                          | UE  | No | No           | No           |
| <b><i>eventAxHy-r18</i></b><br>Indicates whether the UE supports events A3H1, A3H2, A4H1, A4H2, A5H1, and A5H2 as specified in TS 38.331 [9]. If the UE indicates support of <i>eventAxHy-r18</i> , then the UE additionally supports <i>multipleCellsMeasExtension-r18</i> for eventA3H1, eventA3H2, eventA4H1, eventA4H2, eventA5H1, and eventA5H2 as specified in TS 38.331 [9].                                   | UE  | No | No           | No           |
| <b><i>flightPathReporting-r18</i></b><br>Indicates whether the UE supports reporting of the flight path plan through the procedure defined in TS 38.331 [9].                                                                                                                                                                                                                                                          | UE  | No | No           | No           |
| <b><i>flightPathAvailabilityIndicationUAI-r18</i></b><br>Indicates whether the UE supports indication of the flight path availability through the UAI message as defined in TS 38.331 [9]. If a UE supports this capability, the UE shall also support <i>flightPathReporting-r18</i> .                                                                                                                               | UE  | No | No           | No           |
| <b><i>multipleCellsMeasExtension-r18</i></b><br>Indicates whether the UE supports measurement reporting triggered based on a number of cells for eventA3, eventA4, and eventA5 as specified in TS 38.331 [9]. It is mandatory if the UE supports <i>aerialUE-Capability-r18</i> .                                                                                                                                     | UE  | CY | No           | No           |
| <b><i>nr-NS-PmaxListAerial-r18</i></b><br>Indicates whether the UE supports the mechanisms defined for cells broadcasting <i>nr-NS-PmaxListAerial</i> and <i>frequencyBandListAerial</i> as specified in TS 38.331 [9]. It is mandatory if the UE supports <i>aerialUE-Capability-r18</i> .                                                                                                                           | UE  | CY | No           | No           |
| <b><i>simulMultiTriggerSingleMeasReport-r18</i></b><br>Indicates whether the UE supports, for all the events of the same type for which the measurement reporting was triggered, measurement reporting considering only the configuration of the event with the smallest value between the altitude of the UE and the corresponding altitude threshold, as specified in TS 38.331 [9].                                | UE  | No | No           | No           |
| <b><i>sl-A2X-Service-r18</i></b><br>Indicates whether the UE supports A2X service(s) which include BRID, DAA or both using A2X communication as specified in TS 38.331 [9]. This field also indicates whether the UE supports the dedicated resource pools as specified in TS 38.331 for the corresponding A2X service(s). A UE supporting this feature shall also support NR sidelink in at least one sidelink band. | UE  | No | No           | No           |

## 4.2.25 AI/ML Parameters

| Definitions for parameters                                                                                                                                                                                                                                                                                                                                                                                                                | Per | M  | FDD-TDD DIFF | FR1-FR2 DIFF |
|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----|----|--------------|--------------|
| <b>applicabilityReportingCSI-r19</b><br>Indicates whether the UE supports applicability reporting and/or its updates based on inference configuration provided via <i>CSI-ReportConfig</i> , as specified in TS 38.331 [9].<br>It is mandatory if UE supports at least one of <i>aiml-BM-Case1-r19</i> , <i>aiml-BM-Case2-r19</i> and <i>aiml-CSI-Prediction-r19</i> , <i>aiml-CSI-PredictionPerBC-r19</i> .                              | UE  | CY | No           | No           |
| <b>applicabilityReportingOther-r19</b><br>Indicates whether the UE supports applicability reporting and/or its updates based on inference related parameters configuration provided via <i>OtherConfig</i> , as specified in TS 38.331 [9].<br>It is mandatory if UE supports at least one of <i>aiml-BM-Case1-r19</i> and <i>aiml-BM-Case2-r19</i> .                                                                                     | UE  | CY | No           | No           |
| <b>dataThresholdAvailabilityIndication-r19</b><br>Indicates whether the UE supports triggering data availability indication via <i>UEAssistanceInformation</i> message when the amount of logged data for network-side data collection reaches a configured threshold.<br>A UE supporting this feature shall also indicate support of <i>loggedDataCollection-r19</i> .                                                                   | UE  | No | No           | No           |
| <b>eventBasedLoggedDataCollection-r19</b><br>Indicates whether the UE supports L3 measurement event-triggered logging of measurements for network-side data collection, as specified in TS 38.331 [9].<br>A UE supporting this feature shall also indicate support of <i>loggedDataCollection-r19</i> and <i>dataThresholdAvailabilityIndication-r19</i> .                                                                                | UE  | No | No           | No           |
| <b>loggedDataCollection-r19</b><br>Indicates whether the UE supports logged measurements for network-side data collection, as specified in TS 38.331 [9]. The UE supporting this feature also supports periodical logging and providing full memory indication and low power indication via <i>UEAssistanceInformation</i> message.<br>The minimum memory size for storing of logged measurement of network-side data collection is 64kB. | UE  | No | No           | No           |

## 5 Optional features without UE radio access capability parameters

### 5.1 PWS features

| Definitions for feature                                                                                                                                                                                                                                                                                              |
|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>CMAS</b><br>It is optional for UE to support CMAS reception as specified in TS 38.331 [9]. It is optional for a CMAS-capable UE to support Geofencing information ( <i>warningAreaCoordinates</i> ) as specified in TS 38.331 [9].                                                                                |
| <b>ETWS</b><br>It is optional for UE to support ETWS reception as specified in TS 38.331 [9].                                                                                                                                                                                                                        |
| <b>ETWS geofencing in NTN</b><br>It is optional for an ETWS-capable NTN UE to support Geofencing information ( <i>warningAreaCoordinates</i> ) as specified in TS 38.331 [9].                                                                                                                                        |
| <b>KPAS</b><br>It is optional for UE to support Korean Public Alert System (KPAS) reception as specified in TS 38.331 [9]. KPAS uses the same AS mechanisms as defined for CMAS. Therefore a KPAS-capable UE shall support all behaviour that is included in TS 38.331 [9] and TS 38.304 [21] for a CMAS-capable UE. |
| <b>EU-Alert</b><br>It is optional for UE to support EU-Alert reception as specified in TS 38.331 [9]. EU-Alert uses the same AS mechanisms as defined for CMAS. Therefore a EU-Alert-capable UE shall support all behaviour that is included in TS 38.331 [9] and TS 38.304 [21] for a CMAS-capable UE.              |

## 5.2 UE receiver features

| Definitions for feature                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>MU-MIMO Interference Mitigation advanced receiver with modulation order detection</b><br>R-ML (reduced complexity ML) receivers with enhanced inter-user interference suppression for MU-MIMO for 2 layers across target and co-scheduled UEs with 2RX and 4RX in FR1 when the co-scheduled UE information with DCI index 6 or 7 in Table 7.3.1.2.2-12 of TS 38.212 [10] is signalled.<br>UE supporting the feature is required to indicate the support of <i>advReceiver-MU-MIMO-r18</i> and meet the Enhanced Receiver Type 2 requirements in TS 38.101-4 [18].                                                                                 |
| <b>MU-MIMO Interference Mitigation advanced receiver with modulation order detection Enh</b><br>R-ML (reduced complexity ML) receivers with enhanced inter-user interference suppression for MU-MIMO for 2 layers across target and co-scheduled UEs with 2RX and <i>maxNumberMIMO-LayersPD SCH</i> layers across target and co-scheduled UEs with 4RX in FR1 when the co-scheduled UE information with DCI index 6 in Table 7.3.1.2.2-12 of TS 38.212 [10] is signalled.<br>UE supporting the feature is required to indicate the support of <i>advReceiver-MU-MIMO-r18</i> and meet the Enhanced Receiver Type 2 requirements in TS 38.101-4 [18]. |
| <b>SU-MIMO Interference Mitigation advanced receiver</b> <ul style="list-style-type: none"> <li>- R-ML (reduced complexity ML) receivers with enhanced inter-stream interference suppression for SU-MIMO transmissions with rank 2 with 2RX antennas</li> <li>- R-ML (reduced complexity ML) receivers with enhanced inter-stream interference suppression for SU-MIMO transmissions with rank 2, 3, and 4 with 4RX antennas</li> </ul> UE supporting the feature is required to meet the Enhanced Receiver Type 1 requirements in TS 38.101-4 [18].                                                                                                 |
| <b>8Rx receiver</b> <ul style="list-style-type: none"> <li>- Baseline 8Rx receiver: 8Rx receivers for MIMO transmissions with support of up to 8 layers with joint 8Rx MIMO detector in FR1</li> <li>- Simplified 8Rx receiver: 8Rx receivers for MIMO transmissions with support of up to 4 layers with two joint 4Rx MIMO detectors in FR1.</li> </ul>                                                                                                                                                                                                                                                                                             |

## 5.3 RRC connection

| Definitions for feature                                                                                                                                                                                                                                                                                                                                                      |
|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>RRC connection release with deprioritisation</b><br>It is optional for UE to support <i>RRCRelease</i> with <i>deprioritisationReq</i> as specified in TS 38.331 [9].                                                                                                                                                                                                     |
| <b>RRC connection establishment failure with temporary offset</b><br>It is optional for UE to support RRC connection establishment failure with temporary offset ( <i>Qoffsettemp</i> ) as specified in TS 38.331 [9].                                                                                                                                                       |
| <b>Selection of acceptable E-UTRA cell upon HO failure during EPS fallback for emergency call</b><br>It is optional for UE to support selecting an acceptable E-UTRA cell supporting emergency call if no suitable E-UTRA cell is available upon handover failure during EPS fallback when the UE has an ongoing emergency call as specified in TS 38.331 [9].               |
| <b>E-UTRA cell selection upon HO failure during EPS services fallback</b><br>It is optional for UE to support selecting a suitable E-UTRA cell, and support selecting an acceptable E-UTRA cell supporting emergency call if no suitable E-UTRA cell is available upon handover failure when the UE is performing emergency services fallback as specified in TS 38.331 [9]. |

## 5.4 Other features

| Definitions for feature                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |

| <b>Access Category 1 selection assistance information enhancement</b><br>It is optional for UE that is configured for delay tolerant service to support Access Category 1 selection assistance information enhancement, according to <i>uac-AC1-SelectAssistInfo-r16</i> as specified in TS 38.331 [9].                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| <b>Barring exemption for emergency call</b><br>It is optional for UE to support the barring exemption for emergency call, as specified in TS 38.331 [9] and in TS 38.304 [21].                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
| <b>Beam Failure recovery for SDT</b><br>It is optional for UE to support Beam failure recovery for RA-SDT initiated for MO-SDT and MT-SDT as specified in TS 38.321 [8] and TS 38.331 [9].                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
| <b>eCall over IMS</b><br>It is optional for UE to support eCall over IMS as specified in TS 38.331 [9].                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| <b>Equivalent SNPNs for cell (re)selection</b><br>It is optional for UE in SNPN access mode to support cell (re)selection for equivalent SNPNs as specified in TS 38.304 [21].                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
| <b>HSDN cell reselection</b><br>It is optional for UE to support HSDN cell reselection priority handling in RRC_IDLE/RRC_INACTIVE as specified in TS 38.304 [21] and TS 38.331 [9].                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
| <b>Minimization of service interruption</b><br>It is optional for UE to support minimization of service interruption including reporting to NAS of disaster roaming information for available PLMNs and Access Barring check for Access Identity 3, as specified in TS 38.331 [9].                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
| <b>Mobile IAB cell reselection</b><br>It is optional for UE to support mobile IAB cell reselection priority handling in RRC_IDLE/RRC_INACTIVE, as specified in TS 38.304 [21] and TS 38.331 [9].                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
| <b>PUCCH repetition on common PUCCH resource</b><br>It is optional for UE to support repetition transmission of PUCCH for Msg4 HARQ-ACK on common PUCCH resource (i.e., PUCCH resource before dedicated configuration is provided). The UE supports receiving repetition factor in system information, receiving repetition factor in DCI format 1_0 with CRC scrambled by TC-RNTI scheduling Msg4 PDSCH, Msg3 to report capability for PUCCH Msg4 HARQ-ACK repetition, extension of the repetition transmission of PUCCH before dedicated PUCCH resource configuration and RSRP threshold for Msg4 HARQ-ACK repetition on common PUCCH resources.<br>A UE that includes LCID codepoint = one of {2, 3, 4, 5, 6, 7, 14, 15, 16, 17, 18, 19} for UL CCCH when the LX field is set to 1 must support this feature.<br>NOTE: This capability is applicable only for bands in Tables 5.2.2-1 and 5.2.3-1 in TS 38.101-5 [34] and HAPS operation bands in Clause 5.2 of TS 38.104 [35]. |
| <b>Random access prioritization for MPS and MCS</b><br>It is optional for UE that is configured for MPS or MCS to support random access prioritization for Access Identity 1 or 2 as specified in TS 38.321 [8].                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
| <b>Random access prioritisation for Slicing</b><br>It is optional for UE to support slice-based prioritisation for random access as specified in TS 38.321 [8].                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
| <b>Random access partitioning for Slicing</b><br>It is optional for UE to support slice-based RACH partitioning as specified in TS 38.321 [8].                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
| <b>Relaxed cell reselection on GSO</b><br>It is optional for UE to support the relaxed cell reselection on GSO.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
| <b>Support of polarization signalling in NR NTN</b><br>It is optional for UE to support the polarization signalling in NR NTN comprised of the following functional components: <ul style="list-style-type: none"> <li>- Support polarization indication reception in SIB indicating DL and/or UL polarization information using respective polarization type parameters to indicate: RHCP or LHCP or linear;</li> <li>- Support polarization signalling for target serving cell in handover command message;</li> <li>- Support polarization signalling for non-serving cell in RRM measurement configuration.</li> </ul>                                                                                                                                                                                                                                                                                                                                                         |
| <b>TRS occasions from SIB17 for idle mode and RRC_INACTIVE UEs</b><br>It is optional for UE to support reading TRS configuration from SIB17 and receiving L1 indication for TRS availability.<br>NOTE: Receiving L1 indication via DCI format 2_7 is supported only if the UE supports receiving DCI format 2_7.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
| <b>TRS occasions from SIB17bis for idle mode and RRC_INACTIVE UEs</b><br>It is optional for UE to support reading TRS configuration from SIB17bis and receiving L1 indication for TRS availability.<br>NOTE: Receiving L1 indication via DCI format 2_7 is supported only if the UE supports receiving DCI format 2_7.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |

## 5.5 Sidelink Features

| Definitions for feature                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>CW autonomous update for SL transmission without HARQ feedback</b><br>It is optional for UE to support autonomous update of the $CW_p$ to the next higher allowed value when the same $CW_p \neq CW_{\max,p}$ value is consecutively used for X times for generation of $N_{\text{init}}$ for PSCCH/PSSCH transmission without HARQ feedback for a band where shared spectrum channel access must be used.<br><br>A UE supporting this feature shall also indicate the support of <i>sl-DynamicChannelAccess-r18</i> .                                                                               |
| <b>Rank 2 PSSCH transmission</b><br>It is optional for UE to support rank 2 PSSCH transmission. This field is only applicable if the UE supports <i>csi-ReportSidelink-r16</i> with <i>csi-RS-PortsSidelink</i> = p2.                                                                                                                                                                                                                                                                                                                                                                                   |
| <b>Receiving NR sidelink of S-SSB</b><br>It is optional for UE to receive S-SSB in NR sidelink and support synchronisation to a reference UE.                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| <b>Receiving PSCCH/PSSCH from 2<sup>nd</sup> starting symbol in a slot</b><br>It is optional for UE to support receiving PSCCH/PSSCH from 2 <sup>nd</sup> starting symbol in a slot in addition to the first starting symbol for a band where shared spectrum channel access is used.<br>A UE supporting this feature shall also indicate support of <i>sl-Reception-r16</i> .                                                                                                                                                                                                                          |
| <b>Receiving S-SSB on additional S-SSB occasion(s)</b><br>It is optional for UE to support receiving S-SSB on additional S-SSB occasion(s).<br>A UE supporting this feature shall also indicate support of <i>sync-Sidelink-r16</i> .                                                                                                                                                                                                                                                                                                                                                                   |
| <b>Resource allocation for multi-consecutive slots transmission</b><br>It is optional for UE to support resource (re-)selection for PSCCH/PSSCH transmission on multiple consecutive slots.<br>A UE supporting this feature shall also indicate support of at least one of <i>sl-TransmissionMode2-r16</i> and <i>sl-TransmissionMode2-PartialSensing-r17</i> .                                                                                                                                                                                                                                         |
| <b>S-SSB transmissions in multiple contiguous RB sets</b><br>It is optional for UE to support S-SSB transmissions in multiple contiguous RB sets.<br>A UE supporting this feature shall at least indicate support of <i>sl-DynamicMultiChannelAccess-r18</i> or support transmitting PSFCH/S-SSB on a subset of the intended number of RB sets based on the outcome of channel access on individual RB sets.                                                                                                                                                                                            |
| <b>S-SSB transmissions in multiple non-contiguous RB sets</b><br>It is optional for UE to support S-SSB transmissions in multiple non-contiguous RB sets.<br>A UE supporting this feature shall also support S-SSB transmissions in multiple contiguous RB sets.                                                                                                                                                                                                                                                                                                                                        |
| <b>Short-term time-scale TDM for in-device coexistence</b><br>It is optional for UE to support prioritization between LTE sidelink transmission/reception and NR sidelink transmission/reception.<br>This feature is only applicable if the UE supports at least one of <i>sl-Reception-r16</i> , <i>sl-TransmissionMode1-r16</i> and <i>sl-TransmissionMode2-r16</i> , and if the UE supports V2X sidelink communication in the band combination.                                                                                                                                                      |
| <b>SL multi-channel access allowing PSFCH/S-SSB transmission</b><br>It is optional for UE to support Type A and Type B multi-channel access procedures for PSFCH/S-SSB transmissions on a subset of intended number of RB sets based on the outcome of channel access on individual RB sets in a slot.<br>A UE supporting this feature shall also indicate support of <i>sl-DynamicMultiChannelAccess-r18</i> .                                                                                                                                                                                         |
| <b>Transmitting PSCCH/PSSCH from 2<sup>nd</sup> starting symbol in a slot</b><br>It is optional for UE to support transmitting PSCCH/PSSCH from 2 <sup>nd</sup> starting symbol in a slot in addition to the first starting symbol for a band where shared spectrum channel access is used.<br>A UE supporting this feature shall also indicate support of <i>sl-DynamicChannelAccess-r18</i> , at least one of <i>sl-CrossCarrierScheduling-r16</i> , <i>sl-TransmissionMode2-r16</i> , <i>sl-TransmissionMode2-RandomResourceSelection-r17</i> , and <i>sl-TransmissionMode2-PartialSensing-r17</i> . |
| <b>Transmitting SSB repetitions within one RB set</b><br>It is optional for UE to support transmitting S-PSS/S-SSS/PSBCH multiple times by repetition in frequency domain within one RB set.<br>The UE supports NR sidelink in shared spectrum where PSD and/or OCB requirements are defined by regulation must support this feature.<br>A UE supporting this feature shall also indicate support of <i>sync-Sidelink-r16</i> .                                                                                                                                                                         |
| <b>Transmitting S-SSB on additional S-SSB occasion(s)</b><br>It is optional for UE to support transmitting S-SSB on additional S-SSB occasion(s) per band.<br>A UE supporting this feature shall also indicate support of <i>sync-Sidelink-r16</i> .                                                                                                                                                                                                                                                                                                                                                    |

## 5.6 RRM measurement features

| Definitions for feature                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Altitude based measurement in IDLE/INACTIVE</b><br>It is optional for the UE in RRC_IDLE or in RRC_INACTIVE to support altitude based SSB measurement as specified in TS 38.304 [21]. This feature is only applicable if the UE supports <i>aerialUE-Capability-r18</i> .                                                                                                                                                                                                                          |
| <b>Cell reselection from TN to NTN</b><br>It is optional for the UE in RRC_IDLE or in RRC_INACTIVE in a TN cell to support the measurement of NTN neighbour cells for cell reselection based on the information acquired in SIB19 as specified in TS 38.304 [21] and in TS 38.133 [5]. This feature is only applicable if the UE supports <i>nonTerrestrialNetwork-r17</i> .                                                                                                                          |
| <b>Enhanced inter-frequency IDLE/INACTIVE measurements for HST FR2</b><br>It is optional for UE to support RRM requirement for inter-frequency measurements in idle and inactive mode to support FR2 high speed up to 350 km/h, as specified in TS 38.133 [5].<br>A UE supporting this feature shall also indicate support of PC6 in <i>ue-PowerClass-v1700</i> .                                                                                                                                     |
| <b>Enhanced RRM requirements for measurements in IDLE and INACTIVE modes</b><br>It is optional for UE to support enhanced RRM requirements for measurements for NTN bands (FR1 only and FDD only) in RRC_IDLE/RRC_INACTIVE as specified in TS 38.133 [5]. If UE does not support this feature, other NTN measurement requirements (as specified in TS 38.133 [5], clause 4.2C.2 for RRC_IDLE and clause 5.1C.2 for RRC_INACTIVE) are applied.                                                         |
| <b>Enhanced RRM requirements for measurements in IDLE and INACTIVE modes for ATG</b><br>It is optional for the UE in RRC_IDLE/RRC_INACTIVE to support the enhanced inter-frequency cell re-selection requirements for ATG (as specified in TS 38.133 [5], Table 4.2D.2.4-2). If UE does not support this feature, other measurement requirements as specified in TS 38.133 [5], Table 4.2D.2.4-1 are applied.                                                                                         |
| <b>Enhanced RRM requirements for measurements in IDLE and INACTIVE modes for FR1-NTN Ku band</b><br>It is optional for VSAT UE working in FR1-NTN bands between 10.7 GHz and 14.5 GHz as defined in TS 38.101-5 [34] to support enhanced RRM requirements in RRC_IDLE/RRC_INACTIVE as specified in TS 38.133 [5]. If UE does not support this feature, other NTN measurement requirements (as specified in TS 38.133 [5], clause 4.2C.2 for RRC_IDLE and clause 5.1C.2 for RRC_INACTIVE) are applied. |
| <b>Enhanced RRM requirements for measurements in IDLE and INACTIVE modes for FR2-NTN</b><br>It is optional for UE to support enhanced RRM requirements for measurements for FDD FR2-NTN bands in RRC_IDLE/RRC_INACTIVE as specified in TS 38.133 [5]. If UE does not support this feature, other NTN measurement requirements (as specified in TS 38.133 [5], clause 4.2C.2 for RRC_IDLE and clause 5.1C.2 for RRC_INACTIVE) are applied.                                                             |
| <b>High speed inter-frequency IDLE/INACTIVE measurements</b><br>It is optional for UE to support high speed inter-frequency measurements in RRC_IDLE/RRC_INACTIVE as specified in TS 38.133 [5].                                                                                                                                                                                                                                                                                                      |
| <b>Inter-RAT cell selection to IoT NTN</b><br>It is optional for the UE to support assistance information for inter-RAT cell selection from NR NTN to IoT NTN, as specified in TS 38.331 [9].                                                                                                                                                                                                                                                                                                         |
| <b>Location-based measurement initiation</b><br>It is optional for the UE in RRC_IDLE/RRC_INACTIVE to support location based RRM measurements of neighbour cells in NTN (quasi-)Earth fixed cell as specified in TS 38.304 [21].                                                                                                                                                                                                                                                                      |
| <b>Location-based measurement initiation for NTN Earth-moving cell</b><br>It is optional for the UE in RRC_IDLE/RRC_INACTIVE to support location based RRM measurements of neighbour cells in NTN Earth-moving cell as specified in TS 38.304 [21].                                                                                                                                                                                                                                                   |
| <b>Location based SMTC selection for RRC_IDLE/RRC_INACTIVE</b><br>It is optional for the UE in RRC_IDLE/RRC_INACTIVE to support SMTC selection based on UE position and associated location for each SMTC in NTN, as specified in TS 38.331 [9].                                                                                                                                                                                                                                                      |
| <b>Relaxed measurement</b><br>It is optional for UE to support relaxed RRM measurements of neighbour cells in RRC_IDLE/RRC_INACTIVE as specified in TS 38.304 [21].                                                                                                                                                                                                                                                                                                                                   |
| <b>Rel-17 relaxed measurement for RRC_IDLE/RRC_INACTIVE</b><br>It is optional for (e)RedCap UE to support Rel-17 relaxed RRM measurements of neighbour cells in RRC_IDLE/RRC_INACTIVE as specified in TS 38.304 [21].                                                                                                                                                                                                                                                                                 |
| <b>Skipping TN measurements</b><br>It is optional for the UE in RRC_IDLE/RRC_INACTIVE to support skipping the neighbour cell measurements for TN neighbour cells in an area where there is no TN network coverage as specified in TS 38.304 [21].                                                                                                                                                                                                                                                     |
| <b>SMTC adjustment for RRC_IDLE/RRC_INACTIVE</b><br>It is optional for the UE in RRC_IDLE/RRC_INACTIVE to support SMTC adjustment based on propagation delay difference between serving and neighbour cells.                                                                                                                                                                                                                                                                                          |
| <b>Time-based measurement initiation</b><br>It is optional for the UE in RRC_IDLE/RRC_INACTIVE to support time based RRM measurements of neighbour cells in NTN quasi-Earth fixed cell as specified in TS 38.304 [21].                                                                                                                                                                                                                                                                                |
| <b>Time-based measurement initiation for NTN Earth-moving cell</b><br>It is optional for the UE in RRC_IDLE/RRC_INACTIVE to support time based RRM measurements of neighbour cells in NTN Earth-moving cell as specified in TS 38.304 [21].                                                                                                                                                                                                                                                           |

**UAV prioritized frequency for cell reselection**

It is optional for the UE in RRC\_IDLE or in RRC\_INACTIVE to prioritize the frequency configured with *uav-PrioritizedFrequency-r19* for cell reselection as specified in TS 38.304 [21]. This feature is only applicable if the UE supports *aerialUE-Capability-r18*.

## 5.7 MDT and SON features

| Definitions for feature                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |

| <b>Cross RAT RLF Report</b><br>It is optional for UE to support the delivery of EUTRA RLF report to an NR node upon request from the network.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
| <b>Mobility history information storage</b><br>It is optional for UE to support the storage of PCell mobility history information and the reporting in <i>UEInformationResponse</i> message as specified in TS 38.331 [9].                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| <b>Mobility history information storage for SCG deactivation</b><br>It is optional for UE to support the storage of the time the UE has spent in PSCell with SCG activated and the reporting in <i>UEInformationResponse</i> message as specified in TS 38.331 [9].                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
| <b>Radio Link Failure Report for inter-RAT MRO EUTRA</b><br>It is optional for UE to support: <ul style="list-style-type: none"> <li>- Inclusion of EUTRA CGI and associated TAC, if available, and otherwise to include the physical cell identity and carrier frequency of the target PCell of the failed handover as <i>failedPCellId</i> in <i>RLF-Report</i> upon request from the network as specified in TS 38.331 [9].</li> <li>- Inclusion of EUTRA CGI and associated TAC as <i>previousPCellId</i> in <i>RLF-Report</i> as specified in TS 38.331 [9].</li> <li>- Inclusion of <i>eutraReconnectCellId</i> in <i>reconnectCellId</i> in the <i>RLF-Report</i> as specified in TS 38.331 [9] upon UE has radio link failure or handover failure and successfully re-connected to an E-UTRA cell.</li> </ul> |
| <b>RACH Partitioning Information</b><br>It is optional for UE to support the delivery of RACH partitioning related information via RACH report procedure, upon request from the network.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
| <b>RA Report for SDT</b><br>It is optional for UE to support the delivery of SDT related information via RACH report procedure, upon request from the network.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
| <b>RLF report after successful fast MCG recovery</b><br>It is optional for UE to support logging <i>previousPCellId</i> , <i>lastHO-Type</i> , and <i>timeConnFailure</i> when T316 was not running before entering the PCell in which the radio link failure was detected.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| <b>RLF Report for Fast MCG Recovery</b><br>It is optional for UE to support the delivery of the Fast MCG recovery related information in the RLF-Report.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
| <b>RLF Report for Inter-system HO for Voice Fallback</b><br>It is optional for UE to support the delivery of an explicit indication in the RLF-report when mobility from NR due to voice fallback fails.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
| <b>RLF Report for time- or location-based CHO in NTN</b><br>It is optional for UE to support the delivery of the time-/location-based CHO (e.g., CHO configured with <i>condEventD1</i> , <i>condEventD2</i> or <i>condEventT1</i> as specified in TS 38.331 [9]) related information in the RLF-Report. A UE supporting this feature shall also indicate support of <i>rlfReportCHO-r17</i> .                                                                                                                                                                                                                                                                                                                                                                                                                        |
| <b>SCG Failure Report for CPAC</b><br>It is optional for UE to support the delivery of the CPAC and Subsequent CPAC related parameters for MRO in <i>SCGFailureInformation</i> message to the network.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
| <b>SCG Failure Report for MRO</b><br>It is optional for UE to support the delivery of the SCG failure related parameters for MRO in <i>SCGFailureInformation</i> message to the network.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
| <b>SHR and RA report enhancement for MCG LTM</b><br>It is optional for UE to support the delivery of MCG LTM related information in SHR/RACH report, upon request from the network.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
| <b>SON enhancements for CHO with candidate SCG</b><br>It is optional for UE to support the delivery of CHO with candidate SCG related information in SHR/SPR/SCGFailureInformation report, upon request from the network.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
| <b>SON enhancements for CHO with candidate SCG when CHO only configuration is received</b><br>It is optional for UE to support the delivery of CHO with candidate SCG related information when CHO only configuration is received in RLF/SHR report, upon request from the network.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
| <b>SON enhancements for NR-U</b><br>It is optional for UE to support the delivery of NR-U related information (FR1 only) in RA-report/SHR/RLF/SPR/SCGFailureInformation report, upon request from the network.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
| <b>SON Report in SNPN</b><br>It is optional for UE to support collection and delivery of SON reports in SNPN. UE is not required to support all SON reports if it supports collection and delivery of the SON reports in SNPN, it may support one or more SON report for SNPN.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
| <b>SpCell ID indication</b><br>It is optional for UE to support the delivery of the <i>spCellId-r17</i> in the RA-Report, if the RA procedure is performed in a SCell of the MCG/SCG.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |

**Uplink PDCP delay measurements upon MO update**

It is optional for UE to support not resetting the UL PDCP Packet Average Delay measurement or UL PDCP excess packet delay measurement when the associated measurement object is modified. A UE supporting this feature shall also indicate the support of at least one of *ulPDCP-Delay-r16* and *excessPacketDelay-r17*.

## 5.8 Extended DRX features

### Definitions for feature

**Rel-17 extended DRX in RRC\_IDLE**

It is optional for UE to support Rel-17 extended DRX cycle up to 10485.76 seconds and paging in extended DRX in RRC\_IDLE as specified in TS 38.331 [9] and TS 38.304 [21]. A UE that supports extended DRX shall also support *inactiveStatePO-Determination-r17*.

## 5.9 Sidelink Relay Features

### Definitions for feature

**L2 PC5-RRC trigger**

It is optional for L2 sidelink relay UE or L2 sidelink remote UE to support the PC5-RRC trigger in L2 multi-path relay.

**L3 sidelink relay UE operation**

It is optional for UE to support L3 sidelink relay UE operation as specified in TS 38.331 [9].

**L3 sidelink remote UE operation**

It is optional for UE to support L3 sidelink remote UE operation as specified in TS 38.331 [9].

**L3 sidelink U2U relay UE operation**

It is optional for UE to support L3 sidelink U2U relay UE operation as specified in TS 38.331 [9].

**L3 sidelink U2U remote UE operation**

It is optional for UE to support L3 sidelink U2U remote UE operation as specified in TS 38.331 [9].

**MUSIM paging cause forward**

It is optional for L2 sidelink relay UE or L2 sidelink remote UE to support forwarding MUSIM paging cause as defined in TS 38.331 [9].

## 5.10 MBS features

### Definitions for feature

#### Broadcast reception

It is optional for UE to support broadcast reception as specified in TS 38.331 [9]. A UE that supports the feature shall also support:

- Group-common PDCCH/PDSCH for broadcast with CRC scrambled by MCCH-RNTI;
- Group-common PDCCH/PDSCH for broadcast with CRC scrambled by G-RNTI(s) for MTCH;
- CFR configuration for broadcast;
- CORESET and common search space for broadcast;
- DCI format 4\_0 with CRC scrambled with G-RNTI/MCCH-RNTI for broadcast;
- Inter-slot TDM between unicast PDSCH and MCCH group-common PDSCH or MTCH group-common PDSCH, or between MCCH group-common PDSCH and MTCH group-common PDSCH, or among unicast PDSCH and MCCH group-common PDSCH and MTCH group-common PDSCH in different slots;
- MCCH change notification indication via DCI;
- RRC configured slot-level repetition up to 8 for MTCH;
- One G-RNTI per UE is supported for broadcast reception;
- Support of FDMed MCCH and PBCH;
- Support of up to 64QAM for FR1/FR2;
- 4 broadcast MRBs as the minimum number;
- PDCP 12 bits SN;
- ROHC with profiles 0x0000, 0x0001 and 0x0002;
- 4 ROHC context sessions;
- RLC UM with 6 bits SN;
- RLC UM with 12 bits SN;
- DRX with long DRX cycle for MBS broadcast as specified in TS 38.321 [8].

An (e)RedCap UE supporting Broadcast reception also supports CFR and MCCH configuration for (e)RedCap UE.

An NTN UE supporting Broadcast reception may optionally support the intended service area(s) associated with a broadcast service.

## 5.11 Idle/inactive measurement for voice fallback features

### Definitions for feature

#### Idle/Inactive measurement for voice fallback

It is optional for UE to support the idle/inactive measurement for EPS fallback in RRC\_IDLE/RRC\_INACTIVE as specified in TS 38.331 [9].

## 5.12 NCR features

### Definitions for feature

#### Basic NCR support

It is optional for UE to support the NCR-MT feature as specified in TS 38.213 [11]. An NCR node for which the NCR-MT includes *ncr-NodeIndication* in *RRCSetupComplete* as specified in TS 38.331 [9] must support these feature components:

- Support of fixed beam for C-link/backhaul link
- Support of TDMed UL transmission of C-link and backhaul link
- Support of ON-OFF operation for NCR-Fwd based on access link beam indication
- Support of TDD UL/DL determination for backhaul/access link based on TDD UL/DL configuration of C-link
- Support of Tx/Rx timing determination for backhaul/access link based on Tx/Rx timing of C-link
- Support of beam correspondence of the DL/UL of the access link at NCR-Fwd
- Support periodic beam indication for access link
- Priority flag for periodic indication
- Support of simultaneous and TDMed DL reception of C-link and backhaul link

## 6 Conditionally mandatory features without UE radio access capability parameters

| Features                                                                                                                         | Condition                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
|----------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Acquisition of positioning SI messages with 80 milliseconds offset position compared to SI messages in <i>schedulingInfoList</i> | It is mandatory to support acquisition of positioning SI messages with 80 milliseconds offset position compared to SI messages in <i>schedulingInfoList</i> for UEs which support the acquisition of the posSIB types in <i>posSchedulingInfoList</i> as specified in TS 38.331 [9].                                                                                                                                                                                       |
| Acquisition of SI messages with explicit SI window positions                                                                     | It is mandatory to support acquisition of SI messages with explicit SI window positions for UEs which support the SIB types in <i>schedulingInfoList2</i> as specified in TS 38.331 [9].                                                                                                                                                                                                                                                                                   |
| AS layer memory size for QoE paused measurement reports                                                                          | It is mandatory to support the minimum AS layer memory size of 64KB for QoE paused measurement reports for UEs which support <i>qoe-Streaming-MeasReport-r17</i> , <i>qoe-MTSI-MeasReport-r17</i> or <i>qoe-VR-MeasReport-r17</i> .                                                                                                                                                                                                                                        |
| AS layer memory size for QoE measurement reports in RRC_IDLE and RRC_INACTIVE                                                    | It is mandatory to support the minimum AS layer memory size of 64KB for QoE measurement reports stored in RRC_IDLE/RRC_INACTIVE for UEs which support <i>qoe-IdleInactiveMeasReport-r18</i> and any of <i>qoe-Streaming-MeasReport-r17</i> or <i>qoe-MTSI-MeasReport-r17</i> or <i>qoe-VR-MeasReport-r17</i> . This memory size is additional to "AS layer memory size for QoE paused measurement reports"                                                                 |
| ATG specific P-max                                                                                                               | It is mandatory to support the ATG specific P-max configured by network for UEs supporting <i>airToGroundNetwork-r18</i> .                                                                                                                                                                                                                                                                                                                                                 |
| Downlink SDAP header                                                                                                             | Either NAS reflective QoS or <i>as-ReflectiveQoS</i> is supported.                                                                                                                                                                                                                                                                                                                                                                                                         |
| Extended values for <i>drx-HARQ-RTT-TimerDL/UL</i>                                                                               | It is mandatory for UEs which support FR2-2 bands with SCS 480kHz and/or 960kHz.                                                                                                                                                                                                                                                                                                                                                                                           |
| IMS emergency call                                                                                                               | It is mandatory to support IMS emergency call over PLMN for UEs which are IMS voice capable in NR.<br><br>It is mandatory to support IMS emergency call over SNPN for UEs that are SNPN capable and IMS voice capable over SNPNs.                                                                                                                                                                                                                                          |
| Logged measurements suspension due to IDC interference                                                                           | It is mandatory to support Logged measurements suspension due to IDC interference for UEs which are supporting logged measurements in RRC_IDLE and RRC_INACTIVE upon request from the network and in-device coexistence indication as specified in TS 38.331 [9].                                                                                                                                                                                                          |
| MAC subheaders with LX field                                                                                                     | It is mandatory to support MAC subheaders with LX field for UEs supporting MAC SDU(s) using the LCID value(s) as specified in Table 6.2.1-2c in TS 38.321 [8].                                                                                                                                                                                                                                                                                                             |
| MAC subheaders with one-octet eLCID field                                                                                        | It is mandatory to support MAC subheaders with one-octet eLCID field for UEs/IAB-MTs/NCR-MTs supporting MAC CEs using extended LCID values as specified in TS 38.321 [8].                                                                                                                                                                                                                                                                                                  |
| Paging cause in RAN paging message                                                                                               | It is mandatory for a UE to support paging cause in RAN paging if UE supports paging cause in CN paging.                                                                                                                                                                                                                                                                                                                                                                   |
| Receiving PSCCH/PSSCH from 2 <sup>nd</sup> starting symbol in a slot                                                             | It is mandatory for a UE supporting NR sidelink in shared spectrum and when shared spectrum channel access must be used to support receiving PSCCH/PSSCH transmitted from 2nd starting symbol in a slot in addition to the first starting symbol and monitor a total up to the number reported in <i>pscch-RxSidelink-r16</i> of PSCCHs in a slot in the 1st and 2nd starting symbols.<br>A UE supporting this feature shall indicate support of <i>s/-Reception-r16</i> . |
| Receiving UE to UE COT sharing information                                                                                       | It is mandatory for a UE supporting NR SL in shared spectrum where shared spectrum channel access must be used to support monitoring SCI to read COT sharing information and transmitting NR SL based on COT sharing information subject to COT sharing conditions.<br>A UE supporting this feature shall indicate support of <i>s/-DynamicChannelAccess-r18</i> .                                                                                                         |
| SON report in PNI-NPN                                                                                                            | It is mandatory for a UE to support a SON report in PNI-NPN if UE supports PNI-NPN and supports the SON report in PLMN.                                                                                                                                                                                                                                                                                                                                                    |

| Features                                                                                                                                | Condition                                                                                                                                                                                                                                                                                                                                                                                                                                         |

## Annex A (normative): Differentiation of capabilities

### A.1: TDD/FDD differentiation of capabilities in TDD-FDD CA

Annex A.1 specifies for which TDD and FDD serving cells a UE supporting TDD/FDD CA shall support a feature/capability for which it indicates support within the capability signalling.

A UE that indicates support for TDD/FDD CA (e.g. MCG or SCG):

- For the fields for which the UE is allowed to indicate different support for FDD and TDD, the UE shall support the feature on the PCell and/or SCell(s), as specified in tables A.1-1 in accordance to the following rules:
  - PCell: the UE shall support the feature for the PCell, if the UE indicates support of the feature for the PCell duplex mode;
  - PSCell: the UE shall support the feature for the PSCell, if the UE indicates support of the feature for the PSCell duplex mode;
  - Per serving cell: the UE shall support the feature for a serving cell if the UE indicates support of the feature for the serving cell's duplex mode;
  - All serving cells: UE shall support the feature for all serving cells in a CG if the UE indicates support of the feature for both TDD and FDD duplex modes;
  - Associated serving cells: UE shall support the feature if the UE indicates support of the feature for all associated serving cells's duplex modes;
- For the fields where the UE is not allowed to indicate different support for FDD and TDD, the UE shall support the feature for PCell and SCell(s) if the UE indicates support of the feature via the common capability bit.

**Table A.1-1: UE capabilities for which FDD/TDD differentiation is allowed**

## A.2: FR1/FR2 differentiation of capabilities in FR1-FR2 CA

Annex A.2 specifies for which FR1 and FR2 serving cells a UE supporting FR1/FR2 CA shall support a feature/capability for which it indicates support within the capability signalling.

A UE that indicates support for FR1/FR2 CA (e.g. MCG or SCG):

- For the fields for which the UE is allowed to indicate different support for FR1 and FR2, the UE shall support the feature on the PCell and/or SCell(s), as specified in tables A.2-1 in accordance to the following rules:
  - PCell: the UE shall support the feature for the PCell, if the UE indicates support of the feature for the PCell FR mode;
  - Associated serving cells: UE shall support the feature if the UE indicates support of the feature for associated serving cells's FR modes;
- For the fields where the UE is not allowed to indicate different support for FR1 and FR2, the UE shall support the feature for PCell and SCell(s) if the UE indicates support of the feature via the common capability bit.

**Table A.2-1: UE capabilities for which FR1/FR2 differentiation is allowed**

### A.3: TDD/FDD differentiation of capabilities for sidelink

Annex A.3 specifies for which TDD and FDD serving cells for Uu interface and carrier for PC5 interface a UE supporting sidelink shall support a feature/capability for which it indicates support within the capability signalling.

A UE that indicates support for sidelink:

- For the fields for which the UE is allowed to indicate different support for FDD and TDD, the UE shall support the feature on the PCell and/or SCell(s) for Uu interface, as specified in tables A.3-1 in accordance to the following rules:
  - Per serving cell: the UE shall support the feature for a serving cell if the UE indicates support of the feature for the serving cell's duplex mode;
  - Associated serving cells: UE shall support the feature if the UE indicates support of the feature for all associated serving cells's duplex modes;
- For the fields where the UE is not allowed to indicate different support for FDD and TDD, the UE shall support the feature for PCell and SCell(s) for Uu interface and carrier for PC5 interface if the UE indicates support of the feature via the common capability bit.

**Table A.3-1: Rel-16 UE capabilities for which FDD/TDD differentiation is allowed**

| Sidelink Parameter                                                                                                                                                    | Classification           |

## A.5: General differentiation of capabilities in Cross-Carrier operation

Annex A.5 specifies for which multiple serving cells a UE supporting cross-carrier operation shall support a feature/capability for which it indicates support within the capability signalling.

A UE that indicates support for cross-carrier operation in CA (e.g. MCG or SCG):

- For the fields for which the UE is allowed to indicate different support for different bands, the UE shall support the feature on the PCell and/or SCell(s) in cross-carrier operation, as specified in table A.5-1 in accordance to the following rules:
- Triggered serving cell: the UE shall support the feature if the UE indicates support of the feature for the band of the scheduled/triggered/indicated serving cell;
- Triggering&Triggered serving cells: UE shall support the feature if the UE indicates support of the feature for the band of both the scheduling/triggering/indicating serving cell and the scheduled/triggered/indicated serving cell;

**Table A.5-1: General UE capabilities for which differentiation is allowed**

## Annex B (informative): UE capability indication for UE capabilities with both FDD/TDD and FR1/FR2 differentiations

Annex B clarifies the UE capability indication for the case where the UE is allowed to support different functionality between FDD and TDD, and between FR1 and FR2. Table B-1 clarifies the setting of UE capability fields for cases where the UE supports the corresponding feature in different combinations of duplex mode and frequency range. There are two possible ways of UE capability indication in Case 3 and Case 8.

Table B-1: UE capability indication for UE capabilities with both FDD/TDD and FR1/FR2 differentiations

| Support for the feature |                                                                                  | Setting of UE capability fields                                                                   |                                                   |                                 |                                 |                                 |                                 |

| Case 8                  | FR1 FDD: 'supported'<br>FR1 TDD: 'supported'<br>FR2 TDD: 'not supported'         | Included                                                                                          | Not included                                      | Not included                    | Not included                    | Included                        | Not included                    |
|                         |                                                                                  | Not included                                                                                      | Not included                                      | Not included                    | Not included                    | Included                        | Not included                    |

NOTE 1: For a UE capability which cannot be differentiated between FR2-1 and FR2-2, 'FR2 TDD' in Table B-1 includes both 'FR2-1 TDD' and 'FR2-2 TDD'.

NOTE 2: For a UE capability which can be differentiated between FR2-1 and FR2-2, 'FR2 TDD' in Table B-1 only means 'FR2-1 TDD'.

## Annex C (informative): Change history
