<i>ntn-NeighCellConfigList</i>, <i>ntn-NeighCellConfigListExt</i> Provides a list of NTN neighbour cells including their <i>ntn-Config</i>, carrier frequency and <i>PhysCellId</i>. This set includes all elements of <i>ntn-NeighCellConfigList</i> and all elements of <i>ntn-NeighCellConfigListExt</i>. If <i>ntn-Config</i> is absent for an entry in <i>ntn-NeighCellConfigListExt</i>, the <i>ntn-Config</i> provided in the entry at the same position in <i>ntn-NeighCellConfigList</i> applies. Network provides <i>ntn-Config</i> for the first entry of <i>ntn-NeighCellConfigList</i>. If the <i>ntn-Config</i> is absent for any other entry in <i>ntn-NeighCellConfigList</i>, the <i>ntn-Config</i> provided in the previous entry in <i>ntn-NeighCellConfigList</i> applies.
<i>referenceLocation</i> Reference location of the serving cell provided via NTN (quasi-)Earth fixed cell and is used in location-based measurement initiation in RRC_IDLE and RRC_INACTIVE, as defined in TS 38.304 [20]. This field is only present in an NTN cell.
<i>refLocList</i> Indicates a list of reference locations associated to SMTC configurations in <i>smtc</i> and/or <i>smtc5list</i> (in <i>SIB2</i> and/or <i>SIB4</i>) in an NTN (quasi-)Earth fixed cell used for location-based SMTC selection and assisted SMTC and measurement gap configuration in RRC_CONNECTED state. If <i>refLoc</i> is absent for an entry in <i>refLocList</i>, the provided reference location in <i>referenceLocation-r17</i> applies, if present. This field is only present in an NTN cell.
<i>satSwitchWithReSync</i> Provides parameters for the target satellite required to perform satellite switch with resynchronization. This field is only present in an NTN cell and its presence indicates that satellite switch without PCI change is supported in the cell.
<i>t-Service</i> Indicates the time information on when a cell provided via NTN is going to stop serving the area it is currently covering. This field applies for both service link switches in NTN quasi-Earth fixed cell and feeder link switches for both NTN quasi-Earth fixed and Earth-moving cell. The field indicates a time in multiples of 10 ms after 00:00:00 on Gregorian calendar date 1 January, 1900 (midnight between Sunday, December 31, 1899 and Monday, January 1, 1900). The exact stop time is between the time indicated by the value of this field minus 1 and the time indicated by the value of this field. The reference point for <i>t-Service</i> is the uplink time synchronization reference point of the cell. This field is only present in an NTN cell.

NTN-CovEnh field descriptions
<i>numberOfMsg4HARQ-ACK-Repetitions</i> The number of repetition slots for PUCCH transmission with HARQ-ACK information for Msg4, see clause 9.2.6 in TS 38.213 [13]. The first/leftmost bit corresponds to the repetition factor 1, the second bit corresponds to the repetition factor 2, the third bit corresponds to the repetition factor 4, and the last/rightmost bit corresponds to the repetition factor 8. The repetition factor 1 shall be indicated together with at least one other repetition factor.
<i>rsrp-ThresholdMsg4HARQ-ACK</i> This threshold is used by the UE for determining the configuration of the MAC entity for PUCCH repetition for Msg4 HARQ-ACK, as specified in clause 6.2.1 in TS 38.321 [3].

SatSwitchWithReSync field descriptions
ssb-TimeOffset Indicates the time offset of the SSB from target satellite at its uplink time synchronization reference point with respect to the SSB from source satellite at its uplink time synchronization reference point. The starting boundaries of SFN0 of the source satellite and the target satellite are aligned at the uplink time synchronization reference point. The value is given in number of subframes and can only be configured as 5 subframes or multiples of 5 subframes. This field is included only for soft satellite switch with re-synchronization.
t-ServiceStart Indicates the time information on when the target satellite is going to start serving the area currently covered by the serving satellite. The field indicates a time in multiples of 10 ms after 00:00:00 on Gregorian calendar date 1st January 1900 (midnight between Sunday, December 31, 1899, and Monday, January 1, 1900). The exact start time is between the time indicated by the value of this field minus 1 and the time indicated by the value of this field. The reference point for <i>t-ServiceStart</i> is the uplink time synchronization reference point of the serving satellite.

– SIB20

SIB20 contains the information required to acquire the MCCH/MTCH configuration for MBS broadcast.

SIB20 information element

```
-- ASN1START
-- TAG-SIB20-START

SIB20-r17 ::= SEQUENCE {
    mcch-Config-r17          MCCH-Config-r17,

rf256-r17      INTEGER(0..255)
}

-- TAG-SIB20-STOP
-- ASN1STOP
```

SIB20 field descriptions
cfr-ConfigMCCH-MTCH Common frequency resource used for MCCH and MTCH reception. If the field is absent, the CFR for broadcast has the same location and size as CORESET#0 and PDSCH configuration of MCCH is the same as PDSCH configuration provided in <i>initialDownlinkBWP</i> in <i>SIB1</i> .
cfr-ConfigMCCH-MTCH-RedCap Common frequency resource used for MCCH and MTCH reception for (e)RedCap UEs. If the field is absent, the (e)RedCap UE can use <i>cfr-ConfigMCCH-MTCH</i> if the UE supports the configured bandwidth.
mcch-ConfigRedcap Indicates MBS broadcast MCCH configuration for (e)Redcap UEs. If the field is absent, the (e)RedCap UE can use <i>mcch-Config</i> if the UE supports the bandwidth configured by <i>cfr-ConfigMCCH-MTCH</i> .
mcch-ModificationPeriod Defines periodically appearing boundaries, i.e. radio frames for which <i>SFN mod mcch-ModificationPeriod = 0</i> . The contents of different transmissions of MCCH information can only be different if there is at least one such boundary in-between them. Value <i>rf2</i> corresponds to two radio frames, value <i>rf4</i> corresponds to four radio frames and so on.
mcch-RepetitionPeriodAndOffset Defines the length and the offset of the MCCH repetition period. <i>rf1</i> corresponds to a repetition period length of one radio frame, <i>rf2</i> corresponds to a repetition period length of two radio frames and so on. The corresponding integer value indicates the offset of the repetition period in the number of radio frames. MCCH is scheduled in the MCCH transmission window starting from each radio frame for which: <i>SFN mod repetition period length = offset of the repetition period</i> .
mcch-WindowDuration Indicates, starting from the slot indicated by <i>mcch-WindowStartSlot</i> , the duration in slots during which MCCH may be scheduled. Absence of this field means that MCCH is only scheduled in the slot indicated by <i>mcch-WindowStartSlot</i> . The network always configures <i>mcch-WindowDuration</i> to be shorter or equal to the length of MCCH repetition period.
mcch-WindowStartSlot Indicates the slot in which MCCH transmission window starts.

— SIB21

SIB21 contains the mapping between the current and/or neighbouring carrier frequencies and MBS Frequency Selection Area Identities (FSAI).

SIB21 information element

```
-- ASN1START
-- TAG-SIB21-START

SIB21-r17 ::= SEQUENCE {
  mbs-FSAI-IntraFreq-r17      MBS-FSAI-List-r17      OPTIONAL, -- Need R
  mbs-FSAI-InterFreqList-r17  MBS-FSAI-InterFreqList-r17  OPTIONAL, -- Need R
  lateNonCriticalExtension    OCTET STRING            OPTIONAL,
  ...
}
```

```
MBS-FSAI-List-r17 ::= SEQUENCE (SIZE (1..maxFSAI-MBS-r17)) OF MBS-FSAI-r17

MBS-FSAI-InterFreqList-r17 ::= SEQUENCE (SIZE (1..maxFreq)) OF MBS-FSAI-InterFreq-r17

MBS-FSAI-InterFreq-r17 ::= SEQUENCE {
    dl-CarrierFreq-r17      ARFCN-ValueNR,
    mbs-FSAI-List-r17      MBS-FSAI-List-r17
}

MBS-FSAI-r17 ::= OCTET STRING (SIZE (3))

-- TAG-SIB21-STOP
-- ASN1STOP
```

SIB21 field descriptions
mbs-FSAI-InterFreqList Contains a list of neighboring frequencies including additional bands, if any, that provide MBS services and the corresponding MBS FSAIs.
mbs-FSAI-IntraFreq Contains the list of MBS FSAIs for the current frequency. For MBS service continuity, the UE shall use all MBS FSAIs listed in <i>mbs-FSAI-IntraFreq</i> to derive the MBS frequencies of interest.

— SIB22

SIB22 contains ATG assistance information for ATG access.

SIB22 information element

```
-- ASN1START
-- TAG-SIB22-START

SIB22-r18 ::=

    }
}
```

```
-- TAG-SIB22-STOP
-- ASN1STOP
```

SIB22 field descriptions

atg-Config

Provides parameters needed for ATG access such as ATG gNB location information, cell Specific Koffset, TA Report indication.

atg-NeighCellConfigList

Provides ATG assistance information of ATG neighbour cells.

hs-ATG-CellReselectionSet

Indicates whether the UE applies high speed inter-frequency measurements requirements for inter-frequency cell reselection in RRC_IDLE and RRC_INACTIVE states as specified in TS 38.133 [14]. If the field is absent UE applies only the NR cell reselection requirements as specified in TS 38.133 [14].

– SIB23

SIB23 contains NR sidelink Positioning configuration for dedicated SL-PRS resource pool.

SIB23 information element

```
-- ASN1START
-- TAG-SIB23-START

SIB23-r18 ::=
    SEQUENCE {
        segmentNumber-r18          INTEGER (0..63),

    }
}
```

```
-- TAG-SIB23-STOP
-- ASN1STOP
```

SIB23 field descriptions
segmentContainer This field includes a segment of the encoded <i>SIB23-IEs</i> . The size of the included segment in this container should be small enough that the SI message size is less than or equal to the maximum size of a NR SI, i.e. 2976 bits when SIB23 is broadcast.
segmentNumber This field identifies the sequence number of a segment of <i>SIB23-IEs</i> . A segment number of zero corresponds to the first segment, a segment number of one corresponds to the second segment, and so on.
segmentType This field indicates whether the included segment is the last segment or not.
sl-PosConfigCommonNR This field indicates the NR sidelink positioning configuration.

SL-PosConfigCommonNR field descriptions
sl-PosFreqInfoList, sl-PosFreqInfoListExt This field indicates the NR sidelink positioning carrier frequencies for SL-PRS transmission and reception. In this release, only one entry of <i>SL-FreqConfigCommon</i> is included in the list. If network includes <i>sl-PosFreqInfoListExt</i> , it includes the same number of entries, and listed in the same order, as in <i>sl-PosFreqInfoList</i> . The first entry in the <i>sl-PosFreqInfoListExt</i> corresponds to the <i>AdditionalSpectrumEmission</i> of the frequency of first entry in <i>sl-PosFreqInfoList</i> broadcast in SIB23.
sl-PosMeasConfigCommon This field indicates the measurement configurations (e.g. RSRP) for NR sidelink positioning.
sl-PosNR-AnchorCarrierFreqList This field indicates the NR anchor carrier frequency list, which can provide the NR sidelink positioning configurations.
sl-PosOffsetDFN Indicates the timing offset for the UE to determine DFN timing when GNSS is used for timing reference. Value 1 corresponds to 0.001 milliseconds, value 2 corresponds to 0.002 milliseconds, and so on.
sl-PosSSB-PriorityNR This field indicates the priority of NR sidelink SSB transmission and reception.
sl-PosUE-SelectedConfig Indicates the configuration used for UE autonomous resource selection.

– SIB24

SIB24 contains the information required to acquire the multicast MCCH/MTCH configuration for MBS multicast reception in RRC_INACTIVE.

SIB24 information element

```
-- ASN1START
-- TAG-SIB24-START

SIB24-r18 ::= SEQUENCE {
```

```
multicastMCCH-Config-r18      MCCH-Config-r17      OPTIONAL, -- Need S
cfr-ConfigMCCH-MTCH-r18      CFR-ConfigMCCH-MTCH-r17 OPTIONAL, -- Need S
lateNonCriticalExtension      OCTET STRING      OPTIONAL,
...
}

-- TAG-SIB24-STOP
-- ASN1STOP
```

SIB24 field descriptions
cfr-ConfigMCCH-MTCH Common frequency resource used for multicast MCCH and/or multicast MTCH reception. If the field is absent, the CFR for multicast has the same location and size as CORESET#0 and PDSCH configuration of multicast MCCH, if present, is the same as PDSCH configuration provided in <i>initialDownlinkBWP</i> in <i>SIB1</i> .
multicastMCCH-Config Indicates MCCH configuration for MBS multicast reception in RRC_INACTIVE. This field is always included if it is provided via broadcast signalling in <i>SIB24</i> .

– SIB25

SIB25 contains TN coverage information to assist neighbour cell measurements for the UEs in an NTN cell.

SIB25 information element

```
-- ASN1START
-- TAG-SIB25-START

SIB25-r18 ::= SEQUENCE {
  coverageAreaInfoList-r18      CoverageAreaInfoList-r18      OPTIONAL, -- Need R
  lateNonCriticalExtension      OCTET STRING      OPTIONAL,
  ...
}

CoverageAreaInfoList-r18 ::= SEQUENCE (SIZE (1..maxTN-AreaInfo-r18)) OF CoverageAreaInfo-r18

CoverageAreaInfo-r18 ::= SEQUENCE {
  tn-AreaId-r18      TN-AreaId-r18,
  tn-ReferenceLocation-r18      ReferenceLocation-r17,
  tn-DistanceRadius-r18      INTEGER(0..65535)
}

-- TAG-SIB25-STOP
-- ASN1STOP
```

SIB25 field descriptions**coverageAreaInfoList**

Contains a list of TN coverage area's information to assist skipping TN measurements for NTN UEs in RRC_IDLE and RRC_INACTIVE, as defined in TS 38.304 [20].

tn-DistanceRadius

Distance from the TN coverage area reference location. It is used for skipping TN measurements in RRC_IDLE and RRC_INACTIVE, as defined in TS 38.304 [20]. Each step represents 1m.

– **SIB26**

SIB26 contains information to assist OD-SIB1 acquisition from serving cell or neighbour cells.

SIB26 information element

```
-- ASN1START
-- TAG-SIB26-START

SIB26 field descriptions

od-SIB1-ConfigList

Provides a configuration to request SIB1 for serving cell and neighbor cells.

OD-SIB1-Config field descriptions	
carrierFreq	Identifies the ARFCN for the SSB of the cell for which this configuration is valid.
controlResourceSetZero	Determines a common ControlResourceSet (CORESET) with ID #0, see TS 38.213, clause 13.
frequencyBandList	List of one or multiple frequency bands to which this carrier(s) belongs.
k-SSB	Indication of the quantity K_SSB (defined in TS 38.211 as subcarrier offset from subcarrier 0 in common resource block N_CRB^SSB to the lowest-numbered subcarrier of the SS/PBCH block) of the cell indicated by <i>physCellId</i> in IE <i>OD-SIB1-CellConfig</i> for OD-SIB1 transmission, see TS 38.213 [13], clause 23. For FR2, network does not configure values larger than 11.
od-SIB1-WindowDuration	Indicate the duration of the time window of type 0 PDCCH monitoring occasions for SIB1 after transmission of SIB1 request.
od-SIB1-WindowStartOffset	Indicate the time offset between the reference time point and the starting time for the time window of on-demand SIB1.
offsetToPointA	Represents the offset to Point A as defined in TS 38.211 [16], clause 4.4.4.2.
searchSpaceZero	Parameters of the common SearchSpace#0, see TS 38.213 [13], clause 13.
sib1-TDD-UL-DL-ConfigurationCommon	A cell-specific TDD UL/DL configuration, see TS 38.213 [13], clause 11.1.
ss-PBCH-BlockPower	Average EPRE of the resources elements that carry secondary synchronization signals in dBm that the NW used for SSB transmission, see TS 38.213 [13], clause 7.
ssb-Periodicity	The SSB periodicity in ms for at least the purpose of RO validation determination for SIB1 request transmission.
ssb-PositionsInBurst	Time domain positions of the transmitted SS-blocks in an SS-burst as defined in TS 38.213 [13], clause 4.1.
validSIB26-Cells	Identifies the physical cell Id(s) for which this configuration is applied.

SIB1-RequestConfig field descriptions	
absoluteFrequencyPointA	Absolute frequency of the reference resource block (Common RB 0). Its lowest subcarrier is also known as Point A (see TS 38.211 [16], clause 4.4.4.2).
carrierBandwidth	Width of this carrier in number of PRBs (using the <i>subcarrierSpacing</i> defined for this carrier) (see TS 38.211 [16], clause 4.4.2). For the case that 12PRB/20 PRB transmission bandwidth is used as specified in TS 38.101-1 [15], TS 38.211[16] and TS 38.213[13], the network shall configure the <i>carrierBandwidth</i> to 15 PRB (for the 12 PRB case) and 25 PRB (for the 20 PRB case) respectively and the UE shall use 12 PRB/20 PRB as the transmission bandwidth respectively.
locationAndBandwidth	Frequency domain location and bandwidth of this bandwidth part. The value of the field shall be interpreted as resource indicator value (RIV) as defined TS 38.214 [19] with assumptions as described in TS 38.213 [13], clause 12, i.e. setting $N_{\text{BWP}}^{\text{size}}=275$. The first PRB is a PRB determined by <i>offsetToCarrier</i> configured in IE <i>OD-SIB1-Config</i> and <i>subcarrierSpacing</i> of this BWP. In case of TDD, a BWP-pair (UL BWP and DL BWP with the same <i>bwp-Id</i>) must have the same center frequency (see TS 38.213 [13], clause 12)
msg1-SubcarrierSpacing	Subcarrier spacing of PRACH (see TS 38.211 [16], clause 5.3.2) used for SIB1 request transmission.
n-TimingAdvanceOffset	The <i>N_TA-Offset</i> to be applied for random access on this cell. If the field is absent, the UE applies the value defined for the duplex mode and frequency range of this cell. See TS 38.133, table 7.1.2-2.
offsetToCarrier	Offset in frequency domain between Point A (lowest subcarrier of common RB 0) and the lowest usable subcarrier on this carrier in number of PRBs (using the <i>subcarrierSpacing</i> defined for this carrier). The maximum value corresponds to $275 \times 8 - 1$. See TS 38.211 [16], clause 4.4.2.
p-Max	Value in dBm applicable for the cell. If absent the UE applies the maximum power according to TS 38.101-1[57] in case of an FR1 cell or TS 38.101-2 [39] in case of an FR2 cell. In this release of the specification, if p-Max is present on a carrier frequency in FR2, the UE shall ignore the field and applies the maximum power according to TS 38.101-2 [39]. This field is ignored by IAB-MT, the IAB-MT applies output power and emissions requirements, as specified in TS 38.174 [63].
prach-RootSequenceIndex	PRACH root sequence index (see TS 38.211 [16], clause 6.3.3.1) to be used for SIB1 request transmission.
ra-SearchSpace	ID of the Search space for random access procedure (see TS 38.213 [13], clause 10.1).
sib1-PDCCH-RestrictionToPRACH	Indicates whether the UE can assume that, in the OD-SIB1 window, PDCCH for an OD-SIB1 message is transmitted in PDCCH monitoring occasions corresponding only to the SSB associated with the PRACH for SIB1 request.
sib1-RequestPeriod	Periodicity of the <i>SIB1-Request</i> configuration in number of association periods.
sib1-RequestResources	Resources for SIB1 request
sib1-RestrictedSetConfig	Configuration of an unrestricted set or one of two types of restricted sets, see TS 38.211 [16], clause 6.3.3.1.
sib1-RSRP-ThresholdSSB	L1-RSRP threshold used for determining whether a candidate beam may be used by the UE to attempt to transmit SIB1 request, see TS 38.321 [3].
ssb-perRACH-Occasion	Number of SSBs per RACH occasion for OD-SIB1
totalNumberOfRA-Preambles	Total number of preambles used for contention based and contention free 4-step or 2-step random access in the RACH resources configured in the corresponding OD-SIB1-

Config, excluding preambles used for other purposes (e.g. for SI request, or SIB1 request).
ul-FrequencyBandList Provides the frequency band indicator and a list of additionalPmax and additionalSpectrumEmission values for UL operation as defined in TS 38.101-1 [15], table 6.2.3.1-1, TS 38.101-2 [39], table 6.2.3.1-2, and TS 38.101-5 [75], table 6.2.3.1-1. The UE shall apply the first listed band which it supports in the <i>ul-FrequencyBandList</i> field.
ul-SubCarrierSpacing Indicates the reference SCS for <i>msg1-FrequencyStart-r19</i> , <i>offsetToCarrier-r19</i> , <i>carrierBandwidth-r19</i> , and <i>locationAndBandwidth-r19</i> .

SIB1-RequestResources field descriptions
sib1-RA-AssociationPeriodIndex Index of the association period in the <i>sib1-RequestPeriod</i> in which the UE can send the SIB1 request for SIB using the preambles indicated by <i>sib1-RA-PreambleStartIndex</i> and rach occasions indicated by <i>sib1-RA-SSB-OccasionMaskIndex</i> .
sib1-RA-PreambleStartIndex If N SSBs are associated with a RACH occasion, where N >= 1, for the i-th SSB (i=0, ..., N-1) the preamble with preamble index = <i>sib1-RA-PreambleStartIndex</i> + i is used for SIB1 request; For N < 1, the preamble with preamble index = <i>sib1-RA-PreambleStartIndex</i> is used for SIB1 request.
sib1-RA-SSB-OccasionMaskIndex Explicitly signalled PRACH Mask Index for RA Resource selection in TS 38.321 [3].

Conditional Presence	Explanation
FR2-Only	This field is mandatory present for an FR2 carrier frequency. It is absent otherwise and UE releases any configured value.
FDD	The field is optionally present, Need R, for FDD cells; otherwise it is absent.
SUL	The field is mandatory present, in IE <i>sib1-RequestConfigSUL</i> ; otherwise it is absent.
TDD	The field is optionally present, Need R, for TDD cells; otherwise it is absent.
TDD_NES	The field is mandatory present for TDD cells, otherwise it is optionally present, Need R.

– SIB27

SIB27 contains the information of the intended service area(s) of an MBS broadcast service(s) in an NTN cell.

SIB27 information element

```
-- ASN1START
-- TAG-SIB27-START

SIB27-r19 ::= SEQUENCE {
    intendedServiceAreaList-r19    IntendedServiceAreaList-r19    OPTIONAL, -- Need R
    lateNonCriticalExtension       OCTET STRING                   OPTIONAL,
    ...
}

IntendedServiceAreaList-r19 ::= SEQUENCE (SIZE (1..maxNrofMBS-Area-r19)) OF IntendedServiceAreaInfo-r19

        center-r19              ReferenceLocation-r17,
        radius-r19              INTEGER (0..65535)
      }
    }
  }
}

MBS-IntendedAreaID-r19 ::= INTEGER (1..maxNrofMBS-Area-r19)

-- TAG-SIB27-STOP
-- ASN1STOP
```

SIB27 field descriptions
intendedServiceAreaList Contains a list of intended service areas, each associated to one or more MBS broadcast services provided in an NTN cell.
polygonArea Parameter type <i>Polygon</i> defined in TS 37.355 [49]. The first/leftmost bit of the first octet contains the most significant bit.
radius Each step represents 50m.

— SIB28

SIB28 contains satellite assistance information for IoT NTN access.

SIB28 information element

```

SIB28 field descriptions

carrierFreqIoT

Provides the IoT NTN carrier frequency as defined in TS 36.102 [82], clause 5.4A.2 and 5.4B.2.

carrierFreqOffset

Offset of the NB-IoT channel number to EARFCN as defined in TS 36.102 [82], clause 5.4B.2. This field is only present for NB-IoT frequencies.

ntn-Config

Provides parameters needed for the UE to access IoT NTN such as ephemeris data, common TA parameters, validity duration for UL sync information and epoch time.

ntn-NeighCellConfigListBLCE, ntn-NeighCellConfigListNB

Provides a list of E-UTRAN neighbour cells that provides IoT NTN access for NTN capable bandwidth reduced low complexity (BL) UEs, CE capable UEs and NB-IoT UEs.

6.3.1a Positioning System information blocks

<i>PosSI-SchedulingInfo</i> field descriptions
areaScope Indicates that a posSIB is area specific. If the field is absent, the posSIB is cell specific.
encrypted The presence of this field indicates that the <i>pos-sib-type</i> is encrypted as specified in TS 37.355 [49].
gnss-id The presence of this field indicates that the positioning SIB type is for a specific GNSS. Indicates a specific GNSS (see also TS 37.355 [49])
posSchedulingInfoList List of scheduling information for SI messages. If <i>si-SchedulingInfo-v1700</i> is present, the network ensures that the total number of SI messages in the concatenated list of SI messages configured by <i>posSchedulingInfoList</i> in <i>posSI-SchedulingInfo</i> and SI messages containing type2 SIB configured by <i>schedulingInfoList2</i> in <i>si-SchedulingInfo-v1700</i> does not exceed the limit of <i>maxSI-Message</i> .
posSI-BroadcastStatus Indicates if the SI message is being broadcasted or not. Change of <i>posSI-BroadcastStatus</i> should not result in system information change notifications in Short Message transmitted with P-RNTI over DCI (see clause 6.5). The value of the indication is valid until the end of the BCCH modification period when set to <i>broadcasting</i> .
posSI-RequestConfig Configuration of Msg1 resources that the UE uses for requesting SI-messages for which <i>posSI-BroadcastStatus</i> or <i>si-BroadcastStatus</i> of the type2 SIB configured by <i>schedulingInfoList2</i> in <i>si-SchedulingInfo-v1700</i> , if present, is set to <i>notBroadcasting</i> .
posSI-RequestConfigMSG1-Repetition Configuration of Msg1 repetition resources on NUL that the UE uses for requesting SI-messages for which <i>posSI-BroadcastStatus</i> or <i>si-BroadcastStatus</i> of the type2 SIB configured by <i>schedulingInfoList2</i> in <i>si-SchedulingInfo-v1700</i> , if present, is set to <i>notBroadcasting</i> . This field is only applicable when Msg1 repetition resources can be used for requesting SI-messages.
posSI-RequestConfigRedCap Configuration of Msg1 resources for <i>initialUplinkBWP-RedCap</i> that the (e)RedCap UE uses for requesting SI-messages for which <i>posSI-BroadcastStatus</i> or <i>si-BroadcastStatus</i> of the type2 SIB configured by <i>schedulingInfoList2</i> in <i>si-SchedulingInfo-v1700</i> , if present, is set to <i>notBroadcasting</i> .
posSI-RequestConfigRedCap-MSG1-Repetition Configuration of Msg1 repetition resources for <i>initialUplinkBWP-RedCap</i> that the (e)RedCap UE uses for requesting SI-messages for which <i>posSI-BroadcastStatus</i> or <i>si-BroadcastStatus</i> of the type2 SIB configured by <i>schedulingInfoList2</i> in <i>si-SchedulingInfo-v1700</i> , if present, is set to <i>notBroadcasting</i> . This field is only applicable when Msg1 repetition resources can be used for requesting SI-messages.
posSI-RequestConfigSUL Configuration of Msg1 resources that the UE uses for requesting SI-messages for which <i>posSI-BroadcastStatus</i> or <i>si-BroadcastStatus</i> of the type2 SIB configured by <i>schedulingInfoList2</i> in <i>si-SchedulingInfo-v1700</i> , if present, is set to <i>notBroadcasting</i> .
posSI-RequestConfigSUL-MSG1-Repetition Configuration of Msg1 repetition resources on SUL that the UE uses for requesting SI-messages for which <i>posSI-BroadcastStatus</i> or <i>si-BroadcastStatus</i> of the type2 SIB configured by <i>schedulingInfoList2</i> in <i>si-SchedulingInfo-v1700</i> , if present, is set to <i>notBroadcasting</i> . This field is only applicable when Msg1 repetition resources can be used for requesting SI-messages.
posSIB-MappingInfo List of the posSIBs mapped to this <i>SystemInformation</i> message.
posSibType The positioning SIB type is defined in TS 37.355 [49].
posSI-Periodicity Periodicity of the SI-message in radio frames, such that rf8 denotes 8 radio frames, rf16 denotes 16 radio frames, and so on. If the <i>offsetToSI-Used</i> is configured, the <i>posSI-Periodicity</i> of rf8 cannot be used.
offsetToSI-Used This field, if present, indicates that all the SI messages in <i>posSchedulingInfoList</i> are scheduled with an offset of 8 radio frames compared to SI messages in <i>schedulingInfoList</i> . <i>offsetToSI-Used</i> may be present only if the shortest configured SI message periodicity for SI messages in <i>schedulingInfoList</i> is 80ms. If SI offset is used, this field is present in

each of the SI messages in the <i>posSchedulingInfoList</i> .
<i>sbas-id</i> The presence of this field indicates that the positioning SIB type is for a specific SBAS. Indicates a specific SBAS (see also TS 37.355 [49]).

Conditional presence	Explanation
<i>GNSS-ID-SBAS</i>	The field is mandatory present if <i>gnss-id</i> is set to <i>sbas</i> . It is absent otherwise.
<i>MSG-1</i>	The field is optionally present, Need R, if <i>posSI-BroadcastStatus</i> is set to <i>notBroadcasting</i> for any SI-message included in <i>posSchedulingInfoList</i> or if <i>si-BroadcastStatus</i> is set to <i>notBroadcasting</i> for any SI-message containing type2 SIB included in <i>schedulingInfoList2</i> . It is absent otherwise.
<i>SUL-MSG-1</i>	The field is optionally present, Need R, if <i>supplementaryUplink</i> is configured in <i>ServingCellConfigCommonSIB</i> , and if <i>posSI-BroadcastStatus</i> is set to <i>notBroadcasting</i> for any SI-message included in <i>posSchedulingInfoList</i> or if <i>si-BroadcastStatus</i> is set to <i>notBroadcasting</i> for any SI-message containing type2 SIB included in <i>schedulingInfoList2</i> . It is absent otherwise.
<i>REDCAP-MSG-1</i>	The field is optionally present, Need R, if <i>initialUplinkBWP-RedCap</i> is configured in <i>UplinkConfigCommonSIB</i> , and if <i>posSI-BroadcastStatus</i> is set to <i>notBroadcasting</i> for any SI-message included in <i>posSchedulingInfoList</i> or if <i>si-BroadcastStatus</i> is set to <i>notBroadcasting</i> for any SI-message containing type2 SIB included in <i>schedulingInfoList2</i> . It is absent otherwise.

– *SIBpos*

The IE *SIBpos* contains positioning assistance data as defined in TS 37.355 [49].

SIBpos information element

```
-- ASN1START
-- TAG-SIPOS-START

SIBpos-r16 ::= SEQUENCE {
    assistanceDataSIB-Element-r16      OCTET STRING,
    lateNonCriticalExtension            OCTET STRING OPTIONAL,
    ...
}

-- TAG-SIPOS-STOP
-- ASN1STOP
```

<i>SIBpos</i> field descriptions
<i>assistanceDataSIB-Element</i> Parameter <i>AssistanceDataSIBelement</i> defined in TS 37.355 [49]. The first/leftmost bit of the first octet contains the most significant bit.

6.3.2 Radio resource control information elements

– *AdditionalPCIIndex*

The IE *AdditionalPCIIndex* identifies an additional physical cell identity (PCI) configured with *additionalPCI-ToAddModList-r17* in *ServingCellConfig*.

***AdditionalPCIIndex* information element**

```
-- ASN1START
-- TAG-ADDITIONALPCIINDEX-START

AdditionalPCIIndex-r17 ::= INTEGER (1..maxNrofAdditionalPCI-r17)

-- TAG-ADDITIONALPCIINDEX-STOP
-- ASN1STOP
```

– *AdditionalSpectrumEmission*

The IE *AdditionalSpectrumEmission* is used to indicate emission requirements to be fulfilled by the UE (see TS 38.101-1 [15], clause 6.2.3/6.2A.3, TS 38.101-2 [39], clause 6.2.3/6.2A.3, and TS 38.101-5 [75], clause 6.2.3). If an extension is signalled using the extended value range (as defined by the IE *AdditionalSpectrumEmission-v1760*), the corresponding original field, using the value range as defined by the IE *AdditionalSpectrumEmission* (without suffix) shall be set to value 7.

***AdditionalSpectrumEmission* information element**

```
-- ASN1START
-- TAG-ADDITIONALSPECTRUMEMISSION-START

AdditionalSpectrumEmission ::= INTEGER (0..7)

AdditionalSpectrumEmission-v1760 ::= INTEGER (8..39)

AdditionalSpectrumEmission-r18 ::= INTEGER (0..39)

-- TAG-ADDITIONALSPECTRUMEMISSION-STOP
-- ASN1STOP
```

– *AdvancedReceiver-MU-MIMO*

The IE *AdvancedReceiver-MU-MIMO* is used to provide a set of assistance information for R-ML (reduced complexity ML) receivers with enhanced inter-user interference suppression for MU-MIMO transmissions.

***AdvancedReceiver-MU-MIMO* information element**

```
-- ASN1START
-- TAG-ADVANCEDRECEIVER-MU-MIMO-START
```

```
AdvancedReceiver-MU-MIMO-r18 ::= SEQUENCE {
    precodingAndResourceAllocation-r18    BOOLEAN          OPTIONAL, -- Need M
    pdsch-TimeDomainAllocation-r18        BOOLEAN          OPTIONAL, -- Need M
    mcs-Table-r18                        ENUMERATED {qam1024, qam256, qam64, spare1}  OPTIONAL, -- Need R
    advReceiver-MU-MIMO-DCI-1-1-r18      ENUMERATED {enabled}  OPTIONAL, -- Need R
    ...
}

-- TAG-ADVANCEDRECEIVER-MU-MIMO-STOP
-- ASN1STOP
```

AdvancedReceiver-MU-MIMO field descriptions	
advReceiver-MU-MIMO-DCI-1-1	Configure the presence of the co-scheduled UE information field in DCI format 1_1 (see TS 38.212 [17], clause 7.3.1.2.2).
mcs-Table	Indicates the MCS table with the highest modulation order among all MCS tables configured to the co-scheduled UE(s), which has the same DMRS sequence as the target UE.
pdsch-TimeDomainAllocation	If the field is set to true, the UE can assume the time domain resource assignment for PDSCH symbols of all the co-scheduled UE(s), which has the same DMRS sequence as the target UE, is same as the target UE. If the field is set to false, the UE can not assume the time domain resource assignment for PDSCH symbols of all the co-scheduled UE(s), which has the same DMRS sequence as the target UE, is same as the target UE.
precodingAndResourceAllocation	If the field is set to true, the UE can assume the precoding and resource allocation of the co-scheduled UE are the same in the PRG-level grid configured to the target UE when PRG=2 or 4, when the target UE and any co-scheduled UEs are in different CDM groups and with the same DMRS sequence. If the field is set to false, the UE can not assume the precoding or resource allocation of the co-scheduled UE is the same in the PRG-level grid configured to the target UE when PRG=2 or 4, when the target UE and any co-scheduled UEs are in different CDM groups and with the same DMRS sequence.

NOTE: the same DMRS sequence represents the same root DMRS sequence $r(n)$, see TS 38.211 [16], clause 7.4.1.1.1.

– **Aerial-Config**

The IE *Aerial-Config* provides configuration parameters for aerial UE.

Aerial-Config information element

```
-- ASN1START
-- TAG-AERIAL-CONFIG-START

Aerial-Config-r18 ::= SEQUENCE {
    flightPathUpdateThrConfig-r18    SEQUENCE {
        flightPathUpdateDistanceThr-r18    SetupRelease { FlightPathUpdateDistanceThr-r18 }  OPTIONAL, -- Need M
        flightPathUpdateTimeThr-r18        SetupRelease { FlightPathUpdateTimeThr-r18 }    OPTIONAL, -- Need M
    }
}
```

```
    }
    ...
}
FlightPathUpdateDistanceThr-r18 ::=  INTEGER (0..1023)
FlightPathUpdateTimeThr-r18 ::=      INTEGER (0..16383)
-- TAG-AERIAL-CONFIG-STOP
-- ASN1STOP
```

Aerial-Config field descriptions
flightPathUpdateDistanceThr Distance threshold for triggering flight path update indication. Actual value is 5 x field value in meters.
flightPathUpdateTimeThr Time threshold for triggering flight path update indication. Value in seconds.

— *Alpha*

The IE *Alpha* defines possible values of a the pathloss compensation coefficient for uplink power control. Value *alpha0* corresponds to the value 0, Value *alpha04* corresponds to the value 0.4, Value *alpha05* corresponds to the value 0.5 and so on. Value *alpha1* corresponds to value 1. See also clause 7.1 of TS 38.213 [13].

```
-- ASN1START
-- TAG-ALPHA-START

Alpha ::=
    ENUMERATED {alpha0, alpha04, alpha05, alpha06, alpha07, alpha08, alpha09, alpha1}

-- TAG-ALPHA-STOP
-- ASN1STOP
```

— *Altitude*

The IE *Altitude* is used to indicate altitude relative to sea level. The actual value is the field value in meters.

Altitude information element

```
-- ASN1START
-- TAG-ALTITUDE-START

Altitude-r18 ::=
    INTEGER (minAltitude-r18..maxAltitude-r18)

-- TAG-ALTITUDE-STOP
-- ASN1STOP
```

– *AMF-Identifier*

The IE *AMF-Identifier* (AMFI) comprises of an AMF Region ID, an AMF Set ID and an AMF Pointer as specified in TS 23.003 [21], clause 2.10.1.

***AMF-Identifier* information element**

```
-- ASN1START
-- TAG-AMF-IDENTIFIER-START

AMF-Identifier ::=                BIT STRING (SIZE (24))

-- TAG-AMF-IDENTIFIER-STOP
-- ASN1STOP
```

– *ApplicabilitySetConfigId*

The IE *ApplicabilitySetConfigId* is used to identify an *ApplicabilitySetConfigCSI*.

***ApplicabilitySetConfigId* information element**

```
-- ASN1START
-- TAG-APPLICABILITYSETCONFIGID-START

ApplicabilitySetConfigId-r19 ::=    INTEGER (0..maxNrofApplicabilitySetCSI-Configs-1-r19)

-- TAG-APPLICABILITYSETCONFIGID-STOP
-- ASN1STOP
```

– *ApplicabilityReportList*

The IE *ApplicabilityReportList* comprises information that the UE reports to gNB related to the applicability of configurations subject to the applicability determination procedure.

***ApplicabilityReportList* information element**

```
-- ASN1START
-- TAG-APPLICABILITYREPORTLIST-START

ApplicabilityReportList-r19 ::=    SEQUENCE (SIZE (1..maxNrofServingCells)) OF ApplicabilityReport-r19

ApplicabilityReport-r19 ::=        SEQUENCE {
    applicabilityCellId-r19          ServCellIndex,
    applicabilityInfoReportList-r19  SEQUENCE (SIZE (1..maxNrofApplicabilityReports-r19)) OF ApplicabilityInfoReport-r19 OPTIONAL,
    ...
}
```

```
ApplicabilityInfoReport-r19 ::= SEQUENCE {
  applicabilityInfoReportId-r19 CHOICE {
    csi-ReportConfigId-r19 CSI-ReportConfigId,
    applicabilitySetId-r19 ApplicabilitySetConfigId-r19
  } OPTIONAL,
  applicabilityStatus-r19 ENUMERATED {applicable, inapplicable},
  releaseConfigurationPreference-r19 ENUMERATED {true} OPTIONAL,
  ...
}

-- TAG-APPLICABILITYREPORTLIST-STOP
-- ASN1STOP
```

ApplicabilityReportList field descriptions
applicabilityCellId Index of the serving cell that the <i>ApplicabilityReport</i> refers to.
applicabilityInfoReportId Indicates the ID of a configuration subject to the applicability determination procedure.
applicabilityInfoReportList Indicates the list of applicability reports, each associated with a configuration ID for a configuration subject to the applicability determination procedure.
applicabilityStatus Indicates whether the configuration associated to <i>applicabilityInfoReportId</i> is applicable or inapplicable.
releaseConfigurationPreference Indicates the UE's preference to release the configuration associated to <i>applicabilityInfoReportId</i> (e.g. due to model unavailability), if the <i>applicabilityStatus</i> is set to <i>inapplicable</i> .

— ARFCN-ValueEUTRA

The IE *ARFCN-ValueEUTRA* is used to indicate the ARFCN applicable for a downlink, uplink or bi-directional (TDD) E-UTRA carrier frequency, as defined in TS 36.101 [22].

ARFCN-ValueEUTRA information element

```
-- ASN1START
-- TAG-ARFCN-VALUEEUTRA-START

ARFCN-ValueEUTRA ::= INTEGER (0..maxEARFCN)

-- TAG-ARFCN-VALUEEUTRA-STOP
-- ASN1STOP
```

— ARFCN-ValueNR

The IE *ARFCN-ValueNR* is used to indicate the ARFCN applicable for a downlink, uplink or bi-directional (TDD) NR global frequency raster, as defined in TS 38.101-1 [15], TS 38.101-2 [39] and TS 38.101-5 [75], clause 5.4.2.

```
-- ASN1START
-- TAG-ARFCN-VALUENR-START

ARFCN-ValueNR ::=                INTEGER (0..maxNARFCN)

-- TAG-ARFCN-VALUENR-STOP
-- ASN1STOP
```

– *ARFCN-ValueUTRA-FDD*

The IE *ARFCN-ValueUTRA-FDD* is used to indicate the ARFCN applicable for a downlink (Nd, FDD) UTRA-FDD carrier frequency, as defined in TS 25.331 [45].

***ARFCN-ValueUTRA-FDD* information element**

```
-- ASN1START
-- TAG-ARFCN-ValueUTRA-FDD-START

ARFCN-ValueUTRA-FDD-r16 ::=      INTEGER (0..16383)

-- TAG-ARFCN-ValueUTRA-FDD-STOP
-- ASN1STOP
```

– *AssociatedId*

The IE *AssociatedId* indicates that the UE may assume similar properties of a DL Tx beam or beam set/list associated with the same value. The *AssociatedID* value is unique within a PLMN, i.e. it can only be associated with one same/similar beam deployment within the same PLMN.

***AssociatedId* information element**

```
-- ASN1START
-- TAG-ASSOCIATEDID-START

AssociatedId-r19 ::=             BIT STRING (SIZE (24))

-- TAG-ASSOCIATEDID-STOP
-- ASN1STOP
```

– *ATG-Config*

The IE *ATG-Config* provides parameters needed for the UE to access NR via ATG access.

***ATG-Config* information element**

```
-- ASN1START
-- TAG-ATG-CONFIG-START
```

```

ATG-Config-r18 ::= SEQUENCE {
    atg-gNB-Location-r18      ReferenceLocation-r17      OPTIONAL, -- Need R
    height-gNB-r18           INTEGER (-16384..16383)      OPTIONAL, -- Need R
    cellSpecificKoffset-r18  INTEGER (1..3)              OPTIONAL, -- Need R
    ta-ReportATG-r18         ENUMERATED {enabled}         OPTIONAL, -- Need R
}

-- TAG-ATG-CONFIG-STOP
-- ASN1STOP

```

ATG-Config field descriptions

atg-gNB-Location

Indicates the BS location for ATG access.

cellSpecificKoffset

Scheduling offset used for the timing relationships that are modified for ATG. Unit in slot.

height-gNB

Indicates the height of the BS for ATG access relative to the sea level. Unit in meter.

ta-ReportATG

When this field is included in SIB22, it indicates reporting of timing advanced is enabled during Random Access due to RRC connection establishment or RRC connection resume, and during RRC connection reestablishment. When this field is included in *ServingCellConfigCommon* within dedicated signalling, it indicates TA reporting is enabled during Random Access due to reconfiguration with sync (see TS 38.321 [3], clause 5.4.8).

– AvailabilityCombinationsPerCell

The IE *AvailabilityCombinationsPerCell* is used to configure the *AvailabilityCombinations* applicable for a cell of the IAB DU (see TS 38.213 [13], clause 14). Note that the IE *AvailabilityCombinationsPerCellIndex* can only be configured up to 511.

AvailabilityCombinationsPerCell information element

```

-- ASN1START
-- TAG-AVAILABILITYCOMBINATIONSPERCELL-START

AvailabilityCombinationsPerCell-r16 ::= SEQUENCE {
    availabilityCombinationsPerCellIndex-r16  AvailabilityCombinationsPerCellIndex-r16,
    iab-DU-CellIdentity-r16                   CellIdentity,
    positionInDCI-AI-r16                      INTEGER (0..maxAI-DCI-PayloadSize-1-r16) OPTIONAL, -- Need M
    availabilityCombinations-r16              SEQUENCE (SIZE (1..maxNrofAvailabilityCombinationsPerSet-r16)) OF AvailabilityCombination-r16,
    ...
    [[
        availabilityCombinationsRB-Groups-r17 SEQUENCE (SIZE (1..maxNrofAvailabilityCombinationsPerSet-r16)) OF
                                                    AvailabilityCombinationRB-Groups-r17 OPTIONAL -- Need M
    ]],
    [[
        positionInDCI-AI-RBGroups-v1720      INTEGER (0..maxAI-DCI-PayloadSize-1-r16) OPTIONAL -- Need M
    ]]
}

```

```

}

AvailabilityCombinationsPerCellIndex-r16 ::= INTEGER(0..maxNrofDUCells-r16)

AvailabilityCombination-r16 ::= SEQUENCE {
    availabilityCombinationId-r16      AvailabilityCombinationId-r16,
    resourceAvailability-r16           SEQUENCE (SIZE (1..maxNrofResourceAvailabilityPerCombination-r16)) OF INTEGER (0..7)
}

AvailabilityCombinationId-r16 ::= INTEGER (0..maxNrofAvailabilityCombinationsPerSet-1-r16)

AvailabilityCombinationRB-Groups-r17 ::= SEQUENCE {
    availabilityCombinationId-r17      AvailabilityCombinationId-r16,
    rb-SetGroups-r17                  SEQUENCE (SIZE (1..maxNrofRB-SetGroups-r17)) OF RB-SetGroup-r17 OPTIONAL, -- Need R
    resourceAvailability-r17           SEQUENCE (SIZE (1..maxNrofResourceAvailabilityPerCombination-r16)) OF INTEGER (0..7) OPTIONAL -- Need R
}

RB-SetGroup-r17 ::= SEQUENCE {
    resourceAvailability-r17 SEQUENCE (SIZE (1..maxNrofResourceAvailabilityPerCombination-r16)) OF INTEGER (0..7) OPTIONAL, -- Need R
    rb-Sets-r17             SEQUENCE (SIZE (1..maxNrofRB-Sets-r17)) OF INTEGER (0..7) OPTIONAL -- Need R
}

-- TAG-AVAILABILITYCOMBINATIONSPerCELL-STOP
-- ASN1STOP

```

AvailabilityCombination field descriptions

availabilityCombinationId

This ID is used in the DCI Format 2_5 payload to dynamically select this *AvailabilityCombination*, see TS 38.213 [13], clause 14.

resourceAvailability

Indicates the resource availability of soft symbols for a set of consecutive slots in the time domain. The meaning of this field is described in TS 38.213 [13], Table 14.3. If included in *RB-SetGroup* within *AvailabilityCombinationRB-Groups-r17*, it indicates the availability of soft resources for an RB set group. If included in *AvailabilityCombinationRB-Groups-r17* when the *rb-SetGroups* is not configured, it indicates the availability of soft resources in one or multiple slots for all RB sets of a DU cell.

AvailabilityCombinationsPerCell field descriptions

iab-DU-CellIdentity

The ID of the IAB-DU cell for which the *availabilityCombinations* are applicable.

positionInDCI-AI

The (starting) position (bit) of the *availabilityCombinationId* for the indicated IAB-DU cell (*iab-DU-CellIdentity*) within the DCI payload. If *positionInDCI-AI-RBGroups* is not configured, it applies to the *availabilityCombinationId* included in *availabilityCombinations* and in *availabilityCombinationsRB-Groups*. If *positionInDCI-AI-RBGroups* is configured, it applies to the *availabilityCombinationId* included in *availabilityCombinations*.

positionInDCI-AI-RBGroups

The (starting) position (bit) of the *availabilityCombinationId* associated to the *availabilityCombinationsRB-Groups* for the indicated IAB-DU cell (*iab-DU-CellIdentity*) within the DCI payload.

AvailabilityCombinationRB-Groups field descriptions**rb-SetGroups**

Indicates the RB set groups configured for the availability combination. Each group includes consecutive RB sets.

rb-Sets

Indicates the one or more RB set indexes associated to one or more RB sets configured for one RB set group.

– AvailabilityIndicator

The IE *AvailabilityIndicator* is used to configure monitoring a PDCCH for Availability Indicators (AI).

AvailabilityIndicator information element

```
-- ASN1START
-- TAG-AVAILABILITYINDICATOR-START

AvailabilityIndicator-r16 ::= SEQUENCE {
    ai-RNTI-r16                AI-RNTI-r16,
    dci-PayloadSizeAI-r16     INTEGER (1..maxAI-DCI-PayloadSize-r16),
    availableCombToAddModList-r16 SEQUENCE (SIZE (1..maxNrofDUCells-r16)) OF AvailabilityCombinationsPerCell-r16 OPTIONAL, -- Need N
    availableCombToReleaseList-r16 SEQUENCE (SIZE (1..maxNrofDUCells-r16)) OF AvailabilityCombinationsPerCellIndex-r16 OPTIONAL, -- Need N
    ...
}

AI-RNTI-r16 ::= RNTI-Value

-- TAG-AVAILABILITYINDICATOR-STOP
-- ASN1STOP
```

AvailabilityIndicator field descriptions**ai-RNTI**

Used by an IAB-MT for detection of DCI format 2_5 indicating *AvailabilityCombinationId* for an IAB-DU's cells.

availableCombToAddModList

A list of *availabilityCombinations* to add for the IAB-DU's cells. (see TS 38.213 [13], clause 14).

availableCombToReleaseList

A list of *availabilityCombinations* to release for the IAB-DU's cells. (see TS 38.213 [13], clause 14).

dci-PayloadSizeAI

Total length of the DCI payload scrambled with ai-RNTI (see TS 38.213 [13]).

– BAP-RoutingID

The IE *BAP-RoutingID* is used for IAB-node to configure the BAP Routing ID.

BAP-RoutingID information element

```
-- ASN1START
-- TAG-BAPROUTINGID-START

BAP-RoutingID-r16 ::=      SEQUENCE{
    bap-Address-r16          BIT STRING (SIZE (10)),
    bap-PathId-r16           BIT STRING (SIZE (10))
}

-- TAG-BAPROUTINGID-STOP
-- ASN1STOP
```

BAP-RoutingID field descriptions	
bap-Address	The ID of a destination IAB-node or IAB-donor-DU used in the BAP header.
bap-PathId	The ID of a path used in the BAP header.

– BeamFailureRecoveryConfig

The IE *BeamFailureRecoveryConfig* is used to configure the UE with RACH resources and candidate beams for beam failure recovery in case of beam failure detection. See also TS 38.321 [3], clause 5.1.1.

BeamFailureRecoveryConfig information element

```
-- ASN1START
-- TAG-BEAMFAILURERECOVERYCONFIG-START

BeamFailureRecoveryConfig ::=      SEQUENCE {
    rootSequenceIndex-BFR          INTEGER (0..137)                OPTIONAL, -- Need M
    rach-ConfigBFR                 RACH-ConfigGeneric              OPTIONAL, -- Need M
    rsrp-ThresholdSSB              RSRP-Range                     OPTIONAL, -- Need M
    candidateBeamRSLList           SEQUENCE (SIZE (1..maxNrofCandidateBeams)) OF PRACH-ResourceDedicatedBFR  OPTIONAL, -- Need M
    ssb-perRACH-Occasion           ENUMERATED {oneEighth, oneFourth, oneHalf, one, two, four, eight, sixteen}  OPTIONAL, -- Need M
    ra-ssb-OccasionMaskIndex       INTEGER (0..15)                 OPTIONAL, -- Need M
    recoverySearchSpaceId         SearchSpaceId                   OPTIONAL, -- Need R
    ra-Prioritization              RA-Prioritization               OPTIONAL, -- Need R
    beamFailureRecoveryTimer       ENUMERATED {ms10, ms20, ms40, ms60, ms80, ms100, ms150, ms200}  OPTIONAL, -- Need M

    msg1-SubcarrierSpacing         SubcarrierSpacing              OPTIONAL -- Need M
    ]],
    [[
    ra-PrioritizationTwoStep-r16   RA-Prioritization              OPTIONAL, -- Need R
    candidateBeamRSLListExt-v1610  SetupRelease{ CandidateBeamRSLListExt-r16 }  OPTIONAL -- Need M
    ]]
```

```

    ]],
    [[
    spCell-BFR-CBRA-r16          ENUMERATED {true}          OPTIONAL -- Need R
    ]],
    [[
    ra-OccasionType-r19          ENUMERATED {sbfd}           OPTIONAL -- Need S
    ]]
}

PRACH-ResourceDedicatedBFR ::= CHOICE {
    ssb          BFR-SSB-Resource,
    csi-RS        BFR-CSIRS-Resource
}

BFR-SSB-Resource ::= SEQUENCE {
    ssb          SSB-Index,
    ra-PreambleIndex  INTEGER (0..63),
    ...
}

BFR-CSIRS-Resource ::= SEQUENCE {
    csi-RS        NZP-CSI-RS-ResourceId,
    ra-OccasionList  SEQUENCE (SIZE (1..maxRA-OccasionsPerCSIRS)) OF INTEGER (0..maxRA-Occasions-1) OPTIONAL, -- Need R
    ra-PreambleIndex  INTEGER (0..63)                                OPTIONAL, -- Need R
    ...
}

CandidateBeamRSListExt-r16 ::= SEQUENCE (SIZE (1.. maxNrofCandidateBeamsExt-r16)) OF PRACH-ResourceDedicatedBFR

-- TAG-BEAMFAILURERECOVERYCONFIG-STOP
-- ASN1STOP

```

BeamFailureRecoveryConfig field descriptions
beamFailureRecoveryTimer Timer for beam failure recovery timer. Upon expiration of the timer the UE does not use CFRA for BFR. Value in ms. Value <i>ms10</i> corresponds to 10 ms, value <i>ms20</i> corresponds to 20 ms, and so on.
candidateBeamRSList, candidateBeamRSListExt-v1610 Set of reference signals (CSI-RS and/or SSB) identifying the candidate beams for recovery and the associated RA parameters. This set includes all elements of <i>candidateBeamRSList</i> (without suffix) and all elements of <i>candidateBeamRSListExt-v1610</i> . The UE maintains <i>candidateBeamRSList</i> and <i>candidateBeamRSListExt-v1610</i> separately: Receiving <i>candidateBeamRSListExt-v1610</i> set to <i>release</i> releases only the entries that were configured by <i>candidateBeamRSListExt-v1610</i> , and receiving <i>candidateBeamRSListExt-v1610</i> set to <i>setup</i> replaces only the entries that were configured by <i>candidateBeamRSListExt-v1610</i> with the newly signalled entries. The network configures these reference signals to be within the linked DL BWP (i.e., within the DL BWP with the same <i>bwp-Id</i>) of the UL BWP in which the <i>BeamFailureRecoveryConfig</i> is provided.
msg1-SubcarrierSpacing Subcarrier spacing for contention free beam failure recovery (see TS 38.211 [16], clause 5.3.2). Only the following values are applicable depending on the used frequency: FR1/FR1-NTN: 15 or 30 kHz FR2-1/FR2-NTN: 60 or 120 kHz FR2-2: 120, 480, or 960 kHz
rsrp-ThresholdSSB L1-RSRP threshold used for determining whether a candidate beam may be used by the UE to attempt contention free random access to recover from beam failure (see TS 38.213 [13], clause 6).
ra-OccasionType Indicates that SBFD aware UE (see TS 38.300 [2], clause 23.1) shall use the second PRACH occasions (see TS 38.213 [13], clause 8) for CFRA or for the fallback CBRA, as specified in clause 5.1.2 in TS 38.321 [3]. If absent, the first PRACH occasions shall be used.
ra-prioritization Parameters which apply for prioritized random access procedure for BFR (see TS 38.321 [3], clause 5.1.1).
ra-PrioritizationTwoStep Parameters which apply for prioritized 2-step random access procedure for BFR (see TS 38.321 [3], clause 5.1.1).
ra-ssb-OccasionMaskIndex Explicitly signalled PRACH Mask Index for RA Resource selection in TS 38.321 [3]. The mask is valid for all SSB resources.
rach-ConfigBFR Configuration of random access parameters for BFR.
recoverySearchSpaceId Search space to use for BFR RAR. The network configures this search space to be within the linked DL BWP (i.e., within the DL BWP with the same <i>bwp-Id</i>) of the UL BWP in which the <i>BeamFailureRecoveryConfig</i> is provided. The CORESET associated with the recovery search space cannot be associated with another search space. Network always configures the UE with a value for this field when contention free random access resources for BFR are configured.
rootSequenceIndex-BFR PRACH root sequence index (see TS 38.211 [16], clause 6.3.3.1) for beam failure recovery.
spCell-BFR-CBRA Indicates that UE is configured to send MAC CE for SpCell BFR as specified in TS38.321 [3].
ssb-perRACH-Occasion Number of SSBs per RACH occasion for CF-BFR, see TS 38.213 [13], clause 8.1.

BFR-CSI-RS-Resource field descriptions
csi-RS The ID of a <i>NZP-CSI-RS-Resource</i> configured in the <i>CSI-MeasConfig</i> of this serving cell. This reference signal determines a candidate beam for beam failure recovery (BFR).
ra-OccasionList RA occasions that the UE shall use when performing BFR upon selecting the candidate beam identified by this CSI-RS. The network ensures that the RA occasion indexes provided herein are also configured by <i>prach-ConfigurationIndex</i> and <i>msg1-FDM</i> . Per PRACH occasions type as specified in TS 38.213 [13] clause 8, each RACH occasion is sequentially numbered, first, in increasing order of frequency resource indexes for frequency multiplexed PRACH occasions; second, in increasing order of time resource indexes for time multiplexed PRACH occasions within a PRACH slot and Third, in increasing order of indexes for PRACH slots. If the field is absent the UE uses the RA occasion associated with the SSB that is QCLed with this CSI-RS.
ra-PreambleIndex The RA preamble index to use in the RA occasions associated with this CSI-RS. If the field is absent, the UE uses the preamble index associated with the SSB that is QCLed with this CSI-RS.

BFR-SSB-Resource field descriptions
ra-PreambleIndex The preamble index that the UE shall use when performing BFR upon selecting the candidate beams identified by this SSB.
ssb The ID of an SSB transmitted by this serving cell. It determines a candidate beam for beam failure recovery (BFR).

– *BeamFailureRecoveryRSConfig*

The IE *BeamFailureRecoveryRSConfig* is used to configure the UE with candidate beams for beam failure recovery in case of beam failure detection. See also TS 38.321 [3], clause 5.17.

BeamFailureRecoveryRSConfig information element

```
-- ASN1START
-- TAG-BEAMFAILURERECOVERYRSCONFIG-START

BeamFailureRecoveryRSConfig-r16 ::= SEQUENCE {
    rsrp-ThresholdBFR-r16          RSRP-Range                                OPTIONAL, -- Need M
    candidateBeamRS-List-r16      SEQUENCE (SIZE(1..maxNrofCandidateBeams-r16)) OF CandidateBeamRS-r16  OPTIONAL, -- Need M
    ...,
    [
        candidateBeamRS-List2-r17  SEQUENCE (SIZE(1..maxNrofCandidateBeams-r16)) OF CandidateBeamRS-r16  OPTIONAL -- Need R
    ]
}

-- TAG-BEAMFAILURERECOVERYRSCONFIG-STOP
-- ASN1STOP
```

BeamFailureRecoveryRSConfig field descriptions
candidateBeamRS-List A list of reference signals (CSI-RS and/or SSB) identifying the candidate beams for recovery. The network always configures this parameter in every instance of this IE.
candidateBeamRS-List2 A list of reference signals (CSI-RS and/or SSB) identifying the candidate beams for recovery.
rsrp-ThresholdBFR L1-RSRP threshold used for determining whether a candidate beam may be included by the UE in MAC CE for BFR (see TS 38.321 [3] and TS 38.213 [13], clause 6). The network always configures this parameter in every instance of this IE.

– *BetaOffsets*

The IE *BetaOffsets* is used to configure beta-offset values, see TS 38.213 [13], clause 9.3.

BetaOffsets information element

```
-- ASN1START
-- TAG-BETAOFFSETS-START

BetaOffsets ::=
    SEQUENCE {
        betaOffsetACK-Index1    INTEGER(0..31)        OPTIONAL, -- Need S
        betaOffsetACK-Index2    INTEGER(0..31)        OPTIONAL, -- Need S
        betaOffsetACK-Index3    INTEGER(0..31)        OPTIONAL, -- Need S
        betaOffsetCSI-Part1-Index1    INTEGER(0..31)    OPTIONAL, -- Need S
        betaOffsetCSI-Part1-Index2    INTEGER(0..31)    OPTIONAL, -- Need S
        betaOffsetCSI-Part2-Index1    INTEGER(0..31)    OPTIONAL, -- Need S
        betaOffsetCSI-Part2-Index2    INTEGER(0..31)    OPTIONAL -- Need S
    }

-- TAG-BETAOFFSETS-STOP
-- ASN1STOP
```

<i>BetaOffsets</i> field descriptions
<i>betaOffsetACK-Index1</i> Up to 2 bits HARQ-ACK (see TS 38.213 [13], clause 9.3). When the field is absent the UE applies the value 11.
<i>betaOffsetACK-Index2</i> Up to 11 bits HARQ-ACK (see TS 38.213 [13], clause 9.3). When the field is absent the UE applies the value 11.
<i>betaOffsetACK-Index3</i> Above 11 bits HARQ-ACK (see TS 38.213 [13], clause 9.3). When the field is absent the UE applies the value 11.
<i>betaOffsetCSI-Part1-Index1</i> Up to 11 bits of CSI part 1 bits (see TS 38.213 [13], clause 9.3). When the field is absent the UE applies the value 13.
<i>betaOffsetCSI-Part1-Index2</i> Above 11 bits of CSI part 1 bits (see TS 38.213 [13], clause 9.3). When the field is absent the UE applies the value 13.
<i>betaOffsetCSI-Part2-Index1</i> Up to 11 bits of CSI part 2 bits (see TS 38.213 [13], clause 9.3). When the field is absent the UE applies the value 13.
<i>betaOffsetCSI-Part2-Index2</i> Above 11 bits of CSI part 2 bits (see TS 38.213 [13], clause 9.3). When the field is absent the UE applies the value 13.

– *BetaOffsetsCrossPri*

The IE *BetaOffsetsCrossPri* is used to configure beta-offset values for cross-priority HARQ-ACK multiplexing on PUSCH.

***BetaOffsetsCrossPri* information element**

```
-- ASN1START
-- TAG-BETAOFFSETSCROSSPRI-START

BetaOffsetsCrossPri-r17 ::= SEQUENCE (SIZE(3)) OF INTEGER(0..31)

-- TAG-BETAOFFSETSCROSSPRI-STOP
-- ASN1STOP
```

– *BH-LogicalChannelIdentity*

The IE *BH-LogicalChannelIdentity* is used to identify a logical channel between an IAB-node and its parent IAB-node or IAB-donor-DU.

***BH-LogicalChannelIdentity* information element**

```
-- ASN1START
-- TAG-BHLOGICALCHANNELIDENTITY-START

BH-LogicalChannelIdentity-r16 ::= CHOICE {
    bh-LogicalChannelIdentity-r16      LogicalChannelIdentity,
    bh-LogicalChannelIdentityExt-r16    BH-LogicalChannelIdentity-Ext-r16
}

-- TAG-BHLOGICALCHANNELIDENTITY-STOP
```

-- ASN1STOP

<i>BH-LogicalChannelIdentity</i> field descriptions
<i>bh-LogicalChannelIdentity</i> ID used for the MAC logical channel.
<i>bh-LogicalChannelIdentityExt</i> ID used for the MAC logical channel.

– *BH-LogicalChannelIdentity-Ext*

The IE *BH-LogicalChannelIdentity-Ext* is used to identify a logical channel between an IAB-node and its parent node.

BH-LogicalChannelIdentity-Ext information element

```
-- ASN1START
-- TAG-BHLOGICALCHANNELIDENTITYEXT-START

BH-LogicalChannelIdentity-Ext-r16 ::=  INTEGER (320.. maxLC-ID-Iab-r16)

-- TAG-BHLOGICALCHANNELIDENTITYEXT-STOP
-- ASN1STOP
```

– *BH-RLC-ChannelConfig*

The IE *BH-RLC-ChannelConfig* is used to configure an RLC entity, a corresponding logical channel in MAC for BH RLC channel between IAB-node and its parent node.

BH-RLC-ChannelConfig information element

```
-- ASN1START
-- TAG-BHRLCCHANNELCONFIG-START

BH-RLC-ChannelConfig-r16 ::=  SEQUENCE {
    bh-LogicalChannelIdentity-r16    BH-LogicalChannelIdentity-r16    OPTIONAL,  -- Cond LCH-SetupOnly
    bh-RLC-ChannelID-r16             BH-RLC-ChannelID-r16,
    reestablishRLC-r16               ENUMERATED {true}                OPTIONAL,  -- Need N
    rlc-Config-r16                   RLC-Config                        OPTIONAL,  -- Cond LCH-Setup
    mac-LogicalChannelConfig-r16     LogicalChannelConfig              OPTIONAL,  -- Cond LCH-Setup
    ...
}

-- TAG-BHRLCCHANNELCONFIG-STOP
-- ASN1STOP
```

BH-RLC-ChannelConfig field descriptions	
bh-LogicalChannelIdentity	Indicates the logical channel id for BH RLC channel of the IAB-node.
bh-RLC-ChannelID	Indicates the BH RLC channel in the link between IAB-MT of the IAB-node and IAB-DU of the parent IAB-node or IAB-donor-DU.
reestablishRLC	Indicates that RLC should be re-established.
rlc-Config	Determines the RLC mode (UM, AM) and provides corresponding parameters.

Conditional Presence	Explanation
LCH-Setup	This field is mandatory present upon creation of a new logical channel for a BH RLC channel. It is optionally present, Need M, otherwise.
LCH-SetupOnly	This field is mandatory present upon creation of a new logical channel for a BH RLC channel. It is absent, Need M otherwise.

– BH-RLC-ChannelID

The IE *BH-RLC-ChannelID* is used to identify a BH RLC channel in the link between IAB-MT of the IAB-node and IAB-DU of the parent IAB-node or IAB-donor-DU.

BH-RLC-ChannelID information element

```
-- ASN1START
-- TAG-BHRLCCHANNELID-START

BH-RLC-ChannelID-r16 ::=  BIT STRING (SIZE (16))

-- TAG-BHRLCCHANNELID-STOP
-- ASN1STOP
```

– BSR-Config

The IE *BSR-Config* is used to configure buffer status reporting.

BSR-Config information element

```
-- ASN1START
-- TAG-BSR-CONFIG-START

BSR-Config ::=
    periodicBSR-Timer          ENUMERATED { sf1, sf5, sf10, sf16, sf20, sf32, sf40, sf64,
                                           sf80, sf128, sf160, sf320, sf640, sf1280, sf2560, infinity },
    retxBSR-Timer              ENUMERATED { sf10, sf20, sf40, sf80, sf160, sf320, sf640, sf1280, sf2560,
                                           sf5120, sf10240, spare5, spare4, spare3, spare2, spare1},
    logicalChannelSR-DelayTimer  ENUMERATED { sf20, sf40, sf64, sf128, sf512, sf1024, sf2560, spare1}
    ...
```

OPTIONAL, -- Need R

```
}
-- TAG-BSR-CONFIG-STOP
-- ASN1STOP
```

BSR-Config field descriptions
logicalChannelSR-DelayTimer Value in number of subframes. Value <i>sf20</i> corresponds to 20 subframes, <i>sf40</i> corresponds to 40 subframes, and so on.
periodicBSR-Timer Value in number of subframes. Value <i>sf1</i> corresponds to 1 subframe, value <i>sf5</i> corresponds to 5 subframes and so on.
retxBSR-Timer Value in number of subframes. Value <i>sf10</i> corresponds to 10 subframes, value <i>sf20</i> corresponds to 20 subframes and so on.

— *BWP*

The IE *BWP* is used to configure generic parameters of a bandwidth part as defined in TS 38.211 [16], clause 4.5, and TS 38.213 [13], clause 12.

For each serving cell the network configures at least an initial downlink bandwidth part and one (if the serving cell is configured with an uplink) or two (if using supplementary uplink (SUL)) initial uplink bandwidth parts. Furthermore, the network may configure additional uplink and downlink bandwidth parts for a serving cell.

The uplink and downlink bandwidth part configurations are divided into common and dedicated parameters.

BWP information element

```
-- ASN1START
-- TAG-BWP-START

BWP ::=
locationAndBandwidth      SEQUENCE {
subcarrierSpacing          INTEGER (0..37949),
cyclicPrefix              ENUMERATED { extended }
}

-- TAG-BWP-STOP
-- ASN1STOP
```

OPTIONAL -- Need R

BWP field descriptions	
cyclicPrefix	Indicates whether to use the extended cyclic prefix for this bandwidth part. If not set, the UE uses the normal cyclic prefix. Normal CP is supported for all subcarrier spacings and slot formats. Extended CP is supported only for 60 kHz subcarrier spacing. (see TS 38.211 [16], clause 4.2). Except for SUL, the network ensures the same cyclic prefix length is used in active DL BWP and active UL BWP within a serving cell. If RedCap-specific initial DL BWP is configured, the network ensures the same cyclic prefix length is configured for initial DL BWP and RedCap-specific initial DL BWP.
locationAndBandwidth	Frequency domain location and bandwidth of this bandwidth part. The value of the field shall be interpreted as resource indicator value (RIV) as defined TS 38.214 [19] with assumptions as described in TS 38.213 [13], clause 12, i.e. setting $N_{\text{BWP}}^{\text{size}}=275$. The first PRB is a PRB determined by <i>subcarrierSpacing</i> of this BWP and <i>offsetToCarrier</i> (configured in <i>SCS-SpecificCarrier</i> contained within <i>FrequencyInfoDL</i> / <i>FrequencyInfoUL</i> / <i>FrequencyInfoUL-SIB</i> / <i>FrequencyInfoDL-SIB</i> within <i>ServingCellConfigCommon</i> / <i>ServingCellConfigCommonSIB</i>) corresponding to this subcarrier spacing. In case of TDD, a BWP-pair (UL BWP and DL BWP with the same <i>bwp-Id</i>) must have the same center frequency (see TS 38.213 [13], clause 12)
subcarrierSpacing	Subcarrier spacing to be used in this BWP for all channels and reference signals unless explicitly configured elsewhere. Corresponds to subcarrier spacing according to TS 38.211 [16], table 4.2-1. The value <i>kHz15</i> corresponds to $\mu=0$, value <i>kHz30</i> corresponds to $\mu=1$, and so on. Only the following values are applicable depending on the used frequency: FR1/FR1-NTN: 15, 30, or 60 kHz FR2-1/FR2-NTN: 60 or 120 kHz FR2-2: 120, 480, or 960 kHz For the initial DL BWP and operation in licensed spectrum this field has the same value as the field <i>subCarrierSpacingCommon</i> in <i>MIB</i> of the same serving cell. Except for SUL, the network ensures the same subcarrier spacing is used in active DL BWP and active UL BWP within a serving cell. For the initial DL BWP and operation with shared spectrum channel access, the value of this field corresponds to the subcarrier spacing of the SSB associated to the initial DL BWP. If RedCap-specific initial DL BWP is configured, the network ensures the same subcarrier spacing is configured for initial DL BWP and RedCap-specific initial DL BWP.

– **BWP-Downlink**

The IE *BWP-Downlink* is used to configure an additional downlink bandwidth part (not for the initial BWP).

BWP-Downlink information element

```
-- ASN1START
-- TAG-BWP-DOWNLINK-START

BWP-Downlink ::=
    SEQUENCE {
        bwp-Id                BWP-Id,
        bwp-Common             BWP-DownlinkCommon                OPTIONAL, -- Cond SetupOtherBWP
        bwp-Dedicated          BWP-DownlinkDedicated              OPTIONAL, -- Cond SetupOtherBWP
        ...
    }

-- TAG-BWP-DOWNLINK-STOP
-- ASN1STOP
```

BWP-Downlink field descriptions	
bwp-Id An identifier for this bandwidth part. Other parts of the RRC configuration use the <i>BWP-Id</i> to associate themselves with a particular bandwidth part. The network configures the BWPs with consecutive IDs from 1. The Network does not include the value 0, since value 0 is reserved for the initial BWP.	

Conditional Presence	Explanation
<i>SetupOtherBWP</i>	The field is mandatory present upon configuration of a new DL BWP. The field is optionally present, Need M, otherwise.

– *BWP-DownlinkCommon*

The IE *BWP-DownlinkCommon* is used to configure the common parameters of a downlink BWP. They are "cell specific" and the network ensures the necessary alignment with corresponding parameters of other UEs. The common parameters of the initial bandwidth part of the PCell are also provided via system information. For all other serving cells, the network provides the common parameters via dedicated signalling.

BWP-DownlinkCommon information element

```
-- ASN1START
-- TAG-BWP-DOWNLINKCOMMON-START

BWP-DownlinkCommon ::=
    genericParameters
    pdcch-ConfigCommon
    pdsch-ConfigCommon
    ...
}

SEQUENCE {
    BWP,
    SetupRelease { PDCCH-ConfigCommon } OPTIONAL, -- Need M
    SetupRelease { PDSCH-ConfigCommon } OPTIONAL, -- Need M
}

-- TAG-BWP-DOWNLINKCOMMON-STOP
-- ASN1STOP
```

BWP-DownlinkCommon field descriptions	
pdccch-ConfigCommon Cell specific parameters for the PDCCH of this BWP. This field is absent for a dormant BWP.	
pdsch-ConfigCommon Cell specific parameters for the PDSCH of this BWP.	

– *BWP-DownlinkDedicated*

The IE *BWP-DownlinkDedicated* is used to configure the dedicated (UE specific) parameters of a downlink BWP.

BWP-DownlinkDedicated information element

```
-- ASN1START
```

```

-- TAG-BWP-DOWNLINKDEDICATED-START

BWP-DownlinkDedicated ::= SEQUENCE {

```

```
-- TAG-BWP-DOWNLINKDEDICATED-STOP  
-- ASN1STOP
```

<i>BWP-DownlinkDedicated</i> field descriptions
<i>beamFailureRecoverySCellConfig</i> Configuration of candidate RS for beam failure recovery on SCells.
<i>beamFailureRecoverySpCellConfig</i> Configuration of candidate RS for beam failure recovery on the SpCell. This field can only be configured when <i>beamFailure-r17</i> is configured in <i>RadioLinkMonitoringConfig</i> .
<i>cfr-ConfigMulticast</i> UE specific common frequency resource configuration for MBS multicast for one dedicated BWP. This field can be configured within at most one serving cell.
<i>dl-PPW-PreConfigToAddModList</i> Indicates a list of DL-PRS processing window configurations to be added or modified for the dedicated DL BWP.
<i>dl-PPW-PreConfigToReleaseList</i> Indicates a list of DL-PRS processing window configurations to be released for the dedicated DL BWP.
<i>harq-FeedbackEnablingforSPSActive</i> If enabled, UE reports ACK/NACK for the first SPS PDSCH after activation, regardless of if HARQ feedback is enabled or disabled for the HARQ process corresponding to the first SPS PDSCH after activation. Otherwise, UE follows configuration of HARQ feedback enabled/disabled for the HARQ process corresponding to the first SPS PDSCH after activation.
<i>nonCellDefiningSSB</i> If configured, the UE operating in this BWP uses this SSB for the purposes for which it would otherwise have used the CD-SSB of the serving cell (e.g. obtaining sync, measurements, RLM, BFD, beam management). Furthermore, other parts of the BWP configuration that refer to an SSB (e.g. the "SSB" configured in the <i>QCL-Info</i> IE; the "ssb-Index" configured in the <i>RadioLinkMonitoringRS</i> ; <i>CFRA-SSB-Resource</i> ; <i>PRACH-ResourceDedicatedBFR</i>) refer implicitly to this NCD-SSB. The NCD-SSB has the same values for the properties (e.g., <i>ssb-PositionsInBurst</i> , <i>PCI</i> , <i>ssb-PBCH-BlockPower</i>) of the corresponding CD-SSB apart from the values of the properties configured in the <i>NonCellDefiningSSB-r17</i> IE. In the MIB associated with this NCD-SSB, the <i>systemFrameNumber</i> field indicates the frame boundary and frame number of the NCD-SSB. The <i>subCarrierSpacingCommon</i> and <i>dmrs-TypeA-Position</i> field in the MIBs associated with CD-SSB and NCD-SSB in the same cell are configured with the same values, respectively.
<i>pathlossOffsetPRACH-DCI-1-0</i> Enables the presence of a 1-bit DCI field in DCI format 1_0 for indicating the pathloss offset for PDCCH-ordered PRACH transmissions (see TS 38.212 [17], clause 7.3.1).
<i>pdcch-Config</i> UE specific PDCCH configuration for one BWP.
<i>pdsch-Config</i> UE specific PDSCH configuration for one BWP.
<i>prachAssociationDCI-1-0</i> Enables the presence of 1-bit DCI field "PRACH association indicator" in DCI format 1_0 (see TS 38.212 [17], clause 7.3.1). This field can only be configured if <i>twoTA-Without-MultiDCI-MultiTRP</i> is configured.
<i>preConfigGapStatus</i> Indicates whether the pre-configured measurement gaps (i.e. the gaps configured with <i>preConfigInd</i>) are activated or deactivated upon the switch to this BWP. If this field is configured, the UE shall apply network-controlled mechanism for activation and deactivation of the pre-configured measurement gaps, otherwise the UE shall apply the autonomous activation/deactivation mechanism, as specified in TS 38.133 [14]. The first/leftmost bit corresponds to the measurement gap with gap ID 1, the second bit corresponds to measurement gap with gap ID 2, and so on. Value 0 indicates that the corresponding pre-configured measurement gap is deactivated while value 1 indicates that the corresponding pre-configured measurement gap is activated. The UE shall ignore the bit if the corresponding measurement gap is not a pre-configured measurement gap.
<i>sbfd-Config2-Reception</i> Indicates that the PDSCH receptions can be in SBFD symbols and non-SBFD symbols in different slots in a given DL BWP, as specified in TS 38.214 [19], clause 5. If not enabled, the restriction that the receptions are restricted to SBFD symbols only or non-SBFD symbols only is applied for PDSCH receptions in the given DL BWP.
<i>servingCellMO</i> <i>measObjectId</i> of the <i>MeasObjectNR</i> in <i>MeasConfig</i> which is associated to the serving cell. For this <i>MeasObjectNR</i> , the following relationship applies between this <i>MeasObjectNR</i> and <i>nonCellDefiningSSB</i> in <i>BWP-DownlinkDedicated</i> of the associated downlink BWP: if <i>ssbFrequency</i> is configured, its value is the same as the

<i>absoluteFrequencySSB</i> in the <i>nonCellDefiningSSB</i> . If the field is present in a downlink BWP and the BWP is activated, the UE uses this measurement object for serving cell measurements (e.g., including those used in measurement report triggering events), otherwise, the UE uses the <i>servingCellMO</i> in <i>ServingCellConfig</i> IE.
<i>sps-Config</i> UE specific SPS (Semi-Persistent Scheduling) configuration for one BWP. Except for reconfiguration with sync, the NW does not reconfigure <i>sps-Config</i> when there is an active configured downlink assignment (see TS 38.321 [3]). However, the NW may release the <i>sps-Config</i> at any time. Network can only configure SPS in one BWP using either this field or <i>sps-ConfigToAddModList</i> . Network does not configure SPS in one BWP using this field and <i>sps-ConfigMulticastToAddModList-r17</i> simultaneously.
<i>sps-ConfigDeactivationStateList</i> Indicates a list of the deactivation states in which each state can be mapped to a single or multiple SPS configurations to be deactivated, see clause 10.2 in TS 38.213 [13]. If a state is mapped to multiple SPS configurations, each of these SPS configurations is configured with the same <i>harq-CodebookID</i> .
<i>sps-ConfigToAddModList</i> Indicates a list of one or more DL SPS configurations to be added or modified in one BWP. Except for reconfiguration with sync, the NW does not reconfigure a SPS configuration when it is active (see TS 38.321 [3]).
<i>sps-ConfigToReleaseList</i> Indicates a list of one or more DL SPS configurations to be released. The NW may release a SPS configuration at any time.
<i>radioLinkMonitoringConfig</i> UE specific configuration of radio link monitoring for detecting cell- and beam radio link failure occasions. The maximum number of failure detection resources should be limited up to 8 for both cell and beam radio link failure detection. For SCells, only periodic 1-port CSI-RS can be configured in IE <i>RadioLinkMonitoringConfig</i> .
<i>sl-PDCCH-Config</i> Indicates the UE specific PDCCH configurations for receiving the SL grants (via SL-RNTI or SL-CS-RNTI) for NR sidelink communication/discovery.
<i>sl-V2X-PDCCH-Config</i> Indicates the UE specific PDCCH configurations for receiving SL grants (i.e. sidelink SPS) for V2X sidelink communication.

TCI-InDCI field descriptions

<i>applyIndicatedTCI-StateDCI-1-0</i> This field indicates, for PDSCH reception scheduled or activated by DCI format 1_0, if the UE applies the first, the second or both "indicated" DL only TCI or joint TCI as specified in TS 38.214 [19], clause 5.1.5.
<i>tci-SelectionPresentInDCI</i> Used as specified in TS 38.214 [19] clause 5.1.5 and TS 38.212 [17] clauses 7.3.1.2.2 and 7.3.1.2.3.

Conditional Presence	Explanation
<i>MeasObject-NCD-SSB</i>	This field is optionally present, Need S, if <i>nonCellDefiningSSB</i> is configured in this DL BWP. It is absent otherwise.
<i>PreConfigMG</i>	The field is optionally present, Need R, if there is at least one per UE gap configured with <i>preConfigInd</i> or there is at least one per FR gap of the same FR which the BWP belongs to and configured with <i>preConfigInd</i> . It is absent, Need R, otherwise.
<i>ScellOnly</i>	The field is optionally present, Need M, in the <i>BWP-DownlinkDedicated</i> of an Scell. It is absent otherwise.
<i>SpCellOnly</i>	The field is optionally present, Need M, in the <i>BWP-DownlinkDedicated</i> of an Spcell. It is absent otherwise.

— *BWP-Id*

The IE *BWP-Id* is used to refer to Bandwidth Parts (BWP). The initial BWP (including RedCap-specific initial BWP, if configured) is referred to by *BWP-Id* 0. The other BWPs are referred to by *BWP-Id* 1 to *maxNrofBWPs*.

***BWP-Id* information element**

```
-- ASN1START
-- TAG-BWP-ID-START

BWP-Id ::=
    INTEGER (0..maxNrofBWPs)

-- TAG-BWP-ID-STOP
-- ASN1STOP
```

— *BWP-Uplink*

The IE *BWP-Uplink* is used to configure an additional uplink bandwidth part (not for the initial BWP).

***BWP-Uplink* information element**

```
-- ASN1START
-- TAG-BWP-UPLINK-START

BWP-Uplink ::=
    SEQUENCE {
        bwp-Id                BWP-Id,

```

<i>BWP-Uplink</i> field descriptions	
<i>bwp-Id</i> An identifier for this bandwidth part. Other parts of the RRC configuration use the <i>BWP-Id</i> to associate themselves with a particular bandwidth part. The network configures the BWPs with consecutive IDs from 1. The Network does not include the value 0, since value 0 is reserved for the initial BWP.	

Conditional Presence	Explanation
<i>SetupOtherBWP</i>	The field is mandatory present upon configuration of a new UL BWP. The field is optionally present, Need M, otherwise.

– BWP-UplinkCommon

The IE *BWP-UplinkCommon* is used to configure the common parameters of an uplink BWP. They are "cell specific" and the network ensures the necessary alignment with corresponding parameters of other UEs. The common parameters of the initial bandwidth part of the PCell, excluding *additionalRACH-perPCI-ToAddModList* and *additionalRACH-perPCI-ToReleaseList*, are also provided via system information. For all other serving cells, the network provides the common parameters via dedicated signalling.

```

<i>BWP-UplinkCommon</i> field descriptions
<i>additionalRACH-ConfigList</i> List of feature or feature combination-specific RACH configurations, i.e. the RACH configurations configured in addition to the one configured by <i>rach-ConfigCommon</i> and by <i>msgA-ConfigCommon</i>. The network associates all possible preambles of an additional RACH configuration to one or more feature(s) or feature combination(s). The network does not configure this list to have more than 16 entries. If both <i>rach-ConfigCommon</i> and <i>msgA-ConfigCommon</i> are configured for a specific <i>FeatureCombination</i>, the network always provides them in the same <i>additionalRACH-Config</i>. If both <i>rach-ConfigCommon</i> and <i>sbfd-RACH-DualConfig</i> are configured for the same <i>FeatureCombination</i>, <i>rach-ConfigCommon</i> and <i>sbfd-RACH-DualConfig</i> are configured in the same <i>AdditionalRACH-Config</i>.
<i>additionalRACH-perPCI-ToAddModList</i>, <i>additionalRACH-perPCI-ToReleaseList</i> List of RACH configurations for the additional PCIs. The RACH configuration for an additional PCI is applied for Random Access procedure initiated by PDCCH order towards to the additional PCI, as specified in TS 38.321 clause 5.1.1b. This list includes the same number of elements like <i>additionalPCI-ToAddModList</i> for this serving cell and the <i>n</i>-th element of this list is for the PCI in the <i>n</i>-th element of <i>additionalPCI-ToAddModList</i>. Either the network does not configure any RACH configuration for any additional PCI, or the network configures a RACH configuration for each additional PCI. When the network releases an additional PCI of a serving cell, the network also explicitly releases the associated random access configuration in every UL BWP of the serving cell. This configuration may be different for different UEs.
<i>enableRA-PrioritizationForSlicing</i> Indicates whether or not the <i>ra-PrioritizationForSlicing/ra-PrioritizationForSlicingTwoStep</i> should override the <i>ra-PrioritizationForAccessIdentity</i>. The field is applicable only when the UE is configured by upper layers with both NSAG and Access Identity 1 or 2. If value <i>TRUE</i> is configured, the UE should only apply the <i>ra-PrioritizationForSlicing/ra-PrioritizationForSlicingTwoStep</i>. If value <i>FALSE</i> is configured, the UE should only apply <i>ra-PrioritizationForAccessIdentity</i>. If the field is absent, whether to use <i>ra-PrioritizationForSlicing/ra-PrioritizationForSlicingTwoStep</i> or <i>ra-PrioritizationForAccessIdentity</i> is up to UE implementation.
<i>mcs-Msg3-Repetitions</i> Configuration of eight candidate MCS indexes for PUSCH transmission scheduled by RAR UL grant and DCI format 0_0 with CRC scrambled by TC-RNTI. Only the first 4 configured or default MCS indexes are used for PUSCH transmission scheduled by RAR UL grant. This field is only applicable when the UE selects Random Access resources indicating Msg3 repetition in this BWP. If this field is absent when the set(s) of Random Access resources with MSG3 repetition indication are configured in the <i>BWP-UplinkCommon</i>, the UE shall apply the values {0, 1, 2, 3, 4, 5, 6, 7} (see TS 38.214 [19], clause 6.1.4).
<i>msgA-ConfigCommon</i> Configuration of the cell specific PRACH and PUSCH resource parameters for transmission of MsgA in 2-step random access type procedure. The NW can configure <i>msgA-ConfigCommon</i> only for UL BWPs if the linked DL BWPs (same bwp-Id as UL-BWP) are the initial DL BWPs or DL BWPs containing the SSB associated to the initial DL BWP or DL BWPs associated with <i>nonCellDefiningSSB</i> or, for (e)RedCap UEs, the RedCap-specific initial downlink BWP. The network configures <i>msgA-ConfigCommon</i> (without suffix) and/or <i>msgA-ConfigCommon-r17</i>, whenever it configures contention free 2-step random access, the UE then applies the corresponding configuration depending on the RACH resource set selected upon RACH initialization, as specified in TS 38.321 [3].
<i>numberOfMsg3-RepetitionsList</i> The number of repetitions for PUSCH transmission scheduled by RAR UL grant and DCI format 0_0 with CRC scrambled by TC-RNTI. This field is only applicable when the UE selects Random Access resources indicating Msg3 repetition in this BWP. If this field is absent when the set(s) of Random Access resources with MSG3 repetition indication are configured in the <i>BWP-UplinkCommon</i>, the UE shall apply the values {n1, n2, n3, n4} (see TS 38.214 [19], clause 6.1.2.1).
<i>preambleTransMax-Msg1-Repetition</i> Max number of transmissions of MSG1 repetitions number (2, 4 and 8) performed before switching to higher repetition number (see TS 38.321 [3], clauses 5.1.1). This field is only applicable when more than one repetition numbers are configured in shared RO. If the field is absent, switching from lower repetition number to higher repetition number is not allowed.
<i>preambleTransMaxRO-Type</i> Max number of RA preamble transmissions performed before switching to another RO type (i.e., from the second PRACH occasions to the first PRACH occasions, as specified in TS 38.213 [13] clause 8, and vice versa).
<i>pucch-ConfigCommon</i> Cell specific parameters for the PUCCH of this BWP.
<i>pusch-ConfigCommon</i> Cell specific parameters for the PUSCH of this BWP.
<i>rach-ConfigCommon</i>

Configuration of cell specific random access parameters which the UE uses for contention based and contention free random access as well as for contention based beam failure recovery in this BWP. The NW configures SSB-based RA (and hence *RACH-ConfigCommon*) only for UL BWPs if the linked DL BWPs (same *bwpld* as UL-BWP) are the initial DL BWPs or DL BWPs containing the SSB associated to the initial DL BWP or DL BWPs associated with *nonCellDefiningSSB* or, for (e)RedCap UEs, the RedCap-specific initial downlink BWP. The network configures *rach-ConfigCommon* (without suffix) and/or *rach-ConfigCommon-r17*, whenever it configures contention free 4-step random access (e.g. for reconfiguration with sync or for beam failure recovery or PDCCH order), the UE then applies the corresponding configuration depending on the RACH resource set selected upon RACH initialization, as specified in TS 38.321 [3]. For RedCap-specific initial uplink BWP, *rach-ConfigCommon* is always configured when *msgA-ConfigCommon* is configured in this BWP.

rach-ConfigCommonIAB

Configuration of cell specific random access parameters for the IAB-MT. The IAB specific IAB RACH configuration is used by IAB-MT, if configured.

rsrp-ThresholdMsg1-RepetitionNum2, rsrp-ThresholdMsg1-RepetitionNum4, rsrp-ThresholdMsg1-RepetitionNum8

Threshold used by the UE for determining whether to select resources indicating Msg1 repetition number 2, 4 or 8 in this BWP, as specified in TS 38.321 [3]. The value applies to all the BWPs and all RACH configurations. For a given MSG1 repetition number, this corresponding field is mandatory if both set(s) of Random Access resources with MSG1 repetition indication associated with this MSG1 repetition number and set(s) of Random Access resources without MSG1 repetition indication are configured in the BWP, or if the set(s) of Random Access resources with MSG1 repetition indication associated with this MSG1 repetition number and set(s) of Random Access resources with MSG1 repetition indication associated with a lower repetition number are configured in the BWP. It is absent otherwise.

rsrp-ThresholdMsg3

Threshold used by the UE for determining whether to select resources indicating Msg3 repetition in this BWP, as specified in TS 38.321 [3]. The field is mandatory if both set(s) of Random Access resources with MSG3 repetition indication and set(s) of Random Access resources without MSG3 repetition indication are configured in the BWP. It is absent otherwise.

sbfd-RACH-Config

Indicated SBFD RACH configuration type, see clause 5 in TS 38.211 [16] and clause 8 in TS 38.213 [13]. Value *sbfd-RACH-SingleConfig* indicates the single RACH configuration for SBFD random access operation is enabled in this BWP, and value *sbfd-RACH-DualConfig* is used to enable dual RACH configurations and configure random access parameters in SBFD symbols by setting up one additional RACH configuration and including all parameters in *rach-ConfigCommon* except *rsrp-ThresholdSSB-SUL*. If present and the UE is indicated to use SBFD random access operation for CFRA in the same BWP, the UE shall derive the locations of the second PRACH occasions based on this field.

sbfd-RO-Type

Indicates which RO type (the first or the second PRACH occasions as specified in TS 38.213 [13], clause 8) to be used for a SBFD aware UE (see TS 38.300 [2], clause 23.1) in the initial PRACH transmission. If absent, the RO type is determined based on *sbfd-RSRP-ThresholdRO-Type* and *sbfd-RSRP-ThresholdRO-TypeUsage*.

sbfd-RSRP-ThresholdMsg1-RepetitionNum2, sbfd-RSRP-ThresholdMsg1-RepetitionNum4, sbfd-RSRP-ThresholdMsg1-RepetitionNum8

Threshold used by the UE for determining whether to select resources indicating Msg1 repetition number 2, 4 or 8 within the second PRACH occasions (see TS 38.213 [13], clause 8). If *sbfd-RACH-DualConfig* is configured, for a given MSG1 repetition number, this corresponding field is mandatory if both set(s) of Random Access resources with MSG1 repetition indication associated with this MSG1 repetition number and set(s) of Random Access resources without MSG1 repetition indication are configured in the BWP, or if the set(s) of Random Access resources with MSG1 repetition indication associated with this MSG1 repetition number and set(s) of Random Access resources with MSG1 repetition indication associated with a lower repetition number are configured in the BWP. If *sbfd-RACH-DualConfig* is configured, it is absent otherwise.

sbfd-RSRP-ThresholdRO-Type

Threshold used by the SBFD aware UE for choosing RACH occasion type (the first or the second PRACH occasions as specified in TS 38.213 [13], clause 8) for the initial PRACH preamble transmissions.

sbfd-RSRP-ThresholdRO-TypeUsage

Indicate how the SBFD aware UE chooses RACH occasion type (the first or the second PRACH occasions as specified in TS 38.213 [13], clause 8) using *sbfd-RSRP-ThresholdRO-Type* for the initial PRACH preamble transmissions and is always configured together with *sbfd-RSRP-ThresholdRO-Type*. With value *above*, the SBFD aware UE chooses the second PRACH occasions if the measured downlink pathloss reference RSRP is above *sbfd-RSRP-ThresholdRO-Type* and chooses the first PRACH occasions otherwise. With value *below*, the SBFD aware UE chooses the second PRACH occasions if the measured downlink pathloss reference RSRP is below *sbfd-RSRP-ThresholdRO-Type* and chooses the first PRACH occasions otherwise. If all of *sbfd-RO-Type*, *sbfd-RSRP-ThresholdRO-Type* and *sbfd-RSRP-ThresholdRO-TypeUsage* are absent, it is up to UE implementation to determine the RO type.

useInterlacePUCCH-PUSCH

If the field is present, the UE uses uplink frequency domain resource allocation Type 2 for cell-specific PUSCH, e.g., PUSCH scheduled by RAR UL grant (see TS 38.213 [13] clause 8.3 and TS 38.214 [19], clause 6.1.2.2) and uses interlaced PUCCH Format 0 and 1 for cell-specific PUCCH (see TS 38.213 [13], clause 9.2.1).

***SBFD-RACH-DualConfig* field descriptions**

sbfd-AdditionalRACH-Config

Indicates the additional RACH configuration for random access operation in the second PRACH occasions, see RACH configuration for SBFD random access operation in clause 5 in TS 38.211 [16] and clause 8 in TS 38.213 [13].

sbfd-RACH-DualConfig-ValidRO-AcrossSymbolTypes

Indicates whether a configured RO starting from SBFD symbol and ending in non-SBFD symbol either in the same slot or across different slots is valid.

Conditional Presence	Explanation
<i>Msg1Rep1</i>	This field is optionally present, Need R, if the set(s) of Random Access resources with MSG1 repetition indication are configured in the <i>BWP-UplinkCommon</i> . It is absent otherwise.
<i>Msg3Rep</i>	This field is optionally present, Need S, if the set(s) of Random Access resources with MSG3 repetition indication are configured in the <i>BWP-UplinkCommon</i> . It is absent otherwise.
<i>RA-PrioSliceAI</i>	The field is optionally present in <i>SIB1</i> , Need R, if both parameters <i>ra-PrioritizationForAccessIdentity</i> and the <i>ra-PrioritizationForSlicing/ra-PrioritizationForSlicingTwoStep</i> are present in <i>SIB1</i> . It is absent otherwise.
<i>SpCellOnly2</i>	The field is optionally present, Need M, in the <i>BWP-UplinkCommon</i> of an SpCell. It is absent otherwise.
<i>2TA-Only</i>	The field is optionally present, Need N in the <i>BWP-UplinkCommon</i> if <i>additionalPCI-ToAddModList</i> is present in <i>ServingCellConfig</i> and if <i>tag2</i> is present in <i>ServingCellConfig</i> . It is absent otherwise.
<i>NoSingleConfig</i>	This field is optionally present, Need R, if <i>sbfd-RACH-Config</i> in <i>BWP-UplinkCommon</i> is set to <i>sbfd-RACH-DualConfig</i> . It is absent otherwise.

– ***BWP-UplinkDedicated***

The IE *BWP-UplinkDedicated* is used to configure the dedicated (UE specific) parameters of an uplink BWP.

```

BWP-UplinkDedicated field descriptions
beamFailureRecoveryConfig Configuration of beam failure recovery. If <i>supplementaryUplink</i> is present, the field is present only in one of the uplink carriers, either UL or SUL.
configuredGrantConfig A <i>Configured-Grant</i> of <i>type1</i> or <i>type2</i> . It may be configured for UL or SUL but in case of <i>type1</i> not for both at a time. Except for reconfiguration with sync, the NW does not reconfigure <i>configuredGrantConfig</i> when there is an active configured uplink grant Type 2 (see TS 38.321 [3]). However, the NW may release the <i>configuredGrantConfig</i> at any time. Network can only configure configured grant in one BWP using either this field or <i>configuredGrantConfigToAddModList</i> .
configuredGrantConfigToAddModList Indicates a list of one or more configured grant configurations to be added or modified for one BWP. Except for reconfiguration with sync, the NW does not reconfigure a Type 2 configured grant configuration when it is active (see TS 38.321 [3]). The network configures multiple CG configurations for one BWP with either all configurations or no configuration configured with <i>cg-RetransmissionTimer-r16</i> .
configuredGrantConfigToReleaseList Indicates a list of one or more UL Configured Grant configurations to be released. The NW may release a configured grant configuration at any time.
configuredGrantConfigType2DeactivationStateList Indicates a list of the deactivation states in which each state can be mapped to a single or multiple Configured Grant type 2 configurations to be deactivated when the corresponding deactivation DCI is received, see clause 7.3.1 in TS 38.212 [17] and clause 10.2 in TS 38.213 [13].
cp-ExtensionC2, cp-ExtensionC3 Configures the cyclic prefix (CP) extension (see TS 38.211 [16], clause 5.3.1). For 15 kHz SCS, {1..28} are valid for both <i>cp-ExtensionC2</i> and <i>cp-ExtensionC3</i> . For 30 kHz SCS, {1..28} are valid for <i>cp-ExtensionC2</i> and {2..28} are valid for <i>cp-ExtensionC3</i> . For 60 kHz SCS, {2..28} are valid for <i>cp-ExtensionC2</i> and {3..28} are valid for <i>cp-ExtensionC3</i> .
lbt-FailureRecoveryConfig Configures parameters used for detection of consistent uplink LBT failures for operation with shared spectrum channel access, as specified in TS 38.321 [3].
pathlossReferenceRSToAddModList A list of Reference Signals (e.g. a CSI-RS config or a SS block) to be used for path loss estimation for PUSCH, PUCCH and SRS for unified TCI state operation. If <i>unifiedTCI-StateType</i> is not configured for the serving cell, no element in this list is configured.
pucch-Config PUCCH configuration for one BWP of the normal UL or SUL of a serving cell. If the UE is configured with SUL, the network configures PUCCH only on the BWPs of one of the uplinks (normal UL or SUL). The network configures <i>PUCCH-Config</i> at least on non-initial BWP(s) for SpCell and on all BWP(s) for PUCCH SCell. If supported by the UE, the network may configure at most one additional SCell of a cell group with <i>PUCCH-Config</i> (i.e. PUCCH SCell). If PUCCH cell switching is supported by the UE, the network may configure two TDD serving cells with <i>PUCCH-Config</i> within each PUCCH group. For supporting PUCCH cell switching in the PUCCH group with the SpCell, the TDD SpCell and one TDD SCell shall have <i>PUCCH-Config</i> on their normal UL. For supporting PUCCH cell switching in the PUCCH group with only SCells, two TDD SCells shall have <i>PUCCH-Config</i> on their normal UL. In (NG)EN-DC and NE-DC, the NW configures at most one serving cell per frequency range with PUCCH. In (NG)EN-DC and NE-DC, if two PUCCH groups are configured, the serving cells of the NR PUCCH group in FR2 use the same numerology. For NR-DC, the maximum number of PUCCH groups in each cell group is one, and only the same numerology is supported for the cell group with carriers only in FR2. The NW may configure PUCCH for a BWP when setting up the BWP. The network may also add/remove the <i>pucch-Config</i> in an <i>RRCReconfiguration</i> with <i>reconfigurationWithSync</i> (for SpCell or PUCCH SCell) or with SCell release and add (for PUCCH SCell) to move the PUCCH between the UL and SUL carrier of one serving cell. In other cases, only modifications of a previously configured <i>pucch-Config</i> are allowed. If one (S)UL BWP of a serving cell is configured with PUCCH, all other (S)UL BWPs must be configured with PUCCH, too.
pucch-ConfigurationList PUCCH configurations for two simultaneously constructed HARQ-ACK codebooks (see TS 38.213 [13], clause 9.1). Different PUCCH Resource IDs are configured in different <i>PUCCH-Config</i> within the <i>pucch-ConfigurationList</i> if configured.
pucch-ConfigurationListMulticast1 PUCCH configurations for two simultaneously constructed HARQ-ACK codebooks for MBS multicast (see TS 38.213, clause 9).
pucch-ConfigurationListMulticast2

PUCCH configurations for two simultaneously constructed NACK-only feedback for MBS multicast (see TS 38.213, clause 9).
<i>pusch-Config</i> PUSCH configuration for one BWP of the normal UL or SUL of a serving cell. If the UE is configured with SUL and if it has a <i>PUSCH-Config</i> for both UL and SUL, an UL/SUL indicator field in DCI indicates which of the two to use. See TS 38.212 [17], clause 7.3.1.
<i>pucch-ConfigMulticast1</i> PUCCH configuration for the HARQ-ACK codebook for MBS multicast when multicast feedback is not configured with a priority value (see TS 38.213 [13], clause 9). If the field is not configured, <i>pucch-Config</i> applies.
<i>pucch-ConfigMulticast2</i> PUCCH configuration for the NACK-only feedback for MBS multicast when multicast feedback is not configured with a priority value (see TS 38.213 [13], clause 9). If the field is not configured, <i>pucch-Config</i> applies.
<i>sbfd-Config2-Transmission</i> Indicates that the PUCCH and PUSCH transmissions can be in SBFD symbols and non-SBFD symbols in different slots in a given UL BWP (see TS 38.213 [13], clause 11 and TS 38.214 [19], clause 6). If not enabled, the restriction that the transmissions are restricted to SBFD symbols only or non-SBFD symbols only is applied for PUCCH and PUSCH transmissions in the given UL BWP.
<i>sbfd-Config2-PUSCH-RB-Offset</i> Indicates the RB offset to determine the starting PRB for Type 2 configured grant and dynamic grant PUSCH transmissions in SBFD symbols when the PUSCH transmissions can be in SBFD symbols and non-SBFD symbols in different slots in a given UL BWP (see TS 38.214 [19], clause 6).
<i>sl-PUCCH-Config</i> Indicates the UE specific PUCCH configurations used for the HARQ-ACK feedback reporting for NR sidelink communication.
<i>srs-Config</i> Uplink sounding reference signal configuration.
<i>twoTA-Without-MultiDCI-MultiTRP</i> Enables two TA for intra-cell without multi-DCI multi-TRP operation or inter-cell without multi-DCI multi-TRP operation.
<i>ul-Muting-NonSBFD-Symbol</i> Indicates whether a UE may apply UL resource muting in non-SBFD symbols if SBFD symbols are configured for the UE. If configured as ' <i>enabled</i> ', UL muting is applicable in both SBFD symbols and non-SBFD symbols. Otherwise, UL resource muting is applicable only in SBFD symbols. This parameter does not apply for a UE configured with UL resource muting if SBFD symbols are not configured for the UE. In this case, UL resource muting is applicable in both flexible symbols and UL symbols.
<i>ul-powerControl</i> Configures power control parameters for PUCCH, PUSCH and SRS when UE is configured with <i>unifiedTCI-StateType</i> for this serving cell. For each serving cell, <i>ul-powerControl</i> is either configured in all <i>BWP-UplinkDedicated</i> or it is not configured in any <i>BWP-UplinkDedicated</i> . When <i>unifiedTCI-StateRef</i> in the <i>BWP-UplinkDedicated</i> or in the <i>PDSCH-Config</i> if the <i>unifiedTCI-StateType</i> is set to <i>joint</i> , of a serving cell refers to another serving cell, <i>ul-powerControl</i> is either configured in all <i>BWP-UplinkDedicated</i> of these two serving cells or it is not configured in any <i>BWP-UplinkDedicated</i> of these two serving cells.
<i>ul-TCI-StateList</i> Indicates the applicable UL TCI states for PUCCH, PUSCH and SRS.
<i>ul-TCI-ToAddModList</i> Indicates a list of UL TCI states.
<i>unifiedTCI-StateRef</i> Provides the serving cell and UL BWP where UL TCI states applicable to this UL BWP are defined. The value of <i>unifiedTCI-StateType</i> of current serving cell is the same in the serving cell indicated by <i>unifiedTCI-StateRef</i> .
<i>useInterlacePUCCH-PUSCH</i> If the field is present, the UE uses uplink frequency domain resource allocation Type 2 for PUSCH (see TS 38.213 [13], clause 8.3 and TS 38.214 [19], clause 6.1.2.2) and uses interlaced PUCCH Format 0, 1, 2, and 3 for PUCCH (see TS 38.213 [13], clause 9.2.1).

Conditional Presence	Explanation
NoTCI-PC	The field is mandatory present if <i>unifiedTCI-StateType</i> is configured for this serving cell and <i>ul-powerControl</i> is not configured for any UL TCI state or joint TCI state of this serving cell. Otherwise it is absent, Need R
SpCellOnly	The field is optionally present, Need M, in the <i>BWP-UplinkDedicated</i> of an SpCell. It is absent otherwise.

NOTE 1: In case of *RRCReconfiguration* with *reconfigurationWithSync*, the UE performs a MAC reset, which involves releasing the PUCCH-CSI/SRS/SR configuration in accordance with clause 5.3.12 and TS 38.321 [3], clauses 5.12 and 5.2. Hence, for these parts of the dedicated radio resource configuration, delta signalling is not supported in the message when *reconfigurationWithSync* is included.

— **CandidateBeamRS**

The IE *CandidateBeamRS* includes candidate beams for beam failure recovery in case of beam failure detection. See also TS 38.321 [3], clause 5.17.

CandidateBeamRS information element

```
-- ASN1START
-- TAG-CANDIDATEBEAMRS-START

CandidateBeamRS-r16 ::=
  candidateBeamConfig-r16
    ssb-r16
    csi-RS-r16
  },
  servingCellId
}

SEQUENCE {
  CHOICE {
    SSB-Index,
    NZP-CSI-RS-ResourceId
  }
  ServCellIndex
}

OPTIONAL -- Need R

-- TAG-CANDIDATEBEAMRS-STOP
-- ASN1STOP
```

CandidateBeamRS field descriptions
candidateBeamConfig Indicates the resource (i.e. SSB or CSI-RS) defining this beam resource.
servingCellId If the field is absent, the RS belongs to the serving cell in which <i>BeamFailureRecoveryRSConfig</i> is configured.

— **CandidateTCI-State**

The IE *CandidateTCI-State* defines a TCI states configuration which associate one or more reference signal with a corresponding quasi-colocation (QCL) type.

CandidateTCI-State information element

```
-- ASN1START
-- TAG-CANDIDATETCI-STATE-START

CandidateTCI-State-r18 ::=
    tci-StateId-r18
    qcl-Type1-r18
    qcl-Type2-r18
    pathlossReferenceRS-Id-r18
    tag-Id-ptr-r18
    ul-PowerControl-r18
    ...
SEQUENCE {
    TCI-StateId,
    LTM-QCL-Info-r18,
    LTM-QCL-Info-r18
    PathlossReferenceRS-Id-r17
    ENUMERATED {n0,n1}
    Uplink-powerControlId-r17
    OPTIONAL, -- Need R
    OPTIONAL, -- Cond Joint
    OPTIONAL, -- Cond 2TA
    OPTIONAL, -- Cond Joint2
}

LTM-QCL-Info-r18 ::=
    referenceSignal-r18
    ssb-Index
    csi-RS-Index
    },
    qcl-Type-r18
    ...
SEQUENCE {
    CHOICE {
        SSB-Index,
        NZP-CSI-RS-ResourceId
    },
    ENUMERATED {typeA, typeB, typeC, typeD},
}

-- TAG-CANDIDATETCI-STATE-STOP
-- ASN1STOP
```

CandidateTCI-State field descriptions
pathlossReferenceRS-Id Indicates a <i>PathlossReferenceRS</i> of the candidate that includes this <i>CandidateTCI-State</i> and it refers to one of the <i>PathlossReferenceRS</i> configured within <i>LTM-TCI-Info</i> . In this version of the specification only SSB can be included as reference signal when <i>PathlossReferenceRS</i> is included within a <i>CandidateTCI-State</i> IE.
qcl-Type1, qcl-Type2 QCL information for the TCI state.
tci-StateId The ID number of the TCI state.
ul-PowerControl Indicates the UL power control parameters for PUSCH, PUCCH, and SRS of the candidate that includes this <i>CandidateTCI-State</i> . This field refers to an element in the list configured using <i>uplink-PowerControlToAddModList</i> in the <i>SpCellConfig</i> of the <i>Itm-CandidateConfig</i> in the <i>LTM-Candidate</i> where the <i>Itm-TCI-Info</i> is configured.

LTM-QCL-Info field descriptions
referenceSignal The field <i>csi-RS-Index</i> refers to one of the <i>NZP-CSI-RS-Resource</i> configured within <i>LTM-TCI-Info</i> .

Conditional Presence	Explanation
2TA	This field is mandatory present if <i>tag2</i> is present in the <i>SpCellConfig</i> in <i>ltn-CandidateConfig</i> and <i>unifiedTCI-StateType</i> in the <i>ltn-TCI-Info</i> within <i>LTM-Candidate</i> is set to <i>joint</i> . It is absent, Need R, otherwise.
Joint	This field is mandatory present, if <i>unifiedTCI-StateType</i> in the <i>ltn-TCI-Info</i> within <i>LTM-Candidate</i> is set to <i>joint</i> . It is absent, Need R, otherwise.
Joint2	This field is mandatory present if <i>unifiedTCI-StateType</i> in the <i>ltn-TCI-Info</i> within <i>LTM-Candidate</i> is set to <i>joint</i> and <i>ul-powerControl</i> is not configured in any <i>BWP-Uplink-Dedicated</i> of the <i>SpCellConfig</i> in <i>ltn-CandidateConfig</i> . It is absent, Need R, otherwise.

– CandidateTCI-UL-State

The IE *CandidateTCI-UL-State* defines an uplink TCI states configuration.

CandidateTCI-UL-State information element

```
-- ASN1START
-- TAG-CANDIDATETCI-UL-STATE-START

CandidateTCI-UL-State-r18 ::= SEQUENCE {
    tci-UL-StateId-r18          TCI-UL-StateId-r17,
    referenceSignal-r18        CHOICE {
        ssb-Index              SSB-Index,
        csi-RS-Index            NZP-CSI-RS-ResourceId
    },
    pathlossReferenceRS-Id-r18  PathlossReferenceRS-Id-r17 OPTIONAL, -- Need R
    tag-Id-ptr-r18              ENUMERATED {n0,n1}          OPTIONAL, -- Cond 2TA
    ul-PowerControl-r18         Uplink-powerControlId-r17    OPTIONAL, -- Cond separateTCI
    ...
}

-- TAG-CANDIDATETCI-UL-STATE-STOP
-- ASN1STOP
```

CandidateTCI-UL-State field descriptions	
csi-RS-Index	Indicates an <i>NZP-CSI-RS-Resource</i> of the LTM candidate that includes this <i>CandidateTCI-UL-State</i> .
pathlossReferenceRS-Id	Indicates a <i>PathlossReferenceRS</i> of the LTM candidate that includes this <i>CandidateTCI-UL-State</i> and it refers to one of the <i>PathlossReferenceRS</i> configured within <i>LTM-TCI-Info</i> . In this version of the specification, only SSB can be included as reference signal when <i>PathlossReferenceRS</i> is included within a <i>CandidateTCI-UL-State</i> IE.
referenceSignal	Reference signal with which spatial relation information is provided. The field <i>csi-RS-Index</i> refers to one of the <i>NZP-CSI-RS-Resource</i> configured within <i>LTM-TCI-Info</i> .
ssb-Index	The index of a SSB/PBCH block as indicated in <i>ltm-SSB-Config</i> of the LTM candidate that includes this <i>CandidateTCI-UL-State</i> .
tci-UL-StateID	The ID number of the uplink TCI state.
ul-PowerControl	Indicates the UL power control parameters for PUSCH, PUCCH, and SRS of the candidate that includes this <i>CandidateTCI-UL-State</i> . This field refers to an element in the list configured using <i>uplink-PowerControlToAddModList</i> in the <i>SpCellConfig</i> of the <i>ltm-CandidateConfig</i> in the <i>LTM-Candidate</i> where the <i>ltm-TCI-Info</i> is configured.

Conditional Presence	Explanation
2TA	This field is mandatory present if <i>tag2</i> is present in the <i>SpCellConfig</i> in <i>ltm-CandidateConfig</i> . It is absent, Need R, otherwise.
separateTCI	This field is mandatory present if <i>unifiedTCI-StateType</i> in the <i>ltm-TCI-Info</i> within <i>LTM-Candidate</i> is set to <i>separate</i> and <i>ul-powerControl</i> is not configured in any <i>BWP-Uplink-Dedicated</i> of the <i>SpCellConfig</i> in <i>ltm-CandidateConfig</i> . It is absent, Need R, otherwise.

– CellAccessRelatedInfo

The IE *CellAccessRelatedInfo* indicates cell access related information for this cell.

CellAccessRelatedInfo information element

```
-- ASN1START
-- TAG-CELLACCESSRELATEDINFO-START

CellAccessRelatedInfo ::= SEQUENCE {
    plmn-IdentityInfoList      PLMN-IdentityInfoList,
    cellReservedForOtherUse    ENUMERATED {true}          OPTIONAL, -- Need R
    ...,
    [[
        cellReservedForFutureUse-r16    ENUMERATED {true}          OPTIONAL, -- Need R

}

-- TAG-CELLACCESSRELATEDINFO-STOP
-- ASN1STOP

```

CellAccessRelatedInfo field descriptions

cellReservedForFutureUse

Indicates whether the cell is reserved, as defined in 38.304 [20] for future use. The field is applicable to all PLMNs and NPNs. This field is ignored by IAB-MT and NCR-MT.

cellReservedForOtherUse

Indicates whether the cell is reserved, as defined in 38.304 [20]. The field is applicable to all PLMNs. This field is ignored by IAB-MT and NCR-MT for cell barring determination, but still considered by NPN capable IAB-MT and NPN capable NCR-MT for determination of an NPN-only cell.

npn-IdentityInfoList

The *npn-IdentityInfoList* is used to configure a set of *NPN-IdentityInfo* elements. Each of those elements contains a list of one or more NPN Identities and additional information associated with those NPNs. The total number of PLMNs (identified by a PLMN identity in *plmn-IdentityList*), PNI-NPNs (identified by a PLMN identity and a CAG-ID), and SNPNs (identified by a PLMN identity and a NID) together in the *PLMN-IdentityInfoList* and *NPN-IdentityInfoList* does not exceed 12, except for the NPN-only cells. A PNI-NPN and SNPN can be included only once, and in only one entry of the *NPN-IdentityInfoList*. In case of NPN-only cells the *PLMN-IdentityList* contains a single element that does not count to the limit of 12 and the *cellIdentity* of the first entry of the *PLMN-IdentityInfoList* is set to the same value as the *cellIdentity-r16* of the first entry of the *NPN-IdentityInfoList*. The NPN index is defined as $B+c1+c2+\dots+c(n-1)+d1+d2+\dots+d(m-1)+e(i)$ for the NPN identity included in the *n*-th entry of *NPN-IdentityInfoList* and in the *m*-th entry of *npn-Identitylist* within that *NPN-IdentityInfoList* entry, and the *i*-th entry of its corresponding *NPN-Identity*, where

- *B* is the index used for the last PLMN in the *PLMN-IdentityInfoList*; in NPN-only cells *B* is considered 0;
- *c(j)* is the number of NPN index values used in the *j*-th *NPN-IdentityInfoList* entry;
- *d(k)* is the number of NPN index values used in the *k*-th *npn-IdentityList* entry within the *n*-th *NPN-IdentityInfoList* entry;
- *e(i)* is
 - *i* if the *n*-th entry of *NPN-IdentityInfoList* entry is for SNPN(s);
 - 1 if the *n*-th entry of *NPN-IdentityInfoList* entry is for PNI-NPN(s).

plmn-IdentityInfoList

The *plmn-IdentityInfoList* is used to configure a set of *PLMN-IdentityInfo* elements. Each of those elements contains a list of one or more PLMN Identities and additional information associated with those PLMNs. A PLMN-identity can be included only once, and in only one entry of the *PLMN-IdentityInfoList*. The PLMN index is defined as $b1+b2+\dots+b(n-1)+i$ for the PLMN included at the *n*-th entry of *PLMN-IdentityInfoList* and the *i*-th entry of its corresponding *PLMN-IdentityInfo*, where *b(j)* is the number of *PLMN-Identity* entries in each *PLMN-IdentityInfo*, respectively.

snpn-AccessInfoList

This list provides access related information for each SNPN in *npn-IdentityInfoList*, see TS 23.501 [32]. The *n*-th entry of the list contains the access related information of the *n*-th SNPN in *npn-IdentityInfoList*.

SNPN-AccessInfo field descriptions
extCH-Supported Indicates whether the SNPN supports access using credentials from a Credentials Holder as specified in TS 23.501 [32].
extCH-WithoutConfigAllowed Indicates whether the SNPN allows registration attempts with credentials from a Credentials Holder from UEs that are not explicitly configured to select the SNPN as specified in TS 23.501 [32].
imsEmergencySupportForSNPN Indicates whether the SNPN supports IMS emergency bearer services for UEs in limited service mode in the cell. If absent, IMS emergency call is not supported by the SNPN in the cell for UEs in limited service mode.
onboardingEnabled Indicates whether the onboarding SNPN allows registration for onboarding in the cell as specified in TS 23.501 [32].

– *CellAccessRelatedInfo-EUTRA-5GC*

The IE *CellAccessRelatedInfo-EUTRA-5GC* indicates cell access related information for an LTE cell connected to 5GC.

CellAccessRelatedInfo-EUTRA-5GC information element

```
-- ASN1START
-- TAG-CELLACCESSRELATEDINFOEUTRA-5GC-START

CellAccessRelatedInfo-EUTRA-5GC ::= SEQUENCE {
    plmn-IdentityList-eutra-5gc      PLMN-IdentityList-EUTRA-5GC,

}

-- TAG-CELLDTX-DRX-CONFIG-STOP
-- ASN1STOP
```

CellDTX-DRX-Config field descriptions
cellDTX-DRX-CycleStartOffset Indicates <i>cellDTX-DRX-Cycle</i> in ms and <i>cellDTX-DRX-StartOffset</i> in multiples of 1 ms. The configured <i>cellDTX-DRX-Cycle</i> is an integer multiple of configured <i>drx-longCycle</i> or vice versa.
cellDTX-DRX-onDurationTimer Value in multiples of 1/32 ms (subMilliseconds) or in ms (millisecond). For the latter, value <i>ms1</i> corresponds to 1 ms, value <i>ms2</i> corresponds to 2 ms, and so on.
cellDTX-DRX-SlotOffset Value in 1/32 ms. Value 0 corresponds to 0 ms, value 1 corresponds to 1/32 ms, value 2 corresponds to 2/32 ms, and so on.
cellDTX-DRX-ActivationStatus Initial activation status of cell DTX/DRX indicating whether the UE shall activate the configuration according to the received parameters. This field is only used upon setup of a cell DTX/DRX configuration.
cellDTX-DRX-ConfigType Indicates whether the configuration is for cell DTX only, cell DRX only, or joint cell DTX/DRX configuration.

– **CellGroupConfig**

The *CellGroupConfig* IE is used to configure a master cell group (MCG) or secondary cell group (SCG). A cell group comprises of one MAC entity, a set of logical channels with associated RLC entities and of a primary cell (SpCell) and one or more secondary cells (SCells). For an NCR-MT, the *CellGroupConfig* IE is also used to provide the configuration of side control information for the NCR-Fwd access link.

CellGroupConfig information element

Adapt-SSB-Config field descriptions

posInDCI-SSB-PeriodicityIndicationForScell

The starting bit position of an information block of DCI format 2_9 for SSB burst periodicity switching of this serving cell (see TS 38.212 [17], subclause 7.3.1.3.10).

ssb-HalfFrameIndex

Indicate whether SSB according to the *ssb-Periodicity* is in the first half or the second half of the frame.

ssb-Offset

Indicate SFN offset from the SFN which satisfies (SFN index *10) modulo (*ssb-Periodicity*) = 0. The network configures this field according to *ssb-Periodicity* such that the indicated system frame does not exceed the corresponding adaptive SSB periodicity.

ssb-Periodicity

Additional SSB burst periodicity for the Scell. If the field is absent, the UE applies the value ms5. If configured, the network ensures that SSB transmission occasions with larger periodicity are subset of SSB transmission occasions with shorter periodicity.

AutonomousDenialParamters field descriptions

autonomousDenialSlots

Indicates the maximum number of the UL slots for which the UE is allowed to deny any UL transmission. Value *n2* corresponds to 2 slots, value *n5* to 5 slots and so on.

autonomousDenialValidity

Indicates the validity period over which the UL autonomous denial slots shall be counted. Value *n200* corresponds to 200 slots, value *n500* corresponds to 500 slots and so on.

CC-State field descriptions

dlCarrier

Indicates DL carrier activation state for this carrier and the related active BWP Index, if activated.

ulCarrier

Indicates UL carrier activation state for this carrier and the related active BWP Index, if activated.

CellGroupConfig field descriptions
bap-Address BAP address of the parent node in cell group.
bh-RLC-ChannelToAddModList Configuration of the backhaul RLC entities and the corresponding MAC Logical Channels to be added and modified.
bh-RLC-ChannelToReleaseList List of the backhaul RLC entities and the corresponding MAC Logical Channels to be released.
f1c-TransferPath The F1-C transfer path that an EN-DC IAB-MT should use for transferring F1-C packets to the IAB-donor-CU. If IAB-MT is configured with <i>lte</i> , IAB-MT can only use LTE leg for F1-C transfer. If IAB-MT is configured with <i>nr</i> , IAB-MT can only use NR leg for F1-C transfer. If IAB-MT is configured with <i>both</i> , it is up to IAB-MT to select an LTE leg or a NR leg for F1-C transfer. If the field is not configured, the IAB node uses the NR leg as the default one.
f1c-TransferPathNRDC The F1-C transfer path that an NR-DC IAB-MT should use for transferring F1-C packets to the IAB-donor-CU. If IAB-MT is configured with <i>mcg</i> , IAB-MT can only use the MCG for F1-C transfer. If IAB-MT is configured with <i>scg</i> , IAB-MT can only use the SCG for F1-C transfer. If IAB-MT is configured with <i>both</i> , it is up to IAB-MT to select the MCG or the SCG for F1-C transfer.
mac-CellGroupConfig MAC parameters applicable for the entire cell group.
mprReductionExtensionRatio Indicates the pair of lower-sided and higher-sided extension ratio as specified in TS 38.101-1 [15]. The <i>ratio1</i> represents (1/2, 0), the <i>ratio2</i> represents (0, 1/2), <i>ratio3</i> represents (1/2, 1/2), <i>ratio4</i> represents (1/4, 0), <i>ratio5</i> represents (0, 1/4), <i>ratio6</i> represents (1/4, 1/4). The first/leftmost value of the pair represents the lower-sided extension ratio, the second value of the pair represents the higher-sided extension ratio. The network can only configure this field in case of non-CA in NR SA.
ncr-FwdConfig Configuration of side control information for the NCR-Fwd access link.
nonCollocatedTypeMRDC The field <i>nonCollocatedTypeMRDC</i> (without suffix) is only present for a UE configured with <i>maxMIMO-Layers</i> with value less than or equal to 2 for all corresponding serving cells, in case of TDD-TDD inter-band (NG) EN-DC with overlapping or partially overlapping bands. If the field <i>nonCollocatedTypeMRDC</i> (without suffix) is present, the UE applies (NG)EN-DC MTTD/MRTD according to clause 7.5.3/7.6.3 in TS 38.133 [14] and inter-band RF requirements (i.e. Type 1 UE requirement). If the field <i>nonCollocatedTypeMRDC</i> (without suffix) is absent, the UE applies (NG)EN-DC MTTD/MRTD according to clause 7.5.2/7.6.2 in TS 38.133 [14] and inter-band RF requirements (i.e. Type 2 UE requirement) if the UE is configured with <i>maxMIMO-Layers</i> with value less than or equal to 2 for all corresponding serving cells and indicates the support of <i>interBandMRDC-WithOverlapDL-Bands-r16</i> . The field <i>nonCollocatedTypeMRDC-v1900</i> is only present for a UE configured with <i>maxMIMO-Layers</i> with value equal to 4 for all corresponding serving cells, or with <i>maxMIMO-Layers</i> with value equal to 2 for the serving cell(s) of the corresponding EUTRA band and 4 for the serving cell of the corresponding NR band. If <i>nonCollocatedTypeMRDC-v1900</i> is present with <i>type4</i> , the UE applies (NG)EN-DC MTTD/MRTD according to clause 7.5.2/7.6.2 in TS38.133 [14] and inter-band RF requirements including clause 7.10B in TS38.101-3 [34] (i.e. Type 4 UE requirement). If <i>nonCollocatedTypeMRDC-v1900</i> is present with <i>type1</i> or absent, the UE applies (NG)EN-DC MTTD/MRTD according to clause 7.5.3/7.6.3 of in TS38.133 [14] and inter-band RF requirements except clause 7.10B in TS38.101-3 [34] (i.e. Type 1 UE requirement) if the UE is configured with <i>maxMIMO-Layers</i> with value equal to 4 for all corresponding serving cells, or with <i>maxMIMO-Layers</i> with value equal to 2 for the serving cell(s) of the corresponding EUTRA band and 4 for the serving cell of the corresponding NR band.
nonCollocatedTypeNR-CA The field <i>nonCollocatedTypeNR-CA</i> (without suffix) is only present for a UE configured with <i>maxMIMO-Layers</i> with value less than or equal to 2 for all corresponding serving cells, in case of TDD-TDD intra-band NR-CA. If the field <i>nonCollocatedTypeNR-CA</i> (without suffix) is present, the UE applies MRTD according to Table 7.6.4-1 in TS 38.133 [14] and UE RF requirements for intra-band NR-CA except for 7.10A in TS 38.101-1 [15] (i.e. Type 1 UE requirement). If the field <i>nonCollocatedTypeNR-CA</i> (without suffix) is absent, the UE applies MTTD/MRTD requirements according to Table 7.6.4-1/Table 7.6.4-2 in TS 38.133 [14] and UE RF requirements for intra-band non-collocated NR-CA including 7.10A in TS 38.101-1 [15] (i.e. Type 2 UE requirement) if the UE is configured with <i>maxMIMO-Layers</i> with value less than or equal to 2 for all corresponding serving cells and indicates the support of <i>intraBandNR-CA-non-collocated-r18</i> . The field <i>nonCollocatedTypeNR-CA-v1900</i> is only present for a UE configured with <i>maxMIMO-Layers</i> with value equal to 4 for all corresponding serving cells. If

nonCollocatedTypeNR-CA-v1900 is present with *type4*, the UE applies MTTD/MRTD requirements according to Table 7.5.4-1/7.6.4-2 in TS38.133 [14] and UE RF requirements for intra-band non-collocated NR-CA including 7.10A in TS38.101-1 [15] (i.e. Type 4 UE requirement) when indicating support of *intraBandNR-CA-non-collocated-r19*. If *nonCollocatedTypeNR-CA-v1900* is present with *type1* or absent, the UE applies MRTD requirements according to Table 7.6.4-1 in TS38.133 [14] and UE RF requirements for intra-band NR-CA except for 7.10A in TS38.101-1 [15] (i.e. Type 1 UE requirement) if the UE is configured with *maxMIMO-Layers* with value equal to 4 for all corresponding serving cells and indicates support of *intraBandNR-CA-non-collocated-r19*.

npn-IdentityInfoList

This field is used to transfer *npn-IdentityInfoList* in *SIB1* of the SCell. The UE uses this field to translate the *plmn-Index* in MCCH of SCell to SNPN Identity. If this field and *plmn-IdentityInfoList* are both absent, the UE uses the *npn-IdentityInfoList* in *SIB1* of the PCell.

plmn-IdentityInfoList

This field is used to transfer *plmn-IdentityInfoList* in *SIB1* of the SCell. The UE uses this field to translate the *plmn-Index* in MCCH of SCell to PLMN Identity. If this field and *npn-IdentityInfoList* are both absent, the UE uses the *plmn-IdentityInfoList* in *SIB1* of the PCell.

prioSCellPRACH-OverSP-PeriodicSRS

When configured, the UE applies UL power control prioritization by prioritizing PRACH transmission on SCell over semi-persistent and/or periodic SRS transmission as defined in clause 7.5 of TS 38.213 [13].

rlc-BearerToAddModList

Configuration of the MAC Logical Channel, the corresponding RLC entities and association with radio bearers.

reportUplinkTxDirectCurrent

Enables reporting of uplink and supplementary uplink Direct Current location information upon BWP configuration and reconfiguration. This field is only present when the BWP configuration is modified or any serving cell is added or removed. This field is absent in the IE *CellGroupConfig* when provided as part of *RRCSetup* message. If UE is configured with SUL carrier, UE reports both UL and SUL Direct Current locations.

reportUplinkTxDirectCurrentMoreCarrier

Enables reporting of uplink Direct Current location information when the UE is configured with intra-band CA. This field is absent in the IE *CellGroupConfig* when provided as part of *RRCSetup* message. The UE only reports the uplink Direct Current location information that are related to the indicated *cc-CombinationList*. The network does not include carriers which locate in DL only spectrum described in TS 38.101-2 [39], clause 5.3A.4 and defined by *Fsd* according to Table 5.3A.4-3 in FR2 in the *IntraBandCC-CombinationReqList*. I.e. DL-only carrier in FR2 frequency spectrum is not used to calculate the default DC location.

reportUplinkTxDirectCurrentTwoCarrier

Enables reporting of uplink Direct Current location information when the UE is configured with uplink intra-band CA with two carriers. This field is absent in the IE *CellGroupConfig* when provided as part of *RRCSetup* message.

rlc-BearerToReleaseListExt

List of the RLC entities and the corresponding MAC Logical Channels to be released for multicast MRBs.

rlmInSyncOutOfSyncThreshold

BLER threshold pair index for IS/OOS indication generation, see TS 38.133 [14]. *n1* corresponds to the value 1. When the field is absent, the UE applies the value 0. Whenever this is reconfigured, UE resets N310 and N311, and stops T310, if running. Network does not include this field.

sCellSIB20

This field is used to transfer *SIB20* of the SCell in order to allow the UE for MBS broadcast reception on SCell. The network configures this field only for a single SCell at a time.

sCellToAddModList

List of secondary serving cells (SCells) to be added or modified.

sCellToReleaseList

List of secondary serving cells (SCells) to be released.

simultaneousSpatial-UpdatedList1, simultaneousSpatial-UpdatedList2

List of serving cells which can be updated simultaneously for spatial relation with a MAC CE. The *simultaneousSpatial-UpdatedList1* and *simultaneousSpatial-UpdatedList2* shall not contain same serving cells. Network should not configure serving cells that are configured with a BWP with two different values for the *coresetPoolIndex* in these lists.

simultaneousTCI-UpdateList1, simultaneousTCI-UpdateList2

List of serving cells which can be updated simultaneously for TCI relation with a MAC CE. The *simultaneousTCI-UpdateList1* and *simultaneousTCI-UpdateList2* shall not

contain same serving cells. Network should not configure serving cells that are configured with a BWP with two different values for the <i>coresetPoolIndex</i> in these lists.
<i>simultaneousU-TCI-UpdateList1, simultaneousU-TCI-UpdateList2, simultaneousU-TCI-UpdateList3, simultaneousU-TCI-UpdateList4</i> List of serving cells for which the Unified TCI States Activation/Deactivation MAC CE, the Enhanced Unified TCI States Activation/Deactivation MAC CE for Joint TCI States or the Enhanced Unified TCI States Activation/Deactivation MAC CE for Separate TCI States apply simultaneously, as specified in TS 38.321 [3] clauses 6.1.3.47, 6.1.3.70 and 6.1.3.71, respectively. The different lists shall not contain same serving cells. Network only configures in these lists serving cells that are configured with <i>unifiedTCI-StateType</i> . Network should not configure serving cells that are configured with a BWP with different number of <i>coresetPoolIndexes</i> in the same list.
<i>spCellConfig</i> Parameters for the SpCell of this cell group (PCell of MCG or PSCell of SCG).
<i>uplinkTxSwitching3Tx</i> Indicates Tx switching enhancement between 2 configured UL bands for 3Tx UEs is configured for inter-band UL CA, in which the switching gap duration for a triggered uplink switching (as specified in TS 38.214 [19]) is equal to the switching time capability value reported for the switching mode. If this field is absent and <i>uplinkTxSwitching</i> is configured, it is interpreted that 1Tx-2Tx or 2Tx-2Tx UL Tx switching is configured as specified in TS 38.214 [19].
<i>uplinkTxSwitchingOption</i> Indicates which option is configured for dynamic UL Tx switching for inter-band UL CA or (NG)EN-DC. The field is set to <i>switchedUL</i> if network configures option 1 as specified in TS 38.214 [19], or <i>dualUL</i> if network configures option 2 as specified in TS 38.214 [19]. Network always configures UE with a value for this field in inter-band UL CA case and (NG)EN-DC case where UE supports dynamic UL Tx switching. This field is not applicable for a UE configured with <i>uplinkTxSwitching3Tx</i> .
<i>uplinkTxSwitchingPowerBoosting</i> Indicates whether the UE is allowed to enable 3dB boosting on the maximum output power for transmission on carrier2 under the operation state in which 2-port transmission can be supported on carrier2 for inter-band UL CA case with dynamic UL Tx switching as defined in TS 38.101-1 [15]. Network can only configure this field for dynamic UL Tx switching in inter-band UL CA case with power Class 3 as defined in TS 38.101-1 [15].
<i>uplinkTxSwitching-2T-Mode</i> Indicates 2Tx-2Tx switching mode is configured for inter-band UL CA or SUL, in which the switching gap duration for a triggered uplink switching (as specified in TS 38.214 [19]) is equal to the switching time capability value reported for the switching mode. If this field is absent and <i>uplinkTxSwitching</i> is configured, it is interpreted that 1Tx-2Tx UL Tx switching is configured as specified in TS 38.214 [19]. In this case, there is one uplink (or one uplink band in case of intra-band) configured with <i>uplinkTxSwitching</i> , on which the maximum number of antenna ports among all configured P-SRS/A-SRS and activated SP-SRS resources should be 1 and non-codebook based UL MIMO is not configured. This field is not applicable for a UE configured with <i>uplinkTxSwitching3Tx</i> .
<i>uplinkTxSwitching-DualUL-TxState</i> Indicates the state of Tx chains if the state of Tx chains after the UL Tx switching is not unique (as specified in TS 38.214 [19]) in case of 2Tx-2Tx switching is configured and <i>uplinkTxSwitchingOption</i> is set to <i>dualUL</i> . Value <i>oneT</i> indicates 1Tx is assumed to be supported on the carriers on each band, value <i>twoT</i> indicates 2Tx is assumed to be supported on that carrier. This field applies for all band pairs if <i>uplinkTxSwitchingMoreBands</i> is configured. This field is not applicable for a UE configured with <i>uplinkTxSwitching3Tx</i> .
<i>uplinkTxSwitchingMoreBands</i> Indicates UL band list, band pair list and other configurations for UL Tx switching. This field is not applicable for a UE configured with <i>uplinkTxSwitching3Tx</i> .
<i>uu-RelayRLC-ChannelToAddModList</i> List of the Uu RLC entities and the corresponding MAC Logical Channels to be added or modified.
<i>uu-RelayRLC-ChannelToReleaseList</i> List of the Uu RLC entities and the corresponding MAC Logical Channels to be released.

DeactivatedSCG-Config field descriptions**bfd-and-RLM**

If the field is set to *true*, the UE shall perform RLM and BFD on the PSCell when the SCG is deactivated and the network ensures that *beamFailure-r17* is not configured in the *radioLinkMonitoringConfig* of the DL BWP of the PSCell in which the UE performs BFD. If set to *false*, the UE is not required to perform RLM and BFD on the PSCell when the SCG is deactivated.

DAPS-UplinkPowerConfig field descriptions**p-DAPS-Source**

The maximum total transmit power to be used by the UE in the source cell group during DAPS handover.

p-DAPS-Target

The maximum total transmit power to be used by the UE in the target cell group during DAPS handover.

uplinkPowerSharingDAPS-Mode

Indicates the uplink power sharing mode that the UE uses in DAPS handover (see TS 38.213 [13]).

EarlyCSI-Acquisition field descriptions**early-NZP-CSI-RS-ResourceSet**

Indicates the resource set for measurement based on periodic CSI-RS. This is used in early CSI acquisition for the reconfiguration with sync.

early-CSI-IM-ResourceSet

Indicates the resource set for interference measurements. This is used in early CSI acquisition for the reconfiguration with sync.

earlyCSI-ReportQuantity

This field indicates the CSI related quantities for early CSI report.

earlyCSI-CQI-Table

This field indicates the cqi-Table for early CSI report.

earlyCSI-CodeBookConfig

This field indicates the CodeBook configuration for early CSI report. Network can only set codebookType to type1-SinglePanel in *earlyCSI-Acquisition*.

GoodServingCellEvaluation field descriptions**offset**

The parameter "X" (dB) for the good serving cell quality criterion in RRC_CONNECTED, for a cell operating in FR1 and FR2, respectively. If this field is absent, the UE applies the (default) value of 0 dB for "X".

<i>IAB-ResourceConfig</i> field descriptions
<i>iab-ResourceConfigID</i> This ID is used to indicate the specific resource configuration addressed by the MAC CEs specified in TS 38.321 [3].
<i>periodicitySlotList</i> Indicates the periodicity in ms of the list of slot indexes indicated in <i>slotList</i> .
<i>slotList</i> Indicates the list of slot indexes to which the information indicated in the specific MAC CE applies to, as specified in TS 38.321 [3]. The values of the entries in the <i>slotList</i> are strictly less than the value of the <i>periodicitySlotList</i> .
<i>slotListSubcarrierSpacing</i> Subcarrier spacing used as reference for the <i>slotList</i> configuration. Only the following values are applicable depending on the used frequency: FR1: 15 or 30 kHz FR2-1: 60 or 120 kHz FR2-2: 120 or 480 kHz

<i>LowBandCA-Switching</i> field descriptions
<i>gapDurationPCelltoSCell</i> Indicates the duration of the switching gap for the switching from PCell to the SCell, in the unit of 15KHz SCS symbol. NW ensures that the switching gap is enough to cover at least the switching period.
<i>gapDurationSCelltoPCell</i> Indicates the duration of switching gap for the switching from the SCell to PCell, in the unit of 15KHz SCS symbol. NW ensures that the switching gap is enough to cover at least the switching period and TA.
<i>switchingPattern</i> Indicates which carrier is configured for the corresponding slot for low NR band carrier aggregation via switching between FDD and supplementary downlink (SDL) carrier. '0' indicates FDD carrier (PCell), and '1' indicates SDL carrier (SCell). The pattern starts from the beginning of SFN 0 of PCell.

OD-SSB field descriptions
od-SSB-AbsoluteFrequency Indicates the frequency of the OD-SSB. If the field is absent, the UE applies <i>absoluteFrequencySSB</i> indicated in <i>FrequencyInfoDL</i> for this serving cell, if configured. Additional restrictions as described in subclause 4.4. of TS 38.213.
od-SSB-ConfigToAddModList List of OD-SSB configurations for this serving cell. Network configures maximum of one different OD-SSB frequency for the OD-SSB configurations which has than the serving cell SSB frequency.
od-SSB-PBCH-BlockPower Indicates average EPRE of the resources elements that carry secondary synchronization signals in dBm that the NW used for OD-SSB transmission, see TS 38.213 [13], clause 7. If the field is absent, UE applies the value <i>ss-PBCH-BlockPower</i> configured in IE <i>ServingCellConfigCommon</i>.
od-SSB-SubcarrierSpacing Indicates subcarrier spacing of OD-SSB. Only the following values are applicable depending on the used frequency: FR1/FR1-NTN: 15 or 30 kHz FR2-1/FR2-NTN: 120 or 240 kHz FR2-2: 120, 480, or 960 kHz If the field is absent, the UE applies the value <i>subcarrierSpacing</i> configured in IE <i>BWP</i>.

RACH-LessHO field descriptions
ssb-Index This field indicates a beam that the UE should use in the target cell to monitor PDCCH for initial uplink transmission, see TS 38.321 [3]. The network configures this field when <i>cg-RRC-Configuration</i> is not configured for the initial uplink transmission in RACH-less handover in NTN or in case this cell is not a mobile IAB cell.
targetNTA This field refers to the timing adjustment, see TS 38.213 [13] and TS 38.321 [3], indicating the N_{TA} value which the UE shall use for the target PTAG of handover. The value zero corresponds to $N_{TA}=0$, while the value <i>source</i> corresponds to the N_{TA} value of the source PTAG indicated by the <i>tag-Id</i>. Only value <i>source</i> is configured by the network in case source cell is a mobile IAB cell. In this version of the specification, the network shall always configure this field if <i>rach-LessHO</i> is part of an <i>RRCReconfiguration</i> message.
tci-StateID This field indicates a beam that the UE should use in the target cell to monitor PDCCH for initial uplink transmission and also indicates the TCI state information to be used in the target cell. The network configures this field in case this cell is not a NTN cell.

ReconfigurationWithSync field descriptions
earlyCSI-Acquisition Indicates the early CSI acquisition configuration for the reconfiguration with sync. This field is absent if configured in <i>LTM-Config</i>. If this field is present, UE performs early CSI acquisition and reporting as specified in clause 5.2.4a, TS 38.214 [19].
ltm-SchedulingRequestInfo Contains the scheduling request configuration and physical layer resources on PUCCH where the UE may send the scheduling request during an LTM cell switch procedure, if an SR configuration ID is included in the LTM cell switch command MAC CE (see TS 38.321 [3], clauses 6.1.3.75 and 6.1.3.75a).
rach-ConfigDedicated Random access configuration to be used for the reconfiguration with sync (e.g. handover). The UE performs the RA according to these parameters in the <i>firstActiveUplinkBWP</i> (see <i>UplinkConfig</i>).
sl-IndirectPathMaintain Indicates that the L2 U2N Remote UE keeps the PC5 connection with its connected L2 U2N Relay UE.
smtc The SSB periodicity/offset/duration configuration of target cell for NR PSCell change and NR PCell change. The network sets the <i>periodicityAndOffset</i> to indicate the same periodicity as <i>ssb-periodicityServingCell</i> in <i>spCellConfigCommon</i> or sets to the same periodicity as <i>ssb-Periodicity-r17</i> in <i>nonCellDefiningSSB-r17</i> if the first active DL BWP included in this RRC message is configured with <i>nonCellDefiningSSB-r17</i>. For case of NR PCell change, the <i>smtc</i> is based on the timing reference of (source) PCell. For case of NR PSCell change, it is based on the timing reference of source PSCell. If both this field and <i>targetCellSMTC-SCG</i> are absent, the UE uses the SMTC in the <i>measObjectNR</i> having the same SSB frequency and subcarrier spacing, as configured before the reception of the RRC message. If the first active DL BWP included in this RRC message is configured with <i>nonCellDefiningSSB-r17</i>, this field corresponds to the NCD-SSB indicated by <i>nonCellDefiningSSB-r17</i>, otherwise, this field corresponds to the CD-SSB indicated by <i>absoluteFrequencySSB</i> in <i>frequencyInfoDL</i>.

ReportUplinkTxDirectCurrentMoreCarrier field descriptions
IntraBandCC-Combination Indicates the state of the carriers and BWPs indexes of the carriers in a CC combination, each carrier in this combination corresponds to an entry in <i>servCellIndexList</i> with same order. This IE shall have the same size as <i>servCellIndexList</i>.
IntraBandCC-CombinationReqList Indicates the list of the requested carriers/BWPs combinations for an intra-band CA component.
servCellIndexList indicates the list of cell index for an intra-band CA component.

<i>SCellConfig</i> field descriptions
<i>goodServingCellEvaluationBFD</i> Indicates the criterion for a UE to detect the good serving cell quality for BFD relaxation in an SCell in RRC_CONNECTED. This field is always configured when the network enables BFD relaxation for the UE in this SCell. This field is absent if <i>failureDetectionSetN</i> is present for the SCell.
<i>preConfigGapStatus</i> Indicates whether the pre-configured measurement gaps (i.e. the gaps configured with <i>preConfigInd</i>) are activated or deactivated while this SCell is deactivated. If this field is configured, the UE shall apply network-controlled mechanism for activation and deactivation of the pre-configured measurement gaps, otherwise the UE shall apply the autonomous activation/deactivation mechanism, as specified in TS 38.133 [14]. The first/leftmost bit corresponds to the measurement gap with gap ID 1, the second bit corresponds to measurement gap with gap ID 2, and so on. Value 0 indicates that the corresponding pre-configured measurement gap is deactivated while value 1 indicates that the corresponding pre-configured measurement gap is activated. The UE shall ignore the bit if the corresponding measurement gap is not a pre-configured measurement gap.
<i>sCellState</i> Indicates whether the SCell shall be considered to be in activated state upon SCell configuration. If the field is included for an SCell configured with TRS for fast activation of the SCell, such TRS is not used for the corresponding SCell.
<i>secondaryDRX-GroupConfig</i> The field is used to indicate whether the SCell belongs to the secondary DRX group. All serving cells in the secondary DRX group shall belong to one Frequency Range and all serving cells in the default DRX group shall belong to another Frequency Range. If <i>drx-ConfigSecondaryGroup</i> is configured, the field is optionally present. The network always includes the field if the field was previously configured for this SCell and the SCell remains in the secondary DRX group. Removal of an individual SCell from the secondary DRX group is supported by using an SCell release and addition. Otherwise, if <i>drx-ConfigSecondaryGroup</i> is not configured, the field is absent and the UE shall release the field. The UE shall also release the field if <i>drx-ConfigSecondaryGroup</i> is released without including <i>sCellToAddModList</i>.
<i>smtc</i> The SSB periodicity/offset/duration configuration of target cell for NR SCell addition. The network sets the <i>periodicityAndOffset</i> to indicate the same periodicity as <i>ssb-periodicityServingCell</i> in <i>sCellConfigCommon</i>. The <i>smtc</i> is based on the timing of the SpCell of associated cell group. In case of inter-RAT handover to NR, the timing reference is the NR PCell. In case of intra-NR PCell change (standalone NR) or NR PSCell change (EN-DC), the timing reference is the target SpCell. If the field is absent and <i>absoluteFrequencySSB</i> is included, the UE uses the SMTC in the <i>measObjectNR</i> having the same SSB frequency and subcarrier spacing, as configured before the reception of the RRC message. If the SCell is an SSB-less SCell, this field is absent.

<i>SpCellConfig</i> field descriptions
<i>deactivatedSCG-Config</i> Configuration applicable when the SCG is deactivated. The network always configures this field before or when indicating that the SCG is deactivated in an <i>RRCReconfiguration</i> , <i>RRCResume</i> , E-UTRA <i>RRCCConnectionReconfiguration</i> or E-UTRA <i>RRCCConnectionResume</i> message.
<i>goodServingCellEvaluationBFD</i> Indicates the criterion for a UE to detect the good serving cell quality for BFD relaxation in the SpCell in RRC_CONNECTED. The field is always configured when the network enables BFD relaxation for the UE in this SpCell. This field is absent if <i>failureDetectionSetN</i> is present for the SpCell.
<i>goodServingCellEvaluationRLM</i> Indicates the criterion for a UE to detect the good serving cell quality for RLM relaxation in the SpCell in RRC_CONNECTED. The field is always configured when the network enables RLM relaxation for the UE in this SpCell.
<i>lowMobilityEvaluationConnected</i> Indicates the criterion for a UE to detect low mobility in RRC_CONNECTED in an SpCell. The <i>s-SearchDeltaP-Connected</i> is the parameter "S _{SearchDeltaP-connected} ". Value <i>dB3</i> corresponds to 3 dB, <i>dB6</i> corresponds to 6 dB and so on. The <i>t-SearchDeltaP-Connected</i> is the parameter "T _{SearchDeltaP-Connected} ". Value <i>s5</i> means 5 seconds, value <i>s10</i> means 10 seconds and so on. Low mobility criterion is configured in NR PCell for the case of NR SA/ NR CA/ NE-DC/NR-DC, and in the NR PSCell for the case of EN-DC.
<i>reconfigurationWithSync</i> Parameters for the synchronous reconfiguration to the target SpCell.
<i>rlf-TimersAndConstants</i> Timers and constants for detecting and triggering cell-level radio link failure. For the SCG, <i>rlf-TimersAndConstants</i> can only be set to <i>setup</i> and is always included at SCG addition.
<i>servCellIndex</i> Serving cell ID of a PSCell. The PCell of the Master Cell Group uses ID = 0.

<i>SL-PathSwitchConfig</i> field descriptions
<i>targetRelayUE-Identity</i> Indicates the L2 source ID of the target L2 U2N Relay UE during path switch.
<i>t420</i> Indicates the timer value of <i>T420</i> to be used during path switch.

<i>UplinkTxSwitchingMoreBands</i> field descriptions
<i>uplinkTxSwitchingBandList</i> Indicates the NR frequency band number of the UL bands for UL Tx switching. If the UE needs to determine location of switching period as specified in TS 38.101-1 [15], the UE considers that the bands are listed in decreasing order of priority, i.e. the first/leftmost entry corresponds to the band with the highest priority, the next entry corresponds to the band with the second highest priority, and so on. The last entry corresponds the band with the lowest priority.
<i>uplinkTxSwitchingBandPairList</i> Indicates the band pairs involved in UL Tx switching, as well as the per band pair configurations.
<i>uplinkTxSwitchingAssociatedBandDualUL-List</i> Indicates the associated band for the transmitting band indicated by <i>transmitBand</i> which the transmitting carrier(s) is on as specified in TS 38.214 [19], clause 6.1.6. The network ensures that each band pair of a transmitting band and an associated band supports the <i>dualUL</i> switching option.
<i>UplinkTxSwitchingBandIndex</i> The value <i>n</i> indicates the band included at the <i>n</i> -th entry of <i>uplinkTxSwitchingBandList</i> .

<i>UplinkTxSwitchingBandPairConfig</i> field descriptions
<i>bandInfoUL1, bandInfoUL2</i> Indicates the band index for a band pair. The value n indicates the band included at the n-th entry of <i>uplinkTxSwitchingBandList</i> .
<i>switching2T-Mode</i> Indicates 2Tx-2Tx switching mode is configured to the band pair. If this field is absent when uplink Tx switching is configured, it is interpreted that 1Tx-2Tx/1Tx-1Tx UL Tx switching is configured as specified in TS 38.214 [19].
<i>switchingOptionConfigForBandPair</i> Indicates the switching option for the band pair as specified in TS 38.214 [19], clause 6.1.6.
<i>switchingPeriodConfigForBandPair</i> Indicates the value of switching period for the band pair as specified in TS 38.214 [19], clause 6.1.6. Value <i>n35us</i> represents 35 us, <i>n140us</i> represents 140us. If the field is absent, 210 us is applied.

Conditional Presence	Explanation
<i>2Tx</i>	The field is optionally present, Need R, if <i>uplinkTxSwitching</i> is configured; otherwise it is absent, Need R.
<i>3Tx</i>	The field is optionally present, Need R, if <i>uplinkTxSwitching</i> is configured; otherwise it is absent, Need R.
<i>BWP-Reconfig</i>	The field is optionally present, Need N, if the BWPs are reconfigured or if serving cells are added or removed. Otherwise it is absent.
<i>DirectToIndirect-PathSwitch</i>	The field is mandatory present for the L2 U2N remote UE at path switch to the target L2 U2N Relay UE (including direct to indirect path switch, single-hop indirect to single-hop indirect path switch, multi-hop indirect to single-hop indirect path switch and direct/single-hop indirect to multi-hop indirect path switch). It is absent otherwise. Note: the target L2 U2N Relay UE should not be the same as serving L2 U2N Relay UE for inter-gNB indirect to indirect path switch.
<i>LTM</i>	This field is optionally present, Need N, if <i>reconfigurationWithSync</i> is included within <i>ltn-CandidateConfig</i> . It is absent otherwise.
<i>MP</i>	This field is optionally present, Need N, if a L2 U2N remote UE is configured to perform MP direct path addition during indirect-to-direct path switch procedure, or to perform MP direct path release during direct-to-indirect path switch procedure. It is absent otherwise.
<i>NCR</i>	The field is optionally present, Need M, for NCR-MT. It is absent otherwise.
<i>ODssbAOssb</i>	The field is mandatory present, when <i>absoluteFrequencySSB</i> of the serving cell is absent or when <i>absoluteFrequencySSB</i> of the serving cell is present but OD-SSB, when activated, is to be transmitted with a frequency different than this frequency in the serving cell. It is absent, Need R, otherwise.
<i>ODssbOnly</i>	The field is optionally present, Need R, when <i>absoluteFrequencySSB</i> of the serving cell is absent. It is absent otherwise.
<i>PreConfigMG</i>	The field is optionally present, Need R, if there is at least one per UE gap configured with <i>preConfigInd</i> or there is at least one per FR gap of the same FR which the SCell belongs to and configured with <i>preConfigInd</i> . It is absent, Need R, otherwise.
<i>ReconfWithSync</i>	The field is mandatory present in the <i>RRCReconfiguration</i> message: - in each configured <i>CellGroupConfig</i> for which the SpCell changes, - in the <i>masterCellGroup</i>: - at change of AS security key derived from K_{gNB}, - in an <i>RRCReconfiguration</i> message contained in a <i>DLInformationTransferMRDC</i> message, - path switch of L2 U2N remote UE to the target PCell, - path switch of L2 U2N remote UE to the target L2 U2N Relay UE, - in the <i>secondaryCellGroup</i> at: - PSCell addition, - SCG resume with NR-DC or (NG)EN-DC, - update of required SI for PSCell, - change of AS security key derived from $S-K_{gNB}$ in NR-DC while the UE is configured with at least one radio bearer with <i>keyToUse</i> set to <i>secondary</i> and that is not released by this <i>RRCReconfiguration</i> message, - MN handover in (NG)EN-DC. Otherwise, it is optionally present, need M. The field is absent in the <i>masterCellGroup</i> in <i>RRCResume</i> and <i>RRCSetup</i> messages and is absent in the <i>masterCellGroup</i> in <i>RRCReconfiguration</i> messages if source configuration is not released during DAPS handover.
<i>SCellAdd</i>	The field is mandatory present upon SCell addition; otherwise it is absent, Need M.
<i>SCellAddMod</i>	The field is mandatory present upon SCell addition; otherwise it is optionally present, need M.
<i>SCellAddSync</i>	The field is optionally present, Need N: - in the <i>masterCellGroup</i> at - SCell addition,

	- reconfiguration with sync, - resume of an RRC connection. - in the <i>secondaryCellGroup</i>, when the SCG is not indicated as deactivated at: - SCG activation while the SCG was previously deactivated, - SCell addition, - reconfiguration with sync. It is absent otherwise.
SCG	The field is mandatory present in an <i>SpCellConfig</i> for the PSCell. It is absent otherwise.
SCellSIB20-Opt	This field is optionally present, Need M, if the field sCellSIB20 is configured. It is absent otherwise.
SCG-Opt	The field is optionally present, Need M, in an <i>SpCellConfig</i> for the PSCell. It is absent otherwise.

NOTE: In case of change of AS security key derived from S-K_{gNB}/S-K_{eNB}, if *reconfigurationWithSync* is not included in the *masterCellGroup*, the network releases all existing MCG RLC bearers associated with a radio bearer with *keyToUse* set to *secondary*. In case of change of AS security key derived from K_{gNB}/K_{eNB}, if *reconfigurationWithSync* is not included in the *secondaryCellGroup*, the network releases all existing SCG RLC bearers associated with a radio bearer with *keyToUse* set to *master*.

— *CellGroupId*

The IE *CellGroupId* is used to identify a cell group. Value 0 identifies the master cell group. Other values identify secondary cell groups. In this version of the specification only values 0 and 1 are supported.

CellGroupId information element

```
-- ASN1START
-- TAG-CELLGROUPID-START

CellGroupId ::=
    INTEGER (0.. maxSecondaryCellGroups)

-- TAG-CELLGROUPID-STOP
-- ASN1STOP
```

— *CellIdentity*

The IE *CellIdentity* is used to unambiguously identify a cell within a PLMN/SNPN.

CellIdentity information element

```
-- ASN1START
-- TAG-CELLIDENTITY-START

CellIdentity ::=
    BIT STRING (SIZE (36))
```

```
-- TAG-CELLIDENTITY-STOP
-- ASN1STOP
```

– *CellReselectionPriority*

The IE *CellReselectionPriority* concerns the absolute priority of the concerned carrier frequency, as used by the cell reselection procedure. Corresponds to parameter "priority" in TS 38.304 [20]. Value 0 means lowest priority. The UE behaviour for the case the field is absent, if applicable, is specified in TS 38.304 [20].

CellReselectionPriority information element

```
-- ASN1START
-- TAG-CELLRESELECTIONPRIORITY-START

CellReselectionPriority ::=          INTEGER (0..7)

-- TAG-CELLRESELECTIONPRIORITY-STOP
-- ASN1STOP
```

– *CellReselectionSubPriority*

The IE *CellReselectionSubPriority* indicates a fractional value to be added to the value of *cellReselectionPriority* to obtain the absolute priority of the concerned carrier frequency for E-UTRA and NR. Value *oDot2* corresponds to 0.2, value *oDot4* corresponds to 0.4 and so on.

CellReselectionSubPriority information element

```
-- ASN1START
-- TAG-CELLRESELECTIONSUBPRIORITY-START

CellReselectionSubPriority ::=          ENUMERATED {oDot2, oDot4, oDot6, oDot8}

-- TAG-CELLRESELECTIONSUBPRIORITY-STOP
-- ASN1STOP
```

– *CFR-ConfigMulticast*

The IE *CFR-ConfigMulticast* indicates UE specific common frequency resource configuration for multicast for one dedicated BWP.

CFR-ConfigMulticast information element

```
-- ASN1START
-- TAG-CFR-CONFIGMULTICAST-START

CFR-ConfigMulticast-r17 ::= SEQUENCE {
    locationAndBandwidthMulticast-r17          INTEGER (0..37949)
    pdcch-ConfigMulticast-r17                  PDCCCH-Config          OPTIONAL,    -- Need S
                                                OPTIONAL,    -- Need M
}
```

```

pdsch-ConfigMulticast-r17          PDSCH-Config          OPTIONAL,    -- Need M
sps-ConfigMulticastToAddModList-r17 SPS-ConfigMulticastToAddModList-r17 OPTIONAL,    -- Need N
sps-ConfigMulticastToReleaseList-r17 SPS-ConfigMulticastToReleaseList-r17 OPTIONAL    -- Need N
}

SPS-ConfigMulticastToAddModList-r17 ::= SEQUENCE (SIZE (1..8)) OF SPS-Config

SPS-ConfigMulticastToReleaseList-r17 ::= SEQUENCE (SIZE (1..8)) OF SPS-ConfigIndex-r16

-- TAG-CFR-CONFIGMULTICAST-STOP
-- ASN1STOP

```

CFR-ConfigMulticast field descriptions

locationAndBandwidthMulticast

Frequency domain location and bandwidth for MBS multicast. The value of the field shall be interpreted as resource indicator value (RIV) as defined in TS 38.214 [19] with assumptions as described in TS 38.213 [13], clause 12, i.e. setting $N^{\text{size_BWP}}=275$. The first PRB is a PRB determined by *subcarrierSpacing* of the associated BWP and *offsetToCarrier* corresponding to this subcarrier spacing. If not configured, the UE applies the value of *locationAndBandwidth* of the DL BWP in which the *cf-ConfigMulticast* is configured.

pdcch-ConfigMulticast

UE specific group-common PDCCH configuration for MBS multicast for one CFR.

pdsch-ConfigMulticast

UE specific group-common PDSCH configuration for MBS multicast for one CFR.

sps-ConfigMulticastToAddModList

Indicates a list of one or more DL SPS configurations for MBS multicast.

sps-ConfigMulticastToReleaseList

Indicates a list of one or more DL SPS configurations to be released. The NW may release a SPS configuration at any time.

CGI-InfoEUTRA

The IE CGI-InfoEUTRA indicates EUTRA cell access related information, which is reported by the UE as part of E-UTRA report CGI procedure.

CGI-InfoEUTRA information element

```

-- ASN1START
-- TAG-CGI-INFOEUTRA-START

CGI-InfoEUTRA ::=
    cgi-info-EPC
        cgi-info-EPC-legacy
        cgi-info-EPC-list
    }
    cgi-info-5GC
    freqBandIndicator
    multiBandInfoList
    freqBandIndicatorPriority
}

SEQUENCE {
    SEQUENCE {
        CellAccessRelatedInfo-EUTRA-EPC,
        SEQUENCE (SIZE (1..maxPLMN)) OF CellAccessRelatedInfo-EUTRA-EPC OPTIONAL
    }
    SEQUENCE (SIZE (1..maxPLMN)) OF CellAccessRelatedInfo-EUTRA-5GC OPTIONAL,
    FreqBandIndicatorEUTRA,
    MultiBandInfoListEUTRA OPTIONAL,
    ENUMERATED {true} OPTIONAL
}

```

```
-- TAG-CGI-INFOEUTRA-STOP
-- ASN1STOP
```

– *CGI-InfoEUTRALogging*

The IE CGI-InfoEUTRALogging indicates EUTRA cell related information, which is reported by the UE as part of RLF reporting procedure.

CGI-InfoEUTRALogging information element

```
-- ASN1START
-- TAG-CGI-INFOEUTRALOGGING-START

CGI-InfoEUTRALogging ::= SEQUENCE {
    plmn-Identity-eutra-5gc          PLMN-Identity          OPTIONAL,
    trackingAreaCode-eutra-5gc      TrackingAreaCode      OPTIONAL,
    cellIdentity-eutra-5gc          BIT STRING (SIZE (28))  OPTIONAL,
    plmn-Identity-eutra-epc         PLMN-Identity          OPTIONAL,
    trackingAreaCode-eutra-epc      BIT STRING (SIZE (16))  OPTIONAL,
    cellIdentity-eutra-epc         BIT STRING (SIZE (28))  OPTIONAL
}

-- TAG-CGI-INFOEUTRALOGGING-STOP
-- ASN1STOP
```

CGI-InfoEUTRALogging field descriptions
cellIdentity-eutra-epc, cellIdentity-eutra-5GC Unambiguously identify a cell within the context of the PLMN. It belongs the first PLMN entry of <i>plmn-IdentityList</i> (when connected to EPC) or of <i>plmn-IdentityList-r15</i> (when connected to 5GC) in <i>SystemInformationBlockType1</i> .
plmn-Identity-eutra-epc, plmn-Identity-eutra-5GC Identifies the PLMN of the cell for the reported <i>cellIdentity</i> : the first PLMN entry of <i>plmn-IdentityList</i> (when connected to EPC) or of <i>plmn-IdentityList-r15</i> (when connected to 5GC) in <i>SystemInformationBlockType1</i> that contained the reported <i>cellIdentity</i> .
trackingAreaCode-eutra-epc, trackingAreaCode-eutra-5gc Indicates Tracking Area Code to which the cell indicated by <i>cellIdentity-eutra-epc</i> , <i>cellIdentity-eutra-5GC</i> belongs.

– *CGI-InfoNR*

The IE *CGI-InfoNR* indicates cell access related information, which is reported by the UE as part of report CGI procedure.

CGI-InfoNR information element

```
-- ASN1START
-- TAG-CGI-INFO-NR-START

CGI-InfoNR ::= SEQUENCE {
```

```
plmn-IdentityInfoList      PLMN-IdentityInfoList      OPTIONAL,
frequencyBandList          MultiFrequencyBandListNR    OPTIONAL,
noSIB1                     SEQUENCE {
    ssb-SubcarrierOffset    INTEGER (0..15),
    pdcch-ConfigSIB1        PDCCH-ConfigSIB1
}
...
[[
nbn-IdentityInfoList-r16    NPN-IdentityInfoList-r16    OPTIONAL
]],
[[
cellReservedForOtherUse-r16 ENUMERATED {true}           OPTIONAL
]],
[[
hsdn-Cell-r19               ENUMERATED {true}           OPTIONAL
]]
}

-- TAG-CGI-INFO-NR-STOP
-- ASN1STOP
```

CGI-InfoNR field descriptions
cellReservedForOtherUse Contains <i>cellReservedForOtherUse</i> field acquired by the UE that supports <i>nr-CGI-Reporting-NPN</i> from <i>SIB1</i> of the cell for which report CGI procedure was requested by the network.
hsdn-Cell Contains <i>hsdn-Cell</i> field acquired by the UE that supports <i>nr-CGI-Reporting-HSDN</i> from <i>SIB1</i> of the cell for which report CGI procedure was requested by the network.
noSIB1 Contains <i>ssb-SubcarrierOffset</i> and <i>pdccch-ConfigSIB1</i> fields acquired by the UE from <i>MIB</i> of the cell for which report CGI procedure was requested by the network in case <i>SIB1</i> was not broadcast by the cell.

– CGI-Info-Logging

The IE *CGI-Info-Logging* indicates the NR Cell Global Identifier (NCGI) for logging purposes (e.g. RLF report), the globally unique identity, and the TAC information of a cell in NR.

CGI-Info-Logging information element

```
-- ASN1START
-- TAG-CGI-INFO-LOGGING-START

CGI-Info-Logging-r16 ::= SEQUENCE {
    plmn-Identity-r16      PLMN-Identity,
    cellIdentity-r16       CellIdentity,
    trackingAreaCode-r16   TrackingAreaCode      OPTIONAL
}
```

```
-- TAG-CGI-INFO-LOGGING-STOP
-- ASN1STOP
```

CGI-Info-Logging field descriptions
cellIdentity Unambiguously identify a cell within the context of the PLMN. It belongs the first <i>PLMN-IdentityInfo</i> IE of <i>PLMN-IdentityInfoList</i> in <i>SIB1</i> .
plmn-Identity Identifies the PLMN of the cell for the reported <i>cellIdentity</i> : the first PLMN entry of <i>plmn-IdentityList</i> (in <i>SIB1</i>) in the instance of <i>PLMN-IdentityInfoList</i> that contained the reported <i>cellIdentity</i> .
trackingAreaCode Indicates Tracking Area Code to which the cell indicated by <i>cellIdentity</i> field belongs. The first entry from <i>trackingAreaList</i> is logged in case the cell is configured with multiple tracking areas, e.g., NTN cell.

– CHO-WithCandidateSCGInfo

The IE *CHO-WithCandidateSCGInfo* contains information regarding events of CHO with Candidate SCG(s).

CHO-WithCandidateSCGInfo information element

```
-- ASN1START
-- TAG-CHO-WITHCANDIDATESCGINFO-START

CHO-WithCandidateSCGInfo-r19 ::=
    firstFulfilledConfig-r19          SEQUENCE{
        timeBetweenFulfillment-r19    ENUMERATED {cho, cpac}                OPTIONAL,
        timeBetweenLastFulfillmentAndFailure-r19 TimeBetweenEvent-r17      OPTIONAL,
        fulfilledConfigWhenChoOnly-r19    ENUMERATED {cho, cpac, neither, spare } OPTIONAL,
        pCellId-r19                     CHOICE {
            cellGlobalId-r19            CGI-Info-Logging-r16,
            pci-arfcn-r19                PCI-ARFCN-NR-r16
        }                                OPTIONAL,
        psCellId-r19                     CHOICE {
            cellGlobalId-r19            CGI-Info-Logging-r16,
            pci-arfcn-r19                PCI-ARFCN-NR-r16
        }                                OPTIONAL, ...
    }

-- TAG-CHO-WITHCANDIDATESCGINFO-STOP
-- ASN1STOP
```

CHO-WithCandidateSCGInfo field descriptions***firstFulfilledConfig***

This field indicates if the execution conditions for conditional handover or conditional PSCell change/addition was fulfilled first.

fulfilledConfigWhenChoOnly

This field indicates if the execution conditions for conditional handover or conditional PSCell change/addition was fulfilled at the time of receiving a complementary conditional reconfiguration i.e., a conditional reconfiguration for a candidate PCell for which at least one CHO with candidate SCG is already configured.

timeBetweenFulfillment

This field logs the time between fulfillment of conditional handover and conditional PSCell change or addition execution conditions.

timeBetweenLastFulfillmentAndFailure

This field logs the time between the latest fulfillment of either conditional handover or conditional PSCell change or addition execution conditions and failure for RLF and SCG failure.

– ***CLI-RSSI-MeasResource***

The IE *CLI-RSSI-MeasResource* is used to configure CLI-RSSI measurement resource which the UE may be configured to measure L1 CLI-RSSI.

CLI-RSSI-MeasResource information element

```
-- ASN1START
-- TAG-CLI-RSSI-MEASRESOURCE-START

CLI-RSSI-MeasResource-r19 ::=
    SEQUENCE {
        cli-RSSI-MeasResourceId-r19          CLI-RSSI-MeasResourceId-r19          OPTIONAL, -- Need R
        startSymbol-r19                      INTEGER (0..13)                      OPTIONAL, -- Need R
        nrofSymbols-r19                      INTEGER (1..14)                      OPTIONAL, -- Need R
        startPRB-r19                         INTEGER (0..maxNrofPhysicalResourceBlocks-1) OPTIONAL, -- Need R
        nrofPRBs-r19                         INTEGER (1..maxNrofPhysicalResourceBlocks) OPTIONAL, -- Need R
        cli-RSSI-PeriodicityAndOffset-r19     CSI-ReportPeriodicityAndOffset        OPTIONAL, -- Need R
        qcl-InfoPeriodic-CLI-RSSI-MeasResource-r19 TCI-StateId                    OPTIONAL, -- Need R
        ...
    }

-- TAG-CLI-RSSI-MEASRESOURCE-STOP
-- ASN1STOP
```

<i>CLI-RSSI-MeasResource</i> field descriptions
<i>cli-RSSI-MeasResourceId</i> Identifies a CLI-RSSI measurement resource.
<i>cli-RSSI-PeriodicityAndOffset</i> Indicates the periodicity and slot offset for this CLI-RSSI-MeasResource, with the same value range as CSI-ResourcePeriodicityAndOffset.
<i>nrofPRBs</i> Indicates the allowed size of the BW for L1 CLI-RSSI measurement.
<i>nrofSymbols</i> Indicates the number of symbols for L1 CLI-RSSI measurement within a slot.
<i>qcl-InfoPeriodic-CLI-RSSI-MeasResource</i> Indicates a reference to one TCI-State in TCI-States for providing the QCL source and QCL type for a target periodic CLI-RSSI-MeasResource
<i>startPRB</i> Indicates the starting PRB index of the measurement bandwidth.
<i>startSymbol</i> Indicates the starting symbol of the CLI-RSSI-MeasurementResource within a slot

– *CLI-RSSI-MeasResourceId*

The IE *CLI-RSSI-MeasResourceId* is used to identify a *CLI-RSSI-MeasResource*.

CLI-RSSI-MeasResourceId information element

```
-- ASN1START
-- TAG-CLI-RSSI-MEASRESOURCEID-START

CLI-RSSI-MeasResourceId-r19 ::=      INTEGER (0..maxNrofCLI-RSSI-MeasResources-1-r19)

-- TAG-CLI-RSSI-MEASRESOURCEID-STOP
-- ASN1STOP
```

– *CLI-RSSI-MeasResourceSet*

The IE *CLI-RSSI-MeasResourceSet* specifies a set of CLI-RSSI measurement resources (their IDs) for L1 CLI-RSSI measurement and set-specific parameters.

CLI-RSSI-MeasResourceSet information element

```
-- ASN1START
-- TAG-CLI-RSSI-MEASRESOURCESET-START

CLI-RSSI-MeasResourceSet-r19 ::= SEQUENCE {
    aperiodicTriggeringOffset-r19      INTEGER (0..31)                                OPTIONAL,  -- Need R
    cli-RSSI-MeasResourceSetId-r19     CLI-RSSI-MeasResourceSetId-r19                OPTIONAL,  -- Need R
    cli-RSSI-MeasResourceIdList-r19    SEQUENCE (SIZE (1..maxNrofCLI-RSSI-MeasResourcesPerSet-r19)) OF CLI-RSSI-MeasResourceId-r19
                                         OPTIONAL,  -- Need R
    ...
}
```

```

}
-- TAG-CLI-RSSI-MEASRESOURCESET-STOP
-- ASN1STOP

```

***CLI-RSSI-MeasResourceSet* field descriptions**

aperiodicTriggeringOffset

Indicates a slot offset between the slot containing the DCI that triggers a set of aperiodic CLI-RSSI resources and the slot in which the CLI-RSSI resource set is measured.

cli-RSSI-MeasResourceSetIdList

Indicates the CLI-RSSI measurement resources associated with this CLI-RSSI measurement resource set.

cli-RSSI-MeasResourceSetId

Indicates ID of CLI-RSSI measurement resource set.

– ***CLI-RSSI-MeasResourceSetId***

The IE *CLI-RSSI-MeasResourceSetId* is used to identify a *CLI-RSSI-MeasResourceSet*.

***CLI-RSSI-MeasResourceSetId* information element**

```

-- ASN1START
-- TAG-CLI-RSSI-MEASRESOURCESETID-START

CLI-RSSI-MeasResourceSetId-r19 ::=      INTEGER(0..maxNrofCLI-RSSI-MeasResourceSets-1-r19)

-- TAG-CLI-RSSI-MEASRESOURCESETID-STOP
-- ASN1STOP

```

– ***CLI-RSSI-Range***

The IE *CLI-RSSI-Range* specifies the value range used in CLI-RSSI measurements and thresholds. The integer value for CLI-RSSI measurements is according to Table 10.1.22.2.2-1 in TS 38.133 [14].

***CLI-RSSI-Range* information element**

```

-- ASN1START
-- TAG-CLI-RSSI-RANGE-START

CLI-RSSI-Range-r16 ::=      INTEGER(0..76)

-- TAG-CLI-RSSI-RANGE-STOP
-- ASN1STOP

```

The IE *ClockQualityMetrics* is used to configure RAN timing synchronisation status information as specified in TS 38.473 [36]

ClockQualityMetrics information element

```
-- ASN1START
-- TAG-CLOCKQUALITYMETRICS-START

ClockQualityMetrics-r18 ::= SEQUENCE {
    synchronisationState-r18      ENUMERATED {locked, holdover, freerun, spare1} OPTIONAL, -- Need N
    traceabilityToUTC-r18         BOOLEAN OPTIONAL, -- Need N
    traceabilityToGNSS-r18        BOOLEAN OPTIONAL, -- Need N
    clockFrequencyStability-r18   BIT STRING (SIZE(16)) OPTIONAL, -- Need N
    clockAccuracy-r18             CHOICE {
        value INTEGER (1..40000000),
        index INTEGER (32..47)
    } OPTIONAL, -- Need N
    parentTimeSource-r18          ENUMERATED {syncE, pTP, gNSS,atomicClock, terrestrialRadio,
        serialTimeCode, nTP, handset, other, spare7,
        spare6, spare5, spare4, spare3, spare2, spare1} OPTIONAL, -- Need N
    ...
}

-- TAG-CLOCKQUALITYMETRICS-STOP
-- ASN1STOP
```

- *CodebookConfig*

The IE *CodebookConfig* is used to configure codebooks of Type-I and Type-II (see TS 38.214 [19], clause 5.2.2.2)

***CodebookConfig* information element**

```
-- ASN1START
-- TAG-CODEBOOKCONFIG-START

CodebookConfig ::=
    codebookType
        type1
            subType
                typeI-SinglePanel
                    nrOfAntennaPorts
                        two
                            twoTX-CodebookSubsetRestriction
                                BIT STRING (SIZE (6))
                        },
                    moreThanTwo
                        n1-n2
                            two-one-TypeI-SinglePanel-Restriction
                                BIT STRING (SIZE (8)),
                            two-two-TypeI-SinglePanel-Restriction
                                BIT STRING (SIZE (64)),
```

```

CodebookConfig field descriptions
codebookMode CodebookMode as specified in TS 38.214 [19], clause 5.2.2.2.
codebookType CodebookType including possibly sub-types and the corresponding parameters for each (see TS 38.214 [19], clause 5.2.2.2).
cri-Type1-SinglePanelN1-N2-CBSR Number of antenna ports in first ($n1$) and second ($n2$) dimension and resource-specific codebook subset restriction for <i>codebookType</i> set to <i>type1-SinglePanel</i> (see TS 38.214 [19] clause 5.2.1.4.2). Value <i>no-cbsr</i> means no codebook subset restriction is configured for the $n1$ - $n2$ pair. If a codebook subset restriction is configured for the $n1$ - $n2$ pair, the number of elements in <i>cbsr-list</i> is up to the number of elements of <i>nzp-CSI-RS-Resources</i> in <i>NZP-CSI-RS-ResourceSet(s)</i> indicated by <i>nzp-CSI-RS-ResourceSetList</i> in the <i>CSI-ResourceConfig</i> indicated by <i>resourcesForChannelMeasurement</i> in the <i>CSI-ReportConfig</i> in which the <i>CodebookConfig</i> is included. An element in the list corresponds to the element at the same position in <i>nzp-CSI-RS-Resources</i> .
cri-Type1-SinglePanelRI-Restriction Resource-specific RI restriction for <i>codebookType</i> set to <i>type1-SinglePanel</i> (see TS 38.214 [19], clause 5.2.1.4.2).
cri-Type1-N1-N2-CBSR Number of antenna ports in first ($n1$) and second ($n2$) dimension and resource-specific codebook subset restriction for <i>codebookType</i> set to <i>type1-r16</i> (see TS 38.214 [19] clause 5.2.1.4.2). Value <i>no-cbsr</i> means no codebook subset restriction is configured for the $n1$ - $n2$ pair. If a codebook subset restriction is configured for the $n1$ - $n2$ pair, the number of elements in <i>cbsr-list</i> is up to the number of elements of <i>nzp-CSI-RS-Resources</i> in <i>NZP-CSI-RS-ResourceSet(s)</i> indicated by <i>nzp-CSI-RS-ResourceSetList</i> in the <i>CSI-ResourceConfig</i> indicated by <i>resourcesForChannelMeasurement</i> in the <i>CSI-ReportConfig</i> in which the <i>CodebookConfig</i> is included. An element in the list corresponds to the element at the same position in <i>nzp-CSI-RS-Resources</i> .
cri-Type1-RI-Restriction Resource-specific RI restriction for <i>codebookType</i> set to <i>type1-r16</i> (see TS 38.214 [19], clause 5.2.1.4.2).
n1-n2-codebookSubsetRestriction, n1-n2-codebookSubsetRestrictionList Number of antenna ports in first ($n1$) and second ($n2$) dimension and codebook subset restriction (see TS 38.214 [19] clause 5.2.2.2.3). Value <i>no-cbsr</i> means no codebook subset restriction is configured for the $n1$ - $n2$ pair. If a codebook subset restriction is configured for the $n1$ - $n2$ pair, the number of elements in <i>cbsr-list</i> in <i>n1-n2-codebookSubSetRestrictionList</i> is up to the number of elements of <i>nzp-CSI-RS-Resources</i> in <i>NZP-CSI-RS-ResourceSet(s)</i> indicated by <i>nzp-CSI-RS-ResourceSetList</i> in the <i>CSI-ResourceConfig</i> indicated by <i>resourcesForChannelMeasurement</i> in the <i>CSI-ReportConfig</i> in which the <i>CodebookConfig</i> is included. An element in the list corresponds to the element at the same position in <i>nzp-CSI-RS-Resources</i> .
n1-n2 Number of antenna ports in first ($n1$) and second ($n2$) dimension and codebook subset restriction (see TS 38.214 [19] clause 5.2.2.2).
ng-n1-n2 Values of N_g , N_1 , N_2 and codebook subset restriction for Type I Multi-panel codebook (see TS 38.214 [19], clause 5.2.2.2).
numberOfBeams Number of beams, L , used for linear combination.
numberOfPMI-SubbandsPerCQI-Subband Field indicates how PMI subbands are defined per CQI subband according to TS 38.214 [19], clause 5.2.2.2.
paramCombination, paramCombination-CJT-r18, paramCombination-CJT-L-r18, paramCombination-CJT-PS-r18, paramCombination-CJT-PS-alpha, paramCombinationDoppler-r18, paramCombinationDoppler-PS-r18, paramCombination-r19, paramCombinationDoppler-r19 Field describes supported parameter combination (M , ,) as specified in TS 38.214 [19] Clause 5.2.2. For fields <i>paramCombination-CJT-L-r18</i> or <i>paramCombination-CJT-PS-alpha</i> the number of elements is 1, 2 or 4, and the values are configured according to the number of <i>nzp-CSI-RS-Resources</i> in <i>NZP-CSI-RS-ResourceSet</i> elements from Tables 5.2.2.2.8-1 and 5.2.2.2.9-1 in TS 38.214 [19], respectively. The allowed configuration combinations for <i>paramCombination-CJT-r18</i> and <i>paramCombination-CJT-L-r18</i> are given in Table 5.2.2.2.8-3 in TS 38.214 [19]. The allowed configuration combinations for <i>paramCombination-CJT-PS-r18</i> and <i>paramCombination-CJT-PS-alpha-r18</i> are given in Table 5.2.2.2.9-3 in TS 38.214 [19]. The allowed configuration combinations for <i>paramCombination-r19</i> and <i>paramCombinationDoppler-r19</i> are specified in clause 5.2.2 of TS 38.214 [19].
phaseAlphabetSize The size of the PSK alphabet, QPSK or 8-PSK.

portSelectionSamplingSize
The size of the port selection codebook (parameter d), see TS 38.214 [19] clause 5.2.2.2.6.
predictionDelay
Prediction delay for Doppler and Doppler port selection codebooks see TS 38.214 [19], Clause 5.2.1.4. The first value m0 means that the first slot for which the CSI corresponds to is the slot where the CSI reference resource is located at. For the other three candidate values (n0, n1, n2), then the first slot for which the CSI corresponds to is given by $l = n + \text{delta}$, where delta can take on values of 0, 1, 2 and n the slot in which CSI is reported.
restrictedCMR-Selection
Enabling CSI-RS resource (CMR) restriction, (see TS 38.214 [19], clause 5.2.2.2.8)
ri-Restriction
Restriction for RI for <i>Type1-MultiPanel-RI-Restriction</i> (see TS 38.214 [19], clause 5.2.2.2).
subbandAmplitude
If subband amplitude reporting is activated (<i>true</i>).
twoTX-CodebookSubsetRestriction
Codebook subset restriction for 2TX codebook (see TS 38.214 [19] clause 5.2.2.2.1).
typel-CodebookSubsetRestriction
Codebook subset restriction for codebook <i>typel-SinglePanel-r19</i> where the size of the bit string is related to the values configured in n1-n2 and (X1, X2) values as defined in TS 38.214 [19] clause 5.2.2.2.1a. Value <i>twentyFour</i> is used when n1-n2 is set to <i>eight-three</i> or <i>six-four</i> , value <i>thirtyTwo</i> is used when n1-n2 is set to <i>sixteen-two</i> or <i>eight-four</i> and value <i>sixtyFour</i> is used when n1-n2 is set to <i>sixteen-four</i> or <i>eight-eight</i> .
typel-SinglePanel-codebookSubsetRestriction-i2
i2 codebook subset restriction for Type I Single-panel codebook used when <i>reportQuantity</i> is CRI/RI/i1/CQI (see TS 38.214 [19] clause 5.2.2.2.1).
typel-SinglePanel-ri-Restriction
Restriction for RI for <i>Type1-SinglePanel-RI-Restriction</i> (see TS 38.214 [19], clause 5.2.2.2.1 and clause 5.2.2.2.1a).
typel-SinglePanel-Group1, typel-SinglePanel-Group2
Configures codebooks for CSI calculation when UE is configured with two CMR Groups with <i>CMRGroupingAndPairing</i> in the <i>NZP-CSI-RS-ResourceSet</i> associated with the <i>CSI-ReportConfig</i> . Network configures the same number of ports for both codebooks.
typel-SinglePanel-ri-RestrictionSDM, typel-SinglePanel-ri-RestrictionSTRP
Restriction for RI for N Resource Pairs when two CMR Groups are configured with <i>CMRGroupingAndPairing</i> in the <i>NZP-CSI-RS-ResourceSet</i> associated with the <i>CSI-ReportConfig</i> (see TS 38.214 [19], clause 5.2.1.4.2).
typel-SoftScalingRank
Power scaling for codebook <i>typel-SinglePanel-r19</i> where the size of the bit string is related to the values configured in n1-n2 and (X1, X2) values as defined in TS 38.214 [19] clause 5.2.2.2.1a. Value <i>twentyFour</i> is used when n1-n2 is set to <i>eight-three</i> or <i>six-four</i> , value <i>thirtyTwo</i> is used when n1-n2 is set to <i>sixteen-two</i> or <i>eight-four</i> and value <i>sixtyFour</i> is used when n1-n2 is set to <i>sixteen-four</i> or <i>eight-eight</i> .
typell-CodebookSubsetRestriction
Codebook subset restriction for codebook <i>typell-r19</i> and <i>typell-Doppler-r19</i> where the size of the bit string is related to the values configured in n1-n2 and (X1, X2) values as defined in TS 38.214 [19] clause 5.2.2.2.5. Value <i>twentyFour</i> is used when n1-n2 is set to <i>eight-three</i> or <i>six-four</i> , value <i>thirtyTwo</i> is used when n1-n2 is set to <i>sixteen-two</i> or <i>eight-four</i> and value <i>sixtyFour</i> is used when n1-n2 is set to <i>sixteen-four</i> or <i>eight-eight</i> .
typell-PortSelectionRI-Restriction
Restriction for RI for <i>Typell-PortSelection-RI-Restriction</i> (see TS 38.214 [19], clauses 5.2.2.2.4, 5.2.2.2.6 and 5.2.2.2.7).
typell-RI-Restriction
Restriction for RI for <i>Typell-RI-Restriction</i> (see TS 38.214 [19], clause 5.2.2.2).
valueOfN
Field provides the value of parameter N as specified in TS 38.214 [19], clause 5.2.2.2. The field is present only when M=2 set by <i>paramCombination</i> , see TS 38.214 [19].
valueOfO3
O3: oversampling factor for frequency-domain basis selection offset

Only applicable when CodebookMode = 'Mode1'.
valueOfN-CJT Field describes the size of the window of FD basis for FeType-II port selection codebook for multi-TRP CJT. For M=2, N=2,4 (see TS 38.214 [19], clause 5.2.2.2.9)
valueOfN-Doppler Field describes the size of the window of FD basis for FeType-II port selection codebook for Doppler CSI. For M=2, N=2,4 (see TS 38.214 [19], clause 5.2.2.2.9)

TD-DD-Config field descriptions
aperiodicResourceOffset Offset m (in slots) between two consecutive aperiodic CSI-RS resources. See TS 38.214 [19], clause 5.2.1.4.
tdCQI Number of TD CQIs (X) in each SB and ref slot(s) + ref W2(s). 1-1: 1 TD CQI, ref = 1st slot and 1st W2 1-2: 1 TD CQI, ref = 1st and last slots, and 1st and last W2 2: 2 TD CQIs (see TS 38.214 [19], clause 5.2.1.4).
unitDurationDD DD/TD unit duration (in slots), for AP-CSI-RS only. Note: For P/SP-CSI-RS, d is set to CSI-RS periodicity (see TS 38.214 [19], clause 5.2.1.4). If the value of <i>aperiodicResourceOffset</i> is '1', network configures value 'm1' for this field. Value <i>m1</i> corresponds to 1 slot and value <i>m2</i> corresponds to 2 slots.
vectorLengthDD Doppler-/time-domain (DD/TD) basis vector length; See TS 38.214 [19], clause 5.2.1.4.

– CommonLocationInfo

The IE *CommonLocationInfo* is used to transfer detailed location information available at the UE to correlate measurements and UE position information.

CommonLocationInfo field descriptions
gnss-TOD-msec Parameter type <i>gnss-TOD-msec</i> defined in TS 37.355 [49]. The first/leftmost bit of the first octet contains the most significant bit.
locationTimeStamp Parameter type <i>DisplacementTimeStamp</i> defined in TS 37.355 [49]. The first/leftmost bit of the first octet contains the most significant bit.
locationCoordinate Parameter type <i>LocationCoordinates</i> defined in TS 37.355 [49]. The first/leftmost bit of the first octet contains the most significant bit.
locationError Parameter <i>LocationError</i> defined in TS 37.355 [49]. The first/leftmost bit of the first octet contains the most significant bit.
locationSource Parameter <i>LocationSource</i> defined in TS 37.355 [49]. The first/leftmost bit of the first octet contains the most significant bit.
velocityEstimate Parameter type <i>Velocity</i> defined in TS 37.355 [49]. The first/leftmost bit of the first octet contains the most significant bit.

– CondReconfigId

The IE *CondReconfigId* is used to identify a CHO, CPA, CPC, subsequent CPAC, or CHO with candidate SCG(s) configuration.

CondReconfigId information element

```
-- ASN1START
-- TAG-CONDRECONFIGID-START

CondReconfigId-r16 ::=                INTEGER (1.. maxNrofCondCells-r16)

-- TAG-CONDRECONFIGID-STOP
-- ASN1STOP
```

– CondReconfigToAddModList

The IE *CondReconfigToAddModList* concerns a list of conditional reconfigurations to add or modify, with for each entry the *condReconfigId* and the associated fields.

CondReconfigToAddModList information element

```
-- ASN1START
-- TAG-CONDRECONFIGTOADDMODLIST-START

CondReconfigToAddModList-r16 ::= SEQUENCE (SIZE (1.. maxNrofCondCells-r16)) OF CondReconfigToAddMod-r16

CondReconfigToAddMod-r16 ::= SEQUENCE {

-- ASN1STOP

```

CondReconfigToAddMod field descriptions**condExecutionCond**

The execution condition that needs to be fulfilled in order to trigger the execution of a conditional reconfiguration for CHO, CPA, intra-SN CPC without MN involvement, MN initiated inter-SN CPC, MN initiated subsequent CPAC, or SN initiated intra-SN subsequent CPAC without MN involvement. When configuring 2 triggering events (Meas Ids) for a candidate cell, the network ensures that both refer to the same *measObject*. Except for CHO with only event *condEventD1*, or *condEventD2*, or *condEventT1*, if the network configures *condEventD1* or *condEventD2* or *condEventT1* for a candidate cell, the network configures a second triggering event *condEventA3*, *condEventA4* or *condEventA5* for the same candidate cell. The network configures at most one from *condEventD1*, *condEventD2* or *condEventT1* for the same candidate cell. For CPA, MN-initiated inter-SN CPC, and for MN initiated subsequent CPAC, the network only indicates *MeasId(s)* associated with *condEventA4*. For intra-SN CPC and for SN initiated intra-SN subsequent CPAC without MN involvement, the network only indicates *MeasId(s)* associated with *condEventA3* or *condEventA5*.

condExecutionCondPSCell

The execution condition that needs to be fulfilled for the associated PSCell in order to trigger the execution of a conditional reconfiguration for CHO with candidate SCG(s). The Meas Ids refer to the *measConfig* associated with the MCG. When configuring 2 triggering events (Meas Ids) for a candidate cell, network ensures that both refer to the same *measObject*. The network only indicates *MeasId(s)* associated with *condEventA4*.

condExecutionCondSCG

Contains execution condition that needs to be fulfilled in order to trigger the execution of a conditional reconfiguration for SN initiated inter-SN CPC, SN initiated inter-SN subsequent CPAC, or SN initiated intra-SN subsequent CPAC with MN involvement. The Meas Ids refer to the *measConfig* associated with the SCG. When configuring 2 triggering events (Meas Ids) for a candidate cell, network ensures that both refer to the same *measObject*. For each *condReconfigId*, the network always configures either *condExecutionCond* or *condExecutionCondSCG* (not both). The network only indicates *MeasId(s)* associated with *condEventA3* or *condEventA5*.

condRRCReconfig

The *RRCReconfiguration* message to be applied when the condition(s) are fulfilled. The *RRCReconfiguration* message contained in *condRRCReconfig* cannot contain the field *conditionalReconfiguration* or the field *daps-Config*.

securityCellSetId

This field is used to determine whether the UE should perform security update when conditional reconfiguration containing *subsequentCondReconfig* is executed. If the field *servingSecurityCellSetId* is configured in *conditionalReconfiguration*, this field is configured for all the candidate configurations for subsequent CPAC.

subsequentCondReconfig

Contains the execution conditions that need to be fulfilled in order to trigger the execution of a subsequent CPAC. If the field is configured, the configuration of candidate PSCells for subsequent CPAC is supported. The subsequent execution condition is used for conditional reconfiguration evaluation for other candidate cells when the *RRCReconfiguration* message contained in *condRRCReconfig* has been applied.

CondExecutionCondToAddMod field descriptions**subsequentCondExecutionCond**

The execution condition that needs to be fulfilled in order to trigger the subsequent execution of a conditional reconfiguration for SN initiated intra-SN subsequent CPAC without MN involvement. When configuring 2 triggering events (Meas Ids) for a candidate cell, the network ensures that both refer to the same *measObject*. The network only indicates *MeasId(s)* associated with *condEventA3* or *condEventA5*.

subsequentCondExecutionCondSCG

Contains execution condition that needs to be fulfilled in order to trigger the subsequent execution of a conditional reconfiguration for SN initiated inter-SN subsequent CPAC, SN initiated intra-SN subsequent CPAC with MN involvement, or MN initiated subsequent CPAC. The Meas Ids refer to the *measConfig* associated with the SCG. When configuring 2 triggering events (Meas Ids) for a candidate cell, network ensures that both refer to the same *measObject*. The network only indicates *MeasId(s)* associated with *condEventA3* or *condEventA5*.

Conditional Presence	Explanation
<i>condReconfigAdd</i>	The field is mandatory present when a <i>condReconfigId</i> is being added. Otherwise the field is optional, need M.
<i>condReconfigCHO-WithSCG</i>	This field is optional present, need M, if the <i>RRCReconfiguration</i> message contained in corresponding <i>condRRCReconfig</i> includes the <i>nr-SCG</i> and <i>condExecutionCond</i> is configured. Otherwise, it is absent.
<i>CPAC</i>	The field is optionally present, need M, when the conditional reconfiguration includes at least one candidate PSCell supporting subsequent CPAC. Otherwise, the field is absent, need R.

– ConditionalReconfiguration

The IE *ConditionalReconfiguration* is used to add, modify and release the configuration of conditional reconfiguration.

ConditionalReconfiguration information element

```
-- ASN1START
-- TAG-CONDITIONALRECONFIGURATION-START

ConditionalReconfiguration-r16 ::= SEQUENCE {
    attemptCondReconfig-r16      ENUMERATED {true}          OPTIONAL,  -- Cond CHO
    condReconfigToRemoveList-r16 CondReconfigToRemoveList-r16 OPTIONAL,  -- Need N
    condReconfigToAddModList-r16 CondReconfigToAddModList-r16 OPTIONAL,  -- Need N

}

SK-CounterConfig-r18 ::= SEQUENCE {
    securityCellSetId-r18 SecurityCellSetId-r18,
    sk-CounterList-r18    SEQUENCE (SIZE (1..maxSK-Counter-r18)) OF SK-Counter
}

SecurityCellSetId-r18 ::= INTEGER (1.. maxSecurityCellSet-r18)

-- TAG-CONDITIONALRECONFIGURATION-STOP
-- ASN1STOP
```

<i>ConditionalReconfiguration</i> field descriptions	
<i>attemptCondReconfig</i>	If present, the UE shall perform conditional reconfiguration if selected cell is a target candidate cell and it is the first cell selection after failure as described in clause 5.3.7.3.
<i>condReconfigToAddModList</i>	List of the configuration of candidate SpCells to be added or modified for CHO, CPA, CPC or subsequent CPAC.
<i>condReconfigToRemoveList</i>	List of the configuration of candidate SpCells to be removed.
<i>scpac-ReferenceConfiguration</i>	Includes the reference configuration for the candidate supporting subsequent CPAC.
<i>servingSecurityCellSetId</i>	This field identifies the security cell set for serving PSCell. The network does not provide this field for the conditional reconfiguration(s) generated by the SN.
<i>sk-counterConfiguration</i>	Includes a list of <i>sk-Counter</i> from which the UE should select the <i>sk-counter</i> used to derive S-K _{gNB} for inter-SN subsequent CPAC. The network does not provide this field for the conditional reconfiguration(s) generated by the SN.

Conditional Presence	Explanation
<i>CHO</i>	The field is optional present, Need R, if the UE is configured with at least a candidate SpCell for CHO. Otherwise the field is not present.

– *ConfiguredGrantConfig*

The IE *ConfiguredGrantConfig* is used to configure uplink transmission without dynamic grant according to two possible schemes. The actual uplink grant may either be configured via RRC (*type1*) or provided via the PDCCH (addressed to CS-RNTI) (*type2*). Multiple Configured Grant configurations may be configured in one BWP of a serving cell.

ConfiguredGrantConfig information element

ConfiguredGrantConfig field descriptions	
antennaPort	Indicates the antenna port(s) to be used for this configuration, and the maximum bitwidth is 5. See TS 38.214 [19], clause 6.1.2, and TS 38.212 [17], clause 7.3.1. The UE ignores this field in case of CG-SDT or if <i>cg-RRC-Configuration</i> is configured.
applyIndicatedTCI-State	This field indicates, for PUSCH transmission(s) corresponding a Type1-CG configuration, if UE applies the first, the second or both "indicated" UL only TCI or joint TCI as specified in TS 38.214 [19], clause 6.1. Network does not configure this field if <i>cg-RRC-Configuration</i> is configured.
autonomousTx	If this field is present, the Configured Grant configuration is configured with autonomous transmission, see TS 38.321 [3].
betaOffsetCG-UCI	Beta offset for CG-UCI in CG-PUSCH, see TS 38.213 [13], clause 9.3
betaOffsetUTO-UCI	Beta offset value for UTO-UCI multiplexing on CG PUSCH, see TS 38.213 [13], clause 9.3.
cg-betaOffsetsCrossPri0, cg-betaOffsetsCrossPri1	Selection between and configuration of dynamic and semi-static beta-offset for multiplexing HARQ-ACK in CG-PUSCH with different priorities. The field <i>cg-betaOffsetsCrossPri0</i> indicates multiplexing LP HARQ-ACK in HP CG-PUSCH. This field is configured only if <i>phy-PriorityIndex-r16</i> is configured with value <i>p1</i> . The field <i>cg-betaOffsetsCrossPri1</i> indicates multiplexing HP HARQ-ACK in LP CG-PUSCH. This field is configured only if <i>phy-PriorityIndex-r16</i> is configured with value <i>p0</i> .
cg-COT-SharingList	Indicates a table for COT sharing combinations (see 37.213 [48], clause 4.1.3). One row of the table can be set to noCOT-Sharing to indicate that there is no channel occupancy sharing. If the <i>cg-RetransmissionTimer-r16</i> is configured and the UE operates as an initiating device in semi-static channel access mode (see TS 37.213 [48], clause 4.3), then <i>cg-COT-SharingList-r16</i> is configured.
cg-COT-SharingOffset	Indicates the offset from the end of the slot where the COT sharing indication in UCI is enabled where the offset in symbols is equal to $14 \cdot n$, where <i>n</i> is the signaled value for <i>cg-COT-SharingOffset</i> . Applicable when <i>ul-toDL-COT-SharingED-Threshold-r16</i> is not configured (see 37.213 [48], clause 4.1.3).
cg-DMRS-Configuration	DMRS configuration (see TS 38.214 [19], clause 6.1.2.3).
cg-minDFI-Delay	Indicates the minimum duration (in unit of symbols) from the ending symbol of the PUSCH to the starting symbol of the PDCCH containing the downlink feedback indication (DFI) carrying HARQ-ACK for this PUSCH. The HARQ-ACK received before this minimum duration is not considered as valid for this PUSCH (see TS 38.213 [13], clause 10.5). The following minimum duration values are supported, depending on the configured subcarrier spacing [symbols]: 15 kHz: 7, $m \cdot 14$, where $m = \{1, 2, 3, 4\}$ 30 kHz: 7, $m \cdot 14$, where $m = \{1, 2, 3, 4, 5, 6, 7, 8\}$ 60 kHz: 7, $m \cdot 14$, where $m = \{1, 2, 3, 4, 5, 6, 7, 8, 9, 10, 11, 12, 13, 14, 15, 16\}$ 120 kHz: 7, $m \cdot 14$, where $m = \{1, 2, 3, 4, 5, 6, 7, 8, 9, 10, 11, 12, 13, 14, 15, 16, 17, 18, 19, 20, 21, 22, 23, 24, 25, 26, 27, 28, 29, 30, 31, 32\}$ 480 kHz: $m \cdot 14$, where $m = \{2, 4, 8, 12, 16, 20, 24, 28, 32, 36, 40, 44, 48, 52, 56, 60, 64, 68, 72, 76, 80, 84, 88, 92, 96, 100, 104, 108, 112, 116, 120, 124, 128\}$ 960 kHz: $m \cdot 14$, where $m = \{4, 8, 16, 24, 32, 40, 48, 56, 64, 72, 80, 88, 96, 104, 112, 120, 128, 136, 144, 152, 160, 168, 176, 184, 192, 200, 208, 216, 224, 232, 240, 248, 256\}$
cg-nrofPUSCH-InSlot	Indicates the number of consecutive PUSCH configured to CG within a slot where the SLIV indicating the first PUSCH and additional PUSCH appended with the same length (see TS 38.214 [19], clause 6.1.2.3). The network can only configure this field if <i>cg-RetransmissionTimer</i> is configured.
cg-nrofSlots	Indicates the number of allocated slots in a configured grant periodicity following the time instance of configured grant offset (see TS 38.214 [19], clause 6.1.2.3). <i>cg-nrofSlots-r17</i> is only applicable for operation with shared spectrum channel access in FR2-2. When <i>cg-nrofSlots-r17</i> is configured, the UE shall ignore <i>cg-nrofSlots-r16</i> . The network can only configure this field if <i>cg-RetransmissionTimer</i> is configured.
cg-RetransmissionTimer	

Indicates the initial value of the configured retransmission timer (see TS 38.321 [3]) in multiples of *periodicity*. The value of *cg-RetransmissionTimer* is always less than or equal to the value of *configuredGrantTimer*. This field is always configured together with *harq-ProclD-Offset*. This field is not configured for operation in licensed spectrum or simultaneously with *harq-ProclD-Offset2*. The network does not configure this field for CG-SDT.

cg-SDT-PeriodicityExt

This field is used to calculate the periodicity for UL transmission without UL grant for type 1 (see TS 38.321 [3], clause 5.8.2) for extended CG-SDT periodicities. If this field is present, the fields *periodicity* and *periodicityExt* are ignored.

The following periodicities are supported depending on the configured subcarrier spacing [symbols]:

15 kHz: $n \cdot 14 \cdot 1280$, where $n = \{1, 2, 4, 8, 48, 96, 240, 472, 944, 1408, 2816\}$
 30 kHz: $n \cdot 14 \cdot 1280$, where $n = \{2, 4, 8, 16, 96, 192, 480, 944, 1888, 2816, 5632\}$
 60 kHz with normal CP: $n \cdot 14 \cdot 1280$, where $n = \{4, 8, 16, 32, 192, 384, 960, 1888, 3776, 5632, 11264\}$
 60 kHz with ECP: $n \cdot 12 \cdot 1280$, where $n = \{4, 8, 16, 32, 192, 384, 960, 1888, 3776, 5632, 11264\}$
 120 kHz: $n \cdot 14 \cdot 1280$, where $n = \{8, 16, 32, 64, 384, 768, 1920, 3776, 7552, 11264, 22528\}$
 480 kHz: $n \cdot 14 \cdot 1280$, where $n = \{32, 64, 128, 256, 1536, 3072, 7680, 15104, 30208, 45056, 90112\}$
 960 kHz: $n \cdot 14 \cdot 1280$, where $n = \{64, 128, 256, 512, 3072, 6144, 15360, 30208, 60416, 90112, 180224\}$

cg-StartingOffsets

This field is not applicable for a UE which is allowed to operate as an initiating device in semi-static channel access mode, i.e., not applicable for a UE configured with UE FFP parameters (e.g. period, offset) regardless whether the UE would initiate its own COT or would share gNB's COT.

cg-UCI-Multiplexing

If present, this field indicates that in the case of PUCCH overlapping with CG-PUSCH(s) including CG-UCI within a PUCCH group, HARQ-ACK is multiplexed on the CG-PUSCH including CG-UCI (see TS 38.213 [13], clause 9).

configuredGrantConfigIndex

Indicates the index of the Configured Grant configurations within the BWP.

configuredGrantConfigIndexMAC

Indicates the index of the Configured Grant configurations within the MAC entity.

disableCG-RetransmissionMonitoring

When this field is configured, the UE does not start the *drx-HARQ-RTT-TimerUL* for PUSCH transmissions using configured uplink grants corresponding to this *ConfiguredGrantConfig*. See TS 38.321 [3], clause 5.7.

configuredGrantTimer

Indicates the initial value of the configured grant timer (see TS 38.321 [3]) in multiples of *periodicity*. When *cg-RetransmissionTimer* is configured, if HARQ processes are shared among different configured grants on the same BWP, *configuredGrantTimer* * *periodicity* is set to the same value for the configurations that share HARQ processes on this BWP. The value of the extension *configuredGrantTimer* is 2 times the configured value.

dmrs-SeqInitialization

The network configures this field if *transformPrecoder* is disabled or when the value of *sdt-NrofDMRS-Sequences* is set to 1. Otherwise, the field is absent.

frequencyDomainAllocation

Indicates the frequency domain resource allocation, see TS 38.214 [19], clause 6.1.2, and TS 38.212 [17], clause 7.3.1).

frequencyHopping

The value *intraSlot* enables 'Intra-slot frequency hopping' and the value *interSlot* enables 'Inter-slot frequency hopping'. If the field is absent, frequency hopping is not configured. The field *frequencyHopping* applies to configured grant for 'pusch-RepTypeA' (see TS 38.214 [19], clause 6.3.1).

frequencyHoppingOffset

Frequency hopping offset used when frequency hopping is enabled (see TS 38.214 [19], clause 6.1.2 and clause 6.3).

frequencyHoppingOffset-SBFD

Configures the frequency hopping offset for Type 1 configured grant PUSCH in SBFD symbols (see TS 38.214 [19], 6).

frequencyHoppingPUSCH-RepTypeB

Indicates the frequency hopping scheme for Type 1 CG when *pusch-RepTypeIndicator* is set to 'pusch-RepTypeB' (see TS 38.214 [19], clause 6.1). The value *interRepetition* enables 'Inter-repetition frequency hopping', and the value *interSlot* enables 'Inter-slot frequency hopping'. If the field is absent, the frequency hopping is not enabled for Type 1

CG.
harq-ProclD-Offset For operation with shared spectrum channel access configured with <i>cg-RetransmissionTimer-r16</i>, this configures the range of HARQ process IDs which can be used for this configured grant where the UE can select a HARQ process ID within [<i>harq-proclD-offset</i>, ..., (<i>harq-proclD-offset</i> + <i>nrofHARQ-Processes</i> – 1)]. <i>harq-ProclD-Offset-v1730</i> is only applicable for operation with shared spectrum channel access in FR2-2. If the field <i>harq-ProclD-Offset-v1730</i> is present, the UE shall ignore the <i>harq-ProclD-Offset-r16</i>. The network does not configure this field for CG-SDT.
harq-ProclD-Offset2 Indicates the offset used in deriving the HARQ process IDs, see TS 38.321 [3], clause 5.4.1. This field is not configured together with <i>cg-RetransmissionTimer-r16</i>. If the field <i>harq-ProclD-Offset2-v1700</i> is present, the UE shall ignore the <i>harq-ProclD-Offset2-r16</i>.
mappingPattern Indicates whether the UE should follow Cyclical mapping pattern or Sequential mapping pattern when two SRS resource sets are configured in <i>srs-ResourceSetToAddModList</i> or <i>srs-ResourceSetToAddModListDCI-0-2</i> with usage 'codebook' or 'noncodebook' for PUSCH transmission with a Type 1 configured grant and/or a Type 2 configured grant as described in clause 6.1.2.3 of TS 38.214 [19]
mcs-Table Indicates the MCS table the UE shall use for PUSCH without transform precoding. If the field is absent the UE applies the value <i>qam64</i>.
mcs-TableTransformPrecoder Indicates the MCS table the UE shall use for PUSCH with transform precoding. If the field is absent the UE applies the value <i>qam64</i>.
mcsAndTBS The modulation order, target code rate and TB size (see TS 38.214 [19], clause 6.1.2). The NW does not configure the values 28~31 in this version of the specification.
nrofBitsInUTO-UCI Indicates the number of bits in the UTO-UCI bitmap (see TS 38.212 [17], clause 6.2.7, 6.3.2, TS 38.213 [13], clause 9.3.1, TS 38.214 [19], clause 5.2.3). When this field is configured, UTO-UCI is enabled for the UE.
nrofHARQ-Processes The number of HARQ processes configured. It applies for both Type 1 and Type 2. See TS 38.321 [3], clause 5.4.1. If the UE is configured with <i>nrofHARQ-Processes-v1700</i>, the UE shall ignore <i>nrofHARQ-Processes</i> (without suffix). The network sets the value of this field to 1 when <i>cg-LTM-Configuration</i> is configured. The UE shall ignore this field if it is configured within <i>ConfiguredGrantConfig</i> for UE initiated CSI reporting in mode-B.
nrofSlotsInCG-Period Number of consecutive slots for CG PUSCH transmission occasions in a period of a single CG PUSCH configuration, see TS 38.214 [19], clause 6.1. The network does not configure this field for operation on shared spectrum.
occ-LengthAndSequenceIndex Indicates the inter-slot OCC length and sequence index for a Type 1 CG configuration, see TS 38.214 [19].
pathlossReferenceIndex Indicates the reference signal index used as PUSCH pathloss reference (see TS 38.213 [13], clause 7.1.1). In case of CG-SDT or if <i>cg-RRC-Configuration</i> is configured or if <i>enablePL-RS-UpdateForType1CG-PUSCH</i> is configured or if <i>unifiedTCI-StateType</i> is configured, the UE ignores this field.
pathlossReferenceIndex2 Indicates the reference signal used as PUSCH pathloss reference for the second SRS resource set. When this field is present, <i>pathlossReferenceIndex</i> indicates the reference signal used as PUSCH pathloss reference for the first SRS resource set. Network does not configure this field if <i>cg-RRC-Configuration</i> is configured.
p0-PUSCH-Alpha Index of the <i>P0-PUSCH-AlphaSet</i> to be used for this configuration. If <i>unifiedTCI-StateType</i> is configured, the UE ignores this field.
p0-PUSCH-Alpha2 Index of the <i>P0-PUSCH-AlphaSet</i> to be used for second SRS resource set. If this field is present, the <i>p0-PUSCH-Alpha</i> provides index for the <i>P0-PUSCH-AlphaSet</i> to be used for first SRS resource set.
periodicity Periodicity for UL transmission without UL grant for type 1 and type 2 (see TS 38.321 [3], clause 5.8.2). The following periodicities are supported depending on the configured subcarrier spacing [symbols]:

15 kHz: 2, 7, $n \cdot 14$, where $n = \{1, 2, 4, 5, 8, 10, 16, 20, 32, 40, 64, 80, 128, 160, 320, 640\}$
 30 kHz: 2, 7, $n \cdot 14$, where $n = \{1, 2, 4, 5, 8, 10, 16, 20, 32, 40, 64, 80, 128, 160, 256, 320, 640, 1280\}$
 60 kHz with normal CP: 2, 7, $n \cdot 14$, where $n = \{1, 2, 4, 5, 8, 10, 16, 20, 32, 40, 64, 80, 128, 160, 256, 320, 512, 640, 1280, 2560\}$
 60 kHz with ECP: 2, 6, $n \cdot 12$, where $n = \{1, 2, 4, 5, 8, 10, 16, 20, 32, 40, 64, 80, 128, 160, 256, 320, 512, 640, 1280, 2560\}$
 120 kHz: 2, 7, $n \cdot 14$, where $n = \{1, 2, 4, 5, 8, 10, 16, 20, 32, 40, 64, 80, 128, 160, 256, 320, 512, 640, 1024, 1280, 2560, 5120\}$
 480 and 960 kHz: $n \cdot 14$, where $n = \{1, 2, 4, 5, 8, 10, 16, 20, 32, 40, 64, 80, 128, 160, 256, 320, 512, 640, 1024, 1280, 2560, 5120\}$
 In case of SDT, the network does not configure periodicity values less than 5ms.

periodicityExt

This field is used to calculate the periodicity for UL transmission without UL grant for type 1 and type 2 (see TS 38.321 [3], clause 5.8.2). If this field is present, the UE shall ignore field *periodicity* (without suffix). Network does not configure *periodicityExt-r17* together with *periodicityExt-r16*.

The following periodicities are supported depending on the configured subcarrier spacing [symbols]:

15 kHz: *periodicityExt**14, where *periodicityExt* has a value between 1 and 640.
 30 kHz: *periodicityExt**14, where *periodicityExt* has a value between 1 and 1280.
 60 kHz with normal CP: *periodicityExt**14, where *periodicityExt* has a value between 1 and 2560.
 60 kHz with ECP: *periodicityExt**12, where *periodicityExt* has a value between 1 and 2560.
 120 kHz: *periodicityExt**14, where *periodicityExt* has a value between 1 and 5120.
 480 kHz: *periodicityExt**14, where *periodicityExt* has a value between 1 and 20480.
 960 kHz: *periodicityExt**14, where *periodicityExt* has a value between 1 and 40960.

In case of SDT, the network does not configure periodicity values less than 5ms.

phy-PriorityIndex

Indicates the PHY priority of CG PUSCH at least for PHY-layer collision handling. Value *p0* indicates low priority and value *p1* indicates high priority. The network does not configure this for CG-SDT.

powerControlLoopToUse

Closed control loop to apply (see TS 38.213 [13], clause 7.1.1). If *unifiedTCI-StateType* is configured, the UE ignores this field.

powerControlLoopToUse2

Closed control loop to apply to second SRS resource set (see TS 38.213 [13], clause 7.1.1). If this field is present, the *powerControlLoopToUse* applies to the first SRS resource set.

precodingAndNumberOfLayers, precodingAndNumberOfLayers-v1850

Indicates the precoding and number of layers (see TS 38.212 [17], clause 7.3.1.1.2, and TS 38.214 [19], clause 6.1.2.3). In case of CG-SDT or if *cg-RRC-Configuration* is configured, network sets this field to 1. Field *precodingAndNumberOfLayers-v1850* is only configured when *nrofSRS-Ports-n8* is configured. If the network configures *precodingAndNumberOfLayers-v1850*, the UE shall ignore *precodingAndNumberOfLayers* (without suffix).

precodingAndNumberOfLayers2

Indicates the precoding and number of layers for the second SRS resource set. When this field is present, *precodingAndNumberOfLayers* indicated the precoding and number of layers for the first SRS resource set. Network does not configure this field if *cg-RRC-Configuration* is configured.

pusch-MutingResources

Used to configure the time location and frequency location of UL muting resources for Type 1 configured grant PUSCH transmission, see clause 6 in TS 38.211 [16] and clause 6 in TS 38.214 [19].

pusch-RepTypeIndicator

Indicates whether UE follows the behavior for PUSCH repetition type A or the behavior for PUSCH repetition type B for each Type 1 configured grant configuration. The value *pusch-RepTypeA* enables the 'PUSCH repetition type A' and the value *pusch-RepTypeB* enables the 'PUSCH repetition type B' (see TS 38.214 [19], clause 6.1.2.3). The value *pusch-RepTypeB* is not configured simultaneously with *nrofSlotsInCG-Period-r18*. The network does not configure this field if *cg-RetransmissionTimer-r16* is configured for CG operation with shared spectrum channel access.

rbg-Size

Selection between configuration 1 and configuration 2 for RBG size for PUSCH. The UE does not apply this field if *resourceAllocation* is set to *resourceAllocationType1*. Otherwise, the UE applies the value *config1* when the field is absent. Note: *rbg-Size* is used when the *transformPrecoder* parameter is disabled.

repK-RV
The redundancy version (RV) sequence to use. See TS 38.214 [19], clause 6.1.2. The network configures this field if repetitions are used, i.e., if <i>repK</i> is set to <i>n2</i> , <i>n4</i> or <i>n8</i> . This field is not configured when <i>cg-RetransmissionTimer</i> is configured. Otherwise, the field is absent.
repK
Number of repetitions K, see TS 38.214 [19]. If the field <i>repK-v1710</i> is present, the UE shall ignore the <i>repK</i> (without suffix).
resourceAllocation
Configuration of resource allocation type 0 and resource allocation type 1. For Type 1 UL data transmission without grant, <i>resourceAllocation</i> should be <i>resourceAllocationType0</i> or <i>resourceAllocationType1</i> .
rrc-ConfiguredUplinkGrant
Configuration for "configured grant" transmission with fully RRC-configured UL grant (Type1). If this field is absent the UE uses UL grant configured by DCI addressed to CS-RNTI (Type2).
sbfd-Config2-PUSCH-RB-Offset
Indicates the RB offset to determine the starting PRB for Type1 configured grant PUSCH transmissions in SBFD symbols when the transmissions can be in SBFD symbols and non-SBFD symbols in different slots for the UL BWP. (see TS 38.214 [19], clause 6).
sequenceOffsetForRV
Configures the RV offset for the starting RV for the first repetition (first actual repetition in PUSCH repetition Type B) towards the second 'SRS resource set' for PUSCH configured in either <i>srs-ResourceSetToAddModList</i> or <i>srs-ResourceSetToAddModListDCI-0-2</i> with usage 'codebook' or 'noncodebook'.
srs-ResourceSetId
Indicates the associated SRS resource set for PUSCH+PUSCH simultaneous uplink transmission for CG-type 1 PUSCH. Network does not configure this field if <i>cg-RRC-Configuration</i> is configured.
srs-ResourceIndicator, srs-ResourceIndicator-v1850
Indicates the SRS resource to be used (see TS 38.212 [17], clause 7.3.1.1.2, and TS 38.214 [19], clause 6.1.2.3). The network does not configure this for CG-SDT or if <i>cg-RRC-Configuration</i> is configured. Field <i>srs-ResourceIndicator-v1850</i> is only configured when 8 antenna ports are configured (see TS 38.214 [19], clause 6.1.1.2). The network does not configure both <i>srs-ResourceIndicator</i> and <i>srs-ResourceIndicator-v1850</i> .
srs-ResourceIndicator2
Indicates the SRS resource to be used for the second SRS resource set. When this field is present, the <i>srs-ResourceIndicator</i> is used for the first SRS resource set. Network does not configure this field if <i>cg-RRC-Configuration</i> is configured.
startingFromRV0
This field is used to determine the initial transmission occasion of a transport block for a given RV sequence, see TS 38.214 [19], clause 6.1.2.3.1. The network does not configure this field if <i>cg-RetransmissionTimer-r16</i> is configured for CG operation.
symbolType
Indicates the valid symbol type for Type 1 CG PUSCH. The network configures this field if the transmissions are restricted to SBFD symbols only or non-SBFD symbols only. The network does not configure this field if the transmissions can be in SBFD symbols and non-SBFD symbols in different slots for the UL BWP. (see TS 38.214 [19], clause 6)
timeDomainAllocation, timeDomainAllocation-v1710
Indicates a combination of start symbol and length and PUSCH mapping type, see TS 38.214 [19], clause 6.1.2 and TS 38.212 [17], clause 7.3.1. If the field <i>timeDomainAllocation-v1710</i> is present, the UE shall ignore <i>timeDomainAllocation</i> field (without suffix).
timeDomainOffset
Offset related to the reference SFN indicated by <i>timeReferenceSFN</i> , see TS 38.321 [3], clause 5.8.2. <i>timeDomainOffset-r17</i> is only applicable to 480 kHz and 960 kHz. If <i>timeDomainOffset-r17</i> is present, the UE shall ignore <i>timeDomainOffset</i> (without suffix).
timeReferenceHyperSFN
Indicates H-SFN used for determination of the offset of a resource in time domain. The UE uses the closest H-SFN with the indicated number preceding the reception of the configured grant configuration, see TS 38.321 [3], clause 5.8.2. If the field <i>timeReferenceHyperSFN</i> is not present, the reference hyper SFN is 0.
timeReferenceSFN
Indicates SFN used for determination of the offset of a resource in time domain. The UE uses the closest SFN with the indicated number preceding the reception of the configured grant configuration, see TS 38.321 [3], clause 5.8.2. If the field <i>timeReferenceSFN</i> is not present, the reference SFN is 0.

transformPrecoder

Enables or disables transform precoding for *type1* and *type2*. If the field is absent, the UE enables or disables transform precoding in accordance with the field *msg3-transformPrecoder* in *RACH-ConfigCommon* from *rach-ConfigCommon* included directly within BWP configuration (i.e., not included in *additionalRACH-ConfigList*), see TS 38.214 [19], clause 6.1.3.

uci-OnPUSCH

Selection between and configuration of dynamic and semi-static beta-offset. For Type 1 UL data transmission without grant, *uci-OnPUSCH* should be set to *semiStatic*. The network does not configure this for CG-SDT.

CG-COT-Sharing field descriptions**channelAccessPriority**

Indicates the Channel Access Priority Class that the gNB can assume when sharing the UE initiated COT (see 37.213 [48], clause 4.1.3).

duration

Indicates the number of DL transmission slots within UE initiated COT (see 37.213 [48], clause 4.1.3).

offset

Indicates the number of DL transmission slots from the end of the slot where CG-UCI is detected after which COT sharing can be used (see 37.213 [48], clause 4.1.3).

CG-StartingOffsets field descriptions**cg-StartingFullBW-InsideCOT**

A set of configured grant PUSCH transmission starting offsets (see TS 38.211[16], Table 5.3.1-2) which indicates the length of a CP extension of the first symbol that is located before the configured resource when frequency domain resource allocation includes all interlaces in the allocated RB set(s) and the CG PUSCH resource is inside gNB COT (see TS 38.214 [19], clause 6.1.2.3).

cg-StartingFullBW-OutsideCOT

A set of configured grant PUSCH transmission starting offset indices (see TS 38.211[16], Table 5.3.1-2) which indicates the length of a CP extension of the first symbol that is located before the configured resource when frequency domain resource allocation includes all interlaces in the allocated RB set(s) and the CG PUSCH resource is outside gNB COT (see TS 38.214 [19], clause 6.1.2.3).

cg-StartingPartialBW-InsideCOT

A set of configured grant PUSCH transmission starting offset index (see TS 38.211[16], Table 5.3.1-2) which indicates the length of a CP extension of the first symbol that is located before the configured resource when frequency domain resource allocation does not include all interlaces in the allocated RB set(s) and the CG PUSCH resource is inside gNB COT (see TS 38.214 [19], clause 6.1.2.3).

cg-StartingPartialBW-OutsideCOT

A set of configured grant PUSCH transmission starting offset index (see TS 38.211[16], Table 5.3.1-2) which indicates the length of a CP extension of the first symbol that is located before the configured resource when frequency domain resource allocation does not include all interlaces in the allocated RB set(s) and the CG PUSCH resource is outside gNB COT (see TS 38.214 [19], clause 6.1.2.3).

CG-SDT-Configuration and CG-RRC-Configuration field descriptions
cg-RRC-RSRP-ThresholdSSB An RSRP threshold configured for SSB selection for the CG as specified in TS 38.321 [3]. This field is absent in <i>cg-LTM-Configuration</i> if the UE does not support CLTM or when the field <i>l1-Conditions</i> is part of the same <i>l1m-CandidateConfig</i> on where this field is present.
cg-SDT-RetransmissionTimer, cg-RRC-RetransmissionTimer Indicates the initial value of the configured grant retransmission timer used for the initial transmission of CG with CCCH (for CG-SDT) or DCCH message (see TS 38.321 [3]) in multiples of <i>periodicity</i>. The field <i>cg-RRC-RetransmissionTimer</i> is not configured together with the field <i>harq-ProclD-Offset</i> for operations in unlicensed spectrum.
sdt-DMRS-Ports, rrc-DMRS-Ports Indicates the set of DMRS ports for SSB to PUSCH mapping (see TS 38.213 [13]). The first (left-most / most significant) bit corresponds to DMRS port 0, the second most significant bit corresponds to DMRS port 1, and so on. A bit set to 1 indicates that this DMRS port is used for mapping. For <i>sdt-DMRS-Ports</i>, in case of a RedCap-specific initial downlink BWP that is associated with NCD-SSB, the SSB is the NCD-SSB; otherwise, the SSB is the CD-SSB. For <i>rrc-DMRS-Ports</i>, in case of the downlink BWP indicated by <i>firstActiveDownlinkBWP-Id</i> that is associated with NCD-SSB, the SSB is the NCD-SSB; otherwise, the SSB is the CD-SSB.
sdt-NrofDMRS-Sequences, rrc-NrofDMRS-Sequences Indicates the number of DMRS sequences for SSB to PUSCH mapping (see TS 38.213 [13]). For <i>sdt-NrofDMRS-Sequences</i>, in case of a RedCap-specific initial downlink BWP that is associated with NCD-SSB, the SSB is the NCD-SSB; otherwise, the SSB is the CD-SSB. For <i>rrc-NrofDMRS-Sequences</i>, in case of the downlink BWP indicated by <i>firstActiveDownlinkBWP-Id</i> that is associated with NCD-SSB, the SSB is the NCD-SSB; otherwise, the SSB is the CD-SSB.
sdt-SSB-Subset, rrc-SSB-Subset Indicates SSB subset for SSB to CG PUSCH mapping within one CG configuration. The first/leftmost bit corresponds to SS/PBCH block index 0, the second bit corresponds to SS/PBCH block index 1, and so on. Value 0 in the bitmap indicates that the corresponding SS/PBCH block is not included in the SSB subset for SSB to CG PUSCH mapping while value 1 indicates that the corresponding SS/PBCH block is included in SSB subset for SSB to CG PUSCH mapping. If this field is absent, UE assumes the SSB set includes all actually transmitted SSBs. For <i>sdt-SSB-Subset</i>, in case of an RedCap-specific initial downlink BWP that is associated with NCD-SSB, the SSB is the NCD-SSB; otherwise, the SSB is the CD-SSB. For <i>rrc-SSB-Subset</i>, in case of the downlink BWP indicated by <i>firstActiveDownlinkBWP-Id</i> that is associated with NCD-SSB, the SSB is the NCD-SSB; otherwise, the SSB is the CD-SSB.
sdt-SSB-PerCG-PUSCH, rrc-SSB-PerCG-PUSCH The number of SSBs per CG PUSCH (see TS 38.213 [13]). Value <i>one</i> corresponds to 1 SSBs per CG PUSCH, value <i>two</i> corresponds to 2 SSBs per CG PUSCH and so on. For <i>sdt-SSB-PerCG-PUSCH</i>, in case of an RedCap-specific initial downlink BWP that is associated with NCD-SSB, the SSB is the NCD-SSB; otherwise, the SSB is the CD-SSB. For <i>rrc-SSB-PerCG-PUSCH</i>, in case of the downlink BWP indicated by <i>firstActiveDownlinkBWP-Id</i> that is associated with NCD-SSB, the SSB is the NCD-SSB; otherwise, the SSB is the CD-SSB.
sdt-P0-PUSCH, rrc-P0-PUSCH Indicates P0 value for PUSCH in steps of 1dB (see TS 38.213 [13]). When this field is configured, the UE ignores the <i>p0-PUSCH-Alpha</i>. This field is absent in <i>cg-LTM-Configuration</i>.
sdt-Alpha, rrc-Alpha Indicates alpha value for PUSCH. <i>alpha0</i> indicates value 0 is used, <i>alpha04</i> indicates value 4 is used and so on (see TS 38.213 [13]). When this field is configured, the UE ignores the <i>p0-PUSCH-Alpha</i>. This field is absent in <i>cg-LTM-Configuration</i>.

Conditional Presence	Explanation
<i>LCH-BasedPrioritization</i>	This field is optionally present, Need R, if <i>lch-BasedPrioritization</i> is configured in the MAC entity. It is absent otherwise.
<i>RACH-LessHO</i>	The field is optionally present, Need N, if <i>rach-LessHO</i> is present in <i>reconfigurationWithSync</i> . It is absent otherwise.
<i>RepTypeB</i>	The field is optionally present if <i>pusch-RepTypeIndicator</i> is set to <i>pusch-RepTypeB</i> , Need S, and absent otherwise.
<i>CG-List</i>	The field is mandatory present when included in <i>configuredGrantConfigToAddModList-r16</i> , otherwise the field is absent.
<i>CG-IndexMAC</i>	The field is mandatory present if at least one configured grant is configured by <i>configuredGrantConfigToAddModList-r16</i> in any BWP of this MAC entity, otherwise it is optionally present, need R.
<i>CG-SDT1</i>	This field is optionally present, Need R, if <i>cg-SDT-Configuration</i> is configured, otherwise it is absent.
<i>CG-SDT2</i>	This field is optionally present, Need S, if <i>cg-SDT-PeriodicityExt</i> is configured, otherwise it is absent.
<i>LTM</i>	The field is optionally present, Need R, in an <i>RRCReconfiguration</i> message within the <i>LTM-Config</i> IE. Otherwise, the field is absent.
<i>SRSsets</i>	This field is mandatory present when UE is configured with two SRS sets configured in either <i>srs-ResourceSetToAddModList</i> or <i>srs-ResourceSetToAddModListDCI-0-2</i> with usage codebook or non-codebook and none of <i>multipanelSchemeSDM</i> or <i>multipanelSchemeSFN</i> or <i>sTx-2Panel</i> is configured. Otherwise it is absent, Need R

– *ConfiguredGrantConfigIndex*

The IE *ConfiguredGrantConfigIndex* is used to indicate the index of one of multiple UL Configured Grant configurations in one BWP.

***ConfiguredGrantConfigIndex* information element**

```
-- ASN1START
-- TAG-CONFIGUREDGRANTCONFIGINDEX-START

ConfiguredGrantConfigIndex-r16 ::= INTEGER (0.. maxNrofConfiguredGrantConfig-1-r16)

-- TAG-CONFIGUREDGRANTCONFIGINDEX-STOP
-- ASN1STOP
```

– *ConfiguredGrantConfigIndexMAC*

The IE *ConfiguredGrantConfigIndexMAC* is used to indicate the unique Configured Grant configurations index per MAC entity.

***ConfiguredGrantConfigIndexMAC* information element**

```
-- ASN1START
-- TAG-CONFIGUREDGRANTCONFIGINDEXMAC-START

ConfiguredGrantConfigIndexMAC-r16 ::= INTEGER (0.. maxNrofConfiguredGrantConfigMAC-1-r16)

-- TAG-CONFIGUREDGRANTCONFIGINDEXMAC-STOP
-- ASN1STOP
```

– ConnEstFailureControl

The IE *ConnEstFailureControl* is used to configure parameters for connection establishment failure control.

ConnEstFailureControl information element

```
-- ASN1START
-- TAG-CONNЕСТFAILURECONTROL-START

ConnEstFailureControl ::= SEQUENCE {
    connEstFailCount          ENUMERATED {n1, n2, n3, n4},
    connEstFailOffsetValidity ENUMERATED {s30, s60, s120, s240, s300, s420, s600, s900},
    connEstFailOffset         INTEGER (0..15) OPTIONAL -- Need S
}

-- TAG-CONNЕСТFAILURECONTROL-STOP
-- ASN1STOP
```

ConnEstFailureControl field descriptions
connEstFailCount Number of times that the UE detects T300 expiry on the same cell before applying <i>connEstFailOffset</i> .
connEstFailOffset Parameter "Qoffset _{temp} " in TS 38.304 [20]. If the field is absent, the value of infinity shall be used for "Qoffset _{temp} ".
connEstFailOffsetValidity Amount of time that the UE applies <i>connEstFailOffset</i> before removing the offset from evaluation of the cell. Value s30 corresponds to 30 seconds, value s60 corresponds to 60 seconds, and so on.

– ControlResourceSet

The IE *ControlResourceSet* is used to configure a time/frequency control resource set (CORESET) in which to search for downlink control information (see TS 38.213 [13], clause 10.1). For the UE not supporting *multipleCORESET* in FR1, in order to receive MBS multicast in CFR within the UE's active BWP, if a CORESET is not configured within the *PDCCH-ConfigMulticast*, the CORESET other than CORESET#0 configured within the UE's active BWP for scheduling unicast can be used for scheduling MBS multicast, and the CORESET is expected to be included completely within the CFR and the parameters configured in the CORESET are expected to be supported by the UE for MBS multicast.

ControlResourceSet information element

```
-- ASN1START
-- TAG-CONTROLRESOURCESET-START

ControlResourceSet ::= SEQUENCE {
    controlResourceSetId      ControlResourceSetId,
    frequencyDomainResources  BIT STRING (SIZE (45)),
    duration                  INTEGER (1..maxCoReSetDuration),
    cce-REG-MappingType       CHOICE {
```

```

        interleaved                SEQUENCE {
            reg-BundleSize          ENUMERATED {n2, n3, n6},
            interleaverSize         ENUMERATED {n2, n3, n6},
            shiftIndex              INTEGER (0..maxNrofPhysicalResourceBlocks-1)    OPTIONAL -- Need S
        },
        nonInterleaved              NULL
    },
    precoderGranularity             ENUMERATED {sameAsREG-bundle, allContiguousRBs},
    tci-StatesPDCCH-ToAddList       SEQUENCE (SIZE (1..maxNrofTCI-StatesPDCCH)) OF TCI-StateId OPTIONAL, -- Cond NotSIB-initialBWP
    tci-StatesPDCCH-ToReleaseList   SEQUENCE (SIZE (1..maxNrofTCI-StatesPDCCH)) OF TCI-StateId OPTIONAL, -- Cond NotSIB-initialBWP
    tci-PresentInDCI               ENUMERATED {enabled}                            OPTIONAL, -- Need S
    pdcch-DMRS-ScramblingID        INTEGER (0..65535)                            OPTIONAL, -- Need S
    ...,
    [[
        rb-Offset-r16              INTEGER (0..5)                                OPTIONAL, -- Need S
        tci-PresentDCI-1-2-r16      INTEGER (1..3)                                OPTIONAL, -- Need S
        coresetPoolIndex-r16        INTEGER (0..1)                                OPTIONAL, -- Need S
        controlResourceSetId-v1610  ControlResourceSetId-v1610                    OPTIONAL -- Need S
    ]],
    [[
        followUnifiedTCI-State-r17  ENUMERATED {enabled}                          OPTIONAL -- Need R
    ]],
    [[
        applyIndicatedTCI-State-r18 ENUMERATED {first, second, both, none}          OPTIONAL -- Cond FollowUTCI
    ]]
}

-- TAG-CONTROLRESOURCESET-STOP
-- ASN1STOP

```

ControlResourceSet field descriptions
applyIndicatedTCI-State This field indicates, for PDCCH reception on this CORESET, if UE applies the first, the second, both or none "indicated" DL only TCI or joint TCI as specified in TS 38.213 [13], clause 10.1. Value <i>both</i> can be configured only if <i>sfnSchemePDCCH</i> is configured in the serving cell.
cce-REG-MappingType Mapping of Control Channel Elements (CCE) to Resource Element Groups (REG) (see TS 38.211 [16], clauses 7.3.2.2 and 7.4.1.3.2).
controlResourceSetId Identifies the instance of the <i>ControlResourceSet</i> IE. Value 0 identifies the common CORESET configured in <i>MIB</i> and in <i>ServingCellConfigCommon</i> (<i>controlResourceSetZero</i>) and is hence not used here in the <i>ControlResourceSet</i> IE. Other values identify CORESETs configured by dedicated signalling or in <i>SIB1</i> or <i>SIB20</i> . The <i>controlResourceSetId</i> is unique among the BWPs of a serving cell. If the field <i>controlResourceSetId-v1610</i> is present, the UE shall ignore the <i>controlResourceSetId</i> field (without suffix).
coresetPoolIndex The index of the CORESET pool for this CORESET as specified in TS 38.213 [13] (clauses 9 and 10) and TS 38.214 [19] (clauses 5.1 and 6.1). If the field is absent, the UE applies the value 0.
duration Contiguous time duration of the CORESET in number of symbols (see TS 38.211 [16], clause 7.3.2.2).
followUnifiedTCI-State When set to enabled, for PDCCH reception on this CORESET, the UE applies the "indicated" DL only TCI or joint TCI as specified in TS 38.214 [19], clause 5.1.5.
frequencyDomainResources Frequency domain resources for the CORESET. Each bit corresponds a group of 6 RBs, with grouping starting from the first RB group in the BWP or MBS CFR where the CORESET is configured. When at least one search space is configured with <i>freqMonitorLocation-r16</i> , only the first $N_{RBG, set0}^{size}$ bits are valid (see TS 38.213 [13], clause 10.1). The first (left-most / most significant) bit corresponds to the first RB group in the BWP or MBS CFR where the CORESET is configured, and so on. A bit that is set to 1 indicates that this RB group belongs to the frequency domain resource of this CORESET. Bits corresponding to a group of RBs not fully contained in the bandwidth part within which the CORESET is configured are set to zero (see TS 38.211 [16], clause 7.3.2.2).
interleaverSize Interleaver-size (see TS 38.211 [16], clause 7.3.2.2).
pdccch-DMRS-ScramblingID PDCCH DMRS scrambling initialization (see TS 38.211 [16], clause 7.4.1.3.1). When the field is absent the UE applies the value of the <i>physCellId</i> configured for this serving cell.
precoderGranularity Precoder granularity in frequency domain (see TS 38.211 [16], clauses 7.3.2.2 and 7.4.1.3.2).
rb-Offset Indicates the RB level offset in units of RB from the first RB of the first 6RB group to the first RB of BWP (see 38.213 [13], clause 10.1).
reg-BundleSize Resource Element Groups (REGs) can be bundled to create REG bundles. This parameter defines the size of such bundles (see TS 38.211 [16], clause 7.3.2.2).
shiftIndex When the field is absent the UE applies the value of the <i>physCellId</i> configured for this serving cell (see TS 38.211 [16], clause 7.3.2.2).
tcI-PresentInDCI This field indicates if TCI field is present or absent in DCI format 1_1, DCI format 1_3 and DCI format 4_2. When the field is absent the UE considers the TCI to be absent/disabled. In case of cross carrier scheduling, the network sets this field to enabled for the <i>ControlResourceSet</i> used for cross carrier scheduling in DCI format 1_1 in the scheduling cell if <i>enableDefaultBeamForCCS</i> is not configured (see TS 38.214 [19], clause 5.1.5).
tcI-PresentDCI-1-2 Configures the number of bits for "Transmission configuration indicator" in DCI format 1_2. When the field is absent the UE applies the value of 0 bit for the "Transmission configuration indicator" in DCI format 1_2 (see TS 38.212 [17], clause 7.3.1 and TS 38.214 [19], clause 5.1.5). In case of cross carrier scheduling, the network configures this

field for the <i>ControlResourceSet</i> used for cross carrier scheduling in DCI format 1_2 in the scheduling cell if <i>enableDefaultBeamForCCS</i> is not configured (see TS 38.214 [19], clause 5.1.5).
<i>tcI-StatesPDCCH-ToAddList</i> A subset of the TCI states defined in <i>pdsch-Config</i> , either with <i>tcI-StatesToAddModList</i> or <i>dl-OrJointTCI-StateList</i> , included in the <i>BWP-DownlinkDedicated</i> corresponding to the serving cell and to the DL BWP to which the <i>ControlResourceSet</i> belong to. They are used for providing QCL relationships between the DL RS(s) in one RS Set (TCI-State) and the PDCCH DMRS ports (see TS 38.213 [13], clause 6.). The network configures at most <i>maxNrofTCI-StatesPDCCH</i> entries. The QCL relationships defined herein do not apply to MBS broadcast.

Conditional Presence	Explanation
<i>FollowUTCI</i>	The field is absent if the field <i>followUnifiedTCI-State</i> is present or if more than one value for the field <i>coresetPoolIndex</i> is configured in <i>controlResourceSet</i> for the same bandwidthpart. Otherwise, it is optionally present, Need R.
<i>NotSIB-initialBWP</i>	The field is absent in <i>SIB1/SIB20</i> and in the <i>PDCCH-ConfigCommon</i> of the initial BWP in <i>ServingCellConfigCommon</i> , if <i>SIB1/SIB20</i> is broadcasted. Otherwise, it is optionally present, Need N.

– *ControlResourceSetId*

The *ControlResourceSetId* IE concerns a short identity, used to identify a control resource set within a serving cell. The *ControlResourceSetId* = 0 identifies the *ControlResourceSet#0* configured via PBCH (*MIB*) and in *controlResourceSetZero* (*ServingCellConfigCommon*). The ID space is used across the BWPs and MBS CFRs of a Serving Cell.

***ControlResourceSetId* information element**

```
-- ASN1START
-- TAG-CONTROLRESOURCESETID-START

ControlResourceSetId ::=
    INTEGER (0..maxNrofControlResourceSets-1)

ControlResourceSetId-r16 ::=
    INTEGER (0..maxNrofControlResourceSets-1-r16)

ControlResourceSetId-v1610 ::=
    INTEGER (maxNrofControlResourceSets..maxNrofControlResourceSets-1-r16)

-- TAG-CONTROLRESOURCESETID-STOP
-- ASN1STOP
```

– *ControlResourceSetZero*

The IE *ControlResourceSetZero* is used to configure CORESET#0 of the initial BWP (see TS 38.213 [13], clause 13).

***ControlResourceSetZero* information element**

```
-- ASN1START
-- TAG-CONTROLRESOURCESETZERO-START
```

```
ControlResourceSetZero ::=                INTEGER (0..15)

-- TAG-CONTROLRESOURCESETZERO-STOP
-- ASN1STOP
```

– CQI-Table

The IE *CQI-Table* is used for CQI calculation (see TS 38.214 [19], clause 5.2.2.1). For an (e)RedCap UE, CQI table 2 is only supported if the UE indicates support of 256QAM for PDSCH.

CQI-Table information element

```
-- ASN1START
-- TAG-CQI-TABLE-START

CQI-Table ::=                ENUMERATED {table1, table2, table3, table4-r17}

-- TAG-CQI-TABLE-STOP
-- ASN1STOP
```

– CrossCarrierSchedulingConfig

The IE *CrossCarrierSchedulingConfig* is used to specify the configuration when the cross-carrier scheduling is used in a cell.

CrossCarrierSchedulingConfig information element

```
-- ASN1START
-- TAG-CROSSCARRIERSCHEDULINGCONFIG-START

CrossCarrierSchedulingConfig ::=      SEQUENCE {
  schedulingCellInfo                CHOICE {
    own                             SEQUENCE {                -- Cross carrier scheduling: scheduling cell
      cif-Presence                  BOOLEAN
    },
    other                           SEQUENCE {                -- Cross carrier scheduling: scheduled cell
      schedulingCellId              ServCellIndex,
      cif-InSchedulingCell          INTEGER (1..7)
    }
  },
  ...,
  [[
    carrierIndicatorSize-r16        SEQUENCE {

oneHalf, fourSeventh, fiveSeventh, spare1}      OPTIONAL -- Need R
]]
}

-- TAG-CROSSCARRIERSCHEDULINGCONFIG-STOP
-- ASN1STOP

```

CrossCarrierSchedulingConfig field descriptions

carrierIndicatorSizeDCI-0-2, carrierIndicatorSizeDCI-1-2

Configures the number of bits for the field of carrier indicator in PDCCH DCI format 0_2/1_2. The field *carrierIndicatorSizeDCI-0-2* refers to DCI format 0_2 and the field *carrierIndicatorSizeDCI-1-2* refers to DCI format 1_2, respectively (see TS 38.212 [17], clause 7.3.1 and TS 38.213 [13], clause 10.1).

ccs-BlindDetectionSplit

Indicates the share of blind detection candidates and non-overlapping CCEs for PDCCH monitoring on an SpCell and an SCell when cross-carrier scheduling is configured from the SCell for the SpCell (see TS 38.213 [13], clause 10.1.1). The network only configures this field when it sets the field *other* for an SpCell, i.e., when it configures cross-carrier scheduling of the SpCell by a PDCCH on an SCell.

cif-Presence

The field is used to indicate whether carrier indicator field is present (value *true*) or not (value *false*) in PDCCH DCI formats, see TS 38.213 [13]. If *cif-Presence* is set to *true*, the CIF value indicating a grant or assignment for this cell is 0.

cif-InSchedulingCell

The field indicates the CIF value used in the scheduling cell to indicate a grant or assignment applicable for this cell, see TS 38.213 [13]. If configured for an SpCell, the non-fallback DCI formats on the SpCell include same number of CIF bits as the corresponding non-fallback DCI formats on the scheduling cell, and the CIF bits are considered reserved.

enableDefaultBeamForCCS

This field indicates whether default beam selection for cross-carrier scheduled PDSCH or aperiodic CSI-RS is enabled, see TS 38.214 [19]. If not present, the default beam selection behaviour is not applied, i.e. Rel-15 behaviour is applied. This field can only be configured in the cross-scheduled SCell or SpCell.

other

Parameters for cross-carrier scheduling. If configured for an SpCell, the SpCell can be scheduled by the PDCCH on another SCell as well as by the PDCCH on the SpCell. If configured for an SCell, the SCell is scheduled by a PDCCH on another cell.

own

Parameters for self-scheduling, i.e., a serving cell is scheduled by its own PDCCH.

schedulingCellId

If configured for an SpCell, this field indicates which SCell, in addition to the SpCell, signals the downlink allocations and uplink grants, if applicable, for the concerned SpCell. If configured for an SCell, this field indicates which cell signals the downlink allocations and uplink grants, if applicable, for the concerned SCell. In case the UE is configured with DC, the scheduling cell is part of the same cell group (i.e. MCG or SCG) as the scheduled cell. In case the UE is configured with two PUCCH groups, the scheduling cell and the scheduled cell are within the same PUCCH group. If *drx-ConfigSecondaryGroup* is configured in the *MAC-CellGroupConfig* associated with this serving cell, the scheduling cell and the scheduled cell belong to the same Frequency Range. In addition, the serving cell with an aperiodic CSI trigger and the PUSCH resource scheduled for the report are on the same carrier and serving cell, but the cell for which CSI is reported may belong to the same or a different Frequency Range. The network should not trigger a CSI request for a serving cell in the other Frequency Range when that serving cell is outside Active Time.

Conditional Presence	Explanation
<i>CIF-PRESENCE</i>	The field is mandatory present if the <i>cif-Presence</i> is set to <i>true</i> . The field is absent otherwise.

– *CSI-AperiodicTriggerStateList*

The *CSI-AperiodicTriggerStateList* IE is used to configure the UE with a list of CSI trigger states for aperiodic and/or a mode-A UE-initiated CSI report. Each codepoint of the DCI field "CSI request" is associated with one trigger state (see TS 38.321 [3], clause 6.1.3.13). For the aperiodic CSI report, upon reception of the value associated with a trigger state, the UE will perform measurement of CSI-RS, CSI-IM and/or SSB (reference signals) and aperiodic reporting on L1 according to all entries in the *associatedReportConfigInfoList* for that trigger state. For the mode-A UE-initiated CSI report, upon reception of the value associated with a CSI trigger state for the corresponding *CSI-ReportConfig*, the UE sends the CSI report as in TS 38.214 [19], clause 5.2.1.5.4.

CSI-AperiodicTriggerState field descriptions
delayOffsetCompensation Indicates whether the UE should perform delay offset compensation based on the latest linked report with <i>reportQuantity</i> set to <i>cjtc-Dd</i> when codebook type is set to <i>typeII-CJT</i> as specified in TS 38.214 [19] clause 5.2.1.4.2.
ltm-AssociatedReportConfigInfo This field configures the aperiodic CSI reports of LTM candidate cells. If <i>ltm-associatedReportConfigInfo</i> is configured the UE shall ignore the field <i>associatedReportConfigInfoList</i> .

CSI-AssociatedReportConfigInfo field descriptions
ap-CSI-MultiplexingMode Indicates if the behavior of transmitting aperiodic CSI on the first PUSCH repetitions corresponding to two SRS resource sets configured in <i>srs-ResourceSetToAddModList</i> or <i>srs-ResourceSetToAddModListDCI-0-2</i> with usage 'codebook' or 'noncodebook' is enabled or not.
applyIndicatedTCI-State, applyIndicatedTCI-State2 This field indicates, for an aperiodic CSI-RS resource set (perSet) or for CSI-RS resource (perResource), if UE applies the first or the second "indicated" DL only TCI or joint TCI as specified in TS 38.214 [19], clause 5.2.1.5.1. The <i>applyIndicatedTCI-State</i> is for <i>ResourcesForChannel</i>, and <i>applyIndicatedTCI-State2</i> is for <i>ResourcesForChannels2</i>. When <i>applyIndicatedTCI-State</i> and <i>applyIndicatedTCI-State2</i> are absent, the UE shall use <i>qcl-info</i> for <i>ResourcesForChannel</i> and use <i>qcl-info2</i> for <i>ResourcesForChannel2</i>.
csi-IM-ResourcesForInterference CSI-IM-ResourceSet for interference measurement. Entry number in <i>csi-IM-ResourceSetList</i> in the <i>CSI-ResourceConfig</i> indicated by <i>csi-IM-ResourcesForInterference</i> in the <i>CSI-ReportConfig</i> indicated by <i>reportConfigId</i> above (value 1 corresponds to the first entry, value 2 to the second entry, and so on). The indicated <i>CSI-IM-ResourceSet</i> should have exactly the same number of resources like the <i>NZP-CSI-RS-ResourceSet</i> indicated in <i>resourceSet</i> within <i>nzp-CSI-RS</i>.
csi-ReportSubConfigTriggerList A list of sub-configuration ID(s) of N sub-configurations out of L configured sub-configurations within a <i>CSI-ReportConfig</i> associated with a triggering state for aperiodic CSI reporting on PUSCH.
csi-SSB-ResourceSet, csi-SSB-ResourceSet2 CSI-SSB-ResourceSet for channel measurements. Entry number in <i>csi-SSB-ResourceSetList</i> in the <i>CSI-ResourceConfig</i> indicated by <i>resourcesForChannelMeasurement</i> in the <i>CSI-ReportConfig</i> indicated by <i>reportConfigId</i> above (value 1 corresponds to the first entry, value 2 to the second entry, and so on).
mr-SelectedResources Indicates one or two resources to be selected among eight CSI-RS resources. This field is only configured for <i>codebookType</i> set to <i>type1-SinglePanel</i> or <i>type1-r16</i>. This field is used in clause 5.2.1.4.2 in TS 38.214 [19].
nzp-CSI-RS-ResourcesForInterference NZP-CSI-RS-ResourceSet for interference measurement. Entry number in <i>nzp-CSI-RS-ResourceSetList</i> in the <i>CSI-ResourceConfig</i> indicated by <i>nzp-CSI-RS-ResourcesForInterference</i> in the <i>CSI-ReportConfig</i> indicated by <i>reportConfigId</i> above (value 1 corresponds to the first entry, value 2 to the second entry, and so on).
qcl-info, qcl-info2 Fields <i>qcl-Info</i> and <i>qcl-Info2</i> are lists of references to TCI-States for providing the QCL source and QCL type for each <i>NZP-CSI-RS-Resource</i> listed in <i>nzp-CSI-RS-Resources</i> of the <i>NZP-CSI-RS-ResourceSet</i>, indicated by <i>resourceSet</i> within <i>nzp-CSI-RS</i> and by <i>resourceSet2</i> within <i>nzp-CSI-RS2</i>, respectively. Each <i>TCI-StateId</i> refers to the <i>TCI-State</i> which has this value for <i>tcid-StateId</i> and is defined in <i>tcid-StatesToAddModList</i> or in <i>dl-OrJointTCI-StateList</i> in the <i>PDSCH-Config</i> included in the <i>BWP-Downlink</i> corresponding to the serving cell and to the DL BWP to which the <i>resourcesForChannelMeasurement</i> (in the <i>CSI-ReportConfig</i> indicated by <i>reportConfigId</i> above) belong to. First entry in <i>qcl-info/qcl-info2</i> corresponds to first entry in <i>nzp-CSI-RS-Resources</i> of that <i>NZP-CSI-RS-ResourceSet</i>, second entry in <i>qcl-info/qcl-info2</i> corresponds to second entry in <i>nzp-CSI-RS-Resources</i>, and so on (see TS 38.214 [19], clause 5.2.1.5.1). When this field is absent for aperiodic CSI RS, and <i>applyIndicatedTCI-State</i> or <i>applyIndicatedTCI-State2</i> is not configured, the UE shall use QCL information included in the "indicated" DL only/Joint TCI state as specified in TS 38.214 [19].
qcl-infoCLI List of references to TCI-States for providing the QCL source and QCL type for each CLI measurement resources listed in CLI measurement resource set indicated by <i>resourceSetCLI</i>. Each <i>TCI-StateId</i> refers to the <i>TCI-State</i> which has this value for <i>tcid-StateId</i> and is defined in <i>dl-OrJointTCI-StateList</i> in the <i>PDSCH-Config</i> included in the <i>BWP-Downlink</i> corresponding to the serving cell and to the DL BWP to which the <i>resourcesForChannelMeasurement</i> (in the <i>CSI-ReportConfig</i> indicated by <i>reportConfigId</i> above) belong to. First entry in <i>qcl-infoCLI</i> corresponds to first entry in CLI measurement resources of that CLI measurement resource set, second entry in <i>qcl-infoCLI</i> corresponds to second entry in CLI measurement resources, and so on. The length of this list is the same as the number of resources in the CLI measurement resource set.
reportConfigId The <i>reportConfigId</i> of one of the <i>CSI-ReportConfigToAddMod</i> configured in <i>CSI-MeasConfig</i>.
resourcesForChannel2 Configures reference signals for channel measurement corresponding to the second resource set for L1-RSRP measurement as configured in IE <i>CSI-ResourceConfig</i> when <i>nrofReportedGroups-r17</i> is configured in IE <i>CSI-ReportConfig</i>. If this is present, network configures <i>csi-SSB-ResourceSetExt</i> instead of <i>csi-SSB-ResourceSet</i> and the UE ignores <i>csi-SSB-ResourceSet</i> in <i>resourcesForChannel</i>, and the <i>resourcesForChannel</i> configures the reference signals for channel measurement corresponding to the first resource set for L1-RSRP measurement (see TS 38.214 [19], clause 5.2.1.4).

resourcesForChannelCJTC

Configures reference signals for channel measurement corresponding to the second resource set, the third resource set and the fourth resource set as specified in clause 5.2.1.4.1 in TS 38.214 [19].

resourcesForChannelCLI

Configures CLI measurement resource set and the list of corresponding references to TCI-States. If present, the following fields should be ignored by the UE:

resourcesForChannel,
csi-IM-ResourcesForInterference,
nzp-CSI-RS-ResourcesForInterference,
resourcesForChannel2-r17,
resourcesForChannelTDCP-r18,
applyIndicatedTCI-State-r18,
csi-ReportSubConfigTriggerList-r18.

resourcesForChannelTDCP

Configures reference signals for channel measurement corresponding to the second resource set and third resource set for TDCP reporting. All CSI resources of these two resource sets always share the same QCL-info with the resource sets indicated by *resourcesForChannel* as specified in TS 38.214 [19].

resourceSet, resourceSet2

NZP-CSI-RS-ResourceSet for channel measurements. Entry number in *nzp-CSI-RS-ResourceSetList* in the *CSI-ResourceConfig* indicated by *resourcesForChannelMeasurement* in the *CSI-ReportConfig* indicated by *reportConfigId* above (value 1 corresponds to the first entry, value 2 to the second entry, and so on).

resourceSetCLI

CLI measurement resource set for L1 UE-to-UE CLI measurements. Entry number in *cli-MeasResourceSetList* in the *CSI-ResourceConfig* indicated by *resourcesForChannelMeasurement* in the *CSI-ReportConfig* indicated by *reportConfigId* above (value 1 corresponds to the first entry, value 2 to the second entry, and so on).

Conditional Presence	Explanation
<i>Aperiodic</i>	The field is mandatory present if the <i>NZP-CSI-RS-Resources</i> in the associated <i>resourceSet</i> have the <i>resourceType</i> aperiodic and <i>unifiedTCI-StateType</i> is not configured. The field is optionally present, Need R, if the <i>NZP-CSI-RS-Resources</i> in the associated <i>resourceSet</i> have the <i>resourceType</i> aperiodic and <i>unifiedTCI-StateType</i> is configured. The field is absent otherwise.
<i>ApplyIndicatedTCI</i>	The field is optionally present, need R, if <i>resourceForChannel</i> has aperiodic CSI-RS and <i>unifiedTCI-StateType</i> is configured. This field is absent otherwise.
<i>CJTC</i>	This field is absent if <i>resourcesForChannel2</i> or <i>resourcesForChannelTDCP</i> is configured. It is optionally present, Need R, otherwise.
<i>CSI-IM-ForInterference</i>	This field is mandatory present if the <i>CSI-ReportConfig</i> identified by <i>reportConfigId</i> is configured with <i>csi-IM-ResourcesForInterference</i> ; otherwise it is absent.
<i>NZP-CSI-RS-ForInterference</i>	This field is mandatory present if the <i>CSI-ReportConfig</i> identified by <i>reportConfigId</i> is configured with <i>nzp-CSI-RS-ResourcesForInterference</i> ; otherwise it is absent.
<i>SecondCSICMR</i>	This field is mandatory present if <i>resourcesForChannel2</i> is configured with aperiodic CSI-RS and <i>applyIndicatedTCI-State</i> is configured. It is absent otherwise.
<i>TDCP</i>	This field is absent if <i>resourcesForChannel2</i> or <i>resourcesForChannelCJTC</i> is configured. It is optionally present, Need R, otherwise.

– CSI-FrequencyOccupation

The IE *CSI-FrequencyOccupation* is used to configure the frequency domain occupation of a channel state information measurement resource (e.g. *NZP-CSI-RS-Resource*, *CSI-IM-Resource*).

CSI-FrequencyOccupation information element

```
-- ASN1START
-- TAG-CSI-FREQUENCYOCCUPATION-START

CSI-FrequencyOccupation ::=
    SEQUENCE {
        startingRB      INTEGER (0..maxNrofPhysicalResourceBlocks-1),
        nrofRBs         INTEGER (24..maxNrofPhysicalResourceBlocksPlus1),
        ...
    }

-- TAG-CSI-FREQUENCYOCCUPATION-STOP
-- ASN1STOP
```

CSI-FrequencyOccupation field descriptions
nrofRBs Number of PRBs across which this CSI resource spans. Only multiples of 4 are allowed. The smallest configurable number is the minimum of 24 and the width of the associated BWP. If the configured value is larger than the width of the corresponding BWP, the UE shall assume that the actual CSI-RS bandwidth is equal to the width of the BWP.
startingRB PRB where this CSI resource starts in relation to common resource block #0 (CRB#0) on the common resource block grid. Only multiples of 4 are allowed (0, 4, ...)

– CSI-IM-Resource

The IE *CSI-IM-Resource* is used to configure one CSI Interference Management (IM) resource.

CSI-IM-Resource information element

```
-- ASN1START
-- TAG-CSI-IM-RESOURCE-START

CSI-IM-Resource ::=
    SEQUENCE {
        csi-IM-ResourceId      CSI-IM-ResourceId,
        csi-IM-ResourceElementPattern CHOICE {
            pattern0 SEQUENCE {
                subcarrierLocation-p0 ENUMERATED { s0, s2, s4, s6, s8, s10 },
                symbolLocation-p0      INTEGER (0..12)
            },
            pattern1 SEQUENCE {
                subcarrierLocation-p1 ENUMERATED { s0, s4, s8 },
                symbolLocation-p1      INTEGER (0..13)
            }
        }
    }
```

```
    }
  }
  freqBand                CSI-FrequencyOccupation      OPTIONAL, -- Need M
  periodicityAndOffset    CSI-ResourcePeriodicityAndOffset  OPTIONAL, -- Need M
  ...                     CSI-ResourcePeriodicityAndOffset  OPTIONAL, -- Cond PeriodicOrSemiPersistent
}

-- TAG-CSI-IM-RESOURCE-STOP
-- ASN1STOP
```

CSI-IM-Resource field descriptions	
csi-IM-ResourceElementPattern	The resource element pattern (Pattern0 (2,2) or Pattern1 (4,1)) with corresponding parameters (see TS 38.214 [19], clause 5.2.2.4)
freqBand	Frequency-occupancy of CSI-IM (see TS 38.214 [19], clause 5.2.2.4)
periodicityAndOffset	Periodicity and slot offset for periodic/semi-persistent CSI-IM. Network always configures the UE with a value for this field for periodic and semi-persistent CSI-IM-Resources (as indicated in CSI-ResourceConfig). A change of configuration between periodic or semi-persistent and aperiodic for a CSI-IM-Resource is not supported without a release and add.
subcarrierLocation-p0	OFDM subcarrier occupancy of the CSI-IM resource for Pattern0 (see TS 38.214 [19], clause 5.2.2.4)
subcarrierLocation-p1	OFDM subcarrier occupancy of the CSI-IM resource for Pattern1 (see TS 38.214 [19], clause 5.2.2.4)
symbolLocation-p0	OFDM symbol location of the CSI-IM resource for Pattern0 (see TS 38.214 [19], clause 5.2.2.4)
symbolLocation-p1	OFDM symbol location of the CSI-IM resource for Pattern1 (see TS 38.214 [19], clause 5.2.2.4)

Conditional Presence	Explanation
<i>PeriodicOrSemiPersistent</i>	The field is optionally present, Need M, for periodic and semi-persistent CSI-IM-Resources (as indicated in CSI-ResourceConfig). The field is absent otherwise.

– CSI-IM-ResourceId

The IE *CSI-IM-ResourceId* is used to identify one *CSI-IM-Resource*.

CSI-IM-ResourceId information element

```
-- ASN1START
-- TAG-CSI-IM-RESOURCEID-START

CSI-IM-ResourceId ::=
    INTEGER (0..maxNrofCSI-IM-Resources-1)

-- TAG-CSI-IM-RESOURCEID-STOP
```

-- ASN1STOP

– CSI-IM-ResourceSet

The IE *CSI-IM-ResourceSet* is used to configure a set of one or more CSI Interference Management (IM) resources (their IDs) and set-specific parameters.

CSI-IM-ResourceSet information element

```
-- ASN1START
-- TAG-CSI-IM-RESOURCESET-START

CSI-IM-ResourceSet ::=
    csi-IM-ResourceSetId      CSI-IM-ResourceSetId,
    csi-IM-Resources          SEQUENCE (SIZE (1..maxNrofCSI-IM-ResourcesPerSet)) OF CSI-IM-ResourceId,
    ...
}
-- TAG-CSI-IM-RESOURCESET-STOP
-- ASN1STOP
```

CSI-IM-ResourceSet field descriptions
csi-IM-Resources CSI-IM-Resources associated with this CSI-IM-ResourceSet (see TS 38.214 [19], clause 5.2).

– CSI-IM-ResourceSetId

The IE *CSI-IM-ResourceSetId* is used to identify *CSI-IM-ResourceSets*.

CSI-IM-ResourceSetId information element

```
-- ASN1START
-- TAG-CSI-IM-RESOURCESETID-START

CSI-IM-ResourceSetId ::=
    INTEGER (0..maxNrofCSI-IM-ResourceSets-1)
-- TAG-CSI-IM-RESOURCESETID-STOP
-- ASN1STOP
```

– CSI-LoggedMeasurementConfig

The IE *CSI-LoggedMeasurementConfig* is used to configure a CSI logged measurement configuration. It defines a group of one or more CSI resources for which the UE logs the associated L1 radio measurements.

CSI-LoggedMeasurementConfig information element

```

-- ASN1START
-- TAG-CSI-LOGGEDMEASUREMENTCONFIG-START

CSI-LoggedMeasurementConfig-r19 ::= SEQUENCE {
    csi-LoggedMeasurementConfigId-r19    CSI-LoggedMeasurementConfigId-r19,
    csi-LoggedResourceConfig-r19         CSI-ResourceConfigId,
    loggingPeriodicity-r19                ENUMERATED {n2, n3, n4, n5, spare4, spare3, spare2, spare1} OPTIONAL, -- Need R
    csi-LoggedMeasurementEventTriggerConfig-r19  CSI-LoggedMeasurementEventTriggerConfig-r19 OPTIONAL, -- Need R
    ...
}

CSI-LoggedMeasurementEventTriggerConfig-r19 ::= SEQUENCE {
    eventId-r19                CHOICE {
        eventA1-r19            SEQUENCE {
            a1-Threshold-r19    MeasTriggerQuantity,
            hysteresis-r19       Hysteresis,
            timeToTrigger-r19    TimeToTrigger
        },
        eventA2-r19            SEQUENCE {
            a2-Threshold-r19    MeasTriggerQuantity,
            hysteresis-r19       Hysteresis,
            timeToTrigger-r19    TimeToTrigger
        },
        ...
    }
}

-- TAG-CSI-LOGGEDMEASUREMENTCONFIG-STOP
-- ASN1STOP

```

CSI-LoggedMeasurementConfig field descriptions
a1-Threshold Threshold value associated to the selected trigger quantity to be used in measurement logging triggering condition for event a1.
a2-Threshold Threshold value associated to the selected trigger quantity to be used in measurement logging triggering condition for event a2.
csi-LoggedMeasurementConfigId This field indicates the instance of <i>CSI-LoggedMeasurementConfig</i> .
csi-LoggedMeasurementEventTriggerConfig This field is used to configure the UE with event-triggered CSI measurement logging. If this field is not included, the UE starts the measurement logging according to <i>csi-LoggedResourceConfig</i> upon reception. This field is included only if the serving cell is configured with <i>servingCellMO</i> .
csi-LoggedResourceConfig Resources in which the UE performs channel measurement whose associated measurement results are logged by the UE. The <i>csi-LoggedResourceConfig</i> indicated here contains only NZP-CSI-RS resources and/or SSB resources.
eventId Indicates an event used for measurement logging. If this field is set to <i>eventA1</i> , the UE starts performing logging of measurements when the entering condition as specified in 5.5.4.2 is met and stops logging when the corresponding leaving condition as specified in 5.5.4.2 is met. If this field is set to <i>eventA2</i> , the UE starts performing logging of measurements when the entering condition as specified in 5.5.4.3 is met and stops logging when the corresponding leaving condition as specified in 5.5.4.3 is met.
hysteresis Hysteresis when evaluating the entering/leaving conditions for an event for CSI measurement logging.
loggingPeriodicity The periodicity that the UE shall use for the logging of the CSI measurements. The <i>loggingPeriodicity</i> is given as a multiple of the periodicity of the resources indicated by <i>csi-LoggedResourceConfig</i> . If <i>loggingPeriodicity</i> is included and set to 'n2', the UE performs the logging of CSI measurements for every 2 nd occasion of the resources, if it is set to 'n3', the UE performs logging of CSI measurements for every 3 rd occasion of the resources, and so on. If <i>loggingPeriodicity</i> is not included, the UE performs the logging of CSI measurements according to the periodicity of the resources indicated by <i>csi-LoggedResourceConfig</i> , i.e. for every occasion of the resources.
timeToTrigger Time during which specific criteria for the event needs to be met in order to trigger logging of CSI measurements.

– CSI-LoggedMeasurementConfigId

The IE *CSI-LoggedMeasurementConfigId* is used to identify a *CSI-LoggedMeasurementConfig*.

CSI-LoggedMeasurementConfigId information element

```
-- ASN1START
-- TAG-CSI-LOGGEDMEASUREMENTCONFIGID-START

CSI-LoggedMeasurementConfigId-r19 ::=          INTEGER (0..maxNrofLoggedMeasurementConfigurations-1-r19)

-- TAG-CSI-LOGGEDMEASUREMENTCONFIGID-STOP
-- ASN1STOP
```

– CSI-MeasConfig

The IE *CSI-MeasConfig* is used to configure CSI-RS (reference signals) belonging to the serving cell in which *CSI-MeasConfig* is included, channel state information reports to be transmitted on PUCCH on the serving cell in which *CSI-MeasConfig* is included and channel state information reports on PUSCH triggered by DCI received on the serving cell in which *CSI-MeasConfig* is included. See also TS 38.214 [19], clause 5.2. The IE *CSI-MeasConfig* is also used to configure logging of channel state information for the serving cell in which *CSI-MeasConfig* is included, as specified in 5.5c.3. The IE *CSI-MeasConfig* is also used to configure channel state information reports for one or more LTM candidate cells to be transmitted on PUCCH on the serving cell in which *CSI-MeasConfig* is included and channel state information reports on PUSCH triggered by DCI received on the serving cell in which *CSI-MeasConfig* is included.

CSI-MeasConfig field descriptions
<i>aperiodicTriggerStateList</i> Contains trigger states for dynamically selecting one or more aperiodic and semi-persistent reporting configurations and/or triggering one or more aperiodic CSI-RS resource sets for channel and/or interference measurement (see TS 38.214 [19], clause 5.2.1).
<i>cli-RSSI-MeasResourceToAddModList</i> Pool of CLI-RSSI-MeasResource for CLI RSSI measurement.
<i>cli-RSSI-MeasResourceSetToAddModList</i> Pool of CLI-RSSI-MeasResourceSet for CLI RSSI measurement.
<i>csi-IM-ResourceSetToAddModList</i> Pool of CSI-IM-ResourceSet which can be referred to from CSI-ResourceConfig or from MAC CEs.
<i>csi-IM-ResourceToAddModList</i> Pool of CSI-IM-Resource which can be referred to from CSI-IM-ResourceSet.
<i>csi-LoggedMeasurementConfigToAddModList</i> Configured CSI logged measurements for network-side data collection.
<i>csi-ReportConfigToAddModList</i> Configured CSI report settings as specified in TS 38.214 [19] clause 5.2.1.1.
<i>csi-ResourceConfigToAddModList</i> Configured CSI resource settings as specified in TS 38.214 [19] clause 5.2.1.2.
<i>csi-SSB-ResourceSetToAddModList</i> Pool of CSI-SSB-ResourceSet which can be referred to from CSI-ResourceConfig.
<i>ltm-CSI-ReportConfigToAddModList</i> Configured CSI report settings for LTM as specified in TS 38.214 [19].
<i>nzp-CSI-RS-ResourceSetToAddModList</i> Pool of NZP-CSI-RS-ResourceSet which can be referred to from CSI-ResourceConfig or from MAC CEs.
<i>nzp-CSI-RS-ResourceToAddModList</i> Pool of NZP-CSI-RS-Resource which can be referred to from NZP-CSI-RS-ResourceSet.
<i>reportTriggerSize, reportTriggerSizeDCI-0-2</i> Size of CSI request field in DCI (bits) (see TS 38.214 [19], clause 5.2.1.5.1). The field <i>reportTriggerSize</i> applies to DCI format 0_1 and the field <i>reportTriggerSizeDCI-0-2</i> applies to DCI format 0_2 (see TS 38.214 [19], clause 5.2.1.5.1).
<i>scellActivationRS-ConfigToAddModList</i> Configured RS for fast SCell activation as specified in TS 38.214 [19] clause 5.2.1.5.3.
<i>srs-RSRP-MeasResourceSetToAddModList</i> Pool of SRS-RSRP-MeasResourceSet for SRS RSRP measurement.
<i>srs-RSRP-MeasResourceToAddModList</i> Pool of SRS-RSRP-MeasResource for SRS RSRP measurement.

– CSI-ReportConfig

The IE *CSI-ReportConfig* is used to configure either (see TS 38.214 [19], clause 5.2.1):

- a periodic or semi-persistent report sent on PUCCH on the cell in which the *CSI-ReportConfig* is included; or
- a mode-B UE-initiated report sent on PUSCH on the cell in which the *CSI-ReportConfig* is included; or

- a semi-persistent or aperiodic report sent on PUSCH triggered by DCI received on the cell in which the *CSI-ReportConfig* is included (in this case, the cell on which the report is sent is determined by the received DCI); or
- a mode-A UE-initiated report sent on PUSCH triggered by DCI received on the cell in which the *CSI-ReportConfig* is included (in this case, the cell on which the report is sent is determined by the received DCI).

The IE *CSI-ReportConfig* is also used to configure a measurement prediction report, a performance monitoring report or UE-side data collection.

CSI-ReportConfig field descriptions	
associatedIdForChannelMeasurement	Indicates the associated ID for <i>resourcesForChannelMeasurement</i> . This field is absent if <i>resourcesForChannelPrediction</i> is not configured or if all <i>NZP-CSI-RS-ResourceId/SSB-Index(es)</i> in <i>resourcesForChannelMeasurement</i> are the same as or a subset of all <i>NZP-CSI-RS-ResourceId/SSB-Index(es)</i> in <i>resourcesForChannelPrediction</i> .
associatedIdForChannelPrediction	Indicates the associated ID for <i>resourcesForChannelPrediction</i> . This field is absent if <i>resourcesForChannelPrediction</i> is not configured.
carrier	Indicates in which serving cell the <i>CSI-ResourceConfig</i> indicated below are to be found. If the field is absent, the resources are on the same serving cell as this report configuration.
codebookConfig	Codebook configuration for Type-1 or Type-2 including codebook subset restriction. Network can only configure one of <i>codebookConfig</i> , <i>codebookConfig-r16</i> , <i>codebookConfig-r17</i> , <i>codebookConfig-r18</i> or <i>codebookConfig-r19</i> (if <i>codebookType</i> is configured in <i>codebookConfig-r19</i>) in a <i>CSI-ReportConfig</i> . The network includes <i>codebookConfig-v1730</i> only if <i>codebookConfig-r17</i> is configured. For <i>codebookConfig-r19</i> , <i>cri-Type1-SinglePanel</i> can only be configured when <i>type1-SinglePanel</i> is configured in <i>codebookConfig</i> and <i>cri-Type1</i> can only be configured when <i>type1-r16</i> is configured in <i>codebookConfig-r16</i> .
cqi-BitsPerSubband	This field can only be present if <i>cqi-FormatIndicator</i> is set to <i>subbandCQI</i> . If the field is configured with <i>bits4</i> , the UE uses 4-bit sub-band CQI. If the field is not present and <i>cqi-FormatIndicator</i> is set to <i>subbandCQI</i> , the UE uses 2-bit sub-band differential CQI.
cqi-FormatIndicator	Indicates whether the UE shall report a single (wideband) or multiple (subband) CQI (see TS 38.214 [19], clause 5.2.1.4).
csi-IM-ResourcesForInterference	CSI IM resources for interference measurement. <i>csi-ResourceConfigId</i> of a <i>CSI-ResourceConfig</i> included in the configuration of the serving cell indicated with the field "carrier" above. The <i>CSI-ResourceConfig</i> indicated here contains only CSI-IM resources. The <i>bwp-Id</i> in that <i>CSI-ResourceConfig</i> is the same value as the <i>bwp-Id</i> in the <i>CSI-ResourceConfig</i> indicated by <i>resourcesForChannelMeasurement</i> .
csi-ReportCJTC	Configures parameters used for CJT calibration.
csi-ReportingBand	Indicates a contiguous or non-contiguous subset of subbands in the bandwidth part which CSI shall be reported for. Each bit in the bit-string represents one subband in order of frequency position in the BWP. The right-most bit in the bit string represents the lowest subband with the lowest frequency position in the BWP. The choice determines the number of subbands (subbands3 for 3 subbands, subbands4 for 4 subbands, and so on) (see TS 38.214 [19], clause 5.2.1.4). This field is absent if there are less than 24 PRBs (no sub band) and present otherwise (see TS 38.214 [19], clause 5.2.1.4). NOTE: In TS 38.212 [17] clause 6.3.1.1.2 and TS 38.214 [19] clause 5.2.1.4, only subbands to be reported are numbered, e.g. subband #0 is the subband corresponding to the right-most bit set to 1.
csi-ReportMode	Configures the CSI report modes Mode1 or Mode 2 (see TS 38.214 [19], clause 5.2.1.4.2)
csi-ReportSubConfigToAddModList, csi-ReportSubConfigToAddModListExt	List of <i>CSI-ReportSubConfiguration(s)</i> in a CSI report configuration to add or modify. No simultaneous configuration of <i>a1-parameters</i> (including <i>a1-Parameters-v1900</i>) and <i>a2-parameters</i> in a same CSI report sub-configuration. The number of elements in a list is at least 2. If the network includes <i>csi-ReportSubConfigToAddModListExt</i> , it includes the same number of entries, and listed in the same order, as in <i>csi-ReportSubConfigToAddModList</i> .
csi-ReportSubConfigToReleaseList	List of <i>CSI-ReportSubConfiguration(s)</i> in a CSI report configuration to release.
csi-ReportUE-Initiated	Configures parameters used for the UE initiated CSI reporting. When this field is configured, the UE ignores <i>reportConfigType</i> .
dummy	This field is not used in the specification. If received it shall be ignored by the UE.

groupBasedBeamReporting

Turning on/off group beam based reporting (see TS 38.214 [19], clause 5.2.1.4). If *groupBasedBeamReporting* (without suffix) is set to disabled, *groupBasedBeamReporting-v1710* and *groupBasedBeamReporting-v1800* is absent. The network configures *groupBasedBeamReporting-v1800* only if *groupBasedBeamReporting-v1710* is configured.

mappingToResourcesForChannelPrediction

If configured, this field indicates the resources included in *resourcesForChannelMeasurement* to be used for monitoring the channel predictions in the resources *resourcesForChannelPrediction* included within the linked prediction report configuration indicated by *refToPredictionConfig*. This field indicates Y non-zero bits in a X-bit bitmap, where X is the size of *resourcesForChannelPrediction* included within the linked prediction report configuration indicated by *refToPredictionConfig* and Y is the size of the resource set for monitoring in *resourcesForChannelMeasurement*. The x-th MSB of the bitmap corresponds to x-th resource in *resourcesForChannelPrediction* in the linked prediction report configuration indicated by *refToPredictionConfig*. The y-th nonzero bit of the bitmap corresponds to the y-th entry of associated *nzp-CSI-RS-Resources* or *csi-SSB-ResourceList* in the *resourcesForChannelMeasurement* set for monitoring, $1 \leq y \leq Y$. This field is mandatory present only if the size of *resourcesForChannelMeasurement* is smaller than the size of *resourcesForChannelPrediction* in the linked prediction report configuration indicated by *refToPredictionConfig*.

If the size of *resourcesForChannelMeasurement* for monitoring is equal to the size of *resourcesForChannelPrediction* in the linked prediction report configuration indicated by *refToPredictionConfig*, the n-th resource in *resourcesForChannelMeasurement* for monitoring is mapped to the n-th resource in *resourcesForChannelPrediction* in the linked prediction report configuration indicated by *refToPredictionConfig*.

non-PMI-PortIndication

Port indication for RI/CQI calculation. For each CSI-RS resource in the linked ResourceConfig for channel measurement, a port indication for each rank R, indicating which R ports to use. Applicable only for non-PMI feedback (see TS 38.214 [19], clause 5.2.1.4.2).

The first entry in *non-PMI-PortIndication* corresponds to the NZP-CSI-RS-Resource indicated by the first entry in *nzp-CSI-RS-Resources* in the *NZP-CSI-RS-ResourceSet* indicated in the first entry of *nzp-CSI-RS-ResourceSetList* of the *CSI-ResourceConfig* whose *CSI-ResourceConfigId* is indicated in a CSI-MeasId together with the above *CSI-ReportConfigId*; the second entry in *non-PMI-PortIndication* corresponds to the NZP-CSI-RS-Resource indicated by the second entry in *nzp-CSI-RS-Resources* in the *NZP-CSI-RS-ResourceSet* indicated in the first entry of *nzp-CSI-RS-ResourceSetList* of the same *CSI-ResourceConfig*, and so on until the NZP-CSI-RS-Resource indicated by the last entry in *nzp-CSI-RS-Resources* in the *NZP-CSI-RS-ResourceSet* indicated in the first entry of *nzp-CSI-RS-ResourceSetList* of the same *CSI-ResourceConfig*. Then the next entry corresponds to the NZP-CSI-RS-Resource indicated by the first entry in *nzp-CSI-RS-Resources* in the *NZP-CSI-RS-ResourceSet* indicated in the second entry of *nzp-CSI-RS-ResourceSetList* of the same *CSI-ResourceConfig* and so on.

nrofBestBeamForMonitoring

Indicates the number of best M beam(s) based on L1-RSRP measurements of the resource set(s) for monitoring for performance metric calculation.

nrofReportedGroups

Number of reported resource groups per CSI-report. Value *n1* means one resource group, *n2* means 2 resource groups, and so on. If *nrofReportedGroups* is configured, the UE ignores *groupBasedBeamReporting* (without suffix).

nrofReportedPredictedRS

Indicates the number (K) of predicted RS resources to be reported per report setting, if *nrofTimeInstance* is not configured. Indicates the number (K) of predicted RS resources per time instance to be reported per report setting, if *nrofTimeInstance* is configured. This field is present only if *reportQuantity-r19* is set to *p-CRI*, *p-SSB-Index*, *p-CRI-RSRP* or *p-SSB-Index-RSRP*.

nrofReportedRS

The number (N) of measured RS resources to be reported per report setting in a non-group-based report. $N \leq N_{\max}$, where $N_{\max}$ is 2, 4, 6 or 8 depending on UE capability.

(see TS 38.214 [19], clause 5.2.1.4) When the field is absent the UE applies the value 1. Network does not configure *nrofReportedRS-v1900* at the same time as *nrofReportedRS* (without suffix).

nrofTimeInstance

When *reportQuantity-r19* is set to *p-CRI*, *p-SSB-Index*, *p-CRI-RSRP* or *p-SSB-Index-RSRP*, this field indicates the number of future time instance(s) N for prediction to be reported per report setting. When *reportQuantity-r19* is set to *noneBM*, this field indicates the number of expected future time instance(s) N of prediction per report setting. This field is not configured together with other *reportQuantity-r19* settings. This field is present only if *timeGap* is configured.

nrofTransmissionOccasion

Indicates the number of (N) latest transmission occasion(s) of monitoring resources for performance metric calculation.

numberOfSingleTRP-CSI-Mode1

Configures the number of reported X CSIs when *csi-ReportMode* is set to 'Mode 1' as described in TS 38.214 [19], clause 5.2.1.4.2. The field is present only if *csi-ReportMode* configures Mode 1.

nzp-CSI-RS-ResourcesForInterference

NZP CSI RS resources for interference measurement. *csi-ResourceConfigId* of a *CSI-ResourceConfig* included in the configuration of the serving cell indicated with the field "carrier" above. The *CSI-ResourceConfig* indicated here contains only NZP-CSI-RS resources. The *bwp-Id* in that *CSI-ResourceConfig* is the same value as the *bwp-Id* in the *CSI-ResourceConfig* indicated by *resourcesForChannelMeasurement*.

p0alpha

Index of the p0-alpha set determining the power control for this CSI report transmission (see TS 38.214 [19], clause 6.2.1.2).

pdsch-BundleSizeForCSI

PRB bundling size to assume for CQI calculation when *reportQuantity* is CRI/RI/i1/CQI. If the field is absent, the UE assumes that no PRB bundling is applied (see TS 38.214 [19], clause 5.2.1.4.2).

pmi-FormatIndicator

Indicates whether the UE shall report a single (wideband) or multiple (subband) PMI. (see TS 38.214 [19], clause 5.2.1.4).

portMappingMethod

Indicates the mapping from CSI-RS resource index/port index per resource to port index for CSI/PMI calculation (see TS 38.214 [19], clause 5.2.1.4).

predictionConfiguration

Configures the UE with parameters for prediction:

- *csi-InferencePrediction-r19* indicates inference for CSI prediction;
- *configurationForBM-PredictionAndDataCollection-r19* can only be configured when *reportQuantity-r19* is present and indicates inference for beam management (i.e., *reportQuantity-r19* is set to *p-CRI*, *p-SSB-Index*, *p-CRI-RSRP* or *p-SSB-Index-RSRP*) or indicates UE-side data collection for beam management (i.e., *reportQuantity-r19* is set to *noneBM*);
- *configurationForBM-Monitoring-r19* can only be configured when *reportQuantity-r19* is present and indicates monitoring for beam management (i.e., *reportQuantity-r19* is set to *rs-PAI*);
- *configurationForCSI-Monitoring-r19* can only be configured when *reportQuantity-r19* is present and indicates monitoring for CSI prediction (i.e., *reportQuantity-r19* is set to *csi-PAI*).

pucch-CSI-ResourceList

Indicates which PUCCH resource to use for reporting on PUCCH.

refToPredictionConfig

Indicates the linked *CSI-ReportConfigId* corresponding to a prediction report configuration.

reportConfigType

Time domain behavior of reporting configuration.

reportFreqConfiguration

Reporting configuration in the frequency domain. (see TS 38.214 [19], clause 5.2.1.4).

reportQuantity

The CSI related quantities to report. see TS 38.214 [19], clause 5.2.1. If the field *reportQuantity-r16*, *reportQuantity-r17*, *reportQuantity-r18* or *reportQuantity-r19* is present, UE shall ignore *reportQuantity* (without suffix). Network does not configure *reportQuantity-r16*, *reportQuantity-r17*, *reportQuantity-r18* or *reportQuantity-r19* simultaneously.

reportingMode

Configures the UE with reporting mode for group based reporting.(see TS 38.214 [19] clause 5.2.1.4).

reportSlotConfig

Periodicity and slot offset (see TS 38.214 [19], clause 5.2.1.4). If the field *reportSlotConfig-v1530* is present, the UE shall ignore the value provided in *reportSlotConfig* (without suffix).

reportSlotOffsetList*, *reportSlotOffsetListDCI-0-1*, *reportSlotOffsetListDCI-0-2

Timing offset Y for semi persistent reporting using PUSCH. This field lists the allowed offset values. This list must have the same number of entries as the *pusch-TimeDomainAllocationList* in *PUSCH-Config*. A particular value is indicated in DCI. The network indicates in the DCI field of the UL grant, which of the configured report slot offsets the UE shall apply. The DCI value 0 corresponds to the first report slot offset in this list, the DCI value 1 corresponds to the second report slot offset in this list, and so

on. The first report is transmitted in slot $n+Y$, second report in $n+Y+P$, where P is the configured periodicity. Timing offset Y for aperiodic reporting using PUSCH. This field lists the allowed offset values. This list must have the same number of entries as the *pusch-TimeDomainAllocationList* in *PUSCH-Config*. A particular value is indicated in DCI. The network indicates in the DCI field of the UL grant, which of the configured report slot offsets the UE shall apply. The DCI value 0 corresponds to the first report slot offset in this list, the DCI value 1 corresponds to the second report slot offset in this list, and so on (see TS 38.214 [19], clause 6.1.2.1).

The field *reportSlotOffsetListDCI-0-1* applies to DCI format 0_1 and the field *reportSlotOffsetListDCI-0-2* applies to DCI format 0_2 (see TS 38.214 [19], clause 6.1.2.1). The fields *reportSlotOffsetList-r17*, *reportSlotOffsetListDCI-0-1-r17* and *reportSlotOffsetListDCI-0-2-r17* are only applicable for SCS 480 kHz and 960 kHz and if they are configured, the UE shall ignore the fields *reportSlotOffsetList* (without suffix), *reportSlotOffsetListDCI-0-1* (without suffix) and *reportSlotOffsetListDCI-0-2* (without suffix) for SCS 480 kHz and 960 kHz.

resourcesForChannelMeasurement

Resources for channel measurement. *csi-ResourceConfigId* of a *CSI-ResourceConfig* included in the configuration of the serving cell indicated with the field "carrier" above. The *CSI-ResourceConfig* indicated here contains only NZP-CSI-RS resources and/or SSB resources. This *CSI-ReportConfig* is associated with the DL BWP indicated by *bwp-Id* in that *CSI-ResourceConfig*. For the UE initiated CSI reporting, this field indicates the new beam resource set (see TS 38.214 [19], clause 5.2.1.5.4).

resourcesForChannelPrediction

Indicates resources to be predicted based on measurements performed on *resourcesForChannelMeasurement*. The UE is not expected to measure the resources to be predicted, unless the *reportQuantity-r19* is set to *noneBM*.

sharedCMR

Enables sharing of channel measurement resources between different CSI measurement hypotheses when (1) *csi-ReportMode* is set to 'Mode1' and *numberOfSingleTRP-CSI-Mode1* is set to 1 or 2; or (2) *csi-ReportMode* is set to 'Mode2' (see TS 38.214 [19], clause 5.2.1.4.2).

subbandSize

Indicates one out of two possible BWP-dependent values for the subband size as indicated in TS 38.214 [19], table 5.2.1.4-2. If *csi-ReportingBand* is absent, the UE shall ignore this field.

symbolType

Configures the symbol type of periodic/semi-persistent CSI-RS resources for CSI derivation for a CSI report associated with periodic/semi-persistent CSI-RS (see TS 38.214 [19], clause 5).

timeGap

When *reportQuantity-r19* is set to *p-CRI*, *p-SSB-Index*, *p-CRI-RSRP* or *p-SSB-Index-RSRP*:

- if *nrofTimeInstance-r19* is set to 1, this field indicates the time gap between the reference time and the first future time instance for prediction;
- if *nrofTimeInstance-r19* is set to >1, this field indicates the time gap between two consecutive future time instances for prediction.

When *reportQuantity-r19* is set to *noneBM*:

- if *nrofTimeInstance-r19* is set to 1, this field indicates the expected time gap between the reference time and the first future time instance of prediction;
- if *nrofTimeInstance-r19* is set to >1, this field indicates the expected time gap between two consecutive future time instances of prediction.

This field is present only if *resourcesForChannelPrediction-r19* and *nrofTimeInstance-r19* are configured.

timeInstanceForCSI-PAI

Indicates the f -th doppler domain unit which is used for the performance metric calculation for $N_4 > 1$.

timeInstanceForRS-PAI

Indicates the f -th time instance which is used for the performance metric calculation.

timeRestrictionForChannelMeasurements

Time domain measurement restriction for the channel (signal) measurements (see TS 38.214 [19], clause 5.2.1.1).

timeRestrictionForInterferenceMeasurements

Time domain measurement restriction for interference measurements (see TS 38.214 [19], clause 5.2.1.1).

valueOfM

This field is used in clause 5.1, 5.2 and 5.4 in TS 38.214 [19]. This field is configured up to value 4 if *codebookType* is set to *type1-SinglePanel* and up to value 2 if *codebookType* is set to *type1-r16*.

<i>CSI-ReportCJTC</i> field descriptions
<i>associatedSRS-ResourceSet</i> This field is used in clause 5.2.1.4 in TS 38.214 [19].
<i>linkedCJTC-Report</i> Linked CJT calibration report when codebook type is set to <i>typeII-CJT-r18</i> . This field is used in clause 5.2.1.4 in TS 38.214 [19].
<i>nrOfSubbandsPO</i> This field is used in clause 5.2.1.4 in TS 38.214 [19].
<i>referenceAntennaPort</i> This field is used in clause 5.2.1.4 in TS 38.214 [19].
<i>subbandSizeCJTC</i> This field is used in clause 5.2.1.4 in TS 38.214 [19].
<i>valueOfAD</i> This field is used in clause 5.2.1.4 in TS 38.214 [19]. Value <i>dot5</i> corresponds to 0.5 CP and value <i>one</i> corresponds to 1 CP.
<i>valueOfAFO</i> This field is used in clause 5.2.1.4 in TS 38.214 [19]. Value <i>zeroDot1</i> corresponds to 0.1 ppm and value <i>zeroDot2</i> corresponds to 0.2 ppm.
<i>valueOfMD</i> This field is used in clause 5.2.1.4 in TS 38.214 [19].
<i>valueOfMFO</i> This field is used in clause 5.2.1.4 in TS 38.214 [19].
<i>valueOfMPhi</i> This field is used in clause 5.2.1.4 in TS 38.214 [19].

CSI-ReportSubConfig field descriptions
codebookSubConfig Applicable codebook parameters for the ports indicated by <i>portSubsetIndicator</i>. Applicable value ranges for codebook subset restriction, rank restriction, N1, N2, and Ng and twoTX-CodebookSubsetRestriction follow existing specification according to the <i>codebookConfig</i> configured within the <i>CSI-ReportConfig</i>, and apply for the number of ports determined by <i>portSubsetIndicator</i> (see TS 38.214 [19], clause 5.2.1.4.2). In this field, the network always sets the <i>codebookType</i> to <i>type1</i>. When <i>reportQuantity</i> is set to '<i>cri-RI-i1-CQI</i>', the parameter <i>type1SinglePanel-codebookSubsetRestriction-i2</i> is mandatory to be configured in the <i>codebookSubConfig</i> for each sub-configuration that includes <i>portSubsetIndicator</i>.
non-PMI-PortIndication Port indication for RI/CQI calculation applicable only for non-PMI feedback. The field shall be configured only if the <i>portSubsetIndicator-r18</i> is configured. For each CSI-RS resource in the linked <i>CSI-ResourceConfig</i> for channel measurement, a port indication for each rank R, indicating which R ports out of P ports to use within the sub-configuration. P corresponds to the number of bits with value 1 in the bitmap <i>portSubsetIndicator-r18</i>.
nzp-CSI-RS-ResourceList List of NZP CSI RS resources for the sub-configuration that is a (sub)set of NZP CSI-RS resource(s) of the CSI-RS resource set for channel measurement associated with the sub-configuration in the CSI report configuration. Value 0 refers to the first NZP CSI RS resource of the CSI-RS resource set, value 1 refers to the second NZP CSI RS resource of the CSI-RS resource set, and so on.
portSubsetIndicator, portSubsetIndicator-v1900 Indicates the (sub)set of CSI-RS antenna ports used for CSI calculation of the sub-configuration. In the bit string, each bit corresponds to an antenna port. When a bit is set to 1, the corresponding port is enabled for CSI calculation corresponding to the sub-configuration. When the bit is set to zero, the corresponding port is not enabled for CSI calculation corresponding to the sub-configuration. The size of the bit string equals P bits, where $P=2/4/8/12/16/24/32/48/64/128$ represents the number of ports of the NZP CSI-RS resource(s) in the resource set for channel measurement associated with the <i>CSI-ReportConfig</i>. The network does not configure <i>portSubsetIndicator</i> and <i>portSubsetIndicator-v1900</i> simultaneously.
powerOffset When <i>powerControlOffset</i> is configured in NZP CSI-RS resources in the resource set for channel measurement associated with the <i>CSI-ReportConfig</i>, the power offset of PDSCH EPRE to NZP CSI-RS EPRE is equal to <i>powerControlOffset</i> - <i>powerOffset</i>.
reportSubConfigParams, reportSubConfigParams-v1900 Indicates the parameters to be used for the CSI report sub-configuration, which includes either <i>a1-parameters</i> that contain the antenna port subset and the associated parameters relevant to the sub-configuration or <i>a2-parameters</i> that contain the list of NZP CSI-RS resources for the sub-configuration (see TS 38.214 [19], clause 5.2.1.4.2).

CSI-ReportUE-Initiated field descriptions	
currentBeamReport	If configured, the UE includes measurements of the current beam in the UE initiated CSI reporting.
eventDetectionTimeWindow	Indicates the time window length for triggering event determination (see TS 38.214 [19], clause 5.2). Value <i>ms4</i> corresponds to 4 milliseconds, value <i>ms5</i> corresponds to 5 milliseconds and so on.
eventInstanceCount	Indicates the minimum number of event instances of the same new beam within a configured time window for the UE to initiate CSI report (see TS 38.214 [19], clause 5.2.1.5.4.1).
eventTypeUE-Initiated	Indicates the event type for UE initiated CSI reporting and associated fields as specified in clause 5.2.1.5.4 of TS 38.214 [19]. When this field is set to <i>event1</i> , <i>event1Threshold</i> can only be configured with values from 16 to 113. The parameter <i>conditionFulfillmentIndicator</i> is only configured if <i>eventDetectionTimeWindow</i> is configured and <i>nrofReportedRS-UE-Initiated</i> is not set to <i>n1</i> .
minimumPucch-PuschOffset	Indicates the time offset in number of symbols for determining available transmission occasion of PUSCH from the PUCCH for mode-B UE initiated CSI reporting. Value <i>sym0</i> corresponds to 0 symbol, value <i>sym1</i> corresponds to 1 symbol and so on.
nrofReportedRS-UE-Initiated	The number of reported RS in the UE initiated CSI reporting not including the current beam (see TS 38.214 [19], clause 5.2.1.5.4). Value <i>n1</i> corresponds to 1 reported RS, value <i>n2</i> corresponds to 2 reported RSs and so on.
pusch-ResourceOfModeB	Indicates Type-1 CG PUSCH resource for the UE initiated CSI reporting in mode-B. The Type-1 CG PUSCH resource is located on the cell in which the <i>CSI-ReportConfig</i> is included. If <i>configuredGrantConfigIndex</i> is absent, the Type-1 CG resource configured in <i>configuredGrantConfig</i> in <i>BWP-UplinkDedicated</i> is used.
reportSlotOffsetList	Timing offset for UE initiated CSI reporting for Mode A using PUSCH. This field lists the allowed offset values. A particular value is indicated in DCI. The network indicates in the DCI field of the UL grant, which of the configured report slot offsets the UE shall apply. The DCI value 0 corresponds to the first report slot offset in this list, the DCI value 1 corresponds to the second report slot offset in this list, and so on (see TS 38.214 [19], clause 6.1.2.1).
reportTransmissionMode	Indicates the transmission mode for UE initiated CSI reporting. Value <i>modeA</i> indicates transmission of UE initiated CSI reporting in a dynamically scheduled uplink grant and value <i>modeB</i> indicates transmission of UE initiated CSI reporting in a pre-configured type-1 configured uplink grant.
tci-ServCellIndex	Indicates the serving cell on which the TCI state used to determine the current beam RS is applied (see TS 38.214 [19], clause 5.2.1.5.4).
ue-InitiatedResourceConfig	Indicates the periodic PUCCH resource for the UE initiated report indicator for both mode-A and mode-B UE initiated CSI reporting: - to request dynamically scheduled PUSCH to carry UE initiated/CSI report for mode-A; - to notify the network of a Type-1 CG PUSCH to carry UE initiated/CSI report for mode-B.

<i>PortIndexFor8Ranks</i> field descriptions
<i>portIndex8</i> Port-Index configuration for up to rank 8. If present, the network configures port indexes for at least one of the ranks.
<i>portIndex4</i> Port-Index configuration for up to rank 4. If present, the network configures port indexes for at least one of the ranks.
<i>portIndex2</i> Port-Index configuration for up to rank 2. If present, the network configures port indexes for at least one of the ranks.
<i>portIndex1</i> Port-Index configuration for rank 1.

<i>TDCP</i> field descriptions
<i>delayDSetofLengthY</i> Configures a set of Y delay values for TDCP reporting, see reference TS 38.214 clause 5.2.1.4. The <i>symb4</i> denotes 4 symbols, the <i>slot1</i> denotes 1 slot, the <i>slot2</i> denotes 2 slots and so on. The value <i>slot10</i> is applicable only to SCS >=30kHz. The parameter Y, see reference TS38.214 clause 5.2.1.4, is given by the length of the set of D values.
<i>phaseReporting</i> Configures the UE for phase reporting for TDCP reporting see reference TS 38.214 clause 5.2.1.4

Conditional Presence	Explanation
<i>codebookBased</i>	This field is optionally present, Need R, if <i>codebookConfig-r19</i> is configured. It is absent otherwise.

– *CSI-ReportConfigId*

The IE *CSI-ReportConfigId* is used to identify one *CSI-ReportConfig*.

CSI-ReportConfigId information element

```
-- ASN1START
-- TAG-CSI-REPORTCONFIGID-START

CSI-ReportConfigId ::=
    INTEGER (0..maxNrofCSI-ReportConfigurations-1)

-- TAG-CSI-REPORTCONFIGID-STOP
-- ASN1STOP
```

– *CSI-ReportPeriodicityAndOffset*

The IE *CSI-ReportPeriodicityAndOffset* is used to configure a periodicity and a corresponding offset. Both the periodicity and the offset are given in number of slots. The periodicity value *slots4* corresponds to 4 slots, value *slots5* corresponds to 5 slots, and so on.

CSI-ReportPeriodicityAndOffset information element

```

-- ASN1START
-- TAG-CSI-REPORTPERIODICITYANDOFFSET-START

CSI-ReportPeriodicityAndOffset ::= CHOICE {
    slots4          INTEGER (0..3),
    slots5          INTEGER (0..4),
    slots8          INTEGER (0..7),
    slots10         INTEGER (0..9),
    slots16         INTEGER (0..15),
    slots20         INTEGER (0..19),
    slots40         INTEGER (0..39),
    slots80         INTEGER (0..79),
    slots160        INTEGER (0..159),
    slots320        INTEGER (0..319)
}

-- TAG-CSI-REPORTPERIODICITYANDOFFSET-STOP
-- ASN1STOP

```

– **CSI-ReportSubConfigId**

The IE *CSI-ReportSubConfigId* is used to indicate the index of one *CSI-ReportSubConfig* within a CSI report configuration.

CSI-ReportSubConfigId information element

```

-- ASN1START
-- TAG-CSI-REPORTSUBCONFIGID-START

CSI-ReportSubConfigId-r18 ::= INTEGER (0..maxNrofCSI-ReportSubconfigPerCSI-ReportConfig-1-r18)

-- TAG-CSI-REPORTSUBCONFIGID-STOP
-- ASN1STOP

```

– **CSI-ReportSubConfigTriggerList**

The IE *CSI-ReportSubConfigTriggerList* is used to configure a list of sub-configuration ID(s) of N sub-configurations out of L configured sub-configurations within a CSI-ReportConfig associated with a triggering state for semi-persistent CSI reporting on PUSCH and aperiodic CSI reporting.

CSI-ReportSubConfigTriggerList information element

```

-- ASN1START
-- TAG-CSI-REPORTSUBCONFIGTRIGGERLIST-START

CSI-ReportSubConfigTriggerList-r18 ::= SEQUENCE (SIZE (1..maxNrofCSI-ReportSubconfigPerCSI-ReportConfig-r18)) OF CSI-ReportSubConfigId-r18

```

```
-- TAG-CSI-REPORTSUBCONFIGTRIGGERLIST-STOP
-- ASN1STOP
```

– CSI-ResourceConfig

The IE *CSI-ResourceConfig* defines a group of one or more *NZP-CSI-RS-ResourceSet*, *CSI-IM-ResourceSet*, *CSI-SSB-ResourceSet*, *CLI-RSSI-MeasResourceSet* and/or *SRS-RSRP-MeasResourceSet*.

CSI-ResourceConfig information element

```

CSI-ResourceConfig field descriptions	
bwp-Id	The DL BWP which the CSI-RS or CLI measurement resources associated with this <i>CSI-ResourceConfig</i> are located in (see TS 38.214 [19], clause 5.2.1.2).
cli-MeasResourceSetList	List of references to SRS-RSRP measurement resource set(s) or CLI-RSSI measurement resource set(s) used for L1 SRS-RSRP measurement and reporting or L1 CLI-RSSI measurement and reporting (see TS 38.214 [19], clause 5). Value <i>cli-RSSI-MeasResourceSetList</i> contains up to <i>maxNrofCLI-RSSI-MeasResourceSetsPerConfig</i> resource sets if <i>resourceType</i> is 'aperiodic' and 1 otherwise. Value <i>srs-RSRP-MeasResourceSetList</i> contains up to <i>maxNrofSRS-RSRP-MeasResourceSetsPerConfig</i> resource sets if <i>resourceType</i> is 'aperiodic' and 1 otherwise. If this field is configured, the UE shall ignore the field <i>csi-RS-ResourceSetList</i> .
csi-IM-ResourceSetList	List of references to CSI-IM resources used for CSI measurement and reporting in a CSI-RS resource set. Contains up to <i>maxNrofCSI-IM-ResourceSetsPerConfig</i> resource sets if <i>resourceType</i> is 'aperiodic' and 1 otherwise (see TS 38.214 [19], clause 5.2.1.2).
csi-ResourceConfigId	Used in <i>CSI-ReportConfig</i> to refer to an instance of <i>CSI-ResourceConfig</i> .
csi-SSB-ResourceSetList, csi-SSB-ResourceSetListExt	List of references to SSB resources used for CSI measurement and reporting in a CSI-RS resource set (see TS 38.214 [19], clause 5.2.1.2). The <i>csi-SSB-ResourceSetListExt</i> provides additional references and can only be configured if <i>csi-SSB-ResourceSetList</i> is configured and <i>groupBasedBeamReporting-v1710</i> is configured in the <i>CSI-ReportConfig</i> that indicates this <i>CSI-ResourceConfig</i> as <i>resourcesForChannelMeasurement</i> . If <i>groupBasedBeamReporting-v1710</i> is configured in the IE <i>CSI-ReportConfig</i> that indicates this <i>CSI-ResourceConfig</i> as <i>resourcesForChannelMeasurement</i> , the network configures 2 resource sets, which may be two CSI SSB resource sets (see TS 38.214 [19], clause 5.2.1.2 and 5.2.1.4.2). In this case, in TS 38.212 [17] Table 6.3.1.1.2-8B, the first resource set is indicated by a resource set indicator set to 0 and the second resource set by a resource set indicator set to 1.
nzp-CSI-RS-ResourceSetList	List of references to NZP CSI-RS resources used for beam measurement and reporting in a CSI-RS resource set. If <i>resourceType</i> is set to 'aperiodic', the network configures up to <i>maxNrofNZP-CSI-RS-ResourceSetsPerConfig</i> resource sets. If <i>resourceType</i> is set to 'periodic' or 'semiPersistent' and <i>groupBasedBeamReporting-v1710</i> is not configured in IE <i>CSI-ReportConfig</i> , the network configures 1 resource set. If <i>resourceType</i> is set to 'periodic' or 'semiPersistent' and <i>groupBasedBeamReporting-v1710</i> is configured, the network configures 2 resource sets, which may be two NZP CSI-RS resource sets (see TS 38.214 [19], clause 5.2.1.2 and 5.2.1.4.2). In this case, in TS 38.212 [17] Table 6.3.1.1.2-8B, the first resource set is indicated by a resource set indicator set to 0 and the second resource set by a resource set indicator set to 1. If <i>resourceType</i> is set to 'periodic' and <i>reportQuantity</i> is set to 'TDGP', the network configures up to 3 resource sets, see TS 38.214 [19] clause 5.2.1.2.
resourceType	Time domain behavior of resource configuration (see TS 38.214 [19], clause 5.2.1.2). It does not apply to resources provided in the <i>csi-SSB-ResourceSetList</i> . If the associated <i>csi-ResourceConfigId</i> is included in <i>CSI-LoggedMeasurementConfig</i> , it is set to 'periodic'.

– CSI-ResourceConfigId

The IE *CSI-ResourceConfigId* is used to identify a *CSI-ResourceConfig*.

CSI-ResourceConfigId information element

```
-- ASN1START
-- TAG-CSI-RESOURCECONFIGID-START

CSI-ResourceConfigId ::=
    INTEGER (0..maxNrofCSI-ResourceConfigurations-1)

-- TAG-CSI-RESOURCECONFIGID-STOP
-- ASN1STOP
```

– *CSI-ResourcePeriodicityAndOffset*

The IE *CSI-ResourcePeriodicityAndOffset* is used to configure a periodicity and a corresponding offset for periodic and semi-persistent CSI resources, and for periodic and semi-persistent reporting on PUCCH, and for UE initiated CSI reporting. Both the periodicity and the offset are given in number of slots. The periodicity value *slots4* corresponds to 4 slots, value *slots5* corresponds to 5 slots, and so on.

CSI-ResourcePeriodicityAndOffset information element

```
-- ASN1START
-- TAG-CSI-RESOURCEPERIODICITYANDOFFSET-START

CSI-ResourcePeriodicityAndOffset ::= CHOICE {
    slots4      INTEGER (0..3),
    slots5      INTEGER (0..4),

CSI-RS-Index ::=
    INTEGER (0..maxNrofCSI-RS-ResourcesRRM-1)

-- TAG-CSI-RS-RESOURCECONFIGMOBILITY-STOP
-- ASN1STOP

```

CSI-RS-CellMobility field descriptions
<i>csi-rs-ResourceList-Mobility</i> List of CSI-RS resources for mobility. The maximum number of CSI-RS resources that can be configured per <i>measObjectNR</i> depends on the configuration of <i>associatedSSB</i> and the support of <i>increasedNumberOfCSIRSPerMO</i> capability (see TS 38.214 [19], clause 5.1.6.1.3).
<i>density</i> Frequency domain density for the 1-port CSI-RS for L3 mobility. See TS 38.211 [16], clause 7.4.1.
<i>nrofPRBs</i> Allowed size of the measurement BW in PRBs. See TS 38.211 [16], clause 7.4.1.
<i>startPRB</i> Starting PRB index of the measurement bandwidth. See TS 38.211 [16], clause 7.4.1.

CSI-RS-ResourceConfigMobility field descriptions
<i>csi-RS-CellList-Mobility</i> List of cells for CSI-RS based RRM measurements.
<i>refServCellIndex</i> Indicates the serving cell providing the timing reference for CSI-RS resources without <i>associatedSSB</i> . The field may be present only if there is at least one CSI-RS resource configured without <i>associatedSSB</i> . If this field is absent, the UE shall use the timing of the PCell for measurements on the CSI-RS resources without <i>associatedSSB</i> . The CSI-RS resources and the serving cell indicated by <i>refServCellIndex</i> for timing reference should be located in the same band.
<i>subcarrierSpacing</i> Subcarrier spacing of CSI-RS. Only the following values are applicable depending on the used frequency: FR1/FR1-NTN: 15, 30, or 60 kHz FR2-1/FR2-NTN: 60 or 120 kHz FR2-2: 120, 480, or 960 kHz

CSI-RS-Resource-Mobility field descriptions	
associatedSSB	If this field is present, the UE may base the timing of the CSI-RS resource indicated in <i>CSI-RS-Resource-Mobility</i> on the timing of the cell indicated by the <i>cellId</i> in the <i>CSI-RS-CellMobility</i> . In this case, the UE is not required to monitor that CSI-RS resource if the UE cannot detect the SS/PBCH block indicated by this <i>associatedSSB</i> and <i>cellId</i> . If this field is absent, the UE shall base the timing of the CSI-RS resource indicated in <i>CSI-RS-Resource-Mobility</i> on the timing of the serving cell indicated by <i>refServCellIndex</i> . In this case, the UE is required to measure the CSI-RS resource even if SS/PBCH block(s) with <i>cellId</i> in the <i>CSI-RS-CellMobility</i> are not detected. CSI-RS resources with and without <i>associatedSSB</i> may be configured in accordance with the rules in TS 38.214 [19], clause 5.1.6.1.3.
csi-RS-Index	CSI-RS resource index associated to the CSI-RS resource to be measured (and used for reporting).
firstOFDMSymbolInTimeDomain	Time domain allocation within a physical resource block. The field indicates the first OFDM symbol in the PRB used for CSI-RS, see TS 38.211 [16], clause 7.4.1.5.3.
frequencyDomainAllocation	Frequency domain allocation within a physical resource block in accordance with TS 38.211 [16], clause 7.4.1.5.3 including table 7.4.1.5.2-1. The number of bits that may be set to one depend on the chosen row in that table.
isQuasiColocated	Indicates that the CSI-RS resource is quasi co-located with the associated SS/PBCH block, see TS 38.214 [19], clause 5.1.6.1.3.
sequenceGenerationConfig	Scrambling ID for CSI-RS (see TS 38.211 [16], clause 7.4.1.5.2).
slotConfig	Indicates the CSI-RS periodicity (in milliseconds) and for each periodicity the offset (in number of slots). When <i>subcarrierSpacing</i> is set to <i>kHz15</i> , the maximum offset values for periodicities <i>ms4/ms5/ms10/ms20/ms40</i> are 3/4/9/19/39 slots. When <i>subcarrierSpacing</i> is set to <i>kHz30</i> , the maximum offset values for periodicities <i>ms4/ms5/ms10/ms20/ms40</i> are 7/9/19/39/79 slots. When <i>subcarrierSpacing</i> is set to <i>kHz60</i> , the maximum offset values for periodicities <i>ms4/ms5/ms10/ms20/ms40</i> are 15/19/39/79/159 slots. When <i>subcarrierSpacing</i> is set to <i>kHz120</i> , the maximum offset values for periodicities <i>ms4/ms5/ms10/ms20/ms40</i> are 31/39/79/159/319 slots. When <i>subcarrierSpacing</i> is set to <i>kHz480</i> , the maximum offset values for periodicities <i>ms4/ms5/ms10/ms20/ms40</i> are 127/159/319/639/1279 slots. When <i>subcarrierSpacing</i> is set to <i>kHz960</i> , the maximum offset values for periodicities <i>ms4/ms5/ms10/ms20/ms40</i> are 255/319/639/1279/2559 slots. If <i>slotConfig-r17</i> is present, UE shall ignore the <i>slotConfig</i> (without suffix).

– CSI-RS-ResourceMapping

The IE *CSI-RS-ResourceMapping* is used to configure the resource element mapping of a CSI-RS resource in time- and frequency domain.

CSI-RS-ResourceMapping information element

```
-- ASN1START
-- TAG-CSI-RS-RESOURCEMAPPING-START

CSI-RS-ResourceMapping ::=
    SEQUENCE {
        frequencyDomainAllocation
            CHOICE {
                row1          BIT STRING (SIZE (4)),
                row2          BIT STRING (SIZE (12)),
                row4          BIT STRING (SIZE (3)),
                other          BIT STRING (SIZE (6))
            },
        nrofPorts              ENUMERATED {p1,p2,p4,p8,p12,p16,p24,p32},
        firstOFDMSymbolInTimeDomain INTEGER (0..13),
        firstOFDMSymbolInTimeDomain2 INTEGER (2..12)
    }
    OPTIONAL, -- Need R
```

```

    cdm-Type          ENUMERATED {noCDM, fd-CDM2, cdm4-FD2-TD2, cdm8-FD2-TD4},
    density           CHOICE {
        dot5          ENUMERATED {evenPRBs, oddPRBs},
        one           NULL,
        three         NULL,
        spare         NULL
    },
    freqBand          CSI-FrequencyOccupation,
    ...
}

-- TAG-CSI-RS-RESOURCEMAPPING-STOP
-- ASN1STOP

```

CSI-RS-ResourceMapping field descriptions

cdm-Type

CDM type (see TS 38.214 [19], clause 5.2.2.3.1).

density

Density of CSI-RS resource measured in RE/port/PRB (see TS 38.211 [16], clause 7.4.1.5.3).

Values 0.5 (*dot5*), 1 (*one*) and 3 (*three*) are allowed for X=1, values 0.5 (*dot5*) and 1 (*one*) are allowed for X=2, 16, 24 and 32, value 1 (*one*) is allowed for X=4, 8, 12.

For density = 1/2, includes 1-bit indication for RB level comb offset indicating whether odd or even RBs are occupied by CSI-RS.

firstOFDMSymbolInTimeDomain2

Time domain allocation within a physical resource block. See TS 38.211 [16], clause 7.4.1.5.3.

firstOFDMSymbolInTimeDomain

Time domain allocation within a physical resource block. The field indicates the first OFDM symbol in the PRB used for CSI-RS. See TS 38.211 [16], clause 7.4.1.5.3.

freqBand

Wideband or partial band CSI-RS, (see TS 38.214 [19], clause 5.2.2.3.1).

frequencyDomainAllocation

Frequency domain allocation within a physical resource block in accordance with TS 38.211 [16], clause 7.4.1.5.3. The applicable row number in table 7.4.1.5.3-1 is determined by the *frequencyDomainAllocation* for rows 1, 2 and 4, and for other rows by matching the values in the column Ports, Density and CDMtype in table 7.4.1.5.3-1 with the values of *nrofPorts*, *cdm-Type* and density below and, when more than one row has the 3 values matching, by selecting the row where the column (k bar, l bar) in table 7.4.1.5.3-1 has indexes for k ranging from 0 to 2*n-1 where n is the number of bits set to 1 in *frequencyDomainAllocation*.

nrofPorts

Number of ports (see TS 38.214 [19], clause 5.2.2.3.1).

– CSI-SemiPersistentOnPUSCH-TriggerStateList

The *CSI-SemiPersistentOnPUSCH-TriggerStateList* IE is used to configure the UE with list of trigger states for semi-persistent reporting of channel state information on L1. See also TS 38.214 [19], clause 5.2.

CSI-SemiPersistentOnPUSCH-TriggerStateList information element

```

-- ASN1START
-- TAG-CSI-SEMI-PERSISTENT-ON-PUSCH-TRIGGER-STATE-LIST-START

```

```

CSI-SemiPersistentOnPUSCH-TriggerStateList ::= SEQUENCE (SIZE (1..maxNrOfSemiPersistentPUSCH-Triggers)) OF CSI-SemiPersistentOnPUSCH-TriggerState

CSI-SemiPersistentOnPUSCH-TriggerState ::= SEQUENCE {
    associatedReportConfigInfo      CSI-ReportConfigId,
    ...,
    [[
        sp-CSI-MultiplexingMode-r17      ENUMERATED {enabled}                OPTIONAL  -- Need R
    ]],
    [[
        csi-ReportSubConfigTriggerList-r18  CSI-ReportSubConfigTriggerList-r18  OPTIONAL, -- Need R
        ltm-AssociatedReportConfigInfo-r18  LTM-CSI-ReportConfigId-r18          OPTIONAL  -- Need R
    ]]
}

-- TAG-CSI-SEMI-PERSISTENT-ON-PUSCH-TRIGGER-STATE-LIST-STOP
-- ASN1STOP

```

CSI-SemiPersistentOnPUSCH-TriggerStateList field descriptions

csi-ReportSubConfigTriggerList

A list of sub-configuration ID(s) of N sub-configurations out of L configured sub-configurations within a *CSI-ReportConfig* associated with a triggering state for semi-persistent CSI reporting on PUSCH.

ltm-AssociatedReportConfigInfo

This field configures semi-persistent CSI reports on PUSCH of LTM candidate cells. If *ltm-associatedReportConfigInfo* is configured the UE shall ignore the field *associatedReportConfigInfo*.

sp-CSI-MultiplexingMode

Indicates if the behavior of transmitting SP-CSI on the first PUSCH repetitions corresponding to two SRS resource sets configured in *srs-ResourceSetToAddModList* or *srs-ResourceSetToAddModListDCI-0-2* with usage 'codebook' or 'noncodebook' is enabled or not.

– CSI-SSB-ResourceSet

The IE *CSI-SSB-ResourceSet* is used to configure one SS/PBCH block resource set which refers to SS/PBCH as indicated in *ServingCellConfigCommon* and *ServingCellConfig*.

CSI-SSB-ResourceSet information element

```

-- ASN1START
-- TAG-CSI-SSB-RESOURCESET-START

CSI-SSB-ResourceSet ::= SEQUENCE {
    csi-SSB-ResourceSetId      CSI-SSB-ResourceSetId,
    csi-SSB-ResourceList       SEQUENCE (SIZE (1..maxNrofCSI-SSB-ResourcePerSet)) OF SSB-Index,
    ...,
    [[
        servingAdditionalPCIList-r17      SEQUENCE (SIZE (1..maxNrofCSI-SSB-ResourcePerSet)) OF ServingAdditionalPCIIndex-r17  OPTIONAL  -- Need R
    ]]
}

ServingAdditionalPCIIndex-r17 ::= INTEGER (0..maxNrofAdditionalPCI-r17)

```

```
-- TAG-CSI-SSB-RESOURCESET-STOP
-- ASN1STOP
```

CSI-SSB-ResourceSet field descriptions
servingAdditionalPCList Indicates the physical cell IDs (PCI) of the SSBs in the <i>csi-SSB-ResourceList</i>. If present, the list has the same number of entries as <i>csi-SSB-ResourceList</i>. The first entry of the list indicates the value of the PCI for the first entry of <i>csi-SSB-ResourceList</i>, the second entry of this list indicates the value of the PCI for the second entry of <i>csi-SSB-ResourceList</i>, and so on. For each entry, the following applies: - If the value is zero, the PCI is the PCI of the serving cell in which this <i>CSI-SSB-ResourceSet</i> is defined; - otherwise, the value is <i>additionalPCIIndex-r17</i> of an <i>SSB-MTC-AdditionalPCI-r17</i> configured using the <i>additionalPCI-ToAddModList-r17</i> in <i>ServingCellConfig</i>, and the PCI is the <i>additionalPCI-r17</i> in this <i>SSB-MTC-AdditionalPCI-r17</i>.

– CSI-SSB-ResourceSetId

The IE *CSI-SSB-ResourceSetId* is used to identify one SS/PBCH block resource set.

CSI-SSB-ResourceId information element

```
-- ASN1START
-- TAG-CSI-SSB-RESOURCESETID-START

CSI-SSB-ResourceSetId ::=
    INTEGER (0..maxNrofCSI-SSB-ResourceSets-1)

-- TAG-CSI-SSB-RESOURCESETID-STOP
-- ASN1STOP
```

– DataCollectionCandidateConfigId

The IE *DataCollectionCandidateConfigId* is used to identify a *DataCollectionCandidateConfigParameters*.

DataCollectionCandidateConfigId information element

```
-- ASN1START
-- TAG-DATACOLLECTIONCANDIDATECONFIGID-START

DataCollectionCandidateConfigId-r19 ::=
    INTEGER (0..maxNrofDataCollectionCandidateConfigs-1-r19)

-- TAG-DATACOLLECTIONCANDIDATECONFIGID-STOP
-- ASN1STOP
```

– *DedicatedNAS-Message*

The IE *DedicatedNAS-Message* is used to transfer UE specific NAS layer information between the 5GC CN and the UE. The RRC layer is transparent for this information.

DedicatedNAS-Message information element

```
-- ASN1START
-- TAG-DEDICATED-NAS-MESSAGE-START

DedicatedNAS-Message ::=          OCTET STRING

-- TAG-DEDICATED-NAS-MESSAGE-STOP
-- ASN1STOP
```

– *DL-PPW-PreConfig*

The IE *DL-PPW-PreConfig* provides configuration for a measurement window where a UE is expected to measure the DL PRS, if it is inside the active DL BWP and with the same numerology as the active DL BWP. Based upon the indication received in the configuration, the UE identifies whether the DL PRS priority is higher than that of the other DL signals or channels and accordingly determines, for example, the UE is expected to measure the DL PRS and is not expected to receive other DL signals and channels.

DL-PPW-PreConfig information element

```
-- ASN1START
-- TAG-DL-PPW-PRECONFIG-START

DL-PPW-PreConfig-r17 ::= SEQUENCE {
    dl-PPW-ID-r17                DL-PPW-ID-r17,
    dl-PPW-PeriodicityAndStartSlot-r17  DL-PPW-PeriodicityAndStartSlot-r17,
    length-r17                   INTEGER (1..160),
    type-r17                     ENUMERATED {type1A, type1B, type2}          OPTIONAL, -- Cond MultiType
    priority-r17                 ENUMERATED {st1, st2, st3}                OPTIONAL -- Cond MultiState
}

DL-PPW-ID-r17 ::= INTEGER (0..maxNrofPPW-ID-1-r17)

DL-PPW-PeriodicityAndStartSlot-r17 ::= CHOICE {

-- TAG-DL-PPW-PRECONFIG-STOP
-- ASN1STOP
```

DL-PPW-PreConfig field descriptions	
dl-PPW-ID	Indicates the pre-configured ID for DL-PRS processing window configuration.
dl-PPW-PeriodicityAndStartSlot	Indicates the periodicity in slots and the offset of the starting slot with respect to SFN #0 slot #0 of the serving cell where the DL-PRS processing window is configured.
length	Indicates the length of DL-PRS processing window in slots. Value 1 indicates <i>length</i> of one slot, value 2 indicates <i>length</i> of two slots and so on.
priority	Indicates the priority between PDCCH/PDSCH/CSI-RS and PRS as specified in TS 38.214 [19].
type	Indicates the DL-PRS processing window type as specified in TS 38.214 [19].

Conditional Presence	Explanation
<i>MultiType</i>	The field is mandatory present when the UE reports its capability on supporting multiple processing types, otherwise it is absent.
<i>MultiState</i>	The field is mandatory present when the UE reports its capability on supporting option 1 or option 2 for the configured type, otherwise it is absent.

– *DMRS-BundlingPUCCH-Config*

The IE *DMRS-BundlingPUCCH-Config-r17* is used to configure DMRS bundling for PUCCH.

DMRS-BundlingPUCCH-Config information element

```
-- ASN1START
-- TAG-DMRS-BUNDLINGPUCCH-CONFIG-START

DMRS-BundlingPUCCH-Config-r17 ::=
    SEQUENCE {
        pucch-DMRS-Bundling-r17          ENUMERATED {enabled}          OPTIONAL, -- Need R
        pucch-TimeDomainWindowLength-r17 INTEGER (2..8)                OPTIONAL, -- Need S
        pucch-WindowRestart-r17          ENUMERATED {enabled}          OPTIONAL, -- Need R
        pucch-FrequencyHoppingInterval-r17 ENUMERATED {s2, s4, s5, s10}  OPTIONAL, -- Need S
        ...
    }

-- TAG-DMRS-BUNDLINGPUCCH-CONFIG-STOP
-- ASN1STOP
```

DMRS-BundlingPUCCH-Config field descriptions
pucch-DMRS-Bundling Indicates whether DMRS bundling and time domain window for PUCCH are jointly enabled.
pucch-FrequencyHoppingInterval Configures the number of consecutive slots for the UE to perform inter-slot frequency hopping with inter-slot bundling for PUCCH. When both inter-frequency hopping and DMRS bundling are enabled for PUCCH repetitions, the UE is expected to be configured with at least one <i>pucch-FrequencyHoppingInterval-r17</i> and <i>pucch-TimeDomainWindowLength-r17</i>. When DMRS bundling for PUCCH is enabled by <i>pucch-DMRS-Bundling-r17</i>, PUCCH frequency hopping interval is only determined by the configuration of PUCCH hopping interval if PUCCH hopping interval is configured. If the field is absent, the number of consecutive slots for the UE to perform inter-slot PUCCH frequency hopping is indicated by <i>pucch-TimeDomainWindowLength-r17</i>.
pucch-TimeDomainWindowLength Configures the length of a nominal time domain window in slots for DMRS bundling for PUCCH. The value shall not exceed the maximum duration for DMRS bundling for PUCCH as specified in TS 38.306 [26]. If this field is absent, the UE shall apply the default value that is the minimum value in the unit of consecutive slots of the time duration for the transmission of all PUCCH repetitions and the maximum duration for DMRS bundling for PUCCH as specified in TS 38.306 [26].
pucch-WindowRestart Indicates whether UE bundles PUCCH DMRS remaining in a nominal time domain window after event(s) triggered by DCI or MAC CE that violate power consistency and phase continuity requirements is enabled (see TS 38.214 [19], clause 6.1.7). NOTE: Events, which are triggered by DCI or MAC CE, but do not require UE capability to resume maintaining power consistency and/or phase continuity as specified in clause 6.1.7 of TS 38.214 [19], are excluded.

– DMRS-BundlingPUSCH-Config

The IE *DMRS-BundlingPUSCH-Config-r17* is used to configure DMRS bundling for PUSCH.

DMRS-BundlingPUSCH-Config information element

```
-- ASN1START
-- TAG-DMRS-BUNDLINGPUSCH-CONFIG-START

DMRS-BundlingPUSCH-Config-r17 ::=
    SEQUENCE {
```

```

pusch-DMRS-Bundling-r17          ENUMERATED {enabled}          OPTIONAL, -- Need R
pusch-TimeDomainWindowLength-r17 INTEGER (2..32)              OPTIONAL, -- Need S
pusch-WindowRestart-r17         ENUMERATED {enabled}          OPTIONAL, -- Need R
pusch-FrequencyHoppingInterval-r17 ENUMERATED {s2, s4, s5, s6, s8, s10, s12, s14, s16, s20} OPTIONAL, -- Need S
...
}

-- TAG-DMRS-BUNDLINGPUSCH-CONFIG-STOP
-- ASN1STOP

```

DMRS-BundlingPUSCH-Config field descriptions

pusch-DMRS-Bundling

Indicates whether DMRS bundling and time domain window for PUSCH are jointly enabled.

pusch-FrequencyHoppingInterval

Configures the number of consecutive slots for the UE to perform inter-slot frequency hopping with inter-slot bundling for PUSCH. When both inter-frequency hopping and DMRS bundling are enabled for PUSCH repetitions, the UE is expected to be configured with at least one *pusch-FrequencyHoppingInterval-r17* and *pusch-TimeDomainWindowLength-r17*. This parameter is shared for both DG-PUSCH and CG-PUSCH. When DMRS bundling for PUSCH is enabled by *pusch-DMRS-Bundling-r17*, PUSCH frequency hopping interval is only determined by the configuration of PUSCH hopping interval if PUSCH hopping interval is configured. If the field is absent, the number of consecutive slots for the UE to perform inter-slot PUSCH frequency hopping is indicated by *pusch-TimeDomainWindowLength-r17*.

Note: For unpaired spectrum, the UE is not expected to be configured the value of s6, s8, s12, s14 and s16.

pusch-TimeDomainWindowLength

Configures the length of a nominal time domain window in number of consecutive slots for DMRS bundling for PUSCH. The value shall not exceed the maximum duration for DMRS bundling for PUSCH as specified in TS 38.306 [26]. For PUSCH repetition type A/B, if this field is absent, the UE shall apply the default value that is the minimum value in the unit of consecutive slots of the time duration for the transmission of all PUSCH repetitions and the maximum duration for DMRS bundling for PUSCH as specified in TS 38.306 [26]. For TBoMS, if this field is absent, the UE shall apply the default value that is the minimum value in the unit of consecutive slots of the duration of TBoMS transmission (including repetition of TBoMS) and the maximum duration for DMRS bundling for PUSCH as specified in TS 38.306 [26].

pusch-WindowRestart

Indicates whether UE bundles PUSCH DMRS remaining in a nominal time domain window after event(s) triggered by DCI or MAC CE that violate power consistency and phase continuity requirements is enabled (see TS 38.214 [19], clause 6.1.7).

NOTE: Events, which are triggered by DCI or MAC CE, but do not require UE capability to resume maintaining power consistency and/or phase continuity as specified in clause 6.1.7 of TS 38.214 [19], are excluded.

– DMRS-DownlinkConfig

The IE *DMRS-DownlinkConfig* is used to configure downlink demodulation reference signals for PDSCH.

DMRS-DownlinkConfig information element

```

-- ASN1START
-- TAG-DMRS-DOWNLINKCONFIG-START

DMRS-DownlinkConfig ::= SEQUENCE {

```

DMRS-DownlinkConfig field descriptions

dmrs-AdditionalPosition

Position for additional DM-RS in DL, see Tables 7.4.1.1.2-3 and 7.4.1.1.2-4 in TS 38.211 [16]. If the field is absent, the UE applies the value *pos2*. See also clause 7.4.1.1.2 for additional constraints on how the network may set this field depending on the setting of other fields.

dmrs-Downlink

This field indicates whether low PAPR DMRS is used, as specified in TS38.211 [16], clause 7.4.1.1.1.

dmrs-Type

Selection of the DMRS type to be used for DL (see TS 38.211 [16], clause 7.4.1.1.1). If the field is absent, the UE uses DMRS type 1.

dmrs-TypeEnh

This field is used in TS 38.211 [16], clause 7.4.1.1.2.

maxLength

The maximum number of OFDM symbols for DL front loaded DMRS. *len1* corresponds to value 1. *len2* corresponds to value 2. If the field is absent, the UE applies value *len1*. If set to *len2*, the UE determines the actual number of DM-RS symbols by the associated DCI. (see TS 38.211 [16], clause 7.4.1.1.2).

phaseTrackingRS

Configures downlink PTRS. If the field is not configured, the UE assumes that downlink PTRS are absent. See TS 38.214 [19] clause 5.1.6.3.

scramblingID0

DL DMRS scrambling initialization (see TS 38.211 [16], clause 7.4.1.1.1). When the field is absent the UE applies the value *physCellId* configured for this serving cell.

scramblingID1

DL DMRS scrambling initialization (see TS 38.211 [16], clause 7.4.1.1.1). When the field is absent the UE applies the value *physCellId* configured for this serving cell.

– DMRS-UplinkConfig

The IE *DMRS-UplinkConfig* is used to configure uplink demodulation reference signals for PUSCH.

DMRS-UplinkConfig information element

```

-- ASN1START
-- TAG-DMRS-UPLINKCONFIG-START

DMRS-UplinkConfig ::= SEQUENCE {

}

-- TAG-DMRS-UPLINKCONFIG-STOP
-- ASN1STOP

```

DMRS-UplinkConfig field descriptions	
dmrs-AdditionalPosition	Position for additional DM-RS in UL (see TS 38.211 [16], clause 6.4.1.1.3). If the field is absent, the UE applies the value pos2. See also clause 6.4.1.1.3 for additional constraints on how the network may set this field depending on the setting of other fields.
dmrs-Type	Selection of the DMRS type to be used for UL (see TS 38.211 [16], clause 6.4.1.1.3) If the field is absent, the UE uses DMRS type 1.
dmrs-TypeEnh	This field is used in TS 38.211 [16], clause 6.4.1.1.3.
dmrs-Uplink	This field indicates whether low PAPR DMRS is used, as specified in TS38.211 [16], clause 6.4.1.1.1.1.
dmrs-UplinkTransformPrecoding	This field indicates whether low PAPR DMRS is used for PUSCH with pi/2 BPSK modulation, as specified in TS38.211 [16], clause 6.4.1.1.1.2. The network configures this field only if <i>tp-pi2BPSK</i> is configured in <i>PUSCH-Config</i> .
maxLength	The maximum number of OFDM symbols for UL front loaded DMRS. <i>len1</i> corresponds to value 1. <i>len2</i> corresponds to value 2. If the field is absent, the UE applies value <i>len1</i> . If set to <i>len2</i> , the UE determines the actual number of DM-RS symbols by the associated DCI. (see TS 38.211 [16], clause 6.4.1.1.3).
nPUSCH-Identity	Parameter: N_ID^(PUSCH) for DFT-s-OFDM DMRS. If the value is absent or released, the UE uses the value Physical cell ID (<i>physCellId</i>). See TS 38.211 [16].
phaseTrackingRS	Configures uplink PTRS (see TS 38.211 [16]).
pi2BPSK-ScramblingID0, pi2BPSK-ScramblingID1	UL DMRS scrambling initialization for pi/2 BPSK DMRS for PUSCH (see TS 38.211 [16], Clause 6.4.1.1.2). When the field is absent the UE applies the value Physical cell ID (<i>physCellId</i>) of the serving cell.
scramblingID0	UL DMRS scrambling initialization for CP-OFDM (see TS 38.211 [16], clause 6.4.1.1.1.1). When the field is absent the UE applies the value Physical cell ID (<i>physCellId</i>).
scramblingID1	UL DMRS scrambling initialization for CP-OFDM. (see TS 38.211 [16], clause 6.4.1.1.1.1). When the field is absent the UE applies the value Physical cell ID (<i>physCellId</i>).
sequenceGroupHopping	For DMRS transmission with transform precoder the NW may configure group hopping by the cell-specific parameter <i>groupHoppingEnabledTransformPrecoding</i> in <i>PUSCH-ConfigCommon</i> . In this case, the NW may include this UE specific field to disable group hopping for PUSCH transmission except for Msg3, i.e., to override the configuration in <i>PUSCH-ConfigCommon</i> (see TS 38.211 [16]). If the field is absent, the UE uses the same hopping mode as for Msg3.
sequenceHopping	Determines if sequence hopping is enabled for DMRS transmission with transform precoder for PUSCH transmission other than Msg3 (sequence hopping is always disabled for Msg3). If the field is absent, the UE uses the same hopping mode as for msg3. The network does not configure simultaneous group hopping and sequence hopping. See TS 38.211 [16], clause 6.4.1.1.1.2.
transformPrecodingDisabled	DMRS related parameters for Cyclic Prefix OFDM.
transformPrecodingEnabled	DMRS related parameters for DFT-s-OFDM (Transform Precoding).

– DownlinkConfigCommon

The IE *DownlinkConfigCommon* provides common downlink parameters of a cell.

DownlinkConfigCommon information element

```
-- ASN1START
-- TAG-DOWNLINKCONFIGCOMMON-START

DownlinkConfigCommon ::= SEQUENCE {
    frequencyInfoDL          FrequencyInfoDL          OPTIONAL, -- Cond InterFreqHOAndServCellAdd
    initialDownlinkBWP        BWP-DownlinkCommon      OPTIONAL, -- Cond ServCellAdd
    ...,
    [[
        initialDownlinkBWP-RedCap-r17 BWP-DownlinkCommon OPTIONAL -- Need R
    ]]
}

-- TAG-DOWNLINKCONFIGCOMMON-STOP
-- ASN1STOP
```

DownlinkConfigCommon field descriptions	
frequencyInfoDL	Basic parameters of a downlink carrier and transmission thereon.
initialDownlinkBWP	The initial downlink BWP configuration for a serving cell. The network configures the <i>locationAndBandwidth</i> so that the initial downlink BWP contains the entire CORESET#0 of this serving cell in the frequency domain.
initialDownlinkBWP-RedCap	If present, (e)RedCap UEs use this DL BWP instead of <i>initialDownlinkBWP</i> . If absent, (e)RedCap UEs use <i>initialDownlinkBWP</i> provided that it does not exceed the (e)RedCap UE maximum bandwidth (see also clause 5.2.2.4.2).

Conditional Presence	Explanation
<i>InterFreqHOAndServCellAdd</i>	This field is mandatory present for inter-frequency handover, and upon serving cell (PSCell/SCell) addition. Otherwise, the field is optionally present, Need M.
<i>ServCellAdd</i>	This field is mandatory present upon serving cell addition (for PSCell and SCell) and upon handover from E-UTRA to NR. It is optionally present, Need M otherwise.

– DownlinkConfigCommonSIB

The IE *DownlinkConfigCommonSIB* provides common downlink parameters of a cell.

```

DownlinkConfigCommonSIB field descriptions
bcch-Config The modification period related configuration.
entryCondition The entry condition for LP-WUS monitoring related configuration.
exitCondition The exit condition for LP-WUS monitoring related configuration.
frequencyInfoDL-SIB Basic parameters of a downlink carrier and transmission thereon.
initialDownlinkBWP The initial downlink BWP configuration for a PCell. The network configures the <i>locationAndBandwidth</i> so that the initial downlink BWP contains the entire CORESET#0 of this serving cell in the frequency domain. The UE applies the <i>locationAndBandwidth</i> upon reception of this field (e.g. to determine the frequency position of signals described in relation to this <i>locationAndBandwidth</i>) but it keeps CORESET#0 until after reception of <i>RRCSetup/RRCResume/RRCReestablishment</i> .
initialDownlinkBWP-RedCap If present, (e)RedCap UEs use this DL BWP instead of <i>initialDownlinkBWP</i> . If the <i>locationAndBandwidth</i> of this BWP contains the entire CORESET#0, the UE applies the <i>locationAndBandwidth</i> upon reception of this field (e.g. to determine the frequency position of signals described in relation to this <i>locationAndBandwidth</i>) but it keeps CORESET#0 until after reception of <i>RRCSetup/RRCResume/RRCReestablishment</i> . Otherwise, i.e., if the <i>locationAndBandwidth</i> of this BWP does not contain the entire CORESET#0, the UE uses this BWP for receiving DL messages during initial access (Msg2, MsgB, Msg4) and after initial access. If absent, (e)RedCap UEs use <i>initialDownlinkBWP</i> provided that it does not exceed the (e)RedCap UE maximum bandwidth (see also clause 5.2.2.4.2).
lastUsedCellOnly When present, the field indicates that the UE monitors PEI only if the latest received <i>RRCRelease</i> without <i>noLastCellUpdate</i> is from this cell. A PEI-capable UE stores its last used cell information.
lowPowerConfig The LP-WUS and LP-SS related configuration.
lp-SubgroupConfig The LP-WUS subgroup related configuration.
pagingAdaptPEI-Config The PEI related configuration for paging adaptation. If the UE supports <i>pagingAdaptationPEI-SupportBandList-r19</i> , it ignores <i>po-NumPerPEI-r17</i> , <i>payloadSizeDCI-2-7-r17</i> , and <i>pei-FrameOffset-r17</i> , if configured.
pcch-Config The paging related configuration.
pei-Config The PEI related configuration.
subgroupConfig The paging subgroup related configuration.

BCCH-Config field descriptions
modificationPeriodCoeff Actual modification period, expressed in number of radio frames $m = \text{modificationPeriodCoeff} * \text{defaultPagingCycle}$, see clause 5.2.2.2.2. <i>n2</i> corresponds to value 2, <i>n4</i> corresponds to value 4, and so on.

PCCH-Config field descriptions
defaultPagingCycle Default paging cycle, used to derive 'T' in TS 38.304 [20]. Value <i>rf32</i> corresponds to 32 radio frames, value <i>rf64</i> corresponds to 64 radio frames and so on.
firstPDCCH-MonitoringOccasionOfPO Points out the first PDCCH monitoring occasion for paging of each PO of the PF, see TS 38.304 [20].
pagingAdapt-NS Number of paging occasions per paging frame for paging adaptation.
pagingAdaptFirstPDCCH-MonitoringOccasionOfPO Points out the first PDCCH monitoring occasion for paging of each PO of the PF for paging adaptation, see TS 38.304 [20].
pagingAdaptNAndPagingFrameOffset Used to derive the number of total paging frames in T (corresponding to parameter N in TS 38.304 [20]) and paging frame offset (corresponding to parameter PF_offset in TS 38.304 [20]) for paging adaptation. A value of <i>oneThirtySecondT</i> corresponds to $T/32$, a value of <i>oneSixteenthT</i> corresponds to $T/16$, a value of <i>oneEighthT</i> corresponds to $T/8$, and so on. If <i>pagingSearchSpace</i> is set to zero and if SS/PBCH block and CORESET multiplexing pattern is 2 or 3 (as specified in TS 38.213 [13]): - for <i>ssb-periodicityServingCell</i> of 5 or 10 ms, N can be set to one of {<i>oneT</i>, <i>halfT</i>, <i>quarterT</i>, <i>oneEighthT</i>, <i>oneSixteenthT</i>, <i>oneThirtySecondT</i>} - for <i>ssb-periodicityServingCell</i> of 20 ms, N can be set to one of {<i>halfT</i>, <i>quarterT</i>, <i>oneEighthT</i>, <i>oneSixteenthT</i>, <i>oneThirtySecondT</i>} - for <i>ssb-periodicityServingCell</i> of 40 ms, N can be set to one of {<i>quarterT</i>, <i>oneEighthT</i>, <i>oneSixteenthT</i>, <i>oneThirtySecondT</i>} - for <i>ssb-periodicityServingCell</i> of 80 ms, N can be set to one of {<i>oneEighthT</i>, <i>oneSixteenthT</i>, <i>oneThirtySecondT</i>} - for <i>ssb-periodicityServingCell</i> of 160 ms, N can be set to {<i>oneSixteenthT</i>, <i>oneThirtySecondT</i>} If <i>pagingSearchSpace</i> is set to zero and if SS/PBCH block and CORESET multiplexing pattern is 1 (as specified in TS 38.213 [13]), N can be set to one of { <i>halfT</i> , <i>quarterT</i> , <i>oneEighthT</i> , <i>oneSixteenthT</i> , <i>oneThirtySecondT</i> } If <i>pagingSearchSpace</i> is not set to zero, N can be configured to one of { <i>oneT</i> , <i>halfT</i> , <i>quarterT</i> , <i>oneEighthT</i> , <i>oneSixteenthT</i> , <i>oneThirtySecondT</i> }
nAndPagingFrameOffset Used to derive the number of total paging frames in T (corresponding to parameter N in TS 38.304 [20]) and paging frame offset (corresponding to parameter PF_offset in TS 38.304 [20]). A value of <i>oneSixteenthT</i> corresponds to $T/16$, a value of <i>oneEighthT</i> corresponds to $T/8$, and so on. If <i>pagingSearchSpace</i> is set to zero and if SS/PBCH block and CORESET multiplexing pattern is 2 or 3 (as specified in TS 38.213 [13]): - for <i>ssb-periodicityServingCell</i> of 5 or 10 ms, N can be set to one of {<i>oneT</i>, <i>halfT</i>, <i>quarterT</i>, <i>oneEighthT</i>, <i>oneSixteenthT</i>} - for <i>ssb-periodicityServingCell</i> of 20 ms, N can be set to one of {<i>halfT</i>, <i>quarterT</i>, <i>oneEighthT</i>, <i>oneSixteenthT</i>} - for <i>ssb-periodicityServingCell</i> of 40 ms, N can be set to one of {<i>quarterT</i>, <i>oneEighthT</i>, <i>oneSixteenthT</i>} - for <i>ssb-periodicityServingCell</i> of 80 ms, N can be set to one of {<i>oneEighthT</i>, <i>oneSixteenthT</i>} - for <i>ssb-periodicityServingCell</i> of 160 ms, N can be set to <i>oneSixteenthT</i> If <i>pagingSearchSpace</i> is set to zero and if SS/PBCH block and CORESET multiplexing pattern is 1 (as specified in TS 38.213 [13]), N can be set to one of { <i>halfT</i> , <i>quarterT</i> , <i>oneEighthT</i> , <i>oneSixteenthT</i> } If <i>pagingSearchSpace</i> is not set to zero, N can be configured to one of { <i>oneT</i> , <i>halfT</i> , <i>quarterT</i> , <i>oneEighthT</i> , <i>oneSixteenthT</i> }
nrofPDCCH-MonitoringOccasionPerSSB-InPO The number of PDCCH monitoring occasions corresponding to an SSB within a Paging Occasion, see TS 38.304 [20], clause 7.1.
ns Number of paging occasions per paging frame.
ranPagingIdlePO Indicates that the network supports to send RAN paging in PO that corresponds to the <i>i_s</i> as determined by UE in RRC_IDLE state, see TS38.304 [20].

<i>PEI-Config</i> field descriptions
<i>payloadSizeDCI-2-7</i> Payload size of PEI DCI, i.e., DCI format 2_7. The size is no larger than the payload size of paging DCI which has maximum of 41 bits and 43 bits for licensed and unlicensed spectrums, respectively.
<i>pei-FrameOffset</i> Offset, in number of frames from the start of a reference frame for PEI-O to the start of a first paging frame of the paging frames associated with the PEI-O, see TS 38.213 [13], clause 10.4A.
<i>po-NumPerPEI</i> The number of PO(s) associated with one PEI monitoring occasion. It is a factor of the total PO number in a paging cycle, i.e $N \times N_s$, as specified in TS 38.304 [20]. The maximum number of PF associated with one PEI monitoring occasion is 2. The number of PO mapping to one PEI should be multiple of N_s when <i>po-NumPerPEI</i> is larger than N_s.

<i>SubgroupConfig</i> field descriptions
<i>subgroupsNumPerPO</i> Total number of subgroups per Paging Occasion (PO) for UE to read subgroups indication from PEI signaling. The field represents the sum of CN-assigned and UEID-based subgroups supported by for PEI the network. When <i>PEI-Config</i> is configured, there is always at least one subgroup (UEID-based subgroup or CN-assigned subgroup) configured.
<i>subgroupsNumForUEID</i> Number of subgroups per Paging Occasion (PO) for UE to read subgroups indication from PEI signaling, for UEID-based subgrouping method for PEI. When present, the field is set to an integer smaller than or equal to <i>subgroupsNumPerPO</i>. <i>subgroupsNumPerPO</i> equals to <i>subgroupsNumForUEID</i> when the network does not configure CN-assigned subgrouping for PEI. When <i>pei-Config</i> is configured, the field is absent when the network only configures CN-assigned subgrouping. Both this field and <i>subgroupsNumPerPO</i> are equal to 1 when the network does not configure subgrouping for PEI. When <i>pei-Config</i> is configured, if the field is absent, the UE uses subgrouping according to TS 38.304 [20], clause 7.3.0.

LowPowerConfig field descriptions	
<i>lpss-BinarySeqIndex</i>	Indicates the LP-SS binary sequence index in the cell for RRC IDLE/INACTIVE (see TS 38.211 [16], clause 7.4.5.1.1).
<i>lpss-BinarySeqLen</i>	Indicates the LP-SS binary sequence length in the cell for RRC IDLE/INACTIVE. The value n6 means <i>BinarySeqLen</i> (see TS 38.211 [16], clause 7.4.5.1.1) is set to 6, value n8 means <i>BinarySeqLen</i> is set to 8, and so on.
<i>lpss-EPRE-Ratio</i>	Indicates the EPRE ratio between LP-SS and SSB in the cell for RRC IDLE/INACTIVE (see TS 38.213 [13], clause 10.4C). A value of dBminus3 means EPRE ratio is set to -3dB, a value of dB0 means EPRE ratio is set to 0dB, and so on. If the M value = 1 for both LP-WUS and LP-SS, or the M value > 1 for both LP-WUS and LP-SS, the difference between <i>lpwus-EPRE-Ratio</i> and <i>lpss-EPRE-Ratio</i> shall be no larger than 3 dB. If M value =1 for LP-WUS and the M value >1 for LP-SS, the EPRE ratio for LP-SS minus the EPRE ratio for LP-WUS should be within the range of -6 dB to 0 dB. Note: EPRE refers to EPRE in one OFDM symbol with non-zero power (from baseband perspective) LP-SS transmission.
<i>lpss-MvalueAndSeqConfig</i>	Indicates the number of OOK symbols in an OFDM symbol for LP-SS in FR1 or FR2 for RRC IDLE/INACTIVE (corresponding to parameter M_{LPSS} , see TS 38.211 [16], clause 7.4.5.1.1) and the LP-SS sequence configuration in the cell for RRC_IDLE/INACTIVE. A value of nOne means M value is set to 1, a value of nTwo means M value is set to 2, and so on.
<i>lpss-OverlaidSeqRoot</i>	Indicates the configuration of single overlaid sequence root for LP-SS in the cell for RRC IDLE/INACTIVE (see TS 38.211 [16], clause 7.4.2.5.1.2).
<i>lpss-PeriodicityAndOffset</i>	Indicates the configuration of LP-SS periodicity and time offset (see TS 38.213 [13]). The time offset is configured for the first LP-SS occasion with reference to SFN#0. A value of ms160 means the LP-SS periodicity (see TS 38.213 [13], clause 10.4C) is set to 160ms, a value of ms320 means the LP-SS periodicity is set to 320ms. For each LP-SS periodicity value, the time offset (see TS 38.213 [13], clause 10.4C) is configured with the unit of ms.
<i>lpss-StartSymbol</i>	Indicates start symbol(s) within a slot for LP-SS (see TS 38.213 [13], clause 10.4C), where the slot is determined from the periodicity/offset configuration, i.e. <i>lpss-PeriodicityAndOffset</i> , for LP-SS. If only <i>startSymbol1</i> is configured, there is one LP-SS occasion in a slot. If both <i>startSymbol1</i> and <i>startSymbol2</i> are configured, there are two LP-SS occasions in a slot.
<i>lpwus-ActualDuration</i>	Indicates the actual duration for LP-WUS in the cell for RRC IDLE/INACTIVE (see TS 38.213 [13], clause 10.4C). The actual duration of LP-WUS for different number of OOK symbols in an OFDM symbol for LP-WUS, i.e. M_{WUS} value of LP-WUS, see TS 38.211 [16], is configured with the unit of OFDM symbols.
<i>lpwus-AvailableSlot</i>	Indicates the available slot(s) for LP-WUS using a unit level bitmap with a periodicity 10, 20, or 40 units (see TS 38.213 [13], clause 10.4C) in RRC IDLE/INACTIVE, where the unit is one slot if 14-bit symbol level bitmap is used, or the unit is two slots if 28-bits symbol level bitmap is used, as configured by <i>lpwus-AvailableSymbol</i> . The most significant bit of the bit string represents the first unit and the second most significant bit represents the second unit and so on. Value 1 in the bitmap indicates that the corresponding unit is available, value 0 indicates that the corresponding unit is not available. This slot pattern repeats itself continuously.
<i>lpwus-AvailableSymbol</i>	Indicates the available symbol(s) for LP-WUS within the slot(s) that are indicated as available for LP-WUS configured by <i>lpwus-AvailableSlot</i> (see TS 38.213 [13], clause 10.4C) in RRC IDLE/INACTIVE. A 14-bit or 28-bit symbol level bitmap that covers one or two slots can be configured. For <i>oneSlot</i> , the 14 bits represent the symbols within the slot. For <i>twoSlots</i> , the first 14 bits represent the symbols within the first slot and the next 14 bits represent the symbols in the second slot. For the bits representing symbols in a slot, the most significant bit of the bit string represents the first symbol in the slot and the second most significant bit represents the second symbol in the slot and so on. Value 1 in the bitmap indicates that the corresponding symbol is available, value 0 indicates that the corresponding symbol is not available.
<i>lpwus-EPRE-Ratio</i>	Indicates the EPRE ratio between LP-WUS and SSB in the cell for RRC IDLE/INACTIVE (see TS 38.213 [13], clause 10.4C). A value of dBminus3 means EPRE ratio is set to -3dB, a value of dB0 means EPRE ratio is set to 0dB, and so on. If the M value = 1 for both LP-WUS and LP-SS, or the M value > 1 for both LP-WUS and LP-SS, the difference

between *lpwus-EPRE-Ratio* and *lpss-EPRE-Ratio* shall be no larger than 3 dB. If M value =1 for LP-WUS and the M value >1 for LP-SS, the ERPE ratio for LP-SS minus the EPRE ratio for LP-WUS should be within the range of -6 dB to 0 dB.

Note: EPRE refers to EPRE in one OFDM symbol with non-zero power (from baseband perspective) LP-WUS transmission.

lpwus-LO-FrameOffsetList

Indicates the frame-level offset between an LO and a reference point for LP-WUS in the cell for RRC IDLE/INACTIVE, where the reference point is the start of the PF, or the first PF of the PF(s) (if mapping of POs from multiple PFs to one LO is supported), associated with the LO (see TS 38.213 [13], clause 10.4C).

The number of entries of *offsetForLongerWakeUpDelay* and *offsetForShorterWakeUpDelay*, if present, is each equal to CEIL ($N_s / lpwus-PO-NumPerLO$), where N_s is the number of paging occasions per paging frame configured in SIB1.

Network configures at least one of *offsetForLongerWakeUpDelay* and *offsetForShorterWakeUpDelay*.

lpwus-LO-FrameOffsetListForPagingAdapt

Indicates the frame-level offset between an LO and a reference point for LP-WUS in the cell for RRC IDLE/INACTIVE, where the reference point is the start of the PF, or the first PF of the PF(s) (if mapping of POs from multiple PFs to one LO is supported), associated with the LO (see TS 38.213 [13], clause 10.4C) for paging adaptation. If the UE supports paging adaptation and LP-WUS, it ignores *lpwus-LO-FrameOffsetList*, if configured.

The number of entries of *offsetForLongerWakeUpDelay* and *offsetForShorterWakeUpDelay*, if present, is each equal to CEIL ($N_s / lpwus-PO-NumPerLO$), where N_s is the number of paging occasions per paging frame configured in SIB1 for paging adaptation.

Network configures at least one of *offsetForLongerWakeUpDelay* and *offsetForShorterWakeUpDelay*.

lpwus-LPSS-BeamSubset

Indicates the subset of beams for LP-WUS/LP-SS in the cell for RRC IDLE/INACTIVE (see TS 38.213 [13], clause 10.4C), where the full set of beams refers to the actual transmitted SSBs determined according to *ssb-PositionsInBurst* configured in SIB1. The most significant bit of the bit string corresponds to beam index 0, the second most significant bit of the bit string corresponds to beam index 1, and so on. Value 0 in the bitmap indicates that the corresponding beam is not transmitted while value 1 indicates that the corresponding beam is transmitted. One bit could be set to value 1 only if the corresponding bit in *ssb-PositionsInBurst* is set to value 1.

If this field is not configured, UE assumes the LP-WUS/LP-SS is transmitted for all the actual transmitted beams determined according to *ssb-PositionsInBurst* configured in SIB1.

lpwus-LPSS-StartRB

Indicates the starting RB of LP-WUS and LP-SS for RRC IDLE/INACTIVE (see TS 38.213 [13], clause 10.4C). The starting RB index reference to carrier boundary determined by *offsetToCarrier* corresponding to SCS of the DL initial BWP is configured by gNB. The starting PRB index configured for LP-WUS is that same as that of LP-SS.

lpwus-MO-NumPerLO

Indicates the number of LP-WUS MO(s) per beam within an LO in the cell for RRC IDLE/INACTIVE (see TS 38.213 [13], clause 10.4C). Value n1 means 1 MO per beam within an LO, value n2 means 2 MOs per beam within an LO, and so on.

lpwus-MvalueAndSeqConfigFR1

Indicates the number of OOK symbols in an OFDM symbol for LP-WUS in FR1 for RRC IDLE/INACTIVE (corresponding to parameter M_{WUS} , see TS 38.211 [16], clause 7.4.4.1.1 in TS 38.211 [16]) and the LP-WUS sequence configuration in the cell for RRC_IDLE/INACTIVE. A value of nOne means M value is set to 1, a value of nTwo means M value is set to 2, and so on.

lpwus-MvalueAndSeqConfigFR2

Indicates the number of OOK symbols in an OFDM symbol for LP-WUS in FR2 for RRC IDLE/INACTIVE (corresponding to parameter M_{WUS} , see TS 38.211 [16], clause 7.4.4.1.1 in TS 38.211 [16]) and the LP-WUS sequence configuration in the cell for RRC_IDLE/INACTIVE. A value of nOne means M value is set to 1.

lpwus-NominalMoDuration

Indicates the nominal MO duration for LP-WUS in the cell for RRC IDLE/INACTIVE (see TS 38.213 [13], clause 10.4C), in number of OFDM symbols. A value of 1 cannot be configured in case M_{WUS} in TS 38.211 [16] is 1.

lpwus-OffsetFirstMoWithinLo

Indicates the symbol level offset for the starting time location of the first LP-WUS MO in an LO w.r.t. the reference point (see TS 38.213 [13], clause 10.4C). The reference point is the start of a reference frame determined by the frame-level offset from the start of the first PF of the PF(s) associated with the LO. Common symbol level offset is shared across all LOs. The offset for different SCS is configured with the unit of OFDM symbols.

lpwus-OverlaidSeqNum

Indicates the number of candidate overlaid sequences to carry LP-WUS information per OOK ON chip for LP-WUS in the cell in FR1 for RRC IDLE/INACTIVE (corresponding

to parameter N_{seq} , see TS 38.211 [16], clause 7.4.4.1.1).

lpwus-OverlaidSeqNum-SCS-120kHz

Indicates the number of candidate overlaid sequences to carry LP-WUS information per OOK ON chip for LP-WUS in the cell for RRC IDLE/INACTIVE for SCS of 120KHz in FR2 (see TS 38.211 [16], clause 7.4.4.1.1).

lpwus-OverlaidSeqRoot

Indicates the configuration of overlaid sequence root for LP-WUS in the cell for RRC IDLE/INACTIVE (see TS 38.211 [16], clause 7.4.4.1.1).

lpwus-PO-NumPerLO

Indicates the number of PO(s) associated with one LO for LP-WUS in the cell for RRC IDLE/INACTIVE (see TS 38.213 [13], clause 10.4C). Value po1 means 1 PO associated with one LO, value po2 means 2 POs associated with one LO, and so on. The network always includes this field when *LowPowerConfig* is configured.

offsetForLongerWakeUpDelay

Indicates the frame-level offset value for LP-WUS corresponding to longer UE wake-up delay (see TS 38.213 [13], clause 10.4C). The reference point (reference PO/PF) for the frame-level offset is the start of the PF, or the first PF of the PF(s) (if mapping of POs from multiple PFs to one LO is supported), associated with the LO. Each entry in *offsetForLongerWakeUpDelay* is configured with the unit of frames.

offsetForShorterWakeUpDelay

Indicates the frame-level offset value for LP-WUS corresponding to shorter UE wake-up delay (see TS 38.213 [13], clause 10.4C). The reference point (reference PO/PF) for the frame-level offset is the start of the PF, or the first PF of the PF(s) (if mapping of POs from multiple PFs to one LO is supported), associated with the LO. Each entry in *offsetForShorterWakeUpDelay* is configured with the unit of frames.

root1

Indicates the first overlaid sequence root for LP-WUS in the cell for RRC IDLE/INACTIVE (see TS 38.211 [16], clause 7.4.4.1.1).

root2

Indicates the second overlaid sequence root for LP-WUS in the cell for RRC IDLE/INACTIVE (see TS 38.211 [16], clause 7.4.4.1.1). For FR1, this field shall be present for the case when the value of parameter *lpwus-OverlaidSeqNum* is configured as 16/8/4 for M value=1/2/4, respectively; otherwise, it is optional.

***LP-SubgroupConfig* field descriptions**

lp-SubgroupsNumForUEID

Number of subgroups per Paging Occasion (PO) for UE to read subgroups indication from LP-WUS signaling, for UEID-based subgrouping method for LP-WUS. When present, the field is set to an integer smaller than or equal to *lp-SubgroupsNumPerPO*. *lp-SubgroupsNumPerPO* equals to *lp-SubgroupsNumForUEID* when the network does not configure CN-assigned subgrouping for LP-WUS. When *lowPowerConfig* is configured, the field is absent when the network only configures CN-assigned subgrouping for LP-WUS. Both this field and *lp-SubgroupsNumPerPO* are equal to 1 when the network does not configure subgrouping for LP-WUS. When *lowPowerConfig* is configured, if the field is absent, the UE uses subgrouping according to TS 38.304 [20], clause 7.6.2.

lp-SubgroupsNumPerPO

Total number of subgroups per Paging Occasion (PO) for UE to monitor codepoint from LP-WUS signaling. The field represents the sum of CN-assigned and UEID-based subgroups supported for LP-WUS by the network. When *lowPowerConfig* is configured, there is always at least one subgroup (UEID-based subgroup or CN-assigned subgroup) configured. The maximum number of subgroups per PO is 31, 15, and 7 when the number of PO(s) associated with one LO for LP-WUS, i.e., *lpwus-PO-NumPerLO*, is configured as 1, 2, and 4, respectively.

EntryCondition, ExitCondition field descriptions
entryEvaluationOnLR-ForLR-OnLPSS Indicates the threshold(s) for a UE supporting OOK based LP-WUR or OFDM based LP-WUR measuring on LP-SS to determine whether the entry condition for using LP-WUS is fulfilled or not based on the serving cell measurement on LP-WUR (see TS 38.304 [20], clause 7.5.1). This field is optional present for the cell supporting OOK based LP-WUR or OFDM based LP-WUR measuring on LP-SS. It is absent otherwise.
entryEvaluationOnLR-ForLR-OnSSB Indicates the threshold(s) for a UE supporting OFDM based LP-WUR measuring on SSB to determine whether the entry condition for using LP-WUS is fulfilled or not based on the serving cell measurement on LP-WUR (see TS 38.304 [20], clause 7.5.1). This field is optional present for the cell supporting OFDM based LP-WUR measuring on SSB. It is absent otherwise.
entryEvaluationOnMR-ForLR-OnLPSS Indicates the threshold(s) for a UE supporting OOK based LP-WUR or OFDM based LP-WUR measuring on LP-SS to determine whether the entry condition for using LP-WUS is fulfilled or not based on the serving cell measurement on MR (see TS 38.304 [20], clause 7.5.1).
entryEvaluationOnMR-ForLR-OnSSB Indicates the threshold(s) for a UE supporting OFDM based LP-WUR measuring on SSB to determine whether the entry condition for using LP-WUS is fulfilled or not based on the serving cell measurement on MR (see TS 38.304 [20], clause 7.5.1).
exitEvaluationOnLR-ForLR-OnLPSS Indicates the threshold(s) for a UE supporting OOK based LP-WUR or OFDM based LP-WUR measuring on LP-SS to determine whether the exit condition for using LP-WUS is fulfilled or not based on the serving cell measurement on LP-WUR (see TS 38.304 [20], clause 7.5.1). This field is optional present for the cell supporting OOK based LP-WUR or OFDM based LP-WUR measuring on LP-SS. It is absent otherwise.
exitEvaluationOnLR-ForLR-OnSSB Indicates the threshold(s) for a UE supporting OFDM based LP-WUR measuring on SSB to determine whether the exit condition for using LP-WUS is fulfilled or not based on the serving cell measurement on LP-WUR (see TS 38.304 [20], clause 7.5.1). This field is optional present for the cell supporting OFDM based LP-WUR measuring on SSB. It is absent otherwise.
thresholdP1, thresholdP2 Parameters " $S_{ThresholdP1}$ ", and " $S_{ThresholdP2}$ " in TS 38.304 [20].
thresholdQ1, thresholdQ2 Parameters " $S_{ThresholdQ1}$ ", and " $S_{ThresholdQ2}$ " in TS 38.304 [20].
thresholdP1-LR, thresholdP2-LR, thresholdP3-LR, thresholdP4-LR Parameters " $S_{ThresholdP1-LR}$ ", " $S_{ThresholdP2-LR}$ ", " $S_{ThresholdP3-LR}$ ", and " $S_{ThresholdP4-LR}$ " in TS 38.304 [20].
thresholdQ1-LR, thresholdQ2-LR, thresholdQ3-LR, thresholdQ4-LR Parameters " $S_{ThresholdQ1-LR}$ ", " $S_{ThresholdQ2-LR}$ ", " $S_{ThresholdQ3-LR}$ ", and " $S_{ThresholdQ4-LR}$ " in TS 38.304 [20].

Conditional Presence	Explanation
<i>SharedSpectrum2</i>	The field is optional present, Need R, if this cell operates with shared spectrum channel access. Otherwise, it is absent, Need R.
<i>FR1-Only</i>	This field is mandatory present for an FR1 carrier frequency. It is absent otherwise.
<i>FR2-Only</i>	This field is mandatory present for an FR2 carrier frequency. It is absent otherwise.
<i>SupportLR-OnLPSS</i>	This field is mandatory present for the cell supporting OOK based LP-WUR or OFDM based LP-WUR measuring on LP-SS. It is absent otherwise.
<i>SupportLR-OnSSB</i>	This field is mandatory present for the cell supporting OFDM based LP-WUR measuring on SSB. It is absent otherwise.
<i>OOK-Only</i>	This field is mandatory present for OOK based LP-WUR for LP-WUS operation in RRC IDLE/INACTIVE. Otherwise, it is absent.
<i>OOK4-Only</i>	This field is mandatory present for OOK-4 based LP-SS with M value >1, and optional present, Need R, for OOK-4 based LP-SS with M value =1. Otherwise, it is absent.

– DownlinkPreemption

The IE *DownlinkPreemption* is used to configure the UE to monitor PDCCH for the INT-RNTI (interruption).

DownlinkPreemption information element

```
-- ASN1START
-- TAG-DOWNLINKPREEMPTION-START

DownlinkPreemption ::=
    SEQUENCE {
        int-RNTI                RNTI-Value,
        timeFrequencySet        ENUMERATED {set0, set1},
        dci-PayloadSize         INTEGER (0..maxINT-DCI-PayloadSize),
        int-ConfigurationPerServingCell SEQUENCE (SIZE (1..maxNrofServingCells)) OF INT-ConfigurationPerServingCell,
        ...
    }

INT-ConfigurationPerServingCell ::= SEQUENCE {
    servingCellId        ServCellIndex,
    positionInDCI        INTEGER (0..maxINT-DCI-PayloadSize-1)
}

-- TAG-DOWNLINKPREEMPTION-STOP
-- ASN1STOP
```

DownlinkPreemption field descriptions
dcf-PayloadSize Total length of the DCI payload scrambled with INT-RNTI (see TS 38.213 [13], clause 11.2).
int-ConfigurationPerServingCell Indicates (per serving cell) the position of the 14 bit INT values inside the DCI payload (see TS 38.213 [13], clause 11.2).
int-RNTI RNTI used for indication pre-emption in DL (see TS 38.213 [13], clause 10).
timeFrequencySet Set selection for DL-preemption indication (see TS 38.213 [13], clause 11.2) The set determines how the UE interprets the DL preemption DCI payload.

INT-ConfigurationPerServingCell field descriptions
positionInDCI Starting position (in number of bit) of the 14 bit INT value applicable for this serving cell (<i>servingCellId</i>) within the DCI payload (see TS 38.213 [13], clause 11.2). Must be multiples of 14 (bit).

– DRB-Identity

The IE *DRB-Identity* is used to identify a DRB used by a UE.

DRB-Identity information element

```
-- ASN1START
-- TAG-DRB-IDENTITY-START

DRB-Identity ::=
    INTEGER (1..32)

-- TAG-DRB-IDENTITY-STOP
-- ASN1STOP
```

– DRX-Config

The IE *DRX-Config* is used to configure DRX related parameters.

DRX-Config information element

```
-- ASN1START
-- TAG-DRX-CONFIG-START

DRX-Config ::=

DRX-Config field descriptions
drx-HARQ-RTT-TimerDL Value in number of symbols of the BWP where the transport block was received. <i>drx-HARQ-RTT-TimerDL-r17</i> is only applicable for SCS 480 kHz and 960 kHz. If configured, the UE shall ignore <i>drx-HARQ-RTT-TimerDL</i> (without suffix) for SCS 480 kHz and 960 kHz.
drx-HARQ-RTT-TimerUL Value in number of symbols of the BWP where the transport block was transmitted. <i>drx-HARQ-RTT-TimerUL-r17</i> is only applicable for SCS 480 kHz and 960 kHz. If configured, the UE shall ignore <i>drx-HARQ-RTT-TimerUL</i> (without suffix) for SCS 480 kHz and 960 kHz.
drx-InactivityTimer Value in multiple integers of 1 ms. <i>ms0</i> corresponds to 0, <i>ms1</i> corresponds to 1 ms, <i>ms2</i> corresponds to 2 ms, and so on.
drx-LongCycleStartOffset <i>drx-LongCycle</i> in ms and <i>drx-StartOffset</i> in multiples of 1 ms. If <i>drx-ShortCycle</i> is configured, the value of <i>drx-LongCycle</i> shall be a multiple of the <i>drx-ShortCycle</i> value.
drx-NonIntegerLongCycleStartOffset <i>drx-NonIntegerLongCycle</i> in non-integer number of ms (e.g. <i>ms1001over240</i> corresponds to 1001/240 ms, <i>ms25over6</i> corresponds to 25/6 ms and so on) and <i>drx-StartOffset</i> in multiples of 1 ms. If <i>drx-NonIntegerShortCycle</i> is configured, the value of <i>drx-NonIntegerLongCycle</i> shall be a multiple of the <i>drx-NonIntegerShortCycle</i> value. If <i>drx-NonIntegerLongCycleStartOffset-r18</i> is configured, the UE shall ignore <i>drx-LongCycleStartOffset</i> .
drx-NonIntegerShortCycle Value in non-integer number of ms, e.g. <i>ms1001over240</i> corresponds to 1001/240 ms, <i>ms25over6</i> corresponds to 25/6 ms and so on.
drx-onDurationTimer Value in multiples of 1/32 ms (subMilliSeconds) or in ms (milliSecond). For the latter, value <i>ms1</i> corresponds to 1 ms, value <i>ms2</i> corresponds to 2 ms, and so on.
drx-RetransmissionTimerDL Value in number of slot lengths of the BWP where the transport block was received. value <i>s/0</i> corresponds to 0 slots, <i>s/1</i> corresponds to 1 slot, <i>s/2</i> corresponds to 2 slots, and so on.
drx-RetransmissionTimerUL Value in number of slot lengths of the BWP where the transport block was transmitted. <i>s/0</i> corresponds to 0 slots, <i>s/1</i> corresponds to 1 slot, <i>s/2</i> corresponds to 2 slots, and so on.
drx-ShortCycleTimer Value in multiples of <i>drx-ShortCycle</i> or <i>drx-NonIntegerShortCycle</i> (depending on which one is configured). A value of 1 corresponds to <i>drx-ShortCycle</i> or <i>drx-NonIntegerShortCycle</i> , a value of 2 corresponds to 2 * <i>drx-ShortCycle</i> or 2 * <i>drx-NonIntegerShortCycle</i> and so on.
drx-ShortCycle Value in ms. <i>ms1</i> corresponds to 1 ms, <i>ms2</i> corresponds to 2 ms, and so on.
drx-SlotOffset Value in 1/32 ms. Value 0 corresponds to 0 ms, value 1 corresponds to 1/32 ms, value 2 corresponds to 2/32 ms, and so on.
drx-TimeReferenceSFN Indicates how the UE initializes the counter DRX_SF_N_COUNTER, see TS 38.321 [3], clause 5.7.
shortDRX Configuration of a short DRX cycle. The network configures only one of <i>shortDRX</i> (without a suffix) or <i>shortDRX-r18</i> .

– DRX-ConfigSecondaryGroup

The IE *DRX-ConfigSecondaryGroup* is used to configure DRX related parameters for the second DRX group as specified in TS 38.321 [3].

DRX-ConfigSecondaryGroup information element

-- ASN1START

```
-- TAG-DRX-CONFIGSECONDARYGROUP-START

DRX-ConfigSecondaryGroup-r16 ::= SEQUENCE {
    drx-onDurationTimer-r16 CHOICE {
        subMilliSeconds INTEGER (1..31),
        milliSeconds ENUMERATED {
            ms1, ms2, ms3, ms4, ms5, ms6, ms8, ms10, ms20, ms30, ms40, ms50, ms60,
            ms80, ms100, ms200, ms300, ms400, ms500, ms600, ms800, ms1000, ms1200,
            ms1600, spare8, spare7, spare6, spare5, spare4, spare3, spare2, spare1 }
        },
    drx-InactivityTimer-r16 ENUMERATED {

        ms100, ms200, ms300, ms500, ms750, ms1280, ms1920, ms2560, spare9, spare8,
        spare7, spare6, spare5, spare4, spare3, spare2, spare1}
    }
}

-- TAG-DRX-CONFIGSECONDARYGROUP-STOP
-- ASN1STOP
```

DRX-ConfigSecondaryGroup field descriptions
drx-InactivityTimer Value in multiple integers of 1 ms. <i>ms0</i> corresponds to 0 ms, <i>ms1</i> corresponds to 1 ms, <i>ms2</i> corresponds to 2 ms, and so on, as specified in TS 38.321 [3]. The network configures a <i>drx-InactivityTimer</i> value for the second DRX group that is smaller than the <i>drx-InactivityTimer</i> configured for the default DRX group in IE <i>DRX-Config</i> .
drx-onDurationTimer Value in multiples of 1/32 ms (subMilliSeconds) or in ms (milliSeconds). For the latter, value <i>ms1</i> corresponds to 1 ms, value <i>ms2</i> corresponds to 2 ms, and so on, as specified in TS 38.321 [3]. The network configures a <i>drx-onDurationTimer</i> value for the second DRX group that is smaller than the <i>drx-onDurationTimer</i> configured for the default DRX group in IE <i>DRX-Config</i> .

— DRX-ConfigSL

The IE *DRX-ConfigSL* is used to configure additional DRX parameters for the UE performing sidelink operation with resource allocation mode 1, as specified in TS 38.321 [3].

DRX-ConfigSL information element

```
-- ASN1START
-- TAG-DRX-CONFIGSL-START

DRX-ConfigSL-r17 ::= SEQUENCE {
    drx-HARQ-RTT-TimerSL-r17 INTEGER (0..56),
    drx-RetransmissionTimerSL-r17 ENUMERATED {s10, s11, s12, s14, s16, s18, s116, s124, s133, s140, s164, s180, s196, s1112, s1128,
        s1160, s1320, spare15, spare14, spare13, spare12, spare11, spare10, spare9, spare8,
        spare7, spare6, spare5, spare4, spare3, spare2, spare1}
    }
}

-- TAG-DRX-CONFIGSL-STOP
-- ASN1STOP
```

DRX-ConfigSL field descriptions**drx-HARQ-RTT-TimerSL**

For sidelink configured grant Type 1, value in number of symbols of the activated DL BWP of PCell. For other cases, value in number of symbols of the BWP where the PDCCH was transmitted. Value 0 is used in case *sl-PUCCH-Config* is not configured and the corresponding resource pool is not configured with PSFCH.

drx-RetransmissionTimerSL

For sidelink configured grant Type 1, value in number of slot lengths of the activated DL BWP of PCell. For other cases, value in number of slot lengths of the BWP where the PDCCH was transmitted. *sl0* corresponds to 0 slots, *sl1* corresponds to 1 slot, *sl2* corresponds to 2 slots, and so on.

– **EarlyUL-SyncConfig**

The IE *EarlyUL-SyncConfig* is used to configure random access resources for the early UL synchronization procedure.

EarlyUL-SyncConfig information element

```
-- ASN1START

}

-- TAG-EARLYUL-SYNCCONFIG-STOP
-- ASN1STOP
```

EarlyUL-SyncConfig field descriptions	
frequencyInfoUL	This field provides basic parameters of an uplink carrier for PRACH transmission on a candidate cell.
ltm-PRACH-SubcarrierSpacing	Indicates subcarrier spacing of PRACH for LTM (see TS 38.211 [16], clause 5.3.2). Only the following values are applicable depending on the used frequency: FR1: 15 or 30 kHz FR2-1: 60 or 120 kHz FR2-2: 120, 480, or 960 kHz If absent, the UE applies the SCS as derived from the <i>prach-ConfigurationIndex</i> in <i>RACH-ConfigGeneric</i> (see tables Table 6.3.3.1-1, Table 6.3.3.1-2, Table 6.3.3.2-2 and Table 6.3.3.2-3, TS 38.211 [16]).
n-TimingAdvanceOffset	The N_TA-Offset to be applied for all uplink transmissions on a candidate cell. If the field is absent, the UE applies the value as defined in TS 38.133 [14], table 7.1.2-2.
rach-ConfigGeneric	RACH parameters for performing a random access procedure on a candidate cell.
ssb-PerRACH-Occasion	This field indicated the number of SSBs for RACH occasion.
ltm-TimeAlignmentTimerTag2	The TAT value for TAG with ID <i>tag2-Id</i> , as specified in TS 38.321 [3].

Conditional Presence	Explanation
2TA	This field is optionally present, Need R, if <i>tag2</i> is present in the <i>SpCellConfig</i> in <i>ltm-CandidateConfig</i> . It is absent otherwise.
L139	The field is mandatory present if <i>prach-RootSequenceIndex</i> L=139, otherwise the field is absent, Need S.
TDD	This field is optionally present, Need R, for TDD LTM candidate cells. It is absent otherwise.

– EphemerisInfo

The IE *EphemerisInfo* provides satellite ephemeris. Ephemeris may be expressed either in format of position and velocity state vector in ECEF or in format of orbital parameters in ECI. Note: The ECI and ECEF coincide at *epochTime*, i.e., x,y,z axis in ECEF are aligned with x,y,z axis in ECI at *epochTime*.

EphemerisInfo information element

```
-- ASN1START
-- TAG-EPHEMERISINFO-START

EphemerisInfo-r17 ::= CHOICE {
    positionVelocity-r17    PositionVelocity-r17,
    orbital-r17             Orbital-r17

-- TAG-EPHEMERISINFO-STOP
-- ASN1STOP
```

EphemerisInfo field descriptions
eccentricity Satellite orbital parameter: eccentricity <i>e</i> . Unit is radian. Step of $1.431 \cdot 10^{-8}$. Actual value = field value * ($1.431 \cdot 10^{-8}$).
inclination Satellite orbital parameter: inclination <i>i</i> . Unit is radian. Step of $2.341 \cdot 10^{-8}$ rad. Actual value = field value * ($2.341 \cdot 10^{-8}$) for positive values. Actual value = field value * ($2.341 \cdot 10^{-8}$) + pi for negative values.
longitude Satellite orbital parameter: longitude of ascending node ϖ . Unit is radian. Step of $2.341 \cdot 10^{-8}$ rad. Actual value = field value * ($2.341 \cdot 10^{-8}$).
meanAnomaly Satellite orbital parameter: Mean anomaly <i>M</i> at epoch time. Unit is radian. Step of $2.341 \cdot 10^{-8}$ rad. Actual value = field value * ($2.341 \cdot 10^{-8}$).
periapsis Satellite orbital parameter: argument of periapsis ϖ . Unit is radian. Step of $2.341 \cdot 10^{-8}$ rad. Actual value = field value * ($2.341 \cdot 10^{-8}$).
positionX, positionY, positionZ X, Y, Z coordinate of satellite position state vector in ECEF. Unit is meter. Step of 1.3 m. Actual value = field value * 1.3.
semiMajorAxis Satellite orbital parameter: semi major axis a . Unit is meter. Step of $4.249 \cdot 10^{-3}$ m. Actual value = 6500000 + field value * ($4.249 \cdot 10^{-3}$).
velocityVX, velocityVY, velocityVZ X, Y, Z coordinate of satellite velocity state vector in ECEF. Unit is meter/second. Step of 0.06 m/s. Actual value = field value * 0.06.

– *EpochTime*

The IE *EpochTime* is used to indicate the epoch time for the NTN assistance information, and it is defined as the starting time of a DL sub-frame, indicated by a SFN and a sub-frame number signaled together with the assistance information. The reference point for *EpochTime* of the serving or neighbour NTN payload ephemeris and Common TA parameters is the uplink time synchronization reference point of the serving cell when this field is provided in an NTN cell and the gNB when this field is provided in a TN cell. In case of handover or conditional handover, the reference point for *EpochTime* of the target NTN payload ephemeris and Common TA parameters is the uplink time synchronization reference point of the target cell. In case of handover or conditional handover, *EpochTime* is based on the timing of the target cell, i.e. the SFN and sub-frame number indicated refers to the SFN and sub-frame of the target cell. Otherwise, *EpochTime* is used based on the timing of the serving cell, i.e. the SFN and sub-frame number indicated refers to the SFN and sub-frame of the serving cell.

EpochTime information element

```
-- ASN1START
-- TAG-EPOCHTIME-START

EpochTime-r17 ::=
    sfm-r17          SEQUENCE {
                        INTEGER(0..1023),
```

```
subFrameNR-r17          INTEGER (0..9)
}

-- TAG-EPOCHTIME-STOP
-- ASN1STOP
```

EpochTime field descriptions
sfn For serving cell, it indicates the current SFN or the next upcoming SFN after the frame where the message indicating the <i>epochTime</i> is received. For neighbour or target cell when explicit epoch time is present, it indicates the SFN nearest to the frame where the message indicating the <i>epochTime</i> is received.

– EUTRA-C-RNTI

The IE *EUTRA-C-RNTI* identifies a UE having a RRC connection within an E-UTRA cell.

EUTRA-C-RNTI information element

```
-- ASN1START
-- TAG-EUTRACRNTI-START

EUTRA-C-RNTI ::=
    BIT STRING (SIZE (16))

-- TAG-EUTRACRNTI-STOP
-- ASN1STOP
```

– FeatureCombination

The IE *FeatureCombination* indicates a feature or a combination of features to be associated with a set of Random Access resources (i.e. an instance of *FeatureCombinationPreambles*).

FeatureCombination information element

```
-- ASN1START
-- TAG-FEATURECOMBINATION-START

FeatureCombination-r17 ::= SEQUENCE {
    redCap-r17          ENUMERATED {true}                OPTIONAL, -- Need R
    smallData-r17       ENUMERATED {true}                OPTIONAL, -- Need R
    nsag-r17            NSAG-List-r17                    OPTIONAL, -- Need R

    spare1              ENUMERATED {true}                OPTIONAL -- Need R
}
```

```
NSAG-List-r17 ::= SEQUENCE (SIZE (1.. maxSliceInfo-r17)) OF NSAG-ID-r17

-- TAG-FEATURECOMBINATION-STOP
-- ASN1STOP
```

FeatureCombination field descriptions
eRedCap If present, this field indicates that eRedCap is part of this feature combination. The fields <i>redCap</i> and <i>eRedCap</i> shall not be both set to <i>true</i> . If the UE is an eRedCap UE and there is no set of configured RA resources with <i>eRedCap</i> set to <i>true</i> among all sets of configured RA resources, the UE considers <i>redCap</i> to be applicable for random access procedure. This field is not configured in a set of preambles that is configured with 2-step random-access type.
msg1-Repetitions If present, this field indicates that signalling of msg1 repetition is part of this feature combination. This field is not configured in a set of preambles that is configured with 2-step random-access type.
msg3-Repetitions If present, this field indicates that signalling of msg3 repetition is part of this feature combination. This field is not configured in a set of preambles that is configured with 2-step random-access type.
nsag If present, this field indicates NSAG(s) that are part of this feature combination.
redCap If present, this field indicates that RedCap is part of this feature combination.
smallData If present, this field indicates that Small Data is part of this feature combination.

– FeatureCombinationPreambles

The IE *FeatureCombinationPreambles* associates a set of preambles with a feature combination. For parameters which can be provided in this IE, the UE applies this field value when performing Random Access using a preamble in this featureCombinationPreambles, otherwise the UE applies the corresponding value as determined by applicable Need Code, e.g. Need S. On a specific BWP, there can be at most one set of preambles associated with a given feature combination per RA Type (i.e. 4-step RACH or 2-step RACH) per MSG1 repetition number.

FeatureCombinationPreambles information element

```
-- ASN1START

    ]]
}

-- TAG-FEATURECOMBINATIONPREAMBLES-STOP
-- ASN1STOP

```

FeatureCombinationPreambles field descriptions
deltaPreamble Power offset between msg3 or msgA-PUSCH and RACH preamble transmission. If configured, this parameter overrides <i>msg3-DeltaPreamble</i> or <i>msgA-DeltaPreamble</i>, Actual value = field value * 2 [dB] (see TS 38.213 [13], clause 7.1). If <i>msgA-DeltaPreamble</i> is configured in <i>separateMsgA-PUSCH-Config-r17</i>, this field is absent. This field is set to the same value for all <i>FeatureCombinationPreambles</i> for MSG1 repetitions.
featureCombination Indicates which combination of features that the preambles indicated by this IE are associated with. Network ensures that at least one field within the <i>featureCombination</i> is configured. The UE ignores a RACH resource defined by this <i>FeatureCombinationPreambles</i> if any feature within the <i>featureCombination</i> is not supported by the UE or if any of the spare fields within the <i>featureCombination</i> is set to <i>true</i>.
messagePowerOffsetGroupB Threshold for preamble selection. Value is in dB. Value <i>minusinfinity</i> corresponds to –infinity. Value <i>dB0</i> corresponds to 0 dB, <i>dB5</i> corresponds to 5 dB and so on (see TS 38.321 [3], clause 5.1.2).
msg1-RepetitionNum Indicates which MSG1-repetition number that this <i>FeatureCombinationPreambles</i> is associated with.
msg1-RepetitionTimeOffsetROGroup Indicates a time offset of the starting ROs between two successive RO groups for a given repetition number (2, 4 or 8) associated with this <i>FeatureCombinationPreambles</i> for each frequency resource index within a time period (see TS 38.213 [13]). If this field is absent, the time offset is implicitly determined (see TS 38.213 [13]). For each MSG1 repetition number, the following values are applicable. • {n16}, for RO groups for MSG1 repetition number 8 • {n8, n16}, for RO groups for MSG1 repetition number 4 • {n4, n8, n16}, for RO groups for MSG1 repetition number 2
msgA-RSRP-Threshold The UE selects 2-step random access type to perform random access based on this threshold (see TS 38.321 [3], clause 5.1.1). This field is only present if both 2-step and 4-step RA type are configured for the concerned feature combination in the BWP. If configured, this parameter overrides <i>msgA-RSRP-Threshold-r16</i>. If absent, the UE applies <i>msgA-RSRP-Threshold-r16</i>, if configured
numberOfPreamblesPerSSB-ForThisPartition It determines how many consecutive preambles are associated to the Feature Combination starting from the starting preamble(s) per SSB.
numberOfRA-PreamblesGroupA It determines how many consecutive preambles per SSB are associated to Group A starting from the starting preamble(s). The remaining preambles associated to the Feature Combination are associated to Group B
ra-SizeGroupA Transport Blocks size threshold in bits below which the UE shall use a contention-based RA preamble of group A. (see TS 38.321 [3], clause 5.1.2). If this feature combination preambles are associated to a <i>RACH-ConfigCommon-twostepRA</i>, this field correspond to <i>ra-MsgA-SizeGroupA</i>, otherwise it corresponds to <i>ra-Msg3SizeGroupA</i>.
rsrp-ThresholdSSB UE may select the SS block and corresponding PRACH resource for path-loss estimation and (re)transmission based on SS blocks that satisfy the threshold (see TS 38.213 [13]). If this parameter is included in <i>FeatureCombinationPreambles</i> which is included in <i>RACH-ConfigCommonTwoStepRA</i>, it corresponds to <i>msgA-RSRP-ThresholdSSB</i>, as defined in TS 38.321 [3]. If this parameter is included in <i>FeatureCombinationPreambles</i> which is included in <i>RACH-ConfigCommon</i>, it corresponds to <i>rsrp-ThresholdSSB</i>, as defined in TS 38.321 [3]. If this parameter is not included in <i>FeatureCombinationPreambles</i> which is included in <i>RACH-ConfigCommon</i>, the UE applies <i>rsrp-ThresholdSSB</i> included in the <i>RACH-ConfigCommon</i> which includes this <i>FeatureCombinationPreambles</i>. If this parameter is not included in <i>FeatureCombinationPreambles</i> which is included in <i>RACH-ConfigCommonTwoStepRA</i>, the UE applies <i>msgA-RSRP-ThresholdSSB</i> included in the <i>RACH-ConfigCommonTwoStepRA</i> which includes this <i>FeatureCombinationPreambles</i>.
separateMsgA-PUSCH-Config If present, it specifies how the 2-step RACH preambles identified by this <i>FeatureCombinationPreambles</i> are mapped to a PUSCH slot separate from the one defined in <i>MsgA-ConfigCommon-r16</i>. If the field is absent, the UE should apply the corresponding parameter in the <i>RACH-ConfigCommonTwoStepRA</i> of the BWP which includes the

FeatureCombinationPreambles IE.**ssb-SharedRO-MaskIndex**

Mask index (see TS 38.321 [3]).

Indicates a subset of ROs where preambles are allocated for this feature combination.

If this field is configured within *FeatureCombinationPreambles* which is included in *RACH-ConfigCommonTwoStepRA*:

- in case of separate ROs are configured for 4-step and 2-step random access, this field indicates a subset of ROs configured within this *RACH-ConfigCommonTwoStepRA*;
- in case shared ROs are used for 4-step and 2-step random access, it indicates the subset of ROs configured within *RACH-ConfigCommon*, which are the subset of ROs configured for 2-step random access.

This field is configured when there is more than one RO per SSB. If the field is absent, all ROs configured in *RACH-ConfigCommon* or *RACH-ConfigCommonTwoStepRA* containing this *FeatureCombinationPreambles* are shared. The network does not configure this field, if the field *msg1-RepetitionNum* is configured.

startPreambleForThisPartition

It defines the first preamble associated with the Feature Combination. If the UE is provided with a number N of SSB block indexes associated with one PRACH occasion, and $N < 1$, the first preamble in each PRACH occasion is the one having the same index as indicated by this field. If $N \geq 1$, N blocks of preambles associated with the Feature

Combination are defined, each having start index $22 \cdot \frac{N}{N+1} + \text{startPreambleForThisPartition}$, where n refers to SSB block index (see TS 38.213 [13], clause 8.1).

Conditional Presence	Explanation
<i>MsgAConfigCommon</i>	The field is optionally present, Need S, if <i>FeatureCombinationPreambles</i> is included in <i>RACH-ConfigCommonTwoStepRA</i> . Otherwise, it is absent. If the field is absent in <i>FeatureCombinationPreambles</i> included in <i>RACH-ConfigCommonTwoStepRA</i> , the UE applies <i>MsgA-PUSCH-Config</i> included in the corresponding <i>MsgA-ConfigCommon</i> .
<i>Msg1Rep2</i>	The field is mandatory present, if <i>msg1-Repetitions</i> is included in <i>FeatureCombinationPreambles</i> . Otherwise, it is absent.
<i>Msg1Rep3</i>	The field is optionally present, Need S, if <i>msg1-Repetitions</i> is included in <i>FeatureCombinationPreambles</i> . Otherwise, it is absent.

– *FilterCoefficient*

The IE *FilterCoefficient* specifies the measurement filtering coefficient. Value *fc0* corresponds to $k = 0$, *fc1* corresponds to $k = 1$, and so on.

FilterCoefficient information element

```
-- ASN1START
-- TAG-FILTERCOEFFICIENT-START

FilterCoefficient ::=      ENUMERATED { fc0, fc1, fc2, fc3, fc4, fc5, fc6, fc7, fc8, fc9, fc11, fc13, fc15, fc17, fc19, spare1, ...}

-- TAG-FILTERCOEFFICIENT-STOP
-- ASN1STOP
```

– *FreqBandIndicatorNR*

The IE *FreqBandIndicatorNR* is used to convey an NR frequency band number as defined in TS 38.101-1 [15], TS 38.101-2 [39] and TS 38.101-5 [75].

***FreqBandIndicatorNR* information element**

    }

SliceCellListNR-r17 ::=
    SEQUENCE (SIZE (1..maxCellSlice-r17)) OF PCI-Range

-- TAG-FREQPRIORITYLISTSLICING-STOP
-- ASN1STOP
```

<i>FreqPriorityListSlicing</i> field descriptions
dl-ImplicitCarrierFreq Indicates the downlink carrier frequency to which <i>sliceInfoList</i> is associated with. The frequency is signalled implicitly, value 0 corresponds to the serving frequency, value 1 corresponds to the first frequency indicated by the <i>InterFreqCarrierFreqList</i> in SIB4, and value 2 corresponds to the second frequency indicated by the <i>InterFreqCarrierFreqList</i> in SIB4, and so on.

SliceInfo field descriptions
sliceAllowedCellListNR List of allow-listed cells for slicing. If present, the cells listed in this list support the corresponding nsag-frequency pair, and the cells not listed in this list do not support the corresponding nsag-frequency pair, according to TS 38.304 [20], clause 5.2.4.11.
sliceCellListNR Contains either the list of allow-listed or exclude-listed cells for slicing. If absent, it implies all the cells support the corresponding nsag-frequency pair, according to 38.304 [20], clause 5.2.4.11.
sliceExcludedCellListNR List of exclude-listed cells for slicing. If present, the cells listed in this list do not support the corresponding nsag-frequency pair, and the cells not listed in this list support the corresponding nsag-frequency pair, according to TS 38.304 [20], clause 5.2.4.11.

Conditional Presence	Explanation
Mandatory	The field is mandatory present.

– FrequencyInfoDL

The IE *FrequencyInfoDL* provides basic parameters of a downlink carrier and transmission thereon.

FrequencyInfoDL information element

```
-- ASN1START
-- TAG-FREQUENCYINFODL-START

FrequencyInfoDL ::=
    SEQUENCE {
        absoluteFrequencySSB          ARFCN-ValueNR          OPTIONAL,  -- Cond SpCellAdd
        frequencyBandList             MultiFrequencyBandListNR,
        absoluteFrequencyPointA        ARFCN-ValueNR,
        scs-SpecificCarrierList        SEQUENCE (SIZE (1..maxSCSs)) OF SCS-SpecificCarrier,
        ...,
        [
            referenceCell-r18          ServCellIndex          OPTIONAL  -- Cond SSBlessSCell
        ]
    }

-- TAG-FREQUENCYINFODL-STOP
-- ASN1STOP
```

FrequencyInfoDL field descriptions***absoluteFrequencyPointA***

Absolute frequency position of the reference resource block (Common RB 0). Its lowest subcarrier is also known as Point A (see TS 38.211 [16], clause 4.4.4.2). Note that the lower edge of the actual carrier is not defined by this field but rather in the *scs-SpecificCarrierList*.

absoluteFrequencySSB

Frequency of the SSB to be used for this serving cell. SSB related parameters (e.g. SSB index) provided for a serving cell refer to this SSB frequency unless mentioned otherwise. The CD-SSB of the PCell is always on the sync raster. The SSB of the SCell supporting 12 PRB, 15 PRB or 20 PRB transmission bandwidth configuration as defined in TS 38.101-1 [15], TS 38.211 [16] and TS 38.213 [13] is always on the sync raster. Frequencies are considered to be on the sync raster if they are also identifiable with a GSCN value (see TS 38.101-1 [15] or TS 38.101-5 [75]). If the field is absent, the SSB related parameters should be absent, e.g. *ssb-PositionsInBurst*, *ssb-periodicityServingCell* and *subcarrierSpacing* in *ServingCellConfigCommon* IE. If the field is absent and *od-ssb* is absent in IE *SCellConfig*, or if the field is absent and *od-ssb* is present in IE *SCellConfig* but OD-SSB is not activated, the UE obtains timing reference from the intra-band SpCell or intra-band SCell if applicable as described in TS 38.213 [13], clause 4.1, or from the SpCell or an SCell indicated by *referenceCell*, or from the reference serving cell defined in TS 38.133 [14]. This is supported in case the SCell for which the UE obtains the timing reference is in the same or different frequency band as the cell (i.e. the SpCell or the SCell, respectively) from which the UE obtains the timing reference.

For PCell, this field corresponds to the CD-SSB.

frequencyBandList

List containing only one frequency band to which this carrier(s) belongs. Multiple values are not supported.

referenceCell

Indicates the reference cell, i.e. the cell which provides the timing reference and AGC source for the inter-band SSB-less SCell. If the reference cell is an SCell or PSCell, it should be an activated SCell or activated PSCell.

If this field is absent for an inter-band SSB-less SCell, the reference serving cell is defined in TS 38.133 [14].

scs-SpecificCarrierList

A set of carriers for different subcarrier spacings (numerologies). Defined in relation to Point A. The network configures a *scs-SpecificCarrier* at least for each numerology (SCS) that is used e.g. in a BWP (see TS 38.211 [16], clause 5.3).

Conditional Presence	Explanation
<i>SpCellAdd</i>	The field is mandatory present if this <i>FrequencyInfoDL</i> is for SpCell. Otherwise the field is optionally present, Need S.
<i>SSBlessSCell</i>	The field is optionally present, Need S, if the inter-band SSB-less SCell is configured for this cell and <i>absoluteFrequencySSB</i> is absent. It is absent otherwise, Need R.

– ***FrequencyInfoDL-SIB***

The IE *FrequencyInfoDL-SIB* provides basic parameters of a downlink carrier and transmission thereon.

***FrequencyInfoDL-SIB* information element**

```
-- ASN1START
-- TAG-FREQUENCYINFODL-SIB-START

FrequencyInfoDL-SIB ::=
    SEQUENCE {
        frequencyBandList      MultiFrequencyBandListNR-SIB,
        offsetToPointA          INTEGER (0..2199),
        scs-SpecificCarrierList SEQUENCE (SIZE (1..maxSCSs)) OF SCS-SpecificCarrier
    }
```

```
FrequencyInfoDL-SIB-v1760 ::= SEQUENCE {
    frequencyBandList-v1760      MultiFrequencyBandListNR-SIB-v1760
}

FrequencyInfoDL-SIB-v1800 ::= SEQUENCE {
    frequencyBandListAerial-r18  MultiFrequencyBandListNR-Aerial-SIB-r18
}

-- TAG-FREQUENCYINFODL-SIB-STOP
-- ASN1STOP
```

FrequencyInfoDL-SIB field descriptions
offsetToPointA Represents the offset to Point A as defined in TS 38.211 [16], clause 4.4.4.2.
frequencyBandList List of one or multiple frequency bands to which this carrier(s) belongs. If <i>frequencyBandList-v1760</i> is present, it shall contain the same number of entries, listed in the same order as in <i>frequencyBandList</i> (without suffix).
scs-SpecificCarrierList A set of carriers for different subcarrier spacings (numerologies). Defined in relation to Point A (see TS 38.211 [16], clause 5.3). The network configures this for all SCSs that are used in DL BWPs in this serving cell.

– FrequencyInfoUL

The IE *FrequencyInfoUL* provides basic parameters of an uplink carrier and transmission thereon.

FrequencyInfoUL information element

```
-- ASN1START
-- TAG-FREQUENCYINFOUL-START

FrequencyInfoUL ::= SEQUENCE {
    frequencyBandList      MultiFrequencyBandListNR              OPTIONAL,  -- Cond FDD-OrSUL-OrEarlyUL-Sync

-- ASN1STOP
```

FrequencyInfoUL field descriptions

absoluteFrequencyPointA

Absolute frequency of the reference resource block (Common RB 0). Its lowest subcarrier is also known as Point A (see TS 38.211 [16], clause 4.4.4.2). Note that the lower edge of the actual carrier is not defined by this field but rather in the *scs-SpecificCarrierList*.

additionalSpectrumEmission

The additional spectrum emission requirements to be applied by the UE on this uplink. If both *additionalSpectrumEmission* (without suffix) and *additionalSpectrumEmission-v1760* are absent, the UE uses value 0 for the *additionalSpectrumEmission* (see TS 38.101-1 [15], tables 6.2.3.1-1A, 6.2A.3.1.1-2 and 6.2A.3.1.2-2, TS 38.101-2 [39], tables 6.2.3.1-2 and 6.2A.3.1-2, and TS 38.101-5 [75], table 6.2.3.1-1A). Network configures the same value in *additionalSpectrumEmission* for all uplink carrier(s) of the same band with UL configured and if signalled, the same value in *additionalSpectrumEmission-v1760* for all uplink carrier(s) of the same band with UL configured, except for *additionalSpectrumEmission* value corresponding to NS_55/NS_57. If NS_55/NS_57 (see TS 38.101-1 [15], table 6.2.3.1-1) is applicable for at least one uplink carrier, the network may configure either NS_55/NS_57 or NS_01 for these uplink carriers, and NS_01 for the remaining uplink carrier(s) of band n77. The *additionalSpectrumEmission* is applicable for all uplink carriers of the same band with UL configured.

additionalSpectrumEmissionAerial

The additional spectrum emission requirements to be applied by the aerial UE on this uplink (see TS 38.101-1 [15], clause 6.2K). If the field is absent, the aerial UE uses value indicated by the field *additionalSpectrumEmission/ additionalSpectrumEmission-v1760*.

frequencyBandList

List containing only one frequency band to which this carrier(s) belongs. Multiple values are not supported.

frequencyShift7p5khz

Enable the NR UL transmission with a 7.5 kHz shift to the LTE raster. If the field is absent, the frequency shift is disabled.

p-Max

Maximum transmit power allowed in this serving cell. The maximum transmit power that the UE may use on this serving cell may be additionally limited by *p-NR-FR1* (configured for the cell group) and by *p-UE-FR1* (configured total for all serving cells operating on FR1). If absent, the UE applies the maximum power according to TS 38.101-1 [15] in case of an FR1 cell, TS 38.101-2 [39] in case of an FR2 cell or TS 38.101-5 [75] in case of an NTN cell. In this release of the specification, if p-Max is present on a carrier frequency in FR2, the UE shall ignore the field and applies the maximum power according to TS 38.101-2 [39] for FR2-1/2 or according to TS 38.101-5 [75] for FR2-NTN. Value in dBm. This field is ignored by IAB-MT and NCR-MT. The IAB-MT applies output power and emissions requirements, as specified in TS 38.174 [63]. The NCR-MT applies output power and emission requirements as specified in TS 38.106 [79].

scs-SpecificCarrierList

A set of carriers for different subcarrier spacings (numerologies). Defined in relation to Point A. The network configures a *scs-SpecificCarrier* at least for each numerology (SCS) that is used e.g. in a BWP (see TS 38.211 [16], clause 5.3).

Conditional Presence	Explanation
<i>FDD-OrSUL-OrEarlyUL-Sync</i>	The field is mandatory present if this <i>FrequencyInfoUL</i> is for the paired UL for a DL (defined in a <i>FrequencyInfoDL</i>), if this <i>FrequencyInfoUL</i> is for a supplementary uplink (SUL), or if this <i>FrequencyInfoUL</i> is configured within <i>EarlyUL-SyncConfig</i> . It is absent, Need R, otherwise.
<i>FDD-TDD-OrSUL-Optional</i>	The field is optionally present, Need R, if this <i>FrequencyInfoUL</i> is for the paired UL for a DL (defined in a <i>FrequencyInfoDL</i>), or if this <i>FrequencyInfoUL</i> is for an unpaired UL (TDD) in certain bands (as defined in clause 5.4.2.1 of TS 38.101-1 and in clause 5.4.2.1 of TS 38.104 [12]), or if this <i>FrequencyInfoUL</i> is for a supplementary uplink (SUL). It is absent, Need R, otherwise.

– *FrequencyInfoUL-SIB*

The IE *FrequencyInfoUL-SIB* provides basic parameters of an uplink carrier and transmission thereon.

FrequencyInfoUL-SIB information element

```
-- ASN1START
-- TAG-FREQUENCYINFOUL-SIB-START

FrequencyInfoUL-SIB ::=
    frequencyBandList          MultiFrequencyBandListNR-SIB          OPTIONAL, -- Cond FDD-OrSUL
    absoluteFrequencyPointA    ARFCN-ValueNR                        OPTIONAL, -- Cond FDD-OrSUL

    frequencyBandList-v1760    MultiFrequencyBandListNR-SIB-v1760

-- TAG-FREQUENCYINFOUL-SIB-STOP
-- ASN1STOP
```

FrequencyInfoUL-SIB field descriptions	
<i>absoluteFrequencyPointA</i>	Absolute frequency of the reference resource block (Common RB 0). Its lowest subcarrier is also known as Point A (see TS 38.211 [16], clause 4.4.4.2). Note that the lower edge of the actual carrier is not defined by this field but rather in the <i>scs-SpecificCarrierList</i> .
<i>frequencyBandList</i>	Provides the frequency band indicator and a list of <i>additionalPmax</i> and <i>additionalSpectrumEmission</i> values as defined in TS 38.101-1 [15], table 6.2.3.1-1, TS 38.101-2 [39], table 6.2.3.1-2, and TS 38.101-5 [75], table 6.2.3.1-1. The UE shall apply the first listed band which it supports in the <i>frequencyBandList</i> field. If <i>frequencyBandList-v1760</i> is present, it shall contain the same number of entries, listed in the same order as in <i>frequencyBandList</i> (without suffix).
<i>frequencyBandListAerial</i>	Provides the frequency band indicator and a list of <i>additionalPmax</i> and <i>additionalSpectrumEmission</i> values for aerial UE as defined in TS 38.101-1 [15], clause 6.2K. If the field is present, the aerial UE shall apply the first listed band which it supports in the <i>frequencyBandListAerial</i> field. If the field is absent, <i>frequencyBandList</i> applies.
<i>frequencyShift7p5khz</i>	Enable the NR UL transmission with a 7.5 kHz shift to the LTE raster. If the field is absent, the frequency shift is disabled.
<i>p-Max</i>	Value in dBm applicable for the cell. If absent the UE applies the maximum power according to TS 38.101-1 [15] in case of an FR1 cell, TS 38.101-2 [39] in case of an FR2 cell or TS 38.101-5 [75] in case of an NTN cell. In this release of the specification, if p-Max is present on a carrier frequency in FR2, the UE shall ignore the field and applies the maximum power according to TS 38.101-2 [39] for FR2-1/2 or according to TS 38.101-5 [75] for FR2-NTN. This field is ignored by IAB-MT and NCR-MT. The IAB-MT applies output power and emissions requirements, as specified in TS 38.174 [63]. The NCR-MT applies output power and emission requirements as specified in TS 38.106 [79].
<i>scs-SpecificCarrierList</i>	A set of carriers for different subcarrier spacings (numerologies). Defined in relation to Point A (see TS 38.211 [16], clause 5.3). The network configures this for all SCSs that are used in UL BWPs configured in this serving cell.

Conditional Presence	Explanation
<i>FDD-OrSUL</i>	The field is mandatory present if this <i>FrequencyInfoUL-SIB</i> is for the paired UL for a DL (defined in a <i>FrequencyInfoDL-SIB</i>) or if this <i>FrequencyInfoUL-SIB</i> is for a supplementary uplink (SUL). It is absent otherwise (if this <i>FrequencyInfoUL-SIB</i> is for an unpaired UL (TDD)).
<i>FDD-TDD-OrSUL-Optional</i>	The field is optionally present, Need R, if this <i>FrequencyInfoUL-SIB</i> is for the paired UL for a DL (defined in a <i>FrequencyInfoDL-SIB</i>), or if this <i>FrequencyInfoUL-SIB</i> is for an unpaired UL (TDD) in certain bands (as defined in clause 5.4.2.1 of TS 38.101-1 and in clause 5.4.2.1 of TS 38.104 [12]), or if this <i>FrequencyInfoUL-SIB</i> is for a supplementary uplink (SUL). It is absent otherwise.

– **GapOccasionRatio**

Ratio of gap occasions that is recommended for cancellation during a time period of 1 second. Value 'pc0' corresponds to 0 percent, 'pc20' corresponds to 20 percent and so on.

GapOccasionRatio information element

```
-- ASN1START
-- TAG-GAPOCCASIONRATIO-START
GapOccasionRatio-r19 ::= ENUMERATED {pc0, pc20, pc40, pc60}
-- TAG-GAPOCCASIONRATIO-STOP
-- ASN1STOP
```

– *GapPriority*

The IE *GapPriority* is used to identify the priority of a gap configuration.

***GapPriority* information element**

```
-- ASN1START
-- TAG-GAPPRIORITY-START

GapPriority-r17 ::=                INTEGER (1..maxNrOfGapPri-r17)

-- TAG-GAPPRIORITY-STOP
-- ASN1STOP
```

– *HighSpeedConfig*

The IE *HighSpeedConfig* is used to configure parameters for high speed scenarios.

***HighSpeedConfig* information element**

```
-- ASN1START
-- TAG-HIGHSPEEDCONFIG-START

HighSpeedConfig-r16 ::= SEQUENCE {
    highSpeedMeasFlag-r16    ENUMERATED {true}          OPTIONAL,  -- Cond SpCellOnly
    highSpeedDemodFlag-r16   ENUMERATED {true}          OPTIONAL,  -- Need R
    ...
}

HighSpeedConfig-v1700 ::= SEQUENCE {
    highSpeedMeasCA-Scell-r17  ENUMERATED {true}        OPTIONAL,  -- Cond SCellOnly
    highSpeedMeasInterFreq-r17 ENUMERATED {true}        OPTIONAL,  -- Cond SpCellOnly2
    highSpeedDemodCA-Scell-r17 ENUMERATED {true}        OPTIONAL,  -- Need R
    ...
}

HighSpeedConfigFR2-r17 ::= SEQUENCE {
    highSpeedMeasFlagFR2-r17   ENUMERATED {set1, set2}   OPTIONAL,  -- Need R
    highSpeedDeploymentTypeFR2-r17 ENUMERATED {unidirectional, bidirectional} OPTIONAL,  -- Need R
    highSpeedLargeOneStepUL-TimingFR2-r17 ENUMERATED {true} OPTIONAL,  -- Need R
    ...
}

-- TAG-HIGHSPEEDCONFIG-STOP
-- ASN1STOP
```

HighSpeedConfig field descriptions**HighSpeedDemodCA-Scell**

If the field is present and UE supports *demodulationEnhancementCA-r17*, the UE shall apply the enhanced demodulation processing for HST-SFN joint transmission scheme with velocity up to 500km/h as specified in TS 38.101-4 [59]. This parameter only applies to SCell.

highSpeedDemodFlag

If the field is present and UE supports *demodulationEnhancement-r16*, the UE shall apply the enhanced demodulation processing for HST-SFN joint transmission scheme with velocity up to 500km/h as specified in TS 38.101-4 [59]. This parameter only applies to SpCell.

highSpeedDeploymentTypeFR2

If the field is present, and field value is *unidirectional*, the UE shall assume uni-directional deployment or if field value is *birectional* the UE shall assume bidirectional deployment for FR2 up to 350km/h as specified in TS 38.133 [14].

highSpeedLargeOneStepUL-TimingFR2

If the field is present, large one step UE autonomous uplink transmit timing adjustment for FR2 up to 350km/h as specified in TS 38.133 [14] is enabled.

highSpeedMeasCA-Scell

If the field is present and UE supports *measurementEnhancementCA-r17*, the UE shall apply the enhanced RRM requirements to the serving frequency of SCell for carrier aggregation to support high speed up to 500 km/h as specified in TS 38.133 [14].

highSpeedMeasFlag

If the field is present and UE supports *measurementEnhancement-r16*, the UE shall apply the enhanced intra-NR and inter-RAT EUTRAN RRM requirements to support high speed up to 500 km/h as specified in TS 38.133 [14].

If the field is present and UE supports *intraNR-MeasurementEnhancement-r16*, the UE shall apply enhanced intra-NR RRM requirement to support high speed up to 500 km/h as specified in TS 38.133 [14].

If the field is present and UE supports *interRAT-MeasurementEnhancement-r16*, the UE shall apply enhanced inter-RAT EUTRAN RRM requirement to support high speed up to 500 km/h as specified in TS 38.133 [14].

This parameter only applies to the serving frequency of SpCell.

highSpeedMeasFlagFR2

If the field is present and UE supports *ue-PowerClass-v1700* set to *pc6*, the UE shall apply enhanced intra-frequency RRM requirement to the serving frequency of SpCell to support high speed up to 350 km/h for FR2 as specified in TS 38.133 [14].

If the field is present and the UE supports enhanced inter-frequency RRM requirements for FR2 HST in RRC_IDLE and RRC_INACTIVE, the UE shall apply enhanced inter-frequency RRM requirement to support high speed up to 350 km/h for FR2 as specified in TS 38.133 [14] in RRC_IDLE and RRC_INACTIVE.

If the field is present for SpCell and the UE supports *measEnhCAInterFreqFR2-r18*, the UE shall apply enhanced inter-frequency RRM requirement to support high speed up to 350 km/h for FR2 as specified in TS 38.133 [14] in RRC_CONNECTED.

If the field is present for SCell(s) and the UE supports *measEnhCAInterFreqFR2-r18*, the UE shall apply enhanced intra-frequency RRM requirements to the serving frequency of the corresponding SCell to support high speed up to 350 km/h for FR2 as specified in TS 38.133 [14] in RRC_CONNECTED. If the UE is configured with intra-band CA and the field *highSpeedMeasFlagFR2* is present, the network configures the same value for all serving cells.

The field value, *set1* or *set2*, is applied as specified in TS38.133 [14].

highSpeedMeasInterFreq

If the field is present and UE supports *measurementEnhancementInterFreq-r17*, the UE shall apply the enhanced RRM requirements for inter-frequency measurement in RRC_CONNECTED to support high speed up to 500 km/h as specified in TS 38.133 [14].

Conditional Presence	Explanation
<i>SCellOnly</i>	The field is optionally present, Need R, in <i>ServingCellConfigCommon</i> of an SCell. It is absent otherwise.
<i>SpCellOnly</i>	The field is optionally present, Need R, in <i>ServingCellConfigCommonSIB</i> or in the <i>ServingCellConfigCommon</i> of an SpCell. It is absent otherwise.
<i>SpCellOnly2</i>	The field is optionally present, Need R, in <i>ServingCellConfigCommon</i> of an SpCell. It is absent otherwise.

– *Hysteresis*

The IE *Hysteresis* is a parameter used within the entry and leave condition of an event triggered reporting condition. The actual value is field value * 0.5 dB.

Hysteresis information element

```
-- ASN1START
-- TAG-HYSTERESIS-START

Hysteresis ::=
    INTEGER (0..30)

-- TAG-HYSTERESIS-STOP
-- ASN1STOP
```

– *HysteresisAltitude*

The IE *HysteresisAltitude* is a parameter used within the entry and leave condition of an altitude-based event triggered reporting condition and within altitude range based parameter configuration. The actual value is field value in meters.

HysteresisAltitude information element

```
-- ASN1START
-- TAG-HYSTERESISALTITUDE-START

HysteresisAltitude-r18 ::=
    INTEGER (0..64)

-- TAG-HYSTERESISALTITUDE-STOP
-- ASN1STOP
```

– *HysteresisLocation*

The IE *HysteresisLocation* is a parameter used within entry and leave condition of a location based event triggered reporting condition. The actual value is field value * 10 meters.

HysteresisLocation information element

```
-- ASN1START
```

```
-- TAG-HYSTERESISLOCATION-START
HysteresisLocation-r17 ::=          INTEGER (0..32768)
-- TAG-HYSTERESISLOCATION-STOP
-- ASN1STOP
```

– *InvalidSymbolPattern*

The IE *InvalidSymbolPattern* is used to configure one invalid symbol pattern for PUSCH transmission repetition type B applicable for both DCI format 0_1 and 0_2, see TS 38.214 [19], clause 6.1.

InvalidSymbolPattern information element

```
-- ASN1START
-- TAG-INVALIDSYMBOLPATTERN-START
InvalidSymbolPattern-r16 ::= SEQUENCE {
    symbols-r16 CHOICE {
        oneSlot BIT STRING (SIZE (14)),
        twoSlots BIT STRING (SIZE (28))
    },
    periodicityAndPattern-r16 CHOICE {
        n2 BIT STRING (SIZE (2)),
        n4 BIT STRING (SIZE (4)),
        n5 BIT STRING (SIZE (5)),
        n8 BIT STRING (SIZE (8)),
        n10 BIT STRING (SIZE (10)),
        n20 BIT STRING (SIZE (20)),
        n40 BIT STRING (SIZE (40))
    }
    ... OPTIONAL, -- Need M
}
-- TAG-INVALIDSYMBOLPATTERN-STOP
-- ASN1STOP
```

InvalidSymbolPattern field descriptions
periodicityAndPattern A time domain repetition pattern at which the pattern defined by <i>symbols</i> recurs. This slot pattern repeats itself continuously. When the field is not configured, the UE uses the value n1 (see TS 38.214 [19], clause 6.1).
symbols A symbol level bitmap in time domain (see TS 38.214[19], clause 6.1). For <i>oneSlot</i>, if ECP is configured, the first 12 bits represent the symbols within the slot and the last two bits within the bitstring are ignored by the UE; Otherwise, the 14 bits represent the symbols within the slot. For <i>twoSlots</i>, if ECP is configured, the first 12 bits represent the symbols within the first slot and the next 12 bits represent the symbols in the second slot and the last four bits within the bit string are ignored by the UE; Otherwise, the first 14 bits represent the symbols within the first slot and the next 14 bits represent the symbols in the second slot. For the bits representing symbols in a slot, the most significant bit of the bit string represents the first symbol in the slot and the second most significant bit represents the second symbol in the slot and so on. This pattern recurs (in time domain) with the configured <i>periodicityAndPattern</i>.

– I-RNTI-Value

The IE *I-RNTI-Value* is used to identify the suspended UE context of a UE in RRC_INACTIVE.

I-RNTI-Value information element

```
-- ASN1START
-- TAG-I-RNTI-VALUE-START

I-RNTI-Value ::=
    BIT STRING (SIZE(40))

-- TAG-I-RNTI-VALUE-STOP
-- ASN1STOP
```

– LBT-FailureRecoveryConfig

The IE *LBT-FailureRecoveryConfig-r16* is used to configure the parameters used for detection of consistent uplink LBT failures for operation with shared spectrum channel access, as specified in TS 38.321 [3].

LBT-FailureRecoveryConfig information element

```
-- ASN1START
-- TAG-LBT-FAILURERECOVERYCONFIG-START

LBT-FailureRecoveryConfig-r16 ::= SEQUENCE {
    lbt-FailureInstanceMaxCount-r16    ENUMERATED {n4, n8, n16, n32, n64, n128},
    lbt-FailureDetectionTimer-r16      ENUMERATED {ms10, ms20, ms40, ms80, ms160, ms320},
    ...
}

-- TAG-LBT-FAILURERECOVERYCONFIG-STOP
```

-- ASN1STOP

LBT-FailureRecoveryConfig field descriptions
lbt-FailureDetectionTimer Timer for consistent uplink LBT failure detection (see TS 38.321 [3]). Value <i>ms10</i> corresponds to 10 ms, value <i>ms20</i> corresponds to 20 ms, and so on.
lbt-FailureInstanceMaxCount This field determines after how many LBT failure indications received from the physical layer the UE triggers uplink LBT failure recovery (see TS 38.321 [3]). Value <i>n4</i> corresponds to 4, value <i>n8</i> corresponds to 8, and so on.

– **LocationInfo**

The IE *LocationInfo* is used to transfer available detailed location information, Bluetooth, WLAN and sensor available measurement results at the UE.

LocationInfo information element

```
-- ASN1START
-- TAG-LOCATIONINFO-START

LocationInfo-r16 ::= SEQUENCE {
    commonLocationInfo-r16    CommonLocationInfo-r16    OPTIONAL,
    bt-LocationInfo-r16       LogMeasResultListBT-r16    OPTIONAL,
    wlan-LocationInfo-r16     LogMeasResultListWLAN-r16  OPTIONAL,
    sensor-LocationInfo-r16   Sensor-LocationInfo-r16   OPTIONAL,
    ...
}

-- TAG-LOCATIONINFO-STOP
-- ASN1STOP
```

– **LocationMeasurementInfo**

The IE *LocationMeasurementInfo* defines the information sent by the UE to the network to assist with the configuration of measurement gaps for location related measurements.

LocationMeasurementInfo information element

```
-- ASN1START
-- TAG-LOCATIONMEASUREMENTINFO-START

LocationMeasurementInfo ::= CHOICE {
    eutra-RSTD                EUTRA-RSTD-InfoList,
    ...,
    eutra-FineTimingDetection  NULL,
    nr-PRS-Measurement-r16     NR-PRS-MeasurementInfoList-r16
}

-- TAG-LOCATIONMEASUREMENTINFO-STOP
-- ASN1STOP
```

```

EUTRA-RSTD-InfoList ::= SEQUENCE (SIZE (1..maxInterRAT-RSTD-Freq)) OF EUTRA-RSTD-Info

EUTRA-RSTD-Info ::= SEQUENCE {
    carrierFreq          ARFCN-ValueEUTRA,
    measPRS-Offset       INTEGER (0..39),
    ...
}

NR-PRS-MeasurementInfoList-r16 ::= SEQUENCE (SIZE (1..maxFreqLayers)) OF NR-PRS-MeasurementInfo-r16

NR-PRS-MeasurementInfo-r16 ::= SEQUENCE {
    dl-PRS-PointA-r16     ARFCN-ValueNR,
    nr-MeasPRS-RepetitionAndOffset-r16 CHOICE {
        ms20-r16          INTEGER (0..19),
        ms40-r16          INTEGER (0..39),
        ms80-r16          INTEGER (0..79),
        ms160-r16         INTEGER (0..159),
        ...
    },
    nr-MeasPRS-length-r16 ENUMERATED {ms1dot5, ms3, ms3dot5, ms4, ms5dot5, ms6, ms10, ms20},
    ...
}

-- TAG-LOCATIONMEASUREMENTINFO-STOP
-- ASN1STOP

```

***LocationMeasurementInfo* field descriptions**

carrierFreq

The EARFCN value of the carrier received from upper layers for which the UE needs to perform the inter-RAT RSTD measurements.

measPRS-Offset

Indicates the requested gap offset for performing RSTD measurements towards E-UTRA. It is the smallest subframe offset from the beginning of subframe 0 of SFN=0 of the serving cell of the requested gap for measuring PRS positioning occasions in the carrier frequency *carrierFreq* for which the UE needs to perform the inter-RAT RSTD measurements. The PRS positioning occasion information is received from upper layers. The value of *measPRS-Offset* is obtained by mapping the starting subframe of the PRS positioning occasion in the measured cell onto the corresponding subframe in the serving cell and is calculated as the serving cell's number of subframes from SFN=0 mod 40.

The UE shall take into account any additional time required by the UE to start PRS measurements on the other carrier when it does this mapping for determining the *measPRS-Offset*.

NOTE: Figure 6.2.2-1 in TS 36.331[10] illustrates the *measPRS-Offset* field.

dl-PRS-PointA

The ARFCN value of the carrier received from upper layers for which the UE needs to perform the NR DL-PRS measurements.

nr-MeasPRS-RepetitionAndOffset

Indicates the gap periodicity in ms and offset in number of subframes of the requested measurement gap for performing NR DL-PRS measurements.

nr-MeasPRS-length

Indicates measurement gap length in ms of the requested measurement gap for performing NR DL-PRS measurements. The measurement gap length is according to in Table 9.1.2-1 in TS 38.133 [14].

– LogicalChannelConfig

The IE *LogicalChannelConfig* is used to configure the logical channel parameters.

LogicalChannelConfig information element

```
-- ASN1START
-- TAG-LOGICALCHANNELCONFIG-START

LogicalChannelConfig ::=
    ul-SpecificParameters
        SEQUENCE {
            priority
                INTEGER (1..16),
            prioritisedBitRate

<i>LogicalChannelConfig</i> field descriptions
additionalPriority The additional logical channel priority that overrides the logical channel priority configured by the field <i>priority</i> when the logical channel priority adjustment condition is satisfied as specified in TS 38.321 [3]. Within the <i>LogicalChannelConfig</i> for a certain logical channel, if this field is present, the value of the field shall be smaller than that of the field <i>priority</i>.
allowedCG-List This restriction applies only when the UL grant is a configured grant. If present, UL MAC SDUs from this logical channel can only be mapped to the indicated configured grant configuration. If the size of the sequence is zero, then UL MAC SDUs from this logical channel cannot be mapped to any configured grant configurations. If the field is not present, UL MAC SDUs from this logical channel can be mapped to any configured grant configurations. If the field <i>configuredGrantType1Allowed</i> is present, only those configured grant type 1 configuration indicated in this sequence are allowed for use by this logical channel; otherwise, this sequence shall not include any configured grant type 1 configuration. Corresponds to "allowedCG-List" as specified in TS 38.321 [3]. This field is ignored when SDT procedure is ongoing.
allowedHARQ-mode Indicates the allowed HARQ mode of a HARQ process mapped to this logical channel. If the parameter is absent, there is no restriction for HARQ mode for the mapping. This field applies to SRB1, SRB2, SRB4 and DRBs.
allowedPHY-PriorityIndex This restriction applies only when the UL grant is a dynamic grant. If the field is present and the dynamic grant has a PHY-priority index, UL MAC SDUs from this logical channel can only be mapped to the dynamic grants indicating PHY-priority index equal to the values configured by this field. If the field is present and the dynamic grant does not have a PHY-priority index, UL MAC SDUs from this logical channel can only be mapped to this dynamic grant if the value of the field is <i>p0</i>, see TS 38.213 [13], clause 9. If the field is not present, UL MAC SDUs from this logical channel can be mapped to any dynamic grants. Corresponds to "allowedPHY-PriorityIndex" as specified in TS 38.321 [3].
allowedSCS-List If present, UL MAC SDUs from this logical channel can only be mapped to the indicated numerology. Otherwise, UL MAC SDUs from this logical channel can be mapped to any configured numerology. Corresponds to 'allowedSCS-List' as specified in TS 38.321 [3]. Only the following values are applicable depending on the used frequency: FR1/FR1-NTN: 15, 30, or 60 kHz FR2-1/FR2-NTN: 60 or 120 kHz FR2-2: 120, 480, or 960 kHz
allowedServingCells If present, UL MAC SDUs from this logical channel can only be mapped to the serving cells indicated in this list. Otherwise, UL MAC SDUs from this logical channel can be mapped to any configured serving cell of this cell group. Corresponds to 'allowedServingCells' in TS 38.321 [3].
bitRateMultiplier Bit rate multiplier for recommended bit rate MAC CE as specified in TS 38.321 [3]. Value <i>x40</i> indicates bit rate multiplier 40, value <i>x70</i> indicates bit rate multiplier 70 and so on.
bitRateQueryProhibitTimer The timer is used for bit rate recommendation query in TS 38.321 [3], in seconds. Value <i>s0</i> means 0 s, <i>s0dot4</i> means 0.4 s and so on.
bucketSizeDuration Value in ms. <i>ms5</i> corresponds to 5 ms, value <i>ms10</i> corresponds to 10 ms, and so on.
channelAccessPriority Indicates the Channel Access Priority Class (CAPC), as specified in TS 38.300 [2], to be used on uplink transmissions for operation with shared spectrum channel access in FR1. The network configures this field only for SRB2 and DRBs.
configuredGrantType1Allowed If present, or if the capability <i>lcp-Restriction</i> as specified in TS 38.306 [26] is not supported, UL MAC SDUs from this logical channel can be transmitted on a configured grant type 1. Otherwise, UL MAC SDUs from this logical channel cannot be transmitted on a configured grant type 1. Corresponds to 'configuredGrantType1Allowed' in TS 38.321 [3]. This field is ignored when SDT procedure is ongoing.
logicalChannelGroup, logicalChannelGroupIAB-Ext ID of the logical channel group, as specified in TS 38.321 [3], which the logical channel belongs to. The <i>logicalChannelGroupIAB-Ext</i> is only applicable to the IAB-MT. When

<i>logicalChannelGroupAB-Ext</i> is configured, <i>logicalChannelGroup</i> shall be ignored.	
<i>logicalChannelSR-Mask</i>	Controls SR triggering when a configured uplink grant of <i>type1</i> or <i>type2</i> is configured. <i>true</i> indicates that SR masking is configured for this logical channel as specified in TS 38.321 [3].
<i>logicalChannelSR-DelayTimerApplied</i>	Indicates whether to apply the delay timer for SR transmission for this logical channel. Set to <i>false</i> if <i>logicalChannelSR-DelayTimer</i> is not included in <i>BSR-Config</i> .
<i>maxPUSCH-Duration</i>	If present, UL MAC SDUs from this logical channel can only be transmitted using uplink grants that result in a PUSCH duration shorter than or equal to the duration indicated by this field. Otherwise, UL MAC SDUs from this logical channel can be transmitted using an uplink grant resulting in any PUSCH duration. Corresponds to "maxPUSCH-Duration" in TS 38.321 [3]. The PUSCH duration is calculated based on the same length of all symbols, and the shortest length applies if the symbol lengths are different.
<i>prioritisedBitRate</i>	Value in kiloBytes/s. Value <i>kBps0</i> corresponds to 0 kiloBytes/s, value <i>kBps8</i> corresponds to 8 kiloBytes/s, value <i>kBps16</i> corresponds to 16 kiloBytes/s, and so on. For SRBs, the value can only be set to <i>infinity</i> .
<i>priority</i>	Logical channel priority, as specified in TS 38.321 [3].
<i>priorityAdjustmentThreshold</i>	Remaining time threshold for determining whether the additional logical channel priority configured by <i>additionalPriority</i> is applied for the logical channel, as specified in TS 38.321 [3]. Value in number of milliseconds.
<i>schedulingRequestId</i>	If present, it indicates the scheduling request configuration applicable for this logical channel, as specified in TS 38.321 [3].

Conditional Presence	Explanation
<i>PDCCP-CADuplication</i>	The field is mandatory present if the DRB/SRB associated with this logical channel is configured with PDCCP CA duplication in UL in the cell group in which this IE is included (i.e. the PDCCP entity is associated with multiple RLC entities belonging to this cell group). Otherwise the field is optionally present, need R.
<i>UL</i>	The field is mandatory present for a logical channel with uplink if it serves DRB or multicast MRB. It is optionally present, Need R, for a logical channel with uplink if it serves an SRB. Otherwise it is absent.

– *LogicalChannelIdentity*

The IE *LogicalChannelIdentity* is used to identify one logical channel (*LogicalChannelConfig*) and the corresponding RLC bearer (*RLC-BearerConfig*) or BH RLC channel (*BH-RLC-ChannelConfig*) or Uu Relay RLC channel (*Uu-RelayRLC-ChannelConfig*) or PC5 Relay RLC channel (*SL-RLC-ChannelConfigPC5*).

LogicalChannelIdentity information element

```
-- ASN1START
-- TAG-LOGICALCHANNELIDENTITY-START

LogicalChannelIdentity ::=          INTEGER (1..maxLC-ID)

-- TAG-LOGICALCHANNELIDENTITY-STOP
-- ASN1STOP
```

– *LTE-NeighCellsCRS-AssistInfoList*

The IE *LTE-NeighCellsCRS-AssistInfoList-r17* is used to provide configuration information of neighbour LTE cells to assist the UE to perform CRS interference mitigation (CRS-IM) in scenarios with overlapping spectrum for LTE and NR.

***LTE-NeighCellsCRS-AssistInfoList* information element**

```
-- ASN1START
-- TAG-LTE-NEIGHCELLSCRS-ASSISTINFOLIST-START

LTE-NeighCellsCRS-AssistInfoList-r17 ::= SEQUENCE (SIZE (1..maxNrofCRS-IM-InterfCell-r17)) OF LTE-NeighCellsCRS-AssistInfo-r17

LTE-NeighCellsCRS-AssistInfo-r17 ::= SEQUENCE {
    neighCarrierBandwidthDL-r17      ENUMERATED {n6, n15, n25, n50, n75, n100, spare2, spare1} OPTIONAL, -- Cond CRS-IM
    neighCarrierFreqDL-r17           INTEGER (0..16383)                                OPTIONAL, -- Need S
    neighCellId-r17                  EUTRA-PhysCellId                                OPTIONAL, -- Need S
    neighCRS-muting-r17              ENUMERATED {enabled}                            OPTIONAL, -- Need R
    neighMBSFN-SubframeConfigList-r17 EUTRA-MBSFN-SubframeConfigList                OPTIONAL, -- Need S
    neighNrofCRS-Ports-r17           ENUMERATED {n1, n2, n4}                        OPTIONAL, -- Need S
    neighV-Shift-r17                 ENUMERATED {n0, n1, n2, n3, n4, n5}             OPTIONAL  -- Cond NotCellID
}

-- TAG-LTE-NEIGHCELLSCRS-ASSISTINFOLIST-STOP
-- ASN1STOP
```

LTE-NeighCellsCRS-AssistInfo field descriptions**neighCarrierBandwidthDL**

Indicates the channel bandwidth of the neighbour LTE cell in number of PRBs. If the field is absent, the UE applies the value of *carrierBandwidthDL* indicated in *RateMatchPatternLTE-CRS* for this serving cell, if configured.

neighCarrierFreqDL

Indicates the downlink centre frequency of the neighbour LTE cell. If the field is absent, the UE applies the value of *carrierFreqDL* indicated in *RateMatchPatternLTE-CRS* for this serving cell, if configured.

neighCellId

Indicates the physical cell ID of the neighbour LTE cell for which the other fields within the same *LTE-NeighCellsCRS-AssistInfo* apply.

If the IE *LTE-NeighCellsCRS-AssistInfoList* contains multiple list entries, either this field or *neighV-Shift* is included in each instance.

If the IE *LTE-NeighCellsCRS-AssistInfoList* contains multiple list entries, the entry with *neighV-Shift* is only used for neighbour LTE cells for which *neighCellId* is not provided (i.e. the entry with *neighCellId* takes precedence over the entry with *neighV-Shift*, if provided).

If the IE *LTE-NeighCellsCRS-AssistInfoList* contains one list entry with neither this field nor *neighV-Shift*, the information within the entry applies to all neighbour LTE cells.

neighCRS-muting

Indicates whether the CRS interference mitigation is enabled in the neighbour LTE cell, as specified in TS 36.133 [40], clause 3.6.1.1.

neighMBSFN-SubframeConfigList

Indicates the MBSFN subframe configuration of the neighbour LTE cell. If *RateMatchPatternLTE-CRS* is configured for this serving cell and the field is absent, the UE applies the value of *mbsfn-SubframeConfigList* indicated in *RateMatchPatternLTE-CRS* for this serving cell if configured; otherwise, if the field is absent, the UE assumes MBSFN is not configured in the neighbour LTE cell.

neighNrofCRS-Ports

Indicates the CRS antenna ports number of the neighbour LTE cell. If the field is absent, the UE applies the value of *nrofCRS-Ports* indicated in *RateMatchPatternLTE-CRS* for this serving cell, if configured. If *RateMatchPatternLTE-CRS* is not configured for this serving cell and the field is absent, the UE applies the default value n4.

neighV-Shift

Indicates the shifting value v-shift of neighbour LTE cells for which the other fields within the same *LTE-NeighCellsCRS-AssistInfo* apply.

Conditional Presence	Explanation
<i>CRS-IM</i>	For the serving cell with 15kHz SCS, this field is mandatory present for the UE supporting the capability of <i>crs-IM-nonDSS-NWA-15kHzSCS-r17</i> , but not supporting <i>crs-IM-nonDSS-15kHzSCS-r17</i> , if <i>RateMatchPatternLTE-CRS</i> is not configured for this serving cell. Otherwise it is optionally present, Need S if <i>RateMatchPatternLTE-CRS</i> is configured for this serving cell; Need M otherwise. For the serving cell with 30kHz SCS, this field is mandatory present for the UE supporting the capability of <i>crs-IM-nonDSS-NWA-30kHzSCS-r17</i> , but not supporting <i>crs-IM-nonDSS-30kHzSCS-r17</i> , if <i>RateMatchPatternLTE-CRS</i> is not configured for this serving cell. Otherwise it is optionally present, Need S if <i>RateMatchPatternLTE-CRS</i> is configured for this serving cell; Need M otherwise.
<i>NotCellID</i>	If the field <i>neighCellId</i> is present, this field shall be absent; otherwise, it is optionally present if the IE <i>LTE-NeighCellsCRS-AssistInfoList</i> contains one list entry, Need S, or it is mandatory present if the IE <i>LTE-NeighCellsCRS-AssistInfoList</i> contains multiple list entries.

– **LTM-CandidateId**

The IE *LTM-CandidateId* is used to identify an LTM candidate configuration.

***LTM-CandidateId* information element**

```
-- ASN1START
-- TAG-LTM-CANDIDATEID-START

LTM-CandidateId-r18 ::=                INTEGER (1..maxNrofLTM-Configs-r18)

-- TAG-LTM-CANDIDATEID-STOP
-- ASN1STOP
```

LTM-Candidate

The IE *LTM-Candidate* concerns a LTM candidate configuration to add or modify.

***LTM-Candidate* information element**

```
-- ASN1START

LTM-Candidate field descriptions

Ltm-CandidateConfig

This field includes an RRCReconfiguration message used to configure an LTM candidate configuration.

Ltm-CandidatePCI

This field identifies the PCI of the SpCell of the LTM candidate configuration contained in *Ltm-CandidateConfig*.

Ltm-EarlyUL-SyncConfig, Ltm-EarlyUL-SyncConfigSUL

A configuration used to perform the early UL synchronization procedure over an UL or SUL carrier.

Ltm-ExecutionCondition

This field can only be included in an *Ltm-Config* associated with the MCG.

Ltm-NoResetID

If the network configures this field for one LTM candidate configuration, the network configures also for all LTM candidate configurations within *Ltm-CandidateToAddModList* in *LTM-Config* and ensures that the UE has stored a value for *Ltm-ServingCellNoResetID* within *VarLTM-ServingCellNoResetID*.

Ltm-NoSecurityChangeID

If the network configures this field for one LTM candidate configuration, the network configures also for all LTM candidate configurations within *Ltm-CandidateToAddModList* in *LTM-Config* and ensures that the UE has stored a value for *Ltm-ServingCellNoSecurityChangeID* within *VarLTM-ServingCellNoSecurityChange*.

Ltm-UE-MeasuredTA-ID

If the network configures this field for one LTM candidate configuration, the network configures also for all LTM candidate configurations within *Ltm-CandidateToAddModList* in *LTM-Config* and ensures that the UE has stored a value for *Ltm-ServingCellUE-MeasuredTA-ID* within *VarLTM-ServingCellUE-MeasuredTA-ID*. This field is absent if *tag2* is present for this LTM candidate configuration.

LTM-SSB-Config field descriptions**ssb-Periodicity**

The SSB periodicity in ms. If the field is absent, the UE applies the value *ms5*. (see TS 38.213 [13], clause 4.1).

ssb-PositionsInBurst

For operation in licensed spectrum, indicates the time domain positions of the transmitted SS-blocks in a half frame with SS/PBCH blocks as defined in TS 38.213 [13], clause 4.1. The first/leftmost bit corresponds to SS/PBCH block index 0, the second bit corresponds to SS/PBCH block index 1, and so on. Value 0 in the bitmap indicates that the corresponding SS/PBCH block is not transmitted while value 1 indicates that the corresponding SS/PBCH block is transmitted. The network always includes this field if *ltm-SSB-Config* is configured.

ss-PBCH-BlockPower

Average EPRE of the resources elements that carry secondary synchronization signals in dBm that the NW used for SSB transmission, see TS 38.213 [13], clause 7. The network always includes this field if *ltm-SSB-Config* is configured.

– **LTM-Config**

The IE *LTM-Config* is used to provide LTM configurations.

LTM-Config information element

```
-- ASN1START
-- TAG-LTM-CONFIG-START

LTM-Config-r18 ::= SEQUENCE {

}

-- TAG-LTM-CONFIG-STOP
-- ASN1STOP
```

LTM-Config field descriptions	
<i>ltm-ServingCellExecutionCondition</i> This field can only be included in an <i>ltm-Config</i> associated with the MCG.	

Conditional Presence	Explanation
LTM-MCG	This field is optional present for the MCG, Need R, if the UE is configured with at least one LTM candidate configuration in an <i>ltm-Config</i> for LTM on the MCG. Otherwise the field is absent.

– *LTM-ConfigNRDC*

The IE *LTM-ConfigNRDC* is used to provide LTM configurations in NR-DC.

LTM-ConfigNRDC information element

```
-- ASN1START
-- TAG-LTM-CONFIGNRDC-START

LTM-ConfigNRDC-r19 ::=
    SEQUENCE {
        ltm-ConfigurationSCG-r19          LTM-Config-r18                                OPTIONAL, -- Need M

-- TAG-LTM-CONFIGNRDC-STOP
-- ASN1STOP
```

– *LTM-CSI-ReportConfig*

The IE *LTM-CSI-ReportConfig* is used to configure gNB-scheduled measurement report on the cell in which the *LTM-CSI-ReportConfig* is included when the field *ltm-ReportConfigType* is configured as *periodic*, *semi-persistentOnPUCCH*, or *semi-persistentOnPUSCH/aperiodic*.

The IE *LTM-CSI-ReportConfig* is also used to configure events for the conditional execution of an LTM cell switch procedure.

The IE *LTM-CSI-ReportConfig* is also used to configure event-triggered measurement report when the field *ltm-ReportConfigType* is configured as *eventTriggered*, within which the criteria for triggering measurement report by MAC CE as in TS 38.321 [3] is specified.

- Event LTM2: Beam of SpCell becomes worse than absolute threshold;
- Event LTM3: Beam of candidate cell becomes amount of offset better than the beam of SpCell;
- Event LTM4: Beam of candidate cell becomes better than absolute threshold;

Event LTM5: Beam of SpCell becomes worse than absolute threshold1 AND Beam of candidate cell becomes better than another absolute threshold2.

LTM-CandidateReportConfig field descriptions	
candidateSpecificOffset	Offset for event condition that is applicable for all the reference signals belonging to the candidate cell with the candidate cell ID <i>ltm-CandidateReportConfigId</i> . If the field is absent, the value '0dB' is applied.
ltm-CandidateReportConfigId	LTM candidate cell ID for which the UE is required to measure reference signal and perform LTM event evaluation as specified in TS 38.321 [3].

<i>LTM-CSI-ReportConfig</i> field descriptions
<i>eventId</i> Type of LTM event for triggering event-triggered measurement report as specified in TS 38.321 [3].
<i>eventTriggered</i> For CLTM, network can only configure events <i>eventLTM3</i> and <i>eventLTM5</i> .
<i>eventTriggeredReportConfig</i> If this field is included, the <i>LTM-CSI-ReportConfig</i> is for L1 measurement and event-triggered reporting as specified in TS 38.321 [3] clause 5.35. Otherwise, the <i>LTM-CSI-ReportConfig</i> is to configure execution conditions for LTM as specified in TS 38.321 [3] clause 5.36.
<i>hysteresis</i> Hysteresis when evaluating the entering/leaving conditions for an LTM event.
<i>Itm-CandidateReportConfigList</i> List of report configurations for LTM candidate IDs. If the field is absent the UE shall measure all the LTM candidate cells associated to the field <i>Itm-ResourcesForChannelMeasurement</i> .
<i>Itm-EventTriggeredPeriodicReport</i> This field indicates when an LTM event is triggered, whether the event-triggered measurement report is sent periodically. If the field is absent, the event-triggered measurement report is sent once, as specified in TS 38.321 [3].
<i>Itm-EventTriggeredReportContent</i> This field indicates what to include in a measurement report when an LTM event is triggered.
<i>Itm-ReportConfigType</i> This field specifies how the UE shall report the measurement results for LTM either by gNB-scheduled measurement report or by event-triggered measurement report by MAC CE, or to configure execution conditions for LTM. The UE shall ignore this field if <i>LTM-CSI-ReportConfig</i> is configured in a <i>LTM-Candidate</i> IE. The value <i>eventTriggered</i> can only be configured in the SpCell.
<i>Itm-ReportContent</i> This field defines the content of the LTM L1 measurement report. The UE shall ignore <i>Itm-ReportContent-r18</i> if the field <i>Itm-ReportConfigType</i> is set to <i>eventTriggered</i> .
<i>Itm-ResourcesForChannelMeasurement, Itm-ResourceForInterferenceMeasurements</i> This field indicates the index of SSB or CSI-RS in the field <i>LTM-CSI-ResourceConfig</i> .
<i>Itm2-Threshold, Itm4-Threshold, Itm5-Threshold1, Itm5-Threshold2</i> Thresholds defined in the entering/leaving conditions for different LTM events.
<i>Itm3-Offset</i> Offset for the entering/leaving condition for event LTM3. The actual value is field value * 0.5 dB.
<i>reportOnLeave</i> Indicates whether the event-triggered measurement report by MAC CE shall be triggered when leaving condition is satisfied, as specified in TS 38.321 [3].
<i>reportSlotConfig</i> Periodicity and slot offset (see TS 38.214 [19], clause 5.2.1.4). The UE shall ignore the offset provided by this field in case <i>semiPersistentOnPUSCH</i> is configured.
<i>reportSlotOffsetList, reportSlotOffsetListDCI-0-1, reportSlotOffsetListDCI-0-2</i> Timing offset Y for semi persistent reporting using PUSCH and aperiodic reporting.
<i>servingSpecificOffsets</i> Offset for event condition that is applicable for all the reference signals belonging to serving cell. If the field is absent, the value '0dB' is applied.

<i>LTM-ReportContent</i> field descriptions
<i>nrOfReportedCells</i> This field defines how many cells are reported within a single L1 measurement report instance.
<i>nrOfReportedRS-PerCell</i> This field defines how many RSs per cell are reported within a single L1 measurement report instance.
<i>spCellInclusion</i> This field indicates whether the UE shall include a L1 measurement report associated to the current SpCell. This field can only be configured if the current SpCell is configured as an SpCell of an LTM candidate configuration and the <i>LTM-CSI-ResourceConfig</i> IE associated to the <i>LTM-CSI-ReportConfig</i> IE includes resources for the current SpCell.
<i>reportQuantity</i> Indicates the report quantity for the CSI report. The network does not set this field to the value <i>dummy</i> .

<i>LTM-EventTriggeredReportContent</i> field descriptions
<i>allowReportAnyBeam</i> Indicates whether the UE can report the measurement results for the beams not satisfying the conditions of the events at least for the time duration configured by <i>timeToTrigger</i> as specified in TS 38.321 [3].
<i>maxNumberOfReportedBeams</i> This field defines maximum number of beams whose measurements results can be reported in the event-triggered measurement report by MAC CE as specified in TS 38.321 [3].
<i>reportCurrentBeam</i> Indicates whether the UE is required to report the measurement result of the current beam as specified in TS 38.321 [3].

<i>LTM-EventTriggeredPeriodicReport</i> field descriptions
<i>reportInterval</i> This field defines the periodicity of the event-triggered periodic measurement report as specified in TS 38.321 [3].
<i>reportAmount</i> Number of measurement reports needs to be transmitted after the event is triggered as specified in TS 38.321 [3]. Value 'r2' means the report is sent twice, 'r3' means the report is sent three times, and so on.

Conditional Presence	Explanation
<i>EarlyCSI</i>	This field is mandatory present in case <i>ltm-CSI-ReportConfig</i> is present within an <i>LTM-Candidate</i> IE. Otherwise, it is absent.
<i>LTM2</i>	This field is mandatory in case the <i>eventId</i> is configured as <i>eventLTM2</i> . Otherwise, it is optionally present, need R.
<i>notEventLTM2</i>	This field is not present when the <i>eventId</i> is configured as <i>eventLTM2</i> . Otherwise, it is optionally present, need S.

– *LTM-CSI-ReportConfigId*

The IE *LTM-CSI-ReportConfigId* is used to identify an *LTM-CSI-ReportConfig*.

    ...
}

LTM-CSI-IM-ResourceSet-r19 ::=           SEQUENCE {
    ltm-CSI-IM-ResourceSetId-r19          CSI-IM-ResourceSetId,
    ...
}

-- TAG-LTM-CSI-RESOURCECONFIG-STOP
-- ASN1STOP

```

<i>LTM-CSI-ResourceConfig</i> field descriptions
<i>Itm-CSI-IM-ResourceSet</i> This field indicates the resource set for LTM interference measurements. This field is absent if <i>Itm-NZP-CSI-RS-ResourceSet</i> is configured. When the field is present, the UE shall ignore the field <i>Itm-SSB-ResourceSet</i> .
<i>Itm-NZP-CSI-RS-ResourceSet</i> This field indicates the resource set for LTM measurement based on CSI-RS. When the field is present, the UE shall ignore the field <i>Itm-SSB-ResourceSet</i> .
<i>Itm-SSB-ResourceSet</i> This field indicates the resource set for LTM measurement based on SSB.
<i>resourceType</i> Time domain behavior of LTM CSI resource (see TS 38.214 [19], clause 5.2.1.2).

<i>LTM-SSB-ResourceSet</i> field descriptions
<i>Itm-CandidateIdList</i> This field indicates the LTM candidate configuration IDs related to the SSBs in the <i>Itm-SSB-ResourceList</i> . The list has the same number of entries as <i>Itm-SSB-ResourceList</i> . The first entry in this list shall be associated to the first entry in <i>Itm-SSB-ResourceList</i> , the second entry of this list shall be associated to the second entry in <i>Itm-SSB-ResourceList</i> , and so on.
<i>Itm-SSB-ResourceList</i> This field is used to indicate on SS/PBCH block resources from one or more LTM candidate cells.

<i>LTM-NZP-CSI-RS-ResourceSet</i> field descriptions
<i>Itm-CandidateIdList</i> This field indicates the LTM candidate configuration IDs related to the NZP CSI-RS resource in the <i>Itm-CSI-RS-ResourceList</i> . The list has the same number of entries as <i>Itm-CSI-RS-ResourceList</i> . The first entry in this list is associated to the first entry in <i>Itm-CSI-RS-ResourceList</i> , the second entry of this list is associated to the second entry in <i>Itm-CSI-RS-ResourceList</i> , and so on.
<i>Itm-NZP-CSI-RS-ResourceList</i> This field is used to indicate on NZP CSI-RS resources from one or more LTM candidate cells. If the resource type of the NZP-CSI-RS resource is <i>semi-persistent</i> , the <i>Itm-ReportConfigType</i> within <i>LTM-CSI-ReportConfig</i> that this resource set is associated with cannot be configured as <i>eventTriggered</i> .
<i>repetition</i> Indicates that repetition is off for the indicated NZP CSI-RS resources (see TS 38.214 [19], clause 5.2.1.2).

<i>LTM-CSI-IM-ResourceSet</i> field descriptions
<i>Itm-CSI-IM-ResourceSetId</i> This field is used to indicate CSI-IM resources from one LTM candidate cell.

Conditional Presence	Explanation
NoSSB	This field is mandatory present if the field <i>Itm-NZP-CSI-RS-ResourceSet</i> or <i>Itm-CSI-IM-ResourceSet</i> is configured. Otherwise, it is absent.

– *LTM-CSI-ResourceConfigId*

The IE *LTM-CSI-ResourceConfigId* is used to identify an *LTM-CSI-ResourceConfig*.

***LTM-CSI-ResourceConfigId* information element**

```
-- ASN1START
-- TAG-LTM-CSI-RESOURCECONFIGID-START

LTM-CSI-ResourceConfigId-r18 ::=          INTEGER (0..maxNrofLTM-CSI-ResourceConfigurations-1-r18)

<i>LTM-TCI-Info</i> field descriptions
<i>ltm-NZP-CSI-RS-ResourceSetToAddModList</i> When the field <i>ltm-NZP-CSI-RS-ResourceSetToAddModList</i> is configured within an <i>LTM-Candidate</i> IE, this field is absent
<i>ltm-NZP-CSI-RS-ResourceSetToReleaseList</i> When the field <i>ltm-NZP-CSI-RS-ResourceSetToReleaseList</i> is configured within an <i>LTM-Candidate</i> IE, this field is absent
<i>ltm-NZP-CSI-RS-ResourceToAddModList</i> When the field <i>ltm-NZP-CSI-RS-ResourceToAddModList</i> is configured within an <i>LTM-Candidate</i> IE, this field is absent
<i>ltm-NZP-CSI-RS-ResourceToReleaseList</i> When the field <i>ltm-NZP-CSI-RS-ResourceToReleaseList</i> is configured within an <i>LTM-Candidate</i> IE, this field is absent
<i>unifiedTCI-StateType</i> Indicates the unified TCI states type the UE is configured for this LTM candidate configuration. The value <i>separate</i> means this LTM candidate configuration is configured with <i>ltm-DL-OrJointTCI-StateToAddModList</i> for DL TCI states and <i>ltm-UL-TCI-StateToAddModList</i> for UL TCI states. The value <i>joint</i> means this LTM candidate configuration is configured with <i>ltm-DL-OrJointTCI-StateToAddModList</i> for joint TCI states for UL and DL operation. The network always configures this field.

– *MAC-CellGroupConfig*

The IE *MAC-CellGroupConfig* is used to configure MAC parameters for a cell group, including DRX.

```

MAC-CellGroupConfig field descriptions
additionalBS-TableAllowed Indicates whether a UE is allowed to utilize the refined buffer size levels, as specified in TS 38.321 [3], for a certain Logical Channel Group. The leftmost bit corresponds to LCG ID=0, second leftmost bit to LCG ID=1 and so on. The UE is allowed to utilize the refined buffer size levels for a Logical Channel Group only when the corresponding bit is set to 1.
allowCSI-SRS-Tx-MulticastDRX-Active Used to control the CSI/SRS transmission during MBS multicast DRX ActiveTime, see TS 38.321 [3].
csi-Mask If set to true, the UE limits CSI reports to the on-duration period of the DRX cycle, see TS 38.321 [3]. Network does not configure <i>csi-Mask</i> when <i>lpwus-PDCCH-MonitoringTimer</i> is configured (see TS 38.321 [3]).
dataInactivityTimer Releases the RRC connection upon data inactivity as specified in clause 5.3.8.5 and in TS 38.321 [3]. Value <i>s1</i> corresponds to 1 second, value <i>s2</i> corresponds to 2 seconds, and so on.
drx-Config, drx-ConfigExt, drx-ConfigExt2 Used to configure DRX as specified in TS 38.321 [3]. Network only configures <i>drx-ConfigExt</i> or <i>drx-ConfigExt2</i> when <i>drx-Config</i> is configured.
drx-ConfigSecondaryGroup Used to configure DRX related parameters for the second DRX group as specified in TS 38.321 [3]. The network does not configure secondary DRX group with DCP simultaneously nor secondary DRX group with a dormant BWP simultaneously.
drx-ConfigSL Used to configure additional DRX parameters for the UE performing sidelink operation with resource allocation mode 1, as specified in TS 38.321 [3]. Network only configures this field if <i>sl-ScheduledConfig</i> is configured and <i>drx-Config</i> is configured.
drx-LastTransmissionUL If this field is present, the start of the <i>drx-HARQ-RTT-TimerUL</i> is after the last transmission within a bundle, see TS 38.321 [3].
dsr-ConfigToAddModList List of LCG-specific DSR configurations to add or modify.
dsr-ConfigToReleaseList List of LCG-specific DSR configurations to release.
g-RNTI-ConfigToAddModList List of G-RNTI configurations to add or modify. Up to 8 G-RNTIs can be configured in total in this release based on the UE capability.
g-RNTI-ConfigToReleaseList List of G-RNTI configurations to release.
g-CS-RNTI-ConfigToAddModList List of G-CS-RNTI configurations to add or modify. Up to 8 G-CS-RNTIs can be configured in total in this release based on the UE capability.
g-CS-RNTI-ConfigToReleaseList List of G-CS-RNTI configurations to release.
intraCG-Prioritization Used to enable HARQ process ID selection based on LCH-priority for one CG as specified in TS 38.321 [3].
lch-BasedPrioritization If this field is present, the corresponding MAC entity of the UE is configured with prioritization between overlapping grants and between scheduling request and overlapping grants based on LCH priority, see TS 38.321 [3]. The network does not configure <i>lch-BasedPrioritization</i> with <i>enhancedSkipUplinkTxDynamic</i> simultaneously nor <i>lch-BasedPrioritization</i> with <i>enhancedSkipUplinkTxConfigured</i> simultaneously.
posMG-Request Indicates whether UE is configured to send UL MAC CE for Positioning Measurement Gap Activation/Deactivation Request, as specified in TS 38.321 [3].
schedulingRequestID-BFR-SCell

Indicates the scheduling request configuration applicable for BFR on SCell, as specified in TS 38.321 [3].
schedulingRequestID-BFR Indicates the scheduling request configuration (SchedulingRequestConfig) that the UE shall use upon detecting a beam failure on the detection resources configured in <i>failureDetectionSet1</i> of a serving cell while beam failure is not detected on resources configured in <i>failureDetectionSet2</i> of the same serving cell.
schedulingRequestID-BFR2 Indicates the scheduling request configuration (SchedulingRequestConfig) that the UE shall use upon detecting a beam failure on the detection resources configured in <i>failureDetectionSet2</i> of a serving cell while beam failure is not detected on resources configured in <i>failureDetectionSet1</i> of the same serving cell.
schedulingRequestID-LBT-SCell Indicates the scheduling request configuration applicable for consistent uplink LBT recovery on SCell, as specified in TS 38.321 [3].
schedulingRequestID-LTM Indicates the scheduling request configuration applicable for event-triggered measurement report by MAC CE, as specified in TS 38.321 [3].
schedulingRequestID-PosMG-Request Indicates the scheduling request configuration applicable for Positioning Measurement Gap Activation/Deactivation Request, as specified in TS 38.321 [3].
skipUplinkTxDynamic, enhancedSkipUplinkTxDynamic, enhancedSkipUplinkTxConfigured If set to <i>true</i> , the UE skips UL transmissions as described in TS 38.321 [3]. If the UE is configured with <i>enhancedSkipUplinkTxDynamic</i> or <i>enhancedSkipUplinkTxConfigured</i> with value <i>true</i> , REPETITION_NUMBER (as specified in TS 38.321 [3], clause 5.4.2.1) of the corresponding PUSCH transmission of the uplink grant shall be equal to 1. The network does not configure <i>enhancedSkipUplinkTxDynamic</i> or <i>enhancedSkipUplinkTxConfigured</i> with value <i>true</i> together with <i>numberOfSlotsTBoMS-r17</i> . The network does not configure <i>skipUplinkTxDynamic</i> with value <i>true</i> if <i>eventTypeUE-Initiated</i> is configured for a serving cell in the corresponding MAC entity.
tag-Config The field is used to configure parameters for a time-alignment group. The field is not present if any DAPS bearer is configured.
ul-RateControlConfigList Includes the list of QoS flows for which the UL rate control is enabled.
ul-RateQueryConfigList Includes the list of QoS flows for which the UL rate query is enabled.
ul-RateQueryProhibitTimer This timer is used for uplink bit rate query as specified in TS 38.321 [3]. Value <i>s0</i> means 0 s, <i>s0dot1</i> means 0.1 s and so on.
usePreBSR If set to <i>true</i> , the MAC entity of the IAB-MT may use the Pre-emptive BSR, see TS 38.321 [3].

<i>MBS-RNTI-SpecificConfig</i> field descriptions
<i>drx-ConfigPTM</i> Used to configure DRX for PTM transmission as specified in TS 38.321 [3].
<i>g-CS-RNTI</i> Used to scramble the SPS group-common PDSCH and activation/deactivation of SPS group-common PDSCH for one or more MBS multicast services.
<i>g-RNTI</i> Used to scramble the scheduling and transmission of PTM for one or more MBS multicast services.
<i>groupCommon-RNTI</i> Used to configure g-RNTI or g-CS-RNTI.
<i>harq-FeedbackEnablerMulticast</i> Indicates whether the UE shall provide HARQ feedback for MBS multicast. Value <i>dci-enabler</i> means that whether the UE shall provide HARQ feedback for MBS multicast is indicated by DCI as specified in TS 38.213 [13]. Value <i>enabled</i> means the UE shall always provide HARQ feedback for MBS multicast. When the field is absent, the UE behavior is specified in TS 38.213 [13].
<i>harq-FeedbackOptionMulticast</i> Indicates the feedback mode for MBS multicast dynamically scheduled PDSCH or SPS PDSCH.
<i>mbs-RNTI-SpecificConfigId</i> An identifier of the RNTI specific configuration for MBS multicast.
<i>pdsch-AggregationFactor</i> Number of repetitions for dynamically scheduled MBS multicast data (see TS 38.214 [19], clause 5.1.2.1). When the field is absent and <i>groupCommon-RNTI</i> is set to <i>g-RNTI</i> , the UE applies the value 1.

<i>LCG-DSR-Config</i> field descriptions
<i>dsr-ReportingThresList</i> List of remaining time thresholds configured in ascending order for reporting delay status information in the Multiple Entry DSR MAC CE, as specified in TS 38.321 [3]. At least one configured DSR reporting threshold should be no lower than the <i>remainingTimeThreshold</i> . If at least one LCG is configured with <i>dsr-ReportingThresList</i> , any LCG configured with <i>remainingTimeThreshold</i> should be configured with <i>dsr-ReportingThresList</i> . The IE <i>DSR-ReportingThreshold</i> in number of milliseconds.
<i>dsr-ReportNonDelayCriticalData</i> Indicates whether the UE should consider the non-delay reporting data ahead of delay reporting data in the delay status reporting data volume calculation for the Logical Channel Group as specified in TS 38.323 [5].
<i>lcg-Id</i> Identifier of the Logical Channel Group which the DSR configuration refers to.
<i>remainingTimeThreshold</i> Remaining time threshold used for triggering Single Entry and Multiple Entry DSR for the logical channels belonging to this Logical Channel Group, as specified in TS 38.321 [3]. Value in number of milliseconds.

<i>QoS-FlowIdentity</i> field descriptions
<i>qfi</i> Identifier of the QoS flow for which bit rate query or bit rate control is enabled.
<i>pdu-SessionID</i> Identifier of the PDU session to which the QoS flow identified by the field <i>qfi</i> belongs.

Conditional Presence	Explanation
<i>G-RNTI</i>	This field is optionally present, Need S, if <i>groupCommon-RNTI</i> is set to <i>g-RNTI</i> . The field is absent when <i>groupCommon-RNTI</i> is set to <i>g-CS-RNTI</i> .
<i>HARQFeedback</i>	The field is mandatory present when <i>harq-FeedbackEnablerMulticast</i> is present. It is absent otherwise.
<i>MCG-Only</i>	This field is optionally present, Need M, for the <i>MAC-CellGroupConfig</i> of the MCG. It is absent otherwise.
<i>LCH-PrioWithReTxTimer</i>	This field is optionally present, Need R, if <i>lch-BasedPrioritization-r16</i> is configured in this MAC entity and <i>cg-RetransmissionTimer-r16</i> is configured for any configured grant configuration associated with this MAC entity. It is absent otherwise, Need R.

– MeasConfig

The IE *MeasConfig* specifies measurements to be performed by the UE, and covers intra-frequency, inter-frequency and inter-RAT mobility as well as configuration of measurement gaps.

MeasConfig information element

```
-- ASN1START
-- TAG-MEASCONFIG-START

```

<i>MeasConfig</i> field descriptions
<i>cssf-Config</i> Used to enable or disable the CSSF optimization feature.
<i>cssf-MeasMO-List</i> Used to indicate which measurement object associated to SCell (i.e. SCC MO) is measured as defined in TS 38.133 [14]. At most one SCC MO per band is configured in this list. The SCC MO for a given band is indicated only if there are more than one SCC MO configured with SSB based measurement in the band, and neither PCell nor PSCell is configured in the band.
<i>effectiveMeasWindowConfig</i> Used to setup and release effective measurement window in NR for E-UTRA measurements.
<i>fs-Config</i> Indicates the configuration of triggering condition for L3 fast beam sweeping operation. If the measured PCell RSRP is below <i>fs-ThresholdP</i> (if configured) and the measured PCell RSRQ is below <i>fs-ThresholdQ</i> (if configured), UE activates L3 fast beam sweeping operation as specified in TS 38.133 [14].
<i>interFrequencyConfig-NoGap-r16</i> If the field is set to true, UE is configured to perform SSB based inter-frequency measurement without measurement gaps when the inter-frequency SSB is completely contained in the active DL BWP of the UE, as specified in TS 38.133 [14], clause 9.3. Otherwise, the SSB based inter-frequency measurement is performed within measurement gaps. In NR-DC, the field can only be configured in the <i>measConfig</i> associated with MCG, and when configured, it applies to all the inter-frequency measurements configured by MN and SN.
<i>measGapConfig</i> Used to setup and release measurement gaps in NR.
<i>measGapSharingConfig</i> Specifies the measurement gap sharing scheme and controls setup/ release of measurement gap sharing.
<i>measIdToAddModList</i> List of measurement identities to add and/or modify.
<i>measIdToRemoveList</i> List of measurement identities to remove.
<i>measObjectToAddModList</i> List of measurement objects to add and/or modify.
<i>measObjectToRemoveList</i> List of measurement objects to remove.
<i>reportConfigToAddModList</i> List of measurement reporting configurations to add and/or modify.
<i>reportConfigToRemoveList</i> List of measurement reporting configurations to remove.
<i>s-MeasureConfig</i> Threshold for NR SpCell RSRP measurement controlling when the UE is required to perform measurements on non-serving cells. Choice of <i>ssb-RSRP</i> corresponds to cell RSRP based on SS/PBCH block and choice of <i>csi-RSRP</i> corresponds to cell RSRP of CSI-RS. This field is also applicable to L1 measurements configured with <i>ltm-CSI-ResourceConfigToAddModList-r18</i> . This field is not configured to a UE configured with event(s) related to the L2 U2N Relay UE.
<i>timeToTrigger-SF</i> Indicates a scaling factor for <i>timeToTrigger</i> in <i>ReportConfigNR</i> and <i>ReportConfigInterRAT</i> . The <i>timeToTrigger</i> is multiplied with the scaling factor applicable for the UE's speed state.

<i>FBS-Config</i> field descriptions
<i>fbs-ThresholdP</i> RSRP threshold to evaluate the criterion to activate L3 fast beam sweeping operation as specified in TS 38.133 [14].
<i>fbs-ThresholdQ</i> RSRQ threshold to evaluate the criterion to activate L3 fast beam sweeping operation as specified in TS 38.133 [14].

– *MeasGapConfig*

The IE *MeasGapConfig* specifies the measurement gap configuration and controls setup/release of measurement gaps.

MeasGapConfig information element

```
-- ASN1START

<i>MeasGapConfig</i> field descriptions
gapAssociationPRS Indicates that PRS measurement is associated with this measurement gap. The network only includes this field for one per-UE gap or for one per-FR gap. If concurrent gap (i.e. one of the gap combination as defined in Table 9.1.8-1 in TS 38.133 [14]) is configured and no gap is configured with this field, the PRS measurement is associated with the gap configured via <i>GapConfig</i> (without suffix), if available. If both per-UE gap and per-FR gap are configured via <i>GapConfig</i> and/or <i>GapConfig-r17</i>, the PRS measurement is always associated with the per-UE gap.
gapFR1 Indicates measurement gap configuration that applies to FR1 only. In (NG)EN-DC, <i>gapFR1</i> cannot be set up by NR RRC (i.e. only LTE RRC can configure FR1 measurement gap). In NE-DC, <i>gapFR1</i> can only be set up by NR RRC (i.e. LTE RRC cannot configure FR1 gap). In NR-DC, <i>gapFR1</i> can only be set up in the <i>measConfig</i> associated with MCG. <i>gapFR1</i> can not be configured together with <i>gapUE</i>. The applicability of the FR1 measurement gap is according to Table 9.1.2-2 and Table 9.1.2-3 in TS 38.133 [14].
gapFR2 Indicates measurement gap configuration applies to FR2 only. In (NG)EN-DC or NE-DC, <i>gapFR2</i> can only be set up by NR RRC (i.e. LTE RRC cannot configure FR2 gap). In NR-DC, <i>gapFR2</i> can only be set up in the <i>measConfig</i> associated with MCG. <i>gapFR2</i> cannot be configured together with <i>gapUE</i>. The applicability of the FR2 measurement gap is according to Table 9.1.2-2 and Table 9.1.2-3 in TS 38.133 [14].
gapOffset Value <i>gapOffset</i> is the gap offset of the gap pattern with MGRP indicated in the field <i>mgrp</i>. The value range is from 0 to <i>mgrp</i>-1. If <i>ncsglnd-r17</i> is present, this offset value refers to the starting point of VIL1 (the visible interruption length before the ML).
gapPriority Indicates the priority of this measurement gap (see TS 38.133 [14]). Value 1 indicates highest priority, value 2 indicates second level priority, and so on.
gapSharing Indicates the measurement gap sharing scheme that applies to this <i>GapConfig</i>. For applicability of the different gap sharing schemes, see TS 38.133 [14]. Value <i>scheme00</i> corresponds to scheme "00", value <i>scheme01</i> corresponds to scheme "01", and so on.
gapToAddModList A list of measurement gap configuration to be added or modified. If more than one measurement gap is configured (i.e. concurrent measurement gap as specified in TS 38.133[14], clause 9.1.8 for TN or clause 9.1C.8 for NTN), the maximum number of configured measurement gap is limited by the gap combinations defined in Table 9.1.8-1 in TS 38.133 [14] for TN. For NTN the maximum number of configured measurement gap is limited by UE capability indicated in <i>parallelMeasurementGap</i>. In this version of the specification, the network configures this field only in NR standalone. This field is used only for a UE that supports pre-configured measurement gap, concurrent measurement gap, or NCSG. In this version of the specification, the network does not configure concurrent measurement gap together with preconfigured measurement gap for positioning. For the UE supporting the capability of <i>musim-GapPriorityPreference</i>, the network can configure concurrent measurement gap together with MUSIM gap. Otherwise, the network does not configure concurrent measurement gap together with MUSIM gap.
gapToReleaseList A list of measurement gap configuration to be released.
gapType Indicates the type of this measurement gap. Value <i>perUE</i> indicates that it is a per UE measurement gap, value <i>perFR1</i> indicates that it is an FR1 measurement gap, and value <i>perFR2</i> indicates that it is an FR2 measurement gap.
gapUE Indicates measurement gap configuration that applies to all frequencies (FR1 and FR2). In (NG)EN-DC, <i>gapUE</i> cannot be set up by NR RRC (i.e. only LTE RRC can configure per UE measurement gap). In NE-DC, <i>gapUE</i> can only be set up by NR RRC (i.e. LTE RRC cannot configure per UE gap). In NR-DC, <i>gapUE</i> can only be set up in the <i>measConfig</i> associated with MCG. If <i>gapUE</i> is configured, then neither <i>gapFR1</i> nor <i>gapFR2</i> can be configured. For TN, the applicability of the per UE measurement gap is according to Table 9.1.2-2 and Table 9.1.2-3 for non-RedCap UEs, and Table 9.1A.2-2 for RedCap UEs in TS 38.133 [14]. For NTN, the applicability of per UE measurement gap is according to subclause 9.1C.2 in TS 38.133 [14].
measGapId The ID of this measurement gap configuration.

<i>mgl</i>	Value <i>mgl</i> is the measurement gap length in ms of the measurement gap. If <i>ncsglnd-r17</i> is not present, the measurement gap length is according to Table 9.1.2-1 for non-RedCap UEs in TN, Table 9.1A.2-1 for RedCap UEs in TN, and Table 9.1C.2-1 for NTN in TS 38.133 [14]. If <i>ncsglnd-r17</i> is present, this field indicates the measurement length (ML) in NCSG pattern and is configured according to Table 9.1.9.3-1 in TS 38.133 [14]. Value <i>ms1dot5</i> corresponds to 1.5 ms, <i>ms3</i> corresponds to 3 ms and so on. If <i>mgl-r16</i> is present, UE shall ignore the <i>mgl</i> (without suffix). Value <i>ms1</i> , <i>ms2</i> , and <i>ms5</i> can only be configured if <i>ncsglnd</i> is present.
<i>mgrp</i>	If <i>ncsglnd-r17</i> is not present, the <i>mgrp</i> field indicates the measurement gap repetition period in (ms) of the measurement gap according to Table 9.1.2-1 for non-RedCap UEs in TN, Table 9.1A.2-1 for RedCap UEs in TN, and Table 9.1C.2-1 for NTN in TS 38.133 [14]. If <i>ncsglnd-r17</i> is present, the <i>mgrp</i> field indicates the Visible Interruption Repetition Period (VIRP) of NCSG pattern and is configured according to Table 9.1.9.3-1 in TS 38.133 [14].
<i>mgta</i>	Value <i>mgta</i> is the measurement gap timing advance in ms. The applicability of the measurement gap timing advance is according to clause 9.1.2 for non-RedCap UEs in TN, clause 9.1A.2 for RedCap UEs in TN, and clause 9.1C.2 for NTN of TS 38.133 [14], or according to clause 9.1.9 of TS 38.133 [14] if <i>ncsglnd</i> is present. Value <i>ms0</i> corresponds to 0 ms, <i>ms0dot25</i> corresponds to 0.25 ms, <i>ms0dot5</i> corresponds to 0.5 ms and <i>ms0dot75</i> corresponds to 0.75 ms. For FR2, the network only configures 0 ms and 0.25 ms if <i>ncsglnd</i> is not present. If <i>ncsglnd</i> is present, the network only configures 0ms for per-UE NCSG and FR1 NCSG and only configures 0ms or 0.75ms for FR2 NCSG. Value <i>ms0dot75</i> can only be configured if <i>ncsglnd</i> is present.
<i>ncsglnd</i>	Indicates that the measurement gap is a NCSG as specified in 38.133 [14].
<i>posMeasGapPreConfigToAddModList</i>	List of preconfigured measurement gap for positioning to add and/or modify. All the gaps configured are associated with the measurement of PRS for RSTD, UE-RxTx Time Difference, PRS-RSRP and PRS-RSRPP as defined in TS 38.215 [9]. In this version of the specification, the network does not configure preconfigured measurement gap for positioning together with concurrent measurement gap or MUSIM gap.
<i>posMeasGapPreConfigToReleaseList</i>	List of preconfigured measurement gap for positioning to release.
<i>preConfigInd</i>	Indicates whether the measurement gap is a pre-configured measurement gap.
<i>refFR2ServCellAsyncCA</i>	Indicates the FR2 serving cell identifier whose SFN and subframe is used for FR2 gap calculation for this gap pattern with asynchronous CA involving FR2 carrier(s).
<i>refServCellIndicator</i>	Indicates the serving cell whose SFN and subframe are used for gap calculation for this gap pattern. Value pCell corresponds to the PCell, pSCell corresponds to the PSCell, and mcg-FR2 corresponds to a serving cell on FR2 frequency in MCG.

Conditional Presence	Explanation
<i>AsyncCA</i>	This field is mandatory present when configuring and reconfiguring FR2 gap pattern to UE in: - (NG)EN-DC or NR SA with asynchronous CA involving FR2 carrier(s); - NE-DC or NR-DC with asynchronous CA involving FR2 carrier(s), if the field <i>refServCellIndicator</i> is set to <i>mcg-FR2</i>. Otherwise, it is absent, Need R.
<i>NEDCorNRDC</i>	This field is mandatory present when configuring and reconfiguring gap pattern to UE in NE-DC or NR-DC. Otherwise, it is absent, Need R.
<i>PRS</i>	This field is optionally present, Need R, when configuring gap pattern to UE for measurements of DL-PRS configured via LPP (TS 37.355 [49]). Otherwise, it is absent.

– *MeasGapId*

The IE *MeasGapId* used to identify a per UE or per FR measurement gap configuration.

MeasGapId information element

```
-- ASN1START
-- TAG-MEASGAPID-START

MeasGapId-r17 ::=
    INTEGER (1..maxNrofGapId-r17)

-- TAG-MEASGAPID-STOP
-- ASN1STOP
```

– *MeasGapSharingConfig*

The IE *MeasGapSharingConfig* specifies the measurement gap sharing scheme and controls setup/ release of measurement gap sharing.

MeasGapSharingConfig information element

```
-- ASN1START
-- TAG-MEASGAPSHARINGCONFIG-START

MeasGapSharingConfig ::=
    SEQUENCE {

        ]
    }

MeasGapSharingScheme ::=
    ENUMERATED {scheme00, scheme01, scheme10, scheme11}

-- TAG-MEASGAPSHARINGCONFIG-STOP
-- ASN1STOP
```

MeasGapSharingConfig field descriptions**gapSharingFR1**

Indicates the measurement gap sharing scheme that applies to the gap set via *gapFR1*. In (NG)EN-DC, *gapSharingFR1* cannot be set up by NR RRC (i.e. only LTE RRC can configure FR1 gap sharing). In NE-DC, *gapSharingFR1* can only be set up by NR RRC (i.e. LTE RRC cannot configure FR1 gap sharing). In NR-DC, *gapSharingFR1* can only be set up in the *measConfig* associated with MCG. *gapSharingFR1* can not be configured together with *gapSharingUE*. For the applicability of the different gap sharing schemes, see TS 38.133 [14]. Value *scheme00* corresponds to scheme "00", value *scheme01* corresponds to scheme "01", and so on.

gapSharingFR2

Indicates the measurement gap sharing scheme that applies to the gap set via *gapFR2*. In (NG)EN-DC or NE-DC, *gapSharingFR2* can only be set up by NR RRC (i.e. LTE RRC cannot configure FR2 gap sharing). In NR-DC, *gapSharingFR2* can only be set up by MCG in the *measConfig* associated with MCG. *gapSharingFR2* cannot be configured together with *gapSharingUE*. For applicability of the different gap sharing schemes, see TS 38.133 [14]. Value *scheme00* corresponds to scheme "00", value *scheme01* corresponds to scheme "01", and so on.

gapSharingUE

Indicates the measurement gap sharing scheme that applies to the gap set via *gapUE*. In (NG)EN-DC, *gapSharingUE* cannot be set up by NR RRC (i.e. only LTE RRC can configure per UE gap sharing). In NE-DC, *gapSharingUE* can only be set up by NR RRC (i.e. LTE RRC cannot configure per UE gap sharing). In NR-DC, *gapSharingUE* can only be set up in the *measConfig* associated with MCG. If *gapSharingUE* is configured, then neither *gapSharingFR1* nor *gapSharingFR2* can be configured. For the applicability of the different gap sharing schemes, see TS 38.133 [14]. Value *scheme00* corresponds to scheme "00", value *scheme01* corresponds to scheme "01", and so on.

– **MeasId**

The IE *MeasId* is used to identify a measurement configuration, i.e., linking of a measurement object and a reporting configuration.

MeasId information element

```
-- ASN1START
-- TAG-MEASID-START

MeasId ::=
    INTEGER (1..maxNrofMeasId)

-- TAG-MEASID-STOP
-- ASN1STOP
```

– **MeasIdleConfig**

The IE *MeasIdleConfig* is used to convey information to UE about measurements requested to be done while in RRC_IDLE or RRC_INACTIVE.

MeasIdleConfig information element

```
-- ASN1START
-- TAG-MEASIDLECONFIG-START

```

<i>MeasIdleConfig</i> field descriptions
<i>absThreshSS-BlocksConsolidation</i> Threshold for consolidation of L1 measurements per RS index.
<i>beamMeasConfigIdle</i> Indicates the beam level measurement configuration.
<i>carrierFreq</i> Indicates the NR carrier frequency to be used for measurements during RRC_IDLE or RRC_INACTIVE.
<i>carrierFreqEUTRA</i> Indicates the E-UTRA carrier frequency to be used for measurements during RRC_IDLE or RRC_INACTIVE.
<i>deriveSSB-IndexFromCell</i> This field indicates whether the UE may use the timing of any detected cell on that frequency to derive the SSB index of all neighbour cells on that frequency. If this field is set to true, the UE assumes SFN and frame boundary alignment across cells on the neighbor frequency as specified in TS 38.133 [14].
<i>frequencyBandList</i> Indicates the list of frequency bands for which the NR idle/inactive measurement parameters apply. The UE shall select the first listed band which it supports in the frequencyBandList field to represent the NR neighbour carrier frequency.
<i>includeBeamMeasurements</i> Indicates whether or not the UE shall include beam measurements in the NR idle/inactive measurement results.
<i>maxNrofRS-IndexesToReport</i> Max number of beam indices to include in the idle/inactive measurement result.
<i>measCellListEUTRA</i> Indicates the list of E-UTRA cells which the UE is requested to measure and report for idle/inactive measurements.
<i>measCellListNR</i> Indicates the list of NR cells which the UE is requested to measure and report for idle/inactive measurements.
<i>measIdleCarrierListEUTRA</i> Indicates the E-UTRA carriers to be measured during RRC_IDLE or RRC_INACTIVE.
<i>measIdleCarrierListNR</i> Indicates the NR carriers to be measured during RRC_IDLE or RRC_INACTIVE.
<i>measIdleCarrierListNR-LessThan5MHz</i> Indicates the NR carriers to be measured during RRC_IDLE or RRC_INACTIVE for the cell(s) supporting 12 PRB, 15 PRB or 20 PRB transmission bandwidth configuration as defined in TS 38.101-1 [15], TS 38.211 [16] and TS 38.213 [13]. Total number of <i>MeasIdleCarrierNR</i> included in <i>measIdleCarrierListNR</i> and <i>measIdleCarrierListNR-LessThan5MHz</i> does not exceed <i>maxFreqIdle-r16</i> .
<i>measIdleDuration</i> Indicates the duration for performing idle/inactive measurements while in RRC_IDLE or RRC_INACTIVE. Value sec10 correspond to 10 seconds, value sec30 to 30 seconds and so on.
<i>measIdleValidityDuration, measReselectionValidityDuration</i> Indicates time values for UE to determine validity of reported idle/inactive and reselection measurements as defined in TS 38.133[14]. Value s5 correspond to 5 seconds, value s10 correspond to 10 seconds and so on.
<i>measReselectionCarrierListNR</i> Indicates the NR carriers for reselection measurement reporting.
<i>measReselectionCarrierListNR-LessThan5MHz</i> Indicates the NR carriers for reselection measurement reporting for the cell(s) supporting 12 PRB, 15 PRB or 20 PRB transmission bandwidth configuration as defined in TS 38.101-1 [15], TS 38.211 [16] and TS 38.213 [13]. Total number of <i>MeasReselectionCarrierNR</i> included in <i>measReselectionCarrierListNR</i> and <i>measReselectionCarrierListNR-LessThan5MHz</i> does not exceed <i>maxFreqIdle-r16</i> .
<i>nrofSS-BlocksToAverage</i>

Number of SS blocks to average for cell measurement derivation.
qualityThreshold Indicates the quality thresholds for reporting the measured cells for idle/inactive NR measurements.
qualityThresholdEUTRA Indicates the quality thresholds for reporting the measured cells for idle/inactive E-UTRA measurements.
reportQuantities Indicates which measurement quantities UE is requested to report in the idle/inactive measurement report.
reportQuantitiesEUTRA Indicates which E-UTRA measurement quantities the UE is requested to report in the idle/inactive measurement report.
reportQuantityRS-Indexes Indicates which measurement information per beam index the UE shall include in the NR idle/inactive measurement results.
smtc Indicates the measurement timing configuration for inter-frequency measurement. If this field is absent in <i>VarMeasIdleConfig</i> , the UE assumes that SSB periodicity is 5 ms in this frequency.
ssbSubcarrierSpacing Indicates subcarrier spacing of SSB. Only the following values are applicable depending on the used frequency: FR1: 15 or 30 kHz FR2-1: 120 or 240 kHz FR2-2: 120, 480, or 960 kHz
ssb-ToMeasure The set of SS blocks to be measured within the SMTC measurement duration (see TS 38.215 [9]). When the field is absent in <i>VarMeasIdleConfig</i> , the UE measures on all SS-blocks.
ss-RSSI-Measurement Indicates the SSB-based RSSI measurement configuration. If the field is absent in <i>VarMeasIdleConfig</i> , the UE behaviour is defined in TS 38.215 [89], clause 5.1.3.
validityAreaList Indicates the list of frequencies and optionally, for each frequency, a list of cells within which the UE is required to perform measurements while in RRC_IDLE and RRC_INACTIVE.

Conditional Presence	Explanation
<i>LessThan5MHz</i>	The field is mandatory present if the <i>carrierBandwidth</i> in SIB1 indicates UL or DL transmission bandwidth other than 15 PRB and the corresponding neighbour cell(s) support(s) 12 PRB, 15 PRB or 20 PRB transmission bandwidth configuration as defined in TS 38.101-1 [15], TS 38.211 [16] and TS 38.213 [13]. Otherwise, the field is optional, Need R.

– *MeasIdToAddModList*

The IE *MeasIdToAddModList* concerns a list of measurement identities to add or modify, with for each entry the *measId*, the associated *measObjectId* and the associated *reportConfigId*.

MeasIdToAddModList information element

```
-- ASN1START
-- TAG-MEASIDTOADDMODLIST-START
```

```

MeasIdToAddModList ::= SEQUENCE (SIZE (1..maxNrofMeasId)) OF MeasIdToAddMod
MeasIdToAddMod ::= SEQUENCE {
    measId MeasId,
    measObjectId MeasObjectId,
    reportConfigId ReportConfigId
}
-- TAG-MEASIDTOADDMODLIST-STOP
-- ASN1STOP

```

– *MeasObjectCLI*

The IE *MeasObjectCLI* specifies information applicable for SRS-RSRP measurements and/or CLI-RSSI measurements.

MeasObjectCLI information element

```

-- ASN1START
-- TAG-MEASOBJECTCLI-START

MeasObjectCLI-r16 ::= SEQUENCE {
    cli-ResourceConfig-r16 CLI-ResourceConfig-r16,

    s1640     INTEGER(0..639),
    ...
}

-- TAG-MEASOBJECTCLI-STOP
-- ASN1STOP

```

CLI-ResourceConfig field descriptions
srs-ResourceConfig SRS resources to be used for CLI measurements.
rssi-ResourceConfig CLI-RSSI resources to be used for CLI measurements.

MeasObjectCLI field descriptions
cli-ResourceConfig SRS and/or CLI-RSSI resource configuration for CLI measurement.

SRS-ResourceConfigCLI field descriptions
refBWP DL BWP id that is used to derive the reference point of the SRS resource (see TS 38.211[16], clause 6.4.1.4.3)
refServCellIndex The index of the reference serving cell that the <i>refBWP</i> belongs to. If this field is absent, the reference serving cell is PCell.
srs-SCS Subcarrier spacing for SRS. Only the following values are applicable depending on the used frequency: FR1: 15, 30, or 60 kHz FR2-1: 60 or 120 kHz FR2-2: 120, 480, or 960 kHz

<i>RSSI-ResourceConfigCLI</i> field descriptions
<i>nrofPRBs</i> Allowed size of the measurement BW. Only multiples of 4 are allowed. The smallest configurable number is the minimum of 4 and the width of the active DL BWP. If the configured value is larger than the width of the active DL BWP, the UE shall assume that the actual CLI-RSSI resource bandwidth is within the active DL BWP.
<i>nrofSymbols</i> Within a slot that is configured for CLI-RSSI measurement (see <i>slotConfiguration</i>), the UE measures the RSSI from <i>startPosition</i> to <i>startPosition</i> + <i>nrofSymbols</i> - 1. The configured CLI-RSSI resource does not exceed the slot boundary of the reference SCS. If the SCS of configured DL BWP(s) is larger than the reference SCS, network configures <i>startPosition</i> and <i>nrofSymbols</i> such that the configured CLI-RSSI resource not to exceed the slot boundary corresponding to the configured BWP SCS. If the reference SCS is larger than SCS of configured DL BWP(s), network ensures <i>startPosition</i> and <i>nrofSymbols</i> are integer multiple of reference SCS divided by configured BWP SCS.
<i>refServCellIndex</i> The index of the reference serving cell. Frequency reference point of the RSSI resource is subcarrier 0 of CRB0 of the reference serving cell. If this field is absent, the reference serving cell is PCell.
<i>rssi-PeriodicityAndOffset</i> Periodicity and slot offset for this CLI-RSSI resource. All values are in "number of slots". Value <i>s/1</i> corresponds to a periodicity of 1 slot, value <i>s/2</i> corresponds to a periodicity of 2 slots, and so on. For each periodicity the corresponding offset is given in number of slots.
<i>rssi-SCS</i> Reference subcarrier spacing for CLI-RSSI measurement. Only the following values are applicable depending on the used frequency: FR1: 15, 30, or 60 kHz FR2-1: 60 or 120 kHz FR2-2: 120, 480, or 960 kHz UE performs CLI-RSSI measurement with the SCS of the active bandwidth part within the configured CLI-RSSI resource in the active BWP regardless of the reference SCS of the measurement resource.
<i>startPosition</i> OFDM symbol location of the CLI-RSSI resource within a slot.
<i>startPRB</i> Starting PRB index of the measurement bandwidth. For the case where the reference subcarrier spacing is smaller than subcarrier spacing of active DL BWP(s), network configures <i>startPRB</i> and <i>nrofPRBs</i> are as a multiple of active BW SCS divided by reference SCS.

– *MeasObjectEUTRA*

The IE *MeasObjectEUTRA* specifies information applicable for E- UTRA cells.

MeasObjectEUTRA information element

<pre>-- ASN1START -- TAG-MEASOBJECTEUTRA-START MeasObjectEUTRA ::= carrierFreq allowedMeasBandwidth cellsToRemoveListEUTRAN cellsToAddModListEUTRAN excludedCellsToRemoveListEUTRAN</pre>				<pre>SEQUENCE { ARFCN-ValueEUTRA, EUTRA-AllowedMeasBandwidth, EUTRA-CellIndexList SEQUENCE (SIZE (1..maxCellMeasEUTRA)) OF EUTRA-Cell EUTRA-CellIndexList</pre>				<pre>OPTIONAL, -- Need N OPTIONAL, -- Need N OPTIONAL, -- Need N</pre>

]
}

EUTRA-CellIndexList ::= SEQUENCE (SIZE (1..maxCellMeasEUTRA)) OF EUTRA-CellIndex
EUTRA-CellIndex ::= INTEGER (1..maxCellMeasEUTRA)

EUTRA-Cell ::= SEQUENCE {
  cellIndexEUTRA EUTRA-CellIndex,
  physCellId EUTRA-PhysCellId,
  cellIndividualOffset EUTRA-Q-OffsetRange
}

EUTRA-ExcludedCell ::= SEQUENCE {
  cellIndexEUTRA EUTRA-CellIndex,
  physCellIdRange EUTRA-PhysCellIdRange
}

-- TAG-MEASOBJECTEUTRA-STOP
-- ASN1STOP
```

EUTRAN-ExcludedCell field descriptions	
cellIndexEUTRA	Entry index in the cell list.
physicalCellIdRange	Physical cell identity or a range of physical cell identities.

EUTRAN-Cell field descriptions	
physicalCellId	Physical cell identity of a cell in the cell list.
cellIndividualOffset	Cell individual offset applicable to a specific cell. Value <i>dB</i> -24 corresponds to -24 dB, <i>dB</i> -22 corresponds to -22 dB and so on.

MeasObjectEUTRA field descriptions
allowedMeasBandwidth The maximum allowed measurement bandwidth on a carrier frequency as defined by the parameter Transmission Bandwidth Configuration "N _{RB} " TS 36.104 [33].
associatedMeasGap Indicates the associated measurement gap for measuring this EUTRA frequency. If this field is absent, the associated measurement gap is the gap configured via <i>gapFR1</i> or <i>gapUE</i> .
carrierFreq Identifies E-UTRA carrier frequency for which this configuration is valid. Network does not configure more than one <i>MeasObjectEUTRA</i> for the same physical frequency, regardless of the E-ARFCN used to indicate this.
cellsToAddModListEUTRA List of cells to add/ modify in the cell list.
cellsToRemoveListEUTRA List of cells to remove from the cell list.
eutra-PresenceAntennaPort1 When set to <i>true</i> , the UE may assume that at least two cell-specific antenna ports are used in all neighbouring cells.
eutra-Q-OffsetRange Used to indicate a cell, or frequency specific offset to be applied when evaluating triggering conditions for measurement reporting. The value is in dB. Value <i>dB-24</i> corresponds to -24 dB, value <i>dB-22</i> corresponds to -22 dB and so on.
excludedCellsToAddModListEUTRA List of cells to add/ modify in the exclude-list of cells.
excludedCellsToRemoveListEUTRA List of cells to remove from the exclude-list of cells.
measSequence Indicates the recommended sequence for intra/inter-RAT intra/inter-frequency measurement. Value 1 means the corresponding frequency is measured firstly. Value 2 means the corresponding frequency is measured secondly and so on. If more than one frequency is configured with the same value, it means no recommended sequence among these frequencies. If not configured, it means there is no recommended sequence for the corresponding frequency. This field is only configured for NR standalone or if the <i>measObject</i> is associated to the MCG.
widebandRSRQ-Meas If set to <i>true</i> , the UE shall, when performing RSRQ measurements, use a wider bandwidth in accordance with TS 36.133 [40]. The network may set the field to <i>true</i> if the measurement bandwidth indicated by <i>allowedMeasBandwidth</i> is 50 resource blocks or larger; otherwise the network sets this field to <i>false</i> .

– MeasObjectId

The IE *MeasObjectId* used to identify a measurement object configuration.

MeasObjectId information element

```
-- ASN1START
-- TAG-MEASOBJECTID-START

MeasObjectId ::=
    INTEGER (1..maxNrofObjectId)

-- TAG-MEASOBJECTID-STOP
-- ASN1STOP
```

– *MeasObjectNR*

The IE *MeasObjectNR* specifies information applicable for SS/PBCH block(s) intra/inter-frequency measurements and/or CSI-RS intra/inter-frequency measurements.

MeasObjectNR information element

```
-- ASN1START
-- TAG-MEASOBJECTNR-START

}

-- TAG-MEASOBJECTNR-STOP
-- ASN1STOP

```

<i>CellsToAddMod</i> field descriptions	
<i>cellIndividualOffset</i>	Cell individual offsets applicable to a specific cell.
<i>ntn-NeighbourCellInfo</i>	Includes satellite assistance information of an NTN neighbour cell.
<i>ntn-PolarizationDL</i>	If present, this parameter indicates polarization information for downlink transmission on service link: including Right hand, Left hand circular polarizations (RHCP, LHCP) and Linear polarization.
<i>ntn-PolarizationUL</i>	In this version of the specification, the network does not include this field.
<i>physCellId</i>	Physical cell identity of a cell in the cell list.
<i>referenceLocation</i>	Reference location of a neighbor NTN Earth-moving cell for the evaluation of the trigger criteria of an associated <i>ReportConfig</i> which contains <i>EventD2</i> or <i>condEventD2</i> .

<i>MeasObjectNR</i> field descriptions
<i>absThreshCSI-RS-Consolidation</i> Absolute threshold for the consolidation of measurement results per CSI-RS resource(s) from L1 filter(s). The field is used for the derivation of cell measurement results as described in 5.5.3.3 and the reporting of beam measurement information per CSI-RS resource as described in 5.5.5.2.
<i>absThreshSS-BlocksConsolidation</i> Absolute threshold for the consolidation of measurement results per SS/PBCH block(s) from L1 filter(s). The field is used for the derivation of cell measurement results as described in 5.5.3.3 and the reporting of beam measurement information per SS/PBCH block index as described in 5.5.5.2.
<i>allowedCellsToAddModList</i> List of cells to add/modify in the allow-list of cells. It applies only to SSB resources.
<i>allowedCellsToRemoveList</i> List of cells to remove from the allow-list of cells.
<i>associatedMeasGapSSB</i> Indicates the associated measurement gap for SSB measuring identified by <i>ssb-ConfigMobility</i> in this measurement object. When multiple <i>MeasObjectNR</i> with the same SSB frequency are configured, the network configures the same measurement gap ID in this field for each <i>MeasObjectNR</i> . If this field is absent, the associated measurement gap is the gap configured via <i>gapFR1</i> , <i>gapFR2</i> , or <i>gapUE</i> .
<i>associatedMeasGapSSB2</i> Indicates the associated additional measurement gap for SSB measuring identified by <i>ssb-ConfigMobility</i> in this measurement object for NTN deployments. When multiple <i>MeasObjectNR</i> with the same SSB frequency are configured, the network configures the same measurement gap ID in this field for each <i>MeasObjectNR</i> . If this field is absent, the associated measurement gap is the gap indicated by <i>associatedMeasGapSSB</i> .
<i>associatedMeasGapCSIRS</i> Indicates the associated measurement gap for CSI-RS measuring identified by <i>csi-rs-ResourceConfigMobility</i> in this measurement object. If this field is absent, the associated measurement gap is the gap configured via <i>gapFR1</i> , <i>gapFR2</i> , or <i>gapUE</i> .
<i>associatedMeasGapCSIRS2</i> Indicates the associated additional measurement gap for CSI-RS measuring identified by <i>csi-rs-ResourceConfigMobility</i> in this measurement object for NTN deployments. If this field is absent, the associated measurement gap is the gap indicated by <i>associatedMeasGapCSIRS</i> . In this release of the specification, this field is not configured for NTN deployments.
<i>cellsToAddModList</i> List of cells to add/modify in the cell list. If the network includes <i>cellsToAddModListExt-v1710</i> and/or <i>cellsToAddModListExt-v1800</i> , it contains the same number of entries listed in the same order as in <i>cellsToAddModList</i> (i.e without suffix).
<i>cellsToRemoveList</i> List of cells to remove from the cell list.
<i>excludedCellsToAddModList</i> List of cells to add/modify in the exclude-list of cells. It applies only to SSB resources.
<i>excludedCellsToRemoveList</i> List of cells to remove from the exclude-list of cells.
<i>freqBandIndicatorNR</i> The frequency band in which the SSB and/or CSI-RS indicated in this <i>MeasObjectNR</i> are located and according to which the UE shall perform the RRM measurements. This field is always provided when the network configures measurements with this <i>MeasObjectNR</i> .
<i>measCyclePSCell</i> The parameter is used only when the PSCell is configured on the frequency indicated by the <i>measObjectNR</i> and the SCG is deactivated, see TS 38.133 [14]. The field may also be configured when the PSCell is not configured on that frequency. The network always configures <i>measCyclePSCell</i> for the <i>measObjectNR</i> associated with the PSCell if <i>bfd-and-RLM</i> is set to <i>true</i> and the SCG is deactivated. Value <i>ms160</i> corresponds to 160 ms, value <i>ms256</i> corresponds to 256 ms and so on.
<i>measCycleSCell</i> The parameter is used only when an SCell is configured on the frequency indicated by the <i>measObjectNR</i> and is in deactivated state, see TS 38.133 [14]. gNB configures the parameter whenever an SCell is configured on the frequency indicated by the <i>measObjectNR</i> , but the field may also be signalled when an SCell is not configured. Value <i>sf160</i>

corresponds to 160 sub-frames, value <i>sf256</i> corresponds to 256 sub-frames and so on. This field is ignored for serving cell measurements during fast measurement window.
measSequence Indicates the recommended sequence for intra/inter-RAT intra/inter-frequency measurement. Value 1 means the corresponding frequency is measured firstly. Value 2 means the corresponding frequency is measured secondly and so on. If more than one frequency is configured with the same value, it means no recommended sequence among these frequencies. If not provided, it means there is no recommended sequence for the corresponding frequency. This field is only configured for NR standalone or if the <i>measObject</i> is associated to the MCG.
neighSCellMeasSkipping If configured, the UE is not required to perform neighbour cell measurements on the frequency of this <i>MeasObjectNR</i> . This field is only applicable to UE supporting <i>antennaArrayType-r18</i> and CA.
nrofCSI-RS-ResourcesToAverage Indicates the maximum number of measurement results per beam based on CSI-RS resources to be averaged. The same value applies for each detected cell associated with this <i>MeasObjectNR</i> .
nrofSS-BlocksToAverage Indicates the maximum number of measurement results per beam based on SS/PBCH blocks to be averaged. The same value applies for each detected cell associated with this <i>MeasObject</i> .
offsetMO Offset values applicable to all measured cells with reference signal(s) indicated in this <i>MeasObjectNR</i> .
quantityConfigIndex Indicates the <i>n</i> -th element of <i>quantityConfigNR-List</i> provided in <i>MeasConfig</i> .
referenceSignalConfig RS configuration for SS/PBCH block and CSI-RS.
refFreqCSI-RS Point A which is used for mapping of CSI-RS to physical resources according to TS 38.211 [16] clause 7.4.1.5.3.
smtc1 Primary measurement timing configuration. (see clause 5.5.2.10).
smtc2 Secondary measurement timing configuration for SS corresponding to this <i>MeasObjectNR</i> with PCI listed in <i>pci-List</i> . For these SS, the periodicity is indicated by <i>periodicity</i> in <i>smtc2</i> and the timing offset is equal to the offset indicated in <i>periodicityAndOffset</i> modulo <i>periodicity</i> . <i>periodicity</i> in <i>smtc2</i> can only be set to a value strictly shorter than the periodicity indicated by <i>periodicityAndOffset</i> in <i>smtc1</i> (e.g. if <i>periodicityAndOffset</i> indicates <i>sf10</i> , <i>periodicity</i> can only be set of <i>sf5</i> , if <i>periodicityAndOffset</i> indicates <i>sf5</i> , <i>smtc2</i> cannot be configured). This field is not configured together with <i>smtc4list</i> .
smtc3list Measurement timing configuration list for SS corresponding to IAB-MT. This is used for the IAB-node's discovery of other IAB-nodes and the IAB-Donor-DUs.
smtc4list, smtc5list Measurement timing configuration list for NTN deployments, see clause 5.5.2.10. <i>smtc5list</i> is only configured to indicate SMTC(s) with an additional periodicity different from the one indicated in <i>smtc1</i> .
smtc6list Measurement timing configuration list for OD-SSB, see clause 5.5.2.10.
smtc7-SSBAdapt Measurement timing configuration for adapted SSB transmission, see clause 5.5.2.10.
ssbFrequency Indicates the frequency of the SS associated to this <i>MeasObjectNR</i> . For operation with shared spectrum channel access, this field is a k*30 kHz shift from the sync raster where k = 0,1,2, and so on if the <i>reportType</i> within the corresponding <i>ReportConfigNR</i> is set to <i>reportCGI</i> (see TS 38.211 [16], clause 7.4.3.1). Frequencies are considered to be on the sync raster if they are also identifiable with a GSCN value (see TS 38.101-1 [15], or TS 38.101-5 [75]).
ssb-PositionQCL-Common Indicates the QCL relationship between SS/PBCH blocks for all measured cells as specified in TS 38.213 [13], clause 4.1.

ssbSubcarrierSpacing Subcarrier spacing of SSB. Only the following values are applicable depending on the used frequency: FR1/FR1-NTN: 15 or 30 kHz FR2-1/FR2-NTN: 120 or 240 kHz FR2-2: 120, 480, or 960 kHz
t312 The value of timer T312. Value ms0 represents 0 ms, ms50 represents 50 ms and so on.

ReferenceSignalConfig field descriptions
csi-rs-ResourceConfigMobility CSI-RS resources to be used for CSI-RS based RRM measurements.
ssb-ConfigMobility SSB configuration for mobility (nominal SSBs, timing configuration).

RMTC-Config field descriptions	
<i>measDurationSymbols</i>	Number of consecutive symbols for which the Physical Layer reports samples of RSSI (see TS 38.215 [9], clause 5.1.21). Value <i>sym1</i> corresponds to one symbol, <i>sym14or12</i> corresponds to 14 symbols of the reference numerology for NCP and 12 symbols for ECP, and so on. If <i>measDurationSymbols-v1700</i> is signalled, the UE ignores <i>measDurationSymbols-r16</i> .
<i>ref-BWPId</i>	Indicates the reference BWP for the TCI state indicated in <i>tci-StateInfo</i> . Network includes this field if <i>tci-StateInfo</i> is present. This field is only applicable for operation with shared spectrum channel access in FR2-2 and network does not configure this if the UE does not have any serving cells in FR2-2.
<i>ref-SCS-CP</i>	Indicates a reference subcarrier spacing and cyclic prefix to be used for RSSI measurements (see TS 38.215 [9]). Value kHz15 corresponds to 15kHz, kHz30 corresponds to 30 kHz, value kHz60-NCP corresponds to 60 kHz using normal cyclic prefix (NCP), and kHz60-ECP corresponds to 60 kHz using extended cyclic prefix (ECP). If <i>ref-SCS-CP-v1700</i> is signalled, the UE ignores <i>ref-SCS-CP-r16</i> .
<i>ref-ServCellId</i>	Indicates the FR2-2 reference serving cell index for the TCI state. Network includes this field if <i>tci-StateInfo</i> is present. This field is only applicable for operation with shared spectrum channel access in FR2-2 and network does not configure this if the UE does not have any serving cells in FR2-2.
<i>rmtc-Bandwidth</i>	Indicates the bandwidth for the RSSI measurement (see TS 38. 215 [9], clause 5.1.21).
<i>rmtc-Frequency</i>	Indicates the center frequency of the measured bandwidth for a frequency which operates with shared spectrum channel access (see TS 38. 215 [9], clause 5.1.21).
<i>rmtc-Periodicity</i>	Indicates the RSSI measurement timing configuration (RMTC) periodicity (see TS 38.215 [9], clause 5.1.21).
<i>rmtc-SubframeOffset</i>	Indicates the RSSI measurement timing configuration (RMTC) subframe offset for this frequency (see TS 38.215 [9], clause 5.1.21). For inter-frequency measurements, this field is optional present and if it is not configured, the UE chooses a random value as <i>rmtc-SubframeOffset</i> for <i>measDurationSymbols</i> which shall be selected to be between 0 and the configured <i>rmtc-Periodicity</i> with equal probability.
<i>tci-StateId</i>	Indicates the TCI state to be used for RSSI measurements. This field is only applicable for shared spectrum channel access in FR2-2. Network does not configure this if the UE does not have any serving cells in FR2-2 and in such a case, it is up to UE implementation how to determine the spatial domain filter for the inter-frequency RSSI measurement in FR2-2.

SSB-ConfigMobility field descriptions
<i>cca-CellsToAddModList</i>, <i>cca-CellsToRemoveList</i> Lists of cells to be added or removed from the list of neighbor cells that apply channel access mode procedures for operation with shared spectrum channel access in accordance with TS 37.213 [48], clause 4.4 for FR2-2.
<i>deriveSSB-IndexFromCell</i> If this field is set to <i>true</i>, UE assumes SFN and frame boundary alignment across cells on the same frequency carrier as specified in TS 38.133 [14]. Hence, if the UE is configured with a serving cell for which (<i>absoluteFrequencySSB</i>, <i>subcarrierSpacing</i>) in <i>ServingCellConfigCommon</i> is equal to (<i>ssbFrequency</i>, <i>ssbSubcarrierSpacing</i>) in this <i>MeasObjectNR</i>, this field indicates whether the UE can utilize the timing of this serving cell to derive the index of SS block transmitted by neighbour cell. Otherwise, this field indicates whether the UE may use the timing of any detected cell on that target frequency to derive the SSB index of all neighbour cells on that frequency.
<i>deriveSSB-IndexFromCellInter</i> If this field is present, UE assumes SFN and frame boundary alignment between the reference serving cell indicated by <i>ServCellIndex</i> and all neighbour cells in this <i>MeasObjectNR</i> as specified in TS 38.133 [14]. This field also indicates that the UE can utilize the timing of the reference serving cell indicated by <i>ServCellIndex</i> to derive the index of SS block transmitted by all inter-frequency neighbour cells on the frequency indicated by the <i>MeasObjectNR</i>. When this field is included, the network should set <i>deriveSSB-IndexFromCell</i> to <i>true</i>.
<i>ssb-ToMeasure</i> The set of SS blocks to be measured within the SMTC measurement duration. The first/leftmost bit corresponds to SS/PBCH block index 0, the second bit corresponds to SS/PBCH block index 1, and so on. Value 0 in the bitmap indicates that the corresponding SS/PBCH block is not to be measured while value 1 indicates that the corresponding SS/PBCH block is to be measured (see TS 38.215 [9]). When the field is not configured the UE measures on all SS blocks. Regardless of the value of this field, SS/PBCH blocks outside of the applicable <i>smtc</i> are not to be measured. See TS 38.215 [9] clause 5.1.1.
<i>ssb-ToMeasureAltitudeBasedList</i> List of altitude-dependent <i>ssb-ToMeasure</i>. When the UE is within an altitude range indicated by <i>altitudeRange</i>, it ignores the <i>ssb-ToMeasure</i> (without suffix), and applies the corresponding <i>ssb-ToMeasure-r18</i> if present, otherwise (i.e., the UE is within an altitude range indicated by <i>altitudeRange</i> and <i>ssb-ToMeasure-r18</i> is absent) it measures on all SS-blocks. When the UE is outside all the altitude ranges indicated by <i>altitudeRange</i> (if any), <i>ssb-ToMeasure</i> (without suffix) applies. For each altitude range, <i>altitudeMin</i> indicates the minimum altitude in meters relative to sea level, <i>altitudeMax</i> indicates the maximum altitude in meters relative to sea level, and if included, <i>altitudeHyst</i> indicates hysteresis in meters for determination of the altitude range. I.e., when <i>altitudeHyst</i> is configured for an altitude range, the UE considers itself to have entered the range if $altitudeMin \leq \text{UE altitude} \leq altitudeMax$ and after entering the range considers itself to be in the range while $(altitudeMin - altitudeHyst) \leq \text{UE altitude} \leq (altitudeMax + altitudeHyst)$. For each <i>altitudeRange</i>, if <i>altitudeMin</i> is absent, value <i>minAltitude-r18</i> is used and if <i>altitudeMax</i> is absent, value <i>maxAltitude-r18</i> is used.

SSB-PositionQCL-CellsToAddMod field descriptions
<i>physCellId</i> Physical cell identity of a cell in the cell list.
<i>ssb-PositionQCL</i> Indicates the QCL relation between SS/PBCH blocks for a specific cell as specified in TS 38.213 [13], clause 4.1. If provided, the cell specific value overwrites the value signalled by <i>ssb-PositionQCL-Common</i>.

Conditional Presence	Explanation
<i>AssociatedGapCSIIRS</i>	This field is optionally present, Need R if <i>associatedMeasGapCSIIRS</i> is configured, otherwise, it is absent.
<i>AssociatedGapSSB</i>	This field is optionally present, Need R if <i>associatedMeasGapSSB</i> is configured, otherwise, it is absent.
<i>CSI-RS</i>	This field is mandatory present if <i>csi-rs-ResourceConfigMobility</i> is configured, otherwise, it is absent.
<i>IntraFreqConnected</i>	This field is optionally present, Need R if the UE is configured with a serving cell for which (absoluteFrequencySSB, subcarrierSpacing) in <i>ServingCellConfigCommon</i> is equal to (<i>ssbFrequency</i> , <i>ssbSubcarrierSpacing</i>) in this <i>MeasObjectNR</i> , otherwise, it is absent.
<i>SCellMO</i>	This field is optionally present, Need R, in the <i>MeasObjectNR</i> associated with an SCell. Otherwise the field is absent.
<i>SCG</i>	This field is optionally present, Need R, in the <i>measConfig</i> associated with the SCG. It is absent in the <i>measConfig</i> associated with the MCG.
<i>NeighbourCell</i>	This field is mandatory present if this <i>MeasObject</i> is configured by the serving cell for a neighbour cell served by a NTN Earth-moving cell and is associated with a <i>ReportConfig</i> which contains <i>EventD2</i> or <i>condEventD2</i> . Otherwise, it is optional, Need R.
<i>SharedSpectrum</i>	This field is mandatory present if this <i>MeasObject</i> is for a frequency which operates with shared spectrum channel access in FR1. Otherwise, it is absent, Need R.
<i>SharedSpectrum2</i>	This field is optionally present if this <i>MeasObject</i> is for a frequency which operates with shared spectrum channel access in FR2-2, Need R. Otherwise, it is absent, Need R.
<i>SSBorAssociatedSSB</i>	This field is mandatory present if <i>ssb-ConfigMobility</i> is configured or <i>associatedSSB</i> is configured in at least one cell. Otherwise, it is absent, Need R.

– *MeasObjectNR-SL*

The IE *MeasObjectNR-SL* concerns a measurement object including a list of transmission resource pool(s) for which CBR measurement is performed for NR sidelink communication/discovery.

MeasObjectNR-SL information element

```
-- ASN1START
-- TAG-MEASOBJECTNR-SL-START

MeasObjectNR-SL-r16 ::= SEQUENCE {
    tx-PoolMeasToRemoveList-r16 Tx-PoolMeasList-r16 OPTIONAL, -- Need N
    tx-PoolMeasToAddModList-r16 Tx-PoolMeasList-r16 OPTIONAL -- Need N
}

MeasObjectNR-SL-r18 ::= SEQUENCE {
    sl-Frequency-r18 INTEGER (1..maxNrofFreqSL-r16),
    tx-PoolMeasToRemoveList-r18 Tx-PoolMeasList-r16 OPTIONAL, -- Need N
    tx-PoolMeasToAddModList-r18 Tx-PoolMeasList-r16 OPTIONAL -- Need N
}

Tx-PoolMeasList-r16 ::= SEQUENCE (SIZE (1..maxNrofSL-PoolToMeasureNR-r16)) OF SL-ResourcePoolID-r16

-- TAG-MEASOBJECTNR-SL-STOP
-- ASN1STOP
```

MeasObjectNR-SL field descriptions***sl-Frequency***

Indicates the sidelink frequency associated to this *MeasObjectNR-SL*. The value 1 corresponds to the frequency of first entry in *sl-FreqInfoList* broadcast in *SIB12*, the value 2 corresponds to the frequency of first entry in *sl-FreqInfoListSizeExt* broadcast in *SIB12*, the value 3 corresponds to the frequency of second entry in *sl-FreqInfoListSizeExt* broadcast in *SIB12* and so on.

– ***MeasObjectRxTxDiff***

The IE *MeasObjectRxTxDiff* is used to configure the measurement object for UE Rx-Tx time difference measurement.

***MeasObjectRxTxDiff* information element**

```
-- ASN1START
-- TAG-MEASOBJECTRXTXDIFF-START

MeasObjectRxTxDiff-r17 ::=      SEQUENCE {
    dl-Ref-r17      CHOICE {
        prs-Ref-r17      NULL,
        csi-RS-Ref-r17    NULL,
        ...
    }
    ...
    OPTIONAL, -- Need R
}

-- TAG-MEASOBJECTRXTXDIFF-STOP
-- ASN1STOP
```

MeasObjectRxTxDiff* field descriptions**dl-Ref***

configures the DL references signals to measure Rx-Tx time difference. *prs-Ref-r17* indicates PRS is chosen, and *csi-RS-Ref-r17* indicates that CSI-RS for tracking is chosen. Only one PRS resource set is configured by the network. Only one *NZP-CSI-RS-ResourceSet* can be configured with *pdcc-Info-r17* set to *true* and it is used for UE Rx-Tx time difference measurement. Only reference signals from the PCell of the MCG can be configured by the network.

– ***MeasObjectToAddModList***

The IE *MeasObjectToAddModList* concerns a list of measurement objects to add or modify.

***MeasObjectToAddModList* information element**

```
-- ASN1START
-- TAG-MEASOBJECTTOADDMODLIST-START

MeasObjectToAddModList ::=      SEQUENCE (SIZE (1..maxNrofObjectId)) OF MeasObjectToAddMod
```

```

MeasObjectToAddMod ::=
    measObjectId
    measObject
        measObjectNR
        ...,
        measObjectEUTRA
        measObjectUTRA-FDD-r16
        measObjectNR-SL-r16
        measObjectCLI-r16
        measObjectRxTxDiff-r17
        measObjectRelay-r17
        measObjectNR-SL-r18
    }
}

-- TAG-MEASOBJECTTOADDMODLIST-STOP
-- ASN1STOP

```

```

SEQUENCE {
    MeasObjectId,
    CHOICE {
        MeasObjectNR,
        MeasObjectEUTRA,
        MeasObjectUTRA-FDD-r16,
        MeasObjectNR-SL-r16,
        MeasObjectCLI-r16,
        MeasObjectRxTxDiff-r17,
        SL-MeasObject-r16,
        MeasObjectNR-SL-r18
    }
}

```

– *MeasObjectUTRA-FDD*

The IE *MeasObjectUTRA-FDD* specifies information applicable for inter-RAT UTRA-FDD neighbouring cells.

MeasObjectUTRA-FDD information element

```

-- ASN1START
-- TAG-MEASOBJECTUTRA-FDD-START

MeasObjectUTRA-FDD-r16 ::=
    carrierFreq-r16
    utra-FDD-Q-OffsetRange-r16
    cellsToRemoveList-r16
    cellsToAddModList-r16
    ...
}

CellsToAddModListUTRA-FDD-r16 ::=
    SEQUENCE (SIZE (1..maxCellMeasUTRA-FDD-r16)) OF CellsToAddModUTRA-FDD-r16

CellsToAddModUTRA-FDD-r16 ::=
    SEQUENCE {
        cellIndexUTRA-FDD-r16
        physCellId-r16
    }

UTRA-FDD-CellIndexList-r16 ::=
    SEQUENCE (SIZE (1..maxCellMeasUTRA-FDD-r16)) OF UTRA-FDD-CellIndex-r16

UTRA-FDD-CellIndex-r16 ::=
    INTEGER (1..maxCellMeasUTRA-FDD-r16)

-- TAG-MEASOBJECTUTRA-FDD-STOP
-- ASN1STOP

```

```

SEQUENCE {
    ARFCN=ValueUTRA-FDD-r16,
    UTRA-FDD-Q-OffsetRange-r16 OPTIONAL, -- Need R
    UTRA-FDD-CellIndexList-r16 OPTIONAL, -- Need N
    CellsToAddModListUTRA-FDD-r16 OPTIONAL, -- Need N
}

```

MeasObjectUTRA-FDD field descriptions
carrierFreq Identifies UTRA-FDD carrier frequency for which this configuration is valid. NR does not configure more than one measurement object for the same physical frequency regardless of the ARFCN used to indicate this.
cellIndexUTRA-FDD Entry index in the neighbouring cell list.
cellsToAddModList List of UTRA-FDD cells to add/modify in the neighbouring cell list.
cellsToRemoveList List of cells to remove from the neighbouring cell list.
utra-FDD-Q-OffsetRange Used to indicate a frequency specific offset to be applied when evaluating triggering conditions for measurement reporting. The value is in dB.

– MeasResultCellListSFTD-NR

The IE *MeasResultCellListSFTD-NR* consists of SFN and radio frame boundary difference between the PCell and an NR cell as specified in TS 38.215 [9] and TS 38.133 [14].

MeasResultCellListSFTD-NR information element

```
-- ASN1START
-- TAG-MEASRESULTCELLLISTSFTD-NR-START

MeasResultCellListSFTD-NR ::=      SEQUENCE (SIZE (1..maxCellSFTD)) OF MeasResultCellSFTD-NR

MeasResultCellSFTD-NR ::=          SEQUENCE {
    physCellId                      PhysCellId,
    sfn-OffsetResult                 INTEGER (0..1023),
    frameBoundaryOffsetResult        INTEGER (-30720..30719),
    rsrp-Result                      RSRP-Range                               OPTIONAL
}

-- TAG-MEASRESULTCELLLISTSFTD-NR-STOP
-- ASN1STOP
```

MeasResultCellSFTD-NR field descriptions
sfn-OffsetResult Indicates the SFN difference between the PCell and the NR cell as an integer value according to TS 38.215 [9].
frameBoundaryOffsetResult Indicates the frame boundary difference between the PCell and the NR cell as an integer value according to TS 38.215 [9].

– *MeasResultCellListSFTD-EUTRA*

The IE *MeasResultCellListSFTD-EUTRA* consists of SFN and radio frame boundary difference between the PCell and an E-UTRA PSCell.

***MeasResultCellListSFTD-EUTRA* information element**

```
-- ASN1START
-- TAG-MEASRESULTCELLLISTSFTD-EUTRA-START

MeasResultCellListSFTD-EUTRA ::=          SEQUENCE (SIZE (1..maxCellSFTD)) OF MeasResultSFTD-EUTRA

MeasResultSFTD-EUTRA ::=          SEQUENCE {
    eutra-PhysCellId          EUTRA-PhysCellId,
    sfm-OffsetResult          INTEGER (0..1023),
    frameBoundaryOffsetResult  INTEGER (-30720..30719),
    rsrp-Result               RSRP-Range          OPTIONAL
}

-- TAG-MEASRESULTCELLLISTSFTD-EUTRA-STOP
-- ASN1STOP
```

<i>MeasResultSFTD-EUTRA</i> field descriptions
<i>eutra-PhysCellId</i> Identifies the physical cell identity of the E-UTRA cell for which the reporting is being performed.
<i>sfn-OffsetResult</i> Indicates the SFN difference between the PCell and the E-UTRA cell as an integer value according to TS 38.215 [9].
<i>frameBoundaryOffsetResult</i> Indicates the frame boundary difference between the PCell and the E-UTRA cell as an integer value according to TS 38.215 [9].

– *MeasResults*

The IE *MeasResults* covers measured results for intra-frequency, inter-frequency, inter-RAT mobility and measured results for NR sidelink communication/discovery/positioning.

***MeasResults* information element**

```
-- ASN1START
-- TAG-MEASRESULTS-START

MeasResults ::=          SEQUENCE {
    measId          MeasId,
    measResultServingMOList  MeasResultServMOList,
    measResultNeighCells     CHOICE {
        measResultListNR          MeasResultListNR,
        ...,

MeasResultEUTRA field descriptions	
eutra-PhysCellId	Identifies the physical cell identity of the E-UTRA cell for which the reporting is being performed. The UE reports a value in the range 0..503, other values are reserved.
hsdn-Cell	Contains <i>hsdn-Cell</i> field acquired by the UE that supports <i>eutra-CGI-Reporting-HSDN</i> from SIB1 of the cell for which report CGI procedure was requested by the network.

<i>MeasResultNR</i> field descriptions
averageDelay Indicates average delay for the packets during the reporting period, as specified in TS 38.314 [53]. Value 0 corresponds to 0 millisecond, value 1 corresponds to 0.1 millisecond, value 2 corresponds to 0.2 millisecond, and so on.
cellResults Cell level measurement results.
cellsMetReportOnLeaveList This field indicates the list of cells which met the event leaving condition.
choCandidate This field indicates whether the associated cell is a candidate target cell for conditional handover or conditional PSCell change or addition. This field may be included only in the <i>SuccessHO-Report</i> or <i>SuccessPSCell-Report</i> within <i>UEInformationResponse</i> message.
choConfig If the associated cell is a candidate target cell for conditional handover, this field indicates the conditional handover execution condition for each <i>measId</i> within <i>condTriggerConfig</i> associated to the cell. This field may be included only in the <i>rlf-report</i> within <i>UEInformationResponse</i> message.
distanceFromReference2 This field indicates the distance between UE and the moving reference locations of associated neighbour cell if the conditional handover is based on <i>condEventD2</i> . Each step represents 50m. The actual measured distance shall be rounded down to the nearest lower or equal step value (i.e., $\text{FLOOR}(\text{actual distance[m]} / 50)$). The maximum value is 65535, which indicates a distance equal to or greater than 65535 multiplied by 50m.
drb-Id Indicates DRB value for which uplink PDCP delay ratio or value is provided, according to TS 38.314 [53].
entering This field indicates if the event entering condition for the cell is satisfied and the cell has been just added within <i>cellsTriggeredList</i> .
firstTriggeredEvent This field indicates the first fulfilled conditional execution condition. This field may be included in <i>rlf-report</i> within <i>UEInformationResponse</i> message or in <i>SCGFailureInformation</i> message.
locationInfo Positioning related information and measurements.
physCellId The physical cell identity of the NR cell for which the reporting is being performed.
resultsSSB-Cell Cell level measurement results based on SS/PBCH related measurements.
resultsSSB-Indexes Beam level measurement results based on SS/PBCH related measurements.
resultsCSI-RS-Cell Cell level measurement results based on CSI-RS related measurements.
resultsCSI-RS-Indexes Beam level measurement results based on CSI-RS related measurements.
rsIndexResults Beam level measurement results.
timeBetweenEvents Indicates the time elapsed between fulfilling the conditional execution conditions. Value in milliseconds. The maximum value 1023 means 1023ms or longer. This field may be included in the reports associated to <i>UEInformationResponse</i> message, e.g., <i>rlf-Report</i> or in the <i>SCGFailureInformation</i> message.

<i>MeasResultUTRA-FDD</i> field descriptions	
<i>physCellId</i>	The physical cell identity of the UTRA-FDD cell for which the reporting is being performed.
<i>utra-FDD-EcN0</i>	According to CPICH_Ec/No in TS 25.133 [46] for FDD.
<i>utra-FDD-RSCP</i>	According to CPICH_RSCP in TS 25.133 [46] for FDD.

<i>MeasResults</i> field descriptions
<i>coarseLocationInfo</i> This field indicates the coarse location information reported by the UE. This field is coded as the <i>Ellipsoid-Point</i> defined in TS 37.355 [49]. The first/leftmost bit of the first octet contains the most significant bit. The least significant bits of <i>degreesLatitude</i> and <i>degreesLongitude</i> are set to 0 to meet the accuracy requirement corresponds to a granularity of approximately 2 km. It is up to UE implementation how many LSBs are set to 0 to meet the accuracy requirement
<i>excessDelay</i> Indicates the ratio of packets in UL per DRB exceeding the configured delay threshold among the UL PDCP SDUs, according to the UL PDCP Excess Packet Delay per DRB mapping table, as defined in TS 38.314 [53], Table 4.3.1.e-1.
<i>measId</i> Identifies the measurement identity for which the reporting is being performed.
<i>measQuantityResults</i> The value <i>sinr</i> is not included when it is used for <i>LogMeasReport-r16</i> .
<i>measResultCellListSFTD-NR</i> SFTD measurement results between the PCell and the NR neighbour cell(s) in NR standalone.
<i>measResultCLI</i> CLI measurement results.
<i>measResultEUTRA</i> Measured results of an E-UTRA cell.
<i>measResultForRSSI</i> Includes measured RSSI result in dBm (see TS 38.215 [9]) and <i>channelOccupancy</i> which is the percentage of samples when the RSSI was above the configured <i>channelOccupancyThreshold</i> for the associated <i>reportConfig</i> .
<i>measResultListEUTRA</i> List of measured results for the maximum number of reported best cells for an E-UTRA measurement identity.
<i>measResultListNR</i> List of measured results for the maximum number of reported best cells for an NR measurement identity.
<i>measResultListUTRA-FDD</i> List of measured results for the maximum number of reported best cells for a UTRA-FDD measurement identity.
<i>measResultNR</i> Measured results of an NR cell.
<i>measResultServFreqListEUTRA-SCG</i> Measured results of the E-UTRA SCG serving frequencies: the measurement result of PSCell and each SCell, if any, and of the best neighbouring cell on each E-UTRA SCG serving frequency.
<i>measResultServFreqListNR-SCG</i> Measured results of the NR SCG serving frequencies: the measurement result of PSCell and each SCell, if any, and of the best neighbouring cell on each NR SCG serving frequency.
<i>measResultServingMOList</i> Measured results of measured cells with reference signals indicated in the serving cell measurement objects including measurement results of SpCell, configured SCell(s) and best neighbouring cell within measured cells with reference signals indicated in on each serving cell measurement object. If the sending of the <i>MeasurementReport</i> message is triggered by a measurement configured by the field <i>sl-ConfigDedicatedForNR</i> received within an E-UTRA <i>RRCCConnectionReconfiguration</i> message (i.e. CBR measurements), this field is not applicable and its contents is ignored by the network.
<i>measResultSFTD-EUTRA</i> SFTD measurement results between the PCell and the E-UTRA PScell in NE-DC.
<i>measResultSFTD-NR</i> SFTD measurement results between the PCell and the NR PScell in NR-DC.

MeasResults field descriptions
coarseLocationInfo This field indicates the coarse location information reported by the UE. This field is coded as the <i>Ellipsoid-Point</i> defined in TS 37.355 [49]. The first/leftmost bit of the first octet contains the most significant bit. The least significant bits of <i>degreesLatitude</i> and <i>degreesLongitude</i> are set to 0 to meet the accuracy requirement corresponds to a granularity of approximately 2 km. It is up to UE implementation how many LSBs are set to 0 to meet the accuracy requirement
excessDelay Indicates the ratio of packets in UL per DRB exceeding the configured delay threshold among the UL PDCP SDUs, according to the UL PDCP Excess Packet Delay per DRB mapping table, as defined in TS 38.314 [53], Table 4.3.1.e-1.
measResultsSL CBR measurements results for NR sidelink communication/discovery/positioning.
measResultUTRA-FDD Measured result of a UTRA-FDD cell.
sl-MeasResultsCandRelay Measurement result(s) of candidate L2 U2N relay UE(s).
sl-MeasResultServingRelay Measurement result of serving L2 U2N relay UE.

– MeasResult2EUTRA

The IE *MeasResult2EUTRA* contains measurements on E-UTRA frequencies.

MeasResult2EUTRA information element

```
-- ASN1START

    ssb-RSRQ-Result-r16  RSRQ-Range          OPTIONAL
  }
}

-- TAG-MEASRESULTIDLENR-STOP
-- ASN1STOP
```

MeasResultIdleNR field descriptions
carrierFreq Indicates the NR carrier frequency.
measIdleResultNR Idle/inactive measurement results for an NR cell (optionally including beam level measurements).
measResultServingCell Measured results of the serving cell (i.e., PCell) from idle/inactive measurements.
measResultsPerCellListIdleNR List of idle/inactive measured results for the maximum number of reported best cells for a given NR carrier.
resultsSSB-Indexes Beam level measurement results (indexes and optionally, beam measurements).

– **MeasResultRxTxTimeDiff**

The IE *MeasResultRxTxTimeDiff* is used to provide Rx-Tx time difference measurement result.

MeasResultRxTxTimeDiff information element

```
-- ASN1START
-- TAG-MEASRESULTRXTXTIMEDIFF-START

MeasResultRxTxTimeDiff-r17 ::= SEQUENCE {
  rxTxTimeDiff-ue-r17      RxTxTimeDiff-r17  OPTIONAL,
  ...
}

-- TAG-MEASRESULTRXTXTIMEDIFF-STOP
-- ASN1STOP
```

MeasResultRxTxTimeDiff field descriptions
rxTxTimeDiff-ue indicates the Rx-Tx Time difference measurement at the UE (see clause 5.1.30, TS 38.215 [9]).

– **MeasResultSCG-Failure**

The IE *MeasResultSCG-Failure* is used to provide information regarding failures detected by the UE in (NG)EN-DC and NR-DC.

MeasResultSCG-Failure information element

```
-- ASN1START
-- TAG-MEASRESULTSCG-FAILURE-START

MeasResultSCG-Failure ::=          SEQUENCE {
    measResultPerMOList             MeasResultList2NR,
    ...,
    [[
        locationInfo-r16            LocationInfo-r16          OPTIONAL
    ]]
}

MeasResultList2NR ::=              SEQUENCE (SIZE (1..maxFreq)) OF MeasResult2NR

-- TAG-MEASRESULTSCG-FAILURE-STOP
-- ASN1STOP
```

– **MeasResultsSL**

The IE *MeasResultsSL* covers measured results for NR sidelink communication/discovery/positioning.

MeasResultsSL information element

```
-- ASN1START
-- TAG-MEASRESULTSSL-START

MeasResultsSL-r16 ::=              SEQUENCE {
    measResultsListSL-r16           CHOICE {
        measResultNR-SL-r16         MeasResultNR-SL-r16,
        ...,
        [[
            measResultNR-SL-r18      MeasResultNR-SL-r18
        ]]
    },
    ...
}

MeasResultNR-SL-r16 ::=            SEQUENCE {
```

```
measResultListCBR-NR-r16      SEQUENCE (SIZE (1.. maxNrofSL-PoolToMeasureNR-r16)) OF MeasResultCBR-NR-r16,
...
}

MeasResultCBR-NR-r16 ::= SEQUENCE {
  sl-poolReportIdentity-r16    SL-ResourcePoolID-r16,
  sl-CBR-ResultsNR-r16        SL-CBR-r16,
  ...
}

MeasResultNR-SL-r18 ::= SEQUENCE {
  measResultListCBR-DedicatedSL-PRS-r18 SEQUENCE (SIZE (1..maxNrofDedicatedSL-PRS-PoolToMeas-r18)) OF MeasResultCBR-DedicatedSL-PRS-r18,
  ...
}

MeasResultCBR-DedicatedSL-PRS-r18 ::= SEQUENCE {
  sl-PRS-ResourcePoolID-r18    SL-PRS-ResourcePoolID-r18,
  sL-CBR-ResultsDedicatedSL-PRS-RP-r18  SL-CBR-r16,
  ...
}

-- TAG-MEASRESULTSSL-STOP
-- ASN1STOP
```

MeasResultsSL field descriptions
measResultNR-SL Include the measured results for NR sidelink communication/discovery/positioning.

MeasResultNR-SL field descriptions
measResultListCBR-DedicatedSL-PRS CBR measurement results for NR sidelink positioning for dedicated SL PRS resource pool.
measResultListCBR-NR CBR measurement results for NR sidelink communication/discovery.
sl-poolReportIdentity The identity of the transmission resource pool which is corresponding to the <i>sl-ResourcePoolID</i> configured in a resource pool for NR sidelink communication/discovery.
sl-PRS-ResourcePoolID The ID of the transmission resource pool which is corresponding to the <i>sl-PRS-ResourcePoolID</i> configured in a resource pool for NR sidelink positioning.

– MeasSequence

The IE *MeasSequence* is used to configure a recommended sequence for intra/inter-RAT intra/inter-frequency measurement.

MeasSequence information element

```
-- ASN1START
```

```
-- TAG-MEASSEQUENCE-START
MeasSequence-r18 ::=                INTEGER (1..maxMeasSequence-r18)
-- TAG-MEASSEQUENCE-STOP
-- ASN1STOP
```

– *MeasTriggerQuantity*

Measurement quantity defined in the measurement report configurations (e.g., events defined in *ReportConfig-NR*, or *LTM-CSI-ReportConfig*) for triggering measurement reports (e.g., by RRC message *MeasurementReport* or by MAC CE in TS 38.321 [3]). When the IE is configured under *LTM-CSI-ReportConfig*, only the field *rsrp* is applicable.

MeasTriggerQuantity information element

```
-- ASN1START
-- TAG-MEASTRIGGERQUANTITY-START
MeasTriggerQuantity ::=                CHOICE {
    rsrp                        RSRP-Range,
    rsrq                        RSRQ-Range,
    sinr                        SINR-Range
}
-- TAG-MEASTRIGGERQUANTITY-STOP
-- ASN1STOP
```

– *MeasTriggerQuantityEUTRA*

The IE *MeasTriggerQuantityEUTRA* is used to configure the trigger quantity and reporting range for E-UTRA measurements. The RSRP, RSRQ and SINR ranges correspond to *RSRP-Range*, *RSRQ-Range* and *RS-SINR-Range* in TS 36.331 [10], respectively.

MeasTriggerQuantityEUTRA information element

```
-- ASN1START
-- TAG-MEASTRIGGERQUANTITYEUTRA-START
MeasTriggerQuantityEUTRA ::=          CHOICE {
    rsrp                        RSRP-RangeEUTRA,
    rsrq                        RSRQ-RangeEUTRA,
    sinr                        SINR-RangeEUTRA
}

RSRP-RangeEUTRA ::=                    INTEGER (0..97)
RSRQ-RangeEUTRA ::=                    INTEGER (0..34)
SINR-RangeEUTRA ::=                    INTEGER (0..127)
```

```
-- TAG-MEASTRIGGERQUANTITYEUTRA-STOP
-- ASN1STOP
```

– *MeasTriggerQuantityOffset*

Offsets defined in measurement report configurations (e.g., events defined in *ReportConfig-NR*, or *LTM-CSI-ReportConfig*) for triggering measurement reports (e.g., by RRC message *MeasurementReport* or by MAC CE in TS 38.321 [3]). Values in the unit of 'dB'. When the IE is configured under *LTM-CSI-ReportConfig*, only the field *rsrp* is applicable.

MeasTriggerQuantityOffset information element

```
-- ASN1START
-- TAG-MEASTRIGGERQUANTITYOFFSET-START

MeasTriggerQuantityOffset ::=
    CHOICE {
        rsrp      INTEGER (-30..30),
        rsrq      INTEGER (-30..30),
        sinr      INTEGER (-30..30)
    }

-- TAG-MEASTRIGGERQUANTITYOFFSET-STOP
-- ASN1STOP
```

– *MeasurementValidityDuration*

The IE *MeasurementValidityDuration* indicates time values for validation of reported idle/inactive and reselection measurements as defined in TS 38.133[14]. Value s5 correspond to 5 seconds, value s10 correspond to 10 seconds and so on.

MeasurementValidityDuration information element

```
-- ASN1START
-- TAG-MEASUREMENTVALIDITYDURATION-START

MeasurementValidityDuration-r18 ::= ENUMERATED {s5, s10, s20, s50, s100, spare3, spare2, spare1}

-- TAG-MEASUREMENTVALIDITYDURATION-STOP
-- ASN1STOP
```

– *MeasWindowConfig*

The IE *MeasWindowConfig* specifies the effective measurement window configuration for inter-RAT E-UTRA measurement.

MeasWindowConfig information element

```
-- ASN1START
-- TAG-MEASWINDOWCONFIG-START

MeasWindowConfig-r18 ::= SEQUENCE {
    windowOffsetPeriodicity-r18 CHOICE {
        periodicityMs40-r18 INTEGER (0..39),
        periodicityMs80-r18 INTEGER (0..79),
        ...
    },
    windowDuration-r18 ENUMERATED {ms2, ms5, ms5dot5, spare1},
    ...
}

-- TAG-MEASWINDOWCONFIG-STOP
-- ASN1STOP
```

MeasWindowConfig field descriptions
windowDuration Value windowDuration is the measurement window length in ms of effective measurement window. Value <i>ms2</i> corresponds to 2 ms, value <i>ms5</i> corresponds to 5 ms, and Value <i>ms5dot5</i> corresponds to 5.5 ms.
windowOffsetPeriodicity Indicates the periodicity and offset of effective measurement window. The choice determines the periodicity (periodicityMs40 for 40ms and periodicityMs80 for 80 ms). The field value indicates the offset in ms.

– MobilityStateParameters

The IE *MobilityStateParameters* contains parameters to determine UE mobility state.

MobilityStateParameters information element

```
-- ASN1START
-- TAG-MOBILITYSTATEPARAMETERS-START

MobilityStateParameters ::= SEQUENCE{
    t-Evaluation ENUMERATED {
        s30, s60, s120, s180, s240, spare3, spare2, spare1},
    t-HystNormal ENUMERATED {
        s30, s60, s120, s180, s240, spare3, spare2, spare1},
    n-CellChangeMedium INTEGER (1..16),
    n-CellChangeHigh INTEGER (1..16)
}

-- TAG-MOBILITYSTATEPARAMETERS-STOP
-- ASN1STOP
```

MobilityStateParameters field descriptions
n-CellChangeHigh The number of cell changes to enter high mobility state. Corresponds to N _{CR_H} in TS 38.304 [20].
n-CellChangeMedium The number of cell changes to enter medium mobility state. Corresponds to N _{CR_M} in TS 38.304 [20].
t-Evaluation The duration for evaluating criteria to enter mobility states. Corresponds to T _{CRmax} in TS 38.304 [20]. Value in seconds, s30 corresponds to 30 s and so on.
t-HystNormal The additional duration for evaluating criteria to enter normal mobility state. Corresponds to T _{CRmaxHyst} in TS 38.304 [20]. Value in seconds, value s30 corresponds to 30 seconds and so on.

— MRB-Identity

The IE *MRB-Identity* is used to identify a multicast MRB used by a UE.

MRB-Identity information element

```
-- ASN1START
-- TAG-MRB-IDENTITY-START

MRB-Identity-r17 ::=                INTEGER (1..512)

-- TAG-MRB-IDENTITY-STOP
-- ASN1STOP
```

— MsgA-ConfigCommon

The IE *MsgA-ConfigCommon* is used to configure the PRACH and PUSCH resource for transmission of MsgA in 2-step random access type procedure.

```
-- ASN1START
-- TAG-MSGACONFIGCOMMON-START

MsgA-ConfigCommon-r16 ::=          SEQUENCE {
    rach-ConfigCommonTwoStepRA-r16  RACH-ConfigCommonTwoStepRA-r16,
    msgA-PUSCH-Config-r16            MsgA-PUSCH-Config-r16              OPTIONAL --Cond InitialBWPConfig
}

-- TAG-MSGACONFIGCOMMON-STOP
-- ASN1STOP
```

MsgA-ConfigCommon field descriptions**msgA-PUSCH-Config**

Configuration of cell-specific MsgA PUSCH parameters which the UE uses for contention-based MsgA PUSCH transmission of this BWP. If the field is not configured for the selected UL BWP, the UE shall use the MsgA PUSCH configuration of initial UL BWP.

rach-ConfigCommonTwoStepRA

Configuration of cell specific random access parameters which the UE uses for contention based and contention free 2-step random access type procedure as well as for 2-step RA type contention based beam failure recovery in this BWP.

Conditional Presence	Explanation
<i>InitialBWPCongig</i>	The field is mandatory present when <i>MsgA-ConfigCommon</i> is configured for the initial uplink BWP, or when <i>MsgA-ConfigCommon</i> is configured for a non-initial uplink BWP and <i>MsgA-ConfigCommon</i> is not configured for the initial uplink BWP, otherwise the field is optionally present, Need S.

– MsgA-PUSCH-Config

The IE *MsgA-PUSCH-Config* is used to specify the PUSCH allocation for MsgA in 2-step random access type procedure.

MsgA-PUSCH-Config information element

```
-- ASN1START
-- TAG-MSG-A-PUSCH-CONFIG-START

MsgA-PUSCH-Config-r16 ::=
    msgA-PUSCH-ResourceGroupA-r16          OPTIONAL, -- Cond InitialBWPCongig

  msgA-PUSCH-NrofPorts-r16         INTEGER (0..1)
  msgA-ScramblingID0-r16           INTEGER (0..65535)
  msgA-ScramblingID1-r16           INTEGER (0..65535)
}

-- TAG-MSGA-PUSCH-CONFIG-STOP
-- ASN1STOP
```

MsgA-PUSCH-Config field descriptions	
msgA-DataScramblingIndex	Identifier used to initiate data scrambling (c_init) for msgA PUSCH. If the field is absent the UE applies the value Physical cell ID (<i>physCellID</i>).
msgA-DeltaPreamble	Power offset of msgA PUSCH relative to the preamble received target power. Actual value = field value * 2 [dB] (see TS 38.213 [13], clause 7.1).
msgA-PUSCH-ResourceGroupA	MsgA PUSCH resources that the UE shall use when performing MsgA transmission using preambles group A. If field is not configured for the selected UL BWP, the UE shall use the MsgA PUSCH configuration for group A of initial UL BWP or RedCap-specific initial UL BWP (if configured) for (e)RedCap UEs.
msgA-PUSCH-ResourceGroupB	MsgA PUSCH resources that the UE shall use when performing MsgA transmission using preambles group B.
msgA-TransformPrecoder	Enables or disables the transform precoder for MsgA transmission (see clause 6.1.3 of TS 38.214 [19]). If the field is absent in <i>MsgA-ConfigCommon</i> which is configured directly within a BWP (i.e., not within <i>AdditionalRACH-Config</i>), the UE determines whether to enable the transform precoding according to the <i>msg3-transformPrecoder</i> in <i>RACH-ConfigCommon</i> in the configured BWP. If the field is absent in <i>MsgA-ConfigCommon</i> in <i>AdditionalRACH-Config</i> , the UE determines whether to enable the transform precoding according to the <i>msg3-transformPrecoder</i> in <i>RACH-ConfigCommon</i> in the same <i>AdditionalRACH-Config</i> .

<i>MsgA-PUSCH-Resource</i> field descriptions
<i>guardBandMsgA-PUSCH</i> PRB-level guard band between FDMed PUSCH occasions (see TS 38.213 [13], clause 8.1A). If interlaced PUSCH is configured, value 0 is applied.
<i>guardPeriodMsgA-PUSCH</i> Guard period between PUSCH occasions in the unit of symbols (see TS 38.213 [13], clause 8.1A).
<i>frequencyStartMsgA-PUSCH</i> Offset of lowest PUSCH occasion in frequency domain with respect to PRB 0 (see TS 38.213 [13], clause 8.1A).
<i>interlaceIndexFirstPO-MsgA-PUSCH</i> Interlace index of the first PUSCH occasion in frequency domain if interlaced PUSCH is configured. For 30kHz SCS only the integers 1, 2, 3, 4, 5 are applicable (see TS 38.213 [13], clause 8.1A).
<i>mappingTypeMsgA-PUSCH</i> PUSCH mapping type A or B. If the field is absent, the UE shall use the parameter <i>msgA-PUSCH-TimeDomainAllocation</i> (see TS 38.213 [13], clause 8.1A).
<i>msgA-Alpha</i> Dedicated alpha value for MsgA PUSCH. If the field is absent, the UE shall use the value of <i>msg3-Alpha</i> if configured, else UE applies value 1 (see TS 38.213 [13], clause 7.1.1).
<i>msgA-DMRS-Config</i> DMRS configuration for msgA PUSCH (see TS 38.213 [13], clause 8.1A and TS 38.214 [19] clause 6.2.2).
<i>msgA-HoppingBits</i> Value of hopping bits to indicate which frequency offset to be used for second hop. See Table 8.3-1 in TS 38.213 [13].
<i>msgA-IntraSlotFrequencyHopping</i> Intra-slot frequency hopping per PUSCH occasion (see TS 38.213 [13], clause 8.1A).
<i>msgA-MCS</i> Indicates the MCS index for msgA PUSCH from the Table 6.1.4.1-1 for DFT-s-OFDM and Table 5.1.3.1-1 for CP-OFDM in TS 38.214 [19].
<i>msgA-PUSCH-TimeDomainAllocation</i> Indicates a combination of start symbol and length and PUSCH mapping type from the TDRA table (<i>PUSCH-TimeDomainResourceAllocationList</i> if provided in <i>PUSCH-ConfigCommon</i> , or else the default Table 6.1.2.1.1-2 in 38.214 [19] is used if <i>pusch-TimeDomainAllocationList</i> is not provided in <i>PUSCH-ConfigCommon</i>). The parameter K2 in the table is not used for msgA PUSCH. The network configures one of <i>msgA-PUSCH-TimeDomainAllocation</i> and <i>startSymbolAndLengthMsgA-PO</i> , but not both. If the field is absent, the UE shall use the value of <i>startSymbolAndLengthMsgA-PO</i> .
<i>msgA-PUSCH-TimeDomainOffset</i> A single time offset with respect to the start of each PRACH slot (with at least one valid RO), counted as the number of slots (based on the numerology of active UL BWP). See TS 38.213 [13], clause 8.1A.
<i>nrofDMRS-Sequences</i> Number of DMRS sequences for MsgA PUSCH for CP-OFDM. In case of single PUSCH configuration or if the DMRS symbols of multiple configurations are not overlapped, if the DMRS resources configured in one PUSCH occasion is no larger than 8 (for <i>len2</i>) or 4 (for <i>len1</i>), then only DMRS port is configured.
<i>nrofInterlacesPerMsgA-PO</i> Number of consecutive interlaces per PUSCH occasion if interlaced PUSCH is configured. For 30kHz SCS only the integers 1, 2, 3, 4, 5 are applicable (see TS 38.213 [13], clause 8.1A).
<i>nrofMsgA-PO-FDM</i> The number of msgA PUSCH occasions FDMed in one time instance (see TS 38.213 [13], clause 8.1A).
<i>nrofMsgA-PO-PerSlot</i> Number of time domain PUSCH occasions in each slot. PUSCH occasions including guard period are contiguous in time domain within a slot (see TS 38.213 [13], clause 8.1A).
<i>nrofPRBs-PerMsgA-PO</i> Number of PRBs per PUSCH occasion (see TS 38.213 [13], clause 8.1A). An eRedcap UE ignores the PRACH and PUSCH resource parameters for transmission of MsgA in 2-step random access type procedure if configured number of PRBs per PUSCH occasion for Preambles group A is larger than the maximum number of PRBs that can be

configured per slot or per hop. If configured number of PRBs per PUSCH occasion for Preambles group B is larger than the maximum number of PRBs that can be configured per slot or per hop, an eRedCap UE ignores the PRACH and PUSCH resource parameters for transmission of MsgA using Preambles group B.

nrofSlotsMsgA-PUSCH

Number of slots (in active UL BWP numerology) containing one or multiple PUSCH occasions, each slot has the same time domain resource allocation (see TS 38.213 [13], clause 8.1A).

startSymbolAndLengthMsgA-PO

An index giving valid combinations of start symbol, length and mapping type as start and length indicator (SLIV) for the first msgA PUSCH occasion, for RRC_CONNECTED UEs in non-initial BWP as described in TS 38.214 [19] clause 6.1.2. The network configures the field so that the allocation does not cross the slot boundary. The number of occupied symbols excludes the guard period. If the field is absent, the UE shall use the value in *msgA-PUSCH-TimeDomainAllocation* (see TS 38.213 [13], clause 8.1A). The network configures one of *msgA-PUSCH-TimeDomainAllocation* and *startSymbolAndLengthMsgA-PO*, but not both. If the field is absent, the UE shall use the value of *msgA-PUSCH-TimeDomainAllocation*.

***MsgA-DMRS-Config* field descriptions**

msgA-DMRS-AdditionalPosition

Indicates the position for additional DM-RS. If the field is absent, the UE applies value *pos2*.

msgA-MaxLength

indicates single-symbol or double-symbol DMRS. If the field is absent, the UE applies value *len1*.

msgA-PUSCH-DMRS-CDM-Group

1-bit indication of indices of CDM group(s). If the field is absent, then both CDM groups are used.

msgA-PUSCH-NrofPorts

0 indicates 1 port per CDM group, 1 indicates 2 ports per CDM group. If the field is absent then 4 ports per CDM group are used (see TS 38.213 [13], clause 8.1A).

msgA-ScramblingID0

UL DMRS scrambling initialization for CP-OFDM. If the field is absent the UE applies the value Physical cell ID (*physCellID*).

msgA-ScramblingID1

UL DMRS scrambling initialization for CP-OFDM. If the field is absent the UE applies the value Physical cell ID (*physCellID*).

Conditional Presence	Explanation
<i>FreqHopConfigured</i>	This field is mandatory present when the field <i>msgA-IntraSlotFrequencyHopping</i> is configured. Otherwise, the field is absent.
<i>GroupBConfigured</i>	The field is mandatory present if <i>groupB-ConfiguredTwoStepRA</i> is configured in <i>RACH-ConfigCommonTwoStepRA</i> , otherwise the field is absent.
<i>InitialBWPConfig</i>	The field is mandatory present when <i>MsgA-ConfigCommon</i> is configured for the initial uplink BWP, or when <i>MsgA-ConfigCommon</i> is configured for a non-initial uplink BWP and <i>MsgA-ConfigCommon</i> is not configured for the initial uplink BWP, otherwise the field is optionally present, Need S.

– ***MultiFrequencyBandListNR***

The IE *MultiFrequencyBandListNR* is used to configure a list of one or multiple NR frequency bands.

***MultiFrequencyBandListNR* information element**

```
-- ASN1START
-- TAG-MULTIFREQUENCYBANDLISTNR-START
```

```

MultiFrequencyBandListNR ::= SEQUENCE (SIZE (1..maxNrofMultiBands)) OF FreqBandIndicatorNR
-- TAG-MULTIFREQUENCYBANDLISTNR-STOP
-- ASN1STOP

```

– MultiFrequencyBandListNR-SIB

The IE *MultiFrequencyBandListNR-SIB* indicates the list of frequency bands, for which cell (re-)selection parameters are common, and a list of *additionalPmax* and *additionalSpectrumEmission*.

MultiFrequencyBandListNR-SIB information element

```

-- ASN1START
-- TAG-MULTIFREQUENCYBANDLISTNR-SIB-START

MultiFrequencyBandListNR-SIB ::= SEQUENCE (SIZE (1.. maxNrofMultiBands)) OF NR-MultiBandInfo

NR-MultiBandInfo ::= SEQUENCE {
    freqBandIndicatorNR FreqBandIndicatorNR OPTIONAL, -- Cond OptULNotSIB2
    nr-NS-PmaxList NR-NS-PmaxList OPTIONAL -- Need S
}

MultiFrequencyBandListNR-SIB-v1760 ::= SEQUENCE (SIZE (1.. maxNrofMultiBands)) OF NR-MultiBandInfo-v1760

NR-MultiBandInfo-v1760 ::= SEQUENCE {
    nr-NS-PmaxList-v1760 NR-NS-PmaxList-v1760 OPTIONAL -- Need S
}

MultiFrequencyBandListNR-Aerial-SIB-r18 ::= SEQUENCE (SIZE (1.. maxNrofMultiBands)) OF NR-MultiBandInfoAerial-r18

NR-MultiBandInfoAerial-r18 ::= SEQUENCE {
    freqBandIndicatorNR-Aerial-r18 FreqBandIndicatorNR OPTIONAL, -- Cond OptULNotSIB2
    nr-NS-PmaxListAerial-r18 NR-NS-PmaxListAerial-r18 OPTIONAL -- Need S
}

-- TAG-MULTIFREQUENCYBANDLISTNR-SIB-STOP
-- ASN1STOP

```

NR-MultiBandInfo field descriptions	
<i>freqBandIndicatorNR</i>	Provides an NR frequency band number as defined in TS 38.101-1 [15], TS 38.101-2 [39], table 5.2-1, and TS 38.101-5 [75], table 5.2.2-1.
<i>freqBandIndicatorNR-Aerial</i>	Provides an NR frequency band number for aerial UE(s), as defined in TS 38.101-1 [15], TS 38.101-2 [39], table 5.2-1, and TS 38.101-5 [75], table 5.2.2-1.
<i>nr-NS-PmaxList</i>	Provides a list of <i>additionalPmax</i> and <i>additionalSpectrumEmission</i> values. If the field is absent the UE uses value 0 for the <i>additionalSpectrumEmission</i> (see TS 38.101-1 [15] table 6.2.3.1-1A, TS 38.101-2 [39], table 6.2.3.1-2, and TS 38.101-5 [75], table 6.2.3.1-1A). This field is ignored by IAB-MT and wide area NCR-MT (see TS 38.106 [79]). The IAB-MT applies output power and emissions requirements, as specified in TS 38.174 [63]. The wide area NCR-MT applies output power and emissions requirements as specified in TS 38.106 [79]. If <i>nr-NS-PmaxList-v1760</i> is present, it shall contain the same number of entries, listed in the same order as in <i>nr-NS-PmaxList</i> (without suffix).
<i>nr-NS-PmaxListAerial</i>	Provides a list of <i>additionalPmax</i> and <i>additionalSpectrumEmission</i> values for aerial UE(s) as defined in TS 38.101-1 [15], clause 6.2K. If the field is absent, the value indicated by the corresponding field within <i>frequencyBandList</i> for the same NR frequency band number applies, if present. Otherwise (i.e. the field is not present for the same NR frequency band number in any of the <i>nr-NS-PmaxList</i> , <i>nr-NS-PmaxList-v1760</i> or <i>nr-NS-PmaxListAerial</i>), the UE uses value 0 for the <i>additionalSpectrumEmission</i> (see TS 38.101-1 [15] table 6.2.3.1-1A, TS 38.101-2 [39], table 6.2.3.1-2, and TS 38.101-5 [75], table 6.2.3.1-1A). This field is ignored by IAB-MT and wide area NCR-MT (see TS 38.106 [79]). The IAB-MT applies output power and emissions requirements, as specified in TS 38.174 [63]. The wide area NCR-MT applies output power and emissions requirements as specified in TS 38.106 [79].

Conditional Presence	Explanation
<i>OptULNotSIB2</i>	The field is absent for <i>SIB2</i> and is mandatory present if the parent IE is included in <i>SIB4</i> or <i>frequencyInfoDL-SIB</i> . Otherwise, if the field is absent in <i>frequencyInfoUL-SIB</i> in <i>UplinkConfigCommonSIB</i> , the UE will use the frequency band indicated in <i>frequencyInfoDL-SIB</i> in <i>DownlinkConfigCommonSIB</i> .

– MUSIM-GapConfig

The IE *MUSIM-GapConfig* specifies the MUSIM gap configuration and controls setup/release of MUSIM gaps.

MUSIM-GapConfig information element

```
-- ASN1START
-- TAG-MUSIM-GAPCONFIG-START

MUSIM-GapConfig-r17 ::=
    SEQUENCE {
        musim-GapToReleaseList-r17      SEQUENCE (SIZE (1..3)) OF MUSIM-GapId-r17      OPTIONAL, -- Need N
        musim-GapToAddModList-r17       SEQUENCE (SIZE (1..3)) OF MUSIM-Gap-r17       OPTIONAL, -- Need N
        musim-AperiodicGap-r17          MUSIM-GapInfo-r17                             OPTIONAL, -- Need N
        ...,
        [
            musim-GapToAddModListExt-v1820 SEQUENCE (SIZE (1..3)) OF MUSIM-GapExt-v1820 OPTIONAL, -- Need N
            musim-GapKeep-r18              ENUMERATED {true}                          OPTIONAL -- Need N
        ]
    }

MUSIM-Gap-r17 ::=
    SEQUENCE {
        musim-GapId-r17      MUSIM-GapId-r17,
```

```
musim-GapInfo-r17          MUSIM-GapInfo-r17
}

MUSIM-GapExt-v1820 ::=
gapPriority-r18             SEQUENCE {
                             GapPriority-r17
}

-- TAG-MUSIM-GAPCONFIG-STOP
-- ASN1STOP
```

MUSIM-GapConfig field descriptions
musim-AperiodicGap Indicates the MUSIM aperiodic gap as specified in TS 38.133 [14] clause 9.1.10. If UE indicates the <i>musim-Starting-SFN-AndSubframe</i> when requesting aperiodic gap the network can only configure the aperiodic gap with the same start point or no aperiodic gap. If the field <i>musim-Starting-SFN-AndSubframe</i> is absent for aperiodic gap, network can configure any timing as the starting point for aperiodic gap or configure no aperiodic gap.
musim-GapInfo Indicates the values for <i>musim-GapLength</i> and <i>musim-GapRepetitionAndOffset</i> . When network provides periodic gap, network always signals the <i>musim-GapLength</i> and <i>musim-GapRepetitionAndOffset</i> as indicated by the UE's preferred MUSIM gap configuration.
musim-GapKeep Indicates the UE is allowed to use "keep solution" for colliding MUSIM periodic/aperiodic gaps. If "keep solution" is not granted, collisions between MUSIM periodic gaps are resolved based on the assigned MUSIM gap priorities as specified in TS 38.133[14].
musim-GapToAddModListExt Indicates the priority of MUSIM periodic gap(s). If the network includes <i>musim-GapToAddModListExt-v1820</i> , it includes the same number of entries, and listed in the same order, as in <i>musim-GapToAddModList-r17</i> . For the priority of MUSIM aperiodic gap, the MUSIM aperiodic gap is always kept (not dropped) from UE perspective in case of collisions with other gaps (i.e. all gaps including MUSIM gaps, etc).
musim-GapToAddModList List of MUSIM periodic gap patterns to add or modify.
musim-GapToReleaseList List of MUSIM periodic gap patterns to release.

– MUSIM-GapId

The IE *MUSIM-GapId* is used to identify UE periodic MUSIM gap(s) to add, modify or release.

MUSIM-GapId information element

```
-- ASN1START
-- TAG-MUSIM-GAPID-START

MUSIM-GapId-r17 ::=
INTEGER (0..2)

-- TAG-MUSIM-GAPID-STOP
-- ASN1STOP
```

– *MUSIM-GapInfo*

The IE *MUSIM-GapInfo* is used to indicate MUSIM gap parameters.

MUSIM-GapInfo information element

```
-- ASN1START
-- TAG-MUSIM-GAPINFO-START

MUSIM-GapInfo-r17 ::= SEQUENCE {
    musim-Starting-SFN-AndSubframe-r17 MUSIM-Starting-SFN-AndSubframe-r17 OPTIONAL, -- Cond aperiodic

MUSIM-GapInfo field descriptions	
musim-GapLength	Indicates the length of the UE's MUSIM gap as specified in TS 38.133 [14] clause 9.1.10. This field is mandatory present for both periodic gap and aperiodic gap preference indication.
musim-GapRepetitionAndOffset	Indicates the gap repetition period in ms and gap offset in number of subframes for the periodic MUSIM gap as specified in TS 38.133 [14] clause 9.1.10. This field is mandatory present for the periodic MUSIM gap preference indication.
musim-Starting-SFN-AndSubframe	Indicates gap starting position for the aperiodic MUSIM gap. This field is optionally present for the aperiodic MUSIM gap preference indication.
starting-SFN	Indicates gap starting SFN number for the aperiodic MUSIM gap.
startingSubframe	Indicates gap starting subframe number for the aperiodic MUSIM gap.

Conditional Presence	Explanation
<i>aperiodic</i>	This field is mandatory present in case of aperiodic MUSIM gap configuration. Otherwise it is absent.
<i>gapSetup</i>	The field is mandatory present upon configuration of a new MUSIM gap. The field is optionally present, Need M, otherwise.
<i>periodic</i>	This field is mandatory present in case of periodic MUSIM gap configuration. Otherwise it is absent.

– *N3C-IndirectPathConfigRelay*

The IE *N3C-IndirectPathConfigRelay* indicates the N3C indirect path related configuration used by N3C relay UE in MP.

N3C-IndirectPathConfigRelay information element

```
-- ASN1START
-- TAG-N3C-INDIRECTPATHCONFIGRELAY-START

N3C-IndirectPathConfigRelay-r18 ::= SEQUENCE {
    n3c-MappingToReleaseList-r18      SEQUENCE (SIZE (1..maxLC-ID)) OF SL-RemoteUE-RB-Identity-r17      OPTIONAL, -- Need N
    n3c-MappingToAddModList-r18      SEQUENCE (SIZE (1..maxLC-ID)) OF N3C-MappingConfig-r18      OPTIONAL, -- Need N
    ...
}

N3C-MappingConfig-r18 ::= SEQUENCE {
    n3c-RemoteUE-RB-Identity-r18      SL-RemoteUE-RB-Identity-r17,
    n3c-RLC-ChannelUu-r18             Uu-RelayRLC-ChannelID-r17,
    ...
}

-- TAG-N3C-INDIRECTPATHCONFIGRELAY-STOP
-- ASN1STOP
```

N3C-IndirectPathConfigRelay field descriptions
n3c-MappingToAddModList Indicates the list of mappings between the bearer identity of the N3C remote UE and the Uu Relay RLC channel to be added or modified. The Uu Relay RLC channel is associated to only one N3C remote UE's end-to-end bearer.
n3c-MappingToReleaseList Indicates the list of mappings between the bearer identity of the N3C remote UE and the Uu Relay RLC channel to be released.

– N3C-IndirectPathAddChange

The IE *N3C-IndirectPathAddChange* indicates the N3C indirect path related configuration used by N3C remote UE.

N3C-IndirectPathAddChange information element

```
-- ASN1START
-- TAG-N3C-INDIRECTPATHADDCCHANGE-START

N3C-IndirectPathAddChange-r18 ::= SEQUENCE {
    n3c-RelayIdentification-r18      N3C-RelayUE-Info-r18,
    ...
}

-- TAG-N3C-INDIRECTPATHADDCCHANGE-STOP
-- ASN1STOP
```

N3C-IndirectPathAddChange field descriptions
n3c-RelayIdentification Indicates the NCGI and C-RNTI of N3C relay UE.

– N3C-RelayUE-Info

The IE *N3C-RelayUE-Info* includes the information of N3C relay UE.

N3C-RelayUE-Info information element

```
-- ASN1START
-- TAG-N3CRELAYUEINFO-START

N3C-RelayUE-Info-r18 ::= SEQUENCE {
    n3c-CellGlobalId-r18      SEQUENCE {
        n3c-PLMN-Id-r18      PLMN-Identity,
        n3c-CellIdentity-r18  CellIdentity
    },
    n3c-C-RNTI-r18            RNTI-Value
}
```

```
-- TAG-N3CRELAYUEINFO-STOP
-- ASN1STOP
```

– *NCR-AperiodicFwdConfig*

The IE *NCR-AperiodicFwdConfig* is used to configure a list of aperiodic forwarding time resources for NCR-Fwd access link (see TS 38.212 [17], clause 7.3.1.3.9 and TS 38.213 [13], clause 20).

NCR-AperiodicFwdConfig information element

```
-- ASN1START
-- TAG-NCR-APERIODICFWDCONFIG-START

NCR-AperiodicFwdConfig-r18 ::= SEQUENCE {
    aperiodicFwdTimeRsrcToAddModList-r18 SEQUENCE (SIZE (1..maxNrofAperiodicFwdTimeResource-r18)) OF NCR-AperiodicFwdTimeResource-r18

}

NCR-AperiodicFwdTimeResourceId-r18 ::= INTEGER (0..maxNrofAperiodicFwdTimeResource-1-r18)

-- TAG-NCR-APERIODICFWDCONFIG-STOP
-- ASN1STOP
```

<i>NCR-AperiodicFwdConfig</i> field descriptions
<i>aperiodicBeamFieldWidth</i> Indicates the bitwidth of each beam index field in DCI carrying aperiodic beam indication.
<i>aperiodicFwdTimeRsrcToAddModList</i> List of aperiodic forwarding time resources to be added or modified.
<i>durationInSymbols</i> Indicates the time duration in number of symbols.
<i>numberOfFields</i> Indicates the number of time resource fields in DCI carrying aperiodic beam indication.
<i>referenceSCS</i> Indicates the reference subcarrier spacing for all the time resources in the list. Only values <i>kHz15</i> , <i>kHz30</i> , <i>kHz60</i> , <i>kHz120</i> and <i>kHz240</i> are applicable.
<i>slotOffsetAperiodic</i> Indicates the slot offset used to define the start slot of aperiodic time resource.
<i>symbolOffset</i> Indicates the symbol offset in one slot.

– *NCR-FwdConfig*

The IE *NCR-FwdConfig* contains configuration related to periodic, aperiodic and semi-persistent beam indication for NCR-Fwd access link.

NCR-FwdConfig information element

```
-- ASN1START
-- TAG-NCR-FWDCONFIG-START

NCR-FwdConfig-r18 ::=
    SEQUENCE {
        periodicFwdRsrcSetToAddModList-r18 SEQUENCE (SIZE (1..maxNrofPeriodicFwdResourceSet-r18)) OF NCR-PeriodicFwdResourceSet-r18

        ...
    }

-- TAG-NCR-FWDCONFIG-STOP
-- ASN1STOP
```

<i>NCR-FwdConfig</i> field descriptions
<i>aperiodicFwdConfig</i> Aperiodic time resource configuration for beam indication for NCR. The configuration includes a list of time domain resources that can be selected for aperiodic forwarding.
<i>periodicFwdRsrcSetToAddModList</i> List of periodic forwarding resource configurations to be added or modified.
<i>periodicFwdRsrcSetToReleaseList</i> List of periodic forwarding resource configurations to be released.
<i>semiPersistentFwdRsrcSetToAddModList</i> List of semi-persistent forwarding resource configurations to be added or modified.

– *NCR-PeriodicityAndOffset*

The IE *NCR-PeriodicityAndOffset* is used to indicate the periodicity (in slot or ms) and offset (in slot) for periodic forwarding resource and semi-persistent forwarding resource.

NCR-PeriodicityAndOffset information element

```
-- ASN1START
-- TAG-NCR-PERIODICITYANDOFFSET-START

NCR-PeriodicityAndOffset-r18 ::= CHOICE {
    slot          NCR-SlotPeriodicityAndSlotOffset-r18,

    ...
}

NCR-PeriodicFwdResourceId-r18 ::= INTEGER (0..maxNrofPeriodicFwdResource-1-r18)

-- TAG-NCR-PERIODICFWDRESOURCESET-STOP
-- ASN1STOP
```

NCR-PeriodicFwdResourceSet field descriptions	
beamIndex	Indicates the logical beam index for NCR-Fwd access link. NCR-Fwd is assumed to be ON over the indicated time domain resource if there is beam indication.
durationInSymbols	Indicates the time duration in number of symbols.
periodicFwdRsrcToAddModList	List of periodic forwarding resources to be added or modified.
periodicityAndOffset	Indicates the periodicity and slot offset for the periodic forwarding resource. All the periodic forwarding resources configured within the same resource set should have the same periodicity. If the periodicity is expressed in [ms], the value range of slot offset is from 0 to Periodicity[ms] * referenceSCS[kHz]/15 -1.
priorityFlag	Indicates the priority for the list of periodic forwarding resources, as specified in TS 38.213 [13], clause 20.
referenceSCS	Indicates the reference subcarrier spacing for all the time resources in the list. Only values <i>kHz15</i> , <i>kHz30</i> , <i>kHz60</i> , <i>kHz120</i> and <i>kHz240</i> are applicable.
symbolOffset	Indicates the symbol offset in one slot.

– NCR-PeriodicFwdResourceSetId

The IE *NCR-PeriodicFwdResourceSetId* is used to identify one *NCR-PeriodicFwdResourceSet*.

NCR-PeriodicFwdResourceSetId information element

```
-- ASN1START
-- TAG-NCR-PERIODICFWDRESOURCESETID-START
```

```

NCR-PeriodicFwdResourceSetId-r18 ::= INTEGER (0..maxNrofPeriodicFwdResourceSet-1-r18)

-- TAG-NCR-PERIODICFWDRESOURCESETID-STOP
-- ASN1STOP

```

– *NCR-SemiPersistentFwdResourceSet*

The IE *NCR-SemiPersistentFwdResourceSet* is used to configure a list of semi-persistent forwarding resources for NCR-Fwd access link (see TS 38.213 [13], clause 20). Each semi-persistent forwarding resource configuration includes a list of semi-persistent forwarding resources, a common periodicity and a common reference SCS.

NCR-SemiPersistentFwdResourceSet information element

```

-- ASN1START
-- TAG-NCR-SEMIPERSISTENTFWDRESOURCESET-START

NCR-SemiPersistentFwdResourceSet-r18 ::= SEQUENCE {
    semiPersistentFwdRsrcSetId-r18      NCR-SemiPersistentFwdResourceSetId-r18,

    },
    ...
}

NCR-SemiPersistentFwdResourceId-r18 ::= INTEGER (0..maxNrofSemiPersistentFwdResource-1-r18)

-- TAG-NCR-SEMIPERSISTENTFWDRESOURCESET-STOP
-- ASN1STOP

```

NCR-SemiPersistentFwdResourceSet field descriptions	
beamIndex	Indicates logical beam index for NCR-Fwd access link. NCR-Fwd is assumed to be ON over the indicated time domain resource if there is beam indication.
durationInSymbols	Indicates the time duration in number of symbols.
periodicityAndOffset	Indicates the periodicity and slot offset for the semi-persistent forwarding resource. All the semi-persistent forwarding resources configured within the same resource set should have the same periodicity. If the periodicity is expressed in [ms], the value range of slot offset is from 0 to Periodicity[ms] * referenceSCS[kHz]/15 -1.
priorityFlag	Indicates the priority for the list of semi-persistent forwarding resources, as specified in TS 38.213 [13], clause 20.
referenceSCS	Indicates the reference subcarrier spacing for all the time resources in the list. Only values <i>kHz15</i> , <i>kHz30</i> , <i>kHz60</i> , <i>kHz120</i> and <i>kHz240</i> are applicable.
semiPersistentFwdRsrcToAddModList	List of semi-persistent forwarding resources to be added or modified.
symbolOffset	Indicates the symbol offset in one slot.

– NCR-SemiPersistentFwdResourceSetId

The IE *NCR-SemiPersistentFwdResourceSetId* is used to identify one *NCR-SemiPersistentFwdResourceSet*.

NCR-SemiPersistentFwdResourceSetId information element

```
-- ASN1START
-- TAG-NCR-SEMIPERSISTENTFWDRESOURCESETID-START

NCR-SemiPersistentFwdResourceSetId-r18 ::= INTEGER (0..maxNrofSemiPersistentFwdResourceSet-1-r18)

-- TAG-NCR-SEMIPERSISTENTFWDRESOURCESETID-STOP
-- ASN1STOP
```

– NeedForGapsConfigNR

The IE *NeedForGapsConfigNR* contains configuration related to the reporting of measurement gap requirement information.

NeedForGapsConfigNR information element

```
-- ASN1START
-- TAG-NeedForGapsConfigNR-START

NeedForGapsConfigNR-r16 ::= SEQUENCE {
    requestedTargetBandFilterNR-r16 SEQUENCE (SIZE (1..maxBands)) OF FreqBandIndicatorNR OPTIONAL -- Need R
}

-- TAG-NeedForGapsConfigNR-STOP
```

-- ASN1STOP

NeedForGapsConfigNR field descriptions
requestedTargetBandFilterNR Indicates the target NR bands that the UE is requested to report the gap requirement information.

– *NeedForGapsInfoNR*

The IE *NeedForGapsInfoNR* indicates whether measurement gap is required for the UE to perform SSB based measurements on an NR target band while NR-DC or NE-DC is not configured.

NeedForGapsInfoNR information element

```
-- ASN1START
-- TAG-NeedForGapsInfoNR-START

NeedForGapsInfoNR-r16 ::=          SEQUENCE {
    intraFreq-needForGap-r16        NeedForGapsIntraFreqList-r16,
    interFreq-needForGap-r16        NeedForGapsBandListNR-r16
}

NeedForGapsIntraFreqList-r16 ::=    SEQUENCE (SIZE (1.. maxNrofServingCells)) OF NeedForGapsIntraFreq-r16

NeedForGapsBandListNR-r16 ::=       SEQUENCE (SIZE (1..maxBands)) OF NeedForGapsNR-r16

NeedForGapsIntraFreq-r16 ::=        SEQUENCE {
    servCellId-r16                  ServCellIndex,
    gapIndicationIntra-r16           ENUMERATED {gap, no-gap}
}

NeedForGapsNR-r16 ::=               SEQUENCE {
    bandNR-r16                      FreqBandIndicatorNR,
    gapIndication-r16                ENUMERATED {gap, no-gap}
}

-- TAG-NeedForGapsInfoNR-STOP
-- ASN1STOP
```

NeedForGapsInfoNR field descriptions
intraFreq-needForGap Indicates the measurement gap requirement information for NR intra-frequency measurement.
interFreq-needForGap Indicates the measurement gap requirement information for NR inter-frequency measurement.

NeedForGapsIntraFreq field descriptions
servCellId Indicates the serving cell which contains the target SSB (associated with the initial DL BWP) to be measured.
gapIndicationIntra Indicates whether measurement gap is required for the UE to perform intra-frequency SSB based measurements on the concerned serving cell. Value <i>gap</i> indicates that a measurement gap is needed if any of the UE configured BWPs (except the BWP(s) configured with <i>servingCellMO</i> associated with NCD-SSB) do not contain the frequency domain resources of the SSB associated to the initial DL BWP (CD-SSB). Value <i>no-gap</i> indicates a measurement gap is not needed to measure the SSB associated to the initial DL BWP (CD-SSB) for all configured BWPs (except the BWP(s) configured with <i>servingCellMO</i> associated with NCD-SSB), no matter the SSB is within the configured BWP or not. This field shall be set to 'no-gap' for the serving cell(s) belonging to the corresponding band(s) where <i>bwpOperationMeasWithoutInterrupt-r18</i> is supported by the UE.

NeedForGapsNR field descriptions
bandNR Indicates the NR target band to be measured.
gapIndication Indicates whether measurement gap is required for the UE to perform SSB based measurements on the concerned NR target band while NR-DC or NE-DC is not configured. The UE determines this information based on the resultant configuration of the <i>RRCReconfiguration</i> or <i>RRCResume</i> message that triggers this response. Value <i>gap</i> indicates that a measurement gap is needed, value <i>no-gap</i> indicates a measurement gap is not needed.

– **NeedForGapNCSG-ConfigEUTRA**

The IE *NeedForGapNCSG-ConfigEUTRA* contains configuration related to the reporting of measurement gap and NCSG requirement information.

NeedForGapNCSG-ConfigEUTRA information element

```
-- ASN1START
-- TAG-NeedForGapNCSG-ConfigEUTRA-START

NeedForGapNCSG-ConfigEUTRA-r17 ::= SEQUENCE {

}

-- TAG-NeedForGapNCSG-ConfigEUTRA-STOP
-- ASN1STOP
```

NeedForGapNCSG-ConfigEUTRA field descriptions
requestedTargetBandFilterNCSG-EUTRA Indicates the target E-UTRA bands that the UE is requested to report the measurement gap and NCSG requirement information.

– **NeedForGapNCSG-ConfigNR**

The IE *NeedForGapNCSG-ConfigNR* contains configuration related to the reporting of measurement gap and NCSG requirement information.

NeedForGapNCSG-ConfigNR information element

```
-- ASN1START
-- TAG-NEEDFORGAPNCSG-CONFIGNR-START

NeedForGapNCSG-ConfigNR-r17 ::= SEQUENCE {
    requestedTargetBandFilterNCSG-NR-r17 SEQUENCE (SIZE (1..maxBands)) OF FreqBandIndicatorNR OPTIONAL -- Need R
}

-- TAG-NEEDFORGAPNCSG-CONFIGNR-STOP
-- ASN1STOP
```

NeedForGapNCSG-ConfigNR field descriptions
requestedTargetBandFilterNCSG-NR Indicates the target NR bands that the UE is requested to report the measurement gap and NCSG requirement information.

– NeedForGapNCSG-InfoEUTRA

The IE *NeedForGapNCSG-InfoEUTRA* indicates whether measurement gap or NCSG is required for the UE to perform measurements on an E- UTRA target band while NR-DC or NE-DC is not configured.

NeedForGapNCSG-InfoEUTRA information element

```
-- ASN1START
-- TAG-NEEDFORGAPNCSG-INFOEUTRA-START

NeedForGapNCSG-InfoEUTRA-r17 ::= SEQUENCE {
    needForNCSG-EUTRA-r17 SEQUENCE (SIZE (1..maxBandsEUTRA)) OF NeedForNCSG-EUTRA-r17
}

NeedForNCSG-EUTRA-r17 ::= SEQUENCE {
    bandEUTRA-r17 FreqBandIndicatorEUTRA,
    gapIndication-r17 ENUMERATED {gap, ncsg, nogap-noncsg}
}

-- TAG-NEEDFORGAPNCSG-INFOEUTRA-STOP
-- ASN1STOP
```

NeedForGapNCSG-InfoEUTRA field descriptions
needForNCSG-EUTRA Indicates the measurement gap and NCSG requirement information for E-UTRA measurement.

NeedForNCSG-EUTRA field descriptions
bandEUTRA Indicates the E- UTRA target band to be measured.
gapIndication Indicates whether measurement gap or NCSG is required for the UE to perform measurements on the concerned E- UTRA target band while NR-DC or NE-DC is not configured. The UE determines this information based on the resultant configuration of the <i>RRCReconfiguration</i> message or <i>RRCResume</i> message that triggers this response. Value <i>gap</i> indicates that a measurement gap is needed, value <i>ncsg</i> indicates that NCSG is needed, value <i>nogap-noncs</i> indicates neither a measurement gap nor a NCSG is needed. Value <i>nogap-noncs</i> also indicates interruption is not needed.

– NeedForGapNCSG-InfoNR

The IE *NeedForGapNCSG-InfoNR* indicates whether measurement gap or NCSG is required for the UE to perform SSB based measurements on an NR target band while NR-DC or NE-DC is not configured.

NeedForGapNCSG-InfoNR information element

```
-- ASN1START
-- TAG-NEEDFORGAPNCSG-INFONR-START

NeedForGapNCSG-InfoNR-r17 ::= SEQUENCE {
    intraFreq-needForNCSG-r17      NeedForNCSG-IntraFreqList-r17,
    interFreq-needForNCSG-r17      NeedForNCSG-BandListNR-r17
}

NeedForNCSG-IntraFreqList-r17 ::= SEQUENCE (SIZE (1.. maxNrofServingCells)) OF NeedForNCSG-IntraFreq-r17

NeedForNCSG-BandListNR-r17 ::= SEQUENCE (SIZE (1..maxBands)) OF NeedForNCSG-NR-r17

NeedForNCSG-IntraFreq-r17 ::= SEQUENCE {
    servCellId-r17                ServCellIndex,

}

-- TAG-NEEDFORGAPNCSG-INFONR-STOP
-- ASN1STOP
```

NeedForGapNCSG-InfoNR field descriptions
intraFreq-needForNCSG Indicates the measurement gap and NCSG requirement information for NR intra-frequency measurement.
interFreq-needForNCSG Indicates the measurement gap and NCSG requirement information for NR inter-frequency measurement.

NeedForNCSG-IntraFreq field descriptions
servCellId Indicates the serving cell which contains the target SSB (associated with the initial DL BWP) to be measured.
gapIndicationIntra Indicates whether measurement gap or NCSG is required for the UE to perform intra-frequency SSB based measurements on the concerned serving cell. Value <i>gap</i> indicates that a measurement gap is needed if any of the UE configured BWPs (except the BWP(s) configured with <i>servingCellMO</i> associated with NCD-SSB) do not contain the frequency domain resources of the SSB associated to the initial DL BWP (CD-SSB). Value <i>ncsg</i> indicates that a NCSG is needed if any of the UE configured BWPs do not contain the frequency domain resources of the SSB associated to the initial DL BWP. Value <i>nogap-noncsG</i> indicates that neither a measurement gap nor a NCSG is needed to measure the SSB associated to the initial DL BWP (CD-SSB) for all configured BWPs (except the BWP(s) configured with <i>servingCellMO</i> associated with NCD-SSB), no matter the SSB is within the configured BWP or not. This field shall be set to ' <i>nogap-noncsG</i> ' for the serving cell cell(s) belonging to the corresponding band(s) where <i>bwpOperationMeasWithoutInterrupt-r18</i> is supported by the UE. Value <i>nogap-noncsG</i> also indicates interruption is not needed.

NeedForNCSG-NR field descriptions
bandNR Indicates the NR target band to be measured.
gapIndication Indicates whether measurement gap or NCSG is required for the UE to perform SSB based measurements on the concerned NR target band while NR-DC or NE-DC is not configured. The UE determines this information based on the resultant configuration of the <i>RRCReconfiguration</i> or <i>RRCResume</i> message that triggers this response. Value <i>gap</i> indicates that a measurement gap is needed, value <i>ncsg</i> indicates that a NCSG is needed, and value <i>nogap-noncsG</i> indicates neither a measurement gap nor a NCSG is needed. Value <i>nogap-noncsG</i> also indicates interruption is not needed.

– **NeedForInterruptionInfoNR**

The IE *NeedForInterruptionInfoNR* indicates whether interruption is needed for the UE to perform SSB based measurements on an NR target band without measurement gap while NR-DC or NE-DC is not configured.

NeedForInterruptionInfoNR information element

```
-- ASN1START
-- TAG-NeedForInterruptionInfoNR-START

NeedForInterruptionInfoNR-r18 ::= SEQUENCE {
    intraFreq-needForInterruption-r18    NeedForInterruptionIntraFreqList-r18,
    interFreq-needForInterruption-r18    NeedForInterruptionBandListNR-r18,
    ...
}
```

```
NeedForInterruptionIntraFreqList-r18 ::= SEQUENCE (SIZE (1.. maxNrofServingCells)) OF NeedForInterruptionNR-r18
NeedForInterruptionBandListNR-r18 ::= SEQUENCE (SIZE (1..maxBands)) OF NeedForInterruptionNR-r18
NeedForInterruptionNR-r18 ::= SEQUENCE {
    interruptionIndication-r18 ENUMERATED {no-gap-with-interruption, no-gap-no-interruption} OPTIONAL
}
-- TAG-NeedForInterruptionInfoNR-STOP
-- ASN1STOP
```

NeedForInterruptionInfoNR field descriptions
intraFreq-needForInterruption Indicates the interruption requirement information for NR intra-frequency measurement. Each entry in the list is associated to the entry in list <i>intraFreq-needForGap-r16</i> with the same index. This field shall be set to <i>no-gap-no-interruption</i> for the serving cell(s) belonging to the corresponding band(s) where <i>bwpOperationMeasWithoutInterrupt-r18</i> is supported by the UE.
interFreq-needForInterruption Indicates the interruption requirement information for NR inter-frequency measurement. Each entry in the list is associated to the entry in list <i>interFreq-needForGap-r16</i> with the same index.

NeedForInterruptionNR field descriptions
interruptionIndication Indicates whether interruption is needed for the UE to perform SSB based measurements without measurement gap. Value <i>no-gap-with-interruption</i> indicates that interruption is needed. Value <i>no-gap-no-interruption</i> indicates interruption is not needed.

– **NextHopChainingCount**

The IE *NextHopChainingCount* is used to update the K_{gNB} key and corresponds to parameter NCC: See TS 33.501 [11].

NextHopChainingCount information element

```
-- ASN1START
-- TAG-NEXTHOPCHAININGCOUNT-START
NextHopChainingCount ::= INTEGER (0..7)
-- TAG-NEXTHOPCHAININGCOUNT-STOP
-- ASN1STOP
```

– **NG-5G-S-TMSI**

The IE *NG-5G-S-TMSI* contains a 5G S-Temporary Mobile Subscription Identifier (5G-S-TMSI), a temporary UE identity provided by the 5GC which uniquely identifies the UE within the tracking area, see TS 23.003 [21].

NG-5G-S-TMSI information element

```
-- ASN1START
-- TAG-NG-5G-S-TMSI-START

NG-5G-S-TMSI ::=
    BIT STRING (SIZE (48))

-- TAG-NG-5G-S-TMSI-STOP
-- ASN1STOP
```

– NonCellDefiningSSB

The IE *NonCellDefiningSSB* is used to configure a NCD-SSB to be used while the UE operates in an RedCap-specific initial BWP that does not contain the CD-SSB or a dedicated BWP that does not contain the CD-SSB.

NonCellDefiningSSB information element

```
-- ASN1START
-- TAG-NONCELLDEFININGSSB-START

NonCellDefiningSSB-r17 ::=
    SEQUENCE {
        absoluteFrequencySSB-r17 ARFCN-ValueNR,
        ssb-Periodicity-r17 ENUMERATED { ms5, ms10, ms20, ms40, ms80, ms160, spare2, spare1 } OPTIONAL, -- Need S
        ssb-TimeOffset-r17 ENUMERATED { ms5, ms10, ms15, ms20, ms40, ms80, spare2, spare1 } OPTIONAL, -- Need S
        ...
    }

-- TAG-NONCELLDEFININGSSB-STOP
-- ASN1STOP
```

NonCellDefiningSSB field descriptions	
absoluteFrequencySSB	Frequency of the NCD-SSB. The network configures this field so that the SSB is within the bandwidth of the BWP configured in <i>BWP-DownlinkCommon</i> .
ssb-Periodicity	The periodicity of this NCD-SSB. The network configures only periodicities that are larger than the periodicity of serving cell's CD-SSB. If the field is absent, the UE applies the SSB periodicity of the CD-SSB (<i>ssb-periodicityServingCell</i> configured in <i>ServingCellConfigCommon</i> or <i>ServingCellConfigCommonSIB</i>).
ssb-TimeOffset	The time offset between CD-SSB of the serving cell and this NCD-SSB. Value <i>ms5</i> means the first burst of NCD-SSB is transmitted 5ms later than the first burst of CD-SSB transmitted after the first symbol of SFN=0 of the serving cell, value <i>ms10</i> means the first burst of NCD-SSB is transmitted 10ms later than the first burst of CD-SSB transmitted after the first symbol in SFN=0 of the serving cell, and so on. If the field is absent, UE considers that the time offset between the first burst of CD-SSB transmitted in the serving cell and the first burst of this NCD-SSB transmitted is zero. For UEs in TDD cells, the network configures this time offset to be an integer multiple of the periodicity of the serving cell's CD-SSB.

– *NPN-Identity*

The IE *NPN-Identity* includes either a list of CAG-IDs or a list of NIDs per PLMN Identity. Further information regarding how to set the IE is specified in TS 23.003 [21].

***NPN-Identity* information element**

```
-- ASN1START
-- TAG-NPN-IDENTITY-START

NPN-Identity-r16 ::=
    CHOICE {
        pni-npn-r16
            SEQUENCE {
                plmn-Identity-r16
                    PLMN-Identity,
                cag-IdentityList-r16
                    SEQUENCE (SIZE (1..maxNPN-r16)) OF CAG-IdentityInfo-r16
            },
        snpn-r16
            SEQUENCE {
                plmn-Identity-r16
                    PLMN-Identity,
                nid-List-r16
                    SEQUENCE (SIZE (1..maxNPN-r16)) OF NID-r16
            }
    }

CAG-IdentityInfo-r16 ::=
    SEQUENCE {
        cag-Identity-r16
            BIT STRING (SIZE (32)),
        manualCAGselectionAllowed-r16
            ENUMERATED {true}
    }
    OPTIONAL -- Need R

NID-r16 ::=
    BIT STRING (SIZE (44))

-- TAG-NPN-IDENTITY-STOP
-- ASN1STOP
```

<i>NPN-Identity</i> field descriptions
<i>cag-Identity</i> A CAG-ID as specified in TS 23.003 [21]. The PLMN ID and a CAG ID in the <i>NPN-Identity</i> identifies a PNI-NPN.
<i>cag-IdentityList</i> The <i>cag-IdentityList</i> contains one or more CAG IDs. All CAG IDs associated to the same PLMN ID are listed in the same <i>cag-IdentityList</i> entry.
<i>manualCAGselectionAllowed</i> The <i>manualCAGselectionAllowed</i> indicates that the CAG ID can be selected manually even if it is outside the UE's allowed CAG list.
<i>NID</i> A NID as specified in TS 23.003 [21]. The PLMN ID and a NID in the <i>NPN-Identity</i> identifies a SNPN.
<i>nid-List</i> The <i>nid-List</i> contains one or more <i>NID</i> .

– *NPN-IdentityInfoList*

The IE *NPN-IdentityInfoList* includes a list of NPN identity information.

***NPN-IdentityInfoList* information element**

```

-- ASN1START
-- TAG-NPN-IDENTITYINFOLIST-START

NPN-IdentityInfoList-r16 ::=      SEQUENCE (SIZE (1..maxNPN-r16)) OF NPN-IdentityInfo-r16

NPN-IdentityInfo-r16 ::=          SEQUENCE {
    npn-IdentityList-r16          SEQUENCE (SIZE (1..maxNPN-r16)) OF NPN-Identity-r16,
    trackingAreaCode-r16          TrackingAreaCode,
    ranac-r16                     RAN-AreaCode                                OPTIONAL,      -- Need R
    cellIdentity-r16              CellIdentity,
    cellReservedForOperatorUse-r16 ENUMERATED {reserved, notReserved},
    iab-Support-r16               ENUMERATED {true}                        OPTIONAL,      -- Need S
    ...,
    [[
    gNB-ID-Length-r17             INTEGER (22..32)                        OPTIONAL      -- Need R
    ]],
    [[
    mobileIAB-Support-r18         ENUMERATED {true}                      OPTIONAL      -- Need S
    ]]
}

-- TAG-NPN-IDENTITYINFOLIST-STOP
-- ASN1STOP

```

<i>NPN-IdentityInfoList</i> field descriptions
<i>iab-Support</i> This field combines both the support of IAB and the cell status for IAB. If the field is present, the cell supports IAB and the cell is also considered as a candidate for cell (re)selection for IAB-nodes; if the field is absent, the cell does not support IAB and/or the cell is barred for IAB-node. This field is absent if <i>mobileIAB-Cell</i> is broadcasted in the cell.
<i>gNB-ID-Length</i> Indicates the length of the gNB ID out of the 36-bit long <i>cellIdentity</i> . This field is always present if the <i>mobileIAB-Support</i> is broadcasted.
<i>mobileIAB-Support</i> This field indicates the support of mobile IAB and whether the cell can be considered as a candidate for cell (re)selection for mobile IAB-node. This field is absent if <i>mobileIAB-Cell</i> is broadcasted in the cell. If the field is absent, the cell is barred for mobile IAB-node.
<i>NPN-IdentityInfo</i> The <i>NPN-IdentityInfo</i> contains one or more NPN identities and additional information associated with those NPNs. Only the same type of NPNs (either SNPNs or PNI-NPNs) can be listed in a <i>NPN-IdentityInfo</i> element.
<i>npn-IdentityList</i> The <i>npn-IdentityList</i> contains one or more NPN Identity elements.
<i>trackingAreaCode</i> Indicates the Tracking Area Code to which the cell indicated by <i>cellIdentity</i> field belongs.
<i>ranac</i> Indicates the RAN Area Code to which the cell indicated by <i>cellIdentity</i> field belongs.
<i>cellReservedForOperatorUse</i> Indicates whether the cell is reserved for operator use (for the NPN(s) identified in the <i>npn-IdentityList</i>) as defined in TS 38.304 [20]. This field is ignored by NPN capable IAB-MT and NPN capable NCR-MT.

– *NR-DL-PRS-PDC-Info*

The IE *NR-DL-PRS-PDC-Info* defines downlink PRS configuration for PDC.

NR-DL-PRS-PDC-Info information element

NR-DL-PRS-PDC-ResourceSet field descriptions
dl-PRS-ResourceBandwidth This field specifies the number of PRBs allocated for all the DL-PRS Resource (allocated DL-PRS bandwidth) in multiples of 4 PRBs in this resource set. All DL-PRS Resources of the DL-PRS-PDC Resource Set have the same bandwidth. Integer value 1 corresponds to 24 PRBs, value 2 corresponds to 28 PRBs, value 3 corresponds to 32 PRBs and so on.
dl-PRS-StartPRB This field specifies the start PRB index defined as offset with respect to subcarrier 0 in common resource block 0 for the DL-PRS Resource. All DL-PRS Resources of the DL-PRS-PDC Resource Set have the same value of dl-PRS-StartPRB.
numSymbols This field specifies the number of symbols per DL-PRS Resource within a slot. The UE does not expect to be configured for PDC with a PRS with <i>numSymbols</i> equals to n1 unless an SSB index is provided as a <i>typeC</i> or <i>typeC-plus-typeD</i> QCL source, or another PRS resource with <i>numSymbols</i> more than n1 is provided as QCL source.
periodicityAndOffset This field specifies the periodicity of DL-PRS allocation in slots and the slot offset with respect to SFN #0 slot #0 in the PCell where the DL-PRS-PDC Resource Set is configured (i.e., slot where the first DL-PRS Resource of DL-PRS-PDC Resource Set occurs).
repFactorAndTimeGap If this field is absent, the value for <i>repetitionFactor</i> is 1 (i.e., no resource repetition).

RepFactorAndTimeGap field descriptions
repetitionFactor This field specifies how many times each DL-PRS Resource is repeated for a single instance of the DL-PRS Resource Set. It is applied to all resources of the DL-PRS Resource Set. Enumerated values n2, n4, n6, n8, n16, n32 correspond to 2, 4, 6, 8, 16, 32 resource repetitions, respectively.
timeGap This field specifies the offset in units of slots between two repeated instances of a DL-PRS Resource corresponding to the same DL-PRS Resource ID within a single instance of the DL-PRS Resource Set. The time duration spanned by one DL-PRS Resource Set containing repeated DL-PRS Resources should not exceed the periodicity configured by <i>periodicityAndOffset</i> .

NR-DL-PRS-Resource field description
dl-PRS-ResourceSymbolOffset This field specifies the starting symbol of the <i>DL-PRS Resource</i> within a slot. If <i>dl-PRS-ResourceSymbolOffset-v1800</i> is present, the UE shall ignore <i>dl-PRS-ResourceSymbolOffset-r17</i> .

– NR-NS-PmaxList

The IE *NR-NS-PmaxList* is used to configure a list of *additionalPmax* and *additionalSpectrumEmission*, as defined in TS 38.101-1 [15], table 6.2.3.1-1A, TS 38.101-2 [39], table 6.2.3.1-2, and TS 38.101-5 [75], table 6.2.3.1-1A for a given frequency band.

NR-NS-PmaxList information element

```
-- ASN1START
-- TAG-NR-NS-PMAXLIST-START

NR-NS-PmaxList ::=
    SEQUENCE (SIZE (1..maxNR-NS-Pmax)) OF NR-NS-PmaxValue

NR-NS-PmaxValue ::=

```

NTN-Config field descriptions	
<i>ephemerisInfo</i>	This field provides satellite ephemeris either in format of position and velocity state vector or in format of orbital parameters. This field is excluded when determining changes in system information, i.e. changes to <i>ephemerisInfo</i> should neither result in system information change notifications nor in a modification of <i>valueTag</i> in <i>SIB1</i> .
<i>epochTime</i>	If this field is absent for the NTN serving cell, the epoch time is the end of SI window where this <i>SIB19</i> or <i>SIB28</i> is scheduled. This field is mandatory present when <i>ntn-Config</i> is provided in dedicated configuration. If this field is absent in <i>ntn-Config</i> provided via <i>NTN-NeighCellConfig</i> or <i>SatSwitchWithReSync</i> or <i>NTN-NeighCellConfigIoT</i> in an NTN cell, the UE uses epoch time of the serving cell, otherwise the field is based on the timing of the serving cell, i.e. the SFN and sub-frame number indicated in this field refers to the SFN and sub-frame of the serving cell. If this field is absent in <i>ntn-Config</i> provided via <i>NTN-NeighCellConfig</i> in a TN cell, the epoch time is the end of SI window where this <i>SIB19</i> is scheduled. In case of satellite switch with resynchronization, this field is based on the timing of the cell served by the source satellite. This field is excluded when determining changes in system information, i.e. changes to <i>epochTime</i> should neither result in system information change notifications nor in a modification of <i>valueTag</i> in <i>SIB1</i> .
<i>cellSpecificKoffset</i>	Scheduling offset used for the timing relationships that are modified for NTN (see TS 38.213 [13]). The unit of the field <i>K_offset</i> is number of slots for a given subcarrier spacing of 15 kHz. If the field is absent UE assumes value 0.
<i>kmac</i>	Scheduling offset provided by network if downlink and uplink frame timing are not aligned at gNB. If the field is absent UE assumes value 0. The unit of <i>kmac</i> is number of slots for a given subcarrier spacing of 15 kHz.
<i>ntn-PolarizationDL</i>	If present, this parameter indicates polarization information for downlink transmission on service link: including Right hand, Left hand circular polarizations (RHCP, LHCP) and Linear polarization.
<i>ntn-PolarizationUL</i>	If present, this parameter indicates Polarization information for uplink service link. If not present and <i>ntn-PolarizationDL</i> is present, UE assumes the same polarization for UL and DL. If both <i>ntn-PolarizationUL</i> and <i>ntn-PolarizationDL</i> are not present, the UE releases any stored value.
<i>ntn-UISyncValidityDuration</i>	A validity duration configured by the network for assistance information (i.e. Serving and/or neighbour satellite ephemeris and Common TA parameters) which indicates the maximum time duration (from <i>epochTime</i>) during which the UE can apply assistance information without having acquired new assistance information. The unit of <i>ntn-UISyncValidityDuration</i> is second. Value <i>s5</i> corresponds to 5 s, value <i>s10</i> indicate 10 s and so on. If this field is absent in <i>ntn-Config</i> provided via <i>NTN-NeighCellConfig</i> , <i>SatSwitchWithReSync</i> , or <i>NTN-NeighCellConfigIoT</i> in an NTN cell, the UE uses validity duration from the serving cell assistance information. If this field is absent in <i>ntn-Config</i> provided via <i>NTN-NeighCellConfig</i> in a TN cell, how the UE sets the validity duration is left to UE implementation. This field is excluded when determining changes in system information, i.e. changes of <i>ntn-UISyncValidityDuration</i> should neither result in system information change notifications nor in a modification of <i>valueTag</i> in <i>SIB1</i> . <i>ntn-UISyncValidityDuration</i> is only updated when at least one of <i>epochTime</i> , <i>ta-Info</i> , <i>ephemerisInfo</i> is updated.
<i>ta-Common</i>, <i>ta-CommonIoT</i>	Network-controlled common timing advance value and it may include any timing offset considered necessary by the network. <i>ta-Common</i> with value of 0 is supported. The granularity of <i>ta-Common</i> is $4.072 \times 10^{(-3)} \mu\text{s}$. Values are given in unit of corresponding granularity. This field is excluded when determining changes in system information, i.e. changes of <i>ta-Common</i> should neither result in system information change notifications nor in a modification of <i>valueTag</i> in <i>SIB1</i> . <i>ta-CommonIoT</i> is network-controlled common time advanced value as defined in TS 36.213 [81]. Unit of μs , Step of $32.55208 \times 10^{-3} \mu\text{s}$. If <i>ta-CommonIoT</i> is absent, the UE uses the (default) value of 0
<i>ta-CommonDrift</i>, <i>ta-CommonDriftIoT</i>	Indicate drift rate of the common TA. <i>ta-CommonDriftIoT</i> is the drift rate as defined in TS 36.213 [81]. The granularity of <i>ta-CommonDrift</i> is $0.2 \times 10^{(-3)} \mu\text{s/s}$. Values are given in unit of corresponding granularity. This field is excluded when determining changes in system information, i.e. changes of <i>ta-CommonDrift</i> or <i>ta-CommonDriftIoT</i> should neither result in system information change notifications nor in a modification of <i>valueTag</i> in <i>SIB1</i> .
<i>ta-CommonDriftVariant</i>, <i>ta-CommonDriftVariantIoT</i>	Indicate drift rate variation of the common TA. <i>ta-CommonDriftVariantIoT</i> is the drift rate variation as defined in TS 36.213 [81]. The granularity of <i>ta-CommonDriftVariant</i> is $0.2 \times 10^{(-4)} \mu\text{s/s}^2$. Values are given in unit of corresponding granularity. This field is excluded when determining changes in system information, i.e. changes of <i>ta-</i>

CommonDriftVariant should neither result in system information change notifications nor in a modification of *valueTag* in SIB1. If the field is absent, the UE uses the (default) value of 0.

ta-Info, ta-InfoIoT

Indicate network-controlled common timing advanced related information. *ta-InfoIoT* is used for access to IoT via NTN. *ta-InfoIoT* is only included in SIB28.

ta-Report

When this field is included in SIB19, it indicates reporting of timing advance is enabled during Random Access due to RRC connection establishment or RRC connection resume, and during RRC connection reestablishment. When configured, the UE may include TA report during the SDT procedure for CG-SDT. When this field is included in *ServingCellConfigCommon* within dedicated signalling, it indicates TA reporting is enabled during reconfiguration with sync (see TS 38.321 [3], clause 5.4.8).

Conditional Presence	Explanation
SIB19	The field is mandatory present for the serving cell in SIB19. The field is optionally present, Need R, otherwise.

– Nzp-Csi-Rs-Resource

The IE *Nzp-Csi-Rs-Resource* is used to configure Non-Zero-Power (Nzp) CSI-RS transmitted in the cell where the IE is included, which the UE may be configured to measure on (see TS 38.214 [19], clause 5.2.2.3.1). A change of configuration between periodic, semi-persistent or aperiodic for an *Nzp-Csi-Rs-Resource* is not supported without a release and add.

Nzp-Csi-Rs-Resource information element

```

-- TAG-Nzp-Csi-Rs-Resource-STOP
-- ASN1STOP
```

NZP-CSI-RS-Resource field descriptions	
additionalOneSlotOffset	See TS 38.214 [19], clause 5.2.2.3.1. This field is only configured for codebook <i>type1-SinglePanel-r19</i> , <i>type1-MultiPanel-r19</i> , <i>etypell-r19</i> and <i>typell-FePortSelection-r19</i> .
additionalSlotOffset	See TS 38.214 [19], clause 5.2.2.3.1. The value 0 corresponds to 0 slots, value 1 corresponds to 1 slot and so on. This field is only configured for codebook <i>type1-SinglePanel</i> and <i>typell-r16</i> .
periodicityAndOffset	Periodicity and slot offset <i>s1</i> corresponds to a periodicity of 1 slot, <i>s2</i> to a periodicity of two slots, and so on. The corresponding offset is also given in number of slots (see TS 38.214 [19], clause 5.2.2.3.1). Network always configures the UE with a value for this field for periodic and semi-persistent NZP-CSI-RS-Resource (as indicated in <i>CSI-ResourceConfig</i>).
powerControlOffset	Power offset of PDSCH EPRE to NZP CSI-RS EPRE. Value in dB (see TS 38.214 [19], clauses 5.2.2.3.1 and 4.1). The UE shall ignore this field in case <i>NZP-CSI-RS-Resources</i> is received as part of an <i>LTM-Candidate</i> IE.
powerControlOffsetSS	Power offset of NZP CSI-RS EPRE to SS/PBCH block EPRE. Value in dB (see TS 38.214 [19], clause 5.2.2.3.1).
qcl-InfoPeriodicCSI-RS	For a target periodic CSI-RS, contains a reference to one <i>TCI-State</i> in <i>TCI-States</i> for providing the QCL source and QCL type. For periodic CSI-RS, the source can be SSB or another periodic-CSI-RS. Refers to the <i>TCI-State</i> or <i>dl-OrJoint-TCI-State</i> which has this value for <i>tci-StateId</i> and is defined in <i>tci-StatesToAddModList</i> or in <i>dl-OrJointTCI-StateList</i> in the <i>PDSCH-Config</i> included in the <i>BWP-Downlink</i> corresponding to the serving cell and to the DL BWP to which the resource belongs to (see TS 38.214 [19], clause 5.2.2.3.1). In case <i>NZP-CSI-RS-Resources</i> is received as part of an <i>LTM-Candidate</i> IE, it refers to the TCI state identifier in <i>CandidateTCI-State</i> and is defined in <i>ltm-DL-OrJointTCI-StateToAddModList</i> within the <i>LTM-Candidate</i> IE.
resourceMapping	OFDM symbol location(s) in a slot and subcarrier occupancy in a PRB of the CSI-RS resource.
scramblingID	Scrambling ID (see TS 38.214 [19], clause 5.2.2.3.1).

Conditional Presence	Explanation
<i>LTM</i>	The field is optionally present, Need R, in an <i>LTM-Candidate</i> IE. Otherwise, the field is absent.
<i>Periodic</i>	The field is optionally present, Need M, for periodic <i>NZP-CSI-RS-Resources</i> (as indicated in <i>CSI-ResourceConfig</i>). The field is absent otherwise.
<i>PeriodicOrSemiPersistent</i>	The field is optionally present, Need M, for periodic and semi-persistent <i>NZP-CSI-RS-Resources</i> (as indicated in <i>CSI-ResourceConfig</i>). The field is absent otherwise.

– NZP-CSI-RS-ResourceId

The IE *NZP-CSI-RS-ResourceId* is used to identify one NZP-CSI-RS-Resource.

NZP-CSI-RS-ResourceId information element

```
-- ASN1START
-- TAG-NZP-CSI-RS-RESOURCEID-START
NZP-CSI-RS-ResourceId ::=

NZP-CSI-RS-ResourceSet field descriptions
additionalOneSlotOffsetDoppler See TS 38.214 [19], clause 5.2.2.3.1. This field is only configured for codebook <i>type1-Doppler-r19</i>.
aperiodicTriggeringOffset, aperiodicTriggeringOffset-r16, aperiodicTriggeringOffset-r17 Offset X between the slot containing the DCI that triggers a set of aperiodic NZP CSI-RS resources and the slot in which the CSI-RS resource set is transmitted. For <i>aperiodicTriggeringOffset</i>, the value 0 corresponds to 0 slots, value 1 corresponds to 1 slot, value 2 corresponds to 2 slots, value 3 corresponds to 3 slots, value 4 corresponds to 4 slots, value 5 corresponds to 16 slots, value 6 corresponds to 24 slots. For <i>aperiodicTriggeringOffset-r16</i> and <i>aperiodicTriggeringOffset-r17</i>, the value indicates the number of slots. <i>aperiodicTriggeringOffset-r17</i> is applicable to SCS 480 kHz and 960 kHz, and only the values of integer multiples of 4 are valid, i.e. 0, 4, 8, and so on. The network configures only one of the fields. When neither field is included, the UE applies the value 0. This field is not present in case <i>NZP-CSI-RS-ResourcesSet</i> is received as part of an <i>LTM-Candidate</i> IE.
aperiodicTriggeringOffsetL2 Indicates triggering offset of aperiodic NZP CSI-RS resources used for fast activation of the SCell (see clause 5.2.1.5.3 of TS 38.214 [19]), when the NZP CSI-RS resources are activated by the MAC CE (see clause 5.9 of TS 38.321 [3]). The value indicates the number of slots. This field is not present in case <i>NZP-CSI-RS-ResourcesSet</i> is received as part of an <i>LTM-Candidate</i> IE.
cmrGroupingAndPairing Configures CMR groups and pairs. The first <i>nrofResourcesGroup1</i> resources in the NZP-CSI-RS resource set belong to Group 1 and the remaining resources in the NZP-CSI-RS resource set belong to Group 2. <i>nrofResourcesGroup1</i> is K_1 and the number of remaining resources in the NZP-CSI-RS resource set belonging to Group 2 is K_2 as specified in TS 38.214 clause 5.2.1.4.1. Maximum total number in Group 1 and Group 2 is 8 (see TS 38.214 [19], clauses 5.2.1.4.1 and 5.2.1.4.2). This field is not present in case <i>NZP-CSI-RS-ResourcesSet</i> is received as part of an <i>LTM-Candidate</i> IE.
kdopp The number of configured resource groups and number of NZP CSI-RS resources in each group. For <i>numberOfResourceGroups</i>, value <i>n4</i> corresponds to 4 resource groups, value <i>n8</i> corresponds to 8 resource groups and value <i>n12</i> corresponds to 12 resource groups. For <i>numberOfResourcesPerGroup</i>, value <i>n2</i> corresponds to 2 NZP CSI-RS resources per group, value <i>n3</i> corresponds to 3 NZP CSI-RS resources per group and value <i>n4</i> corresponds to 4 NZP CSI-RS resources per group. This field is only configured for codebook <i>type1-Doppler-r19</i>.
pair1OfNZP-CSI-RS, pair2OfNZP-CSI-RS A pair of NZP CSI-RS resources. In one pair, one resource shall belong to group 1 and the other resource shall belong to group 2 (see TS 38.214 [19], clause 5.2.1.4.1).
nzp-CSI-RS-Resources NZP-CSI-RS-Resources associated with this NZP-CSI-RS resource set (see TS 38.214 [19], clause 5.2). If the <i>NZP-CSI-RS-ResourceSet</i> is indicated in a <i>CSI-ResourceConfig</i> indicated by <i>resourcesForChannelMeasurement</i> in a <i>CSI-ReportConfig</i>, if the <i>codebookType</i> in the <i>codebookConfig</i> in the <i>CSI-ReportConfig</i> is <i>type1-Doppler-r18</i> or <i>type1-DopplerPortSelection-r18</i>, there are at most 1 periodic or semi-persistent NZP CSI-RS resource and 4, 8 or 12 aperiodic NZP CSI-RS resources and if the <i>codebookType</i> is <i>type1-CJT-r18</i> or <i>type1-CJT-PortSelection-r18</i>, there are 1, 2, 3, or 4 aperiodic, periodic or semi-persistent NZP-CSI-RS resources, see TS 38.214 [19], clause 5.2.1.4.
nzp-CSI-RS-ResourceId1, nzp-CSI-RS-ResourceId2 The <i>nzp-CSI-RS-ResourceId1-r17</i> represents the index of the NZP CSI-RS resource in Resource Group 1, and <i>nzp-CSI-RS-ResourceId2-r17</i> represents the index of the NZP CSI-RS resource in Resource Group 2.
pdcc-Info Indicates that this NZP-CSI-RS-ResourceSet, if configured also with <i>trs-Info</i>, is used for propagation delay compensation. The field can be present only if <i>trs-info</i> is present. The field can be present in only one <i>NZP-CSI-RS-ResourceSet</i>. If network configures this field for an <i>NZP-CSI-RS-ResourceSet</i>, the UE measures the UE Rx-Tx time difference based on resources configured in this resource set. This field is not present in case <i>NZP-CSI-RS-ResourcesSet</i> is received as part of an <i>LTM-Candidate</i> IE.
repetition Indicates whether repetition is on/off. If the field is set to <i>off</i> or if the field is absent, the UE may not assume that the NZP-CSI-RS resources within the resource set are transmitted with the same downlink spatial domain transmission filter (see TS 38.214 [19], clauses 5.2.2.3.1 and 5.1.6.1.2). It can only be configured for CSI-RS resource sets which are associated with <i>CSI-ReportConfig</i> with report of L1 RSRP, L1 SINR or "no report". If <i>NZP-CSI-RS-ResourceSet</i> if configured in <i>LTM-Candidate</i>, the field can only be configured as <i>off</i>, if present.
resourceType

Time domain behavior of resource configuration (see TS 38.214 [19], clause 5.2.1.2).

trs-info

Indicates that the antenna port for all NZP-CSI-RS resources in the CSI-RS resource set is same. If the field is absent or released the UE applies the value *false* (see TS 38.214 [19], clause 5.2.2.3.1).

Conditional Presence	Explanation
<i>LTM</i>	The field is optionally present, Need R, in an <i>LTM-TCI-Info</i> IE. Otherwise, the field is absent.

– **NZP-CSI-RS-ResourceSetId**

The IE *NZP-CSI-RS-ResourceSetId* is used to identify one *NZP-CSI-RS-ResourceSet*.

NZP-CSI-RS-ResourceSetId information element

```
-- ASN1START
-- TAG-NZP-CSI-RS-RESOURCESETID-START

NZP-CSI-RS-ResourceSetId ::=          INTEGER (0..maxNrofNZP-CSI-RS-ResourceSets-1)

-- TAG-NZP-CSI-RS-RESOURCESETID-STOP
-- ASN1STOP
```

– **OD-SSB-Config**

The IE *OD-SSB-Config* is used to configure the OD-SSB activated by *od-ssb-ActivationStatus* or by a MAC CE see TS 38.321 [3], clause 6.1.3.88.

OD-SSB-Config information element

```
-- ASN1START
-- TAG-OD-SSB-CONFIG-START

OD-SSB-Config-r19 ::= SEQUENCE {
    od-SSB-ConfigId-r19          OD-SSB-ConfigId-r19,
    od-SSB-SFN-Offset-r19        INTEGER (0..15)                                OPTIONAL, -- Need S
    od-SSB-HalfFrameIndex-r19    ENUMERATED {zero, one}                        OPTIONAL, -- Need S
    od-SSB-ActivationStatus-r19  ENUMERATED {activated}                        OPTIONAL, -- Need S
    od-SSB-Periodicity-r19       ENUMERATED { ms5, ms10, ms20, ms40, ms80, ms160, spare2, spare1 },
    od-SSB-PositionsInBurst-r19  CHOICE {
        shortBitmap              BIT STRING (SIZE (4)),
        mediumBitmap              BIT STRING (SIZE (8)),
        longBitmap                BIT STRING (SIZE (64))
    }                                OPTIONAL, -- Cond ODssbAOssb
    od-SSB-NrofBursts-r19        ENUMERATED {n5, n10, n15, n20, n25, n30, n40, n50, n75, n100, n150, n200} OPTIONAL, -- Cond MACCE
    ...
}
```

```
OD-SSB-ConfigId-r19 ::= INTEGER (0.. maxNrofOD-SSB-1-r19)

-- TAG-OD-SSB-CONFIG-STOP
-- ASN1STOP
```

OD-SSB-Config field descriptions	
od-SSB-ActivationStatus	Indicates the activation status of this OD-SSB pattern upon configuration. Only one OD-SSB pattern can be activated at one point of time.
od-SSB-HalfFrameIndex	Indicates whether OD-SSB is in the first half or the second half of the frame. If the field is absent, the UE applies the value <i>zero</i> .
od-SSB-NrofBursts	Indicates the number of OD-SSB bursts to be transmitted after OD-SSB is activated. Network only configures this field when <i>od-SSB-ActivationStatus</i> is absent. For FR1, the value range is {5, 10, 15, 20, 25, 30, 40, 50}. For FR2, the value range is {25, 30, 40, 50, 75, 100, 150, 200}.
od-SSB-Periodicity	The SSB periodicity for the OD-SSB in ms. If <i>absoluteFrequencySSB</i> is configured in <i>servingCellConfigCommon</i> , the network may only configure values smaller than or equal to the periodicity associated for the <i>absoluteFrequencySSB</i> (<i>ssb-periodicityServingCell</i> configured in <i>ServingCellConfigCommon</i>).
od-SSB-PositionsInBurst	Indicates the time domain positions of the transmitted SS-blocks for OD-SSB in a half frame with SS/PBCH blocks as defined in TS 38.213 [13], clause 4.1. If absent, UE applies the value <i>ssb-PositionsInBurst</i> provided in <i>ServingCellConfigCommon</i> .
od-SSB-SFN-Offset	Indicates SFN offset, where SFN refers to the SFN of this serving cell (see TS 38.213 [13], clause 4.4). The network configures this field according to the field <i>od-SSB-Periodicity</i> such that the indicated system frame does not exceed the OD-SSB periodicity. If the field is absent, the UE applies the value 0.

Conditional Presence	Explanation
ODssbAOssb	The field is mandatory present, when <i>absoluteFrequencySSB</i> of the serving cell is absent. It is optionally present, Need R, otherwise.
MACCE	The field is optionally present, Need R, when <i>od-SSB-ActivationStatus</i> is absent. It is absent otherwise.

– *P-Max*

The IE *P-Max* is used to limit the UE's uplink transmission power on a carrier frequency, in TS 38.101-1 [15] and in TS 38.101-5 [75], and is used to calculate the parameter *Pcompensation* defined in TS 38.304 [20]. In ATG cell, actual value of P-Max = 9 + field value [dBm].

P-Max information element

```
-- ASN1START
-- TAG-P-MAX-START

P-Max ::=
    INTEGER (-30..33)

-- TAG-P-MAX-STOP
-- ASN1STOP
```

– PathlossReferenceRS

The IE *PathlossReferenceRS* is used to configure a Reference Signal (e.g. a CSI-RS config or a SS block) to be used for path loss estimation for PUSCH, PUCCH and SRS for unified TCI state operation.

PathlossReferenceRS information element

```
-- ASN1START
-- TAG-PATHLOSSREFERENCECERS-START

PathlossReferenceRS-r17 ::= SEQUENCE {
    pathlossReferenceRS-Id-r17          PathlossReferenceRS-Id-r17,
    referenceSignal-r17                 CHOICE {
        ssb-Index                      SSB-Index,
        csi-RS-Index                   NZP-CSI-RS-ResourceId
    },
    additionalPCI-r17                   AdditionalPCIIndex-r17                               OPTIONAL -- Cond RS-SSB
}

-- TAG-PATHLOSSREFERENCECERS-STOP
-- ASN1STOP
```

PathlossReferenceRS field descriptions
additionalPCI Indicates the physical cell ID (PCI) of the SSB for the referenceSignal.

Conditional Presence	Explanation
RS-SSB	The field is optionally present, Need R, if <i>ssb-Index</i> is configured for <i>referenceSignal</i> . Otherwise it is absent, Need R.

– PathlossReferenceRS-Id

The IE *PathlossReferenceRS-Id* is an ID for a reference signal (RS) configured as PUSCH, PUCCH and SRS pathloss reference RS for unified TCI state operation.

PathlossReferenceRS-Id information element

```
-- ASN1START
-- TAG-PATHLOSSREFERENCECERS-ID-START

PathlossReferenceRS-Id-r17 ::= INTEGER (0..maxNrofPathlossReferenceRSs-1-r17)

-- TAG-PATHLOSSREFERENCECERS-ID-STOP
-- ASN1STOP
```

– *PCI-ARFCN-EUTRA*

The IE *PCI-ARFCN-EUTRA* is used to encode EUTRA PCI and ARFCN.

PCI-ARFCN-EUTRA information element

```
-- ASN1START
-- TAG-PCIARFCNEUTRA-START

PCI-ARFCN-EUTRA-r16 ::=          SEQUENCE {
    physCellId-r16              EUTRA-PhysCellId,
    carrierFreq-r16             ARFCN-ValueEUTRA
}

-- TAG-PCIARFCNEUTRA-STOP
-- ASN1STOP
```

– *PCI-ARFCN-NR*

The IE *PCI-ARFCN-NR* is used to encode NR PCI and ARFCN.

PCI-ARFCN-NR information element

```
-- ASN1START
-- TAG-PCIARFCNNR-START

PCI-ARFCN-NR-r16 ::=          SEQUENCE {
    physCellId-r16              PhysCellId,
    carrierFreq-r16             ARFCN-ValueNR
}

-- TAG-PCIARFCNNR-STOP
-- ASN1STOP
```

– *PCI-List*

The IE *PCI-List* concerns a list of physical cell identities, which may be used for different purposes.

PCI-List information element

```
-- ASN1START
-- TAG-PCI-LIST-START

PCI-List ::=                  SEQUENCE (SIZE (1..maxNrofCellMeas)) OF PhysCellId

-- TAG-PCI-LIST-STOP
```

```
-- ASN1STOP
```

– *PCI-Range*

The IE *PCI-Range* is used to encode either a single or a range of physical cell identities. The range is encoded by using a *start* value and by indicating the number of consecutive physical cell identities (including *start*) in the range. For fields comprising multiple occurrences of *PCI-Range*, the Network may configure overlapping ranges of physical cell identities.

PCI-Range information element

```
-- ASN1START
-- TAG-PCI-RANGE-START

PCI-Range ::=
    start          PhysCellId,
    range          ENUMERATED {n4, n8, n12, n16, n24, n32, n48, n64, n84,
                                n96, n128, n168, n252, n504, n1008, spare1}
}
-- TAG-PCI-RANGE-STOP
-- ASN1STOP
```

OPTIONAL -- Need S

PCI-Range field descriptions
range Indicates the number of physical cell identities in the range (including <i>start</i>). Value <i>n4</i> corresponds with 4, value <i>n8</i> corresponds with 8 and so on. The UE shall apply value 1 in case the field is absent, in which case only the physical cell identity value indicated by <i>start</i> applies.
start Indicates the lowest physical cell identity in the range.

– *PCI-RangeElement*

The IE *PCI-RangeElement* is used to define a *PCI-Range* as part of a list (e.g. AddMod list).

PCI-RangeElement information element

```
-- ASN1START
-- TAG-PCI-RANGEELEMENT-START

PCI-RangeElement ::=
    pci-RangeIndex PCI-RangeIndex,
    pci-Range      PCI-Range
}
-- TAG-PCI-RANGEELEMENT-STOP
-- ASN1STOP
```

PCI-RangeElement field descriptions
pci-Range Physical cell identity or a range of physical cell identities.

– PCI-RangeIndex

The IE PCI-RangeIndex identifies a physical cell id range, which may be used for different purposes.

PCI-RangeIndex information element

```
-- ASN1START
-- TAG-PCI-RANGEINDEX-START

PCI-RangeIndex ::=          INTEGER (1..maxNrofPCI-Ranges)

-- TAG-PCI-RANGEINDEX-STOP
-- ASN1STOP
```

– PCI-RangeIndexList

The IE PCI-RangeIndexList concerns a list of indexes of physical cell id ranges, which may be used for different purposes.

PCI-RangeIndexList information element

```
-- ASN1START
-- TAG-PCI-RANGEINDEXLIST-START

PCI-RangeIndexList ::=      SEQUENCE (SIZE (1..maxNrofPCI-Ranges)) OF PCI-RangeIndex

-- TAG-PCI-RANGEINDEXLIST-STOP
-- ASN1STOP
```

– PDCCH-Config

The IE *PDCCH-Config* is used to configure UE specific PDCCH parameters or MBS multicast PDCCH parameters such as control resource sets (CORESET), search spaces and additional parameters for acquiring the PDCCH. If this IE is used for the scheduled SCell in case of cross carrier scheduling, the fields other than *searchSpacesToAddModList* and *searchSpacesToReleaseList* are absent. If the IE is used for a dormant BWP, the fields other than *controlResourceSetToAddModList* and *controlResourceSetToReleaseList* are absent. If this IE is used for MBS CFR, the field *downlinkPreemption, tpc-PUSCH, tpc-SRS, uplinkCancellation, monitoringCapabilityConfig*, and *searchSpaceSwitchConfig* are absent.

PDCCH-Config information element

```

-- ASN1START
-- TAG-PDCCH-CONFIG-START

PDCCH-Config ::=
    SEQUENCE {
        controlResourceSetToAddModList SEQUENCE(SIZE (1..3)) OF ControlResourceSet OPTIONAL, -- Need N

SCS-SpecificDuration-r17  ::=      INTEGER (1..166)
-- TAG-PDCCH-CONFIG-STOP
-- ASN1STOP
```

<i>PDCCH-Config</i> field descriptions
<i>controlResourceSetToAddModList, controlResourceSetToAddModListSizeExt</i> List of UE specifically configured Control Resource Sets (CORESETs) to be used by the UE. The network restrictions on configuration of CORESETs per DL BWP are specified in TS 38.213 [13], clause 10.1 and TS 38.306 [26]. The UE shall consider entries in <i>controlResourceSetToAddModList</i> and in <i>controlResourceSetToAddModListSizeExt</i> as a single list, i.e. an entry created using <i>controlResourceSetToAddModList</i> can be modified using <i>controlResourceSetToAddModListSizeExt</i> (or deleted using <i>controlResourceSetToReleaseListSizeExt</i>) and vice-versa. In case network reconfigures control resource set with the same <i>ControlResourceSetId</i> as used for <i>commonControlResourceSet</i> or <i>commonControlResourceSetExt</i> configured via <i>PDCCH-ConfigCommon</i> or via <i>SIB20</i> , the configuration from <i>PDCCH-Config</i> always takes precedence and should not be updated by the UE based on <i>servingCellConfigCommon</i> or based on <i>SIB20</i> .
<i>controlResourceSetToReleaseList, controlResourceSetToReleaseListSizeExt</i> List of UE specifically configured Control Resource Sets (CORESETs) to be released by the UE. This field only applies to CORESETs configured by <i>controlResourceSetToAddModList</i> or <i>controlResourceSetToAddModListSizeExt</i> and does not release the field <i>commonControlResourceSet</i> configured by <i>PDCCH-ConfigCommon</i> and <i>commonControlResourceSetExt</i> configured by <i>SIB20</i> .
<i>downlinkPreemption</i> Configuration of downlink preemption indications to be monitored in this cell (see TS 38.213 [13], clause 11.2).
<i>monitoringCapabilityConfig</i> Configures either Rel-15 PDCCH monitoring capability, Rel-16 PDCCH monitoring capability or Rel-17 PDCCH monitoring capability for PDCCH monitoring on a serving cell (see TS 38.213 [13], clause 10.1). Value <i>r15monitoringcapability</i> enables the Rel-15 monitoring capability, and value <i>r16monitoringcapability</i> enables the Rel-16 PDCCH monitoring capability. <i>r17monitoringcapability</i> enables the Rel-17 PDCCH multi-slot monitoring capability. For 480 and 960 kHz SCS, only value <i>r17monitoringcapability</i> is applicable.
<i>pdccch-MonitoringResumptionAfterNack</i> This field is used to enable UE PDCCH monitoring resumption after PDCCH skipping has started, if the UE transmits a NACK due to incorrectly decoding a PDSCH scheduled by a DCI format received from the serving cell (see TS 38.213 [13], clause 10.4).
<i>pdccch-SkippingDurationList</i> Provides one or more values to derive the skipping duration in unit of slots, as specified in TS 38.213 [13], clause 10.4. The DCI which schedules data indicates which of the values is to be applied (see TS 38.213 [13], clause 10.4). For the 15kHz SCS, for each entry, only the first 26 values are valid and correspond to {1, 2, 3, ..., 20, 30, 40, 50, 60, 80, 100}. For the 30kHz SCS, for each entry, only the first 46 values are valid and correspond to {1, 2, 3, ..., 40, 60, 80, 100, 120, 160, 200}. For the 60kHz SCS, for each entry, only the first 86 values are valid and correspond to {1, 2, 3, ..., 80, 120, 160, 200, 240, 320, 400}. For the 120kHz SCS, for each entry, the 166 values correspond to {1, 2, 3, ..., 160, 240, 320, 400, 480, 640, 800}. For the 480kHz SCS, for each entry, the 166 values correspond to {4, 8, 12, ..., 640, 960, 1280, 1600, 1920, 2560, 3200}. For the 960kHz SCS, for each entry, the 166 values correspond to {8, 16, 24, ..., 1280, 1920, 2560, 3200, 3840, 5120, 6400}.
<i>searchSpacesToAddModList, searchSpacesToAddModListExt</i> List of UE specifically configured Search Spaces or MBS multicast Search Spaces. The network configures at most 10 Search Spaces per BWP per cell (including UE-specific and common Search Spaces). If the network includes <i>searchSpacesToAddModListExt</i> , it includes the same number of entries, and listed in the same order, as in <i>searchSpacesToAddModList</i> in each of them.
<i>searchSpaceSwitchConfig</i> Configuration to control the UE behavior to switch from search space group X back to search space group 0, as specified in clause 10 of TS 38.213 [13]. The network only configures either <i>searchSpaceSwitchConfig-r16</i> or <i>searchSpaceSwitchConfig-r17</i> for a UE.
<i>tpc-PUCCH</i> Enable and configure reception of group TPC commands for PUCCH.
<i>tpc-PUSCH</i> Enable and configure reception of group TPC commands for PUSCH.
<i>tpc-SRS</i> Enable and configure reception of group TPC commands for SRS.
<i>uplinkCancellation</i> Configuration of uplink cancellation indications to be monitored in this cell (see TS 38.213 [13], clause 11.2A).

SearchSpaceSwitchConfig field descriptions**cellGroupsForSwitchList**

The list of serving cells which are bundled for the search space group switching purpose (see TS 38.213 [13], clause 10.4). A serving cell can belong to only one *CellGroupForSwitch*. The network configures the same list for all BWPs of serving cells in the same *CellGroupForSwitch*.

searchSpaceSwitchDelay

Indicates the value to be applied by a UE for Search Space Set Group switching; corresponds to the P value in TS 38.213 [13], clause 10.4. The network configures the same value for all BWPs of serving cells in the same *CellGroupForSwitch*. For 120/480/960 kHz SCS, only values 40,41, ... 52 are valid and the actual value = field value * SCS/120 kHz i.e. field value 40 corresponds to 40 with 120 kHz SCS, 160 with 480 kHz SCS and 320 with 960 kHz SCS, and so on.

searchSpaceSwitchTimer

Timer (in unit of slots) to control the UE behavior to switch from search space group X back to search space group 0, as specified in clause 10 of TS 38.213 [13]. For the 15kHz SCS, only the first 26 values are valid and correspond to {1, 2, 3, ..., 20, 30, 40, 50, 60, 80, 100}. For the 30kHz SCS, only the first 46 values are valid and correspond to {1, 2, 3, ..., 40, 60, 80, 100, 120, 160, 200}. For the 60kHz SCS, only the first 86 values are valid and correspond to {1, 2, 3, ..., 80, 120, 160, 200, 240, 320, 400}. For the 120kHz SCS, the 166 values correspond to {1, 2, 3, ..., 160, 240, 320, 400, 480, 640, 800}. For the 480kHz SCS, the 166 values correspond to {4, 8, 12, ..., 640, 960, 1280, 1600, 1920, 2560, 3200}. For the 960kHz SCS, the 166 values correspond to {8, 16, 24, ..., 1280, 1920, 2560, 3200, 3840, 5120, 6400}.

sr-TriggeredSearchSpaceSwitchGroupId

Identifies the target search space group for SR-triggered search space group switching as described in clause 10.4 of TS 38.213 [13].

– **PDCCH-ConfigCommon**

The IE *PDCCH-ConfigCommon* is used to configure cell specific PDCCH parameters provided in SIB as well as in dedicated signalling.

PDCCH-ConfigCommon information element

```
-- ASN1START
-- TAG-PDCCH-CONFIGCOMMON-START

PDCCH-ConfigCommon ::=
SEQUENCE {

PDCCH-ConfigCommon field descriptions
applyIndicatedTCI-State This field indicates, for PDCCH reception in CORESET #0, if UE applies the first, the second, both or none of the "indicated" DL only TCI or joint TCI as specified in TS 38.213 [13], clause 10.1. Value <i>both</i> is not configured if the CORESET is associated with <i>searchSpaceZero</i> for Type 0/0A/2 common search space and can be configured only if <i>sfnSchemePDCCH</i> is configured in the serving cell.
commonControlResourceSet An additional common control resource set which may be configured and used for any common or UE-specific search space. If the network configures this field, it uses a <i>ControlResourceSetId</i> other than 0 for this <i>ControlResourceSet</i>. The network configures the <i>commonControlResourceSet</i> in <i>SIB1</i> so that it is contained in the bandwidth of CORESET#0. If the RedCap-specific initial downlink BWP does not contain the entire CORESET#0, the network configures the <i>commonControlResourceSet</i> in the RedCap-specific initial downlink BWP in <i>SIB1</i> for (e)RedCap such that it does not have to be contained in the bandwidth of CORESET#0.
commonSearchSpaceList, commonSearchSpaceListExt, commonSearchSpaceListExt2 A list of additional common search spaces. If the network configures this field, it uses the <i>SearchSpaceIds</i> other than 0. If the field is included, it replaces any previous list, i.e. all the entries of the list are replaced and each of the <i>SearchSpace</i> entries is considered to be newly created and the conditions and Need codes for setup of the entry apply. If the network includes <i>commonSearchSpaceListExt/commonSearchSpaceListExt2</i>, it includes the same number of entries, and listed in the same order, as in <i>commonSearchSpaceList</i>.
controlResourceSetZero Parameters of the common CORESET#0 which can be used in any common or UE-specific search spaces. The values are interpreted like the corresponding bits in <i>MIB pdccch-ConfigSIB1</i>. Even though this field is only configured in the initial BWP (BWP#0) <i>controlResourceSetZero</i> can be used in search spaces configured in other DL BWP(s) than the initial DL BWP if the conditions defined in TS 38.213 [13], clause 10 are satisfied.
firstPDCCH-MonitoringOccasionOfPEI-O Offset, in number of symbols, from the start of the reference frame for PEI-O to the start of the first PDCCH monitoring occasion of PEI-O on this BWP, see TS 38.213 [13], clause 10.4A. For the case <i>po-NumPerPEI</i> is smaller than <i>Ns</i>, UE applies the $(\text{floor}(i_s/\text{po-NumPerPEI})+1)$-th value out of $(N_s/\text{po-NumPerPEI})$ configured values in <i>firstPDCCH-MonitoringOccasionOfPEI-O</i> for the symbol-level offset. When <i>po-NumPerPEI</i> is one or multiple of <i>Ns</i>, UE applies the first configured value in <i>firstPDCCH-MonitoringOccasionOfPEI-O</i> for the symbol-level offset.
firstPDCCH-MonitoringOccasionOfPO Indicates the first PDCCH monitoring occasion of each PO of the PF on this BWP, see TS 38.304 [20]. The field <i>sCS120KHZquarterT-SCS60KHZZoneEighthT-SCS30KHZZoneSixteenthT</i>, <i>sCS120KHZZoneEighthT-SCS60KHZZoneSixteenthT</i> and <i>sCS120KHZZoneSixteenthT</i> can be applied for SCS 480kHz, corresponding to <i>sCS480KHZZoneT-SCS120KHZquarterT-SCS60KHZZoneEighthT-SCS30KHZZoneSixteenthT</i>, <i>sCS480KHZhalfT-SCS120KHZZoneEighthT-SCS60KHZZoneSixteenthT</i> and <i>sCS480KHZquarterT-SCS120KHZZoneSixteenthT</i> in IE <i>DownlinkConfigCommonSIB</i> respectively.
followUnifiedTCI-State When set to enabled, for PDCCH reception in CORESET #0, the UE applies the "indicated" DL only TCI or joint TCI as specified in TS 38.214 [19], clause 5.1.5.
pagingAdaptFirstPDCCH-MonitoringOccasionOfPEI-O Offset, in number of symbols, from the start of the reference frame for PEI-O to the start of the first PDCCH monitoring occasion of PEI-O on this BWP for paging adaptation, see TS 38.213 [13], clause 10.4A. For the case <i>po-NumPerPEI</i> is smaller than <i>Ns</i>, UE applies the $(\text{floor}(i_s/\text{po-NumPerPEI})+1)$-th value out of $(N_s/\text{po-NumPerPEI})$ configured values in <i>pagingAdaptFirstPDCCH-MonitoringOccasionOfPEI-O</i> for the symbol-level offset. When <i>po-NumPerPEI</i> is one or multiple of <i>Ns</i>, UE applies the first configured value in <i>pagingAdaptFirstPDCCH-MonitoringOccasionOfPEI-O</i> for the symbol-level offset. If <i>pagingAdaptPEI-Config</i> is configured in <i>DownlinkConfigCommonSIB</i>, this field is configured.
pagingAdaptFirstPDCCH-MonitoringOccasionOfPO Indicates the first PDCCH monitoring occasion of each PO of the PF on this BWP for paging adaptation, see TS 38.304 [20].
pagingAdaptPagingSearchSpace ID of the search space for paging adaptation (see TS 38.213 [13], clause 10.1). If the field is absent, the UE does not receive paging in this BWP (see TS 38.213 [13], clause 10). This field is absent for the RedCap-specific initial downlink BWP, if it does not include CD-SSB and the entire CORESET#0. In that case, an (e)RedCap UE in RRC_INACTIVE while SDT procedure is ongoing and T319a is not running, if CG-SDT is selected and if extended CG-SDT periodicity is configured (i.e. <i>cg-SDT-PeriodicityExt</i> is configured), or an (e)RedCap UE in RRC_IDLE or RRC_INACTIVE while SDT procedure is not ongoing, shall monitor paging in the initial DL BWP that includes CORESET#0.

pagingSearchSpace

ID of the search space for paging (see TS 38.213 [13], clause 10.1). If the field is absent, the UE does not receive paging in this BWP (see TS 38.213 [13], clause 10). This field is absent for the RedCap-specific initial downlink BWP, if it does not include CD-SSB and the entire CORESET#0. In that case, an (e)RedCap UE in RRC_INACTIVE while SDT procedure is ongoing and T319a is not running, if CG-SDT is selected and if extended CG-SDT periodicity is configured (i.e. *cg-SDT-PeriodicityExt* is configured), or an (e)RedCap UE in RRC_IDLE or RRC_INACTIVE while SDT procedure is not ongoing, shall monitor paging in the initial DL BWP that includes CORESET#0.

pei-ConfigBWP

Provides the configuration for PEI reception in this BWP. If the field is absent, the UE does not receive PEI in this BWP. For the *initialDownlinkBWP-RedCap* not including CD-SSB and the entire CORESET#0, an (e)RedCap UE in RRC_IDLE or RRC_INACTIVE while SDT procedure is not ongoing monitors PEI in the *initialDownlinkBWP* that includes CORESET#0, if the *initialDownlinkBWP* is configured with *pei-ConfigBWP*.

pei-SearchSpace

ID of dedicated search space for PEI. It can be configured to one of up to 4 common SS sets configured by *commonSearchSpaceList* with *SearchSpaceId* > 0. The CCE aggregation levels and maximum number of PDCCH candidates per CCE aggregation level follows Table 10.1-1 of TS38.213 [13]. *SearchSpaceId* = 0 can be configured for the case of SS/PBCH block and CORESET multiplexing pattern 2 or 3.

ra-SearchSpace

ID of the Search space for random access procedure (see TS 38.213 [13], clause 10.1). If the field is absent, the UE does not receive RAR in this BWP. This field is mandatory present in the DL BWP(s) if the conditions described in TS 38.321 [3], clause 5.15 are met.

sdt-SearchSpace

Common search space for CG-SDT and RA-SDT (see TS 38.213 [13]). If an *existingSearchSpace* is used, the network only signals the search space ID of the *ra-SearchSpace*.

searchSpaceMCCH

ID of the search space for MCCH. If the field is absent, the UE does not receive MCCH in this BWP (see TS 38.213 [13], clause 10). This field is absent for the RedCap-specific initial downlink BWP, if it does not include CD-SSB and the entire CORESET#0. In that case, the (e)RedCap UE in RRC_IDLE or RRC_INACTIVE may receive MCCH using *searchSpaceMCCH* in the initial DL BWP that includes CD-SSB and the entire CORESET#0.

searchSpaceMTCH

ID of the search space for MTCH of MBS broadcast. If the field is absent, the UE applies *searchSpaceMCCH* also for MTCH, (see TS 38.213 [13], clause 10). This field is absent for the RedCap-specific initial downlink BWP, if it does not include CD-SSB and the entire CORESET#0. In that case, the (e)RedCap UE in RRC_IDLE or RRC_INACTIVE may receive MTCH using *searchSpaceMTCH* in the initial DL BWP that includes CD-SSB and the entire CORESET#0.

searchSpaceMulticastMCCH

ID of the search space for multicast MCCH. If the field is absent, the UE does not receive multicast MCCH in this BWP (see TS 38.213 [13], clause 10). This field is absent for the RedCap-specific initial downlink BWP, if it does not include CD-SSB and the entire CORESET#0.

searchSpaceMulticastMTCH

ID of the search space for multicast MTCH. If the field is absent, the UE applies *searchSpaceMulticastMCCH* also for multicast MTCH, (see TS 38.213 [13], clause 10). This field is absent for the RedCap-specific initial downlink BWP, if it does not include CD-SSB and the entire CORESET#0.

searchSpaceOtherSystemInformation

ID of the Search space for other system information, i.e., *SIB2* and beyond (see TS 38.213 [13], clause 10.1). If the field is absent, the UE does not receive other system information in this BWP. This field is absent for the RedCap-specific initial DL BWP, if it does not include CD-SSB and the entire CORESET#0. In that case, an (e)RedCap UE in RRC_IDLE or RRC_INACTIVE shall monitor PDCCH to receive other system information using *searchSpaceOtherSystemInformation* in the initial DL BWP that includes CD-SSB and the entire CORESET#0.

searchSpaceSIB1

ID of the search space for *SIB1* message. In the initial DL BWP of the UE's PCell, the network sets this field to 0. If the field is absent, the UE does not receive *SIB1* in this BWP. (see TS 38.213 [13], clause 10). This field is absent for the RedCap-specific initial DL BWP, if it does not include CD-SSB and the entire CORESET#0. In that case, an (e)RedCap UE in RRC_IDLE or RRC_INACTIVE shall monitor PDCCH to receive *SIB1* using *searchSpaceSIB1* in the initial DL BWP that includes CD-SSB and the entire CORESET#0.

searchSpaceZero

Parameters of the common SearchSpace#0. The values are interpreted like the corresponding bits in *MIB pdccch-ConfigSIB1*. Even though this field is only configured in the

initial BWP (BWP#0), *searchSpaceZero* can be used in search spaces configured in other DL BWP(s) than the initial DL BWP if the conditions described in TS 38.213 [13], clause 10, are satisfied.

Conditional Presence	Explanation
<i>FollowUTC</i>	The field is absent if the field <i>followUnifiedTCI-State</i> is present or if more than one value for the field <i>coresetPoolIndex</i> is configured in <i>controlResourceSet</i> for the same bandwidthpart. Otherwise, it is optionally present, Need R.
<i>InitialBWP-Only</i>	If <i>SIB1</i> is broadcast the field is mandatory present in the <i>PDCCH-ConfigCommon</i> of the initial BWP (BWP#0) in <i>ServingCellConfigCommon</i> except it is the RedCap-specific initial BWP not including CD-SSB and the entire CORESET#0 in which case the field is absent, Need R; it is absent in other BWPs and when sent in system information. If <i>SIB1</i> is not broadcast and there is an SSB associated to the cell, the field is optionally present, Need M, in the <i>PDCCH-ConfigCommon</i> of the initial BWP (BWP#0) in <i>ServingCellConfigCommon</i> (still with the same setting for all UEs). In other cases, the field is absent.
<i>InitialBWP-Paging</i>	This field is optionally present, Need R, if this BWP is the <i>initialDownlinkBWP</i> or <i>initialDownlinkBWP-RedCap</i> including CD-SSB and the entire CORESET#0, and <i>pei-Config</i> is configured in <i>DownlinkConfigCommonSIB</i> . Otherwise, this field is absent.
<i>OtherBWP</i>	This field is optionally present, Need R, if this BWP is not the <i>initialDownlinkBWP</i> and <i>pagingSearchSpace</i> is configured in this BWP. Otherwise this field is absent.

– PDCCH-ConfigSIB1

The IE *PDCCH-ConfigSIB1* is used to configure CORESET#0 and search space#0.

PDCCH-ConfigSIB1 information element

```
-- ASN1START
-- TAG-PDCCH-CONFIGSIB1-START

PDCCH-ConfigSIB1 ::= SEQUENCE {
    controlResourceSetZero    ControlResourceSetZero,
    searchSpaceZero           SearchSpaceZero
}

-- TAG-PDCCH-CONFIGSIB1-STOP
-- ASN1STOP
```

PDCCH-ConfigSIB1 field descriptions
controlResourceSetZero Determines a common ControlResourceSet (CORESET) with ID #0, see TS 38.213 [13], clause 13.
searchSpaceZero Determines a common search space with ID #0, see TS 38.213 [13], clause 13.

– PDCCH-ServingCellConfig

The IE *PDCCH-ServingCellConfig* is used to configure UE specific PDCCH parameters applicable across all bandwidth parts of a serving cell.

PDCCH-ServingCellConfig information element

```
-- ASN1START
-- TAG-PDCCH-SERVINGCELLCONFIG-START

PDCCH-ServingCellConfig ::=          SEQUENCE {
    slotFormatIndicator                SetupRelease { SlotFormatIndicator }          OPTIONAL,  -- Need M
    ...,
    [[
        availabilityIndicator-r16      SetupRelease {AvailabilityIndicator-r16}      OPTIONAL,  -- Need M
        searchSpaceSwitchTimer-r16    INTEGER (1..80)                             OPTIONAL  -- Need R
    ]],
    [[
        searchSpaceSwitchTimer-v1710  INTEGER (81..1280)                         OPTIONAL  -- Need R
    ]]
}

-- TAG-PDCCH-SERVINGCELLCONFIG-STOP
-- ASN1STOP
```

PDCCH-ServingCellConfig field descriptions
availabilityIndicator Use to configure monitoring a PDCCH for Availability Indicators (AI).
searchSpaceSwitchTimer The value of the timer in slots for monitoring PDCCH in the active DL BWP of the serving cell before moving to the default search space group (see TS 38.213 [13], clause 10.4). For 15 kHz SCS, {1..20} are valid. For 30 kHz SCS, {1..40} are valid. For 60kHz SCS, {1..80} are valid. For 120 kHz SCS, {1..160} are valid. For 480 kHz SCS, {1..640} are valid. For 960 kHz SCS, {1..1280} are valid. The network configures the same value for all serving cells in the same <i>CellGroupForSwitch</i> .
slotFormatIndicator Configuration of Slot-Format-Indicators to be monitored in the correspondingly configured PDCCHs of this serving cell.

– PDCP-Config

The IE *PDCP-Config* is used to set the configurable PDCP parameters for signalling, MBS multicast and data radio bearers.

PDCP-Config information element

```
-- ASN1START
-- TAG-PDCP-CONFIG-START

PDCP-Config ::=          SEQUENCE {
```

```

drb

<i>PDCP-Config</i> field descriptions
<i>cipheringDisabled</i> If included, ciphering is disabled for this DRB regardless of which ciphering algorithm is configured for the SRB/DRBs. The field may only be included if the UE is connected to 5GC. Otherwise the field is absent. The network configures all DRBs with the same PDU-session ID with same value for this field. The value for this field cannot be changed after the DRB is set up.
<i>discardTimer</i> Value in ms of <i>discardTimer</i> specified in TS 38.323 [5]. Value <i>ms10</i> corresponds to 10 ms, value <i>ms20</i> corresponds to 20 ms and so on. The value for this field cannot be changed in case of reconfiguration with sync, if the bearer is configured as DAPS bearer.
<i>discardTimerExt</i> Value in ms of <i>discardTimer</i> specified in TS 38.323 [5]. Value <i>ms0dot5</i> corresponds to 0.5 ms, value <i>ms1</i> corresponds to 1ms and so on. If this field is present, the field <i>discardTimer</i> is ignored and <i>discardTimerExt</i> is used instead.
<i>discardTimerExt2</i> Value in ms of <i>discardTimerExt</i> specified in TS 38.323 [5]. Value <i>ms2000</i> corresponds to 2000 ms. If this field is present, the field <i>discardTimer</i> and <i>discardTimerExt</i> are ignored and <i>discardTimerExt2</i> is used instead.
<i>discardTimerForLowImportance</i> Value in ms of <i>discardTimerForLowImportance</i> specified in TS 38.323 [5]. Value <i>ms0</i> corresponds to 0 ms, value <i>ms2</i> corresponds to 2 ms and so on. The value of this timer for a PDCP entity is always configured shorter than <i>discardTimer</i> , <i>discardTimerExt</i> or <i>discardTimerExt2</i> , whichever is used for the PDCP entity. The presence of this field indicates that PSI-based SDU discard is configured for a DRB. The network configures at most 8 DRBs with <i>discardTimerForLowImportance</i> .
<i>drb-ContinueROHC</i> Indicates whether the PDCP entity continues or resets the ROHC header compression protocol during PDCP re-establishment, as specified in TS 38.323 [5]. This field is configured only in case of resuming an RRC connection or reconfiguration with sync, where the PDCP termination point is not changed and the <i>fullConfig</i> is not indicated. The network does not include the field if the bearer is configured as DAPS bearer. This field can be configured for both DRB and multicast MRB.
<i>duplicationState</i> This field indicates the uplink PDCP duplication state for the associated RLC entities at the time of receiving this IE. If set to <i>true</i> , the PDCP duplication state is activated for the associated RLC entity. The index for the indication is determined by ascending order of logical channel ID of all RLC entities other than the primary RLC entity indicated by <i>primaryPath</i> in the order of MCG and SCG, as in clause 6.1.3.32 of TS 38.321 [3]. For MP, the index for the indication is determined by ascending order of direct path (where <i>i</i> is ascending order of logical channel ID of secondary RLC entities) and indirect path, as in clause 6.1.3.32 of TS 38.321 [3]. If the number of associated RLC entities other than the primary RLC entity is two, UE ignores the value in the largest index of this field. If the field is absent, the PDCP duplication states are deactivated for all associated RLC entities.
<i>ethernetHeaderCompression</i> This fields configures Ethernet Header Compression. This field can only be configured for a bi-directional DRB or a bi-directional multicast MRB. The network reconfigures <i>ethernetHeaderCompression</i> only upon reconfiguration involving PDCP re-establishment and with neither <i>drb-ContinueEHC-DL</i> nor <i>drb-ContinueEHC-UL</i> configured. Network only configures this field when <i>uplinkDataCompression</i> is not configured.
<i>headerCompression</i> If rohc is configured, the UE shall apply the configured ROHC profile(s) in both uplink and downlink. If <i>uplinkOnlyROHC</i> is configured, the UE shall apply the configured ROHC profile(s) in uplink (there is no header compression in downlink). ROHC can be configured for any bearer type. ROHC and EHC can be both configured simultaneously for a DRB or a multicast MRB. The network reconfigures <i>headerCompression</i> only upon reconfiguration involving PDCP re-establishment or involving PDCP entity reconfiguration to configure DAPS bearer(s), and without any <i>drb-ContinueROHC</i> . Network configures <i>headerCompression</i> to <i>notUsed</i> when <i>outOfOrderDelivery</i> is configured. Network only configures this field when <i>uplinkDataCompression</i> is not configured.
<i>initialRX-DELIV</i> Indicates the initial value of RX_DELIV during PDCP window initialization for multicast MRB as specified in TS 38.323 [5]. The first/leftmost bit of the bit string contains the most significant bit.
<i>integrityProtection</i> Indicates whether or not integrity protection is configured for this radio bearer. The network configures all DRBs with the same PDU-session ID with same value for this field. The value for this field cannot be changed after the DRB is set up.

<i>PDCP-Config</i> field descriptions
<i>maxCID</i> Indicates the value of the MAX_CID parameter as specified in TS 38.323 [5]. The total value of MAX_CIDs across all bearers for the UE should be less than or equal to the value of <i>maxNumberROHC-ContextSessions</i> parameter as indicated by the UE.
<i>moreThanOneRLC</i> This field configures UL data transmission when more than one RLC entity is associated with the PDCP entity. This field is not present if the bearer is configured as DAPS bearer.
<i>moreThanTwoRLC-DRB</i> This field configures UL data transmission when more than two RLC entities are associated with the PDCP entity for DRBs.
<i>outOfOrderDelivery</i> Indicates whether or not <i>outOfOrderDelivery</i> specified in TS 38.323 [5] is configured. This field should be either always present or always absent, after the radio bearer is established.
<i>pdcp-Duplication</i> Indicates whether or not uplink duplication status at the time of receiving this IE is configured and activated as specified in TS 38.323 [5]. The presence of this field indicates that duplication is configured. PDCP duplication is not configured for CA packet duplication of LTE RLC bearer. The value of this field, when the field is present, indicates the state of the duplication at the time of receiving this IE. If set to <i>true</i> , duplication is activated. The value of this field is always <i>true</i> , when configured for a SRB. For PDCP entity with more than two associated RLC entities for UL transmission, this field is always present. If the field <i>moreThanTwoRLC-DRB</i> is present, the value of this field is ignored and the state of the duplication is indicated by <i>duplicationState</i> . For PDCP entity with more than two associated RLC entities, only NR RLC bearer is supported.
<i>pdcp-SN-SizeDL</i> PDCP sequence number size for downlink, 12 or 18 bits, as specified in TS 38.323 [5]. For SRBs only the value <i>len12bits</i> is applicable. The value for this field cannot be changed in case of reconfiguration with sync, if the bearer is configured as DAPS bearer.
<i>pdcp-SN-SizeUL</i> PDCP sequence number size for uplink, 12 or 18 bits, as specified in TS 38.323 [5]. For SRBs only the value <i>len12bits</i> is applicable. The value for this field cannot be changed in case of reconfiguration with sync, if the bearer is configured as DAPS bearer.
<i>pdu-SetDiscard</i> If set to true, the UE shall perform PDU Set based discarding for this PDCP entity, as specified in TS 38.323 [5]. This field is only configured for a DRB.
<i>primaryPath</i> Indicates the cell group ID and LCID of the primary RLC entity as specified in TS 38.323 [5], clause 5.2.1 for UL data transmission when more than one RLC entity is associated with the PDCP entity. In this version of the specification, only cell group ID corresponding to MCG is supported for SRBs, except for the split SRB2 of the IAB-MT, and except when the UE is required to set the <i>primaryPath</i> to refer to the SCG or indirect path as specified in clause 5.7.3b.4. In this last case, if the network sends an <i>RRCReconfiguration</i> message (in NR-DC) or an EUTRA <i>RRCCConnectionReconfiguration</i> message (in (NG)EN-DC) keeping SRB1 as split SRB, the network explicitly configures the <i>primaryPath</i> for the PDCP entity of SRB1 to refer to the MCG. In this version of the specification, only cell group ID corresponding to MCG is supported for DRBs when the SCG is deactivated. In MR-DC, the NW indicates <i>cellGroup</i> for split bearers using logical channels in different cell groups. The NW always indicates <i>logicalChannel</i> if CA based PDCP duplication is configured in the cell group indicated by <i>cellGroup</i> of this field. This field is also used for configuring Multi-path Primary Path defined in [5] for MP operation. In MP, when the primary path is indirect path, the field <i>cellGroup</i> and <i>logicalChannel</i> are absent, and the field <i>primaryPathOnIndirectPath</i> is set to true.
<i>primaryPathOnIndirectPath</i> Indicates that the primary path is SL indirect path, or primary path is associated with the N3C indirect path, for DRB when MP is configured.
<i>remainingTimeThresholdRLC-Polling</i> Remaining time threshold used by the PDCP entity to decide whether to notify the RLC entity to trigger remaining time-based polling as specified in TS 38.323 [4]. Value for the IE <i>RLC-AM-RemainingTimeThreshold</i> in milliseconds.
<i>remainingTimeThresholdRLC-ReTx</i> Remaining time threshold used by the PDCP entity to decide whether to notify the RLC entity to trigger remaining time-based retransmission as specified in TS 38.323 [4]. Value for the IE <i>RLC-AM-RemainingTimeThreshold</i> in milliseconds.

PDCP-Config field descriptions
sn-GapReport Indicates whether the PDCP entity is configured to send a PDCP SN gap report in the uplink, as specified in TS 38.323 [5]. This field is only configured for DRBs. This field can be included only if <i>outOfOrderDelivery</i> is not configured.
splitSecondaryPath Indicates the LCID of the split secondary RLC entity as specified in TS 38.323 [5] for fallback to split bearer operation when UL data transmission with more than two RLC entities is associated with the PDCP entity. This RLC entity belongs to a cell group that is different from the cell group indicated by <i>cellGroup</i> in the field <i>primaryPath</i>. This RLC entity belongs to the cell group of the direct path if <i>primaryPathOnIndirectPath</i> is set to <i>true</i> in MP case.
statusReportRequired For AM DRBs, AM MRBs and DAPS UM DRBs, indicates whether the DRB or the multicast MRB is configured to send a PDCP status report in the uplink, as specified in TS 38.323 [5]. For DAPS AM DRBs, it also indicates whether the DRB is configured to send a second PDCP status report in the uplink, as specified in TS 38.323 [5].
survivalTimeStateSupport Indicates whether the DRB associated with this PDCP entity has survival time state support. If this field is configured to be true, all associated RLC entities are activated for PDCP duplication upon reception of a retransmission grant addressed to CS-RNTI, as specified in TS 38.321 [3].
t-Reordering Value in ms of t-Reordering specified in TS 38.323 [5]. Value <i>ms0</i> corresponds to 0 ms, value <i>ms20</i> corresponds to 20 ms, value <i>ms40</i> corresponds to 40 ms, and so on. When the field is absent the UE applies the value <i>infinity</i>. The value for this field cannot be changed in case of reconfiguration with sync, if the bearer is configured as DAPS bearer.
ul-DataSplitThreshold Parameter specified in TS 38.323 [5]. Value <i>b0</i> corresponds to 0 bytes, value <i>b100</i> corresponds to 100 bytes, value <i>b200</i> corresponds to 200 bytes, and so on. The network sets this field to <i>infinity</i> for UEs not supporting <i>splitDRB-withUL-Both-MCG-SCG</i> and when the SCG is deactivated or for multi-path U2N Remote UEs not supporting <i>splitDRB-WithUL-BothDirectIndirect</i>. If the field is absent when the split bearer is configured for the radio bearer first time, then the default value <i>infinity</i> is applied.
uplinkDataCompression Indicates the UDC configuration that the UE shall apply. Network does not configure <i>uplinkDataCompression</i> for a DRB, if <i>headerCompression</i> or <i>ethernetHeaderCompression</i> is already configured or <i>outOfOrderDelivery</i> or DAPS is configured for the DRB. The maximum number of DRBs where <i>uplinkDataCompression</i> can be applied is two. The network reconfigures <i>uplinkDataCompression</i> only upon reconfiguration involving PDCP re-establishment. If the field is set to <i>drb-ContinueUDC</i>, the PDCP entity continues the uplink data compression protocol during PDCP re-establishment, as specified in TS 38.323 [5]. The field is set to <i>drb-ContinueUDC</i> only in case of resuming an RRC connection or reconfiguration with sync, where the PDCP termination point is not changed and the <i>fullConfig</i> is not indicated.

<i>EthernetHeaderCompression field descriptions</i>	
<i>drb-ContinueEHC-DL</i>	Indicates whether the PDCP entity continues or resets the downlink EHC header compression protocol during PDCP re-establishment, as specified in TS 38.323 [5]. The field is configured only in case of resuming an RRC connection or reconfiguration with sync, where the PDCP termination point is not changed and the <i>fullConfig</i> is not indicated.
<i>drb-ContinueEHC-UL</i>	Indicates whether the PDCP entity continues or resets the uplink EHC header compression protocol during PDCP re-establishment, as specified in TS 38.323 [5]. The field is configured only in case of resuming an RRC connection or reconfiguration with sync, where the PDCP termination point is not changed and the <i>fullConfig</i> is not indicated.
<i>ehc-CID-Length</i>	Indicates the length of the CID field for EHC packet. The value <i>bits7</i> indicates the length is 7 bits, and the value <i>bits15</i> indicates the length is 15 bits. Once the field <i>ethernetHeaderCompression-r16</i> is configured for a DRB or a multicast MRB, the value of the field <i>ehc-CID-Length</i> for this DRB or multicast MRB is not reconfigured to a different value.
<i>ehc-Common</i>	Indicates the configurations that apply for both downlink and uplink.
<i>ehc-Downlink</i>	Indicates the configurations that apply for only downlink. If the field is configured, then Ethernet header compression is configured for downlink. Otherwise, it is not configured for downlink.
<i>ehc-Uplink</i>	Indicates the configurations that apply for only uplink. If the field is configured, then Ethernet header compression is configured for uplink. Otherwise, it is not configured for uplink.
<i>maxCID-EHC-UL</i>	Indicates the value of the MAX_CID_EHC_UL parameter as specified in TS 38.323 [5]. The total value of MAX_CID_EHC_UL across all bearers for the UE should be less than or equal to the value of <i>maxNumberEHC-Contexts</i> parameter as indicated by the UE.

<i>UplinkDataCompression field descriptions</i>	
<i>bufferSize</i>	This field indicates the buffer size applied for UDC as specified in TS 38.323 [5]. Value <i>kbyte2</i> means 2048 bytes, <i>kbyte4</i> means 4096 bytes and so on.
<i>dictionary</i>	This field indicates which pre-defined dictionary is used for UDC as specified in TS 38.323 [5]. The value <i>sip-SDP</i> means that UE shall prefill the buffer with standard dictionary for SIP and SDP defined in TS 38.323 [5], and the value <i>operator</i> means that UE shall prefill the buffer with operator-defined dictionary.

Conditional presence	Explanation
<i>DRB</i>	This field is mandatory present when the corresponding DRB/multicast MRB is being set up, absent for SRBs. Otherwise this field is optionally present, need M.
<i>DRB2</i>	This field is optionally present in case of DRB, need M. Otherwise, it is absent for SRBs and MRBs.
<i>Drb-Duplication</i>	For SRBs, this field is absent. For DRBs, this field is absent if duplication is not configured. Otherwise, this field is optional, need R.
<i>MoreThanOneRLC</i>	This field is mandatory present upon RRC reconfiguration with setup of a PDCP entity for a radio bearer (except for multicast MRB) with more than one associated logical channel and upon RRC reconfiguration with the association of additional logical channels to the PDCP entity. The field is also mandatory present in case the field <i>moreThanTwoRLC-DRB</i> is included in <i>PDCP-Config</i> . Upon RRC reconfiguration when a PDCP entity is associated with multiple logical channels, this field is optionally present need M. Otherwise, this field is absent. Need R.
<i>MoreThanTwoRLC-DRB</i>	For SRBs, this field is absent. For DRBs, this field is mandatory present upon RRC reconfiguration with setup of a PDCP entity for a radio bearer with more than two associated logical channels and upon RRC reconfiguration with the association of one or more additional logical channel(s) to the PDCP entity so that the PDCP entity has more than two associated logical channels. Upon RRC reconfiguration when a PDCP entity is associated with more than two logical channels, this field is optionally present, Need M. Otherwise, the field is absent, Need R.
<i>Rlc-AM</i>	For RLC AM, the field is optionally present, need M. Otherwise, the field is absent.
<i>Rlc-AM-UM</i>	In case of DRB, for RLC UM (if the UE supports DAPS handover) or RLC AM, the field is optionally present, need R. In case of multicast MRB, if multicast MRB is associated with at least one RLC AM entity, the field is optionally present, need R. Otherwise, the field is absent.
<i>Setup</i>	The field is mandatory present in case of DRB setup. Otherwise the field is optionally present, need M.
<i>SplitBearer</i>	The field is absent for SRBs. Otherwise, the field is optional present, need M, in case of radio bearer with more than one associated RLC mapped to different cell groups.
<i>SplitBearer2</i>	The field is mandatory present, in case of a split bearer except MP split bearer with primary path on direct path. Otherwise the field is absent.
<i>SplitBearerMP</i>	The field is absent for SRBs. Otherwise, the field is optionally present, need R, when MP is configured.
<i>ConnectedTo5GC</i>	The field is optionally present, need R, if the UE is connected to 5GC. Otherwise the field is absent.
<i>ConnectedTo5GC1</i>	The field is optionally present, need R, if the UE is connected to NR/5GC or if the UE supports user plane integrity protection when connected to E-UTRA/EPC (as specified in TS 33.401 [30]). Otherwise the field is absent.
<i>Setup1</i>	This field is mandatory present in case of DRB setup for RLC-AM and RLC-UM. Otherwise, this field is absent, Need M.
<i>Setup2</i>	This field is mandatory present in case for radio bearer setup for RLC-AM and RLC-UM. Otherwise, this field is absent, Need M.
<i>MRB-Initialization</i>	This field is mandatory present in case of multicast MRB setup or in case UE configured with multicast reception in RRC_INACTIVE resumes the RRC connection. In case of PDCP re-establishment for multicast MRB, this field is optionally present, Need N. Otherwise, this field is absent, Need N.
<i>RLC-AM</i>	For RLC AM, this field is optionally present, need R; Otherwise, the field is absent.

– PDSCH-Config

The *PDSCH-Config* IE is used to configure the UE specific PDSCH parameters. If this IE is used for MBS CFR, the following fields shall be absent: *tcI-StatesToAddModList*, *tcI-StatesToReleaseList*, *zp-CSI-RS-ResourceToAddModList*, *minimumSchedulingOffsetK0*, *antennaPortsFieldPresenceDCI-1-2*, *aperiodicZP-CSI-RS-ResourceSetsToAddModListDCI-1-2*, *aperiodicZP-CSI-RS-ResourceSetsToReleaseListDCI-1-2*, *dmrs-DownlinkForPDSCH-MappingTypeA-DCI-1-2*, *dmrs-DownlinkForPDSCH-MappingTypeB-DCI-1-2*, *dmrs-SequenceInitializationDCI-1-2*, *harq-ProcessNumberSizeDCI-1-2*, *mcs-TableDCI-1-2*, *numberOfBitsForRV-DCI-1-2*, *pdsch-AggregationFactor*, *pdsch-TimeDomainAllocationListDCI-1-2*, *prb-BundlingTypeDCI-1-2*, *priorityIndicatorDCI-1-2*, *rateMatchPatternGroup1DCI-1-2*,

<i>PDSCH-Config</i> field descriptions
advancedReceiver-MU-MIMO A set of assistance information for R-ML (reduced complexity ML) receivers with enhanced inter-user interference suppression for MU-MIMO transmissions.
antennaPortsFieldPresenceDCI-1-2 Configure the presence of "Antenna ports" field in DCI format 1_2. When the field is configured, then the "Antenna ports" field is present in DCI format 1_2. Otherwise, the field size is set to 0 for DCI format 1_2 (See TS 38.212 [17], clause 7.3.1.1.3). If neither <i>dmrs-DownlinkForPDSCH-MappingTypeA-DCI-1-2</i> nor <i>dmrs-DownlinkForPDSCH-MappingTypeB-DCI-1-2</i> is configured, this field is absent.
aperiodic-ZP-CSI-RS-ResourceSetsToAddModList, aperiodic-ZP-CSI-RS-ResourceSetsToAddModListDCI-1-2 AddMod/Release lists for configuring aperiodically triggered zero-power CSI-RS resource sets. Each set contains a <i>ZP-CSI-RS-ResourceSetId</i> and the IDs of one or more <i>ZP-CSI-RS-Resources</i> (the actual resources are defined in the <i>zp-CSI-RS-ResourceToAddModList</i>). The network configures the UE with at most 3 aperiodic <i>ZP-CSI-RS-ResourceSets</i> and it uses only the <i>ZP-CSI-RS-ResourceSetId</i> 1 to 3. The network triggers a set by indicating its <i>ZP-CSI-RS-ResourceSetId</i> in the DCI payload. The DCI codepoint '01' triggers the resource set with <i>ZP-CSI-RS-ResourceSetId</i> 1, the DCI codepoint '10' triggers the resource set with <i>ZP-CSI-RS-ResourceSetId</i> 2, and the DCI codepoint '11' triggers the resource set with <i>ZP-CSI-RS-ResourceSetId</i> 3 (see TS 38.214 [19], clause 5.1.4.2). The field <i>aperiodic-ZP-CSI-RS-ResourceSetsToAddModList</i> applies to DCI format 1_1 and the field <i>aperiodic-ZP-CSI-RS-ResourceSetsToAddModListDCI-1-2</i> applies to DCI format 1_2 (see TS 38.214 [19], clause 5.1.4.2 and TS 38.212 [17] clause 7.3.1).
beamAppTime Indicates the first slot to apply the unified TCI indicated by DCI as specified in TS 38.214 Clause 5.1.5. The value n1 means 1 symbol, n2 two symbols and so on. The first slot is at least Y symbols indicated by beamAppTime parameter after the last symbol of the acknowledgment of the joint or separate DL/UL beam indication. The same value shall be configured for all serving cells in any one of the <i>simultaneousU-TCI-UpdateListN</i> configured in IE <i>CellGroupConfig</i> based on the smallest SCS of the active BWP.
dataScramblingIdentityPDSCH, dataScramblingIdentityPDSCH2 Identifier(s) used to initialize data scrambling (c_init) for PDSCH as specified in TS 38.211 [16], clause 7.3.1.1. The <i>dataScramblingIdentityPDSCH2</i> is configured if <i>coresetPoolIndex</i> is configured with 1 for at least one CORESET in the same BWP.
dl-OrJointTCI-StateToAddModList A list of Transmission Configuration Indicator (TCI) states indicating a transmission configuration which includes QCL-relationships between the DL RSs in one RS set and the PDSCH DMRS ports, PDCCH DMRS ports, and CSI-RS, and in case of joint mode, also the PUSCH, PUCCH and SRS (see TS 38.214 [19], clause 5.1.5).
dmrs-DownlinkForPDSCH-MappingTypeA, dmrs-DownlinkForPDSCH-MappingTypeA-DCI-1-2 DMRS configuration for PDSCH transmissions using PDSCH mapping type A (chosen dynamically via <i>PDSCH-TimeDomainResourceAllocation</i>). Only the fields <i>dmrs-Type</i>, <i>dmrs-AdditionalPosition</i> and <i>maxLength</i> may be set differently for mapping type A and B. The field <i>dmrs-DownlinkForPDSCH-MappingTypeA</i> applies to DCI formats 1_1 and 1_3, and the field <i>dmrs-DownlinkForPDSCH-MappingTypeA-DCI-1-2</i> applies to DCI format 1_2 (see TS 38.212 [17], clause 7.3.1).
dmrs-DownlinkForPDSCH-MappingTypeB, dmrs-DownlinkForPDSCH-MappingTypeB-DCI-1-2 DMRS configuration for PDSCH transmissions using PDSCH mapping type B (chosen dynamically via <i>PDSCH-TimeDomainResourceAllocation</i>). Only the fields <i>dmrs-Type</i>, <i>dmrs-AdditionalPosition</i> and <i>maxLength</i> may be set differently for mapping type A and B. The field <i>dmrs-DownlinkForPDSCH-MappingTypeB</i> applies to DCI formats 1_1 and 1_3, and the field <i>dmrs-DownlinkForPDSCH-MappingTypeB-DCI-1-2</i> applies to DCI format 1_2 (see TS 38.212 [17], clause 7.3.1).
dmrs-FD-OCC-DisabledForRank1-PDSCH If configured, the UE may assume that the set of remaining orthogonal antenna ports, which are within the same code division multiplexing (CDM) group and have different frequency domain orthogonal cover codes (FD-OCC), are not associated with the PDSCH of another UE (see TS 38.214 [19], clause 5.1.6.2). It is applicable for PDSCH SCS of 480 and 960 kHz when rank 1 PDSCH with type-1 or type-2 DMRS is scheduled. If <i>dmrs-TypeEnh-r18</i> is configured, this field is not configured.
dmrs-SequenceInitializationDCI-1_2 Configure whether the field "DMRS Sequence Initialization" is present or not in DCI format 1_2. If the field is absent, then the UE applies the value of 0 bit for the field "DMRS Sequence Initialization" in DCI format 1_2. If the field is present, then the UE applies the value of 1 bit as in DCI format 1_2 (see TS 38.212 [17], clause 7.3.1).
dummy This field is not used in the specification. If received it shall be ignored by the UE.
harq-ProcessNumberSizeDCI-1-1-Ext Configure the number of bits for the field "HARQ process number" in DCI format 1_1 in TN (see TS 38.212 [17], clause 7.3.1). For FR1, this field can only be configured when the maximum number of layers configured for PDSCH is no more than 4.

harq-ProcessNumberSizeDCI-1-2

Configure the number of bits for the field "HARQ process number" in DCI format 1_2 (see TS 38.212 [17], clause 7.3.1). Only one of this field and *harq-ProcessNumberSizeDCI-1-2-Ext* is configured by network.

harq-ProcessNumberSizeDCI-1-2-Ext

Configure the number of bits for the field "HARQ process number" in DCI format 1_2 in TN (see TS 38.212 [17], clause 7.3.1). For FR1, this field can only be configured when the maximum number of layers configured for PDSCH is no more than 4. Only one of this field and *harq-ProcessNumberSizeDCI-1-2* is configured by network.

maxMIMO-Layers

Indicates the maximum number of MIMO layers to be used for PDSCH in this DL BWP. If not configured, the UE uses the *maxMIMO-Layers* configuration in IE *PDSCH-ServingCellConfig* of the serving cell to which this BWP belongs, when the UE operates in this BWP. The value of *maxMIMO-Layers* for a DL BWP shall be smaller than or equal to the value of *maxMIMO-Layers* configured in IE *PDSCH-ServingCellConfig* of the serving cell to which this BWP belongs.

For MBS multicast, indicates the maximum number of MIMO layers to be used for group-common PDSCH of MBS multicast in this CFR. If not configured for CFR, the UE applies value 1. The value of *maxMIMO-Layers* for a CFR shall be smaller than or equal to the value of *maxMIMO-Layers* configured in *PDSCH-ServingCellConfig* IE of the serving cell to which this CFR belongs.

maxNrofCodeWordsScheduledByDCI

Maximum number of code words that a single DCI may schedule. This changes the number of MCS/RV/NDI bits in the DCI message from 1 to 2.

mcs-Table

Indicates which MCS table the UE shall use for PDSCH for DCI formats 1_0, 1_1 and 1_3 (see TS 38.214 [19], clause 5.1.3.1). If all fields are absent the UE applies the value 64QAM. If the field *mcs-Table-r17* is present for DCI formats 1_1 and 1_3, the network does not configure the field *mcs-Table* (without suffix). For an (e)RedCap UE, the 256QAM MCS table for PDSCH is only supported if the UE indicates support of 256QAM for PDSCH.

mcs-TableDCI-1-2

Indicates which MCS table the UE shall use for PDSCH for DCI format 1_2 (see TS 38.214 [19], clause 5.1.3.1). If all fields are absent the UE applies the value 64QAM. If the field *mcs-TableDCI-1-2-r17* is present, the network does not configure the field *mcs-TableDCI-1-2-r16*. For an (e)RedCap UE, the 256QAM MCS table for PDSCH is only supported if the UE indicates support of 256QAM for PDSCH.

mg-CancellationDCI-1-1

Indicates the presence of *Measurement gap cancellation* in DCI format 1_1 to indicate whether TX/RX is enabled in the gap as specified in TS 38.212 [17].

mg-CancellationDCI-1-2

Indicates the presence of *Measurement gap cancellation* in DCI format 1_2 to indicate whether TX/RX is enabled in the gap as specified in TS 38.212 [17].

mg-CancellationDCI-1-3

Indicates the presence of *Measurement gap cancellation* in DCI format 1_3 to indicate whether TX/RX is enabled in the gap as specified in TS 38.212 [17]. The field could only be configured if the co-scheduled cells are intra-band and have the same sub-carrier spacing.

minimumSchedulingOffsetK0

List of minimum K0 values. Minimum K0 parameter denotes minimum applicable value(s) for the TDRA table for PDSCH and for A-CSI RS triggering Offset(s) (see TS 38.214 [19], clause 5.3.1).

numberOfBitsForRV-DCI-1-2

Configures the number of bits for "Redundancy version" in the DCI format 1_2 (see TS 38.212 [17], clause 7.3.1 and TS 38.214 [19], clause 5.1.2.1).

pdsch-AggregationFactor

Number of repetitions for data (see TS 38.214 [19], clause 5.1.2.1). When the field is absent in *PDSCH-Config* which is not used for MBS CFR, the UE applies the value 1.

pdsch-HARQ-ACK-EnhType3DCI-1-2

When configured, enhanced Type 3 HARQ-ACK codebook triggering by DCI format 1_2 is enabled.

pdsch-HARQ-ACK-EnhType3DCI-Field-1-2

Enables the enhanced Type 3 codebook through a new DCI field to indicate the enhanced Type 3 HARQ-ACK codebook in DCI format 1_2 if the more than one enhanced Type 3 HARQ-ACK codebook is configured for the primary PUCCH cell group.

pdsch-HARQ-ACK-OneShotFeedbackDCI-1-2

When configured, DCI format 1_2 can request the UE to report A/N for all HARQ processes and all component carriers configured in the PUCCH group (see TS 38.212 [17], clause 7.3.1).

pdsch-HARQ-ACK-RetxDCI-1-2

When configured, DCI format 1_2 can request the UE to perform a HARQ-ACK re-transmission on a PUCCH resource (see TS 38.213 [13], clause 9.1.5).

pdsch-TimeDomainAllocationList, pdsch-TimeDomainAllocationListDCI-1-2, pdsch-TimeDomainAllocationListForMultiPDSCH, pdsch-TimeDomainAllocationListForMultiPDSCH-DCI-1-3

List of time-domain configurations for timing of DL assignment to DL data.

The field *pdsch-TimeDomainAllocationList* (with or without suffix) applies to DCI format 1_0, DCI format 1_1 and DCI format 1_3 (see table 5.1.2.1.1-1 in TS 38.214 [19]), and if the field *pdsch-TimeDomainAllocationListDCI-1-2* is not configured, to DCI format 1_2. If the field *pdsch-TimeDomainAllocationListDCI-1-2* is configured, it applies to DCI format 1_2 (see table 5.1.2.1.1-1A in TS 38.214 [19]). The field *pdsch-TimeDomainAllocationListForMultiPDSCH* applies to DCI format 1_1. The field *pdsch-TimeDomainAllocationListForMultiPDSCH-DCI-1-3* applies to DCI format 1_3.

The network does not configure the *pdsch-TimeDomainAllocationList-r16* simultaneously with the *pdsch-TimeDomainAllocationList* (without suffix) in the same *PDSCH-Config*.

prb-BundlingType, prb-BundlingTypeDCI-1-2

Indicates the PRB bundle type and bundle size(s) (see TS 38.214 [19], clause 5.1.2.3). If *dynamic* is chosen, the actual *bundleSizeSet1* or *bundleSizeSet2* to use is indicated via DCI. Constraints on *bundleSize(Set)* setting depending on *vrB-ToPRB-Interleaver* and *rbg-Size* settings are described in TS 38.214 [19], clause 5.1.2.3. If a *bundleSize(Set)* value is absent, the UE applies the value *n2*. The field *prb-BundlingType* applies to DCI formats 1_1 and 1_3, and the field *prb-BundlingTypeDCI-1-2* applies to DCI format 1_2 (see TS 38.212 [17], clause 7.3.1 and TS 38.214 [19], clause 5.1.2.3).

priorityIndicatorDCI-1-1, priorityIndicatorDCI-1-2, priorityIndicatorDCI-4-2

Configure the presence of "priority indicator" in DCI format 1_1/1_2/4_2. When the field is absent in the IE, then 0 bit for "priority indicator" in DCI format 1_1/1_2/4_2. The field *priorityIndicatorDCI-1-1* applies to DCI format 1_1, the field *priorityIndicatorDCI-1-2* applies to DCI format 1_2 and the field *priorityIndicatorDCI-4-2* applies to DCI format 4_2, respectively (see TS 38.212 [17], clause 7.3.1 and TS 38.213 [13] clause 9).

pucch-sSCellDynDCI-1-2

When configured, PUCCH cell switching based on dynamic indication in DCI format 1_2 is enabled (see TS 38.213 [13], clause 9.A).

p-ZP-CSI-RS-ResourceSet

A set of periodically occurring ZP-CSI-RS-Resources (the actual resources are defined in the *zp-CSI-RS-ResourceToAddModList*). The network uses the ZP-CSI-RS-ResourceSetId=0 for this set.

If *p-ZP-CSI-RS-ResourceSet* is configured in both *PDSCH-Config* for MBS CFR and *PDSCH-Config* for the associated BWP, it is subject to UE capability whether the *p-ZP-CSI-RS-ResourceSet* configured in *PDSCH-Config* for MBS CFR can be different from the *p-ZP-CSI-RS-ResourceSet* configured in *PDSCH-Config* for the associated BWP.

rateMatchPatternGroup1, rateMatchPatternGroup1DCI-1-2

The IDs of a first group of *RateMatchPatterns* defined in *PDSCH-Config->rateMatchPatternToAddModList* (BWP level) or in *ServingCellConfig ->rateMatchPatternToAddModList* (cell level). These patterns can be activated dynamically by DCI (see TS 38.214 [19], clause 5.1.4.1). The field *rateMatchPatternGroup1* applies to DCI formats 1_1 and 1_3, and the field *rateMatchPatternGroup1DCI-1-2* applies to DCI format 1_2 (see TS 38.214 [19], clause 5.1.4.1).

rateMatchPatternGroup2, rateMatchPatternGroup2DCI-1-2

The IDs of a second group of *RateMatchPatterns* defined in *PDSCH-Config->rateMatchPatternToAddModList* (BWP level) or in *ServingCellConfig ->rateMatchPatternToAddModList* (cell level). These patterns can be activated dynamically by DCI (see TS 38.214 [19], clause 5.1.4.1). The field *rateMatchPatternGroup2* applies to DCI formats 1_1 and 1_3, and the field *rateMatchPatternGroup2DCI-1-2* applies to DCI format 1_2 (see TS 38.214 [19], clause 5.1.4.1).

rateMatchPatternToAddModList

Resources patterns which the UE should rate match PDSCH around. The UE rate matches around the union of all resources indicated in the rate match patterns (see TS 38.214 [19], clause 5.1.4.1). If a *RateMatchPattern* with the same *RateMatchPatternId* is configured in both MBS CFR and its associated BWP, the entire *RateMatchPattern* configuration, including the set of RBs/REs indicated by the patterns for the rate matching around, shall be the same and they are counted as a single rate match pattern in the total configured rate match patterns as defined in TS 38.214 [19].

rbg-Size

Selection between config 1 and config 2 for RBG size for PDSCH except PDSCH scheduled by DCI format 1_3. The UE ignores this field if *resourceAllocation* is set to *resourceAllocationType1* (see TS 38.214 [19], clause 5.1.2.2.1).

referenceOfSLIVDCI-1-2

Enable using the starting symbol of the PDCCH monitoring occasion in which the DL assignment is detected as the reference of the SLIV for DCI format 1_2. When the RRC parameter enables the utilization of the new reference, the new reference is applied for TDRA entries with K0=0. For other entries (if any) in the same TDRA table, the

reference is slot boundary as in Rel-15. PDSCH mapping type A is not supported with the new reference. The new reference of SLIV is not configured for a serving cell configured to be scheduled by cross-carrier scheduling on a scheduling cell with different numerology (see TS 38.212 [17] clause 7.3.1 and TS 38.214 [19] clause 5.1.2.1).
repetitionSchemeConfig Configure the UE with repetition schemes. The network does not configure <i>repetitionSchemeConfig-r16</i> and <i>repetitionSchemeConfig-v1630</i> simultaneously to <i>setup</i> in the same <i>PDSCH-Config</i> . The network does not configure this parameter and <i>sfnSchemePDSCH</i> in <i>MIMOParam-r17</i> simultaneously in the same serving cell.
resourceAllocation, resourceAllocationDCI-1-2 Configuration of resource allocation type 0 and resource allocation type 1 for non-fallback DCI (see TS 38.214 [19], clause 5.1.2.2). The field <i>resourceAllocation</i> applies to DCI format 1_1, and the field <i>resourceAllocationDCI-1-2</i> applies to DCI format 1_2 (see TS 38.214 [19], clause 5.1.2.2).
resourceAllocationType1GranularityDCI-1-2 Configure the scheduling granularity applicable for both the starting point and length indication for resource allocation type 1 in DCI format 1_2. If this field is absent, the granularity is 1 PRB (see TS 38.214 [19], clause 5.1.2.2.2).
sizeDCI-4-2 Indicates the size of DCI format 4-2 (see TS 38.213 [13], clause 10.1).
sp-ZP-CSI-RS-ResourceSetsToAddModList AddMod/Release lists for configuring semi-persistent zero-power CSI-RS resource sets. Each set contains a <i>ZP-CSI-RS-ResourceSetId</i> and the IDs of one or more <i>ZP-CSI-RS-Resources</i> (the actual resources are defined in the <i>zp-CSI-RS-ResourceToAddModList</i>) (see TS 38.214 [19], clause 5.1.4.2).
tci-StatesToAddModList A list of Transmission Configuration Indicator (TCI) states indicating a transmission configuration which includes QCL-relationships between the DL RSs in one RS set and the PDSCH DMRS ports (see TS 38.214 [19], clause 5.1.5). If <i>unifiedTCI-StateType</i> is configured for the serving cell, no element in this list is configured.
unifiedTCI-StateRef Provides the serving cell and BWP where the configuration for <i>dl-OrJointTCI-StateToAddModList-r17</i> are defined. When this field is present, <i>dl-OrJointTCI-StateToAddModList</i> and <i>dl-OrJointTCI-StateToReleaseList</i> are not present. The value of <i>unifiedTCI-StateType</i> of current serving cell is the same in the serving cell indicated by <i>unifiedTCI-StateRef</i> .
vrb-ToPRB-Interleaver, vrb-ToPRB-InterleaverDCI-1-2 Interleaving unit configurable between 2 and 4 PRBs (see TS 38.211 [16], clause 7.3.1.6). When the field is absent, the UE performs non-interleaved VRB-to-PRB mapping.
xOverheadMulticast Accounts for an overhead from CSI-RS, CORESET etc. If the field is absent, the UE applies value xOh0 (see TS 38.214 [19]).
zp-CSI-RS-ResourceToAddModList A list of Zero-Power (ZP) CSI-RS resources used for PDSCH rate-matching. Each resource in this list may be referred to from only one type of resource set, i.e., aperiodic, semi-persistent or periodic (see TS 38.214 [19]).

PDSCH-ConfigDCI-1-3 field descriptions	
enabledDefaultBeamForMultiCellScheduling	This field indicates whether default beam selection for DCI format 1_3 scheduled PDSCH or aperiodic CSI-RS is enabled (see TS 38.214 [19], clause 5.1.5 and clause 5.2.1.5).
harq-ProcessNumberSizeDCI-1-3	Configure the number of bits for the field "HARQ process number" in DCI format 1_3 (see TS 38.212 [17], clause 7.3.1). Only one of this field and <i>harq-ProcessNumberSizeDCI-1-3-Ext</i> is configured by network.
harq-ProcessNumberSizeDCI-1-3-Ext	Configure the number of bits for the field "HARQ process number" in DCI format 1_3 in TN (see TS 38.212 [17], clause 7.3.1). This field can only be configured when the maximum number of layers configured for PDSCH is no more than 4. Only one of this field and <i>harq-ProcessNumberSizeDCI-1-3</i> is configured by network.
numberOfBitsForRV-DCI-1-3	Configures the number of bits for "Redundancy version" in the DCI format 1_3 (see TS 38.212 [17], clause 7.3.1 and TS 38.214 [19], clause 5.1.2.1).
rbg-SizeDCI-1-3	Selection among config 1, config 2 and config 3 for RBG size for PDSCH scheduled by DCI format 1_3. The UE ignores this field if resourceAllocationDCI-1-3 is set to resourceAllocationType1. (see TS 38.214 [19], clause 5.1.2.2.1).
resourceAllocationDCI-1-3	Configuration of resource allocation type 0 and resource allocation type 1 for DCI format 1_3 (see TS 38.214 [19], clause 5.1.2.2).
resourceAllocationType1GranularityDCI-1-3	Configure the scheduling granularity applicable for both the starting point and length indication for resource allocation type 1 in DCI format 1_3. If this field is absent, the granularity is 1 PRB (see TS 38.214 [19], clause 5.1.2.2.2).

Conditional Presence	Explanation
DCI-1-3	This field is mandatory present when <i>ScheduledCellListDCI-1-3</i> is configured to the serving cell. Otherwise, it is absent, Need R.

– PDSCH-ConfigCommon

The IE *PDSCH-ConfigCommon* is used to configure cell specific PDSCH parameters.

PDSCH-ConfigCommon information element

```
-- ASN1START
-- TAG-PDSCH-CONFIGCOMMON-START

PDSCH-ConfigCommon ::=
    SEQUENCE {
        pdsch-TimeDomainAllocationList PDSCH-TimeDomainResourceAllocationList OPTIONAL, -- Need R
        ...
        [[
            pdsch-AggregationFactor-r19 ENUMERATED {n2,n4} OPTIONAL -- Need R
        ]]
    }

-- TAG-PDSCH-CONFIGCOMMON-STOP
-- ASN1STOP
```

PDSCH-ConfigCommon field descriptions**pdsch-AggregationFactor**

Indicates the number of consecutive repetition slots for Msg4 PDSCH, see TS 38.214 [19], clause 5.1.2.1.

pdsch-TimeDomainAllocationList

List of time-domain configurations for timing of DL assignment to DL data (see table 5.1.2.1.1-1 in TS 38.214 [19]).

– PDSCH-ServingCellConfig

The IE *PDSCH-ServingCellConfig* is used to configure UE specific PDSCH parameters that are common across the UE's BWPs of one serving cell.

PDSCH-ServingCellConfig information element

```
-- ASN1START
-- TAG-PDSCH-SERVINGCELLCONFIG-START

PDSCH-ServingCellConfig ::=
    SEQUENCE {
        codeBlockGroupTransmission          SetupRelease { PDSCH-CodeBlockGroupTransmission }    OPTIONAL,  -- Need M
        xOverhead                           ENUMERATED { xOh6, xOh12, xOh18 }                     OPTIONAL,  -- Need S
        nrofHARQ-ProcessesForPDSCH          ENUMERATED {n2, n4, n6, n10, n12, n16}              OPTIONAL,  -- Need S
        pucch-Cell                          ServCellIndex                                     OPTIONAL,  -- Cond SCellAddOnly
        ...,
        [[
            maxMIMO-Layers                   INTEGER (1..8)                                     OPTIONAL,  -- Need M
            processingType2Enabled            BOOLEAN                                           OPTIONAL,  -- Need M
        ]],
        [[
            pdsch-CodeBlockGroupTransmissionList-r16 SetupRelease { PDSCH-CodeBlockGroupTransmissionList-r16 }    OPTIONAL  -- Need M
        ]],
        [[
            downlinkHARQ-FeedbackDisabled-r17 SetupRelease { DownlinkHARQ-FeedbackDisabled-r17 }    OPTIONAL,  -- Need M
            nrofHARQ-ProcessesForPDSCH-v1700  ENUMERATED {n32}                                     OPTIONAL  -- Need R
        ]]
    }

PDSCH-CodeBlockGroupTransmission ::=
    SEQUENCE {
        maxCodeBlockGroupsPerTransportBlock  ENUMERATED {n2, n4, n6, n8},
        codeBlockGroupFlushIndicator          BOOLEAN,
        ...
    }

PDSCH-CodeBlockGroupTransmissionList-r16 ::= SEQUENCE (SIZE (1..2)) OF PDSCH-CodeBlockGroupTransmission

DownlinkHARQ-FeedbackDisabled-r17 ::= BIT STRING (SIZE (32))

-- TAG-PDSCH-SERVINGCELLCONFIG-STOP
-- ASN1STOP
```

PDSCH-CodeBlockGroupTransmission field descriptions**codeBlockGroupFlushIndicator**

Indicates whether CBGFI for CBG based (re)transmission in DL is enabled (true). (see TS 38.212 [17], clause 7.3.1.2.2).

maxCodeBlockGroupsPerTransportBlock

Maximum number of code-block-groups (CBGs) per TB. In case of multiple CW, the maximum CBG is 4 (see TS 38.213 [13], clause 9.1.1).

PDSCH-ServingCellConfig field descriptions**codeBlockGroupTransmission**

Enables and configures code-block-group (CBG) based transmission (see TS 38.213 [13], clause 9.1.1). Network does not configure for a UE both spatial bundling of HARQ ACKs and *codeBlockGroupTransmission* within the same cell group.

The network does not configure this field if

- the SCS of at least one DL BWP configured in the cell is 480 or 960 kHz
- Type-1 HARQ-ACK codebook is configured and *pdsch-TimeDomainAllocationListForMultiPDSCH-r17* for this serving cell contains pdsch-AllocationList with multiple entries (multiple PDSCH)
- Type-2 HARQ-ACK codebook is configured and *pdsch-TimeDomainAllocationListForMultiPDSCH-r17* for any cell in the same PUCCH cell group associated with this serving cell contains pdsch-AllocationList with multiple entries (multiple PDSCH)

downlinkHARQ-FeedbackDisabled

Used to disable the DL HARQ feedback, sent in the uplink, per HARQ process ID. The first/leftmost bit corresponds to HARQ process ID 0, the next bit to HARQ process ID 1 and so on. Bits corresponding to HARQ process IDs that are not configured shall be ignored. The bit(s) set to one identify HARQ processes with disabled DL HARQ feedback and the bit(s) set to zero identify HARQ processes with enabled DL HARQ feedback.

maxMIMO-Layers

Indicates the maximum number of MIMO layers to be used for PDSCH in all BWPs of this serving cell. (see TS 38.212 [17], clause 5.4.2.1).

nrofHARQ-ProcessesForPDSCH

The number of HARQ processes to be used on the PDSCH of a serving cell. Value *n2* corresponds to 2 HARQ processes, value *n4* to 4 HARQ processes, and so on. If both *nrofHARQ-ProcessesForPDSCH* and *nrofHARQ-ProcessesForPDSCH-v1700* are absent, the UE uses 8 HARQ processes (see TS 38.214 [19], clause 5.1).

pdsch-CodeBlockGroupTransmissionList

A list of configurations for up to two simultaneously constructed HARQ-ACK codebooks (see TS 38.213 [13], clause 9.3).

processingType2Enabled

Enables configuration of advanced processing time capability 2 for PDSCH (see 38.214 [19], clause 5.3).

pucch-Cell

The ID of the serving cell (of the same cell group) to use for PUCCH. If the field is absent, the UE sends the HARQ feedback on the PUCCH of the SpCell of this cell group, or on this serving cell if it is a PUCCH SCell.

xOverhead

Accounts for overhead from CSI-RS, CORESET, etc. If the field is absent, the UE applies value xOh0 (see TS 38.214 [19], clause 5.1.3.2).

Conditional Presence	Explanation
<i>SCellAddOnly</i>	It is optionally present, Need S, for (non-PUCCH) SCells when adding a new SCell. The field is absent, Need M, when reconfiguring SCells. The field is also absent for the SpCells as well as for a PUCCH SCell.

– PDSCH-TimeDomainResourceAllocationList

The IE *PDSCH-TimeDomainResourceAllocation* is used to configure a time domain relation between PDCCH and PDSCH. The *PDSCH-TimeDomainResourceAllocationList* contains one or more of such *PDSCH-TimeDomainResourceAllocations*. The network indicates in the DL assignment which of the configured time domain allocations the UE shall apply for that DL assignment. The UE determines the bit width of the DCI field based on the number of entries in the *PDSCH-TimeDomainResourceAllocationList*. Value 0 in the DCI field refers to the first element in this list, value 1 in the DCI field refers to the second element in this list, and so on.

PDSCH-TimeDomainResourceAllocationList information element

```
-- ASN1START
-- TAG-PDSCH-TIMEDOMAINRESOURCEALLOCATIONLIST-START

PDSCH-TimeDomainResourceAllocationList ::= SEQUENCE (SIZE(1..maxNrofDL-Allocations)) OF PDSCH-TimeDomainResourceAllocation

PDSCH-TimeDomainResourceAllocation ::= SEQUENCE {
    k0                                INTEGER (0..32)                                OPTIONAL, -- Need S
    mappingType                       ENUMERATED {typeA, typeB},
    startSymbolAndLength              INTEGER (0..127)
}

PDSCH-TimeDomainResourceAllocationList-r16 ::= SEQUENCE (SIZE(1..maxNrofDL-Allocations)) OF PDSCH-TimeDomainResourceAllocation-r16

PDSCH-TimeDomainResourceAllocation-r16 ::= SEQUENCE {
    k0-r16                           INTEGER (0..32)                                OPTIONAL, -- Need S
    mappingType-r16                  ENUMERATED {typeA, typeB},
    startSymbolAndLength-r16         INTEGER (0..127),
    repetitionNumber-r16             ENUMERATED {n2, n3, n4, n5, n6, n7, n8, n16} OPTIONAL, -- Cond Formats1-0_1-1_4-0_4-1_4-2
    ...,
    [[
        k0-v1710                     INTEGER (33..128)                                OPTIONAL -- Need S
    ]],
    [[
        repetitionNumber-v1730       ENUMERATED {n2, n3, n4, n5, n6, n7, n8, n16}      OPTIONAL -- Cond Format1-2
    ]]
}

Dummy-TDRA-List ::= SEQUENCE (SIZE(1.. maxNrofDL-Allocations)) OF MultiPDSCH-TDRA-r17

MultiPDSCH-TDRA-List-r17 ::= SEQUENCE (SIZE(1.. maxNrofDL-AllocationsExt-r17)) OF MultiPDSCH-TDRA-r17

MultiPDSCH-TDRA-r17 ::= SEQUENCE {
    pdsch-TDRA-List-r17              SEQUENCE (SIZE(1..maxNrofMultiplePDSCHs-r17)) OF PDSCH-TimeDomainResourceAllocation-r16,
    ...
}

-- TAG-PDSCH-TIMEDOMAINRESOURCEALLOCATIONLIST-STOP
-- ASN1STOP
```

<i>PDSCH-TimeDomainResourceAllocation</i> field descriptions
<i>k0</i> Slot offset between DCI and its scheduled PDSCH (see TS 38.214 [19], clause 5.1.2.1). <i>k0-v1710</i> is only applicable for PDSCH SCS of 480 kHz and 960 kHz. If multiple PDSCHs are configured per PDCCH, the network always configures this field. Otherwise, when the field is absent and only one PDSCH is configured per PDCCH, the UE applies the value 0.
<i>mappingType</i> PDSCH mapping type (see TS 38.214 [19], clause 5.3).
<i>repetitionNumber</i> Indicates the number of PDSCH transmission occasions for slot-based repetition scheme in IE <i>RepetitionSchemeConfig</i> . The parameter is used as specified in 38.214 [19].
<i>startSymbolAndLength</i> An index giving valid combinations of start symbol and length (jointly encoded) as start and length indicator (SLIV). The network configures the field so that the allocation does not cross the slot boundary (see TS 38.214 [19], clause 5.1.2.1).

<i>MultiPDSCH-TimeDomainResourceAllocation</i> field descriptions
<i>pdsch-TDRA-List</i> One or multiple PDSCHs which can be in consecutive or non-consecutive slots (see TS 38.214 [19], clause 5.1.2.1).

Conditional Presence	Explanation
<i>Format1-2</i>	In <i>pdsch-TimeDomainAllocationListDCI-1-2</i> , this field is optionally present, Need R. It is absent, Need R, otherwise.
<i>Formats1-0_1-1_4-0_4-1_4-2</i>	In <i>pdsch-TimeDomainAllocationListDCI-1-2</i> , <i>pdsch-TimeDomainAllocationListForMultiPDSCH</i> , and <i>SIB20</i> , this field is absent. Otherwise, in <i>pdsch-TimeDomainResourceAllocationList-r16</i> , this field is optionally present, Need R.

– *PDU-SessionID*

The IE *PDU-SessionID* identifies the PDU Session.

PDU-SessionID information element

```
-- ASN1START
-- TAG-PDU-SESSIONID-START

PDU-SessionID ::=  INTEGER (0..255)

-- TAG-PDU-SESSIONID-STOP
-- ASN1STOP
```

– *PHR-Config*

The IE *PHR-Config* is used to configure parameters for power headroom reporting.

PHR-Config information element

```

-- ASN1START
-- TAG-PHR-CONFIG-START

PHR-Config ::=
    phr-PeriodicTimer          ENUMERATED {sf10, sf20, sf50, sf100, sf200,sf500, sf1000, infinity},

```

<i>PHR-Config</i> field descriptions
<i>dpc-Reporting-FR1</i> Indicates if the delta power class (DPC) is reported, as specified in TS 38.321 [3].
<i>dummy</i> This field is not used in this version of the specification and the UE ignores the received value.
<i>mpe-ProhibitTimer</i> Value in number of subframes for MPE reporting, as specified in TS 38.321 [3]. Value <i>sf10</i> corresponds to 10 subframes, and so on.
<i>mpe-Reporting-FR2</i> Indicates whether the UE shall report MPE P-MPR in the PHR MAC control element, as specified in TS 38.321 [3].
<i>mpe-Threshold</i> Value of the P-MPR threshold in dB for reporting MPE P-MPR when FR2 is configured, as specified in TS 38.321 [3]. The same value applies for each serving cell (although the associated functionality is performed independently for each cell).
<i>multiplePHR</i> Indicates if power headroom shall be reported using the Single Entry PHR MAC control element or Multiple Entry PHR MAC control element defined in TS 38.321 [3]. True means to use Multiple Entry PHR MAC control element and False means to use the Single Entry PHR MAC control element defined in TS 38.321 [3]. The network configures this field to <i>true</i> for MR-DC and UL CA for NR, and to <i>false</i> in all other cases.
<i>numberOfN</i> Number of reported P-MPR values in a PHR MAC CE.
<i>phr-AssumedPUSCH-Reporting</i> Indicates if the PHR with an assumed PUSCH is reported, as specified in TS 38.321 [3]. The network ensures <i>phr-AssumedPUSCH-Reporting-r18</i> and <i>twoPHRMode-r17</i> are not configured at the same time for a UE.
<i>phr-ModeOtherCG</i> Indicates the mode (i.e. real or virtual) used for the PHR of the activated cells that are part of the other Cell Group (i.e. MCG or SCG), when DC is configured. If the UE is configured with only one cell group (no DC), it ignores the field.
<i>phr-PeriodicTimer</i> Value in number of subframes for PHR reporting as specified in TS 38.321 [3]. Value <i>sf10</i> corresponds to 10 subframes, value <i>sf20</i> corresponds to 20 subframes, and so on.
<i>phr-ProhibitTimer</i> Value in number of subframes for PHR reporting as specified in TS 38.321 [3]. Value <i>sf0</i> corresponds to 0 subframe, value <i>sf10</i> corresponds to 10 subframes, value <i>sf20</i> corresponds to 20 subframes, and so on.
<i>phr-Tx-PowerFactorChange</i> Value in dB for PHR reporting as specified in TS 38.321 [3]. Value <i>dB1</i> corresponds to 1 dB, <i>dB3</i> corresponds to 3 dB and so on. The same value applies for each serving cell (although the associated functionality is performed independently for each cell).
<i>phr-Type2OtherCell</i> If set to true, the UE shall report a PHR type 2 for the SpCell of the other MAC entity. See TS 38.321 [3], clause 5.4.6. Network sets this field to <i>false</i> if the UE is not configured with an E-UTRA MAC entity.
<i>twoPHRMode</i> Indicates if the power headroom shall be reported as two PHRs (each PHR associated with a SRS resource set) is enabled or not. The network ensures <i>phr-AssumedPUSCH-Reporting-r18</i> and <i>twoPHRMode-r17</i> are not configured at the same time for a UE.

— *PhysCellId*

The *PhysCellId* identifies the physical cell identity (PCI).

PhysCellId information element

```

```

<i>PhysicalCellGroupConfig</i> field descriptions
<i>ackNackFeedbackMode</i> Indicates which among the joint and separate ACK/NACK feedback modes to use within a slot as specified in TS 38.213 [13] (clause 9).
<i>adaptSSB-SizeDCI-2-9</i> The size of DCI format 2_9 for SSB burst periodicity switching (see TS 38.212 [17], clause 7.3.1.3.10).
<i>adaptSSB-PeriodicityIndication-RNTI</i> The RNTI value for scrambling CRC of DCI format 2_9 for SSB burst periodicity switching for Scell(s).
<i>bdFactorR</i> Parameter for determining and distributing the maximum numbers of BD/CCE for mPDCCH based mPDSCH transmission as specified in TS 38.213 [13] Clause 10.1.
<i>cs-RNTI</i> RNTI value for downlink SPS (see <i>SPS-Config</i>) and uplink configured grant (see <i>ConfiguredGrantConfig</i>).
<i>downlinkAssignmentIndexDCI-0-2</i> Indicates if "Downlink assignment index" is present or absent in DCI format 0_2. If the field " <i>downlinkAssignmentIndexDCI-0-2</i> " is absent, then 0 bit for "Downlink assignment index" in DCI format 0_2. If the field " <i>downlinkAssignmentIndexDCI-0-2</i> " is present, then the bitwidth of "Downlink assignment index" in DCI format 0_2 is defined in the same way as that in DCI format 0_1 (see TS 38.212 [17], clause 7.3.1 and TS 38.213 [13], clause 9.1).
<i>downlinkAssignmentIndexDCI-1-2</i> Configures the number of bits for "Downlink assignment index" in DCI format 1_2. If the field is absent, then 0 bit is applied for "Downlink assignment index" in DCI format 1_2. Note that 1 bit and 2 bits are applied if only one serving cell is configured in the DL and <i>pdsch-HARQ-ACK-Codebook</i> is set to <i>dynamic</i> . 4 bits is applied if more than one serving cell are configured in the DL and <i>pdsch-HARQ-ACK-Codebook</i> is set to <i>dynamic</i> (see TS 38.212 [17], clause 7.3.1 and TS 38.213 [13], clause 9.1).
<i>enableDiffCB-Size</i> This field indicates whether a different codebook size from the size determined based on HARQ-ACK information associated with PDSCH reception(s) scheduled before a UL grant, is determined or not to include HARQ-ACK information associated with PDSCH reception(s) scheduled after a UL grant scheduling a PUSCH transmission with repetitions and the HARQ-ACK information are multiplexed on a repetition of the PUSCH transmission other than a first repetition. If enabled, a different HARQ codebook size might be determined. See clause 9 in TS 38.213 [13].
<i>enableDiffPUCCH-Resource</i> This field indicates whether a different PUCCH resource in time domain in a slot from the PUCCH resource indicated by the last DCI format before a UL grant in the slot, is determined or not to include HARQ-ACK information associated with PDSCH reception(s) scheduled after a UL grant scheduling a PUSCH transmission with repetitions and the HARQ-ACK information are multiplexed on a repetition of the PUSCH transmission other than a first repetition in the same slot. If enabled, a different PUCCH resource in time domain might be determined. See clause 9 in TS 38.213 [13].
<i>enableType1HARQ-ACK-MuxForDL-AssignmentAfterUL-Grant</i> If enabled, UE multiplexes Type-1 HARQ-ACK codebook on a repetition of a PUSCH transmission other than a first repetition, where the HARQ-ACK codebook includes HARQ-ACK information associated with PDSCH reception(s) scheduled after the UL grant scheduling the PUSCH transmission. See clause 9 in TS 38.213 [13]. This feature is not simultaneously enabled with PUCCH cell switching.
<i>enableType2HARQ-ACK-MuxForDL-AssignmentAfterUL-Grant</i> If enabled, UE multiplexes Type-2 HARQ-ACK codebook on a repetition of a PUSCH transmission other than a first repetition, where the HARQ-ACK codebook includes HARQ-ACK information associated with PDSCH reception(s) scheduled after the UL grant scheduling the PUSCH transmission. See clause 9 in TS 38.213 [13]. This feature is not simultaneously enabled with PUCCH cell switching.
<i>enableType3HARQ-ACK-MuxForDL-AssignmentAfterUL-Grant</i> If enabled, UE multiplexes Type-3 HARQ-ACK codebook on a repetition of a PUSCH transmission other than a first repetition, where the HARQ-ACK codebook includes HARQ-ACK information associated with PDSCH reception(s) scheduled after the UL grant scheduling the PUSCH transmission. See clause 9 in TS 38.213 [13]. This feature is not simultaneously enabled with PUCCH cell switching.
<i>harq-ACK-SpatialBundlingPUCCH</i> Enables spatial bundling of HARQ ACKs. It is configured per cell group (i.e. for all the cells within the cell group) for PUCCH reporting of HARQ-ACK. It is only applicable when more than 4 layers are possible to schedule. When the field is absent, the spatial bundling of PUCCH HARQ ACKs for the primary PUCCH group is disabled (see TS 38.213 [13], clause 9.1.2.1). If the field <i>harq-ACK SpatialBundlingPUCCH-secondaryPUCCHgroup</i> is present, <i>harq-ACK-SpatialBundlingPUCCH</i> is only applied to primary PUCCH

group. Network does not configure for a UE both spatial bundling of HARQ ACKs and <i>codeBlockGroupTransmission</i> within the same cell group.
<i>harq-ACK-SpatialBundlingPUCCH-secondaryPUCCHgroup</i> Indicates whether spatial bundling of PUCCH HARQ ACKs for the secondary PUCCH group is enabled or disabled. The field is only applicable when more than 4 layers are possible to schedule (see TS 38.213 [13], clause 9.1.2.1). When the field is absent, the use of spatial bundling of PUCCH HARQ ACKs for the secondary PUCCH group is indicated by <i>harq-ACK-SpatialBundlingPUCCH</i> . See TS 38.213 [13], clause 9.1.2.1. Network does not configure for a UE both spatial bundling of HARQ ACKs and <i>codeBlockGroupTransmission</i> within the same cell group.
<i>harq-ACK-SpatialBundlingPUSCH</i> Enables spatial bundling of HARQ ACKs. It is configured per cell group (i.e. for all the cells within the cell group) for PUSCH reporting of HARQ-ACK. It is only applicable when more than 4 layers are possible to schedule. When the field is absent, the spatial bundling of PUSCH HARQ ACKs for the primary PUCCH group is disabled (see TS 38.213 [13], clauses 9.1.2.2 and 9.1.3.2). If the field <i>harq-ACK SpatialBundlingPUSCH-secondaryPUCCHgroup</i> is present, <i>harq-ACK-SpatialBundlingPUSCH</i> is only applied to primary PUCCH group. Network does not configure for a UE both spatial bundling of HARQ ACKs and <i>codeBlockGroupTransmission</i> within the same cell group.
<i>harq-ACK-SpatialBundlingPUSCH-secondaryPUCCHgroup</i> Indicates whether spatial bundling of PUSCH HARQ ACKs for the secondary PUCCH group is enabled or disabled. The field is only applicable when more than 4 layers are possible to schedule (see TS 38.213 [13], clauses 9.1.2.2 and 9.1.3.2). When the field is absent, the use of spatial bundling of PUSCH HARQ ACKs for the secondary PUCCH group is indicated by <i>harq-ACK-SpatialBundlingPUSCH</i> . See TS 38.213 [13], clauses 9.1.2.2 and 9.1.3.2. Network does not configure for a UE both spatial bundling of HARQ ACKs and <i>codeBlockGroupTransmission</i> within the same cell group.
<i>intraBandNC-PRACH-simulTx</i> Enables parallel PRACH and SRS/PUCCH/PUSCH transmissions across CCs in intra-band non-contiguous CA (see TS 38.213 [13], clause 8.1 and TS 38.214 [19], clause 6.2.1). This field is absent in the IE <i>CellGroupConfig</i> when provided as part of <i>RRCSetup</i> message.
<i>lpwus-Config</i> Configuration for UE to use LP-WUS on PCell and/or PSCell to control the PDCCH monitoring as specified in TS 38.321 [3] Clause 5.7. The network will not configure <i>lpwus-Config</i> and <i>dcp-Config</i> for a UE simultaneously.
<i>mcs-C-RNTI</i> RNTI to indicate use of <i>qam64LowSE</i> for grant-based transmissions. When the <i>mcs-C-RNTI</i> is configured, RNTI scrambling of DCI CRC is used to choose the corresponding MCS table.
<i>ncr-RNTI</i> RNTI value for NCR-MT, used to scramble the PDCCHs carrying side control information (see TS 38.213 [13], clause 10.1).
<i>nfi-TotalDAI-Included</i> Indicates whether the NFI and total DAI fields of the non-scheduled PDSCH group is included in the non-fallback DL grant DCI (see TS 38.212 [17], clause 7.3.1). The network configures this only when enhanced dynamic codebook is configured (<i>pdsch-HARQ-ACK-Codebook</i> is set to <i>enhancedDynamic</i>).
<i>nrdc-PCmode-FR1</i> Indicates the uplink power sharing mode that the UE uses in NR-DC in frequency range 1 (FR1) (see TS 38.213 [13], clause 7.6).
<i>nrdc-PCmode-FR2</i> Indicates the uplink power sharing mode that the UE uses in NR-DC in frequency range 2 (FR2) (see TS 38.213 [13], clause 7.6).
<i>pdccch-BlindDetection</i>, <i>pdccch-BlindDetection2</i>, <i>pdccch-BlindDetection3</i>, <i>pdccch-BlindDetection4</i> Indicates the reference number of cells for PDCCH blind detection for the CG. Network configures the field for each CG when the UE is in NR DC and sets the value in accordance with the constraints specified in TS 38.213 [13]. The network configures <i>pdccch-BlindDetection</i> only if the UE is in NR-DC. The network configures <i>pdccch-BlindDetection2</i> only if the UE is in NR-DC with at least one downlink cell using Rel-16 PDCCH monitoring capability. The network configures <i>pdccch-BlindDetection3</i> only if the UE is in NR-DC with at least one downlink cell using Rel-15 PDCCH monitoring capability. The network configures <i>pdccch-BlindDetection4</i> only if the UE is in NR-DC with at least one downlink cell using Rel-17 PDCCH monitoring capability.
<i>pdccch-BlindDetectionCA-CombIndicator</i> Configure one combination of <i>pdccch-BlindDetectionCA1</i> (for R15) and <i>pdccch-BlindDetectionCA2</i> (for R16) for UE to use for scaling PDCCH monitoring capability if the number of serving cells configured to a UE is larger than the reported capability, and if UE reports more than one combination of <i>pdccch-BlindDetectionCA1</i> and <i>pdccch-BlindDetectionCA2</i> as UE capability. The combination of <i>pdccch-BlindDetectionCA1</i> and <i>pdccch-BlindDetectionCA2</i> configured by <i>pdccch-BlindDetectionCA-CombIndicator</i> is from the more than one combination of <i>pdccch-BlindDetectionCA1</i> and <i>pdccch-BlindDetectionCA2</i> reported by UE (see TS 38.213 [13], clause 10).

pdcch-BlindDetectionCA-CombIndicator-r17 is used to configure one combination of *pdcch-BlindDetectionCA1* (for R15), *pdcch-BlindDetectionCA2* (for R16) and *pdcch-BlindDetectionCA3* (for R17) for UE to use for scaling PDCCH monitoring capability if the number of serving cells configured to a UE is larger than the reported capability, and if UE reports more than one combination of *pdcch-BlindDetectionCA1*, *pdcch-BlindDetectionCA2* and *pdcch-BlindDetectionCA3* as UE capability. The combination of *pdcch-BlindDetectionCA1*, *pdcch-BlindDetectionCA2* and *pdcch-BlindDetectionCA3* configured by *pdcch-BlindDetectionCA-CombIndicator-r17* is from the more than one combination of *pdcch-BlindDetectionCA1*, *pdcch-BlindDetectionCA2* and *pdcch-BlindDetectionCA3* reported by UE (see TS 38.213 [13], clause 10).

pdcch-BlindDetectionCA-CombIndicator-r16 and *pdcch-BlindDetectionCA-CombIndicator-r17* are not configured simultaneously.

pdsch-HARQ-ACK-Codebook

The PDSCH HARQ-ACK codebook is either semi-static or dynamic. This is applicable to both CA and non-CA operation (see TS 38.213 [13], clauses 9.1.2 and 9.1.3). If *pdsch-HARQ-ACK-Codebook-r16* is signalled, UE shall ignore the *pdsch-HARQ-ACK-Codebook* (without suffix). For the HARQ-ACK for sidelink, if *pdsch-HARQ-ACK-Codebook-r16* is signalled, the UE uses *pdsch-HARQ-ACK-Codebook* (without suffix) and ignores *pdsch-HARQ-ACK-Codebook-r16*. If the field *pdsch-HARQ-ACK-Codebook-secondaryPUCCHgroup* is present, *pdsch-HARQ-ACK-Codebook* is applied to primary PUCCH group. Otherwise, this field is applied to the cell group (i.e. for all the cells within the cell group). For the HARQ-ACK for sidelink, if the field *pdsch-HARQ-ACK-Codebook-secondaryPUCCHgroup* is present, *pdsch-HARQ-ACK-Codebook* is applied to primary and secondary PUCCH group and the UE ignores *pdsch-HARQ-ACK-Codebook-secondaryPUCCHgroup*.

pdsch-HARQ-ACK-CodebookList

A list of configurations for one or two HARQ-ACK codebooks. Each configuration in the list is defined in the same way as *pdsch-HARQ-ACK-Codebook* (see TS 38.212 [17], clause 7.3.1.2.2 and TS 38.213 [13], clauses 7.2.1, 9.1.2, 9.1.3 and 9.2.1). If this field is present, the field *pdsch-HARQ-ACK-Codebook* is ignored. If this field is present, the value of this field is applied for primary PUCCH group and for secondary PUCCH group (if configured). For the HARQ-ACK for sidelink, the UE uses *pdsch-HARQ-ACK-Codebook* and ignores *pdsch-HARQ-ACK-CodebookList* if this field is present.

pdsch-HARQ-ACK-Codebook-secondaryPUCCHgroup

The PDSCH HARQ-ACK codebook is either semi-static or dynamic. This is applicable to CA operation (see TS 38.213 [13], clauses 9.1.2 and 9.1.3). It is configured for secondary PUCCH group.

pdsch-HARQ-ACK-EnhType3DCI-Field*, *pdsch-HARQ-ACK-EnhType3DCI-FieldSecondaryPUCCHgroup

Indicates the enhanced Type 3 codebook through a new DCI field to indicate the enhanced Type 3 HARQ-ACK codebook in the primary PUCCH group if the more than one enhanced Type 3 HARQ-ACK codebook is configured for the primary PUCCH group, or in the secondary PUCCH group if the more than one enhanced Type 3 HARQ-ACK code is configured for the secondary PUCCH group, respectively.

pdsch-HARQ-ACK-EnhType3ToAddModList*, *pdsch-HARQ-ACK-EnhType3SecondaryToAddModList

Configure the list of enhanced Type 3 HARQ-ACK codebooks for the primary PUCCH group and the secondary PUCCH group, respectively. When configured, DCI format 1_1 can request the UE to report A/N for one of the configured enhanced Type 3 HARQ-ACK codebooks in the corresponding PUCCH group (see TS 38.213 [13], clause 9.1.4). The network can configure *pdsch-HARQ-ACK-EnhType3SecondaryToAddModList* only if secondary PUCCH group is configured.

pdsch-HARQ-ACK-OneShotFeedback

When configured, the DCI format 1_1 can request the UE to report A/N for all HARQ processes and all CCs configured in the PUCCH group (see TS 38.212 [17], clause 7.3.1).

pdsch-HARQ-ACK-OneShotFeedbackCBG

When configured, the DCI format 1_1 can request the UE to include CBG level A/N for each CC with CBG level transmission configured. When not configured, the UE will report TB level A/N even if CBG level transmission is configured for a CC. The network configures this only when *pdsch-HARQ-ACK-OneShotFeedback* is configured.

pdsch-HARQ-ACK-OneShotFeedbackNDI

When configured, the DCI format 1_1 can request the UE to include NDI for each A/N reported. The network configures this only when *pdsch-HARQ-ACK-OneShotFeedback* is configured.

pdsch-HARQ-ACK-Retx*, *pdsch-HARQ-ACK-RetxSecondaryPUCCHgroup

When configured, the DCI format 1_1 can request the UE to perform a HARQ-ACK re-transmission on a PUCCH resource in the primary PUCCH group and the secondary PUCCH group, respectively (see TS 38.213 [13], clause 9.1.5).

prioLowDG-HighCG

Enable PHY prioritization for the case where low-priority dynamic grant-PUSCH collides with high-priority configured grant-PUSCH on a BWP of a serving cell (see TS 38.213 [13], clause 9), when the UE has generated transport blocks for both DG-PUSCH and CG-PUSCH as described in TS 38.321 [3].

prioHighDG-LowCG

Enable PHY prioritization for the case where high-priority dynamic grant PUSCH collides with low-priority configured grant PUSCH on a BWP of a serving cell (see TS 38.213 [13], clause 9), when the UE has generated transport blocks for both DG-PUSCH and CG-PUSCH as described in TS 38.321 [3].
ps-RNTI RNTI value for scrambling CRC of DCI format 2_6 used for power saving (see TS 38.213 [13], clause 10.1).
ps-Offset The start of the search-time of DCI format 2_6 with CRC scrambled by PS-RNTI relative to the start of the <i>drx-onDurationTimer</i> of Long DRX (see TS 38.213 [13], clause 10.3). Value in multiples of 0.125ms (milliseconds). 1 corresponds to 0.125 ms, 2 corresponds to 0.25 ms, 3 corresponds to 0.375 ms and so on.
ps-WakeUp Indicates the UE to wake-up if DCI format 2_6 is not detected outside active time (see TS 38.321 [3], clause 5.7). If the field is absent, the UE does not wake-up if DCI format 2-6 is not detected outside active time.
ps-PositionDCI-2-6 Starting position of UE wakeup and SCell dormancy indication in DCI format 2_6 (see TS 38.213 [13], clause 10.3).
ps-TransmitPeriodicL1-RSRP Indicates the UE to transmit periodic L1-RSRP report(s) when the <i>drx-onDurationTimer</i> does not start (see TS 38.321 [3], clause 5.7). If the field is absent, the UE does not transmit periodic L1-RSRP report(s) when the <i>drx-onDurationTimer</i> does not start.
ps-TransmitOtherPeriodicCSI Indicates the UE to transmit periodic CSI report(s) other than L1-RSRP reports when the <i>drx-onDurationTimer</i> does not start (see TS 38.321 [3], clause 5.7). If the field is absent, the UE does not transmit periodic CSI report(s) other than L1-RSRP reports when the <i>drx-onDurationTimer</i> does not start.
pucch-sSCell, pucch-sSCellSecondaryPUCCHgroup indicates the alternative PUCCH cells for PUCCH cell switching in the primary and the secondary PUCCH group, respectively. For the primary PUCCH group, it is configured for cells on top of SpCell. For the secondary PUCCH group, it is configured for cell on top of the PUCCH SCell.
pucch-sSCellDyn, pucch-sSCellDynSecondaryPUCCHgroup When configured, PUCCH cell switching based on dynamic indication in DCI format 1_1 is enabled (see TS 38.213 [13], clause 9.A, clause 9.1.5), respectively for the primary PUCCH group and the secondary PUCCH group.
pucch-sSCellPattern, pucch-sSCellPatternSecondaryPUCCHgroup When configured, the UE applies the semi-static PUCCH cell switching (see TS 38.213 [13], clause 9.A) using the time domain pattern of applicable PUCCH cells indicated by this field, respectively for the primary PUCCH group and the secondary PUCCH group.
p-NR-FR1 The maximum total transmit power to be used by the UE in this NR cell group across all serving cells in frequency range 1 (FR1). The maximum transmit power that the UE may use may be additionally limited by <i>p-Max</i> (configured in <i>FrequencyInfoUL</i>) and by <i>p-UE-FR1</i> (configured total for all serving cells operating on FR1).
p-NR-FR2 The maximum total transmit power to be used by the UE in this NR cell group across all serving cells in frequency range 2 (FR2). The maximum transmit power that the UE may use may be additionally limited by <i>p-Max</i> (configured in <i>FrequencyInfoUL</i>) and by <i>p-UE-FR2</i> (configured total for all serving cells operating on FR2). This field is only used in NR-DC. A UE does not expect to be configured with this parameter in this release of the specification.
p-UE-FR1 The maximum total transmit power to be used by the UE across all serving cells in frequency range 1 (FR1) across all cell groups. The maximum transmit power that the UE may use may be additionally limited by <i>p-Max</i> (configured in <i>FrequencyInfoUL</i>) and by <i>p-NR-FR1</i> (configured for the cell group).
p-UE-FR2 The maximum total transmit power to be used by the UE across all serving cells in frequency range 2 (FR2) across all cell groups. The maximum transmit power that the UE may use may be additionally limited by <i>p-Max</i> (configured in <i>FrequencyInfoUL</i>) and by <i>p-NR-FR2</i> (configured for the cell group). A UE does not expect to be configured with this parameter in this release of the specification.
simultaneousPUCCH-PUSCH, simultaneousPUCCH-PUSCH-SecondaryPUCCHgroup Enables simultaneous PUCCH and PUSCH transmissions with different priorities for the primary PUCCH group and the secondary PUCCH group, respectively.
simultaneousPUCCH-PUSCH-SamePriority, simultaneousPUCCH-PUSCH-SamePriority-SecondaryPUCCHgroup Enables simultaneous PUCCH and PUSCH transmissions on different cells in different bands with same priority for the primary PUCCH group and the secondary PUCCH

group, respectively, as specified in clause 9 of TS 38.213 [13].
<i>simultaneousSR-PUSCH-diffPUCCH-Groups</i> Enables simultaneous SR and PUSCH transmissions in different PUCCH groups (see TS 38.321 [3], clause 5.4.1, clause 5.4.4).
<i>sizeDCI-2-6</i> Size of DCI format 2_6 (see TS 38.213 [13], clause 10.3).
<i>sp-CSI-RNTI</i> RNTI for Semi-Persistent CSI reporting on PUSCH (see <i>CSI-ReportConfig</i>) (see TS 38.214 [19], clause 5.2.1.5.2). Network always configures the UE with a value for this field when at least one <i>CSI-ReportConfig</i> with <i>reportConfigType</i> set to <i>semiPersistentOnPUSCH</i> is configured.
<i>tpc-PUCCH-RNTI</i> RNTI used for PUCCH TPC commands on DCI (see TS 38.213 [13], clause 10.1).
<i>tpc-PUSCH-RNTI</i> RNTI used for PUSCH TPC commands on DCI (see TS 38.213 [13], clause 10.1).
<i>tpc-SRS-RNTI</i> RNTI used for SRS TPC commands on DCI (see TS 38.213 [13], clause 10.1).
<i>twoQCL-TypeD-ForMultiDCI</i> Indicates whether a UE is expected to identify and monitor two QCL-TypeD properties for multiple overlapping CORESETs, where the first QCL-TypeD is associated with <i>coresetPoolIndex</i> value 0, and the second QCL-TypeD is associated with <i>coresetPoolIndex</i> value 1. (See TS 38.213 [13], clause 10).
<i>twoQCLTypeDforPDCCHRepetition</i> Indicates whether a UE is expected UE to identify and monitor two QCL-TypeD properties for multiple overlapping CORESETs in the case of PDCCH repetition.
<i>uci-MuxWithDiffPrio, uci-MuxWithDiffPrio-secondaryPUCCHgroup</i> When configured, enables multiplexing a high-priority (HP) HARQ-ACK UCI and a low-priority (LP) HARQ-ACK UCI into a PUCCH or PUSCH for the primary PUCCH group and the secondary PUCCH group, respectively.
<i>ul-TotalDAI-Included</i> Indicates whether the total DAI fields of the additional PDSCH group is included in the non-fallback UL grant DCI (see TS 38.212 [17], clause 7.3.1). The network configures this only when enhanced dynamic codebook is configured (<i>pdsch-HARQ-ACK-Codebook</i> is set to <i>enhancedDynamic</i>).
<i>xScale</i> The UE is allowed to drop NR only if the power scaling applied to NR results in a difference between scaled and unscaled NR UL of more than <i>xScale</i> dB (see TS 38.213 [13]). If the value is not configured for dynamic power sharing, the UE assumes default value of 6 dB.

<i>MulticastConfig</i> field descriptions
<i>pdsch-HARQ-ACK-CodebookListMulticast</i> A list of configurations for one or two HARQ-ACK codebooks for MBS multicast. Each configuration in the list is defined in the same way as <i>pdsch-HARQ-ACK-Codebook</i> (see TS 38.212 [17], clause 7.3.1.2.2 and TS 38.213 [13], clauses 7.2.1, 9.1.2, 9.1.3 and 9.2.1). If this field is present, the field <i>pdsch-HARQ-ACK-Codebook</i> is ignored. If this field is present, the value of this field is applied for primary PUCCH group and for secondary PUCCH group (if configured).
<i>type1CodebookGenerationMode</i> Indicates the mode of Type-1 HARQ-ACK codebook generation, as specified in TS 38.213 [13]. Mode 1 is based on the k1 values that are in the intersection of K1 set for unicast and K1 set for multicast. Mode 2 is based on the k1 values that are in the union of K1 set for unicast and K1 set for multicast.

PDSCH-HARQ-ACK-EnhType3 field descriptions***pdsch-HARQ-ACK-EnhType3CBG***

When configured, the DCI format 1_1 or DCI format 1_2 can request the UE to include CBG level A/N for each CC with CBG level transmission configured of the enhanced Type 3 HARQ-ACK codebook. When not configured, the UE will report TB level A/N even if CBG level transmission is configured for a CC.

pdsch-HARQ-ACK-EnhType3NDI

When configured, the DCI format 1_1 or DCI format 1_2 can request the UE to include NDI for each A/N reported of the enhanced Type 3 HARQ-ACK codebook.

perCC

Configures enhanced Type 3 HARQ-ACK codebook using per CC configuration.

perHARQ, perHARQ-Ext

Configures enhanced Type 3 HARQ-ACK codebook using per HARQ process and CC configuration. *perHARQ-Ext* is present only when *nrofHARQ-ProcessesForPDSCH-v1700* is present in *pdsch-ServingCellConfig* of at least one serving cell in the PUCCH group. If *perHARQ-Ext* is present, the UE ignores *perHARQ*.

CellDTRX-DCI-config field descriptions***cellDTRX-RNTI***

The RNTI value for scrambling CRC of DCI format 2_9 for activating and/or deactivating Cell DTX and/or Cell DRX and/or NES mode for CHO indication.

sizeDCI-2-9

The size of DCI format 2_9.

<i>LPWUS-Config</i> field descriptions
<i>lpwus-ActualDuration</i> Indicates the actual duration for LP-WUS in the cell for RRC CONNECTED (see TS 38.213 [13], clause 10.4D). The actual duration for different number of OOK symbols in an OFDM symbol for LP-WUS, i.e. M_{WUS} value of LP-WUS, is configured with the unit of OFDM symbols.
<i>lpwus-AvailableSlot</i> Indicates the available slot(s) for LP-WUS using a unit level bitmap with a periodicity 10, 20, or 40 units (see TS 38.213 [13], clause 10.4D) in RRC CONNECTED, where the unit is one slot if 14-bit symbol level bitmap is used, or the unit is two slots if 28-bits symbol level bitmap is used, as configured by <i>lpwus-AvailableSymbol</i>. The most significant bit of the bit string represents the first unit and the second most significant bit represents the second unit and so on. Value 1 in the bitmap indicates that the corresponding unit is available, value 0 indicates that the corresponding unit is not available. This slot pattern repeats itself continuously.
<i>lpwus-AvailableSymbol</i> Indicates the available symbol(s) for LP-WUS within the slot(s) that are indicated as available for LP-WUS configured by <i>lpwus-AvailableSlot</i> (see TS 38.213 [13], clause 10.4D) in RRC CONNECTED. A 14-bit or 28-bit symbol level bitmap that covers one or two slots can be configured. For <i>oneSlot</i>, the 14 bits represent the symbols within the slot. For <i>twoSlots</i>, the first 14 bits represent the symbols within the first slot and the next 14 bits represent the symbols in the second slot. For the bits representing symbols in a slot, the most significant bit of the bit string represents the first symbol in the slot and the second most significant bit represents the second symbol in the slot and so on. Value 1 in the bitmap indicates that the corresponding symbol is available, value 0 indicates that the corresponding symbol is not available.
<i>lpwus-Codepoint</i> Indicates the codepoints that the UE monitors per MO for LP-WUS (see TS 38.213 [13], clause 10.4D).
<i>lpwus-MO-1-1</i> Indicates the periodicity (with the unit of slots) and time offset (with the unit of slots) relative to the start of SFN#0 for LP-WUS MO for LP-WUS operation option 1-1, i.e. the <i>lpwus-PDCCH-MonitoringTimer</i> is not configured (see TS 38.213 [13], clause 10.4D).
<i>lpwus-MO-1-2</i> Indicates the periodicity (with the unit of slots) and time offset (with the unit of slots) relative to the start of SFN#0 for LP-WUS MO for LP-WUS operation option 1-2, i.e. the <i>lpwus-PDCCH-MonitoringTimer</i> is configured (see TS 38.213 [13], clause 10.4D). The configured periodicity is not larger than the long DRX cycle.
<i>lpwus-MvalueAndSeqConfigFR1</i> Indicates the number of OOK symbols in an OFDM symbol for LP-WUS in FR1 for RRC CONNECTED (corresponding to parameter M_{WUS}, see TS 38.211 [16], clause 7.4.4.1.1) and the LP-WUS sequence configuration in the cell for RRC_IDLE/INACTIVE. A value of nOne means M value is set to 1, a value of nTwo means M value is set to 2, and so on.
<i>lpwus-MvalueAndSeqConfigFR2</i> Indicates the number of OOK symbols in an OFDM symbol for LP-WUS in FR2 for RRC CONNECTED (corresponding to parameter M_{WUS}, see TS 38.211 [16], clause 7.4.4.1.1) and the LP-WUS sequence configuration in the cell for RRC_IDLE/INACTIVE. A value of nOne means M value is set to 1 only for SCS of 120KHz and 60KHz, a value of nTwo means M value is set to 2 only for SCS of 60KHz
<i>lpwus-NominalMoDuration</i> Indicates the nominal MO duration for LP-WUS in the cell for RRC CONNECTED (see TS 38.213 [13], clause 10.4D), in number of OFDM symbols. A value of 1 cannot be configured in case M_{WUS} in TS 38.211 [16] is 1.
<i>lpwus-NumOfBits</i> Indicates the number of information bits that can be indicated by a LP-WUS (see TS 38.213 [13], clause 10.4D).
<i>lpwus-NumOfMO-1-1</i> Indicates the number of the earliest LP-WUS MOs to be monitored by UE from time offset prior to a slot where the <i>drx-onDurationTimer</i> of Long DRX would start for LP-WUS operation option 1-1, i.e. <i>lpwus-PDCCH-MonitoringTimer</i> is not configured (see TS 38.213 [13], clause 10.4D).
<i>lpwus-NumOfMO-1-2</i> Indicates the number of LP-WUS MOs to be monitored by UE per periodicity for LP-WUS operation option 1-2, i.e. <i>lpwus-PDCCH-MonitoringTimer</i> is configured (see TS 38.213 [13], clause 10.4D).
<i>lpwus-OverlaidSeqNum</i>

Indicates the number of candidate overlaid sequences to carry LP-WUS information per OOK ON chip for LP-WUS in the cell for RRC CONNECTED (corresponding to parameter N_{seq} , see TS 38.211 [16], clause 7.4.4.1.1).
<i>lpwus-OverlaidSeqNum-SCS-60kHz</i> Indicates the number of candidate overlaid sequences to carry LP-WUS information per OOK ON chip for LP-WUS in the cell for RRC CONNECTED for SCS of 60KHz in FR2 (see TS 38.211 [16], clause 7.4.4.1.1).
<i>lpwus-OverlaidSeqNum-SCS-120kHz</i> Indicates the number of candidate overlaid sequences to carry LP-WUS information per OOK ON chip for LP-WUS in the cell for RRC CONNECTED for SCS of 120KHz in FR2 (see TS 38.211 [16], clause 7.4.4.1.1).
<i>lpwus-OverlaidSeqRoot</i> Indicates the configuration of overlaid sequence root for LP-WUS in the cell for RRC CONNECTED (see TS 38.211 [16], clause 7.4.4.1.1).
<i>lpwus-PDCCH-MonitoringTimer</i> Indicates the length of the timer for UE to monitor PDCCH after LP-WUS is detected for LP-WUS operation option 1-2 (see TS 38.321 [3], clause 5.7). Value in multiples of 1/32 ms (subMilliSeconds) or in ms (milliSeconds). For the latter, value <i>ms1</i> corresponds to 1 ms, value <i>ms2</i> corresponds to 2 ms, and so on, as specified in TS 38.321 [3]. The <i>timer1</i> is configured if <i>drx-ConfigSecondaryGroup</i> is not configured, or it indicates the length of the timer to monitor PDCCH for the default DRX group if <i>drx-ConfigSecondaryGroup</i> is configured. The <i>timer2</i> is configured only if <i>drx-ConfigSecondaryGroup</i> is configured, and it indicates the length of the timer to monitor PDCCH for the secondary DRX group. The network configures a <i>timer1</i> value for the default DRX group that is larger than or equal to a <i>timer2</i> value for the secondary DRX group.
<i>lpwus-StartRB</i> Indicates the starting RB of LP-WUS for RRC CONNECTED (see TS 38.213 [13], clause 10.4D). The starting RB index reference to carrier boundary determined by <i>offsetToCarrier</i> corresponding to SCS of the active BWP is configured by gNB.
<i>lpwus-TCI-States</i> Indicates the configuration for UE to derive the active TCI state for different BWPs for LP-WUS in RRC CONNECTED (see TS 38.213 [13], clause 10.4D). Value 0 means the CORESET#0, and value 1 means the CORESET#1, and so on. This field is configured if the UE is not configured with <i>dl-OrJointTCI-StateList</i> for unified TCI state.
<i>lpwus-TimeOffset1-1</i> Indicates the time offset determines the start of LP-WUS monitoring relative to the start of the <i>drx-onDurationTimer</i> of Long DRX for LP-WUS operation option 1-1, i.e. the IE <i>lpwus-PDCCH-MonitoringTimer</i> is not configured (see TS 38.213 [13], clause 10.4D). Value in multiples of 0.125 ms (milliseconds). 41 corresponds to 41*0.125 ms, 42 corresponds to 42*0.125 ms, and so on. The network will not configure <i>lpwus-TimeOffset1-1</i> and <i>lpwus-TimeOffset1-2</i> for a UE in one cell simultaneously.
<i>lpwus-TimeOffset1-2</i> Indicates the time offset determines the start of UE PDCCH monitoring via the start of <i>lpwus-PDCCH-MonitoringTimer</i> after LP-WUS is detected for LP-WUS operation option 1-2, i.e. the IE <i>lpwus-PDCCH-MonitoringTimer</i> is configured (see TS 38.213 [13], clause 10.4D). Value in multiples of 0.125 ms (milliseconds). 41 corresponds to 41*0.125 ms, 42 corresponds to 42*0.125 ms, and so on. The network will not configure <i>lpwus-TimeOffset1-1</i> and <i>lpwus-TimeOffset1-2</i> for a UE in one cell simultaneously.
<i>lpwus-TransmitOtherPeriodicCSI</i> Indicates the UE to transmit periodic CSI report(s) other than L1-RSRP reports during the time given by the configured <i>drx-onDurationTimer</i> if the UE is not indicated to wake-up (see TS 38.321 [3], clause 5.7). If the field is absent, the UE does not transmit periodic CSI report(s) other than L1-RSRP reports during the time given by the configured <i>drx-onDurationTimer</i> if the UE is not indicated to wake-up.
<i>lpwus-TransmitPeriodicL1-RSRP</i> Indicates the UE to transmit periodic L1-RSRP report(s) during the time given by the configured <i>drx-onDurationTimer</i> if the UE is not indicated to wake-up (see TS 38.321 [3], clause 5.7). If the field is absent, the UE does not transmit periodic L1-RSRP report(s) during the time given by the configured <i>drx-onDurationTimer</i> if the UE is not indicated to wake-up.
<i>root1</i> Indicates the first overlaid sequence root for LP-WUS in the cell for RRC CONNECTED (see TS 38.211 [16], clause 7.4.4.1.1).
<i>root2</i> Indicates the second overlaid sequence root for LP-WUS in the cell for RRC CONNECTED (see TS 38.211 [16], clause 7.4.4.1.1).

Conditional Presence	Explanation
<i>MCG-Only</i>	This field is optionally present, Need R, in the <i>PhysicalCellGroupConfig</i> of the MCG. It is absent otherwise.
<i>NCR</i>	This field is optionally present, Need M for NCR-MT. It is absent otherwise.
<i>SCG-Only</i>	This field is optionally present, Need S, in the <i>PhysicalCellGroupConfig</i> of the SCG in (NG)EN-DC as defined in TS 38.213 [13]. It is absent otherwise.
<i>twoPUCCHgroup</i>	This field is optionally present, Need R, if secondary PUCCH group is configured. It is absent otherwise, Need R.
<i>FR1-Only</i>	This field is mandatory present for an FR1 carrier frequency. It is absent otherwise.
<i>FR2-Only</i>	This field is mandatory present for an FR2 carrier frequency. It is absent otherwise.
<i>Option1-1</i>	This field is mandatory present for LP-WUS operation option 1-1, i.e., the UE is configured to start <i>drx-onDurationTimer</i> after LP-WUS reception as specified in TS 38.321 [3]. It is absent otherwise.
<i>Option1-2</i>	This field is mandatory present for LP-WUS operation option 1-2, i.e., the UE is configured to start a PDCCH monitoring timer for LP-WUS after LP-WUS reception as specified in TS 38.321 [3]. It is absent otherwise.
<i>DRX-SecondaryGroup</i>	This field is mandatory present, if <i>drx-ConfigSecondaryGroup</i> is configured. It is absent otherwise.

– *PLMN-Identity*

The IE *PLMN-Identity* identifies a Public Land Mobile Network. Further information regarding how to set the IE is specified in TS 23.003 [21].

***PLMN-Identity* information element**

```
-- ASN1START
-- TAG-PLMN-IDENTITY-START

PLMN-Identity ::=
    SEQUENCE {
        mcc          MCC          OPTIONAL,          -- Cond MCC
        mnc          MNC
    }

MCC ::=
    SEQUENCE (SIZE (3)) OF MCC-MNC-Digit

MNC ::=
    SEQUENCE (SIZE (2..3)) OF MCC-MNC-Digit

MCC-MNC-Digit ::=
    INTEGER (0..9)

-- TAG-PLMN-IDENTITY-STOP
-- ASN1STOP
```

<i>PLMN-Identity</i> field descriptions
<i>mcc</i> The first element contains the first MCC digit, the second element the second MCC digit and so on. If the field is absent, it takes the same value as the <i>mcc</i> of the immediately preceding IE <i>PLMN-Identity</i> . See TS 23.003 [21].
<i>mnc</i> The first element contains the first MNC digit, the second element the second MNC digit and so on. See TS 23.003 [21].

Conditional Presence	Explanation
MCC	This field is mandatory present when PLMN-Identity is not used in a list or if it is the first entry of PLMN-Identity in a list. Otherwise it is optionally present, Need S.

– *PLMN-IdentityInfoList*

The IE *PLMN-IdentityInfoList* includes a list of PLMN identity information.

PLMN-IdentityInfoList information element

```
-- ASN1START
-- TAG-PLMN-IDENTITYINFOLIST-START

PLMN-IdentityInfoList ::=          SEQUENCE (SIZE (1..maxPLMN)) OF PLMN-IdentityInfo

PLMN-IdentityInfo ::=              SEQUENCE {
    plmn-IdentityList                SEQUENCE (SIZE (1..maxPLMN)) OF PLMN-Identity,
    trackingAreaCode                  TrackingAreaCode                                OPTIONAL,      -- Need R
    ranac                             RAN-AreaCode                                OPTIONAL,      -- Need R
    cellIdentity                      CellIdentity,
    cellReservedForOperatorUse        ENUMERATED {reserved, notReserved},
    ...,
    [[
        iab-Support-r16                ENUMERATED {true}                                OPTIONAL      -- Need S
    ]],
    [[
        trackingAreaList-r17            SEQUENCE (SIZE (1..maxTAC-r17)) OF TrackingAreaCode    OPTIONAL,      -- Need R
        gNB-ID-Length-r17              INTEGER (22..32)                                OPTIONAL      -- Cond eventID-TSS
    ]],
    [[
        mobileIAB-Support-r18          ENUMERATED {true}                                OPTIONAL      -- Need S
    ]]
}
-- TAG-PLMN-IDENTITYINFOLIST-STOP
-- ASN1STOP
```

PLMN-IdentityInfo field descriptions	
cellReservedForOperatorUse	Indicates whether the cell is reserved for operator use (per PLMN), as defined in TS 38.304 [20]. This field is ignored by IAB-MT and NCR-MT.
gNB-ID-Length	Indicates the length of the gNB ID out of the 36-bit long <i>cellIdentity</i> . This field is always present if the <i>mobileIAB-Support</i> is broadcasted.
iab-Support	This field combines both the support of IAB and the cell status for IAB. If the field is present, the cell supports IAB and the cell is also considered as a candidate for cell (re)selection for IAB-node; if the field is absent, the cell does not support IAB and/or the cell is barred for IAB-node. This field is absent if <i>mobileIAB-Cell</i> is broadcasted in the cell.
mobileIAB-Support	This field indicates the support of mobile IAB and whether the cell can be considered as a candidate for cell (re)selection for mobile IAB-node. This field is absent if <i>mobileIAB-Cell</i> is broadcasted in the cell. If the field is absent, the cell is barred for mobile IAB-node.
trackingAreaCode	Indicates Tracking Area Code to which the cell indicated by <i>cellIdentity</i> field belongs. The absence of the field indicates that the cell only supports PSCell/SCell functionality (per PLMN) or is an NTN cell.
trackingAreaList	List of Tracking Areas to which the cell indicated by <i>cellIdentity</i> field belongs. If this field is present, network does not configure <i>trackingAreaCode</i> . Total number of different TACs across different <i>PLMN-IdentityInfos</i> shall not exceed <i>maxTAC</i> . This field is only present in an NTN cell.

Conditional Presence	Explanation
<i>eventID-TSS</i>	If <i>eventID-TSS</i> is present in SIB9, this field is mandatory present in the <i>PLMN-IdentityInfo</i> IE of <i>PLMN-IdentityInfoList</i> in <i>SIB1</i> . Otherwise, the field is optionally present, Need R.

– *PLMN-IdentityList2*

Includes a list of PLMN identities.

PLMN-IdentityList2 information element

```
-- ASN1START
-- TAG-PLMNIDENTITYLIST2-START

PLMN-IdentityList2-r16 ::= SEQUENCE (SIZE (1..16)) OF PLMN-Identity

-- TAG-PLMNIDENTITYLIST2-STOP
-- ASN1STOP
```

– *PRB-Id*

The IE *PRB-Id* identifies a Physical Resource Block (PRB) position within a carrier.

***PRB-Id* information element**

```
-- ASN1START
-- TAG-PRB-ID-START

PRB-Id ::=                               INTEGER (0..maxNrofPhysicalResourceBlocks-1)

-- TAG-PRB-ID-STOP
-- ASN1STOP
```

PTRS-DownlinkConfig

The IE *PTRS-DownlinkConfig* is used to configure downlink phase tracking reference signals (PTRS) (see TS 38.214 [19] clause 5.1.6.3)

***PTRS-DownlinkConfig* information element**

```
-- ASN1START
-- TAG-PTRS-DOWNLINKCONFIG-START

PTRS-DownlinkConfig ::=                SEQUENCE {
    frequencyDensity                     SEQUENCE (SIZE (2)) OF INTEGER (1..276)                OPTIONAL, -- Need S
    timeDensity                          SEQUENCE (SIZE (3)) OF INTEGER (0..29)                OPTIONAL, -- Need S
    epre-Ratio                           INTEGER (0..3)                                     OPTIONAL, -- Need S
    resourceElementOffset                ENUMERATED { offset01, offset10, offset11 }             OPTIONAL, -- Need S
    ...
    [[
    maxNrofPorts-r16                     ENUMERATED {n1, n2}                                OPTIONAL -- Need R
    ]]
}

-- TAG-PTRS-DOWNLINKCONFIG-STOP
-- ASN1STOP
```

<i>PTRS-DownlinkConfig</i> field descriptions
<i>epre-Ratio</i> EPRE ratio between PTRS and PDSCH. Value 0 corresponds to the codepoint "00" in tables 4.1-2 and 4.1-2A. Value 1 corresponds to codepoint "01", and so on. If the field is not provided, the UE applies value 0 (see TS 38.214 [19], clause 4.1).
<i>frequencyDensity</i> Presence and frequency density of DL PT-RS as a function of Scheduled BW. If the field is absent, the UE uses $K_{\text{PT-RS}} = 2$ (see TS 38.214 [19], clause 5.1.6.3, table 5.1.6.3-2).
<i>maxNrofPorts</i> The maximum number of DL PTRS ports specified in TS 38.214 [19] (clause 5.1.6.3). 2 PT-RS ports can only be configured for a DL BWP that is configured, as specified in TS 38.214 [19] clause 5.1, with a mode where a single PDSCH has association between the DM-RS ports and the TCI states as defined in TS 38.214 [19] clause 5.1.6.2.
<i>resourceElementOffset</i> Indicates the subcarrier offset for DL PTRS. If the field is absent, the UE applies the value offset00 (see TS 38.211 [16], clause 7.4.1.2.2).
<i>timeDensity</i> Presence and time density of DL PT-RS as a function of MCS. The value 29 is only applicable for MCS Table 5.1.3.1-1 (TS 38.214 [19]). If the field is absent, the UE uses $L_{\text{PT-RS}} = 1$ (see TS 38.214 [19], clause 5.1.6.3, table 5.1.6.3-1).

– ***PTRS-UplinkConfig***

The IE *PTRS-UplinkConfig* is used to configure uplink Phase-Tracking-Reference-Signals (PTRS).

```

<i>PTRS-UplinkConfig</i> field descriptions	
frequencyDensity	Presence and frequency density of UL PT-RS for CP-OFDM waveform as a function of scheduled BW. If the field is absent, the UE uses $K_{\text{PT-RS}} = 2$ (see TS 38.214 [19], clause 6.1).
maxNrofPorts, maxNrofPorts-SDM	The maximum number of UL PTRS ports for CP-OFDM (see TS 38.214 [19], clause 6.2.3.1).
ptrs-Power	UL PTRS power boosting factor per PTRS port (see TS 38.214 [19], clause 6.1, table 6.2.3.1.3).
resourceElementOffset	Indicates the subcarrier offset for UL PTRS for CP-OFDM. If the field is absent, the UE applies the value offset00 (see TS 38.211 [16], clause 6.4.1.2.2).
sampleDensity	Sample density of PT-RS for DFT-s-OFDM, pre-DFT, indicating a set of thresholds $T=\{\text{NRB}_n, n=0,1,2,3,4\}$, that indicates dependency between presence of PT-RS and scheduled BW and the values of X and K the UE should use depending on the scheduled BW, see TS 38.214 [19], clause 6.1, table 6.2.3.2-1.
timeDensity	Presence and time density of UL PT-RS for CP-OFDM waveform as a function of MCS. If the field is absent, the UE uses $L_{\text{PT-RS}} = 1$ (see TS 38.214 [19], clause 6.1).
timeDensityTransformPrecoding	Time density (OFDM symbol level) of PT-RS for DFT-s-OFDM. If the field is absent, the UE applies value d1 (see TS 38.214 [19], clause 6.1).
transformPrecoderDisabled	Configuration of UL PTRS without transform precoder (with CP-OFDM).
transformPrecoderEnabled	Configuration of UL PTRS with transform precoder (DFT-S-OFDM).

– *PUCCH-Config*

The IE *PUCCH-Config* is used to configure UE specific PUCCH parameters (per BWP).

```

PUCCH-Config field descriptions
<i>dl-DataToUL-ACK, dl-DataToUL-ACK-DCI-1-2</i> List of timing for given PDSCH to the DL ACK (see TS 38.213 [13], clause 9.1.2). The field <i>dl-DataToUL-ACK</i> applies to DCI format 1_1 and the field <i>dl-DataToUL-ACK-DCI-1-2</i> applies to DCI format 1_2 (see TS 38.212 [17], clause 7.3.1 and TS 38.213 [13], clause 9.2.3). The <i>dl-DataToUL-ACK-v1700</i> is applicable for NTN and <i>dl-DataToUL-ACK-r17</i> is applicable for FR2-2. The <i>dl-DataToUL-ACK-r18</i> is applicable for ATG. If <i>dl-DataToUL-ACK-r16</i> or <i>dl-DataToUL-ACK-r17</i> or <i>dl-DataToUL-ACK-v1700</i> or <i>dl-DataToUL-ACK-r18</i> is signalled, UE shall ignore the <i>dl-DataToUL-ACK</i> (without suffix). The value -1 corresponds to "inapplicable value" for the case where the A/N feedback timing is not explicitly included at the time of scheduling PDSCH. The fields <i>dl-DataToUL-ACK-r17</i> and <i>dl-DataToUL-ACK-DCI-1-2-r17</i> are only applicable for SCS of 480 kHz or 960 kHz. The field <i>dl-DataToUL-ACK-r18</i> applies to DCI format 1_1 and the field <i>dl-DataToUL-ACK-DCI-1-2-r18</i> applies to DCI format 1_2 (see TS 38.212 [17], clause 7.3.1 and TS 38.213 [13], clause 9.2.3).
<i>dl-DataToUL-ACK-MulticastDCI-Format4-1</i> List of timing for given group-common PDSCH to the DL ACK (see TS 38.213 [13], clause 9.1.2). The field <i>dl-DataToUL-ACK-MulticastDciFormat4-1</i> applies to DCI format 4_1 for MBS multicast (see TS 38.212 [17], clause 7.3.1 and TS 38.213 [13], clause 9.2.3).
<i>dmrs-BundlingPUCCH-Config</i> Configuration of the parameters for DMRS bundling for PUCCH (see TS 38.214 [19], clause 6.1.7). DMRS bundling for PUCCH is not supported for PUCCH format 0/2. In this release, this is not applicable to FR2-2.
<i>dmrs-UplinkTransformPrecodingPUCCH</i> This field is used for PUCCH formats 3 and 4 according to TS 38.211, Clause 6.4.1.3.3.1.
<i>format0</i> Parameters that are common for all PUCCH resources of format 0.
<i>format1</i> Parameters that are common for all PUCCH resources of format 1.
<i>format2</i> Parameters that are common for all PUCCH resources of format 2.
<i>format3</i> Parameters that are common for all PUCCH resources of format 3.
<i>format4</i> Parameters that are common for all PUCCH resources of format 4.
<i>mappingPattern</i> Indicates whether the UE should follow Cyclical mapping pattern or Sequential mapping pattern for when a PUCCH resource used for repetitions of a PUCCH transmission includes first and second spatial settings for FR2, or first and second sets of power control parameters for FR1 (see TS 38.213 [13], clause 9.2.6).
<i>numberOfBitsForPUCCH-ResourceIndicatorDCI-1-2</i> Configuration of the number of bits for "PUCCH resource indicator" in DCI format 1_2 (see TS 38.212 [17], clause 7.3.1 and TS 38.213 [13], clause 9.2.3).
<i>powerControlSetInfoToAddModList</i> Configures power control sets for repetition of a PUCCH transmission in FR1. This field is not configured if <i>ul-powerControl</i> is configured in the <i>BWP-UplinkDedicated</i> in which the <i>PUCCH-Config</i> is included.
<i>pucch-PowerControl</i> Configures power control parameters PUCCH transmission.
<i>resourceGroupToAddModList, resourceGroupToReleaseList</i> Lists for adding and releasing groups of PUCCH resources that can be updated simultaneously for spatial relations with a MAC CE.
<i>resourceSetToAddModList, resourceSetToReleaseList</i> Lists for adding and releasing PUCCH resource sets (see TS 38.213 [13], clause 9.2).
<i>resourceToAddModList, resourceToAddModListExt, resourceToReleaseList</i> Lists for adding and releasing PUCCH resources applicable for the UL BWP and serving cell in which the <i>PUCCH-Config</i> is defined. The resources defined herein are referred to from other parts of the configuration to determine which resource the UE shall use for which report. If the network includes of <i>resourceToAddModListExt</i>, it includes the same number of entries, and listed in the same order, as in <i>resourceToAddModList</i>.

secondTPCFieldDCI-1-1, secondTPCFieldDCI-1-2

A second TPC field can be configured via RRC for DCI-1-1 and DCI-1-2. Each TPC field is for each closed-loop index value respectively (i.e., 1st /2nd TPC fields correspond to "closedLoopIndex" value = 0 and 1.

spatialRelationInfoToAddModList, spatialRelationInfoToAddModListSizeExt, spatialRelationInfoToAddModListExt

Configuration of the spatial relation between a reference RS and PUCCH. Reference RS can be SSB/CSI-RS/SRS. If the list has more than one element, MAC-CE selects a single element (see TS 38.321 [3], clause 5.18.8 and TS 38.213 [13], clause 9.2.2). The UE shall consider entries in *spatialRelationInfoToAddModList* and in *spatialRelationInfoToAddModListSizeExt* as a single list, i.e. an entry created using *spatialRelationInfoToAddModList* can be modified using *spatialRelationInfoToAddModListSizeExt* (or deleted using *spatialRelationInfoToReleaseListSizeExt*) and vice-versa. If the network includes *spatialRelationInfoToAddModListExt*, it includes the same number of entries, and listed in the same order, as in the concatenation of *spatialRelationInfoToAddModList* and of *spatialRelationInfoToAddModListSizeExt*. If *unifiedTCI-StateType* is configured for the serving cell, no element in this list is configured.

spatialRelationInfoToReleaseList, spatialRelationInfoToReleaseListSizeExt, spatialRelationInfoToReleaseListExt

Lists of spatial relation configurations between a reference RS and PUCCH to be released by the UE.

sps-PUCCH-AN-List

Indicates a list of PUCCH resources for DL SPS HARQ ACK. The field *maxPayloadSize* is absent for the first and the last *SPS-PUCCH-AN* in the list. If configured, this overrides *n1PUCCH-AN* in *SPS-config*.

sps-PUCCH-AN-ListMulticast

The field is used to configure the list of PUCCH resources per HARQ ACK codebook for MBS multicast.

subslotLengthForPUCCH

Indicates the sub-slot length for sub-slot based PUCCH feedback in number of symbols (see TS 38.213 [13], clause 9). Value *n2* corresponds to 2 symbols, value *n6* corresponds to 6 symbols, value *n7* corresponds to 7 symbols. For normal CP, the value is either *n2* or *n7*. For extended CP, the value is either *n2* or *n6*.

ul-AccessConfigListDCI-1-1, ul-AccessConfigListDCI-1-2

List of the combinations of cyclic prefix extension and UL channel access type (see TS 38.212 [17], clause 7.3.1) applicable, respectively, to DCI format 1_1 and DCI format 1_2. The fields *ul-AccessConfigListDCI-1-1-r16* and *ul-AccessConfigListDCI-1-2-r17* are only applicable for FR1 (see TS 38.212 [17], Table 7.3.1.2.2-6). The field *ul-AccessConfigListDCI-1-1-r17* indicates a list which only contains UL channel access types and is only applicable for FR2-2 (see TS 38.212 [17], Table 7.3.1.2.2-6A).

PUCCH-format3 field descriptions**nrofPRBs**

The supported values are 1,2,3,4,5,6,8,9,10,12,15 and 16. The UE shall ignore this field when *format-v1610* is configured.

<i>PUCCH-FormatConfig, PUCCH-FormatConfigExt</i> field descriptions	
<i>additionalDMRS</i>	If the field is present, the UE enables 2 DMRS symbols per hop of a PUCCH Format 3 or 4 if both hops are more than X symbols when FH is enabled (X=4). And it enables 4 DMRS symbols for a PUCCH Format 3 or 4 with more than 2X+1 symbols when FH is disabled (X=4). The field is not applicable for format 0, 1 and 2. See TS 38.213 [13], clause 9.2.2.
<i>interslotFrequencyHopping</i>	If the field is present, the UE enables inter-slot frequency hopping when PUCCH Format 0, 1, 2, 3 or 4 is repeated over multiple slots. For a PUCCH over multiple slots, the intra and inter slot frequency hopping cannot be enabled at the same time for a UE. See TS 38.213 [13], clause 9.2.6.
<i>maxCodeRate</i>	Max coding rate to determine how to feedback UCI on PUCCH for format 2, 3 or 4. The field is not applicable for format 0 and 1. See TS 38.213 [13], clause 9.2.5.
<i>maxCodeRateLP</i>	Max coding rate to determine how to feedback UCI on PUCCH for format 2, 3 or 4. The field is not applicable for format 0 and 1. This field configures additional max code rate in the second entry of <i>PUCCH-ConfigurationList-r16</i> for multiplexing low-priority (LP) HARQ-ACK and high-priority (HP) UCI in a PUCCH as described Clause 9.2.5.3 of TS 38.213 [13]. The field is absent for the first entry of <i>PUCCH-ConfigurationList-r16</i> .
<i>nrofSlots</i>	Number of slots with the same PUCCH. When the field is absent the UE applies the value <i>n1</i> . See TS 38.213 [13], clause 9.2.6.
<i>pi2BPSK</i>	If the field is present, the UE uses pi/2 BPSK for UCI symbols instead of QPSK for PUCCH. The field is not applicable for format 0, 1 and 2. See TS 38.213 [13], clause 9.2.5.
<i>rb-SetIndex</i>	Indicates the RB set where PUCCH resource is allocated.
<i>simultaneousHARQ-ACK-CSI</i>	If the field is present, the UE uses simultaneous transmission of CSI and HARQ-ACK feedback with or without SR with PUCCH Format 2, 3 or 4. See TS 38.213 [13], clause 9.2.5. When the field is absent the UE applies the value <i>off</i> . The field is not applicable for format 0 and 1.

<i>PUCCH-Resource, PUCCH-ResourceExt</i> field descriptions
<i>applyIndicatedTCI-State</i> This field indicates, for PUCCH transmission(s) corresponding to this PUCCH resource, if UE applies the first, the second or both "indicated" UL only TCI or joint TCI as specified in TS 38.213 9.2.2. For PUCCH resources belonging to a PUCCH group, network configures same value.
<i>format</i> Selection of the PUCCH format (format 0 – 4) and format-specific parameters, see TS 38.213 [13], clause 9.2. <i>format0</i> and <i>format1</i> are only allowed for a resource in a first PUCCH resource set. <i>format2</i> , <i>format3</i> and <i>format4</i> are only allowed for a resource in non-first PUCCH resource set. The network can only configure <i>format-v1610</i> when format is set to <i>format2</i> or <i>format3</i> . The network only configures <i>format-v1700</i> when format is set to <i>format0</i> , <i>format1</i> or <i>format4</i> .
<i>interlace0</i> This is the only interlace of interlaced PUCCH Format 0 and 1 and the first interlace for interlaced PUCCH Format 2 and 3.
<i>interlace1</i> A second interlace, in addition to interlace 0, as specified in TS 38.213 [13], clause 9.2.1. For 15kHz SCS, values {0..9} are applicable; for 30kHz SCS, values {0..4} are applicable. For 15kHz SCS, the values of <i>interlace1</i> shall satisfy $interlace1 = \text{mod}(interlace0 + X, 10)$ where $X=1, -1$, or 5.
<i>intraSlotFrequencyHopping</i> Enabling intra-slot frequency hopping, applicable for all types of PUCCH formats. For long PUCCH over multiple slots, the intra and inter slot frequency hopping cannot be enabled at the same time for a UE. See TS 38.213 [13], clause 9.2.1.
<i>nrofPRBs</i> Indicates the number of PRBs used per PUCCH resource for the PUCCH format, see TS 38.213 [13], clause 9.2.1. This field is applicable for PUCCH <i>format0</i> , <i>format1</i> , and <i>format4</i> in FR2-2. The supported values for <i>format4</i> are 1,2,3,4,5,6,8,9,10,12,15 and 16.
<i>multipanelSFN-Scheme</i> Parameter to configure multiple panel simultaneous uplink transmission SFN scheme for PUCCH resources, see TS 38.214 [19] clause 6.1.1.
<i>occ-Index</i> Indicates the orthogonal cover code index (see TS 38.213 [13], clause 9.2.1). This field is applicable when <i>useInterlacePUCCH-PUSCH-16</i> is configured.
<i>occ-Length</i> Indicates the orthogonal cover code length (see TS 38.213 [13], clause 9.2.1). This field is applicable when <i>useInterlacePUCCH-PUSCH-16</i> is configured.
<i>pucch-RepetitionNrofSlots</i> Configuration of PUCCH repetition factor per PUCCH resource with associated scheduling DCI corresponding to Rel-17 dynamic PUCCH repetition. For a PUCCH resource, if both the field <i>pucch-RepetitionNrofSlots</i> and the field <i>nrofSlots</i> are present, the field <i>nrofSlots</i> is ignored and apply the value of <i>pucch-RepetitionNrofSlots</i> corresponding to Rel-17 dynamic PUCCH repetition. If this field is absent in a PUCCH resource with associated scheduling DCI, the UE applies the value of field <i>nrofSlots</i> .
<i>pucch-ResourceId</i> Identifier of the PUCCH resource.
<i>secondHopPRB</i> Index of first PRB after frequency hopping of PUCCH. This value is applicable for intra-slot frequency hopping (see TS 38.213 [13], clause 9.2.1) or inter-slot frequency hopping (see TS 38.213 [13], clause 9.2.6).
<i>secondHopPRB-SBFD</i> Indicates the second hop PRB of the PUCCH resource in SBFD symbols. If not configured, the second hop PRB configured for non-SBFD symbols for the <i>PUCCH-Resource</i> is used for PUCCH transmissions in SBFD symbols associated with this <i>pucch-ResourceId</i> .
<i>startingPRB-SBFD</i> Indicates the starting PRB of the PUCCH resource in SBFD symbols. If not configured, starting PRB configured with <i>startingPRB</i> for non-SBFD symbols for the <i>PUCCH-Resource</i> is used for PUCCH transmissions in SBFD symbols associated with this <i>pucch-ResourceId</i> .

PUCCH-ResourceSet field descriptions**maxPayloadSize**

Maximum number of UCI information bits that the UE may transmit using this PUCCH resource set (see TS 38.213 [13], clause 9.2.1). In a PUCCH occurrence, the UE chooses the first of its *PUCCH-ResourceSet* which supports the number of bits that the UE wants to transmit. The field is absent in the first set (Set0) and in the last configured set since the UE derives the maximum number of UCI information bits as specified in TS 38.213 [13], clause 9.2.1. This field can take integer values that are multiples of 4.

resourceList

PUCCH resources of *format0* and *format1* are only allowed in the first PUCCH resource set, i.e., in a PUCCH-ResourceSet with *pucch-ResourceSetId* = 0. This set may contain between 1 and 32 resources. PUCCH resources of *format2*, *format3* and *format4* are only allowed in a *PUCCH-ResourceSet* with *pucch-ResourceSetId* > 0. If present, these sets contain between 1 and 8 resources each. The UE chooses a *PUCCH-Resource* from this list as specified in TS 38.213 [13], clause 9.2.3. Note that this list contains only a list of resource IDs. The actual resources are configured in *PUCCH-Config*.

Conditional Presence	Explanation
<i>PI2-BPSK</i>	The field is optionally present, Need R, if <i>format3</i> and/or <i>format4</i> are configured and <i>pi2BPSK</i> is configured in each of them. It is absent, Need R otherwise.

– **PUCCH-ConfigCommon**

The IE *PUCCH-ConfigCommon* is used to configure the cell specific PUCCH parameters.

PUCCH-ConfigCommon information element

```
-- ASN1START
-- TAG-PUCCH-CONFIGCOMMON-START

PUCCH-ConfigCommon ::=
    pucch-ResourceCommon          SEQUENCE {
        INTEGER (0..15)                OPTIONAL,  -- Cond InitialBWP-Only
        pucch-GroupHopping           ENUMERATED { neither, enable, disable },
        hoppingId                     INTEGER (0..1023)          OPTIONAL,  -- Need R
        p0-nominal                    INTEGER (-202..24)         OPTIONAL,  -- Need R
        ...,
        [[
            nrofPRBs                   INTEGER (1..16)           OPTIONAL,  -- Need R
            intra-SlotFH-r17           ENUMERATED {fromLowerEdge, fromUpperEdge}
                                         OPTIONAL,  -- Cond InitialBWP-RedCapOnly
            pucch-ResourceCommonRedCap-r17  INTEGER (0..15)      OPTIONAL,  -- Cond InitialBWP-RedCap
            additionalPRBOffset-r17      ENUMERATED {n2, n3, n4, n6, n8, n9, n10, n12}
                                         OPTIONAL,  -- Cond InitialBWP-RedCapOnly
        ]],
        [[
            p0-nominal-SBFD-r19         INTEGER (-202..24)       OPTIONAL,  -- Need R
        ]]
    }

-- TAG-PUCCH-CONFIGCOMMON-STOP
-- ASN1STOP
```

<i>PUCCH-ConfigCommon</i> field descriptions	
<i>additionalPRBOffset</i>	When intra-slot PUCCH frequency hopping within RedCap-specific initial UL BWP is disabled, each common PUCCH resource is mapped to a single PRB on one side of the UL BWP. This parameter determines an additional PRB offset in the PRB mapping for the PUCCH resource. If the field is not configured, the UE shall assume an additional PRB offset of zero.
<i>hoppingId</i>	Cell-specific scrambling ID for group hopping and sequence hopping if enabled, see TS 38.211 [16], clause 6.3.2.2.
<i>intra-SlotFH-r17</i>	In case a separate initial UL BWP is configured for (e)RedCap UEs, the presence of this parameter indicates whether intra-slot PUCCH frequency hopping within the separate initial UL BWP in the common PUCCH resource is enabled for (e)RedCap UEs. If this field is absent, intra-slot PUCCH frequency hopping within RedCap-specific initial UL BWP is enabled. If this field is present, intra-slot PUCCH frequency hopping within RedCap-specific initial UL BWP is disabled and each PUCCH resource is mapped to a single PRB on one side of the UL BWP and this parameter determines whether the PRB index in the PRB mapping is counted in increasing order from the lower edge or in decreasing order from the upper edge of the UL BWP.
<i>nrofPRBs</i>	Indicates the number of PRBs used per PUCCH resource for PUCCH format 0 and format 1 in FR2-2, see TS 38.213 [13], clause 9.2.1.
<i>p0-nominal</i>	Power control parameter P0 for PUCCH transmissions. Value in dBm. Only even values (step size 2) allowed (see TS 38.213 [13], clause 7.2).
<i>p0-nominal-SBFD</i>	Configures separate power control parameter P0 for PUCCH transmissions in SBFD symbols.
<i>pucch-GroupHopping</i>	Configuration of group- and sequence hopping for all the PUCCH formats 0, 1, 3 and 4. Value <i>neither</i> implies neither group or sequence hopping is enabled. Value <i>enable</i> enables group hopping and disables sequence hopping. Value <i>disable</i> disables group hopping and enables sequence hopping (see TS 38.211 [16], clause 6.3.2.2).
<i>pucch-ResourceCommon</i>	An entry into a 16-row table where each row configures a set of cell-specific PUCCH resources/parameters. The UE uses those PUCCH resources until it is provided with a dedicated <i>PUCCH-Config</i> (e.g. during initial access) on the initial uplink BWP. Once the network provides a dedicated <i>PUCCH-Config</i> for that bandwidth part the UE applies that one instead of the one provided in this field (see TS 38.213 [13], clause 9.2).
<i>pucch-ResourceCommonRedCap</i>	An entry into a 16-row table where each row configures a set of cell-specific PUCCH resources/parameters for (e)RedCap UEs. The UE uses those PUCCH resources until it is provided with a dedicated <i>PUCCH-Config</i> (e.g. during initial access) on the initial uplink BWP. Once the network provides a dedicated <i>PUCCH-Config</i> for that bandwidth part the UE applies that one instead of the one provided in this field (see TS 38.213 [13], clause 9.2).

Conditional Presence	Explanation
<i>InitialBWP-Only</i>	The field is mandatory present in the <i>PUCCH-ConfigCommon</i> of the initial BWP (BWP#0) in SIB1. It is absent in other BWPs including the RedCap-specific initial uplink BWP, if configured.
<i>InitialBWP-RedCap</i>	The field is mandatory present in the <i>PUCCH-ConfigCommon</i> of the RedCap-specific initial BWP. It is optional present, Need R, in the <i>PUCCH-ConfigCommon</i> of the initial BWP configured by <i>initialUplinkBWP</i> . It is absent in other BWPs.
<i>InitialBWP-RedCapOnly</i>	The field is optional present, Need S, in the <i>PUCCH-ConfigCommon</i> of the RedCap-specific initial BWP. It is absent in other BWPs.

– *PUCCH-ConfigurationList*

The IE *PUCCH-ConfigurationList* is used to configure UE specific PUCCH parameters (per BWP) for two simultaneously constructed HARQ-ACK codebooks. See TS 38.213 [13], clause 9.1.

PUCCH-ConfigurationList information element

```
-- ASN1START
-- TAG-PUCCH-CONFIGURATIONLIST-START

PUCCH-ConfigurationList-r16 ::= SEQUENCE (SIZE (1..2)) OF PUCCH-Config

-- TAG-PUCCH-CONFIGURATIONLIST-STOP
-- ASN1STOP
```

– PUCCH-CSI-Resource

The IE *PUCCH-CSI-Resource* is used to indicate a PUCCH resource to use for reporting on PUCCH.

PUCCH-CSI-Resource information element

```
-- ASN1START
-- TAG-PUCCH-CSI-RESOURCE-START

PUCCH-CSI-Resource ::= SEQUENCE {
    uplinkBandwidthPartId      BWP-Id,
    pucch-Resource              PUCCH-ResourceId
}

PUCCH-CSI-ResourceExt-v1900 ::= SEQUENCE {
    symbolType-r19              ENUMERATED {sbfd, non-sbfd} OPTIONAL, -- Need R
    ...
}

-- TAG-PUCCH-CSI-RESOURCE-STOP
-- ASN1STOP
```

PUCCH-CSI-Resource field descriptions
pucch-Resource PUCCH resource for the associated uplink BWP. Only PUCCH-Resource of format 2, 3 and 4 is supported. The actual PUCCH-Resource is configured in <i>PUCCH-Config</i> and referred to by its ID. When two <i>PUCCH-Config</i> are configured within <i>PUCCH-ConfigurationList</i>, <i>PUCCH-ResourceId</i> in a <i>PUCCH-CSI-Resource</i> refers to a PUCCH-Resource in the <i>PUCCH-Config</i> used for HARQ-ACK with low priority.
symbolType Indicates the valid symbol type for PUCCH carrying P-CSI or SP-CSI. The network configures this field if the transmissions are restricted to SBFD symbols only or non-SBFD symbols only for the UL BWP. The network does not configure this field if the transmissions can be in SBFD symbols and non-SBFD symbols in different slots for the UL BWP. (see TS 38.214 [19], clause 7.2).

– PUCCH-PathlossReferenceRS-Id

The IE *PUCCH-PathlossReferenceRS-Id* is an ID for a reference signal (RS) configured as PUCCH pathloss reference (see TS 38.213 [13], clause 7.2).

***PUCCH-PathlossReferenceRS-Id* information element**

```

-- ASN1START
-- TAG-PUCCH-PATHLOSSREFERENCERS-ID-START

PUCCH-PathlossReferenceRS-Id ::=          INTEGER (0..maxNrofPUCCH-PathlossReferenceRSs-1)

PUCCH-PathlossReferenceRS-Id-v1610 ::=    INTEGER (maxNrofPUCCH-PathlossReferenceRSs..maxNrofPUCCH-PathlossReferenceRSs-1-r16)

PUCCH-PathlossReferenceRS-Id-r17 ::=      INTEGER (0..maxNrofPUCCH-PathlossReferenceRSs-1-r17)

-- TAG-PUCCH-PATHLOSSREFERENCERS-ID-STOP
-- ASN1STOP

```

– *PUCCH-PowerControl*

The IE *PUCCH-PowerControl* is used to configure UE-specific parameters for the power control of PUCCH.

***PUCCH-PowerControl* information element**

```

-- ASN1START
-- TAG-PUCCH-POWERCONTROL-START
PUCCH-PowerControl ::=
    SEQUENCE {
        deltaF-PUCCH-f0          INTEGER (-16..15)                OPTIONAL, -- Need R

```

P0-PUCCH field descriptions	
p0-PUCCH-Value	
P0 value for PUCCH with 1dB step size.	

PUCCH-PowerControl field descriptions	
<i>deltaF-PUCCH-f0</i>	deltaF for PUCCH format 0 with 1dB step size (see TS 38.213 [13], clause 7.2).
<i>deltaF-PUCCH-f1</i>	deltaF for PUCCH format 1 with 1dB step size (see TS 38.213 [13], clause 7.2).
<i>deltaF-PUCCH-f2</i>	deltaF for PUCCH format 2 with 1dB step size (see TS 38.213 [13], clause 7.2).
<i>deltaF-PUCCH-f3</i>	deltaF for PUCCH format 3 with 1dB step size (see TS 38.213 [13], clause 7.2).
<i>deltaF-PUCCH-f4</i>	deltaF for PUCCH format 4 with 1dB step size (see TS 38.213 [13], clause 7.2).
<i>p0-Set</i>	A set with dedicated P0 values for PUCCH, i.e., {P01, P02,... } (see TS 38.213 [13], clause 7.2). This field is not configured if <i>unifiedTCI-StateType</i> is configured for the serving cell.
<i>pathlossReferenceRSs, pathlossReferenceRSs-v1610</i>	A set of Reference Signals (e.g. a CSI-RS config or a SS block) to be used for PUCCH pathloss estimation. Up to <i>maxNrofPUCCH-PathlossReference-RSs</i> may be configured. If the field is not configured, the UE uses the SSB as reference signal (see TS 38.213 [13], clause 7.2). The set includes Reference Signals indicated in <i>pathlossReferenceRSs</i> (without suffix) and in <i>pathlossReferenceRSs-v1610</i> . The UE maintains <i>pathlossReferenceRSs</i> and <i>pathlossReferenceRSs-v1610</i> separately: Receiving <i>pathlossReferenceRSs-v1610</i> set to <i>release</i> releases only the entries that were configured by <i>pathlossReferenceRSs-v1610</i> , and receiving <i>pathlossReferenceRSs-v1610</i> set to <i>setup</i> replaces only the entries that were configured by <i>pathlossReferenceRSs-v1610</i> with the newly signalled entries. Neither the field <i>pathlossReferenceRSs</i> (without suffix) nor <i>pathlossReferenceRSs-v1610</i> are configured if <i>unifiedTCI-StateType</i> is configured for the serving cell.
<i>twoPUCCH-PC-AdjustmentStates</i>	Number of PUCCH power control adjustment states maintained by the UE (i.e., <i>g(i)</i>). If the field is present (<i>n2</i>) the UE maintains two power control states (i.e., <i>g(i,0)</i> and <i>g(i,1)</i>). If the field is absent, it maintains one power control state (i.e., <i>g(i,0)</i>) (see TS 38.213 [13], clause 7.2).

– PUCCH-SpatialRelationInfo

The IE *PUCCH-SpatialRelationInfo* is used to configure the spatial setting for PUCCH transmission and the parameters for PUCCH power control, see TS 38.213, [13], clause 9.2.2.

PUCCH-SpatialRelationInfo information element

```
-- ASN1START
-- TAG-PUCCH-SPATIALRELATIONINFO-START

PUCCH-SpatialRelationInfo ::= SEQUENCE {
    pucch-SpatialRelationInfoId PUCCH-SpatialRelationInfoId,
    servingCellId ServCellIndex OPTIONAL, -- Need S
    referenceSignal CHOICE {
        ssb-Index SSB-Index,

    uplinkBWP         BWP-Id
}

-- TAG-PUCCH-SPATIALRELATIONINFO-STOP
-- ASN1STOP
```

PUCCH-SpatialRelationInfo field descriptions
pucch-PathLossReferenceRS-Id When <i>pucch-PathLossReferenceRS-Id-v1610</i> is configured, the UE shall ignore <i>pucch-PathLossReferenceRS-Id</i> (without suffix).
pucch-SpatialRelationInfoId When <i>pucch-SpatialRelationInfoId-v1610</i> is configured, the UE shall ignore <i>pucch-SpatialRelationInfoId</i> (without suffix). If <i>pucch-SpatialRelationInfoId-v1610</i> is absent, the UE shall use the <i>pucch-SpatialRelationInfoId</i> (without suffix).
servingCellId If the field is absent, the UE applies the <i>ServCellId</i> of the serving cell in which this <i>PUCCH-SpatialRelationInfo</i> is configured

– PUCCH-SpatialRelationInfo-Id

The IE *PUCCH-SpatialRelationInfo-Id* is used to identify a *PUCCH-SpatialRelationInfo*

PUCCH-SpatialRelationInfo-Id information element

```
-- ASN1START
-- TAG-PUCCH-SPATIALRELATIONINFO-START

PUCCH-SpatialRelationInfoId ::=
    INTEGER (1..maxNrofSpatialRelationInfos)

PUCCH-SpatialRelationInfoId-r16 ::=
    INTEGER (1..maxNrofSpatialRelationInfos-r16)

PUCCH-SpatialRelationInfoId-v1610 ::=
    INTEGER (maxNrofSpatialRelationInfos-plus-1..maxNrofSpatialRelationInfos-r16)

-- TAG-PUCCH-SPATIALRELATIONINFO-STOP
-- ASN1STOP
```

– *PUCCH-TPC-CommandConfig*

The IE *PUCCH-TPC-CommandConfig* is used to configure the UE for extracting TPC commands for PUCCH from a group-TPC messages on DCI.

***PUCCH-TPC-CommandConfig* information element**

```
-- ASN1START
-- TAG-PUCCH-TPC-COMMANDCONFIG-START

PUCCH-TPC-CommandConfig ::=
    SEQUENCE {
        tpc-IndexPCell          INTEGER (1..15)          OPTIONAL, -- Cond PDCCH-OfSpCell
        tpc-IndexPUCCH-SCell    INTEGER (1..15)          OPTIONAL, -- Cond PDCCH-ofSpCellOrPUCCH-SCell
        ...,
        [[

        ]]
    }

-- TAG-PUCCH-TPC-COMMANDCONFIG-STOP
-- ASN1STOP
```

<i>PUCCH-TPC-CommandConfig</i> field descriptions	
<i>tpc-IndexPCell</i>	An index determining the position of the first bit of TPC command (applicable to the SpCell) inside the DCI format 2-2 payload.
<i>tpc-IndexPUCCH-SCell</i>	An index determining the position of the first bit of TPC command (applicable to the PUCCH SCell) inside the DCI format 2-2 payload.
<i>tpc-IndexPUCCH-sSCell, tpc-IndexPUCCH-sSCellSecondaryPUCCHgroup</i>	An index determining the position of the first bit of TPC command (applicable to the alternative PUCCH cell for PUCCH cell switching) inside the DCI format 2-2 payload, for the primary PUCCH group and the secondary PUCCH group respectively.

Conditional Presence	Explanation
<i>PDCCH-OfSpCell</i>	The field is mandatory present if the <i>PUCCH-TPC-CommandConfig</i> is provided in the <i>PDCCH-Config</i> for the SpCell. Otherwise, the field is absent, Need R.
<i>PDCCH-ofSpCellOrPUCCH-SCell</i>	The field is mandatory present if the <i>PUCCH-TPC-CommandConfig</i> is provided in the <i>PDCCH-Config</i> for the PUCCH-SCell. The field is optionally present, need R, if the UE is configured with a PUCCH SCell in this cell group and if the <i>PUCCH-TPC-CommandConfig</i> is provided in the <i>PDCCH-Config</i> for the SpCell. Otherwise, the field is absent, Need R.
<i>twoPUCCHgroup</i>	This field is optionally present, Need R, if secondary PUCCH group is configured. It is absent otherwise.

– *PUSCH-Config*

The IE *PUSCH-Config* is used to configure the UE specific PUSCH parameters applicable to a particular BWP.

<i>PUSCH-Config</i> field descriptions
<i>antennaPortsFieldPresenceDCI-0-2</i> Configure the presence of "Antenna ports" field in DCI format 0_2. When the field is configured, then the "Antenna ports" field is present in DCI format 0_2. Otherwise, the field size is set to 0 for DCI format 0_2 (See TS 38.212 [17], clause 7.3.1.1.3). If neither <i>dmrs-UplinkForPUSCH-MappingTypeA-DCI-0-2</i> nor <i>dmrs-UplinkForPUSCH-MappingTypeB-DCI-0-2</i> is configured, this field is absent.
<i>applyIndicatedTCI-State</i> This field indicates, for a PUSCH transmission, if UE applies the first or the second "indicated" UL only TCI or joint TCI as specified in TS 38.214 [19], clause 6.1.
<i>availableSlotCounting</i> Indicate whether PUSCH repetitions counted on the basis of available slots is enabled. If the field is absent, PUSCH repetitions counted on the basis of available slots is disabled.
<i>betaOffsetsCrossPrio0</i>, <i>betaOffsetsCrossPrio1</i>, <i>betaOffsetsCrossPrio0DCI-0-2</i>, <i>betaOffsetsCrossPrio1DCI-0-2</i> Selection between and configuration of dynamic and semi-static beta-offset for multiplexing HARQ-ACK on dynamically scheduled PUSCH with different priorities, see TS 38.213 [13], clause 9.3. The field <i>betaOffsetsCrossPrio0</i> indicates multiplexing low priority (LP) HARQ-ACK on dynamically scheduled high priority (HP) PUSCH. The field <i>betaOffsetsCrossPrio1</i> indicates multiplexing HP HARQ-ACK on dynamically scheduled LP PUSCH. The field <i>betaOffsetsCrossPrio0DCI-0-2</i> indicates multiplexing LP HARQ-ACK on dynamically scheduled HP PUSCH by DCI format 0_2. The field <i>betaOffsetsCrossPrio1DCI-0-2</i> indicates multiplexing HP HARQ-ACK on dynamically scheduled LP PUSCH by DCI format 0_2.
<i>codebookSubset</i>, <i>codebookSubsetDCI-0-2</i> Subset of PMIs addressed by TPMI, where PMIs are those supported by UEs with maximum coherence capabilities (see TS 38.214 [19], clause 6.1.1.1). The field <i>codebookSubset</i> applies to DCI formats 0_1 and 0_3, and the field <i>codebookSubsetDCI-0-2</i> applies to DCI format 0_2 (see TS 38.214 [19], clause 6.1.1.1).
<i>codebookTypeUL</i> Configures a codebook and the corresponding number of antenna port groups for codebook-based transmission of PUSCH with 8 antenna ports, see TS 38.211 [16], tables 6.3.1.5-9 to 6.3.1.5-47, and table 6.3.1.5-8 respectively). The values <i>ng1n4n1</i> and <i>ng1n2n2</i> correspond to codebooks with one antenna port group (Ng=1), while <i>ng2</i> , <i>ng4</i> , and <i>ng8</i> correspond to codebooks with Ng=2, 4, and 8 antenna port groups, respectively.
<i>dataScramblingIdentityPUSCH</i> Identifier used to initialise data scrambling (c_init) for PUSCH. If the field is absent, the UE applies the physical cell ID. (see TS 38.211 [16], clause 6.3.1.1).
<i>dmrs-BundlingPUSCH-Config</i> Configure the parameters for DMRS bundling for PUSCH (see TS 38.214 [19], clause 6.1.7). In this release, this is not applicable to FR2-2.
<i>dmrs-SequenceInitializationDCI-0-2</i> Configure whether the field "DMRS Sequence Initialization" is present or not in DCI format 0_2. If the field is absent, then 0 bit for the field "DMRS Sequence Initialization" in DCI format 0_2. If the field is present, then the number of bits is determined in the same way as DCI format 0_1 (see TS 38.212 [17], clause 7.3.1).
<i>dmrs-UplinkForPUSCH-MappingTypeA</i>, <i>dmrs-UplinkForPUSCH-MappingTypeA-DCI-0-2</i> DMRS configuration for PUSCH transmissions using PUSCH mapping type A (chosen dynamically via <i>PUSCH-TimeDomainResourceAllocation</i>). Only the fields <i>dmrs-Type</i> , <i>dmrs-AdditionalPosition</i> and <i>maxLength</i> may be set differently for mapping type A and B. The field <i>dmrs-UplinkForPUSCH-MappingTypeA</i> applies to DCI formats 0_1 and 0_3, and the field <i>dmrs-UplinkForPUSCH-MappingTypeA-DCI-0-2</i> applies to DCI format 0_2 (see TS 38.212 [17], clause 7.3.1).
<i>dmrs-UplinkForPUSCH-MappingTypeB</i>, <i>dmrs-UplinkForPUSCH-MappingTypeB-DCI-0-2</i> DMRS configuration for PUSCH transmissions using PUSCH mapping type B (chosen dynamically via <i>PUSCH-TimeDomainResourceAllocation</i>). Only the fields <i>dmrs-Type</i> , <i>dmrs-AdditionalPosition</i> and <i>maxLength</i> may be set differently for mapping type A and B. The field <i>dmrs-UplinkForPUSCH-MappingTypeB</i> applies to DCI formats 0_1 and 0_3, and the field <i>dmrs-UplinkForPUSCH-MappingTypeB-DCI-0-2</i> applies to DCI format 0_2 (see TS 38.212 [17], clause 7.3.1).
<i>dynamicTransformPrecoderFieldPresenceDCI-0-1</i> Configure the presence of "Dynamic Transform Precoder" field in DCI format 0_1. When the field is configured, then the "Dynamic Transform Precoder" field is present in DCI format 0_1. Otherwise, the field size is set to 0 for DCI format 0_1 (See TS 38.212 [17]). The network ensures <i>dynamicTransformPrecoderFieldPresenceDCI-0-1-r18</i> and <i>twoPHRMode-r17</i> cannot be configured at the same time for a UE.
<i>dynamicTransformPrecoderFieldPresenceDCI-0-2</i> Configure the presence of "Dynamic Transform Precoder" field in DCI format 0_2. When the field is configured, then the "Dynamic Transform Precoder" field is present in DCI

format 0_2. Otherwise, the field size is set to 0 for DCI format 0_2 (See TS 38.212 [17]). The network ensures <i>dynamicTransformPrecoderFieldPresenceDCI-0-2-r18</i> and <i>twoPHRMode-r17</i> cannot be configured at the same time for a UE.
frequencyHopping The value <i>intraSlot</i> enables 'Intra-slot frequency hopping' and the value <i>interSlot</i> enables 'Inter-slot frequency hopping'. If the field is absent, frequency hopping is not configured for 'pusch-RepTypeA' (see TS 38.214 [19], clause 6.3). The field <i>frequencyHopping</i> applies to DCI formats 0_0, 0_1 and 0_3 for 'pusch-RepTypeA'.
frequencyHoppingDCI-0-1 Indicates the frequency hopping scheme for DCI format 0_1 when <i>pusch-RepTypeIndicatorDCI-0-1</i> is set to 'pusch-RepTypeB'. The value <i>interRepetition</i> enables 'Inter-repetition frequency hopping', and the value <i>interSlot</i> enables 'Inter-slot frequency hopping'. If the field is absent, frequency hopping is not configured for DCI format 0_1 for 'pusch-RepTypeB' (see TS 38.214 [19], clause 6.1).
frequencyHoppingDCI-0-2 Indicate the frequency hopping scheme for DCI format 0_2. The value <i>intraSlot</i> enables 'intra-slot frequency hopping', and the value <i>interRepetition</i> enables 'Inter-repetition frequency hopping', and the value <i>interSlot</i> enables 'Inter-slot frequency hopping'. When <i>pusch-RepTypeIndicatorDCI-0-2</i> is not set to 'pusch-RepTypeB', the frequency hopping scheme can be chosen between 'intra-slot frequency hopping and 'inter-slot frequency hopping' if enabled. When <i>pusch-RepTypeIndicatorDCI-0-2</i> is set to 'pusch-RepTypeB', the frequency hopping scheme can be chosen between 'inter-repetition frequency hopping' and 'inter-slot frequency hopping' if enabled. If the field is absent, frequency hopping is not configured for DCI format 0_2 (see TS 38.214 [19], clause 6.3).
frequencyHoppingOffsetLists, frequencyHoppingOffsetListsDCI-0-2 Set of frequency hopping offsets used when frequency hopping is enabled for granted transmission (not msg3) and type 2 configured grant activation (see TS 38.214 [19], clause 6.3). The field <i>frequencyHoppingOffsetLists</i> applies to DCI formats 0_0, 0_1 and 0_3, and the field <i>frequencyHoppingOffsetListsDCI-0-2</i> applies to DCI format 0_2 (see TS 38.214 [19], clause 6.3).
frequencyHoppingOffsetLists-SBFD, frequencyHoppingOffsetListsDCI-0-2-SBFD Configure the frequency hopping offset lists for PUSCH scheduled by DCI and Type 2 configured grant PUSCH in SBFD symbols, and the field <i>frequencyHoppingOffsetListsDCI-0-2-SBFD</i> applies to DCI format 0_2 (see TS 38.214 [19], clause 6.3.3).
harq-ProcessNumberSizeDCI-0-1-Ext Configure the number of bits for the field "HARQ process number" in DCI format 0_1 in TN (see TS 38.212 [17], clause 7.3.1). This field can only be configured when the maximum number of layers configured for PUSCH is no more than 4.
harq-ProcessNumberSizeDCI-0-2 Configure the number of bits for the field "HARQ process number" in DCI format 0_2 (see TS 38.212 [17], clause 7.3.1). Only one of this field and <i>harq-ProcessNumberSizeDCI-0-2-Ext</i> is configured by network.
harq-ProcessNumberSizeDCI-0-2-Ext Configure the number of bits for the field "HARQ process number" in DCI format 0_2 for TN (see TS 38.212 [17], clause 7.3.1). This field can only be configured when the maximum number of layers configured for PUSCH is no more than 4. Only one of this field and <i>harq-ProcessNumberSizeDCI-0-2</i> is configured by network.
invalidSymbolPattern Indicates one pattern for invalid symbols for PUSCH transmission repetition type B applicable to both DCI format 0_1 and 0_2. If <i>InvalidSymbolPattern</i> is not configured, semi-static flexible symbols are used for PUSCH. Segmentation occurs only around semi-static DL symbols (see TS 38.214 [19] clause 6.1).
invalidSymbolPatternIndicatorDCI-0-1, invalidSymbolPatternIndicatorDCI-0-2 Indicates the presence of an additional bit in the DCI format 0_1/0_2. If <i>invalidSymbolPattern</i> is absent, then both <i>invalidSymbolPatternIndicatorDCI-0-1</i> and <i>invalidSymbolPatternIndicatorDCI-0-2</i> are absent. The field <i>invalidSymbolPatternIndicatorDCI-0-1</i> applies to the DCI format 0_1 and the field <i>invalidSymbolPatternIndicatorDCI-0-2</i> applies to DCI format 0_2 (see TS 38.214 [19] clause 6.1). If the field is absent, the UE behaviour is specified in TS 38.214 [19], clause 6.1.2.1.
mappingPattern Indicates whether the UE should follow Cyclical mapping pattern or Sequential mapping pattern for when two SRS resource sets are configured in <i>srs-ResourceSetToAddModList</i> or <i>srs-ResourceSetToAddModListDCI-0-2</i> with usage 'codebook' or 'noncodebook' for PUSCH transmission and the PUSCH transmission occasions are associated with both SRS resource sets.
maxRank, maxRankDCI-0-2 Subset of PMIs addressed by TRIs from 1 to ULmaxRank (see TS 38.214 [19], clause 6.1.1.1). The field <i>maxRank</i> applies to DCI formats 0_1 and 0_3, and the field

<i>maxRankDCI-0-2</i> applies to DCI format 0_2 (see TS 38.214 [19], clause 6.1.1.1). If network configures <i>maxRank-v1810</i> UE ignores <i>maxRank</i> (without suffix).
<i>mcs-Table, mcs-TableFormat0-2</i> Indicates which MCS table the UE shall use for PUSCH without transform precoder (see TS 38.214 [19], clause 6.1.4.1). If the field is absent the UE applies the value 64QAM. The field <i>mcs-Table</i> applies to DCI formats 0_0, 0_1 and 0_3, and the field <i>mcs-TableDCI-0-2</i> applies to DCI format 0_2 (see TS 38.214 [19], clause 6.1.4.1).
<i>mcs-TableTransformPrecoder, mcs-TableTransformPrecoderDCI-0-2</i> Indicates which MCS table the UE shall use for PUSCH with transform precoding (see TS 38.214 [19], clause 6.1.4.1). If the field is absent the UE applies the value 64QAM. The field <i>mcs-TableTransformPrecoder</i> applies to DCI formats 0_0, 0_1 and 0_3, and the field <i>mcs-TableTransformPrecoderDCI-0-2</i> applies to DCI format 0_2 (see TS 38.214 [19], clause 6.1.4.1).
<i>mg-CancellationDCI-0-1</i> Indicates the presence of <i>Measurement gap cancellation</i> in DCI format 0_1 to indicate whether TX/RX is enabled in the gap as specified in TS 38.212 [17].
<i>mg-CancellationDCI-0-2</i> Indicates the presence of <i>Measurement gap cancellation</i> in DCI format 0_2 to indicate whether TX/RX is enabled in the gap as specified in TS 38.212 [17].
<i>mg-CancellationDCI-0-3</i> Indicates the presence of <i>Measurement gap cancellation</i> in DCI format 0_3 to indicate whether TX/RX is enabled in the gap as specified in TS 38.212 [17]. The field could only be configured if the co-scheduled cells are intra-band and have the same sub-carrier spacing.
<i>minimumSchedulingOffsetK2</i> List of minimum K2 values. Minimum K2 parameter denotes minimum applicable value(s) for the <i>Time domain resource assignment</i> table for PUSCH (see TS 38.214 [19], clause 6.1.2.1).
<i>mpe-ResourcePoolToAddModList</i> List of SSB/CSI-RS resources for P-MPR reporting. Each resource is configured with serving cell index where the resource is configured for the UE. The <i>additionalPCI</i> is configured only if the resource is SSB. For each resource, if neither <i>cell</i> nor <i>additionalPCI</i> is present, the SSB/CSI-RS resource is from the serving cell where the <i>PUSCH-Config</i> is configured.
<i>multipanelSchemeSDM</i> Configures UE with a multiple panel simultaneous uplink transmission SDM scheme for PUSCH, as specified in TS 38.214 [19], clause 6.1. Network does not configure <i>multipanelSchemeSDM</i> with <i>multipanelSchemeSFN</i> . When this parameter is configured, two SRS resource sets with <i>usage</i> for <i>codebook</i> or <i>noncodebook</i> are configured in <i>srs-ResourceSetToAddModList</i> or <i>srs-ResourceSetToAddModListDCI-0-2</i> .
<i>multipanelSchemeSFN</i> Configures UE with a multiple panel simultaneous uplink transmission SFN scheme for PUSCH, as specified in TS 38.214 [19], clause 6.1. Network does not configure <i>multipanelSchemeSFN</i> with <i>multipanelSchemeSDM</i> . When this parameter is configured, two SRS resource sets with <i>usage</i> for <i>codebook</i> or <i>noncodebook</i> are configured in <i>srs-ResourceSetToAddModList</i> or <i>srs-ResourceSetToAddModListDCI-0-2</i> .
<i>numberOfBitsForRV-DCI-0-2</i> Configures the number of bits for "Redundancy version" in the DCI format 0_2 (see TS 38.212 [17], clause 7.3.1 and TS 38.214 [19], clause 6.1.2.1).
<i>numberOfInvalidSymbolsForDL-UL-Switching</i> Indicates the number of symbols after the last semi-static DL symbol that are invalid symbols for PUSCH repetition Type B. If it is absent, no symbol is explicitly defined for DL-to-UL switching (see TS 38.214 [19], clause 6.1).
<i>priorityIndicatorDCI-0-1, priorityIndicatorDCI-0-2</i> Configures the presence of "priority indicator" in DCI format 0_1/0_2. When the field is absent in the IE, then the UE shall apply 0 bit for "Priority indicator" in DCI format 0_1/0_2. The field <i>priorityIndicatorDCI-0-1</i> applies to DCI format 0_1 and the field <i>priorityIndicatorDCI-0-2</i> applies to DCI format 0_2 (see TS 38.212 [17] clause 7.3.1 and TS 38.213 [13] clause 9).
<i>pusch-AggregationFactor</i> Number of repetitions for data (see TS 38.214 [19], clause 6.1.2.1). If the field is absent the UE applies the value 1.
<i>pusch-MutingResources</i> Configures the time location and frequency location of UL muting resources for dynamic grant PUSCH transmission and Type 2 configured grant PUSCH transmission.
<i>pusch-PowerControl</i> Configures power control parameters PUSCH transmission.

pusch-RepTypeIndicatorDCI-0-1, pusch-RepTypeIndicatorDCI-0-2

Indicates whether UE follows the behavior for "PUSCH repetition type A" or the behavior for "PUSCH repetition type B" for the PUSCH scheduled by DCI format 0_1/0_2 and for Type 2 CG associated with the activating DCI format 0_1/0_2. The value *pusch-RepTypeA* enables the 'PUSCH repetition type A' and the value *pusch-RepTypeB* enables the 'PUSCH repetition type B'. The field *pusch-RepTypeIndicatorDCI-0-1* applies to DCI format 0_1 and the field *pusch-RepTypeIndicatorDCI-0-2* applies to DCI format 0_2 (see TS 38.214 [19], clause 6.1.2.1).

pusch-TimeDomainAllocationList

List of time domain allocations for timing of UL assignment to UL data (see TS 38.214 [19], table 6.1.2.1.1-1). The field *pusch-TimeDomainAllocationList* applies to DCI format 0_0, or DCI formats 0_1 and 0_3 when the field *pusch-TimeDomainAllocationListDCI-0-1* is not configured (see TS 38.214 [19], table 6.1.2.1.1-1 and tables 6.1.2.1.1-1A and 6.1.2.1.1-1C). The network does not configure the *pusch-TimeDomainAllocationList* (without suffix) simultaneously with the *pusch-TimeDomainAllocationListDCI-0-2-r16* or *pusch-TimeDomainAllocationListDCI-0-1-r16* or *pusch-TimeDomainAllocationListForMultiPUSCH-r16*.

pusch-TimeDomainAllocationListDCI-0-1

Configuration of the time domain resource allocation (TDRA) table for DCI formats 0_1 and 0_3 (see TS 38.214 [19], clause 6.1, tables 6.1.2.1.1-1A and 6.1.2.1.1-1C).

pusch-TimeDomainAllocationListDCI-0-2

Configuration of the time domain resource allocation (TDRA) table for DCI format 0_2 (see TS 38.214 [19], clause 6.1.2, table 6.1.2.1.1-1B).

pusch-TimeDomainAllocationListForMultiPUSCH, pusch-TimeDomainAllocationListForMultiPUSCH-DCI-0-3

Configuration of the time domain resource allocation (TDRA) table for multiple PUSCH (see TS 38.214 [19], clause 6.1.2). The network configures at most 64 rows in this TDRA table in *PUSCH-TimeDomainResourceAllocationList-r16* configured by this field. This field is not configured simultaneously with *pusch-AggregationFactor* if *extendedK2* is not configured. The network does not configure the *pusch-TimeDomainAllocationListForMultiPUSCH-r16* simultaneously with the *pusch-TimeDomainAllocationListDCI-0-1-r16*. The network does not configure the *pusch-TimeDomainAllocationListForMultiPUSCH-r16* simultaneously with the *numberOfSlotsTBoMS-r17*. For a cell within a cell set configured to be schedulable by a DCI format 0_3, the network does not configure *pusch-TimeDomainAllocationListForMultiPUSCH-DCI-0-3* simultaneously with the *numberOfSlotsTBoMS-r17* and/or *pusch-AggregationFactor*.

rbg-Size

Selection between configuration 1 and configuration 2 for RBG size for PUSCH except PUSCH scheduled by DCI format 0_3. The UE does not apply this field if *resourceAllocation* is set to *resourceAllocationType1*. Otherwise, the UE applies the value *config1* when the field is absent (see TS 38.214 [19], clause 6.1.2.2.1).

resourceAllocation, resourceAllocationDCI-0-2

Configuration of resource allocation type 0 and resource allocation type 1 for non-fallback DCI (see TS 38.214 [19], clause 6.1.2). The field *resourceAllocation* applies to DCI format 0_1 and the field *resourceAllocationDCI-0-2* applies to DCI format 0_2 (see TS 38.214 [19], clause 6.1.2).

resourceAllocationType1GranularityDCI-0-2

Configures the scheduling granularity applicable for both the starting point and length indication for resource allocation type 1 in DCI format 0_2. If this field is absent, the granularity is 1 PRB (see TS 38.214 [19], clause 6.1.2.2.2).

secondTPCFieldDCI-0-1, secondTPCFieldDCI-0-2

A second TPC field can be configured via RRC for DCI-0-1 and DCI-0-2. Each TPC field is for each closed-loop index value respectively (i.e., 1st /2nd TPC fields correspond to "closedLoopIndex" value = 0 and 1,

sequenceOffsetForRV

Configures the RV offset for the starting RV for the first repetition (first actual repetition in PUSCH repetition Type B) towards the second 'SRS resource set' for PUSCH configured in either *srs-ResourceSetToAddModList* or *srs-ResourceSetToAddModListDCI-0-2* with usage 'codebook' or 'noncodebook'.

sTx-2Panel

Parameter to enable PUSCH+PUSCH multiple panel simultaneous uplink transmission, as specified in TS 38.214 [19], clause 6.1.

tp-pi2BPSK

Enables pi/2-BPSK modulation with transform precoding if the field is present and disables it otherwise.

transformPrecoder

The UE specific selection of transformer precoder for PUSCH (see TS 38.214 [19], clause 6.1.3). When the field is absent the UE applies the value of the field *msg3-transformPrecoder* from *rach-ConfigCommon* included directly within BWP configuration (i.e., not included in *additionalRACH-ConfigList*).

txConfig

Whether UE uses codebook based or non-codebook based transmission (see TS 38.214 [19], clause 6.1.1). If the field is absent, the UE transmits PUSCH on one antenna

port, see TS 38.214 [19], clause 6.1.1.

uci-OnPUSCH-ListDCI-0-1, uci-OnPUSCH-ListDCI-0-2

Configuration for up to 2 HARQ-ACK codebooks specific to DCI format 0_1/0_2. The field *uci-OnPUSCH-ListDCI-0-1* applies to DCI format 0_1 and the field *uci-OnPUSCH-ListDCI-0-2* applies to DCI format 0_2 (see TS 38.212 [17], clause 7.3.1 and TS 38.213 [13] clause 9.3).

ul-AccessConfigListDCI-0-1, ul-AccessConfigListDCI-0-2

List of the combinations of cyclic prefix extension, channel access priority class (CAPC), and UL channel access type (see TS 38.212 [17], clause 7.3.1) applicable for DCI format 0_1 and DCI format 0_2, respectively. The fields *ul-AccessConfigListDCI-0-1-r16* and *ul-AccessConfigListDCI-0-2-r17* are only applicable for FR1 (see TS 38.212 [17], Table 7.3.1.1.2-35). The field *ul-AccessConfigListDCI-0-1-r17* only contains a list of UL channel access types and is only applicable for FR2-2 (see TS 38.212 [17], Table 7.3.1.1.2-35A).

ul-FullPowerTransmission

Configures the UE with UL full power transmission mode as specified in TS 38.213 [13].

PUSCH-ConfigDCI-0-3 field descriptions

harq-ProcessNumberSizeDCI-0-3

Configure the number of bits for the field "HARQ process number" in DCI format 0_3 (see TS 38.212 [17], clause 7.3.1). Only one of this field and *harq-ProcessNumberSizeDCI-0-3-Ext* is configured by network.

harq-ProcessNumberSizeDCI-0-3-Ext

Configure the number of bits for the field "HARQ process number" in DCI format 0_3 in TN (see TS 38.212 [17], clause 7.3.1). This field can only be configured when the maximum number of layers configured for PUSCH is no more than 4. Only one of this field and *harq-ProcessNumberSizeDCI-0-3* is configured by network.

numberOfBitsForRV-DCI-0-3

Configures the number of bits for "Redundancy version" in the DCI format 0_3 (see TS 38.212 [17], clause 7.3.1 and TS 38.214 [19], clause 6.1.2.1).

rbg-SizeDCI-0-3

Selection among configuration 1, configuration 2 and configuration 3 for RBG size for PUSCH scheduled by DCI format 0_3. The UE does not apply this field if *resourceAllocationDCI-0-3* is set to *resourceAllocationType1*. Otherwise, the UE applies the value *config1* when the field is absent (see TS 38.214 [19], clause 6.1.2.2.1).

resourceAllocationDCI-0-3

Configuration of resource allocation type 0 and resource allocation type 1 for DCI format 0_3 (see TS 38.214 [19], clause 6.1.2).

resourceAllocationType1GranularityDCI-0-3

Configures the scheduling granularity applicable for both the starting point and length indication for resource allocation type 1 in DCI format 0_3. If this field is absent, the granularity is 1 PRB (see TS 38.214 [19], clause 6.1.2.2.2).

uci-OnPUSCH-ListDCI-0-3

Configuration for up to 2 HARQ-ACK codebooks specific to DCI format 0_3 (see TS 38.212 [17], clause 7.3.1 and TS 38.213 [13] clause 9.3).

SDM-Scheme field descriptions

maxRankSDM, maxRankSDM-DCI-0-2

configure maximal number of MIMO layers of each panel in SDM scheme for codebook based PUSCH or for DCI 0_2 for codebook based PUSCH.

SFN-Scheme field descriptions

maxRankSFN, maxRankSFN-DCI-0-2

configure maximal number of MIMO layers of each panel in SFN scheme for codebook based PUSCH or for DCI 0_2 for codebook based PUSCH.

UCI-OnPUSCH field descriptions**betaOffsets**

Selection between and configuration of dynamic and semi-static beta-offset for DCI formats other than DCI format 0_2. If the field is not configured, the UE applies the value 'semiStatic' (see TS 38.213 [13], clause 9.3).

scaling

Indicates a scaling factor to limit the number of resource elements assigned to UCI on PUSCH for DCI formats other than DCI format 0_2. Value *f0p5* corresponds to 0.5, value *f0p65* corresponds to 0.65, and so on. The value configured herein is applicable for PUSCH with configured grant (see TS 38.212 [17], clause 6.3).

UCI-OnPUSCH-DCI-0-2 field descriptions**betaOffsetsDCI-0-2**

Configuration of beta-offset for DCI format 0_2. If semiStaticDCI-0-2 is chosen, the UE shall apply the value of 0 bit for the field of beta offset indicator in DCI format 0_2. If dynamicDCI-0-2 is chosen, the UE shall apply the value of 1 bit or 2 bits for the field of beta offset indicator in DCI format 0_2 (see TS 38.212 [17], clause 7.3.1 and TS 38.213 [13] clause 9.3).

dynamicDCI-0-2

Indicates the UE applies the value 'dynamic' for DCI format 0_2 (see TS 38.212 [17], clause 7.3.1 and TS 38.213 [13], clause 9.3).

semiStaticDCI-0-2

Indicates the UE applies the value 'semiStatic' for DCI format 0_2. (see TS 38.212 [17], clause 7.3.1 and see TS 38.213 [13], clause 9.3).

scalingDCI-0-2

Indicates a scaling factor to limit the number of resource elements assigned to UCI on PUSCH for DCI format 0_2. Value *f0p5* corresponds to 0.5, value *f0p65* corresponds to 0.65, and so on (see TS 38.212 [17], clause 6.3).

Conditional Presence	Explanation
<i>codebookBased</i>	The field is mandatory present if <i>txConfig</i> is set to <i>codebook</i> and absent otherwise.
<i>RepTypeB</i>	The field is optionally present, Need S, if <i>pusch-RepTypeIndicatorDCI-0-1</i> is set to <i>pusch-RepTypeB</i> . It is absent otherwise.
<i>RepTypeB2</i>	The field is optionally present, Need S, if <i>pusch-RepTypeIndicatorDCI-0-1</i> or <i>pusch-RepTypeIndicatorDCI-0-2</i> is set to <i>pusch-RepTypeB</i> . It is absent otherwise.
<i>SRSsets</i>	This field is mandatory present when UE is configured with two SRS sets in either <i>srs-ResourceSetToAddModList</i> or <i>srs-ResourceSetToAddModListDCI-0-2</i> with usage <i>codebook</i> or <i>non-codebook</i> and none of <i>multipanelSchemeSDM</i> or <i>multipanelSchemeSFN</i> or <i>sTx-2Panel</i> is configured. It is absent otherwise.

– PUSCH-ConfigCommon

The IE *PUSCH-ConfigCommon* is used to configure the cell specific PUSCH parameters.

PUSCH-ConfigCommon information element

```
-- ASN1START
-- TAG-PUSCH-CONFIGCOMMON-START

PUSCH-ConfigCommon ::=
    SEQUENCE {
        groupHoppingEnabledTransformPrecoding    ENUMERATED {enabled}                OPTIONAL, -- Need R
        pusch-TimeDomainAllocationList            PUSCH-TimeDomainResourceAllocationList OPTIONAL, -- Need R
    }
```

```
msg3-DeltaPreamble      INTEGER (-1..6)                                OPTIONAL,  -- Need R
p0-NominalWithGrant     INTEGER (-202..24)                            OPTIONAL,  -- Need R
...
}

-- TAG-PUSCH-CONFIGCOMMON-STOP
-- ASN1STOP
```

PUSCH-ConfigCommon field descriptions
groupHoppingEnabledTransformPrecoding For DMRS transmission with transform precoder, the NW may configure group hopping by this cell-specific parameter, see TS 38.211 [16], clause 6.4.1.1.1.2.
msg3-DeltaPreamble Power offset between msg3 and RACH preamble transmission. Actual value = field value * 2 [dB] (see TS 38.213 [13], clause 7.1)
p0-NominalWithGrant P0 value for PUSCH with grant (except msg3). Value in dBm. Only even values (step size 2) allowed (see TS 38.213 [13], clause 7.1) This field is cell specific
pusch-TimeDomainAllocationList List of time domain allocations for timing of UL assignment to UL data (see TS 38.214 [19], table 6.1.2.1.1-1).

– PUSCH-MutingResources

The IE *PUSCH-MutingResources* is used to configure the time location and frequency location of UL muting resources.

PUSCH-MutingResources information element

```
-- ASN1START
-- TAG-PUSCH-MUTINGRESOURCES-START

PUSCH-MutingResources-r19 ::= SEQUENCE {
    symbolPos-r19          SEQUENCE (SIZE (1..2)) OF INTEGER (0.. 13)                                OPTIONAL,  -- Need R
    combOffset-r19        INTEGER (0..1)                                                            OPTIONAL,  -- Need R
    ...
}

-- TAG-PUSCH-MUTINGRESOURCES-STOP
-- ASN1STOP
```

PUSCH-MutingResources field descriptions
symbolPos Configures the symbol location of one or two UL muting symbol(s) within a slot for PUSCH.
combOffset Configures the comb offset of UL muting symbol(s) for PUSCH.

– PUSCH-PowerControl

The IE *PUSCH-PowerControl* is used to configure UE specific power control parameter for PUSCH.

PUSCH-PowerControl information element

```
-- ASN1START
-- TAG-PUSCH-POWERCONTROL-START

PUSCH-PowerControl ::=
    SEQUENCE {
        tpc-Accumulation      ENUMERATED { disabled }      OPTIONAL, -- Need S
        msg3-Alpha            Alpha                          OPTIONAL, -- Need S
        p0-NominalWithoutGrant INTEGER (-202..24)           OPTIONAL, -- Need M
        p0-AlphaSets          SEQUENCE (SIZE (1..maxNrofP0-PUSCH-AlphaSets)) OF P0-PUSCH-AlphaSet OPTIONAL, -- Need M

```

-- TAG-PUSCH-POWERCONTROL-STOP
-- ASN1STOP

P0-PUSCH-AlphaSet field descriptions	
alpha	alpha value for PUSCH with grant (except msg3) (see TS 38.213 [13], clause 7.1). When the field is absent the UE applies the value 1.
p0	P0 value for PUSCH with grant (except msg3) in steps of 1dB (see TS 38.213 [13], clause 7.1). When the field is absent the UE applies the value 0.

P0-PUSCH-Set field descriptions	
p0-List	Configuration of {p0-PUSCH, p0-PUSCH} sets for PUSCH. If SRI is present in the DCI, then one p0-PUSCH can be configured in P0-PUSCH-Set. If SRI is not present in the DCI, and both <i>olpc-ParameterSetDCI-0-1</i> and <i>olpc-ParameterSetDCI-0-2</i> are configured to be 1 bit, then one p0-PUSCH can be configured in P0-PUSCH-Set. If SRI is not present in the DCI, and if any of <i>olpc-ParameterSetDCI-0-1</i> and <i>olpc-ParameterSetDCI-0-2</i> is configured to be 2 bits, then two p0-PUSCH values can be configured in P0-PUSCH-Set (see TS 38.213 [13] clause 7 and TS 38.212 [17] clause 7.3.1).
p0-PUSCH-SetId	Configure the index of a p0-PUSCH-Set (see TS 38.213 [13] clause 7 and TS 38.212 [17] clause 7.3.1).

PUSCH-PowerControl field descriptions
deltaMCS Indicates whether to apply delta MCS. When the field is absent, the UE applies $K_s = 0$ in Δ_{TFC} formula for PUSCH (see TS 38.213 [13], clause 7.1).
dummy This field is not used in the specification. If received it shall be ignored by the UE.
msg3-Alpha Dedicated alpha value for msg3 PUSCH (see TS 38.213 [13], clause 7.1). When the field is absent the UE applies the value 1.
msg3-Alpha-SBFD Configures separate dedicated alpha value for msg3 PUSCH in SBFD symbols. When the field is absent, <i>msg3-Alpha</i> configured for msg3 PUSCH transmission in non-SBFD symbols is used if msg3 PUSCH transmission is transmitted in SBFD symbols.
olpc-ParameterSetDCI-0-1, olpc-ParameterSetDCI-0-2 Configures the number of bits for Open-loop power control parameter set indication for DCI format 0_1/0_2 in case SRI is not configured in the DCI. 2 bits is applicable only if SRI is not present in the DCI format 0_1. The field <i>olpc-ParameterSetDCI-0-1</i> applies to DCI format 0_1 and the field <i>olpc-ParameterSetDCI-0-2</i> applies to DCI format 0_2 (see TS 38.212 [17], clause 7.3.1 and TS 38.213 [13], clause 11).
p0-AlphaSets Configuration { <i>p0-pusch</i> , <i>alpha</i> } sets for PUSCH (except msg3 and msgA PUSCH), i.e., { <i>p0, alpha, index1</i> }, { <i>p0, alpha, index2</i> }, ... (see TS 38.213 [13], clause 7.1). When no set is configured, the UE uses the P0-nominal for msg3/msgA PUSCH, P0-UE is set to 0 and <i>alpha</i> is set according to either msg3-Alpha or msgA-Alpha (see TS 38.213 [13], clause 7.1). This field is not configured if <i>unifiedTCI-StateType</i> is configured for the serving cell.
p0-NominalWithoutGrant P0 value for UL grant-free/SPS based PUSCH. Value in dBm. Only even values (step size 2) allowed (see TS 38.213 [13], clause 7.1).
p0-PUSCH-SetList Configure one additional <i>P0-PUSCH-Set</i> per SRI. If present, the one bit or 2 bits in the DCI is used to dynamically indicate among the P0 value from the existing <i>P0-PUSCH-AlphaSet</i> and the P0 value(s) from the <i>P0-PUSCH-Set</i> (See TS 38.212 [17], clause 7.3.1 and TS 38.213 [13], clause 17).
p0-PUSCH-SetList2 For indicating per-TRP OLPC set in DCI format 0_1/0_2 with the open-loop power control parameter set indication field, a second <i>p0-PUSCH-SetList-r16</i> is used. When this field is present the <i>p0-PUSCH-SetList-r16</i> corresponds to the first SRS resource set (see TS 38.213 [13]).
pathlossReferenceRSToAddModList, pathlossReferenceRSToAddModListSizeExt A set of Reference Signals (e.g. a CSI-RS config or a SS block) to be used for PUSCH path loss estimation. The set consists of Reference Signals configured using <i>pathLossReferenceRSToAddModList</i> and Reference Signals configured using <i>pathlossReferenceRSToAddModListSizeExt</i> . Up to <i>maxNrofPUSCH-PathlossReferenceRSs</i> may be configured (see TS 38.213 [13], clause 7.1). No elements in the list <i>pathLossReferenceRSToAddModList</i> nor <i>pathlossReferenceRSToAddModListSizeExt</i> are configured if <i>unifiedTCI-StateType</i> is configured for the serving cell.
pathlossReferenceRSToReleaseList, pathlossReferenceRSToReleaseListSizeExt Lists of reference signals for PUSCH path loss estimation to be released by the UE.
sri-PUSCH-MappingToAddModList A list of <i>SRI-PUSCH-PowerControl</i> elements among which one is selected (see TS 38.213 [13], clause 7.1). No elements in this list are configured if <i>unifiedTCI-StateType</i> is configured for the serving cell.
sri-PUSCH-MappingToAddModList2 A list of <i>SRI-PUSCH-PowerControl</i> elements for second SRS-resource set, among which one is selected by the SRI field in DCI (see TS 38.213 [13], clause 7.1). When this field is present the <i>sri-PUSCH-MappingToAddModList</i> corresponds to the first SRS resource set for PUSCH. No elements in this list are configured if <i>unifiedTCI-StateType</i> is configured for the serving cell.
tpc-Accumulation If enabled, UE applies TPC commands via accumulation. If not enabled, UE applies the TPC command without accumulation. If the field is absent, TPC accumulation is enabled (see TS 38.213 [13], clause 7.1).
twoPUSCH-PC-AdjustmentStates Number of PUSCH power control adjustment states maintained by the UE (i.e., $fc(i)$). If the field is present (<i>n2</i>) the UE maintains two power control states (i.e., $fc(i,0)$ and

$fc(i,1)$). If the field is absent, it maintains one power control state (i.e., $fc(i,0)$) (see TS 38.213 [13], clause 7.1).

***SRI-PUSCH-PowerControl* field descriptions**

sri-P0-PUSCH-AlphaSetId

The ID of a *P0-PUSCH-AlphaSet* as configured in *p0-AlphaSets* in *PUSCH-PowerControl*.

sri-PUSCH-ClosedLoopIndex

The index of the closed power control loop associated with this *SRI-PUSCH-PowerControl*.

sri-PUSCH-PathlossReferenceRS-Id

The ID of *PUSCH-PathlossReferenceRS* as configured in the *pathlossReferenceRSToAddModList* in *PUSCH-PowerControl*.

sri-PUSCH-PowerControlId

The ID of this *SRI-PUSCH-PowerControl* configuration. It is used as the codepoint (payload) in the SRI DCI field.

– ***PUSCH-ServingCellConfig***

The IE *PUSCH-ServingCellConfig* is used to configure UE specific PUSCH parameters that are common across the UE's BWPs of one serving cell.

***PUSCH-ServingCellConfig* information element**

```
-- ASN1START
-- TAG-PUSCH-SERVINGCELLCONFIG-START

PUSCH-ServingCellConfig ::=
    SEQUENCE {

    ...
}

MaxMIMO-LayersDCI-0-2-r16 ::=              INTEGER (1..4)

UplinkHARQ-mode-r17 ::=                    BIT STRING (SIZE (32))

-- TAG-PUSCH-SERVINGCELLCONFIG-STOP
-- ASN1STOP
```

<i>PUSCH-CodeBlockGroupTransmission</i> field descriptions
<i>maxCodeBlockGroupsPerTransportBlock</i> Maximum number of code-block-groups (CBGs) per TB (see TS 38.213 [13], clause 9.1).

<i>PUSCH-ServingCellConfig</i> field descriptions
<i>codeBlockGroupTransmission</i> Enables and configures code-block-group (CBG) based transmission (see TS 38.214 [19], clause 6.1.5). The network does not configure this field if the SCS of at least one UL BWP configured in the cell is 480 or 960 kHz.
<i>maxMIMO-Layers</i> Indicates the maximum MIMO layer to be used for PUSCH in all BWPs of the corresponding UL of this serving cell (see TS 38.212 [17], clause 5.4.2.1). If present, the network sets <i>maxRank</i> to the same value. The field <i>maxMIMO-Layers</i> refers to DCI format 0_1. If network configures <i>maxMIMO-Layers-v1810</i> the UE ignores <i>maxMIMO-Layers</i> (without suffix).
<i>maxMIMO-LayersforSDM</i> Parameter to indicate maximal number of MIMO layers of each panel for PUSCH with SDM scheme for NCB PUSCH
<i>maxMIMO-LayersforSDM-DCI-0-2</i> Parameter to indicate maximal number of MIMO layers of each panel for PUSCH with SDM scheme for DCI format 0_2 for NCB PUSCH
<i>maxMIMO-LayersforSFN</i> Parameter to indicate maximal number of MIMO layers of each panel for PUSCH with SFN scheme for NCB PUSCH
<i>maxMIMO-LayersforSFN-DCI-0-2</i> Parameter to indicate maximal number of MIMO layers of each panel for PUSCH with SFN scheme for DCI format 0_2 for NCB PUSCH
<i>nrofHARQ-ProcessesForPUSCH</i> The number of HARQ processes to be used on the PUSCH of a serving cell. Value <i>n</i> 32 corresponds to 32 HARQ processes. If the field is absent, the UE uses 16 HARQ processes (see TS 38.214 [19], clause 6.1).
<i>processingType2Enabled</i> Enables configuration of advanced processing time capability 2 for PUSCH (see 38.214 [19], clause 6.4).
<i>rateMatching</i> Enables LBRM (Limited buffer rate-matching). When the field is absent the UE applies FBRM (Full buffer rate-matchingLBRM) (see TS 38.212 [17], clause 5.4.2).
<i>xOverhead</i> If the field is absent, the UE applies the value 0 (see TS 38.214 [19], clause 6.1.4.2).
<i>maxMIMO-LayersDCI-0-2</i> Indicates the maximum MIMO layer to be used for PUSCH for DCI format 0_2 in all BWPs of the corresponding UL of this serving cell (see TS 38.212 [17], clause 5.4.2.1). If present, the network sets <i>maxRankDCI-0-2</i> to the same value.
<i>uplinkHARQ-mode</i> Used to set the HARQ mode per HARQ process ID, see TS 38.321 [3]. The first/leftmost bit corresponds to HARQ process ID 0, the next bit to HARQ process ID 1 and so on. Bits corresponding to HARQ process IDs that are not configured shall be ignored. A bit set to one identifies a HARQ process with <i>HARQmodeA</i> and a bit set to zero identifies a HARQ process with <i>HARQ modeB</i> . This field applies for SRBs and DRBs.

– ***PUSCH-TimeDomainResourceAllocationList***

The IE *PUSCH-TimeDomainResourceAllocation* is used to configure a time domain relation between PDCCH and PUSCH. *PUSCH-TimeDomainResourceAllocationList* contains one or more of such *PUSCH-TimeDomainResourceAllocations*. The network indicates in the UL grant which of the configured time domain allocations the UE shall apply for that UL grant. The UE determines the bit width of the DCI field based on the number of entries in the *PUSCH-TimeDomainResourceAllocationList*. Value 0 in the DCI field refers to the first element in this list, value 1 in the DCI field refers to the second element in this list, and so on.

PUSCH-TimeDomainResourceAllocation information element

```
-- ASN1START
-- TAG-PUSCH-TIMEDOMAINRESOURCEALLOCATIONLIST-START

    ]]
}

-- TAG-PUSCH-TIMEDOMAINRESOURCEALLOCATIONLIST-STOP
-- ASN1STOP

```

PUSCH-TimeDomainResourceAllocationList field descriptions
extendedK2 Corresponds to L1 parameter 'K2' (see TS 38.214 [19], clause 6.1.2.1) configurable per PUSCH allocation. Only values {0..32} are applicable for PUSCH SCS of 120 kHz and for FR1. When the field is absent for the first PUSCH if multiple PUSCH are configured per PDCCH and <i>k2-r16</i> is absent, or when the field is absent and only one PUSCH is configured per PDCCH and <i>k2-r16</i> is absent, the UE applies the value 1 when PUSCH SCS is 15/30 kHz; the value 2 when PUSCH SCS is 60 kHz, the value 3 when PUSCH SCS is 120 kHz, the value 11 when PUSCH SCS is 480 kHz, and the value 21 when PUSCH SCS is 960 kHz. If multiple contiguous PUSCHs are configured per PDCCH, when the field <i>extendedK2(n)</i> corresponding to k2 of the PUSCH(s) in the n-th slot (n>1), or of the PUSCH(s) except the first PUSCH in the first slot (n=1), is absent, the UE applies k2 of the first PUSCH plus n-1.
k2 Corresponds to L1 parameter 'K2' (see TS 38.214 [19], clause 6.1.2.1). When the field is absent the UE applies the value 1 when PUSCH SCS is 15/30 kHz; the value 2 when PUSCH SCS is 60 kHz, and the value 3 when PUSCH SCS is 120 kHz. k2 is absent/ignored if <i>extendedK2</i> is present.
length Indicates the length allocated for PUSCH for DCI format 0_1/0_2 (see TS 38.214 [19], clause 6.1.2.1).
mappingType Mapping type (see TS 38.214 [19], clause 6.1.2.1).
numberOfRepetitions Number of repetitions for DCI format 0_1/0_2 (see TS 38.214 [19], clause 6.1.2.1). When <i>numberOfSlotsTBoMS-r17</i> is set to 2, 4 or 8 (i.e. TB processing over multi-slot (TBoMS) PUSCH is enabled), it indicates the number of repetitions of a single TBoMS.
numberOfRepetitionsExt Number of repetitions for DCI format 0_1/0_2 if <i>pusch-RepTypeIndicatorDCI-0-1/pusch-RepTypeIndicatorDCI-0-2</i> is not set to <i>pusch-RepTypeB</i> (see TS 38.214 [19], clause 6.1.2.1). If this field is present, the field <i>numberOfRepetitions-r16</i> is ignored for PUSCH repetition Type A.
numberOfSlotsTBoMS Number of slots allocated for TB processing over multi-slot PUSCH for DCI format 0_1/0_2. If a number of repetitions K is configured by <i>numberOfRepetitions</i> or <i>numberOfRepetitionsExt</i>, the network configures <i>numberOfSlotsTBoMS</i> (N) and K such that $N \cdot K \leq 32$ (see TS 38.214 [19], clause 6.1.2.1). The network does not configure the <i>numberOfSlotsTBoMS-r17</i> simultaneously with the <i>pusch-TimeDomainAllocationListForMultiPUSCH-r16</i>. The network does not configure <i>numberOfSlotsTBoMS-r17</i> together with <i>enhancedSkipUplinkTxDynamic</i> or <i>enhancedSkipUplinkTxConfigured</i> with value <i>true</i>.
occ-Length Indicates the inter-slot OCC length for a dynamic grant or a Type 2 CG configuration, see TS 38.214 [19].
puschAllocationList The field <i>puschAllocationList-r16</i> indicates one or multiple PUSCH continuous in time domain which share a common k2 (see TS 38.214 [19], clause 6.1.2.1). In this release, this field configures one or multiple PUSCH that may be in consecutive or non-consecutive slots (see TS 38.214 [19], clause 6.1.2.1). The <i>puschAllocationList-r16</i> only has one element in <i>pusch-TimeDomainAllocationListDCI-0-1-r16</i> and in <i>pusch-TimeDomainAllocationListDCI-0-2-r16</i>.
startSymbol Indicates the index of start symbol for PUSCH for DCI format 0_1/0_2 (see TS 38.214 [19], clause 6.1.2.1).
startSymbolAndLength An index giving valid combinations of start symbol and length (jointly encoded) as start and length indicator (SLIV). The network configures the field so that the allocation does not cross the slot boundary. (see TS 38.214 [19], clause 6.1.2.1).
ul-MutingIndicator Indicates whether the semi-statically configured UL muting symbol(s) is enabled for a given PUSCH in the PUSCH TDRA table. If this parameter is absent, the UL muting symbol(s) are disabled.

Conditional Presence	Explanation
<i>Format01-02</i>	In <i>pusch-TimeDomainAllocationListForMultiPUSCH-r16</i> , the field is absent. In <i>pusch-TimeDomainAllocationListDCI-0-1</i> and in <i>pusch-TimeDomainAllocationListDCI-0-2</i> , the field is mandatory present.
<i>Format01-02-For-TypeA</i>	In <i>pusch-TimeDomainAllocationListForMultiPUSCH-r16</i> , the field is absent. In <i>pusch-TimeDomainAllocationListDCI-0-1</i> , the field is optionally present if <i>pusch-RepTypeIndicatorDCI-0-1</i> is not set to <i>pusch-RepTypeB</i> , Need R. It is absent otherwise, Need R. In <i>pusch-TimeDomainAllocationListDCI-0-2</i> , the field is optionally present if <i>pusch-RepTypeIndicatorDCI-0-2</i> is not set to <i>pusch-RepTypeB</i> , Need R. It is absent otherwise, Need R.
<i>NotFormat01-02-Or-TypeA</i>	In <i>pusch-TimeDomainAllocationListForMultiPUSCH-r16</i> , the field is mandatory present. In <i>pusch-TimeDomainAllocationListDCI-0-1</i> , the field is mandatory present if <i>pusch-RepTypeIndicatorDCI-0-1</i> is not set to <i>pusch-RepTypeB</i> . It is absent otherwise, Need R. In <i>pusch-TimeDomainAllocationListDCI-0-2</i> , the field is mandatory present if <i>pusch-RepTypeIndicatorDCI-0-2</i> is not set to <i>pusch-RepTypeB</i> . It is absent otherwise, Need R.
<i>RepTypeB</i>	In <i>pusch-TimeDomainAllocationListForMultiPUSCH-r16</i> , the field is absent. In <i>pusch-TimeDomainAllocationListDCI-0-1</i> , the field is mandatory present if <i>pusch-RepTypeIndicatorDCI-0-1</i> is set to <i>pusch-RepTypeB</i> . It is absent otherwise, Need R. In <i>pusch-TimeDomainAllocationListDCI-0-2</i> , the field is mandatory present if <i>pusch-RepTypeIndicatorDCI-0-2</i> is set to <i>pusch-RepTypeB</i> . It is absent otherwise, Need R.
<i>MultiPUSCH</i>	In case size of <i>puschAllocationList</i> is higher than 1, the field <i>extendedK2(n)</i> corresponding to k2 of the n-th PUSCH, n>1, is mandatory present for all n, if any two consecutive PUSCHs are non-contiguous. Otherwise, it is optionally present, Need S.

– *PUSCH-TPC-CommandConfig*

The IE *PUSCH-TPC-CommandConfig* is used to configure the UE for extracting TPC commands for PUSCH from a group-TPC messages on DCI.

PUSCH-TPC-CommandConfig information element

```
-- ASN1START
-- TAG-PUSCH-TPC-COMMANDCONFIG-START

PUSCH-TPC-CommandConfig ::=
    SEQUENCE {
        tpc-Index          INTEGER (1..15)                OPTIONAL, -- Cond SUL
        tpc-IndexSUL       INTEGER (1..15)                OPTIONAL, -- Cond SUL-Only
        targetCell         ServCellIndex                  OPTIONAL, -- Need S
        ...
    }

-- TAG-PUSCH-TPC-COMMANDCONFIG-STOP
-- ASN1STOP
```

PUSCH-TPC-CommandConfig field descriptions	
targetCell	The serving cell to which the acquired power control commands are applicable. If the value is absent, the UE applies the TPC commands to the serving cell on which the command has been received.
tpc-Index	An index determining the position of the first bit of TPC command inside the DCI format 2-2 payload.
tpc-IndexSUL	An index determining the position of the first bit of TPC command inside the DCI format 2-2 payload.

Conditional Presence	Explanation
SUL-Only	The field is optionally present, Need R, if <i>supplementaryUplink</i> is configured within <i>ServingCellConfig</i> . It is absent otherwise.
SUL	The field is optionally present, Need R, if <i>supplementaryUplink</i> is configured within <i>ServingCellConfig</i> . It is mandatory present otherwise.

— QFI

The IE *QFI* is used to indicate the QoS Flow Identifier.

QFI information element

```
-- ASN1START
-- TAG-QFI-START

QFI ::=
    INTEGER (0..maxQFI)

-- TAG-QFI-STOP
-- ASN1STOP
```

— Q-OffsetRange

The IE *Q-OffsetRange* is used to indicate a cell, beam or measurement object specific offset to be applied when evaluating candidates for cell re-selection or when evaluating triggering conditions for measurement reporting. The value is in dB. Value *dB-24* corresponds to -24 dB, *dB-22* corresponds to -22 dB and so on.

Q-OffsetRange information element

```
-- ASN1START
-- TAG-Q-OFFSETRANGE-START

Q-OffsetRange ::=
    ENUMERATED {
        dB-24, dB-22, dB-20, dB-18, dB-16, dB-14,
        dB-12, dB-10, dB-8, dB-6, dB-5, dB-4, dB-3,
        dB-2, dB-1, dB0, dB1, dB2, dB3, dB4, dB5,
        dB6, dB8, dB10, dB12, dB14, dB16, dB18,
        dB20, dB22, dB24}

-- TAG-Q-OFFSETRANGE-STOP
-- ASN1STOP
```

```
-- TAG-Q-OFFSETRANGE-STOP
-- ASN1STOP
```

– *Q-QualMin*

The IE *Q-QualMin* is used to indicate for cell selection/ re-selection the required minimum received RSRQ level in the (NR) cell. Corresponds to parameter Q_{qualmin} in TS 38.304 [20]. Actual value Q_{qualmin} = field value [dB].

Q-QualMin information element

```
-- ASN1START
-- TAG-Q-QUALMIN-START

Q-QualMin ::=                INTEGER (-43..-12)

-- TAG-Q-QUALMIN-STOP
-- ASN1STOP
```

– *Q-RxLevMin*

The IE *Q-RxLevMin* is used to indicate for cell selection/ re-selection the required minimum received RSRP level in the (NR) cell. Corresponds to parameter Q_{rxlevmin} in TS 38.304 [20]. Actual value Q_{rxlevmin} = field value * 2 [dBm].

Q-RxLevMin information element

```
-- ASN1START
-- TAG-Q-RXLEVMIN-START

Q-RxLevMin ::=                INTEGER (-70..-22)

-- TAG-Q-RXLEVMIN-STOP
-- ASN1STOP
```

– *QuantityConfig*

The IE *QuantityConfig* specifies the measurement quantities and layer 3 filtering coefficients for NR and inter-RAT measurements.

QuantityConfig information element

```
-- ASN1START
-- TAG-QUANTITYCONFIG-START

QuantityConfig ::=            SEQUENCE {
```

```

QuantityConfigNR field descriptions

quantityConfigCell

Specifies L3 filter configurations for cell measurement results for the configurable RS Types (e.g. SS/PBCH block and CSI-RS) and the configurable measurement quantities (e.g. RSRP, RSRQ and SINR).

quantityConfigRS-Index

Specifies L3 filter configurations for measurement results per RS index for the configurable RS Types (e.g. SS/PBCH block and CSI-RS) and the configurable measurement quantities (e.g. RSRP, RSRQ and SINR).

QuantityConfigRS field descriptions**csi-RS-FilterConfig**

CSI-RS based L3 filter configurations:

Specifies L3 filter configurations for CSI-RSRP, CSI-RSRQ and CSI-SINR measurement results from the L1 filter(s), as defined in TS 38.215 [9].

ssb-FilterConfig

SS Block based L3 filter configurations:

Specifies L3 filter configurations for SS-RSRP, SS-RSRQ and SS-SINR measurement results from the L1 filter(s), as defined in TS 38.215 [9].

QuantityConfigUTRA-FDD field descriptions**filterCoefficientRSCP**

Specifies L3 filter coefficient for FDD UTRAN CPICH_RSCP measurement results from L1 filter.

filterCoefficientEcN0

Specifies L3 filter coefficient for FDD UTRAN CPICH_EcN0 measurement results from L1 filter.

– RACH-ConfigCommonThe IE *RACH-ConfigCommon* is used to specify the cell specific random-access parameters.**RACH-ConfigCommon information element**

```

-- ASN1START

```

<i>RACH-ConfigCommon</i> field descriptions
<i>featureCombinationPreamblesList</i> Specifies a series of preamble partitions each associated to a combination of features and 4-step RA. The network does not configure this list to have more than 16 entries.
<i>messagePowerOffsetGroupB</i> Threshold for preamble selection. Value is in dB. Value <i>minusinfinity</i> corresponds to –infinity. Value <i>dB0</i> corresponds to 0 dB, <i>dB5</i> corresponds to 5 dB and so on (see TS 38.321 [3], clause 5.1.2). This field is set to the same value for different repetition numbers associated with a specific <i>FeatureCombination</i> .
<i>msg1-SubcarrierSpacing</i> Subcarrier spacing of PRACH (see TS 38.211 [16], clause 5.3.2). Only the following values are applicable depending on the used frequency: FR1/FR1-NTN: 15 or 30 kHz FR2-1/FR2-NTN: 60 or 120 kHz FR2-2: 120, 480, or 960 kHz If absent, the UE applies the SCS as derived from the <i>prach-ConfigurationIndex</i> in <i>RACH-ConfigGeneric</i> (see tables Table 6.3.3.1-1, Table 6.3.3.1-2, Table 6.3.3.2-2 and Table 6.3.3.2-3, TS 38.211 [16]). The value also applies to contention free random access (<i>RACH-ConfigDedicated</i>), to SI-request and to contention-based beam failure recovery (CB-BFR). But it does not apply for contention free beam failure recovery (CF-BFR) (see <i>BeamFailureRecoveryConfig</i>).
<i>msg3-transformPrecoder</i> Enables the transform precoder for Msg3 transmission according to clause 6.1.3 of TS 38.214 [19]. If the field is absent, the UE disables the transformer precoder (see TS 38.213 [13], clause 8.3).
<i>numberOfRA-PreamblesGroupA</i> The number of CB preambles per SSB in group A. This determines implicitly the number of CB preambles per SSB available in group B. (see TS 38.321 [3], clause 5.1.1). The setting should be consistent with the setting of <i>ssb-perRACH-OccasionAndCB-PreamblesPerSSB</i> .
<i>prach-RootSequenceIndex</i> PRACH root sequence index (see TS 38.211 [16], clause 6.3.3.1). The value range depends on whether L=839 or L=139 or L=571 or L=1151. The length of the root sequence corresponding with the index indicated in this IE should be consistent with the one indicated in <i>prach-ConfigurationIndex</i> in the <i>RACH-ConfigDedicated</i> (if configured). If <i>prach-RootSequenceIndex-r16</i> is signalled, UE shall ignore the <i>prach-RootSequenceIndex</i> (without suffix). For FR2-2, only the following values are applicable depending on the used subcarrier spacing: 120 kHz: L=139, L=571, and L=1151 480 kHz: L=139, and L=571 960 kHz: L=139
<i>ra-ContentionResolutionTimer</i> The initial value for the contention resolution timer (see TS 38.321 [3], clause 5.1.5). Value <i>sf8</i> corresponds to 8 subframes, value <i>sf16</i> corresponds to 16 subframes, and so on.
<i>ra-Msg3SizeGroupA</i> Transport Blocks size threshold in bits below which the UE shall use a contention-based RA preamble of group A (see TS 38.321 [3], clause 5.1.2). This field is set to the same value for different repetition numbers associated with a specific <i>FeatureCombination</i> .
<i>ra-Prioritization</i> Parameters which apply for prioritized random access procedure on any UL BWP of SpCell for specific Access Identities (see TS 38.321 [3], clause 5.1.1a).
<i>ra-PrioritizationForAI</i> Indicates whether the field <i>ra-Prioritization-r16</i> applies for Access Identities. The first/leftmost bit corresponds to Access Identity 1, the next bit corresponds to Access Identity 2. Value 1 indicates that the field <i>ra-Prioritization-r16</i> applies otherwise the field does not apply (see TS 23.501 [32]).
<i>ra-PrioritizationForSlicing</i> Parameters which apply to configure prioritized CBRA 4-step random access type for slicing.
<i>rach-ConfigAdapt</i> Parameters which apply to configure adaptive random access occasions.
<i>rach-ConfigGeneric</i>

RACH parameters for both regular random access and beam failure recovery.	
restrictedSetConfig	Configuration of an unrestricted set or one of two types of restricted sets, see TS 38.211 [16], clause 6.3.3.1.
rsrp-ThresholdSSB	UE may select the SS block and corresponding PRACH resource for path-loss estimation and (re)transmission based on SS blocks that satisfy the threshold (see TS 38.213 [13]).
rsrp-ThresholdSSB-SUL	The UE selects SUL carrier to perform random access based on this threshold (see TS 38.321 [3], clause 5.1.1). The value applies to all the BWPs and all RACH configurations.
ssb-perRACH-OccasionAndCB-PreamblesPerSSB	The meaning of this field is twofold: the CHOICE conveys the information about the number of SSBs per RACH occasion. Value <i>oneEighth</i> corresponds to one SSB associated with 8 RACH occasions, value <i>oneFourth</i> corresponds to one SSB associated with 4 RACH occasions, and so on. The ENUMERATED part indicates the number of Contention Based preambles per SSB. Value <i>n4</i> corresponds to 4 Contention Based preambles per SSB, value <i>n8</i> corresponds to 8 Contention Based preambles per SSB, and so on. The total number of CB preambles in a RACH occasion is given by <i>CB-preambles-per-SSB</i> * max(1, <i>SSB-per-rach-occasion</i>). See TS 38.213 [13].
totalNumberOfRA-Preambles	Total number of preambles used for contention based and contention free 4-step or 2-step random access in the RACH resources defined in <i>RACH-ConfigCommon</i> , excluding preambles used for other purposes (e.g. for SI request). If the field is absent, all 64 preambles are available for RA. The setting should be consistent with the setting of <i>ssb-perRACH-OccasionAndCB-PreamblesPerSSB</i> , i.e. it should be a multiple of the number of SSBs per RACH occasion.

Conditional Presence	Explanation
<i>AdditionalRACH</i>	The field is mandatory present if the <i>RACH-ConfigCommon</i> is included in an <i>AdditionalRACH-Config</i> . When included in <i>initialUplinkBWP-RedCap</i> to indicate other feature(s) than <i>redcap</i> and <i>eRedCap</i> , this field is mandatory present with at least <i>FeatureCombinationPreambles</i> list entries: the list entry/entries indicating only <i>redcap</i> or <i>eRedCap</i> and the other(s) indicating both <i>redcap</i> or <i>eRedCap</i> and one or multiple other feature(s) (e.g., <i>smallData</i> , <i>nsag</i> or <i>msg3-Repetitions</i>). When included in <i>initialUplinkBWP-RedCap</i> to indicate <i>eRedCap</i> and <i>RedCap</i> separately, this field is mandatory present with at least two <i>FeatureCombinationPreambles</i> list entries: one list entry indicating only <i>redcap</i> and the other list entry indicating only <i>eRedCap</i> . Otherwise, it is optional, Need R.
<i>InitialBWP-Only</i>	This field is optionally present, Need R, if this BWP is the initial BWP of SpCell. Otherwise, the field is absent.
<i>L139</i>	The field is mandatory present if <i>prach-RootSequenceIndex</i> L=139, or if L=571 for FR2-2, otherwise the field is absent, Need S.
<i>SUL</i>	The field is mandatory present in <i>rach-ConfigCommon</i> in <i>initialUplinkBWP</i> if <i>supplementaryUplink</i> is configured in <i>ServingCellConfigCommonSIB</i> or if <i>supplementaryUplinkConfig</i> is configured in <i>ServingCellConfigCommon</i> ; otherwise, the field is absent. This field is neither configured in <i>additionalRACH-Config</i> nor in <i>sbfd-RACH-DualConfig</i> .

– RACH-ConfigCommonTwoStepRA

The IE *RACH-ConfigCommonTwoStepRA* is used to specify cell specific 2-step random-access type parameters.

<i>RACH-ConfigCommonTwoStepRA</i> field descriptions
<i>featureCombinationPreamblesList</i> Specifies a series of preamble partitions each associated to a combination of features and 2-step RA. The network does not configure this list to have more than 16 entries.
<i>groupB-ConfiguredTwoStepRA</i> Preamble grouping for 2-step random access type. If the field is absent then there is only one preamble group configured and only one msgA PUSCH configuration.
<i>msgA-CB-PreamblesPerSSB-PerSharedRO</i> Number of contention-based preambles used for 2-step RA type from the non-CBRA 4-step type preambles associated with each SSB for RO shared with 4-step type RA. The number of preambles for 2-step RA type shall not exceed the number of preambles per SSB minus the number of contention-based preambles per SSB for 4-step type RA. The possible value range for this parameter needs to be aligned with value range for the configured SSBs per RACH occasion in <i>ssb-perRACH-OccasionAndCB-PreamblesPerSSB</i> in <i>RACH-ConfigCommon</i> . The field is only applicable for the case of shared ROs with 4-step type random access.
<i>msgA-PRACH-RootSequenceIndex</i> PRACH root sequence index. If the field is not configured in <i>RACH-ConfigCommonTwoStepRA</i> which is configured directly within a BWP (i.e., not within <i>AdditionalRACH-Config</i>), the UE applies the value in field <i>prach-RootSequenceIndex</i> in <i>RACH-ConfigCommon</i> in the configured BWP. If the field is absent in <i>RACH-ConfigCommonTwoStepRA</i> in <i>AdditionalRACH-Config</i> , the UE applies the corresponding value of <i>prach-RootSequenceIndex</i> in <i>RACH-ConfigCommon</i> in the same <i>AdditionalRACH-Config</i> . When both 2-step and 4-step type random access is configured, this field is only configured for the case of separate ROs between 2-step and 4-step type random access. For FR2-2, only the following values are applicable depending on the used subcarrier spacing: 120 kHz: L=139, L=571, and L=1151 480 kHz: L=139, and L=571 960 kHz: L=139
<i>msgA-RestrictedSetConfig</i> Configuration of an unrestricted set or one of two types of restricted sets for 2-step random access type preamble. If the field is not configured in <i>RACH-ConfigCommonTwoStepRA</i> which is configured directly within a BWP (i.e. not within <i>AdditionalRACH-Config</i>), the UE applies the value in field <i>restrictedSetConfig</i> in <i>RACH-ConfigCommon</i> in the configured BWP. If the field is absent in <i>RACH-ConfigCommonTwoStepRA</i> in <i>AdditionalRACH-Config</i> , the UE applies the value of <i>restrictedSetConfig</i> in <i>RACH-ConfigCommon</i> in the same <i>AdditionalRACH-Config</i> . When both 2-step and 4-step type random access is configured, this field is only configured for the case of separate ROs between 2-step and 4-step type random access.
<i>msgA-RSRP-Threshold</i> The UE selects 2-step random access type to perform random access based on this threshold (see TS 38.321 [3], clause 5.1.1). This field is only present if both 2-step and 4-step RA type are configured for the BWP.
<i>msgA-RSRP-ThresholdSSB</i> UE may select the SS block and corresponding PRACH resource for path-loss estimation and (re)transmission based on SS blocks that satisfy the threshold (see TS 38.213 [13]).
<i>msgA-SSB-PerRACH-OccasionAndCB-PreamblesPerSSB</i> The meaning of this field is twofold: the CHOICE conveys the information about the number of SSBs per RACH occasion. Value <i>oneEight</i> corresponds to one SSB associated with 8 RACH occasions, value <i>oneFourth</i> corresponds to one SSB associated with 4 RACH occasions, and so on. The ENUMERATED part indicates the number of Contention Based preambles per SSB. Value <i>n4</i> corresponds to 4 Contention Based preambles per SSB, value <i>n8</i> corresponds to 8 Contention Based preambles per SSB, and so on. The total number of CB preambles in a RACH occasion is given by <i>CB-preambles-per-SSB</i> * max(1, <i>SSB-per-rach-occasion</i>). If the field is not configured in <i>RACH-ConfigCommonTwoStepRA</i> which is configured directly within a BWP (i.e. not within <i>AdditionalRACH-Config</i>) and both 2-step and 4-step are configured for the BWP, the UE applies the value in the field <i>ssb-perRACH-OccasionAndCB-PreamblesPerSSB</i> in <i>RACH-ConfigCommon</i> . If the field is not configured in <i>AdditionalRACH-Config</i> and both 2-step and 4-step are configured in <i>AdditionalRACH-Config</i> , the UE applies the value in the field <i>ssb-perRACH-OccasionAndCB-PreamblesPerSSB</i> in <i>RACH-ConfigCommon</i> in the same <i>AdditionalRACH-Config</i> . The field is not present when RACH occasions are shared between 2-step and 4-step type random access in the BWP.
<i>msgA-SSB-SharedRO-MaskIndex</i> Indicates the subset of 4-step type ROs shared with 2-step random access type for each SSB. This field is configured when there is more than one RO per SSB. If the field is absent, and 4-step and 2-step has shared ROs, then all ROs are shared.
<i>msgA-SubcarrierSpacing</i>

Subcarrier spacing of PRACH (see TS 38.211 [16], clause 5.3.2).

Only the following values are applicable depending on the used frequency:

FR1/FR1-NTN: 15 or 30 kHz

FR2-1/FR2-NTN: 60 or 120 kHz

FR2-2: 120, 480, or 960 kHz.

If the field is absent, the UE applies the SCS as derived from the *msgA-PRACH-ConfigurationIndex* in *RACH-ConfigGenericTwoStepRA* (see tables Table 6.3.3.1-1, Table 6.3.3.1-2, Table 6.3.3.2-2 and Table 6.3.3.2-3, TS 38.211 [16]) in case of 2-step only BWP, otherwise the UE applies the same SCS as *Msg1* derived from *RACH-ConfigCommon*. The value also applies to contention free 2-step random access type (*RACH-ConfigDedicated*).

msgA-TotalNumberOfRA-Preambles

Indicates the total number of preambles used for contention-based and contention-free 2-step random access type when ROs for 2-step are not shared with 4-step. If the field is absent, and 2-step and 4-step does not have shared ROs, all 64 preambles are available for 2-step random access type.

msgA-TransMax

Max number of *MsgA* preamble transmissions performed before switching to 4-step random access (see TS 38.321 [3], clauses 5.1.1). This field is only applicable when 2-step and 4-step RA type are configured and switching to 4-step type RA is supported. If the field is absent, switching from 2-step RA type to 4-step RA type is not allowed.

ra-ContentionResolutionTimer

The initial value for the contention resolution timer for fallback RAR in case no 4-step random access type is configured (see TS 38.321 [3], clause 5.1.5). Value *sf8* corresponds to 8 subframes, value *sf16* corresponds to 16 subframes, and so on. If both 2-step and 4-step random access type resources are configured on the BWP, then this field is absent. If the field is absent in *RACH-ConfigCommonTwoStepRA* in *AdditionalRACH-Config*, the UE shall apply the corresponding value in *RACH-ConfigCommon* in the same *AdditionalRACH-Config*.

ra-Prioritization

Parameters which apply for prioritized random access procedure on any UL BWP of SpCell for specific Access Identities (see TS 38.321 [3], clause 5.1.1a).

ra-PrioritizationForAI

Indicates whether the field *ra-Prioritization-r16* applies for Access Identities. The first/leftmost bit corresponds to Access Identity 1, the next bit corresponds to Access Identity 2. Value 1 for an Access Identity indicates that the field *ra-Prioritization-r16* applies, otherwise the field does not apply.

ra-PrioritizationForSlicingTwoStep

Parameters which apply to configure prioritized CBRA 2-step random access type for slicing.

rach-ConfigGenericTwoStepRA

2-step random access type parameters for both regular random access and beam failure recovery.

GroupB-ConfiguredTwoStepRA field descriptions

messagePowerOffsetGroupB

Threshold for preamble selection. Value is in dB. Value *minusinfinity* corresponds to –infinity. Value *dB0* corresponds to 0 dB, *dB5* corresponds to 5 dB and so on. (see TS 38.321 [3], clause 5.1.1).

numberOfRA-PreamblesGroupA

The number of CB preambles per SSB in group A for idle/inactive or connected mode. The setting of the number of preambles for each group should be consistent with *msgA-SSB-PerRACH-OccasionAndCB-PreamblesPerSSB* or *msgA-CB-PreamblesPerSSB-PerSharedRO* if configured.

ra-MsgA-SizeGroupA

Transport block size threshold in bits below which the UE shall use a contention-based RA preamble of group A. (see TS 38.321 [3], clause 5.1.1).

Conditional Presence	Explanation
<i>2Step4Step</i>	The field is mandatory present if both 2-step random access type and 4-step random access type are configured in the BWP, otherwise the field is not present. The field is mandatory present in <i>msgA-ConfigCommon</i> field in <i>AdditionalRACH-Config</i> if both 2-step random access type and 4-step random access type are configured for the same feature combination in the BWP.
<i>2StepOnlyL139</i>	The field is mandatory present if <i>msgA-PRACH-RootSequenceIndex</i> L=139 and no 4-step random access type is configured, or if L=571 for FR2-2 and no 4-step random access type is configured, otherwise the field is absent, Need S.
<i>2StepOnly</i>	The field is mandatory present in <i>msgA-ConfigCommon</i> field in <i>BWP-UplinkCommon</i> if <i>rach-ConfigCommon</i> field is absent in this <i>BWP-UplinkCommon</i> , otherwise the field is optionally present in <i>msgA-ConfigCommon</i> field in <i>BWP-UplinkCommon</i> , Need S. The field is mandatory present in <i>msgA-ConfigCommon</i> field in <i>AdditionalRACH-Config</i> if <i>rach-ConfigCommon</i> field is absent in this <i>AdditionalRACH-Config</i> , otherwise the field is optionally present in <i>msgA-ConfigCommon</i> field in <i>AdditionalRACH-Config</i> , Need S.
<i>AdditionalRACH</i>	The field is mandatory present if the <i>msgA-ConfigCommon</i> is included in an <i>AdditionalRACH-Config</i> . When included in <i>initialUplinkBWP-RedCap</i> to indicate other feature(s) than <i>redcap</i> , this field is mandatory present with at least two <i>FeatureCombinationPreambles</i> list entries: one list entry indicating only <i>redcap</i> and the other(s) indicating both <i>redcap</i> and one or multiple other feature(s) (e.g. <i>smallData</i> , <i>nsag</i> or <i>msg3-Repetitions</i>). Otherwise, it is optional, Need R.
<i>InitialBWP-Only</i>	This field is optionally present, Need R, if this BWP is the initial BWP of SpCell. Otherwise, the field is absent.
<i>SharedRO</i>	The field is mandatory present if the 2-step random access type occasions are shared with 4-step random access type, otherwise the field is not present.

– *RACH-ConfigDedicated*

The IE *RACH-ConfigDedicated* is used to specify the dedicated random access parameters.

RACH-ConfigDedicated information element

CFRA-CSIRS-Resource field descriptions

csi-RS

The ID of a CSI-RS resource defined in the measurement object associated with this serving cell.

ra-OccasionList

RA occasions that the UE shall use when performing CF-RA upon selecting the candidate beam identified by this CSI-RS. The network ensures that the RA occasion indexes provided herein are also configured by prach-ConfigurationIndex and msg1-FDM. Per RO type (the first or the second PRACH occasions as specified in TS 38.213 [13], clause 8), each RACH occasion is sequentially numbered, first, in increasing order of frequency resource indexes for frequency multiplexed PRACH occasions; second, in increasing order of time resource indexes for time multiplexed PRACH occasions within a PRACH slot and Third, in increasing order of indexes for PRACH slots.

ra-PreambleIndex

The RA preamble index to use in the RA occasions associated with this CSI-RS.

CFRA field descriptions

msg1-RepetitionNum

Indicates the MSG1 repetition number used for contention free 4-step random access type in TS 38.321 [3]. If this field is absent, the UE performs contention free 4-step random access without MSG1-Repetitions.

occasions

RA occasions for contention free random access. If the field is absent, the UE uses the RA occasions configured in *RACH-ConfigCommon* in the first active UL BWP.

ra-ssb-OccasionMaskIndex

Explicitly signalled PRACH Mask Index for RA Resource selection in TS 38.321 [3]. The mask is valid for all SSB resources signalled in *ssb-ResourceList*. The UE shall ignore this field if the field *msg1-RepetitionNum* included in *CFRA* is configured.

rach-ConfigGeneric

Configuration of contention free random access occasions for CFRA. The UE shall ignore *preambleReceivedTargetPower*, *preambleTransMax*, *powerRampingStep*, *ra-ResponseWindow* signalled within this field and use the corresponding values provided in *RACH-ConfigCommon*.

ra-OccasionType

Indicates that SBF aware UE (see TS 38.300 [2], clause 23.1) shall use the second PRACH occasions (see TS 38.213 [13], clause 8) for CFRA or for the fallback CBRA, as specified in clause 5.1.2 in TS 38.321 [3]. If absent, the first PRACH occasions shall be used.

ssb-perRACH-Occasion

Number of SSBs per RACH occasion.

totalNumberOfRA-Preambles

Total number of preambles used for contention free random access in the RACH resources defined in CFRA, excluding preambles used for other purposes (e.g. for SI request). If the field is absent but the field *occasions* is present, the UE may assume all the 64 preambles are for RA. The setting should be consistent with the setting of *ssb-perRACH-Occasion*, if present, i.e. it should be a multiple of the number of SSBs per RACH occasion.

CFRA-SSB-Resource field descriptions
msgA-PUSCH-Resource-Index Identifies the index of the PUSCH resource used for MSGA CFRA. The PUSCH resource index indicates a valid PUSCH occasion (as specified in TS 38.213 [13], clause 8.1A) and the associated DMRS resources corresponding to a PRACH slot. The PUSCH resource indexes are sequentially numbered and are mapped to valid PUSCH occasions corresponding to a PRACH slot which are ordered, first, in increasing order of frequency resource indexes for frequency multiplexed PUSCH occasions; second, in increasing order of DMRS resource indexes within a PUSCH occasion, where a <i>DMRS_{id}</i> resource index is determined first in an ascending order of a DMRS port index and then in an ascending order of a DMRS sequence index, third in increasing order of time resource indexes for time multiplexed PUSCH occasions within a PUSCH slot and fourth, in increasing order of indexes for PUSCH slots. For the case of contention free 2-step random access type, if this field is absent, the UE shall use the value 0.
ra-PreambleIndex The preamble index that the UE shall use when performing CF-RA upon selecting the candidate beams identified by this SSB.
ssb The ID of an SSB transmitted by this serving cell.

CFRA-TwoStep field descriptions
msgA-CFRA-PUSCH PUSCH resource configuration(s) for msgA CFRA.
msgA-TransMax Max number of MsgA preamble transmissions performed before switching to 4-step type random access (see TS 38.321 [3], clauses 5.1.1). This field is only applicable when 2-step and 4-step RA type are configured and switching to 4-step type RA is supported. If the field is absent in <i>cfra-TwoStep</i>, switching from 2-step RA type to 4-step RA type is not allowed.
occasionsTwoStepRA RA occasions for contention free random access. If the field is absent, the UE uses the RA occasions configured in <i>RACH-ConfigCommonTwoStepRA</i> in the first active UL BWP.
ra-SSB-OccasionMaskIndex Explicitly signalled PRACH Mask Index for RA Resource selection in TS 38.321 [3]. The mask is valid for all SSB resources signalled in <i>ssb-ResourceList</i>.
rach-ConfigGenericTwoStepRA Configuration of contention free random access occasions for CFRA 2-step random access type.
ssb-PerRACH-OccasionTwoStep Number of SSBs per RACH occasion for 2-step random access type.

RACH-ConfigDedicated field descriptions
cfra Parameters for contention free random access to a given target cell. If this field and <i>cfra-TwoStep</i> are absent, the UE performs contention based random access.
cfra-TwoStep Parameters for contention free 2-step random access type to a given target cell. Network ensures that <i>cfra</i> and <i>cfra-TwoStep</i> are not configured at the same time. If this field and <i>cfra</i> are absent, the UE performs contention based random access.
ra-prioritization Parameters which apply for prioritized random access procedure to a given target cell (see TS 38.321 [3], clause 5.1.1).
ra-PrioritizationTwoStep Parameters which apply for prioritized 2-step random access type procedure to a given target cell (see TS 38.321 [3], clause 5.1.1).

Conditional Presence	Explanation
<i>Mandatory</i>	The field is mandatory present.
<i>Occasions</i>	The field is optionally present, Need S, if the field <i>occasions</i> is present, otherwise it is absent.
<i>2StepCFRA</i>	The field is optionally present for the case of 2-step RA type contention free random access, Need S, otherwise it is absent.
<i>4StepCFRArep</i>	For non-(e)RedCap UEs, the field is optionally present, Need S, if <i>resources</i> is set to <i>ssb</i> and there is one <i>FeatureCombinationPreambles</i> entry indicating only <i>msg1-Repetitions</i> which is associated with the same Msg1 repetition number. For RedCap UEs or if RedCap is considered to be applicable for this Random Access procedure for eRedCap UEs, the field is optionally present, Need S, if <i>resources</i> is set to <i>ssb</i> and there is one <i>FeatureCombinationPreambles</i> entry indicating only <i>redCap</i> and <i>msg1-Repetitions</i> which is associated with the same Msg1 repetition number. For eRedCap UEs, if eRedCap is considered to be applicable for this Random Access procedure, the field is optional present, Need S, if <i>resource</i> is set to <i>ssb</i> and there is one <i>FeatureCombinationPreambles</i> entry indicating only <i>eRedCap</i> and <i>msg1-Repetitions</i> which is associated with the same Msg1 repetition number. Otherwise, it is absent.

– RACH-ConfigGeneric

The IE *RACH-ConfigGeneric* is used to specify the random-access parameters both for regular random access as well as for beam failure recovery.

RACH-ConfigGeneric information element

```
-- ASN1START
-- TAG-RACH-CONFIGGENERIC-START

RACH-ConfigGeneric ::=

}
-- TAG-RACH-CONFIGGENERIC-STOP
-- ASN1STOP

```

<i>RACH-ConfigGeneric</i> field descriptions
<i>msg1-FDM</i> The number of PRACH transmission occasions FDMed in one time instance. (see TS 38.211 [16], clause 6.3.3.2).
<i>msg1-FrequencyStart</i> Offset of lowest PRACH transmission occasion in frequency domain with respect to PRB 0. This field is used to configure the offset of lowest PRACH transmission occasion in frequency domain with respect to PRB 0 for the first PRACH occasions if <i>sbfd-RACH-SingleConfig</i> is configured and for both the first PRACH occasions and second PRACH occasions if <i>sbfd-RACH-DualConfig</i> is configured (see TS 38.213 [13], clause 8), or, the lowest PRB in PRBs that are both in the active UL BWP and in the UL sub-band for the second PRACH occasions if <i>sbfd-RACH-SingleConfig</i> is configured (see TS 38.213 [13], clause 8). The value is configured so that the corresponding RACH resource is entirely within the bandwidth of the UL BWP. (see TS 38.211 [16], clause 6.3.3.2).
<i>powerRampingStep</i> Power ramping steps for PRACH (see TS 38.321 [3], 5.1.3). This field is set to the same value for different repetition numbers associated with a specific <i>FeatureCombination</i> .
<i>prach-ConfigurationFrameOffset-IAB</i> Frame offset for ROs defined in the baseline configuration indicated by <i>prach-ConfigurationIndex</i> and is used only by the IAB-MT. (see TS 38.211 [16], clause 6.3.3.2).
<i>prach-ConfigurationIndex</i> PRACH configuration index. For <i>prach-ConfigurationIndex</i> configured under <i>beamFailureRecoveryConfig</i> , the <i>prach-ConfigurationIndex</i> can only correspond to the short preamble format, (see TS 38.211 [16], clause 6.3.3.2). If the field <i>prach-ConfigurationIndex-v1610</i> is present, the UE shall ignore the value provided in <i>prach-ConfigurationIndex</i> (without suffix).
<i>prach-ConfigurationPeriodScaling-IAB</i> Scaling factor to extend the periodicity of the baseline configuration indicated by <i>prach-ConfigurationIndex</i> and is used only by the IAB-MT. Value <i>scf1</i> corresponds to scaling factor of 1 and so on. (see TS 38.211 [16], clause 6.3.3.2).
<i>prach-ConfigurationSOffset-IAB</i> Subframe/Slot offset for ROs defined in the baseline configuration indicated by <i>prach-ConfigurationIndex</i> and is used only by the IAB-MT. (see TS 38.211 [16], clause 6.3.3.2).
<i>preambleReceivedTargetPower</i> The target power level at the network receiver side (see TS 38.213 [13], clause 7.4, TS 38.321 [3], clauses 5.1.2, 5.1.3). Only multiples of 2 dBm may be chosen (e.g. -202, -200, -198, ...). This field is set to the same value for different repetition numbers associated with a specific <i>FeatureCombination</i> .
<i>preambleTransMax</i> Max number of RA preamble transmission performed before declaring a failure (see TS 38.321 [3], clauses 5.1.4, 5.1.5). The UE shall ignore this field in case <i>rach-ConfigGeneric</i> is included within an <i>EarlyUL-SyncConfig</i> IE.
<i>ra-ResponseWindow</i> Msg2 (RAR) window length in number of slots. The network configures a value lower than or equal to 10 ms when Msg2 is transmitted in licensed spectrum and a value lower than or equal to 40 ms when Msg2 is transmitted with shared spectrum channel access (see TS 38.321 [3], clause 5.1.4). UE ignores the field if included in <i>SCellConfig</i> . If <i>ra-ResponseWindow-v1610</i> or <i>ra-ResponseWindow-v1700</i> is signalled, UE shall ignore the <i>ra-ResponseWindow</i> (without suffix). The field <i>ra-ResponseWindow-v1700</i> is applicable to SCS 480 kHz and SCS 960 kHz. The UE shall ignore this field in case <i>rach-ConfigGeneric</i> is included within an <i>EarlyUL-SyncConfig</i> IE.
<i>sbfd-RACH-SingleConfig-preambleReceivedTargetPower</i> Configures <i>preambleReceivedTargetPower</i> for PRACH transmission in the second PRACH occasions or for Msg3 PUSCH transmission in SBFD symbols if <i>sbfd-RACH-SingleConfig</i> is configured, see clause 5 in TS 38.211 [16] and clause 8 in TS 38.213 [13].
<i>zeroCorrelationZoneConfig</i> N-CS configuration, see Table 6.3.3.1-5 in TS 38.211 [16].

– RACH-ConfigGenericTwoStepRA

The IE *RACH-ConfigGenericTwoStepRA* is used to specify the 2-step random access type parameters.

```

RACH-ConfigGenericTwoStepRA field descriptions**msgA-PreamblePowerRampingStep**

Power ramping steps for msgA PRACH. If the field is absent in *RACH-ConfigCommonTwoStepRA* in *AdditionalRACH-Config*, the UE shall apply the corresponding value in *RACH-ConfigCommon* in the same *AdditionalRACH-Config*. If the field is absent in other cases, UE shall use the value of *powerRampingStep* in *RACH-ConfigGeneric* in the configured BWP (see TS 38.321 [3], 5.1.3). This field may only be present if no 4-step type RA is configured in the BWP or in the case of separate ROs with 4-step type RA. The field is absent if *RACH-ConfigGenericTwoStepRA* is included in *CFRA-TwoStep* in *RACH-ConfigDedicated* and then the UE uses the value of *msgA-PreamblePowerRampingStep* in *RACH-ConfigGenericTwoStepRA* configured for CBRA.

msgA-PreambleReceivedTargetPower

The target power level at the network receiver side (see TS 38.213 [13], clause 7.1.1 and TS 38.321 [3], clause 5.1.1). Only multiples of 2 dBm may be chosen (e.g. -202, -200, -198, ...). If the field is absent, UE shall use the value of *preambleReceivedTargetPower* in *RACH-ConfigGeneric* in the configured BWP. This field may only be present if no 4-step type RA is configured in the BWP. The field is absent if *RACH-ConfigGenericTwoStepRA* is included in *CFRA-TwoStep* in *RACH-ConfigDedicated* and then the UE uses the value of *msgA-PreambleReceivedTargetPower* in *RACH-ConfigGenericTwoStepRA* configured for CBRA.

msgA-PRACH-ConfigurationIndex

Cell-specific PRACH configuration index for 2-step RA type. If the field is absent in *RACH-ConfigCommonTwoStepRA* which is configured directly within a BWP (i.e. not within *AdditionalRACH-Config*), the UE shall use the value of corresponding 4-step random access parameter in the configured BWP. If the field is absent in *RACH-ConfigCommonTwoStepRA* in *AdditionalRACH-Config*, the UE shall apply the corresponding value in *RACH-ConfigCommon* in the same *AdditionalRACH-Config*. If the value is in the range of 256 to 262, the field *prach-ConfigurationIndex-v1610* should be considered configured (see TS 38.211 [16], clause 6.3.3.2). This field may only be present if no 4-step type RA is configured in the BWP or in the case of separate ROs with 4-step type RA.

msgA-RO-FDM

The number of msgA PRACH transmission occasions Frequency-Division Multiplexed in one time instance. If the field is absent in *RACH-ConfigCommonTwoStepRA* which is configured directly within a BWP (i.e. not within *AdditionalRACH-Config*), UE shall use value of *msg1-FDM* in *RACH-ConfigGeneric* in the configured BWP. If the field is absent in *RACH-ConfigCommonTwoStepRA* in *AdditionalRACH-Config*, the UE shall apply the value of *msg1-FDM* in *RACH-ConfigCommon* in the same *AdditionalRACH-Config* (see TS 38.211 [16], clause 6.3.3.2). This field may only be present if no 4-step type RA is configured in the BWP or in the case of separate ROs with 4-step type RA.

msgA-RO-FrequencyStart

Offset of lowest PRACH transmissions occasion in frequency domain with respect to PRB 0. If the field is absent in *RACH-ConfigCommonTwoStepRA* which is configured directly within a BWP (i.e. not within *AdditionalRACH-Config*), UE shall use value of *msg1-FrequencyStart* in *RACH-ConfigGeneric* in the configured BWP. If the field is absent in *RACH-ConfigCommonTwoStepRA* in *AdditionalRACH-Config*, the UE shall apply the value of *msg1-FrequencyStart* in *RACH-ConfigCommon* in the same *AdditionalRACH-Config* (see TS 38.211 [16], clauses 5.3.2 and 6.3.3.2). This field may only be present if no 4-step type RA is configured in the BWP or in the case of separate ROs with 4-step type RA.

msgA-ZeroCorrelationZoneConfig

N-CS configuration for msgA preamble, see Table 6.3.3.1-5 in TS 38.211 [16]. If the field is absent in *RACH-ConfigCommonTwoStepRA* in *AdditionalRACH-Config*, the UE shall apply the corresponding value in *RACH-ConfigCommon* in the same *AdditionalRACH-Config*. If the field is absent in other cases, UE shall use value *zeroCorrelationZoneConfig* in *RACH-ConfigGeneric* in the configured BWP. This field may only be present if no 4-step type RA is configured in the BWP or in the case of separate ROs with 4-step type RA.

msgB-ResponseWindow

MsgB monitoring window length in number of slots. The network configures a value lower than or equal to 40ms (see TS 38.321 [3], clause 5.1.1). The network does not configure *msgB-ResponseWindow-r16* simultaneously with *msgB-ResponseWindow-v1700*, and if both fields are absent, the UE uses the value of *msgB-ResponseWindow* in *RACH-ConfigGenericTwoStepRA* configured for CBRA.

preambleTransMax

Max number of RA preamble transmission performed before declaring a failure (see TS 38.321 [3], clauses 5.1.4, 5.1.5). If the field is absent in *RACH-ConfigCommonTwoStepRA* in *AdditionalRACH-Config*, the UE shall apply the corresponding value in *RACH-ConfigCommon* in the same *AdditionalRACH-Config*. If the field is absent in other cases, UE shall use the value of *preambleTransMax* in *RACH-ConfigGeneric* in the configured BWP. The field is absent if *RACH-ConfigGenericTwoStepRA* is included in *CFRA-TwoStep* in *RACH-ConfigDedicated* and then the UE uses the value of *preambleTransMax* in *RACH-ConfigGenericTwoStepRA* configured for CBRA.

Conditional Presence	Explanation
<i>2StepOnly</i>	The field is mandatory present in <i>msgA-ConfigCommon</i> field in <i>BWP-UplinkCommon</i> if <i>rach-ConfigCommon</i> field is absent in this <i>BWP-UplinkCommon</i> , otherwise the field is optionally present in <i>msgA-ConfigCommon</i> field in <i>BWP-UplinkCommon</i> , Need S. The field is mandatory present in <i>msgA-ConfigCommon</i> in <i>AdditionalRACH-Config</i> if <i>rach-ConfigCommon</i> field is absent in this <i>AdditionalRACH-Config</i> , otherwise the field is optionally present in <i>msgA-ConfigCommon</i> field in <i>AdditionalRACH-Config</i> , Need S.
<i>2StepOnlyNoCFRA</i>	The field is mandatory present if <i>RACH-ConfigGenericTwoStepRA</i> is included in the <i>RACH-ConfigCommonTwoStepRA</i> and there are no 4-step random access configurations configured in the BWP (i.e only 2-step random access type configured in the BWP), otherwise (i.e. 4-step random access configuration also exists in the BWP) the field is optionally present, Need S. When <i>RACH-ConfigGenericTwoStepRA</i> is included in the <i>RACH-ConfigDedicated</i> , this field is absent.
<i>NoCFRA</i>	The field is mandatory present if <i>msgB-ResponseWindow-r17</i> is absent and <i>RACH-ConfigGenericTwoStepRA</i> is not included in <i>CFRA-TwoStep</i> in <i>RACH-ConfigDedicated</i> , otherwise the field is absent, Need S.
<i>NoCFRA2</i>	The field is mandatory present if <i>msgB-ResponseWindow-r16</i> is absent and <i>RACH-ConfigGenericTwoStepRA</i> is not included in <i>CFRA-TwoStep</i> in <i>RACH-ConfigDedicated</i> , otherwise the field is absent, Need S.

– *RACH-ConfigTwoTA*

The IE *RACH-ConfigTwoTA* is used to specify random access parameters for each additional PCI configured for the serving cell.

RACH-ConfigTwoTA information element

```
-- ASN1START
-- TAG-RACH-CONFIGTWOTA-START

RACH-ConfigTwoTA-r18 ::= SEQUENCE {
    additionalPCI-andRACH-Index-r18 AdditionalPCIIndex-r17,
    rach-ConfigGeneric-r18      RACH-ConfigGeneric,
    ssb-perRACH-Occasion-r18    ENUMERATED {oneEighth, oneFourth, oneHalf, one, two, four, eight, sixteen} OPTIONAL, -- Need M
    prach-RootSequenceIndex-r18 CHOICE {
        1839          INTEGER (0..837),
        1139          INTEGER (0..137),
        1571          INTEGER (0..569),
        11151         INTEGER (0..1149)
    },
    msg1-SubcarrierSpacing-r18 SubcarrierSpacing OPTIONAL, -- Cond L139
    ...,
    [[
        twoTA-restrictedSetConfig-r18 ENUMERATED {unrestrictedSet, restrictedSetTypeA, restrictedSetTypeB} OPTIONAL -- Need R
    ]]
}

-- TAG-RACH-CONFIGTWOTA-STOP
-- ASN1STOP
```

<i>RACH-ConfigTwoTA</i> field descriptions
additionalPCI-andRACH-Index Indicates the associated PCI to this random access configuration.
msg1-SubcarrierSpacing Subcarrier spacing of PRACH when prach-RootSequenceIndex has value set to I139 (see TS 38.211 [16], clause 5.3.2). Only the following values are applicable depending on the used frequency: FR1: 15 or 30 kHz FR2-1: 60 or 120 kHz FR2-2: 120, 480, or 960 kHz. If absent, the UE applies the SCS as derived from the <i>prach-ConfigurationIndex</i> in <i>RACH-ConfigGeneric</i> (see tables Table 6.3.3.1-1, Table 6.3.3.1-2, Table 6.3.3.2-2 and Table 6.3.3.2-3, TS 38.211 [16]).
prach-RootSequenceIndex PRACH root sequence index (see TS 38.211 [16], clause 6.3.3.1). The value range depends on whether L=839, L=139, L=571 or L=1151. For FR2-2, only the following values are applicable depending on the used subcarrier spacing: 120 kHz: L=139, L=571, and L=1151 480 kHz: L=139, and L=571 960 kHz: L=139
rach-ConfigGeneric RACH parameters for contention free random access occasions for CFRA.
ssb-perRACH-Occasion Number of SSBs per RACH occasion.
twoTA-restrictedSetConfig Configuration of an unrestricted set or one of two types of restricted sets associated with additional PCI, see TS 38.211 [16], clause 6.3.3.1.

Conditional Presence	Explanation
L139	The field is mandatory present if <i>prach-RootSequenceIndex</i> L=139, or if L=571 for FR2-2, otherwise the field is absent, Need S.

– *RA-AdaptConfig*

The IE *RA-AdaptConfig* is used to configure adaptive random access occasions.

RA-AdaptConfig information element

```
-- ASN1START
-- TAG-RA-ADAPTCOFIG-START

RA-AdaptConfig-r19 ::=
    prach-ConfigurationIndex-r19          INTEGER (0..255),
    msg1-FDM-r19                          ENUMERATED {one, two, four, eight},
    msg1-FrequencyStart-r19               INTEGER (0..maxNrofPhysicalResourceBlocks-1),

    ssb-PerRACH-OccasionAndCB-PreamblesPerSSB-r19 CHOICE {
        oneEighth      ENUMERATED {n4,n8,n12,n16,n20,n24,n28,n32,n36,n40,n44,n48,n52,n56,n60,n64},
        oneFourth       ENUMERATED {n4,n8,n12,n16,n20,n24,n28,n32,n36,n40,n44,n48,n52,n56,n60,n64},
        oneHalf         ENUMERATED {n4,n8,n12,n16,n20,n24,n28,n32,n36,n40,n44,n48,n52,n56,n60,n64},
        one             ENUMERATED {n4,n8,n12,n16,n20,n24,n28,n32,n36,n40,n44,n48,n52,n56,n60,n64},
        two             ENUMERATED {n4,n8,n12,n16,n20,n24,n28,n32},
        four            INTEGER (1..16),
    }
```

```

    eight          INTEGER (1..8),
    sixteen        INTEGER (1..4)
  }
  validityDurationForRACH-Adaptation-r19          ENUMERATED {n2, n4, n8, n16},
  valueKforAssociationPatternPeriodsForPRACH-SubsetMask-r19  ENUMERATED {n2, n4, n8, n16}
  ...
}
-- TAG-RA-ADAPTCOFIG-STOP
-- ASN1STOP
```

RA-AdaptConfig field descriptions
prach-SubsetMaskIndexAdaptation Indicates the PRACH mask index for determining association periods for valid PRACH occasions associated with <i>rach-ConfigAdapt</i> . Value zero corresponds to mask index 0 and so on (See TS 38.213 [13], subclause 8.1).
validityDurationForRACH-Adaptation Indicates the validity time duration for availability indication of additional PRACH resources indicated by DCI 1_0 with P-RNTI, time unit is one SI modification period (see TS 38.213 [13], subclause 8.1).
valueKforAssociationPatternPeriodsForPRACH-SubsetMask The value of Kmask used for mapping of mask index to association periods per Kmask association pattern periods (See TS 38.213 [13], subclause 8.1). Absence of this field indicates the value 1.

– RA-Prioritization

The IE *RA-Prioritization* is used to configure prioritized random access.

RA-Prioritization information element

```

-- ASN1START
-- TAG-RA-PRIORITIZATION-START

RA-Prioritization ::=
  SEQUENCE {
    powerRampingStepHighPriority  ENUMERATED {dB0, dB2, dB4, dB6},
    scalingFactorBI              ENUMERATED {zero, dot25, dot5, dot75}
    ...
  }
-- TAG-RA-PRIORITIZATION-STOP
-- ASN1STOP
```

RA-Prioritization field descriptions
powerRampingStepHighPriority Power ramping step applied for prioritized random access procedure.
scalingFactorBI Scaling factor for the backoff indicator (BI) for the prioritized random access procedure. (see TS 38.321 [3], clause 5.1.4). Value <i>zero</i> corresponds to 0, value <i>dot25</i> corresponds to 0.25 and so on.

– RA-PrioritizationForSlicing

The IE *RA-PrioritizationForSlicing* is used to configure prioritized random access for slicing.

RA-PrioritizationForSlicing information element

```
-- ASN1START
-- TAG-RA-PRIORITIZATIONFORSLICING-START

RA-PrioritizationForSlicing-r17 ::= SEQUENCE {
    ra-PrioritizationSliceInfoList-r17    RA-PrioritizationSliceInfoList-r17,
    ...
}

RA-PrioritizationSliceInfoList-r17 ::= SEQUENCE (SIZE (1..maxSliceInfo-r17)) OF RA-PrioritizationSliceInfo-r17

RA-PrioritizationSliceInfo-r17 ::= SEQUENCE {
    nsag-ID-List-r17                      SEQUENCE (SIZE (1..maxSliceInfo-r17)) OF NSAG-ID-r17,
    ra-Prioritization-r17                  RA-Prioritization,
    ...
}

-- TAG-RA-PRIORITIZATIONFORSLICING-STOP
-- ASN1STOP
```

– RadioBearerConfig

The IE *RadioBearerConfig* is used to add, modify and release signalling, multicast MRBs and/or data radio bearers. Specifically, this IE carries the parameters for PDCP and, if applicable, SDAP entities for the radio bearers.

RadioBearerConfig information element

```
-- ASN1START
-- TAG-RADIOBEARERCONFIG-START

RadioBearerConfig ::= SEQUENCE {
    srb-ToAddModList          SRB-ToAddModList          OPTIONAL, -- Cond HO-Conn

-- TAG-RADIOBEARERCONFIG-STOP
-- ASN1STOP

```

DRB-ToAddMod and MRB-ToAddMod field descriptions	
cnAssociation	Indicates if the bearer is associated with the <i>eps-bearerIdentity</i> (when connected to EPC) or <i>sdap-Config</i> (when connected to 5GC).
daps-Config	Indicates that the bearer is configured as DAPS bearer. The network does not include this field in an <i>RRCReconfiguration</i> message contained within a <i>LTM-Config</i> IE.
drb-Identity	In case of DC, the DRB identity is unique within the scope of the UE, i.e. an MCG DRB cannot use the same value as a split DRB. For a split DRB the same identity is used for the MCG and SCG parts/indirect path of the configuration.
eps-BearerIdentity	The EPS bearer ID determines the EPS bearer.
mbs-SessionId	Indicates which multicast MBS session the bearer is associated with.
mrbs-Identity	Identification of the multicast MRB.
mrbs-IdentityNew	New identity of the multicast MRB when <i>mrbs-Identity</i> needs to be changed, e.g. as a result of a handover.
n3c-BearerAssociated	Indicates that the radio bearer is associated with the N3C indirect path.
reestablishPDCP	Indicates that PDCP should be re-established. Network sets this to <i>true</i> whenever the security key used for this radio bearer changes. Key change could for example be due to termination point change for the bearer, reconfiguration with sync, resuming an RRC connection, or the first reconfiguration after reestablishment. It is also applicable for LTE procedures when NR PDCP is configured. Network doesn't include this field for DRB if the bearer is configured as DAPS bearer, if the <i>RadioBearerConfig</i> IE is part of an <i>RRCReconfiguration</i> message within the <i>LTM-Config</i> IE, or if the <i>RadioBearerConfig</i> IE is part of an <i>RRCReconfiguration</i> message associated with subsequent CPAC within the <i>ConditionalReconfiguration</i> IE.
recoverPDCP	Indicates that PDCP should perform recovery according to TS 38.323 [5]. Network doesn't include this field if the bearer is configured as DAPS bearer, if the <i>RadioBearerConfig</i> IE is part of an <i>RRCReconfiguration</i> message within the <i>LTM-Config</i> IE, or if the <i>RadioBearerConfig</i> IE is part of an <i>RRCReconfiguration</i> message associated with subsequent CPAC within the <i>ConditionalReconfiguration</i> IE.
sdap-Config	The SDAP configuration determines how to map QoS flows to DRBs when NR or E-UTRA connects to the 5GC and presence/absence of UL/DL SDAP headers.

RadioBearerConfig field descriptions	
securityConfig	Indicates the security algorithm and key to use for the signalling and data radio bearers configured with the list in this IE <i>RadioBearerConfig</i> . When the field is not included after AS security has been activated, the UE shall continue to use the currently configured <i>keyToUse</i> and security algorithm for the radio bearers reconfigured with the lists in this IE <i>RadioBearerConfig</i> . The field is not included when configuring SRB1 before AS security is activated.
srb3-ToRelease	Release SRB3. SRB3 release can only be done over SRB1 and only at SCG release and reconfiguration with sync.

SecurityConfig field descriptions**keyToUse**

Indicates if the bearers configured with the list in this IE *RadioBearerConfig* are using the master key or the secondary key for deriving ciphering and/or integrity protection keys. For MR-DC, network should not configure SRB1 and SRB2 with secondary key and SRB3 with the master key. When the field is not included, the UE shall continue to use the currently configured *keyToUse* for the radio bearers reconfigured with the lists in this IE *RadioBearerConfig*.

securityAlgorithmConfig

Indicates the security algorithm for the signalling and data radio bearers configured with the list in this IE *RadioBearerConfig*. When the field is not included, the UE shall continue to use the currently configured security algorithm for the radio bearers reconfigured with the lists in this IE *RadioBearerConfig*.

SRB-ToAddMod field descriptions**discardOnPDCP**

Indicates that PDCP should discard stored SDU and PDU according to TS 38.323 [5]. Network doesn't include this field if the *RadioBearerConfig* IE is part of an *RRCReconfiguration* message associated with subsequent CPAC within the *ConditionalReconfiguration* IE which is received within a MCG *RRCReconfiguration* message via SRB1.

reestablishPDCP

Indicates that PDCP should be re-established. Network sets this to *true* whenever the security key used for this radio bearer changes. Key change could for example be due to reconfiguration with sync, for SRB2 when resuming an RRC connection, or at the first reconfiguration after RRC connection reestablishment in NR. For SRB1, when resuming an RRC connection, or at the first reconfiguration after RRC connection reestablishment in NR, the network does not set this field to *true*. For LTE SRBs using NR PDCP, it could be for handover, RRC connection reestablishment or resume. Network doesn't include this field if any DAPS bearer is configured or if the *RadioBearerConfig* IE is part of an *RRCReconfiguration* message within the *LTM-Config* IE. For SRB3, network doesn't include this field if the *RadioBearerConfig* IE is part of an *RRCReconfiguration* message associated with subsequent CPAC within the *ConditionalReconfiguration* IE.

srb-Identity, srb-Identity-v1700, srb-Identity-v1800, srb-Identity-v1900

Value 1 is applicable for SRB1 only. Value 2 is applicable for SRB2 only. Value 3 is applicable for SRB3 only. Value 4 is applicable for SRB4 only. Value 5 is applicable for SRB5 only. Value 6 is applicable for SRB6 only. If *srb-Identity-v1700*, *srb-Identity-v1800* or *srb-Identity-v1900* is received for an SRB, the UE shall ignore *srb-Identity* (i.e. without suffix) for this SRB.

Conditional Presence	Explanation
<i>RBTermChange</i>	The field is mandatory present in case of: - set up of signalling and data radio bearer, - change of termination point for the radio bearer between MN and SN. It is optionally present otherwise, Need S.
<i>RBTermChange1</i>	The field is mandatory present in case of: - set up of signalling and data radio bearer, - change of termination point for the radio bearer between MN and SN, - handover from E-UTRA/EPC or E-UTRA/5GC to NR, - handover from NR or E-UTRA/EPC to E-UTRA/5GC if the UE supports NGEN-DC. It is optionally present otherwise, Need S.
<i>PDCP</i>	The field is mandatory present if the corresponding DRB/multicast MRB is being setup or corresponding DRB/multicast MRB is reconfigured with NR PDCP or if the corresponding SRB associated with two RLC entities is being setup or if the number of RLC bearers associated with the DRB/multicast MRB or SRB is changed or if the corresponding SRB4, SRB5 or SRB6 is being setup. The field is optionally present, Need S, if the corresponding SRB1 or SRB2 or SRB3 associated with one RLC entity is being setup or if the corresponding SRB1 or SRB2 or SRB3 is reconfigured with NR PDCP; otherwise the field is optionally present, need M.
<i>DRBSetup</i>	The field is mandatory present if the corresponding DRB is being setup; otherwise the field is optionally present, need M.
<i>HO-Conn</i>	The field is mandatory present - in case of inter-system handover from E-UTRA/EPC to E-UTRA/5GC or NR, - or when the <i>fullConfig</i> is included in the <i>RRCReconfiguration</i> message and NE-DC/NR-DC is not configured, - or in case of <i>RRCSetup</i>. Otherwise the field is optionally present, need N. Upon <i>RRCSetup</i> , only SRB1 can be present.
<i>HO-toNR</i>	If <i>mrbs-ToAddModList</i> is not included, the field is mandatory present for UEs other than NCR-MT - in case of inter-system handover from E-UTRA/EPC to E-UTRA/5GC or NR, - or when the <i>fullConfig</i> is included in the <i>RRCReconfiguration</i> message and NE-DC/NR-DC is not configured. In case of <i>RRCSetup</i> , the field is absent; otherwise the field is optionally present, need N.
<i>DAPS</i>	The field is optionally present, need N, in case masterCellGroup includes ReconfigurationWithSync, SCell(s) and SCG are not configured, multi-DCI/single-DCI based multi-TRP are not configured in any DL BWP, <i>supplementaryUplink</i> is not configured, ethernetHeaderCompression is not configured for the DRB, <i>conditionalReconfiguration</i> is not configured, and NR sidelink and V2X sidelink are not configured. Otherwise the field is absent.
<i>MRBSetup</i>	The field is mandatory present if the corresponding multicast MRB is being setup; otherwise the field is optionally present, need M.
<i>N3C MP</i>	The field is optionally present if the corresponding radio bearer is being setup for MP with N3C indirect path, need R. It is absent otherwise.

– *RadioLinkMonitoringConfig*

The IE *RadioLinkMonitoringConfig* is used to configure radio link monitoring for detection of beam- and/or cell radio link failure. See also TS 38.321 [3], clause 5.1.1.

RadioLinkMonitoringConfig information element

-- ASN1START

```

-- TAG-RADIOLINKMONITORINGCONFIG-START

RadioLinkMonitoringConfig ::= SEQUENCE {

        ssb-Index SSB-Index,
        csi-RS-Index NZP-CSI-RS-ResourceId
    },
    ...
}

BeamLinkMonitoringRS-Id-r17 ::= INTEGER (0..maxNrofFailureDetectionResources-1-r17)

```

```
-- TAG-RADIOLINKMONITORINGCONFIG-STOP
-- ASN1STOP
```

RadioLinkMonitoringConfig field descriptions

additionalPCI

Indicates the physical cell IDs (PCI) of the SSBs in the *failureDetectionSet2*. If *candidateBeamRS-List2* is configured in IE *BeamFailureRecoveryRSConfig* the field indicates the physical cell IDs (PCI) of the SSBs in the *candidateBeamRS-List2*.

beamFailureDetectionTimer

Timer for beam failure detection (see TS 38.321 [3], clause 5.17). See also the *BeamFailureRecoveryConfig* IE. Value in number of " $Q_{out,LR}$ reporting periods of Beam Failure Detection" Reference Signal (see TS 38.213 [13], clause 6). Value *pbfd1* corresponds to 1 $Q_{out,LR}$ reporting period of Beam Failure Detection Reference Signal, value *pbfd2* corresponds to 2 $Q_{out,LR}$ reporting periods of Beam Failure Detection Reference Signal and so on.

beamFailureInstanceMaxCount

This field determines after how many beam failure events the UE triggers beam failure recovery (see TS 38.321 [3], clause 5.17). Value *n1* corresponds to 1 beam failure instance, value *n2* corresponds to 2 beam failure instances and so on.

failureDetectionResourcesToAddModList

A list of reference signals for detecting beam failure and/or cell level radio link failure (RLF). The limits of the reference signals that the network can configure are specified in TS 38.213 [13], table 5-1. The network configures at most two detectionResources per BWP for the purpose *beamFailure* or *both*. If no RSs are provided for the purpose of beam failure detection, the UE performs beam monitoring based on the activated *TCI-State* for PDCCH as described in TS 38.213 [13], clause 6. If no RSs are provided in this list for the purpose of RLF detection, the UE performs Cell-RLM based on the activated *TCI-State* of PDCCH as described in TS 38.213 [13], clause 5. The network ensures that the UE has a suitable set of reference signals for performing cell-RLM. If *failureDetectionSet1-r17* and *failureDetectionSet2-r17* are present, the *purpose* of *RadioLinkMonitoringRS* in *failureDetectionResourcesToAddModList* only can be set to *rlf*.

failureDetectionSet1, failureDetectionSet2

Configures parameters for beamfailure detection towards beam failure detection resources configured in the set. If additional PCIs are configured using *additionalPCI-ToAddModList* for the serving cell, each RS in one set can be associated only with one PCI. Network always configures the *failureDetectionSet1* and *failureDetectionSet2* together. *failureDetectionSetN* is present if and only if *candidateBeamRS-List2-r17* is configured. When a *failureDetectionSetN* is present, after the reconfiguration, the UE shall consider all the reference signals for this failure detection set as activated if at most *maxBFD-RS-resourcesPerSetPerBWP-r17* reference signals are configured for each failure detection set, otherwise the UE shall consider all the reference signals in this failure detection set as deactivated. If *bfdResourcesToAddModList-r17* in *failureDetectionSetN* is not present, the UE determines the RS(es) in each *failureDetectionSetN* as described in TS 38.213 [13], clause 6.

RadioLinkMonitoringRS field descriptions

detectionResource

A reference signal that the UE shall use for radio link monitoring or beam failure detection (depending on the indicated *purpose*). Only periodic 1-port CSI-RS can be configured on SCell for beam failure detection purpose.

purpose

Determines whether the UE shall monitor the associated reference signal for the purpose of cell- and/or beam failure detection. For SCell, network only configures the value to *beamFailure*.

RadioLinkMonitoringRS-Id

The IE *RadioLinkMonitoringRS-Id* is used to identify one *RadioLinkMonitoringRS*.

***RadioLinkMonitoringRS-Id* information element**

```
-- ASN1START
-- TAG-RADIOLINKMONITORINGRS-ID-START

RadioLinkMonitoringRS-Id ::=                INTEGER (0..maxNrofFailureDetectionResources-1)

```

RateMatchPattern field descriptions	
bitmaps	Indicates rate matching pattern by a pair of bitmaps <i>resourceBlocks</i> and <i>symbolsInResourceBlock</i> to define the rate match pattern within one or two slots, and a third bitmap <i>periodicityAndPattern</i> to define the repetition pattern with which the pattern defined by the above bitmap pair occurs.
controlResourceSet	This ControlResourceSet is used as a PDSCH rate matching pattern, i.e., PDSCH reception rate matches around it. In frequency domain, the resource is determined by the frequency domain resource of the CORESET with the corresponding CORESET ID. Time domain resource is determined by the parameters of the associated search space of the CORESET. If the field <i>controlResourceSetId-r16</i> is present, UE shall ignore the <i>controlResourceSetId</i> (without suffix).
periodicityAndPattern	A time domain repetition pattern at which the pattern defined by <i>symbolsInResourceBlock</i> and <i>resourceBlocks</i> recurs. This slot pattern repeats itself continuously. Absence of this field indicates the value <i>n1</i> (see TS 38.214 [19], clause 5.1.4.1).
resourceBlocks	A resource block level bitmap in the frequency domain. A bit in the bitmap set to 1 indicates that the UE shall apply rate matching in the corresponding resource block in accordance with the <i>symbolsInResourceBlock</i> bitmap. If used as cell-level rate matching pattern, the bitmap identifies "common resource blocks (CRB)". If used for MBS broadcast CFR, the bitmap identifies "physical resource blocks" inside the MBS broadcast CFR. If used as BWP-level rate matching pattern, the bitmap identifies "physical resource blocks" inside the BWP or MBS multicast CFR. The first/ leftmost bit corresponds to resource block 0, and so on (see TS 38.214 [19], clause 5.1.4.1).
subcarrierSpacing	The SubcarrierSpacing for this resource pattern. If the field is absent, the UE applies the SCS of the associated BWP. The value <i>kHz15</i> corresponds to $\mu=0$, the value <i>kHz30</i> corresponds to $\mu=1$, and so on. Only the following values are applicable depending on the used frequency (see TS 38.214 [19], clause 5.1.4.1): FR1/FR1-NTN: 15, 30 or 60 kHz FR2-1/FR2-NTN: 60 or 120 kHz FR2-2: 120, 480, or 960 kHz
symbolsInResourceBlock	A symbol level bitmap in time domain. It indicates with a bit set to true that the UE shall rate match around the corresponding symbol. This pattern recurs (in time domain) with the configured <i>periodicityAndPattern</i> (see TS 38.214 [19], clause 5.1.4.1). For <i>oneSlot</i> , if ECP is configured, the first 12 bits represent the symbols within the slot and the last two bits within the bitstring are ignored by the UE; Otherwise, the 14 bits represent the symbols within the slot. For <i>twoSlots</i> , if ECP is configured, the first 12 bits represent the symbols within the first slot and the next 12 bits represent the symbols in the second slot and the last four bits within the bit string are ignored by the UE; Otherwise, the first 14 bits represent the symbols within the first slot and the next 14 bits represent the symbols in the second slot. For the bits representing symbols in a slot, the most significant bit of the bit string represents the first symbol in the slot and the second most significant bit represents the second symbol in the slot and so on.

Conditional Presence	Explanation
<i>CellLevel</i>	The field is mandatory present if the <i>RateMatchPattern</i> is defined on cell level. The field is absent when the <i>RateMatchPattern</i> is defined on BWP level or defined for MBS broadcast CFR. If the <i>RateMatchPattern</i> is defined on BWP level, the UE applies the SCS of the BWP and if <i>RateMatchPattern</i> is defined for MBS broadcast CFR, the UE applies the SCS of the initial BWP or RedCap-specific initial BWP (if configured) for (e)RedCap UEs.

– **RateMatchPatternId**

The IE *RateMatchPatternId* identifies one *RateMatchPattern* (see TS 38.214 [19], clause 5.1.4.1).

RateMatchPatternId information element

```
-- ASN1START
-- TAG-RATEMATCHPATTERNID-START

RateMatchPatternId ::=
    INTEGER (0..maxNrofRateMatchPatterns-1)

-- TAG-RATEMATCHPATTERNID-STOP
-- ASN1STOP
```

– RateMatchPatternLTE-CRS

The IE *RateMatchPatternLTE-CRS* is used to configure a pattern to rate match around LTE CRS. See TS 38.214 [19], clause 5.1.4.2.

RateMatchPatternLTE-CRS information element

```
-- ASN1START
-- TAG-RATEMATCHPATTERNLTE-CRS-START

RateMatchPatternLTE-CRS ::=
    SEQUENCE {
        carrierFreqDL          INTEGER (0..16383),
        carrierBandwidthDL     ENUMERATED {n6, n15, n25, n50, n75, n100, spare2, spare1},
        mbsfn-SubframeConfigList EUTRA-MBSFN-SubframeConfigList OPTIONAL, -- Need M
        nrofCRS-Ports          ENUMERATED {n1, n2, n4},
        v-Shift                 ENUMERATED {n0, n1, n2, n3, n4, n5}
    }

LTE-CRS-PatternList-r16 ::=
    SEQUENCE (SIZE (1..maxLTE-CRS-Patterns-r16)) OF RateMatchPatternLTE-CRS

-- TAG-RATEMATCHPATTERNLTE-CRS-STOP
-- ASN1STOP
```

RateMatchPatternLTE-CRS field descriptions
carrierBandwidthDL BW of the LTE carrier in number of PRBs (see TS 38.214 [19], clause 5.1.4.2).
carrierFreqDL Center of the LTE carrier (see TS 38.214 [19], clause 5.1.4.2).
mbsfn-SubframeConfigList LTE MBSFN subframe configuration (see TS 38.214 [19], clause 5.1.4.2).
nrofCRS-Ports Number of LTE CRS antenna port to rate-match around (see TS 38.214 [19], clause 5.1.4.2).
v-Shift Shifting value v-shift in LTE to rate match around LTE CRS (see TS 38.214 [19], clause 5.1.4.2).

– *ReferenceConfiguration*

The IE *ReferenceConfiguration* is used provide a configuration that is common to all configured non-complete candidate configurations.

***ReferenceConfiguration* information element**

```
-- ASN1START
-- TAG-REFERENCECONFIGURATION-START

ReferenceConfiguration-r18 ::= OCTET STRING (CONTAINING RRCReconfiguration)

-- TAG-REFERENCECONFIGURATION-STOP
-- ASN1STOP
```

– *ReferenceLocation*

The IE *ReferenceLocation* contains location information used as a reference location. The value of the field is same as *Ellipsoid-Point* defined in TS37.355 [49]. The first/leftmost bit of the first octet contains the most significant bit.

***ReferenceLocation* information element**

```
-- ASN1START
-- TAG-REFERENCELOCATION-START

ReferenceLocation-r17 ::= OCTET STRING

-- TAG-REFERENCELOCATION-STOP
-- ASN1STOP
```

– *ReferenceTimeInfo*

The IE *ReferenceTimeInfo* contains timing information for 5G internal system clock used for, e.g., time stamping, see TS 23.501 [32], clause 5.27.1.2.

***ReferenceTimeInfo* information element**

```
-- ASN1START
-- TAG-REFERENCETIMEINFO-START

ReferenceTimeInfo-r16 ::= SEQUENCE {
    time-r16                ReferenceTime-r16,
    uncertainty-r16          INTEGER (0..32767)          OPTIONAL, -- Need S
    timeInfoType-r16         ENUMERATED {localClock}     OPTIONAL, -- Need S
    referenceSFN-r16         INTEGER (0..1023)           OPTIONAL, -- Cond RefTime
}

ReferenceTime-r16 ::= SEQUENCE {
```

```
refDays-r16                INTEGER (0..72999),
refSeconds-r16             INTEGER (0..86399),
refMilliSeconds-r16        INTEGER (0..999),
refTenNanoSeconds-r16      INTEGER (0..99999)
}

-- TAG-REFERENCETIMEINFO-STOP
-- ASN1STOP
```

ReferenceTimeInfo field descriptions
referenceSFN This field indicates the reference SFN corresponding to the reference time information. If <i>referenceTimeInfo</i> field is received in <i>DLInformationTransfer</i> message, this field indicates the SFN of PCell.
time This field indicates time reference with 10ns granularity. If included in <i>DLInformationTransfer</i> and if UE-side TA PDC is de-activated, the indicated time may not be referenced at the network, i.e., gNB may pre-compensate for RF propagation delay. If included in <i>DLInformationTransfer</i> and if UE is requested to transmit UE Rx-Tx time difference measurement, the indicated time may not be referenced at the network, i.e., gNB may pre-compensate for RF propagation delay. Otherwise, the indicated time is referenced at the network, i.e., without compensating for RF propagation delay. In an NTN cell, the indicated time is referenced at the uplink time synchronization reference point (RP), i.e., UE should take into account the propagation delay between UE and RP when determining the UTC time at the UE. The indicated time in 10ns unit from the origin is $refDays * 86400 * 1000 * 100000 + refSeconds * 1000 * 100000 + refMilliSeconds * 100000 + refTenNanoSeconds$. The <i>refDays</i> field specifies the sequential number of days (with day count starting at 0) from the origin of the <i>time</i> field. If the <i>referenceTimeInfo</i> field is received in <i>DLInformationTransfer</i> message, the time field indicates the <i>time</i> at the ending boundary of the system frame indicated by <i>referenceSFN</i>. The UE considers this frame (indicated by <i>referenceSFN</i>) to be the frame which is nearest to the frame where the message is received (which can be either in the past or in the future). If the <i>referenceTimeInfo</i> field is received in <i>SIB9</i>, the <i>time</i> field indicates the time at the SFN boundary at or immediately after the ending boundary of the SI-window in which <i>SIB9</i> is transmitted. If <i>referenceTimeInfo</i> field is received in <i>SIB9</i>, this field is excluded when determining changes in system information, i.e. changes of time should neither result in system information change notifications nor in a modification of <i>valueTag</i> in <i>SIB1</i>. NOTE: The estimated time in an NTN-cell may be less accurate than the estimated time in a TN-cell.
timeInfoType If <i>timeInfoType</i> is not included, the <i>time</i> indicates the GPS time and the origin of the <i>time</i> field is 00:00:00 on Gregorian calendar date 6 January, 1980 (start of GPS time). If <i>timeInfoType</i> is set to <i>localClock</i>, the origin of the <i>time</i> is unspecified.
uncertainty This field indicates the uncertainty of the reference time information provided by the time field. The uncertainty is 25ns multiplied by this field. If this field is absent, the uncertainty is unspecified.

Conditional Presence	Explanation
RefTime	The field is mandatory present if <i>referenceTimeInfo</i> is included in <i>DLInformationTransfer</i> message; otherwise the field is absent.

– *RejectWaitTime*

The IE *RejectWaitTime* is used to provide the value in seconds for timer T302.

RejectWaitTime information element

```
-- ASN1START
-- TAG-REJECTWAITTIME-START

RejectWaitTime ::=                INTEGER (1..16)

-- TAG-REJECTWAITTIME-STOP
-- ASN1STOP
```

– *RepetitionSchemeConfig*

The IE *RepetitionSchemeConfig* is used to configure the UE with repetition schemes as specified in TS 38.214 [19] clause 5.1.

RepetitionSchemeConfig information element

```
-- ASN1START
-- TAG-REPETITIONSchemeCONFIG-START

RepetitionSchemeConfig-r16 ::= CHOICE {
    fdm-TDM-r16                SetupRelease { FDM-TDM-r16 },
    slotBased-r16              SetupRelease { SlotBased-r16 }
}

RepetitionSchemeConfig-v1630 ::= SEQUENCE {
    slotBased-v1630            SetupRelease { SlotBased-v1630 }
}

FDM-TDM-r16 ::=                SEQUENCE {
    repetitionScheme-r16        ENUMERATED {fdmSchemeA, fdmSchemeB,tdmSchemeA },
    startingSymbolOffsetK-r16    INTEGER (0..7)                                OPTIONAL -- Need R
}

SlotBased-r16 ::=                SEQUENCE {
    tciMapping-r16              ENUMERATED {cyclicMapping, sequentialMapping},
    sequenceOffsetForRV-r16      INTEGER (1..3)
}

SlotBased-v1630 ::=                SEQUENCE {
    tciMapping-r16              ENUMERATED {cyclicMapping, sequentialMapping},
    sequenceOffsetForRV-r16      INTEGER (0)
}

-- TAG-REPETITIONSchemeCONFIG-STOP
-- ASN1STOP
```

<i>RepetitionSchemeConfig</i> field descriptions
<i>fdm-TDM</i> Configures UE with a repetition scheme among <i>fdmSchemeA</i> , <i>fdmSchemeB</i> and <i>tdmSchemeA</i> as specified in clause 5.1 of TS 38.214 [19]. The network does not set this field to <i>release</i> . Upon reception of this field in <i>RepetitionSchemeConfig-r16</i> , the UE shall release <i>slotBased</i> if previously configured in the same instance of <i>RepetitionSchemeConfig-r16</i> .
<i>sequenceOffsetForRV</i> For slot-based repetition scheme, selected RV sequence is applied to transmission occasions associated to the first TCI state. The RV sequence associated to the second TCI state is determined by a RV offset from that selected RV sequence.
<i>slotBased</i> Configures UE with slot-based repetition scheme. Network always configures this field when the parameter <i>repetitionNumber</i> is present in IE <i>PDSCH-TimeDomainResourceAllocationList</i> . The network does not set this field to <i>release</i> . Upon reception of this field in <i>RepetitionSchemeConfig-r16</i> , the UE shall release <i>fdm-TDM</i> if previously configured in the same instance of <i>RepetitionSchemeConfig-r16</i> .
<i>startingSymbolOffsetK</i> The starting symbol of the second transmission occasion has K symbol offset relative to the last symbol of the first transmission occasion. When UE is configured with <i>tdmSchemeA</i> , the parameter <i>startingSymbolOffsetK</i> is present, otherwise absent.
<i>tcMapping</i> Enables TCI state mapping method to PDSCH transmission occasions.

– *ReportConfigId*

The IE *ReportConfigId* is used to identify a measurement reporting configuration.

ReportConfigId information element

```
-- ASN1START
-- TAG-REPORTCONFIGID-START

ReportConfigId ::=
    INTEGER (1..maxReportConfigId)

-- TAG-REPORTCONFIGID-STOP
-- ASN1STOP
```

– *ReportConfigInterRAT*

The IE *ReportConfigInterRAT* specifies criteria for triggering of an inter-RAT measurement reporting event, or an L2 U2N relay measurement reporting event. The inter-RAT measurement reporting events for E-UTRA and UTRA-FDD are labelled *BN* with *N* equal to 1, 2 and so on. The measurement reporting events for L2 U2N relay UE are labelled *YN* with *N* equal to 1, 2 and so on, and *Z1*.

- Event B1: Neighbour becomes better than absolute threshold;
- Event B2: PCell becomes worse than absolute threshold1 AND Neighbour becomes better than another absolute threshold2;

Event Y1: PCell becomes worse than absolute threshold1 AND candidate L2 U2N Relay UE becomes better than another absolute threshold2;

Event Y2: Candidate L2 U2N Relay UE becomes better than absolute threshold;

Event Z1: Serving L2 U2N Relay UE becomes worse than absolute threshold1 AND candidate L2 U2N Relay UE becomes better than another absolute threshold2;

ReportConfigInterRAT field descriptions
reportType Type of the configured measurement report. In (NG)EN-DC, and NR-DC, network does not configure report of type <i>ReportCGI-EUTRA</i> for SCG.

ReportCGI-EUTRA field descriptions
useAutonomousGaps Indicates whether or not the UE is allowed to use autonomous gaps in acquiring system information from the E-UTRAN neighbour cell. When the field is included, the UE applies the corresponding value for T321.

EventTriggerConfigInterRAT field descriptions
b2-Threshold1 NR threshold to be used in inter RAT measurement report triggering condition for event B2.
bN-ThresholdEUTRA E-UTRA threshold value associated with the selected trigger quantity (RSRP, RSRQ, SINR) to be used in inter RAT measurement report triggering condition for event number bN. In the same <i>eventB2</i> , the network configures the same CHOICE name (<i>rsrp</i> , <i>rsrq</i> or <i>sinr</i>) for the <i>MeasTriggerQuantity</i> of the <i>b2-Threshold1</i> and for the <i>MeasTriggerQuantityEUTRA</i> of the <i>b2-Threshold2EUTRA</i> .
eventId Choice of inter RAT event triggered reporting criteria.
maxReportCells Max number of non-serving cells/candidate L2 U2N Relay UEs to include in the measurement report.
reportAmount Number of measurement reports applicable for <i>eventTriggered</i> as well as for <i>periodical</i> report types
reportOnLeave Indicates whether or not the UE shall initiate the measurement reporting procedure when the leaving condition is met for a cell in <i>cellsTriggeredList</i> or for a L2 U2N Relay UE in <i>relaysTriggeredList</i> , as specified in 5.5.4.1.
reportQuantity, reportQuantityUTRA-FDD The cell measurement quantities to be included in the measurement report. If the field <i>eventB1-UTRA-FDD</i> or <i>eventB2-UTRA-FDD</i> is present, the UE shall ignore the value(s) provided in <i>reportQuantity</i> .
reportQuantityRelay The L2 U2N Relay UE measurement quantity to be included in measurement report.
timeToTrigger Time during which specific criteria for the event needs to be met in order to trigger a measurement report.
bN-ThresholdUTRA-FDD UTRA-FDD threshold value associated with the selected trigger quantity (RSCP, EcN0) to be used in inter RAT measurement report triggering condition for event number bN. <i>utra-FDD-RSCP</i> corresponds to CPICH_RSCP in TS 25.133 [46] for FDD. <i>utra-FDD-EcN0</i> corresponds to CPICH_Ec/No in TS 25.133 [46] for FDD. For <i>utra-FDD-RSCP</i> : The actual value is field value – 115 dBm. For <i>utra-FDD-EcN0</i> : The actual value is (field value – 49)/2 dB.
y1-Threshold1 NR threshold to be used in measurement report triggering condition for event Y1.
y1-Threshold2-Relay L2 U2N Relay threshold value associated with the selected trigger quantity (i.e. RSRP) to be used in measurement report triggering condition for event Y1.
y2-Threshold-Relay L2 U2N Relay threshold value associated with the selected trigger quantity (i.e. RSRP) to be used in measurement report triggering condition for event Y2.
z1-Threshold1-Relay L2 U2N Relay threshold value associated with the selected trigger quantity (i.e. SL-RSRP and/or SD-RSRP) to be used in measurement report triggering condition for serving Relay UE in event Z1. If the field sd-RSRP is not included, the UE considers it to be equal to sl-RSRP.
z1-Threshold2-Relay L2 U2N Relay threshold value associated with the selected trigger quantity (i.e. SD-RSRP) to be used in measurement report triggering condition for candidate Relay UE in event Z1.

<i>PeriodicalReportConfigInterRAT</i> field descriptions
<i>maxReportCells</i> Max number of non-serving cells/candidate L2 U2N Relay UEs to include in the measurement report.
<i>reportAmount</i> Number of measurement reports applicable for <i>eventTriggered</i> as well as for <i>periodical</i> report types
<i>reportQuantity</i>, <i>reportQuantityUTRA-FDD</i> The cell measurement quantities to be included in the measurement report. If the field <i>reportQuantityUTRA-FDD</i> is present, the UE shall ignore the value(s) provided in <i>reportQuantity</i> .

<i>CellIndividualOffsetList-EUTRA</i> field descriptions
<i>carrierFreq</i> Indicates the EUTRA frequency for which <i>cellIndividualOffset</i> is applicable. If the field is not configured, the EUTRA frequency indicated by <i>carrierFreq</i> within the <i>MeasObjectEUTRA</i> of the <i>measID</i> associated with this <i>ReportConfigInterRAT</i> applies.
<i>cellIndividualOffset</i> Cell individual offsets applicable to a specific measurement event. If this field is present, the UE, for the same cell, shall ignore the cell individual offset configured within the <i>MeasObjectEUTRA</i> of the <i>measID</i> associated with this <i>ReportConfigInterRAT</i> .
<i>physCellId</i> Physical cell identity of a E-UTRAN cell in the cell list.

– *ReportConfigNR*

The IE *ReportConfigNR* specifies criteria for triggering of an NR measurement reporting event or of a CHO, CPA or CPC event or of an L2 U2N relay measurement reporting event. For events labelled AN with N equal to 1, 2 and so on, measurement reporting events and CHO, CPA or CPC events are based on cell measurement results, which can either be derived based on SS/PBCH block or CSI-RS.

Event A1: Serving becomes better than absolute threshold;

Event A2: Serving becomes worse than absolute threshold;

Event A3: Neighbour becomes amount of offset better than PCell/PSCell;

Event A4: Neighbour becomes better than absolute threshold;

Event A5: PCell/PSCell becomes worse than absolute threshold1 AND Neighbour/SCell becomes better than another absolute threshold2;

Event A6: Neighbour becomes amount of offset better than SCell;

Event D1: Distance between UE and a reference location *referenceLocation1* becomes larger than configured threshold *distanceThreshFromReference1* and distance between UE and a reference location *referenceLocation2* becomes shorter than configured threshold *distanceThreshFromReference2*;

Event D2: Distance between UE and the serving cell moving reference location determined based on *movingReferenceLocation* and its corresponding satellite ephemeris and epoch time broadcast in *SIB19* becomes larger than configured threshold *distanceThreshFromReference1* and distance between UE and a moving reference location

determined based on *referenceLocation* and its corresponding satellite ephemeris and epoch time for the neighbor cell provided in the associated *MeasObjectNR* becomes shorter than configured threshold *distanceThreshFromReference2*;

CondEvent A3: Conditional reconfiguration candidate or LTM candidate cell becomes amount of offset better than PCell/PSCell;

CondEvent A4: Conditional reconfiguration candidate becomes better than absolute threshold where *condEventA4* can also be used for current PSCell (i.e., in case it is configured as candidate PSCell for CondEvent A4 evaluation) for CHO with candidate SCG(s) case;

CondEvent A5: PCell/PSCell becomes worse than absolute threshold1 AND Conditional reconfiguration candidate or LTM candidate cell becomes better than another absolute threshold2;

CondEvent D1: Distance between UE and a reference location *referenceLocation1* becomes larger than configured threshold *distanceThreshFromReference1* and distance between UE and a reference location *referenceLocation2* of conditional reconfiguration candidate becomes shorter than configured threshold *distanceThreshFromReference2*;

CondEvent D2: Distance between UE and the serving cell moving reference location determined based on *movingReferenceLocation* and its corresponding satellite ephemeris and epoch time broadcast in *SIB19* becomes larger than configured threshold *distanceThreshFromReference1* and distance between UE and a moving reference location determined based on *referenceLocation* and its corresponding satellite ephemeris and epoch time for the conditional reconfiguration candidate provided in the associated *MeasObjectNR* becomes shorter than configured threshold *distanceThreshFromReference2*;

CondEvent T1: Time measured at UE becomes more than configured threshold *t1-Threshold* but is less than *t1-Threshold + duration*;

CondEvent A3H1: Conditional reconfiguration candidate becomes offset better than SpCell and the Aerial UE altitude becomes higher than a threshold;

CondEvent A3H2: Conditional reconfiguration candidate becomes offset better than SpCell and the Aerial UE altitude becomes lower than a threshold;

CondEvent A5H1: SpCell becomes worse than threshold1 and conditional reconfiguration candidate becomes better than threshold2 and the Aerial UE altitude becomes higher than a threshold3;

CondEvent A5H2: SpCell becomes worse than threshold1 and conditional reconfiguration candidate becomes better than threshold2 and the Aerial UE altitude becomes lower than a threshold3.

Event X1: Serving L2 U2N Relay UE becomes worse than absolute threshold1 AND NR Cell becomes better than another absolute threshold2;

Event X2: Serving L2 U2N Relay UE becomes worse than absolute threshold;

For event I1, measurement reporting event is based on CLI measurement results, which can either be derived based on SRS-RSRP or CLI-RSSI.

Event I1: Interference becomes higher than absolute threshold;

The reporting events concerning Aerial UE altitude are labelled HN with *N* equal to 1 and 2. Additionally, the reporting events concerning Aerial UE altitude and the neighboring cell measurements simultaneously are labelled AMHN with *M* equal to 3, 4, 5 and *N* equal to 1, 2.

Event H1: Aerial UE altitude becomes higher than a threshold;

Event H2: Aerial UE altitude becomes lower than a threshold;

Event A3H1: Neighbour becomes offset better than SpCell and the Aerial UE altitude becomes higher than a threshold;

Event A3H2: Neighbour becomes offset better than SpCell and the Aerial UE altitude becomes lower than a threshold;

Event A4H1: Neighbour becomes better than threshold1 and the Aerial UE altitude becomes higher than a threshold2;

Event A4H2: Neighbour becomes better than threshold1 and the Aerial UE altitude becomes lower than a threshold2;

Event A5H1: SpCell becomes worse than threshold1 and neighbour becomes better than threshold2 and the Aerial UE altitude becomes higher than a threshold3;

Event A5H2: SpCell becomes worse than threshold1 and neighbour becomes better than threshold2 and the Aerial UE altitude becomes lower than a threshold3.

CondTriggerConfig field descriptions

a3-Offset

Offset value(s) to be used in NR conditional reconfiguration or CLTM triggering condition for cond event a3. The actual value is field value * 0.5 dB.

a4-Threshold

Threshold value associated to the selected trigger quantity (e.g. RSRP, RSRQ, SINR) per RS Type (e.g. SS/PBCH block, CSI-RS) to be used in NR conditional reconfiguration triggering condition for cond event a4.

a5-Threshold1/ a5-Threshold2

Threshold value associated to the selected trigger quantity (e.g. RSRP, RSRQ, SINR) per RS Type (e.g. SS/PBCH block, CSI-RS) to be used in NR conditional reconfiguration or CLTM triggering condition for cond event a5. In the same *condEventA5*, the network configures the same quantity for the *MeasTriggerQuantity* of the *a5-Threshold1* and for the *MeasTriggerQuantity* of the *a5-Threshold2*.

condEventId

Choice of NR conditional reconfiguration or CLTM event triggered criteria.

distanceThreshFromReference1, distanceThreshFromReference2

Distance from a fixed reference location configured with *referenceLocation1* or *referenceLocation2* for *condEventD1*. Distance from a moving reference location determined by the UE based on the serving cell *movingReferenceLocation* broadcast in *SIB19* or *referenceLocation* and the corresponding epoch time and satellite ephemeris configured within the *MeasObjectNR* associated to the event for *condEventD2*. Each step represents 50m.

duration

This field is used for defining the leaving condition T1-2 for conditional HO event *condEventT1*. Each step represents 100ms.

nesEvent

Indicates the event is a NES-specific CHO event and the event is only considered to be satisfied if indication from lower layers is received indicating the applicability of NES-specific CHO event and the related entry condition(s) is fulfilled. This field can only be configured for *condEventA3*, *condEventA4* or *condEventA5*. This field cannot be configured for CPAC.

referenceLocation1, referenceLocation2

The *referenceLocation1* is associated to serving cell and *referenceLocation2* is associated to candidate target cell.

t1-Threshold

The field counts the number of UTC seconds in 10 ms units since 00:00:00 on Gregorian calendar date 1 January, 1900 (midnight between Sunday, December 31, 1899 and Monday, January 1, 1900).

timeToTrigger

Time during which specific criteria for the event needs to be met in order to execute the conditional reconfiguration evaluation.

ReportConfigNR field descriptions

reportType

Type of the configured measurement report. In MR-DC, network does not configure report of type *reportCGI* using SRB3. The *condTriggerConfig* is used for CLTM, CHO, CPA, CPC or subsequent CPAC configuration.

ReportCGI field descriptions***useAutonomousGaps***

Indicates whether or not the UE is allowed to use autonomous gaps in acquiring system information from the NR neighbour cell. When the field is included, the UE applies the corresponding value for T321.

<i>EventTriggerConfig</i> field descriptions
a3-Offset/a6-Offset Offset value(s) to be used in NR measurement report triggering condition for event a3/a6. The actual value is field value * 0.5 dB.
aN-ThresholdM Threshold value associated to the selected trigger quantity (e.g. RSRP, RSRQ, SINR) per RS Type (e.g. SS/PBCH block, CSI-RS) to be used in NR measurement report triggering condition for event number aN. If multiple thresholds are defined for event number aN, the thresholds are differentiated by M. In the same <i>eventA5</i> , <i>eventA5H1</i> , <i>eventA5H2</i> , the network configures the same quantity for the <i>MeasTriggerQuantity</i> of the <i>a5-Threshold1</i> and for the <i>MeasTriggerQuantity</i> of the <i>a5-Threshold2</i> .
channelOccupancyThreshold RSSI threshold which is used for channel occupancy evaluation.
coarseLocationRequest This field is used to request UE to report coarse location information.
distanceThreshFromReference1, distanceThreshFromReference2 Distance from a fixed reference location configured with <i>referenceLocation1</i> or <i>referenceLocation2</i> for <i>eventD1</i> . Distance from a moving reference location determined by the UE based on the serving cell <i>movingReferenceLocation</i> broadcast in <i>SIB19</i> or <i>referenceLocation</i> and the corresponding epoch time and satellite ephemeris configured within the <i>MeasObjectNR</i> associated to the event for <i>eventD2</i> . Each step represents 50m.
eventD2PhysCellId Physical cell identity of a cell corresponding to the NTN neighbour cell list when multiple trigger moving reference locations are configured in <i>MeasObjectNR</i> (i.e., <i>CellsToAddMod</i>) for <i>eventD2</i> .
eventId Choice of NR event triggered reporting criteria.
eventXN-SD-Threshold Indicates the SD-RSRP threshold value for the serving L2 U2N Relay UE in event <i>XN</i> (<i>N</i> equals 1 or 2). If this field is not included, the UE considers the SD-RSRP threshold value equals to the one indicated by <i>x1-Threshold1-Relay/ x2-Threshold-Relay</i> .
includeAltitudeUE This field is used to request UE to report altitude information.
maxNrofRS-IndexesToReport Max number of RS indexes to include in the measurement report for A1-A6 events.
maxReportCells Max number of non-serving cells to include in the measurement report.
numberOfTriggeringCells Indicates the number of cells detected that are required to fulfill an event for a measurement report to be triggered. This field is applicable only for the events concerning neighbor cells, i.e. <i>eventA3</i> , <i>eventA4</i> , <i>eventA5</i> , <i>eventA3H1</i> , <i>eventA3H2</i> , <i>eventA4H1</i> , <i>eventA4H2</i> , <i>eventA5H1</i> , <i>eventA5H2</i> .
referenceLocation1, referenceLocation2 The <i>referenceLocation1</i> is associated to serving cell and <i>referenceLocation2</i> is associated to neighbour cell.
reportAddNeighMeas Indicates that the UE shall include the best neighbour cells per serving frequency.
reportAmount Number of measurement reports applicable for <i>eventTriggered</i> as well as for <i>periodical</i> report types.
reportOnBestCellChange Indicates whether the UE shall only send measurement report if the measured best cell (when configured to <i>n1</i>) or two best cells (when configured to <i>n2</i>) have changed. In this release of the specification, this field is applicable only for the events concerning neighbor cells. This field can only be configured when the value of the field <i>reportAmount</i> is set to any other value than <i>r1</i> .
reportOnLeave Indicates whether or not the UE shall initiate the measurement reporting procedure when the leaving condition is met for a cell in <i>cellsTriggeredList</i> or for a L2 U2N Relay UE in <i>relaysTriggeredList</i> , as specified in 5.5.4.1.

Indicates whether or not the UE shall initiate the measurement reporting procedure when the leaving condition is met if configured in <i>eventD1</i> , <i>eventD2</i> , <i>eventH1</i> , <i>eventH2</i> as specified in 5.5.4.1.
reportQuantityCell The cell measurement quantities to be included in the measurement report.
reportQuantityRS-Indexes Indicates which measurement information per RS index the UE shall include in the measurement report.
simulMultiTriggerSingleMeasReport Indicates when multiple events with the same <i>eventID</i> satisfy the measurement report triggering condition(s), whether to consider only the event with the smallest value between the altitude of the UE and the configured altitude threshold.
timeToTrigger Time during which specific criteria for the event needs to be met in order to trigger a measurement report.
useAllowedCellList Indicates whether only the cells included in the allow-list of the associated measObject are applicable as specified in 5.5.4.1.
useT312 If value <i>TRUE</i> is configured, the UE shall use the timer T312 with the value <i>t312</i> as specified in the corresponding <i>measObjectNR</i> . If value <i>FALSE</i> is configured, the timer T312 is considered as disabled. Network configures value <i>TRUE</i> only if <i>reportType</i> is set to <i>eventTriggered</i> .
xN-ThresholdM Threshold value associated to the selected trigger quantity (e.g. RSRP, RSRQ, SINR) per RS Type (e.g. SS/PBCH block, CSI-RS) to be used in NR measurement report triggering condition for event xN. If multiple thresholds are defined for event number xN, the thresholds are differentiated by M. <i>x1-Threshold1</i> and <i>x2-Threshold</i> indicates the threshold value for the serving L2 U2N Relay UE, <i>x1-Threshold2</i> indicates the threshold value for the NR Cells.

CLI-EventTriggerConfig field descriptions
i1-Threshold Threshold value associated to the selected trigger quantity (e.g. SRS-RSRP, CLI-RSSI) to be used in CLI measurement report triggering condition for event i1.
eventId Choice of CLI event triggered reporting criteria.
maxReportCLI Max number of CLI measurement resource to include in the measurement report.
reportAmount Number of measurement reports.
reportOnLeave Indicates whether or not the UE shall initiate the measurement reporting procedure when the leaving condition is met for a CLI measurement resource in <i>srsTriggeredList</i> or <i>rssiTriggeredList</i> , as specified in 5.5.4.1.
timeToTrigger Time during which specific criteria for the event needs to be met in order to trigger a measurement report.

CLI-PeriodicalReportConfig field descriptions
maxReportCLI Max number of CLI measurement resource to include in the measurement report.
reportAmount Number of measurement reports.
reportQuantityCLI The CLI measurement quantities to be included in the measurement report.

PeriodicalReportConfig field descriptions
coarseLocationRequest This field is used to request UE to report coarse location information.
maxNrofRS-IndexesToReport Max number of RS indexes to include in the measurement report.
maxReportCells Max number of non-serving cells to include in the measurement report.
reportAddNeighMeas Indicates that the UE shall include the best neighbour cells per serving frequency.
reportAmount Number of measurement reports applicable for <i>eventTriggered</i> as well as for <i>periodical</i> report types
reportQuantityCell The cell measurement quantities to be included in the measurement report.
reportQuantityRS-Indexes Indicates which measurement information per RS index the UE shall include in the measurement report.
ul-DelayValueConfig Indicates that the UE shall perform the actual UL PDCP Packet Average Delay measurement per DRB as specified in TS 38.314 [53] and the UE shall ignore the fields <i>reportQuantityCell</i> and <i>maxReportCells</i> . The applicable values for the corresponding <i>reportInterval</i> are (one of the) {ms120, ms240, ms480, ms640, ms1024, ms2048, ms5120, ms10240, ms20480, ms40960, min1, min6, min12, min30}. The <i>reportInterval</i> indicates the periodicity for performing and reporting of UL PDCP Packet Average Delay per DRB measurement as specified in TS 38.314 [53].
ul-ExcessDelayConfig Indicates that the UE shall perform the actual UL PDCP Excess Packet Delay per DRB measurement as specified in TS 38.314 [53] and the UE shall ignore the fields <i>reportQuantityCell</i> and <i>maxReportCells</i> . The applicable values for the corresponding <i>reportInterval</i> are (one of the) {ms120, ms240, ms480, ms640, ms1024, ms2048, ms5120, ms10240, ms20480, ms40960, min1, min6, min12, min30}. The <i>reportInterval</i> indicates the periodicity for performing and reporting of UL PDCP Excess Packet Delay per DRB measurement as specified in TS 38.314 [53].
useAllowedCellList Indicates whether only the cells included in the allow-list of the associated measObject are applicable as specified in 5.5.4.1.

ReportSFTD-NR field descriptions
cellForWhichToReportSFTD Indicates the target NR neighbour cells for SFTD measurement between PCell and NR neighbour cells.
drx-SFTD-NeighMeas Indicates that the UE shall use available idle periods (i.e. DRX off periods) for the SFTD measurement in NR standalone. The network only includes <i>drx-SFTD-NeighMeas</i> field when <i>reprtSFTD-NeighMeas</i> is set to true.
reportSFTD-Meas Indicates whether UE is required to perform SFTD measurement between PCell and NR PSCell in NR-DC.
reportSFTD-NeighMeas Indicates whether UE is required to perform SFTD measurement between PCell and NR neighbour cells in NR standalone. The network does not include this field if <i>reportSFTD-Meas</i> is set to true.
reportRSRP Indicates whether UE is required to include RSRP result of NR PSCell or NR neighbour cells in SFTD measurement result, derived based on SSB. If it is set to true, the network should ensure that <i>ssb-ConfigMobility</i> is included in the measurement object for NR PSCell or NR neighbour cells.

RxTxPeriodical field descriptions
reportAmount This field indicates the number of UE Rx-Tx time difference measurement reports. If configured to <i>r1</i> , the network does not configure <i>rxTxReportInterval</i> and only one measurement is reported. If configured to <i>infinity</i> , UE periodically reports measurements according to the periodicity configured by <i>rxTxReportInterval</i> .
rxTxReportInterval This field indicates the measurement reporting periodicity of UE Rx-Tx time difference.

other field descriptions
MeasTriggerQuantity SINR is applicable only for CONNECTED mode events.

ReportOnScellActivation field descriptions
rsType Indicates which RS is used to provide the measurement result. Only value <i>ssb</i> can be set in this release.
reportQuantityRS-Indexes Indicates which measurement information per RS index is used to sort the reported measurement results and is included in the measurement report.
maxNrofRS-IndexesToReport Max number of RS indexes to include in the measurement report.
includeBeamMeasurements Indicates whether to include the measurement result per RS index in the measurement report.

CellIndividualOffsetList field descriptions
cellIndividualOffset Cell individual offsets applicable to a specific measurement event. If this field is present, the UE, for the same cell, shall ignore the cell individual offset configured within the <i>MeasObjectNR</i> of the <i>measID</i> associated with this <i>ReportConfigNR</i> .
physCellId Physical cell identity of a cell in the cell list.
ssbFrequency Indicates the NR frequency of SS for which <i>cellIndividualOffset</i> is applicable. If the field is not configured, the NR frequency of SS indicated by <i>ssbFrequency</i> indicated within the <i>MeasObjectNR</i> of the <i>measID</i> associated with this <i>ReportConfigNR</i> applies.

– *ReportConfigNR-SL*

The IE *ReportConfigNR-SL* specifies criteria for triggering of a CBR measurement reporting event for NR sidelink communication/discovery. Measurement reporting events are based on CBR measurement results on the corresponding transmission resource pools. These events are labelled CN with N equal to 1 and 2.

Event C1: CBR of NR sidelink communication/discovery is above a threshold;

Event C2: CBR of NR sidelink communication/discovery is below a threshold;

```

ReportConfigNR-SL field descriptions
reportType Type of the configured CBR measurement report for NR sidelink communication/discovery.

EventTriggerConfigNR-SL field descriptions
cN-Threshold Threshold used for events C1 and C2 specified in clauses 5.5.4.11 and 5.5.4.12, respectively.
eventId Choice of NR event triggered reporting criteria.
reportAmount Number of measurement reports applicable for <i>eventTriggered</i> as well as for <i>periodical</i> report types.
reportQuantity The sidelink measurement quantities to be included in the measurement report. In this release, this is set as the CBR measurement result.
timeToTrigger Time during which specific criteria for the event needs to be met in order to trigger a measurement report.

PeriodicalReportConfigNR-SL field descriptions
reportAmount Number of measurement reports applicable for <i>eventTriggered</i> as well as for <i>periodical</i> report types.
reportQuantity The sidelink measurement quantities to be included in the measurement report. In this release, this is set as the CBR measurement result.

– *ReportConfigToAddModList*

The IE *ReportConfigToAddModList* concerns a list of reporting configurations to add or modify.

ReportConfigToAddModList information element

```
-- ASN1START
-- TAG-REPORTCONFIGTOADDMODLIST-START

ReportConfigToAddModList ::=      SEQUENCE (SIZE (1..maxReportConfigId)) OF ReportConfigToAddMod

ReportConfigToAddMod ::=          SEQUENCE {
    reportConfigId                ReportConfigId,
    reportConfig                   CHOICE {
        reportConfigNR            ReportConfigNR,
        ...,
        reportConfigInterRAT      ReportConfigInterRAT,
        reportConfigNR-SL-r16     ReportConfigNR-SL-r16
    }
}

-- TAG-REPORTCONFIGTOADDMODLIST-STOP
-- ASN1STOP
```

– *ReportInterval*

The IE *ReportInterval* indicates the interval between periodical reports. The *ReportInterval* is applicable if the UE performs periodical reporting (i.e. when *reportAmount* exceeds 1) when *reportType* is set to either *eventTriggered*, *periodical*, *cli-EventTriggered* or *cli-Periodical*. Value *ms120* corresponds to 120 ms, value *ms240* corresponds to 240 ms and so on, while value *min1* corresponds to 1 min, *min6* corresponds to 6 min and so on.

ReportInterval information element

```
-- ASN1START
-- TAG-REPORTINTERVAL-START

ReportInterval ::=                ENUMERATED {ms120, ms240, ms480, ms640, ms1024, ms2048, ms5120, ms10240, ms20480, ms40960,
                                          min1,min6, min12, min30 }

-- TAG-REPORTINTERVAL-STOP
-- ASN1STOP
```

– *ReselectionThreshold*

The IE *ReselectionThreshold* is used to indicate an Rx level threshold for cell reselection. Actual value of threshold = field value * 2 [dB].

***ReselectionThreshold* information element**

```
-- ASN1START
-- TAG-RESELECTIONTHRESHOLD-START

ReselectionThreshold ::=
    INTEGER (0..31)

-- TAG-RESELECTIONTHRESHOLD-STOP
-- ASN1STOP
```

– *ReselectionThresholdQ*

The IE *ReselectionThresholdQ* is used to indicate a quality level threshold for cell reselection. Actual value of threshold = field value [dB].

***ReselectionThresholdQ* information element**

```
-- ASN1START
-- TAG-RESELECTIONTHRESHOLDQ-START

ReselectionThresholdQ ::=
    INTEGER (0..31)

-- TAG-RESELECTIONTHRESHOLDQ-STOP
-- ASN1STOP
```

– *ResumeCause*

The IE *ResumeCause* is used to indicate the resume cause in *RRCResumeRequest*, *RRCResumeRequest1* and *UEAssistanceInformation*.

***ResumeCause* information element**

```
-- ASN1START
-- TAG-RESUMECAUSE-START

ResumeCause ::=
    ENUMERATED {emergency, highPriorityAccess, mt-Access, mo-Signalling,
        mo-Data, mo-VoiceCall, mo-VideoCall, mo-SMS, rna-Update, mps-PriorityAccess,
        mcs-PriorityAccess, mt-SDT-v1810, srs-PosConfigOrActivationReq-v1800, spare3, spare2, spare1 }

-- TAG-RESUMECAUSE-STOP
-- ASN1STOP
```

– *RLC-BearerConfig*

The IE *RLC-BearerConfig* is used to configure an RLC entity, a corresponding logical channel in MAC and the linking to a PDCP entity (served radio bearer).

RLC-BearerConfig information element

```

-- ASN1START
-- TAG-RLC-BEARERCONFIG-START

RLC-BearerConfig ::=
    logicalChannelIdentity
    servedRadioBearer
        srb-Identity
        drb-Identity

SEQUENCE {

MRB-Identity-r17,

ENUMERATED {true}

OPTIONAL -- Need S

INTEGER (320..65855)

RLC-BearerConfig field descriptions	
isPTM-Entity	If configured, indicates that the RLC entity is used for PTM reception. When the field is absent the RLC entity is used for PTP transmission/reception.
logicalChannelIdentity	ID used commonly for the MAC logical channel and for the RLC bearer.
logicalChannelIdentityExt	Extended logical channel ID used commonly for the MAC logical channel and for the RLC bearer for PTM reception. If this field is configured, the UE shall ignore <i>logicalChannelIdentity</i> .
reestablishRLC	Indicates that RLC should be re-established. Network sets this to <i>true</i> at least whenever the security key used for the radio bearer associated with this RLC entity changes. For SRB2, multicast MRBs and DRBs, unless full configuration is used, it is also set to <i>true</i> during the resumption of the RRC connection or the first reconfiguration after reestablishment. For SRB1, when resuming an RRC connection, or at the first reconfiguration after RRC connection reestablishment, the network does not set this field to <i>true</i> . The network does not include this field if <i>servedRadioBearer</i> is set to <i>drb-Identity</i> and the <i>RLC-BearerConfig</i> IE is part of an <i>RRCReconfiguration</i> message within the <i>LTM-Config</i> IE. For DRBs, network doesn't include this field if the <i>RLC-BearerConfig</i> IE is part of an <i>RRCReconfiguration</i> message associated with subsequent CPAC within the <i>ConditionalReconfiguration</i> IE. Network doesn't include this field if the <i>RadioBearerConfig</i> IE is part of an <i>RRCReconfiguration</i> message associated with subsequent CPAC within the <i>ConditionalReconfiguration</i> IE which is received within a MCG <i>RRCReconfiguration</i> message via SRB1.
rlc-Config	Determines the RLC mode (UM, AM) and provides corresponding parameters. RLC mode reconfiguration can only be performed by DRB/multicast MRB release/addition or full configuration. The network may configure <i>rlc-Config-v1610</i> only when <i>rlc-Config</i> (without suffix) is set to <i>am</i> .
servedMBS-RadioBearer	Associates the RLC Bearer with a multicast MRB. The UE shall deliver DL RLC SDUs received via the RLC entity of this RLC bearer to the PDCP entity of the <i>servedMBS-RadioBearer</i> .
servedRadioBearer, servedRadioBearerSRB4, servedRadioBearerSRB5, servedRadioBearerSRB6	Associates the RLC Bearer with an SRB or a DRB. The UE shall deliver DL RLC SDUs received via the RLC entity of this RLC bearer to the PDCP entity of the <i>servedRadioBearer</i> . Furthermore, the UE shall advertise and deliver uplink PDCP PDUs of the uplink PDCP entity of the <i>servedRadioBearer</i> to the uplink RLC entity of this RLC bearer unless the uplink scheduling restrictions (<i>moreThanOneRLC</i> in <i>PDCP-Config</i> and the restrictions in <i>LogicalChannelConfig</i>) forbid it to do so.

Conditional Presence	Explanation
<i>LCH-Setup</i>	This field is mandatory present upon creation of a new logical channel for a DRB or a multicast MRB or SRB4 or SRB5 or SRB6. This field is optionally present, Need S, upon creation of a new logical channel for an SRB except SRB4 and SRB5. It is optionally present, Need M, otherwise.
<i>LCH-SetupModMRB</i>	This field is optionally present upon creation of a new logical channel for PTM reception for a multicast MRB. If this field is included upon creation of a new logical channel for PTM reception for a multicast MRB, it shall be present when modifying this logical channel. The field is absent for logical channels configured for an SRB and a DRB.
<i>LCH-SetupOnly</i>	This field is mandatory present upon creation of a new logical channel for a DRB or an SRB (<i>servedRadioBearer</i>). It is absent, Need M otherwise.
<i>LCH-SetupOnlyMRB</i>	This field is mandatory present upon creation of a new logical channel for a multicast MRB and upon modification of <i>MRB-Identity</i> of the served MRB. It is absent, Need M otherwise.
<i>LCH-SetupOnlySRB4</i>	This field is mandatory present upon creation of a new logical channel for SRB4 (<i>servedRadioBearerSRB4</i>). It is absent, Need M otherwise.
<i>LCH-SetupOnlySRB5</i>	This field is mandatory present upon creation of a new logical channel for SRB5 (<i>servedRadioBearerSRB5</i>). It is absent, Need M otherwise.
<i>LCH-SetupOnlySRB6</i>	This field is mandatory present upon creation of a new logical channel for SRB6 (<i>servedRadioBearerSRB6</i>). It is absent, Need M otherwise.

– RLC-Config

The IE *RLC-Config* is used to specify the RLC configuration of SRBs, multicast MRBs and DRBs.

```

RLC-Config field descriptions
maxRetxThreshold Parameter for RLC AM in TS 38.322 [4]. Value <i>t1</i> corresponds to 1 retransmission, value <i>t2</i> corresponds to 2 retransmissions and so on.
pollByte Parameter for RLC AM in TS 38.322 [4]. Value <i>kB25</i> corresponds to 25 kBytes, value <i>kB50</i> corresponds to 50 kBytes and so on. <i>infinity</i> corresponds to an infinite amount of kBytes.
pollPDU Parameter for RLC AM in TS 38.322 [4]. Value <i>p4</i> corresponds to 4 PDUs, value <i>p8</i> corresponds to 8 PDUs and so on. <i>infinity</i> corresponds to an infinite number of PDUs.
sn-FieldLength Indicates the RLC SN field size, see TS 38.322 [4], in bits. Value <i>size6</i> means 6 bits, value <i>size12</i> means 12 bits, value <i>size18</i> means 18 bits. The value of <i>sn-FieldLength</i> of an RLC entity for the DRB/multicast MRB shall be changed only using reconfiguration with sync. The network configures only value <i>size12</i> in <i>SN-FieldLengthAM</i> for SRB.
stopReTxDiscardedSDU Indicates whether the Tx side of the RLC entity should stop retransmission of the RLC SDUs or (re-)transmission of its segments when discard indication of the SDU is received from the PDCP layer as specified in TS 38.323 [5].
t-PollRetransmit Timer for RLC AM in TS 38.322 [4], in milliseconds. Value <i>ms5</i> means 5 ms, value <i>ms10</i> means 10 ms and so on.
t-Reassembly, t-ReassemblyExt Timer for reassembly in TS 38.322 [4], in milliseconds. Value <i>ms0</i> means 0 ms, value <i>ms5</i> means 5 ms and so on. If <i>t-ReassemblyExt-r17</i> is configured, the UE shall ignore <i>t-Reassembly</i> (without suffix).
t-RxDiscard Timer for the AMD RLC PDU(s) discard at the Rx side of the RLC entity, see TS 38.322 [4]. For the value of the IE <i>T-RxDiscard</i> , value <i>ms10</i> means 10 milliseconds, value <i>ms20</i> means 20 milliseconds, and so on. The value of the field should not be lower than that configured by the field <i>t-Reassembly</i> or <i>t-ReassemblyExt</i> .
t-StatusProhibit Timer for status reporting in TS 38.322 [4], in milliseconds. Value <i>ms0</i> means 0 ms, value <i>ms5</i> means 5 ms and so on. If <i>t-StatusProhibit-v1610</i> is present, the UE shall ignore <i>t-StatusProhibit</i> (without suffix).

Conditional Presence	Explanation
<i>Reestab</i>	The field is mandatory present at RLC bearer setup. It is optionally present, need M, at RLC re-establishment. Otherwise it is absent. Need M.

– RLF-TimersAndConstants

The IE *RLF-TimersAndConstants* is used to configure UE specific timers and constants.

RLF-TimersAndConstants information element

```
-- ASN1START
-- TAG-RLF-TIMERSANDCONSTANTS-START

RLF-TimersAndConstants ::= SEQUENCE {
    t310      ENUMERATED {ms0, ms50, ms100, ms200, ms500, ms1000, ms2000, ms4000, ms6000},
    n310      ENUMERATED {n1, n2, n3, n4, n6, n8, n10, n20},
    n311      ENUMERATED {n1, n2, n3, n4, n5, n6, n8, n10},
    ...,
}
```

```
[[
  t311          ENUMERATED {ms1000, ms3000, ms5000, ms10000, ms15000, ms20000, ms30000}
]]
}

-- TAG-RLF-TIMERSANDCONSTANTS-STOP
-- ASN1STOP
```

RLF-TimersAndConstants field descriptions
n3xy Constants are described in clause 7.3. Value <i>n1</i> corresponds to 1, value <i>n2</i> corresponds to 2 and so on.
t3xy Timers are described in clause 7.1. Value <i>ms0</i> corresponds to 0 ms, value <i>ms50</i> corresponds to 50 ms and so on.

— *RNTI-Value*

The IE *RNTI-Value* represents a Radio Network Temporary Identity.

RNTI-Value information element

```
-- ASN1START
-- TAG-RNTI-VALUE-START

RNTI-Value ::=          INTEGER (0..65535)

-- TAG-RNTI-VALUE-STOP
-- ASN1STOP
```

— *RSRP-Range*

The IE *RSRP-Range* specifies the value range used in RSRP measurements and thresholds. For measurements, integer value for RSRP measurements is according to Table 10.1.6.1-1 in TS 38.133 [14]. For thresholds, the actual value is (IE value – 156) dBm, except for the IE value 127, in which case the actual value is infinity.

RSRP-Range information element

```
-- ASN1START
-- TAG-RSRP-RANGE-START

RSRP-Range ::=          INTEGER(0..127)

-- TAG-RSRP-RANGE-STOP
-- ASN1STOP
```

– *RSRQ-Range*

The IE *RSRQ-Range* specifies the value range used in RSRQ measurements and thresholds. For measurements, integer value for RSRQ measurements is according to Table 10.1.11.1-1 in TS 38.133 [14]. For thresholds, the actual value is $(\text{IE value} - 87) / 2$ dB.

RSRQ-Range information element

```
-- ASN1START
-- TAG-RSRQ-RANGE-START

RSRQ-Range ::=
    INTEGER(0..127)

-- TAG-RSRQ-RANGE-STOP
-- ASN1STOP
```

– *RSSI-Range*

The IE *RSSI-Range* specifies the value range used in RSSI measurements and thresholds for NR operation with shared spectrum channel access. The integer value for RSSI measurements is according to Table 10.1.34.3-1 in TS 38.133 [14].

RSSI-Range information element

```
-- ASN1START
-- TAG-RSSI-RANGE-START

RSSI-Range-r16 ::=
    INTEGER(0..76)

-- TAG-RSSI-RANGE-STOP
-- ASN1STOP
```

– *RxTxTimeDiff*

The IE *RxTxTimeDiff* contains the Rx-Tx time difference measurement at either the UE or the gNB.

RxTxTimeDiff information element

```
-- ASN1START
-- TAG-RXTXTIMEDIFF-START

RxTxTimeDiff-r17 ::= SEQUENCE {
    result-k5-r17    INTEGER (0..61565)    OPTIONAL, -- Need N
    ...
}

-- TAG-RXTXTIMEDIFF-STOP
-- ASN1STOP
```

<i>RxTxTimeDiff</i> field descriptions
result-k5 This field indicates the Rx-Tx time difference measurement, see TS 38.215 [9], clause 10.1.25.3.1 of TS 38.133 [14] for UE Rx-Tx time difference and clause 13.2.1 of TS 38.133 [14] for gNB Rx-Tx time difference.

– *SCellActivationRS-Config*

The IE *SCellActivationRS-Config* is used to configure a Reference Signal for fast activation of the SCell where the IE is included (see TS 38.214 [19], clause 5.2.1.5.3. Usage of an *SCellActivationRS-Config* is indicated by including its *scellActivationRS-Id* in the Enhanced SCell activation MAC CE (see TS 38.321 [3] clause 6.1.3.55).

***SCellActivationRS-Config* information element**

```
-- ASN1START
-- TAG-SCELLACTIVATIONRS-CONFIG-START

SCellActivationRS-Config-r17 ::= SEQUENCE {
    scellActivationRS-Id-r17          SCellActivationRS-ConfigId-r17,
    resourceSet-r17                  NZP-CSI-RS-ResourceSetId,
    gapBetweenBursts-r17              INTEGER (2..31)                OPTIONAL, -- Need R
    qcl-Info-r17                      TCI-StateId,
    ...
}

-- TAG-SCELLACTIVATIONRS-CONFIG-STOP
-- ASN1STOP
```

<i>SCellActivationRS-Config</i> field descriptions
gapBetweenBursts When this field is present, there are two bursts and it indicates the gap between the two bursts in number of slots. When this field is absent, there is a single burst.
qcl-Info Reference to TCI-State for providing the QCL source and QCL type for each <i>NZP-CSI-RS-Resource</i> listed in <i>nzp-CSI-RS-Resources</i> of the <i>NZP-CSI-RS-ResourceSet</i> indicated by <i>resourceSet</i> (see TS 38.214 [19], clause 5.1.6.1.1.1). <i>TCI-StateId</i> refers to the <i>TCI-State</i> which has this value for <i>tcI-StateId</i> and is defined in <i>tcI-StatesToAddModList</i> or <i>dI-OrJointTCI-StateList</i> in the <i>PDSCH-Config</i> included in the <i>BWP-Downlink</i> of this serving cell indicated by <i>firstActiveDownlinkBWP-Id</i> in the <i>ServingCellConfig</i> in which this IE is included.
resourceSet <i>nzp-CSI-ResourceSetId</i> of the <i>NZP-CSI-RS-ResourceSet</i> of this serving cell used as resource configuration for one or two bursts for SCell activation. This NZP-CSI-RS-ResourceSet consists of four NZP CSI-RS resources in two consecutive slots with two NZP CSI-RS resources in each slot (see TS 38.214 [19], clause 5.1.6.1.1.1). The CSI-RS associated with this NZP-CSI-RS-ResourceSet are located in the BWP addressed by <i>firstActiveDownlinkBWP-Id</i> .

– *SCellActivationRS-ConfigId*

The IE *SCellActivationRS-ConfigId* is used to identify one *SCellActivationRS-Config*.

***SCellActivationRS-ConfigId* information element**

```
-- ASN1START
-- TAG-SCELLACTIVATIONRS-CONFIGID-START

SCellActivationRS-ConfigId-r17 ::=      INTEGER (1.. maxNrofSCellActRS-r17)

-- TAG-SCELLACTIVATIONRS-CONFIGID-STOP
-- ASN1STOP
```

– *SCellIndex*

The IE *SCellIndex* concerns a short identity, used to identify an SCell. The value range is shared across the Cell Groups.

***SCellIndex* information element**

```
-- ASN1START
-- TAG-CELLINDEX-START

SCellIndex ::=      INTEGER (1..31)

-- TAG-CELLINDEX-STOP
-- ASN1STOP
```

– *SchedulingRequestConfig*

The IE *SchedulingRequestConfig* is used to configure the parameters, for the dedicated scheduling request (SR) resources.

***SchedulingRequestConfig* information element**

```
-- ASN1START
-- TAG-SCHEDULINGREQUESTCONFIG-START

SchedulingRequestConfig ::=      SEQUENCE {
    schedulingRequestToAddModList      SEQUENCE (SIZE (1..maxNrofSR-ConfigPerCellGroup)) OF SchedulingRequestToAddMod
                                     OPTIONAL, -- Need N
    schedulingRequestToReleaseList      SEQUENCE (SIZE (1..maxNrofSR-ConfigPerCellGroup)) OF SchedulingRequestId
                                     OPTIONAL  -- Need N
}

SchedulingRequestToAddMod ::=      SEQUENCE {
    schedulingRequestId                SchedulingRequestId,
```

```

    sr-ProhibitTimer          ENUMERATED {ms1, ms2, ms4, ms8, ms16, ms32, ms64, ms128}          OPTIONAL, -- Need S
    sr-TransMax               ENUMERATED { n4, n8, n16, n32, n64, spare3, spare2, spare1}
}

SchedulingRequestConfig-v1700 ::= SEQUENCE {
    schedulingRequestToAddModListExt-v1700 SEQUENCE (SIZE (1..maxNrofSR-ConfigPerCellGroup)) OF SchedulingRequestToAddModExt-v1700
                                                    OPTIONAL -- Need N
}

SchedulingRequestToAddModExt-v1700 ::= SEQUENCE {
    sr-ProhibitTimer-v1700          ENUMERATED { ms192, ms256, ms320, ms384, ms448, ms512, ms576, ms640, ms1082, spare7, spare6, spare5, spare4,
    spare3, spare2, spare1}
                                                    OPTIONAL -- Need R
}

-- TAG-SCHEDULINGREQUESTCONFIG-STOP
-- ASN1STOP

```

SchedulingRequestConfig field descriptions
schedulingRequestToAddModList, schedulingRequestToAddModListExt List of Scheduling Request configurations to add or modify. If <i>schedulingRequestToAddModListExt</i> is configured, it contains the same number of entries, and in the same order, as <i>schedulingRequestToAddModList</i> .
schedulingRequestToReleaseList List of Scheduling Request configurations to release.

SchedulingRequestToAddMod field descriptions
schedulingRequestId Used to modify a SR configuration and to indicate, in <i>LogicalChannelConfig</i> , the SR configuration to which a logical channel is mapped and to indicate, in <i>SchedulingRequestResourceConfig</i> , the SR configuration for which a scheduling request resource is used.
sr-ProhibitTimer Timer for SR transmission on PUCCH in TS 38.321 [3]. Value is in ms. Value <i>ms1</i> corresponds to 1ms, value <i>ms2</i> corresponds to 2ms, and so on. If <i>sr-ProhibitTimer-v1700</i> is configured, UE shall ignore <i>sr-ProhibitTimer</i> (without suffix). If both <i>sr-ProhibitTimer</i> (without suffix) and <i>sr-ProhibitTimer-v1700</i> are absent, the UE applies the value 0.
sr-TransMax Maximum number of SR transmissions as described in TS 38.321 [3]. Value <i>n4</i> corresponds to 4, value <i>n8</i> corresponds to 8, and so on.

– SchedulingRequestId

The IE *SchedulingRequestId* is used to identify a Scheduling Request instance in the MAC layer.

SchedulingRequestId information element

```

-- ASN1START
-- TAG-SCHEDULINGREQUESTID-START

SchedulingRequestId ::= INTEGER (0..7)

```

```
-- TAG-SCHEDULINGREQUESTID-STOP
-- ASN1STOP
```

– *SchedulingRequestResourceConfig*

The IE *SchedulingRequestResourceConfig* determines physical layer resources on PUCCH where the UE may send the dedicated scheduling request (D-SR) (see TS 38.213 [13], clause 9.2.4).

SchedulingRequestResourceConfig information element

```
-- ASN1START
-- TAG-SCHEDULINGREQUESTRESOURCECONFIG-START

SchedulingRequestResourceConfig ::= SEQUENCE {
    schedulingRequestResourceId      SchedulingRequestResourceId,

```

SchedulingRequestResourceConfig field descriptions
periodicityAndOffset SR periodicity and offset in number of symbols or slots (see TS 38.213 [13], clause 9.2.4) The following periodicities may be configured depending on the chosen subcarrier spacing: SCS = 15 kHz: 2sym, 7sym, 1sl, 2sl, 4sl, 5sl, 8sl, 10sl, 16sl, 20sl, 40sl, 80sl SCS = 30 kHz: 2sym, 7sym, 1sl, 2sl, 4sl, 5sl, 8sl, 10sl, 16sl, 20sl, 40sl, 80sl, 160sl SCS = 60 kHz: 2sym, 7sym/6sym, 1sl, 2sl, 4sl, 8sl, 16sl, 20sl, 40sl, 80sl, 160sl, 320sl SCS = 120 kHz: 2sym, 7sym, 1sl, 2sl, 4sl, 5sl, 8sl, 10sl, 16sl, 40sl, 80sl, 160sl, 320sl, 640sl SCS = 480 kHz: 1sl, 2sl, 4sl, 8sl, 16sl, 40sl, 80sl, 160sl, 320sl, 640sl, 1280sl, 2560sl SCS = 960 kHz: 1sl, 2sl, 4sl, 8sl, 16sl, 40sl, 80sl, 160sl, 320sl, 640sl, 1280sl, 2560sl, 5120sl sym6or7 corresponds to 6 symbols if extended cyclic prefix and a SCS of 60 kHz are configured, otherwise it corresponds to 7 symbols. For periodicities 2sym, 7sym and sl1 the UE assumes an offset of 0 slots. If <i>periodicityAndOffset-r17</i> is present, any previously configured <i>periodicityAndOffset</i> (without suffix) is released, and vice versa. UE indicates support of the following SR periodicities in <i>additionalSR-Periodicities</i> (see TS 38.306, clause 4.2.6): SCS = 30 kHz: 5sl SCS = 120 kHz: 5sl, 10sl
phy-PriorityIndex Indicates whether this scheduling request resource is <i>high</i> or <i>low</i> priority in PHY prioritization/multiplexing handling (see TS 38.213 [13], clause 9.2.4). Value <i>p0</i> indicates low priority and value <i>p1</i> indicates high priority.
resource ID of the PUCCH resource in which the UE shall send the scheduling request. The actual <i>PUCCH-Resource</i> is configured in <i>PUCCH-Config</i> of the same UL BWP and serving cell as this <i>SchedulingRequestResourceConfig</i>. The network configures a <i>PUCCH-Resource</i> of <i>PUCCH-format0</i> or <i>PUCCH-format1</i> (other formats not supported) (see TS 38.213 [13], clause 9.2.4). If this field is included in a <i>ltm-SchedulingRequestResourceConfig</i> IE within <i>ltm-SchedulingRequestInfo</i>, this field refers to the PUCCH resources to be used within the first active UL BWP.
schedulingRequestID The ID of the <i>SchedulingRequestConfig</i> that uses this scheduling request resource.
symbolType Indicates the valid symbol type for PUCCH configured for SR. The network configures this field if the transmissions are restricted to SBFD symbols only or non-SBFD symbols only for the UL BWP. The network does not configure this field if the transmissions can be in SBFD symbols and non-SBFD symbols in different slots for the UL BWP. (see TS 38.214 [19], clause 6)

– SchedulingRequestResourceId

The IE *SchedulingRequestResourceId* is used to identify scheduling request resources on PUCCH.

***SchedulingRequestResourceId* information element**

```
-- ASN1START
-- TAG-SCHEDULINGREQUESTRESOURCEID-START

SchedulingRequestResourceId ::=      INTEGER (1..maxNrofSR-Resources)

-- TAG-SCHEDULINGREQUESTRESOURCEID-STOP
-- ASN1STOP
```

– ***ScramblingId***

The IE *ScramblingID* is used for scrambling channels and reference signals.

***ScramblingId* information element**

```
-- ASN1START
-- TAG-SCRAMBLINGID-START

ScramblingId ::=                    INTEGER (0..1023)

-- TAG-SCRAMBLINGID-STOP
-- ASN1STOP
```

– ***SCS-SpecificCarrier***

The IE *SCS-SpecificCarrier* provides parameters determining the location and width of the actual carrier or the carrier bandwidth. It is defined specifically for a numerology (subcarrier spacing (SCS)) and in relation (frequency offset) to Point A.

***SCS-SpecificCarrier* information element**

```
-- ASN1START
-- TAG-SCS-SPECIFICCARRIER-START

SCS-SpecificCarrier ::=      SEQUENCE {
    offsetToCarrier            INTEGER (0..2199),
    subcarrierSpacing          SubcarrierSpacing,
    carrierBandwidth           INTEGER (1..maxNrofPhysicalResourceBlocks),
    ...,
    [[
    txDirectCurrentLocation    INTEGER (0..4095)                OPTIONAL        -- Need S
    ]],
    [[
    sbfd-Subband-Allocation-r19  SBFD-Subband-Allocation-r19    OPTIONAL        -- Need R
    ]],
}

```

```

SBFD-Subband-Allocation-r19 ::= SEQUENCE {
    ul-subbandlocationAndBandwidth-r19    INTEGER (0..37949)    OPTIONAL,    -- Need R
    firstDL-subbandlocationAndBandwidth-r19    INTEGER (0..37949)    OPTIONAL,    -- Need R
    secondDL-subbandlocationAndBandwidth-r19    INTEGER (0..37949)    OPTIONAL,    -- Need R
    ...
}

-- TAG-SCS-SPECIFICCARRIER-STOP
-- ASN1STOP

```

SCS-SpecificCarrier field descriptions

carrierBandwidth

Width of this carrier in number of PRBs (using the *subcarrierSpacing* defined for this carrier) (see TS 38.211 [16], clause 4.4.2). For the case that 12PRB/20 PRB transmission bandwidth is used as specified in TS 38.101-1 [15], TS 38.211[16] and TS 38.213[13], the network shall configure the *carrierBandwidth* to 15 PRB (for the 12 PRB case) and 25 PRB (for the 20 PRB case) respectively and the UE shall use 12PRB/20 PRB as the transmission bandwidth respectively.

offsetToCarrier

Offset in frequency domain between Point A (lowest subcarrier of common RB 0) and the lowest usable subcarrier on this carrier in number of PRBs (using the *subcarrierSpacing* defined for this carrier). The maximum value corresponds to 275*8-1. See TS 38.211 [16], clause 4.4.2.

txDirectCurrentLocation

Indicates the downlink Tx Direct Current location for the carrier. A value in the range 0..3299 indicates the subcarrier index within the carrier. The values in the value range 3301..4095 are reserved and ignored by the UE. If this field is absent for downlink within *ServingCellConfigCommon* and *ServingCellConfigCommonSIB*, the UE assumes the default value of 3300 (i.e. "Outside the carrier"). (see TS 38.211 [16], clause 4.4.2). Network does not configure this field via *ServingCellConfig* or for uplink carriers.

subcarrierSpacing

Subcarrier spacing of this carrier. It is used to convert the *offsetToCarrier* into an actual frequency.

Only the following values are applicable depending on the used frequency:

FR1/FR1-NTN: 15, 30 or 60 kHz

FR2-1/FR2-NTN: 60 or 120 kHz

FR2-2: 120, 480, or 960 kHz

SBFD-Subband-Allocation field descriptions

firstDL-subbandlocationAndBandwidth

Configures frequency domain location and bandwidth of the first DL subband. The value of the field shall be interpreted as resource indicator value (RIV) as defined in TS 38.214 with assumptions as described in TS 38.213 [13], clause 11.1. The network does not configure this field for UL carriers.

secondDL-subbandlocationAndBandwidth

Configures frequency domain location and bandwidth of the second DL subband. The value of the field shall be interpreted as resource indicator value (RIV) as defined in TS 38.214 with assumptions as described in TS 38.213 [13], clause 11.1. The network does not configure this field for UL carriers.

ul-subbandlocationAndBandwidth

Configures frequency domain location and bandwidth of UL subband. The value of the field shall be interpreted as resource indicator value (RIV) as defined in TS 38.214 with assumptions as described in TS 38.213 [13], clause 11.1. The network does not configure this field for DL carriers.

– SDAP-Config

The IE *SDAP-Config* is used to set the configurable SDAP parameters for a data radio bearer. All configured instances of SDAP-Config with the same value of pdu-Session correspond to the same SDAP entity as specified in TS 37.324 [24].

SDAP-Config information element

```
-- ASN1START
-- TAG-SDAP-CONFIG-START

SDAP-Config ::=
    pdu-Session                PDU-SessionID,
    sdap-HeaderDL               ENUMERATED {present, absent},
    sdap-HeaderUL               ENUMERATED {present, absent},
    defaultDRB                  BOOLEAN,
    mappedQoS-FlowsToAdd         SEQUENCE (SIZE (1..maxNrofQFIs)) OF QFI OPTIONAL, -- Need N
    mappedQoS-FlowsToRelease     SEQUENCE (SIZE (1..maxNrofQFIs)) OF QFI OPTIONAL, -- Need N
    ...
}

-- TAG-SDAP-CONFIG-STOP
-- ASN1STOP
```

SDAP-Config field descriptions	
defaultDRB	Indicates whether or not this is the default DRB for this PDU session. Among all configured instances of <i>SDAP-Config</i> with the same value of <i>pdu-Session</i> , this field shall be set to <i>true</i> in at most one instance of SDAP-Config and to <i>false</i> in all other instances.
mappedQoS-FlowsToAdd	Indicates the list of QFIs of UL QoS flows of the PDU session to be additionally mapped to this DRB. A QFI value can be included at most once in all configured instances of <i>SDAP-Config</i> with the same value of <i>pdu-Session</i> . For QoS flow remapping, the QFI value of the remapped QoS flow is only included in <i>mappedQoS-FlowsToAdd</i> in <i>sdap-Config</i> corresponding to the new DRB and not included in <i>mappedQoS-FlowsToRelease</i> in <i>sdap-Config</i> corresponding to the old DRB.
mappedQoS-FlowsToRelease	Indicates the list of QFIs of QoS flows of the PDU session to be released from existing QoS flow to DRB mapping of this DRB.
pdu-Session	Identity of the PDU session whose QoS flows are mapped to the DRB.
sdap-HeaderUL	Indicates whether or not a SDAP header is present for UL data on this DRB. The field cannot be changed after a DRB is established. The network sets this field to <i>present</i> if the field <i>defaultDRB</i> is set to <i>true</i> .
sdap-HeaderDL	Indicates whether or not a SDAP header is present for DL data on this DRB. The field cannot be changed after a DRB is established.

– SearchSpace

The IE *SearchSpace* defines how/where to search for PDCCH candidates. Each search space is associated with one *ControlResourceSet*. For a scheduled SCell in the case of cross carrier scheduling, except for *nrofCandidates*, all the optional fields are absent (regardless of their presence conditions). For a scheduled SpCell in the case of the cross carrier scheduling, if the search space is linked to another search space in the scheduling SCell, all the optional fields of this search space in the scheduled SpCell are absent (regardless of their presence conditions) except for *nrofCandidates*.

SearchSpace information element

```
-- ASN1START
-- TAG-SEARCHSPACE-START

SearchSpace ::=
    searchSpaceId          SEQUENCE {
        searchSpaceId,
        controlResourceSetId          OPTIONAL, -- Cond SetupOnly
        monitoringSlotPeriodicityAndOffset CHOICE {
            s11          NULL,
            s12          INTEGER (0..1),
            s14          INTEGER (0..3),
            s15          INTEGER (0..4),
            s18          INTEGER (0..7),
            s110         INTEGER (0..9),
            s116         INTEGER (0..15),
            s120         INTEGER (0..19),
            s140         INTEGER (0..39),
            s180         INTEGER (0..79),
            s1160        INTEGER (0..159),
            s1320        INTEGER (0..319),
            s1640        INTEGER (0..639),
            s11280       INTEGER (0..1279),
            s12560       INTEGER (0..2559)
        }
        duration            INTEGER (2..2559)
        monitoringSymbolsWithinSlot BIT STRING (SIZE (14))
        nrofCandidates      SEQUENCE {
            aggregationLevel1    ENUMERATED {n0, n1, n2, n3, n4, n5, n6, n8},

```

<i>SearchSpace</i> field descriptions
common Configures this search space as common search space (CSS) and DCI formats to monitor.
controlResourceSetId The CORESET applicable for this SearchSpace. Value 0 identifies the common CORESET#0 configured in MIB and in <i>ServingCellConfigCommon</i> . Values 1.. <i>maxNrofControlResourceSets</i> -1 identify CORESETs configured in System Information or by dedicated signalling. The CORESETs with <i>non-zero controlResourceSetId</i> are configured in the same BWP as this <i>SearchSpace</i> except <i>commonControlResourceSetExt</i> which is configured by SIB20. If the field <i>controlResourceSetId-r16</i> is present, UE shall ignore the <i>controlResourceSetId</i> (without suffix).
dummy1, dummy2 This field is not used in the specification. If received it shall be ignored by the UE.
dci-Format0-0-AndFormat1-0 If configured, the UE monitors the DCI formats 0_0 and 1_0 according to TS 38.213 [13], clause 10.1.
dci-Format2-0 If configured, UE monitors the DCI format 2_0 according to TS 38.213 [13], clause 10.1, 11.1.1.
dci-Format2-1 If configured, UE monitors the DCI format 2_1 according to TS 38.213 [13], clause 10.1, 11.2.
dci-Format2-2 If configured, UE monitors the DCI format 2_2 according to TS 38.213 [13], clause 10.1, 11.3.
dci-Format2-3 If configured, UE monitors the DCI format 2_3 according to TS 38.213 [13], clause 10.1, 11.4.
dci-Format2-4 If configured, UE monitors the DCI format 2_4 according to TS 38.213 [13], clause 11.2A.
dci-Format2-5 If configured, IAB-MT monitors the DCI format 2_5 according to TS 38.213 [13], clause 14.
dci-Format2-6 If configured, UE monitors the DCI format 2_6 according to TS 38.213 [13], clause 10.1, 10.3. DCI format 2_6 can only be configured on the SpCell.
dci-Format2-7 If configured, UE monitors the DCI format 2_7 according to TS 38.213 [13], clause 10.1, 10.4A.
dci-Format2-9 If configured, UE monitors the DCI format 2_9 according to TS 38.213 [13], clause 10.1, 11.5. DCI format 2_9 can be configured on only one cell in the cell group.
dci-Format4-0 If configured, the UE monitors the DCI format 4_0 with CRC scrambled by MCCH-RNTI/G-RNTI according to TS 38.213 [13], clause [10.1].
dci-Format4-1-AndFormat4-2 If configured, the UE monitors the DCI format 4_1 and 4_2 with CRC scrambled by G-RNTI/G-CS-RNTI according to TS 38.213 [13], clause [11.1].
dci-Format4-1 If configured, the UE monitors the DCI format 4_1 with CRC scrambled by G-RNTI/G-CS-RNTI according to TS 38.213 [13], clause [10.1].
dci-Format4-2 If configured, the UE monitors the DCI format 4_2 with CRC scrambled by G-RNTI/G-CS-RNTI according to TS 38.213 [13], clause [10.1].
dci-Formats Indicates whether the UE monitors in this USS for DCI formats 0-0 and 1-0 or for formats 0-1 and 1-1.
dci-FormatsExt If this field is present, the field <i>dci-Formats</i> is ignored and <i>dci-FormatsExt</i> is used instead to indicate whether the UE monitors in this USS for DCI format 0_2 and 1_2 or formats 0_1 and 1_1 and 0_2 and 1_2 (see TS 38.212 [17], clause 7.3.1 and TS 38.213 [13], clause 10.1). This field is not configured for operation with shared spectrum channel access in this release.

dcf-FormatsMC

Indicates whether the UE monitors in this USS for DCI format 0_3 or for format 1_3 or for formats 0_3 and 1_3. Separate search space sets for DCI formats in this field and the DCI formats in *ue-Specific* (without suffix) are independently configured.

NOTE: This parameter is used only for *SearchSpace* configured to the scheduling cell, while another *SearchSpace* configured to the reference scheduled cell (if any) configures only *nrofCandidates* (i.e., all other optional fields are absent) with same *searchSpaceId* with that for scheduling cell.

dcf-FormatsMT

Indicates whether the IAB-MT monitors the DCI formats 2-5 according to TS 38.213 [13], clause 14.

dcf-FormatsNCR

Indicates whether the NCR-MT monitors the DCI formats 2-8 according to TS 38.213 [13], clause 20.

dcf-FormatsSL

Indicates whether the UE monitors in this USS for DCI formats 0-0 and 1-0 or for formats 0-1 and 1-1 or for format 3-0 or for format 3-1 or for formats 3-0 and 3-1. If this field is present, the field *dcf-Formats* is ignored and *dcf-FormatsSL* is used.

dcf-FormatsSL-PRS

Indicates whether the UE monitors in this USS for DCI formats 3-2 or for formats 3-0 and 3-2 or for formats 3-0 and 3-1 and 3-2 or for formats 3-1 and 3-2. If this field is present, the field *dcf-Formats* is ignored and *dcf-FormatsSL-PRS* is used.

duration

Number of consecutive slots that a SearchSpace lasts in every occasion, i.e., upon every period as given in the *periodicityAndOffset*. If the field is absent, the UE applies the value 1 slot, except for DCI format 2_0. The UE ignores this field for DCI format 2_0. The maximum valid duration is periodicity-1 (periodicity as given in the *monitoringSlotPeriodicityAndOffset*).

For SCS 480 kHz and SCS 960 kHz, duration-r17 is used, and the configured duration is restricted to be an integer multiple of L slots and smaller than periodicity, where L is the configured length of the bitmap *monitoringSlotsWithinSlotGroup-r17*. If *duration-r17* is absent, the UE assumes the duration in slots is equal to L. The maximum valid duration is periodicity-L.

For IAB-MT, duration indicates number of consecutive slots that a SearchSpace lasts in every occasion, i.e., upon every period as given in the *periodicityAndOffset*. If the field is absent, the IAB-MT applies the value 1 slot, except for DCI format 2_0 and DCI format 2_5. The IAB-MT ignores this field for DCI format 2_0 and DCI format 2_5. The maximum valid duration is periodicity-1 (periodicity as given in the *monitoringSlotPeriodicityAndOffset*).

freqMonitorLocations

Defines an association of the search space to multiple monitoring locations in the frequency domain and indicates whether the pattern configured in the associated CORESET is replicated to a specific RB set, see TS 38.213, clause 10.1. Each bit in the bitmap corresponds to one RB set, and the leftmost (most significant) bit corresponds to RB set 0 in the BWP. A bit set to 1 indicates that a frequency domain resource allocation replicated from the pattern configured in the associated CORESET is mapped to the RB set.

monitoringSlotPeriodicityAndOffset

Slots for PDCCH Monitoring configured as periodicity and offset.

For SCS 15, 30, 60, and 120 kHz and if the UE is configured to monitor:

- DCI format 2_1, only the values 'sl1', 'sl2' or 'sl4' are applicable.
- DCI format 2_0, only the values 'sl1', 'sl2', 'sl4', 'sl5', 'sl8', 'sl10', 'sl16', and 'sl20' are applicable (see TS 38.213 [13], clause 10).
- DCI format 2_4, only the values 'sl1', 'sl2', 'sl4', 'sl5', 'sl8' and 'sl10' are applicable.

For SCS 480 kHz and if the UE is configured to monitor:

- DCI format 2_0, only the values 'sl4', 'sl8', 'sl16', 'sl20', 'sl32', 'sl40', 'sl64', and 'sl80' are applicable.
- DCI format 2_1, only the values 'sl4', 'sl8', and 'sl16' are applicable.
- DCI format 2_4, only the values 'sl4', 'sl8', 'sl16', 'sl20', 'sl32', 'sl40' are applicable.

For SCS 960 kHz and if the UE is configured to monitor:

- DCI format 2_0, only the values 'sl8', 'sl16', 'sl32', 'sl40', 'sl64', 'sl80', 'sl128', and 'sl160' are applicable.
- DCI format 2_1, only the values 'sl8', 'sl16', and 'sl32' are applicable.
- DCI format 2_4, only the values 'sl8', 'sl16', 'sl32', 'sl40', 'sl64', 'sl80' are applicable.

For SCS 480 kHz and SCS 960 kHz, and the configured periodicity and offset are restricted to be an integer multiple of L slots, where L is the configured length of the bitmap provided by *monitoringSlotsWithinSlotGroup-r17*, i.e. for a given periodicity, the offset has a range of {0, L, 2*L, ..., L*FLOOR(1/L*(periodicity-1))}.

For IAB-MT, If the IAB-MT is configured to monitor DCI format 2_1, only the values 'sl1', 'sl2' or 'sl4' are applicable. If the IAB-MT is configured to monitor DCI format 2_0 or DCI format 2_5, only the values 'sl1', 'sl2', 'sl4', 'sl5', 'sl8', 'sl10', 'sl16', and 'sl20' are applicable (see TS 38.213, clause 10).

If *monitoringSlotPeriodicityAndOffset-v1710* is present, any previously configured *monitoringSlotPeriodicityAndOffset* is released, and if *monitoringSlotPeriodicityAndOffset* is present, any previously configured *monitoringSlotPeriodicityAndOffset-v1710* is released.

monitoringSlotsWithinSlotGroup

Indicates which slot(s) within a slot group are configured for multi-slot PDCCH monitoring. The first (leftmost, most significant) bit represents the first slot in the slot group, the second bit represents the second slot in the slot group, and so on. A bit set to '1' indicates that the corresponding slot is configured for multi-slot PDCCH monitoring (see TS 38.213 [13], clause 10). The number of slots for multi-slot PDCCH monitoring is configured according to clause 10 in TS 38.213 [13].

monitoringSymbolsWithinSlot

The first symbol(s) for PDCCH monitoring in the slots configured for (multi-slot) PDCCH monitoring (see *monitoringSlotPeriodicityAndOffset* and *duration*). The most significant (left) bit represents the first OFDM in a slot, and the second most significant (left) bit represents the second OFDM symbol in a slot and so on. The bit(s) set to one identify the first OFDM symbol(s) of the control resource set within a slot. If the cyclic prefix of the BWP is set to extended CP, the last two bits within the bit string shall be ignored by the UE or IAB-MT.

For DCI format 2_0, the first one symbol applies if the *duration* of CORESET (in the IE *ControlResourceSet*) identified by *controlResourceSetId* indicates 3 symbols, the first two symbols apply if the *duration* of CORESET identified by *controlResourceSetId* indicates 2 symbols, and the first three symbols apply if the *duration* of CORESET identified by *controlResourceSetId* indicates 1 symbol.

See TS 38.213 [13], clause 10.

For IAB-MT: For DCI format 2_0 or DCI format 2_5, the first one symbol applies if the duration of CORESET (in the IE *ControlResourceSet*) identified by *controlResourceSetId* indicates 3 symbols, the first two symbols apply if the *duration* of CORESET identified by *controlResourceSetId* indicates 2 symbols, and the first three symbols apply if the *duration* of CORESET identified by *controlResourceSetId* indicates 1 symbol.

See TS 38.213 [13], clause 10.

nrofCandidates-CI

The number of PDCCH candidates specifically for format 2-4 for the configured aggregation level. If an aggregation level is absent, the UE does not search for any candidates with that aggregation level. The network configures only one aggregationLevel and the corresponding number of candidates (see TS 38.213 [13], clause 10.1). In this release of the specification, only value *n1* is valid.

nrofCandidates-PEI

The number of PDCCH candidates specifically for format 2-7 for the configured aggregation level.

nrofCandidates-SFI

The number of PDCCH candidates specifically for format 2-0 for the configured aggregation level. If an aggregation level is absent, the UE does not search for any candidates with that aggregation level. The network configures only one aggregationLevel and the corresponding number of candidates (see TS 38.213 [13], clause 11.1.1). For a search space configured with *freqMonitorLocations-r16*, only value 'n1' is valid.

nrofCandidates

Number of PDCCH candidates per aggregation level. The number of candidates and aggregation levels configured here applies to all formats unless a particular value is specified or a format-specific value is provided (see inside *searchSpaceType*). If configured in the *SearchSpace* of a cross carrier scheduled cell, this field determines the number of candidates and aggregation levels to be used on the linked scheduling cell (see TS 38.213 [13], clause 10).

searchSpaceGroupIdList-r16, searchSpaceGroupIdList-r17

List of search space group IDs which the search space is associated with. The network configures at most 2 search space groups per BWP where the group ID is either 0 or 1 if *searchSpaceGroupIdList-r16* is included. The network configures at most 3 search space groups per BWP where the group ID is either 0, 1 or 2 if *searchSpaceGroupIdList-r17* is included. And if *searchSpaceGroupIdList-r17* is included, *searchSpaceGroupIdList-r16* is ignored.

searchSpaceId

Identity of the search space. SearchSpaceId = 0 identifies the *searchSpaceZero* configured via PBCH (MIB) or *ServingCellConfigCommon* and may hence not be used in the *SearchSpace* IE. The *searchSpaceId* is unique among the BWPs of a Serving Cell. In case of cross carrier scheduling, search spaces with the same *searchSpaceId* in

scheduled cell and scheduling cell are linked to each other. The UE applies the search space for the scheduled cell only if the DL BWPs in which the linked search spaces are configured in scheduling cell and scheduled cell are both active.

For an IAB-MT, the search space defines how/where to search for PDCCH candidates for an IAB-MT where each search space is associated with one ControlResourceSet and for a scheduled cell in the case of cross carrier scheduling, except for *nrofCandidates*, all the optional fields are absent.

SearchSpaceLinkingId

This parameter is used to link two search spaces of same type in the same BWP. If two search spaces have the same *SearchSpaceLinkingId* UE assumes these search spaces are linked to PDCCH repetition REF. When PDCCH repetition is monitored in two linked search space (SS) sets, the UE does not expect a third monitored SS set to be linked with any of the two linked SS sets. The two linked SS sets have the same SS set type (USS/CSS). The two linked SS sets have the same DCI formats to monitor. For intra-slot PDCCH repetition: The two SS sets should have the same periodicity and offset (*monitoringSlotPeriodicityAndOffset*), and the same duration. For linking monitoring occasions across the two SS sets that exist in the same slot: The two SS sets have the same number of monitoring occasions within a slot and n-th monitoring occasion of one SS set is linked to n-th monitoring occasion of the other SS set. The following SS sets cannot be linked with another SS set for PDCCH repetition: SS set 0, *searchSpaceSIB1*, *searchSpaceOtherSystemInformation*, *pagingSearchSpace*, *ra-SearchSpace*, *searchSpaceMCCH*, *searchSpaceMTCH*, *peiSearchSpace*, and *sdt-SearchSpace*. SS set configured by *recoverySearchSpaceId* cannot be linked to another SS set for PDCCH repetition. When a scheduled serving cell is configured to be cross-carrier scheduled by a scheduling serving cell, two PDCCH candidates (with the same AL and candidate index associated with the scheduled serving cell) are linked only if the corresponding two SS sets in the scheduling serving cell are linked and two SS sets in the scheduled serving cell with the same SS set IDs are also linked.

This parameter is not applicable to search space configured with *dci-FormatsSL* for monitoring format 3-0 or format 3-1 or for monitoring formats 3-0 and format 3-1.

This parameter is not applicable to search space configured with *dci-FormatsSL-PRS* for monitoring format 3-2 or for monitoring formats 3-0 and 3-2 or for monitoring formats 3-0 and 3-1 and 3-2 or for monitoring formats 3-1 and 3-2.

searchSpaceLinkingId-CE

This parameter is used to link two search spaces of same type in the same BWP. If two search spaces have the same *searchSpaceLinkingId-CE* UE assumes these two search spaces are linked to PDCCH repetition. When PDCCH repetition is monitored in two linked search space (SS) sets, the UE does not expect a third monitored SS set to be linked with any of the two linked SS sets. The two linked SS sets have the same CSS set type other than Type-0 CSS and other than Type-3 CSS for common search spaces other than *SearchSpaceZero*. The two linked SS sets have the same DCI formats to monitor. The two linked SS sets are configured with the same *controlResourceSetId*. For intra-slot PDCCH repetition: The two SS sets should have the same periodicity and offset (*monitoringSlotPeriodicityAndOffset*), and the same duration. The starting symbol of monitoring occasion of the second SS is located right after the ending symbol of monitoring occasion of the first SS. For linking monitoring occasions across the two SS sets that exist in the same slot: The two SS sets have the same number of monitoring occasions within a slot and n-th monitoring occasion of one SS set is linked to n-th monitoring occasion of the other SS set.

searchSpaceType

Indicates whether this is a common search space (present) or a UE specific search space as well as DCI formats to monitor for.

ue-Specific

Configures this search space as UE specific search space (USS). The UE monitors the DCI format with CRC scrambled by C-RNTI, CS-RNTI (if configured), and SP-CSI-RNTI (if configured)

Conditional Presence	Explanation
<i>DedicatedOnly</i>	In PDCCH-Config, the field is optionally present, Need R. Otherwise it is absent, Need R.
<i>Setup</i>	This field is mandatory present upon creation of a new <i>SearchSpace</i> . It is optionally present, Need M, otherwise.
<i>Setup2</i>	This field is mandatory present when a new <i>SearchSpace</i> is set up, if the same <i>SearchSpace</i> ID is not included in <i>searchSpacesToAddModListExt-r16/searchSpacesToAddModListExt-v1700/searchSpacesToAddModListExt-v1800</i> of the parent IE with the field <i>searchSpaceType-r16</i> or <i>searchSpaceType-r17</i> or <i>searchSpaceType-r18</i> included. This field is absent if the same <i>SearchSpace</i> ID is included in <i>searchSpacesToAddModListExt-v1800</i> of the parent IE with the field <i>searchSpaceType-r18</i> included and set to <i>dci-FormatsMC-r18</i> . Otherwise it is optionally present, Need M.
<i>Setup3</i>	This field is mandatory present when a new <i>SearchSpace</i> is set up, if the same <i>SearchSpace</i> ID is not included in <i>searchSpacesToAddModListExt</i> (without suffix) of the parent IE with the field <i>searchSpaceType</i> (without suffix) included. Otherwise it is optionally present, Need M.
<i>Setup4</i>	This field is mandatory present upon creation of a new <i>SearchSpace</i> if <i>monitoringSlotPeriodicityAndOffset-v1710</i> is not included. It is optionally present, Need M, otherwise.
<i>Setup5</i>	This field is mandatory present upon creation of a new <i>SearchSpace</i> if <i>monitoringSlotPeriodicityAndOffset</i> (without suffix) is not included. It is optionally present, Need M, otherwise.
<i>SetupOnly</i>	This field is mandatory present upon creation of a new <i>SearchSpace</i> . It is absent, Need M, otherwise.
<i>SetupOnly2</i>	In PDCCH-Config, the field is optionally present upon creation of a new <i>SearchSpace</i> and absent, Need M upon reconfiguration of an existing <i>SearchSpace</i> . In PDCCH-ConfigCommon, the field is absent.

– **SearchSpaceId**

The IE *SearchSpaceId* is used to identify Search Spaces. The ID space is used across the BWPs of a Serving Cell. The search space with the *SearchSpaceId* = 0 identifies the search space configured via PBCH (MIB) and in *ServingCellConfigCommon* (*searchSpaceZero*). The number of Search Spaces per BWP is limited to 10 including the common and UE specific Search Spaces.

SearchSpaceId information element

```
-- ASN1START
-- TAG-SEARCHSPACEID-START

SearchSpaceId ::=
    INTEGER (0..maxNrofSearchSpaces-1)

-- TAG-SEARCHSPACEID-STOP
-- ASN1STOP
```

– **SearchSpaceZero**

The IE *SearchSpaceZero* is used to configure SearchSpace#0 of the initial BWP (see TS 38.213 [13], clause 13).

SearchSpaceZero information element

```
-- ASN1START
-- TAG-SEARCHSPACEZERO-START
```

```
SearchSpaceZero ::=
    INTEGER (0..15)
-- TAG-SEARCHSPACEZERO-STOP
-- ASN1STOP
```

– **SecurityAlgorithmConfig**

The IE *SecurityAlgorithmConfig* is used to configure AS integrity protection algorithm and AS ciphering algorithm for SRBs and DRBs.

SecurityAlgorithmConfig information element

```
-- ASN1START
-- TAG-SECURITYALGORITHMCONFIG-START

SecurityAlgorithmConfig ::=
    SEQUENCE {
        cipheringAlgorithm      CipheringAlgorithm,
        integrityProtAlgorithm   IntegrityProtAlgorithm OPTIONAL, -- Need R
        ...
    }

IntegrityProtAlgorithm ::=
    ENUMERATED {
        nia0, nia1, nia2, nia3, spare4, spare3,
        spare2, spare1, ...}

CipheringAlgorithm ::=
    ENUMERATED {
        nea0, nea1, nea2, nea3, spare4, spare3,
        spare2, spare1, ...}

-- TAG-SECURITYALGORITHMCONFIG-STOP
-- ASN1STOP
```

SecurityAlgorithmConfig field descriptions
<i>cipheringAlgorithm</i> Indicates the ciphering algorithm to be used for SRBs and DRBs, as specified in TS 33.501 [11]. The algorithms <i>nea0-nea3</i> are identical to the LTE algorithms <i>eea0-3</i>. The algorithms configured for all bearers using master key shall be the same, and the algorithms configured for all bearers using secondary key, if any, shall be the same. If UE is connected to E-UTRA/EPC, this field indicates the ciphering algorithm to be used for RBs configured with NR PDCP, as specified in TS 33.501 [11].
<i>integrityProtAlgorithm</i> Indicates the integrity protection algorithm to be used for SRBs and DRBs, as specified in TS 33.501 [11]. The algorithms <i>nia0-nia3</i> are identical to the E-UTRA algorithms <i>eia0-3</i>. The algorithms configured for all bearers using master key shall be the same and the algorithms configured for all bearers using secondary key, if any, shall be the same. The network does not configure <i>nia0</i> except for unauthenticated emergency sessions for unauthenticated UEs in LSM (limited service mode). If UE is connected to E-UTRA/EPC, this field indicates the integrity protection algorithm to be used for SRBs configured with NR PDCP as specified in TS 33.501 [11], and DRBs configured with integrity protection as specified in TS 33.401 [30]. The network does not configure <i>nia0</i> for SRB3.

– *SelectedPSCellForCHO-WithSCG*

The IE *SelectedPSCellForCHO-WithSCG* is used to indicate the information of the selected target PSCell to target MN at execution of a conditional reconfiguration for CHO with candidate SCG(s).

***SelectedPSCellForCHO-WithSCG* information element**

```
-- ASN1START
-- TAG-SELECTEDPSCELLFORCHO-WITHSCG-START

SelectedPSCellForCHO-WithSCG-r18 ::= SEQUENCE {
    ssbFrequency-r18          ARFCN-ValueNR,
    physCellId-r18            PhysCellId
}

-- TAG-SELECTEDPSCELLFORCHO-WITHSCG-STOP
-- ASN1STOP
```

– *SemiStaticChannelAccessConfig*

The IE *SemiStaticChannelAccessConfig* is used to configure channel access parameters when the network is operating in semi-static channel access mode (see clause 4.3 in TS 37.213 [48]).

***SemiStaticChannelAccessConfig* information element**

```
-- ASN1START
-- TAG-SEMISTATICCHANNELACCESSCONFIG-START

SemiStaticChannelAccessConfig-r16 ::= SEQUENCE {
    period-r16          ENUMERATED {ms1, ms2, ms2dot5, ms4, ms5, ms10}
}

-- TAG-SEMISTATICCHANNELACCESSCONFIG-STOP
-- ASN1STOP
```

<i>SemiStaticChannelAccessConfig</i> field descriptions
<i>period</i> Indicates the periodicity of the semi-static channel access mode (see TS 37.213 [48], clause 4.3). Value ms1 corresponds to 1 ms, value ms2 corresponds to 2 ms, value ms2dot5 corresponds to 2.5 ms, and so on.

– *SemiStaticChannelAccessConfigUE*

The IE *SemiStaticChannelAccessConfigUE* is used to configure channel access parameters for UE initiated semi-static channel access.

SemiStaticChannelAccessConfigUE information element

```
-- ASN1START
-- TAG-SEMISTATICCHANNELACCESSCONFIGUE-START

SemiStaticChannelAccessConfigUE-r17 ::= SEQUENCE {
    periodUE-r17          ENUMERATED {ms1, ms2, ms2dot5, ms4, ms5, ms10, spare2, spare1},
    offsetUE-r17          INTEGER (0..559)
}

-- TAG-SEMISTATICCHANNELACCESSCONFIGUE-STOP
-- ASN1STOP
```

SemiStaticChannelAccessConfigUE field descriptions
periodUE Indicates the period of a channel occupancy that the UE can initiate as described in TS 37.213 [48], clause 4.3. Value ms1 corresponds to 1 ms, value ms2 corresponds to 2 ms, value ms2dot5 corresponds to 2.5 ms, and so on.
offsetUE Indicates the number of symbols from the beginning of the even indexed radio frame to the start of the first period within that radio frame that the UE can initiate a channel occupancy (see TS 37.213 [48], clause 4.3), based on the smallest SCS among the configured SCSs in the serving cell. The offset duration indicated by this field is less than the period duration indicated by <i>periodUE</i> . The maximum value is 139, 279 and 559 for 15, 30 and 60 kHz subcarrier spacing, respectively.

– Sensor-LocationInfo

The IE *Sensor-LocationInfo* is used by the UE to provide sensor information.

Sensor-LocationInfo information element

```
-- ASN1START
-- TAG-SENSORLOCATIONINFO-START

Sensor-LocationInfo-r16 ::= SEQUENCE {
    sensor-MeasurementInformation-r16  OCTET STRING  OPTIONAL,
    sensor-MotionInformation-r16       OCTET STRING  OPTIONAL,
    ...
}

-- TAG-SENSORLOCATIONINFO-STOP
-- ASN1STOP
```

Sensor-LocationInfo field descriptions
sensor-MeasurementInformation This field provides barometric pressure measurements as <i>Sensor-MeasurementInformation</i> defined in TS 37.355 [49]. The first/leftmost bit of the first octet contains the most significant bit.
sensor-MotionInformation This field provides motion sensor measurements as <i>Sensor-MotionInformation</i> defined in TS 37.355 [49]. The first/leftmost bit of the first octet contains the most significant bit.

– *ServingCellAndBWP-Id*

The IE *ServingCellAndBWP-Id* is used to indicate a serving cell and an uplink or a downlink BWP.

ServingCellAndBWP-Id information element

```
-- ASN1START
-- TAG-SERVINGCELLANDBWP-ID-START

ServingCellAndBWP-Id-r17 ::= SEQUENCE {
    servingcell-r17      ServCellIndex,
    bwp-r17              BWP-Id
}

-- TAG-SERVINGCELLANDBWP-ID-STOP
-- ASN1STOP
```

– *ServCellIndex*

The IE *ServCellIndex* concerns a short identity, used to uniquely identify a serving cell (i.e. the PCell, the PSCell or an SCell) across the cell groups. Value 0 applies for the PCell, while the *SCellIndex* that has previously been assigned applies for SCells.

ServCellIndex information element

```
-- ASN1START
-- TAG-SERVCELLINDEX-START

ServCellIndex ::=
    INTEGER (0..maxNrofServingCells-1)

-- TAG-SERVCELLINDEX-STOP
-- ASN1STOP
```

– ServingCellConfig

The IE *ServingCellConfig* is used to configure (add or modify) the UE with a serving cell, which may be the SpCell or an SCell of an MCG or SCG. The parameters herein are mostly UE specific but partly also cell specific (e.g. in additionally configured bandwidth parts). Reconfiguration between a PUCCH and PUCCHless SCell is only supported using an SCell release and add.

ServingCellConfig information element

```
-- ASN1START
-- TAG-SERVINGCELLCONFIG-START

ChannelAccessConfig field descriptions	
<i>absenceOfAnyOtherTechnology</i>	Presence of this field indicates absence on a long term basis (e.g. by level of regulation) of any other technology sharing the carrier; absence of this field indicates the potential presence of any other technology sharing the carrier, as specified in TS 37.213 [48] clauses 4.2.1 and 4.2.3.
<i>energyDetectionConfig</i>	Indicates whether to use the <i>maxEnergyDetectionThreshold</i> or the <i>energyDetectionThresholdOffset</i> (see TS 37.213 [48], clause 4.2.3).
<i>energyDetectionThresholdOffset</i>	Indicates the offset to the default maximum energy detection threshold value. Unit in dB. Value -13 corresponds to -13dB, value -12 corresponds to -12dB, and so on (i.e. in steps of 1dB) as specified in TS 37.213 [48], clause 4.2.3.
<i>maxEnergyDetectionThreshold</i>	Indicates the absolute maximum energy detection threshold value. Unit in dBm. Value -85 corresponds to -85 dBm, value -84 corresponds to -84 dBm, and so on (i.e. in steps of 1dBm) as specified in TS 37.213 [48], clause 4.2.3.
<i>ul-toDL-COT-SharingED-Threshold</i>	Maximum energy detection threshold that the UE should use to share channel occupancy with gNB for DL transmission as specified in TS 37.213 [48], clause 4.1.3 for downlink channel access and clause 4.2.3 for uplink channel access. This field is not applicable in semi-static channel access mode.

<i>ServingCellConfig</i> field descriptions
<i>additionalPCI-ToAddModList</i> List of information for the additional SSB with different PCI than the serving cell PCI. The additional SSBs with different PCIs are not used for serving cell quality derivation.
<i>additionalTDDConfig-perPCI-ToAddModList</i> List of TDD-UL-DL configurations for the additional PCIs. When the network releases an additional PCI of a serving cell, the network also explicitly releases the associated TDD-UL-DL configuration for the additional PCI.
<i>bwp-InactivityTimer</i> The duration in ms after which the UE falls back to the default Bandwidth Part (see TS 38.321 [3], clause 5.15). When the network releases the timer configuration, the UE stops the timer without switching to the default BWP.
<i>ca-SlotOffset</i> Slot offset between the primary cell (PCell/PSCell) and the SCell in unaligned frame boundary with slot alignment and partial SFN alignment inter-band CA. Based on this field, the UE determines the time offset of the SCell as specified in clause 4.5 of TS 38.211 [16]. The granularity of this field is determined by the reference SCS for the slot offset (i.e. the maximum of PCell/PSCell lowest SCS among all the configured SCSs in DL/UL <i>SCS-SpecificCarrierList</i> in <i>ServingCellConfigCommon</i> or <i>ServingCellConfigCommonSIB</i> and this serving cell's lowest SCS among all the configured SCSs in DL/UL <i>SCS-SpecificCarrierList</i> in <i>ServingCellConfigCommon</i> or <i>ServingCellConfigCommonSIB</i>). The Network configures at most single non-zero offset duration in ms (independent on SCS) among CCs in the unaligned CA configuration. If the field is absent, the UE applies the value of 0. The slot offset value can only be changed with SCell release and add.
<i>cbg-TxDiffTBsProcessingType1</i>, <i>cbg-TxDiffTBsProcessingType2</i> Indicates whether processing types 1 and 2 based CBG based operation is enabled according to Rel-16 UE capabilities.
<i>cellDTX-DRX-Config</i> Used to configure cell DTX/DRX for the serving cell, as specified in TS 38.321 [3]. A maximum of two cell DTX/DRX patterns can be configured per MAC entity for different serving cells. The two configured patterns are aligned, that the start and slot offset are common and the periodicity of one pattern is an integer multiple of the other. Cell DTX is configured only when connected mode DRX is configured.
<i>cellDTX-DRX-L1activation</i> Indicates whether this serving cell has enabled L1 signaling based on DCI 2_9 for dynamic activation/deactivation of cell DTX/DRX configuration.
<i>cjt-Scheme-PDSCH</i>, <i>cjt-Scheme-PDSCH-v1900</i> This field is used to configure CJT Tx scheme <i>cjtSchemeA</i> or <i>cjtSchemeB</i> , <i>cjt-SchemeC</i> , <i>cjt-SchemeD</i> or <i>cjt-SchemeE</i> for PDSCH reception, see TS 38.214 [19] clause 5.1.5. The network does not configure <i>cjt-Scheme-PDSCH</i> and <i>cjt-Scheme-PDSCH-v1900</i> simultaneously.
<i>channelAccessConfig</i> List of parameters used for access procedures of operation with shared spectrum channel access (see TS 37.213 [48]).
<i>channelAccessMode2</i> If present, this field indicates that the UE shall apply channel access procedures for operation with shared spectrum channel access in accordance with TS 37.213 [48], clause 4.4 for FR2-2. If absent, the UE does not apply these channel access procedures. The network always configures this field if channel access procedures are required for the serving cell within this region by regulations. Overwrites the corresponding field in <i>ServingCellConfigCommon</i> or <i>ServingCellConfigCommonSIB</i> for this serving cell.
<i>crossCarrierSchedulingConfig</i> Indicates whether this serving cell is cross-carrier scheduled by another serving cell or whether it cross-carrier schedules another serving cell. If the field <i>other</i> is configured for an SpCell (i.e., the SpCell is cross-carrier scheduled by another serving cell), the SpCell can be additionally scheduled by the PDCCH on the SpCell.
<i>crossCarrierSchedulingConfigRelease</i> If this field is included, the UE shall release the cross carrier scheduling configuration configured by <i>crossCarrierSchedulingConfig</i> . The network may only include either <i>crossCarrierSchedulingConfigRelease</i> or <i>crossCarrierSchedulingConfig</i> at a time.
<i>crs-RateMatch-PerCORESETPoolIndex</i> Indicates how UE performs rate matching when both <i>lte-CRS-PatternList1-r16</i> and <i>lte-CRS-PatternList2-r16</i> are configured or when both <i>lte-CRS-PatternList3-r18</i> and <i>lte-CRS-PatternList4-r18</i> are configured as specified in TS 38.214 [19], clause 5.1.4.2.
<i>csi-RS-ValidationWithDCI</i>

Indicates how the UE performs periodic and semi-persistent CSI-RS reception in a slot. The presence of this field indicates that the UE uses DCI detection to validate whether to receive CSI-RS (see TS 38.213 [13], clause 11.1).

defaultDownlinkBWP-Id

The initial bandwidth part is referred to by BWP-Id = 0. ID of the downlink bandwidth part to be used upon expiry of the BWP inactivity timer. This field is UE specific. When the field is absent the UE uses the initial BWP as default BWP. (see TS 38.213 [13], clause 12 and TS 38.321 [3], clause 5.15).

directionalCollisionHandling

Indicates that this serving cell is using directional collision handling between a reference and other cell(s) for half-duplex operation in TDD CA with same SCS as specified in TS 38.213 [13], clause 11.1. The half-duplex operation only applies within the same frequency range and cell group.

The network only configures this field for TDD serving cells that are using the same SCS.

directionalCollisionHandling-DC

For the IAB-MT, it indicates that this serving cell is using directional collision handling between a reference and other cell(s) for half-duplex operation in TDD NR-DC with same SCS within same cell group or cross different cell groups.

dormantBWP-Config

The dormant BWP configuration for an SCell. This field can be configured only for a (non-PUCCH) SCell.

downlinkBWP-ToAddModList

List of additional downlink bandwidth parts to be added or modified. (see TS 38.213 [13], clause 12).

downlinkBWP-ToReleaseList

List of additional downlink bandwidth parts to be released. (see TS 38.213 [13], clause 12).

downlinkChannelBW-PerSCS-List

A set of UE specific channel bandwidth and location configurations for different subcarrier spacings (numerologies). Defined in relation to Point A. The UE uses the configuration provided in this field only for the purpose of channel bandwidth and location determination. If absent, UE uses the configuration indicated in *scs-SpecificCarrierList* in *DownlinkConfigCommon* / *DownlinkConfigCommonSIB*. Network only configures channel bandwidth that corresponds to the channel bandwidth values defined in TS 38.101-1 [15], TS 38.101-2 [39], and TS 38.101-5 [75]. If the UE is an (e)RedCap UE and needs to autonomously switch to its initial downlink bandwidth part to perform a random access procedure but its current UE specific channel bandwidth does not cover the initial downlink bandwidth part, the UE autonomously changes its UE specific channel bandwidth to cover the initial downlink bandwidth part. In that case, after completion of the random access procedure, the network ensures that the UE specific channel bandwidth fully covers the UE's active downlink bandwidth part in subsequent bandwidth part switch operations.

dummy1, dummy 2

This field is not used in the specification. If received it shall be ignored by the UE.

enableBeamSwitchTiming

Indicates the aperiodic CSI-RS triggering with beam switching triggering behaviour as defined in clause 5.2.1.5.1 of TS 38.214 [19].

enableDefaultTCI-StatePerCoresetPoolIndex

Presence of this field indicates the UE shall follow the release 16 behavior of default TCI state per CORESETPoolindex when the UE is configured by higher layer parameter PDCCH-Config that contains two different values of CORESETPoolIndex in ControlResourceSet is enabled.

enableTwoDefaultTCI-States

Presence of this field indicates the UE shall follow the release 16 behavior of two default TCI states for PDSCH when at least one TCI codepoint is mapped to two TCI states is enabled

fdmed-ReceptionMulticast

Indicates the Type-1 HARQ codebook generation as specified in TS 38.213 [13], clause 9.1.2.1.

firstActiveDownlinkBWP-Id

If configured for an SpCell, this field contains the ID of the DL BWP to be activated or to be used for RLM, BFD and measurements if included in an *RRCReconfiguration* message contained in an NR or E-UTRA RRC message indicating that the SCG is deactivated, upon performing the RRC (re-)configuration. If the field is absent, the RRC (re-)configuration does not impose a BWP switch. If the field is absent for the PSCell at SCG deactivation, the UE considers the previously activated DL BWP as the BWP to be used for RLM, BFD and measurements. If the field is absent for the PSCell at SCG activation, the DL BWP to be activated is the DL BWP previously to be used for RLM, BFD and measurements.

If configured for an SCell, this field contains the ID of the downlink bandwidth part to be used upon activation of an SCell. The initial bandwidth part is referred to by BWP-Id = 0.

Upon reconfiguration with *reconfigurationWithSync*, the network sets the *firstActiveDownlinkBWP-Id* and *firstActiveUplinkBWP-Id* to the same value.

initialDownlinkBWP

The dedicated (UE-specific) configuration for the initial downlink bandwidth-part (i.e., DL BWP#0). If any of the optional IEs are configured within this IE, the UE considers the BWP#0 to be an RRC configured BWP (from UE capability viewpoint). Otherwise, the UE does not consider the BWP#0 as an RRC configured BWP (from UE capability viewpoint). Network always configures the UE with a value for this field if no other BWPs are configured. NOTE1

intraCellGuardBandsDL-List, intraCellGuardBandsUL-List

List of intra-cell guard bands in a serving cell for operation with shared spectrum channel access in FR1. If not configured, the guard bands are defined according to 38.101-1 [15], see TS 38.214 [19], clause 7. For operation in licensed spectrum, this field is absent, and no UE action is required.

lte-CRS-PatternList1

A list of LTE CRS patterns around which the UE shall do rate matching for PDSCH. The LTE CRS patterns in this list shall be non-overlapping in frequency. The network does not configure this field and *lte-CRS-ToMatchAround* simultaneously.

lte-CRS-PatternList2

A list of LTE CRS patterns around which the UE shall do rate matching for PDSCH scheduled with a DCI detected on a CORESET with CORESETPoolIndex configured with 1. This list is configured only if CORESETPoolIndex configured with 1. The first LTE CRS pattern in this list shall be fully overlapping in frequency with the first LTE CRS pattern in *lte-CRS-PatternList1*, The second LTE CRS pattern in this list shall be fully overlapping in frequency with the second LTE CRS pattern in *lte-CRS-PatternList1*, and so on. Network configures this field only if the field *lte-CRS-ToMatchAround* is not configured and there is at least one ControlResourceSet in one DL BWP of this serving cell with *coresetPoolIndex* set to 1.

lte-CRS-PatternList3

A list of LTE CRS patterns around which the UE shall do rate matching for PDSCH. The LTE CRS patterns in this list shall be non-overlapping in frequency. The network does not configure this field and *lte-CRS-ToMatchAround*, or this field and *lte-CRS-PatternList1*, or this field and *lte-CRS-PatternList2* simultaneously.

lte-CRS-PatternList4

A list of LTE CRS patterns around which the UE shall do rate matching for PDSCH. The LTE CRS patterns in this list shall be non-overlapping in frequency. The first LTE CRS pattern in this list shall be fully overlapping in frequency with the first LTE CRS pattern in *lte-CRS-PatternList3*. The second LTE CRS pattern in this list shall be fully overlapping in frequency with the second LTE CRS pattern in *lte-CRS-PatternList3*, and so on. Network configures this field only if the field *lte-CRS-ToMatchAround* is not configured and the field *lte-CRS-PatternList3* is configured.

lte-CRS-ToMatchAround

Parameters to determine an LTE CRS pattern that the UE shall rate match around.

lte-NeighCellsCRS-AssistInfoList

A list of LTE neighbour cells configuration information which is used to assist the UE to perform CRS interference mitigation (CRS-IM) in scenarios with overlapping spectrum for LTE and NR (see TS 38.101-4 [59]). If the field is included, it replaces any previous list, i.e. all the entries of the list are replaced and each of the *LTE-NeighCellsCRS-AssistInfo* entries is considered to be newly created and the conditions and Need codes for setup of the entry apply.

lte-NeighCellsCRS-Assumptions

If the field is not configured, the following default network configuration assumptions are valid for all LTE neighbour cells for the purpose of CRS interference mitigation (CRS-IM) in scenarios with overlapping spectrum for LTE and NR (see TS 38.101-4 [59]).

- The CRS port number is the same as the one indicated in *RateMatchPatternLTE-CRS* if configured for the serving cell.
- The CRS port number is 4 if *RateMatchPatternLTE-CRS* is not configured for the serving cell.
- The channel bandwidth and centre frequency are the same as the ones indicated in *RateMatchPatternLTE-CRS* if configured for the serving cell.
- The MBSFN configuration is the same as the one indicated in *RateMatchPatternLTE-CRS* if configured for the serving cell. If *RateMatchPatternLTE-CRS* is not configured for the serving cell, MBSFN subframe is not configured.
- Network-based CRS interference mitigation (i.e., CRS muting), as in *crs-IntfMitigConfig* specified in TS 36.331 [10], is not enabled.

If the field is configured (i.e. false) and *LTE-NeighCellsCRS-AssistInfoList* is configured, the configuration provided in *LTE-NeighCellsCRS-AssistInfoList* overrides the default network configuration assumptions.

If the field is configured (i.e. false) and *LTE-NeighCellsCRS-AssistInfoList* is not configured, it is up to the UE implementation whether to apply CRS-IM operation.

mc-DCI-SetOfCellsToAddModList, mc-DCI-SetOfCellsToAddModListExt

List of up to N ($N \leq 4$) configurations of set(s) of cells for multi-cell PDSCH/PUSCH scheduling from the serving cell, where N is reported as UE capability and up to 4 sets of cells can be configured per PUCCH group. When this field is configured to a SCell, PCell cannot be included in either *ScheduledCellListDCI-1-3* or *ScheduledCellListDCI-0-3*. If *mc-DCI-SetOfCellsToAddModListExt* is present, it contains the same number of entries, and listed in the same order, as in *mc-DCI-SetOfCellsToAddModList*.

mc-DCI-SetOfCellsToReleaseList

List of cell set configurations to release.

multiPDSCH-PerSlotType1-CB

Configures the UE behaviour for Type1 codebook HARQ ACK generation regarding the number of PDSCHs per slot on a serving cell as specified in TS 38.213 [13], clause 9.1.2.1.

When this parameter is configured and set to *disabled* for a serving cell, the network does not schedule UE with more than one PDSCH in a slot on the serving cell if HARQ-ACKs of any two PDSCHs in the slot on the serving cell are supposed to be reported on one PUCCH resource in the same PUCCH slot. If two *coresetPoolIndex* values are configured, the number of received PDSCHs is per *coresetPoolIndex* value per slot for a serving cell. If the UE generates two HARQ-ACK codebooks for two priorities, the number of received PDSCHs is per priority per slot for a serving cell. If *fdmed-ReceptionMulticast* is configured, the number of received PDSCHs is per traffic type (unicast / multicast) per slot for a serving cell.

nr-dl-PRS-PDC-Info

Configures the DL PRS for propagation delay compensation. When configured, the UE measures the UE Rx-Tx time difference based on the reference signals configured in this field.

nrofHARQ-BundlingGroups

Indicates the number of HARQ bundling groups for type2 HARQ-ACK codebook.

ntn-RedcapPrioritizeUL-Dynamic

For HD-FDD (e)RedCap NTN UEs, this field indicates that UL is prioritized for DL-UL collisions when dynamically scheduled DL reception collides with dynamically scheduled UL transmission other than collisions with PDSCH scheduled by Type 0/0A/1/2 PDCCH in CSS or PDCCH ordered PRACH (see TS 38.213 [13], clause 17.2).

ntn-RedcapPrioritizeUL-Semistatic

For HD-FDD (e)RedCap NTN UEs, this field indicates that UL is prioritized for DL-UL collisions when semi-static DL reception collides with semi-static UL transmission) other than collisions with Type 0/0A/1/2 PDCCH in CSS (see TS 38.213 [13], clause 17.2).

pathlossReferenceLinking

Indicates whether UE shall apply as pathloss reference either the downlink of SpCell (PCell for MCG or PSCell for SCG) or of SCell that corresponds with this uplink (see TS 38.213 [13], clause 7).

pdcch-CandidateReceptionWithCRS-Overlap

Presence of this field indicates the UE shall monitor PDCCH candidates that overlap with LTE CRS RE(s).

pdsch-ServingCellConfig

PDSCH related parameters that are not BWP-specific.

positionInDCI-cellIDTRX

The starting bit position of an information block of DCI format 2_9 for this serving cell (see TS 38.212 [17], clause 7.3.1.3.10).

rateMatchPatternToAddModList

Resources patterns which the UE should rate match PDSCH around. The UE rate matches around the union of all resources indicated in the rate match patterns. Rate match patterns defined here on cell level apply only to PDSCH of the same numerology. See TS 38.214 [19], clause 5.1.4.1. If a *RateMatchPattern* with the same *RateMatchPatternId* is configured in both *ServingCellConfig/ServingCellConfigCommon* and in SIB20/MCCH, the entire *RateMatchPattern* configuration shall be the same, including the set of RBs/REs indicated by the patterns for the rate matching around, and they are counted as a single rate match pattern in the total configured rate match patterns as defined in TS 38.214 [19].

sCellDeactivationTimer

SCell deactivation timer in TS 38.321 [3]. If the field is absent, the UE applies the value infinity.

sfnSchemePDCCH

This parameter is used to configure single frequency network scheme for PDCCH: *sfnSchemeA* or *sfnSchemeB* as specified (see TS 38.214 [19], clause 5.1). If network includes both *sfnSchemePDCCH* and *sfnSchemePDSCH*, same value shall be configured.

sfnSchemePDSCH

This parameter is used to configure single frequency network scheme for PDSCH: *sfnSchemeA* or *sfnSchemeB* as specified (see TS 38.214 [19], clause 5.1). If network includes both *sfnSchemePDCCH* and *sfnSchemePDSCH*, same value shall be configured. The network does not configure this parameter and *repetitionSchemeConfig* in *PDSCH-Config* simultaneously in the same serving cell.

semiStaticChannelAccessConfigUE

When this field is configured and when *channelAccessMode-r16* (see IE *ServingCellConfigCommon* and IE *ServingCellConfigCommonSIB*) is configured to *semiStatic*, the UE operates in semi-static channel access mode and can initiate a channel occupancy periodically (see TS 37.213 [48], Clause 4.3).

The period can be configured independently from period configured in *SemiStaticChannelAccessConfig-r16* if the UE indicates the corresponding capability. Otherwise, the periodicity configured by *periodUE-r17* is an integer multiple of or an integer factor of the periodicity indicated by *period* in *SemiStaticChannelAccessConfig-r16*.

servingCellMO

measObjectId of the *MeasObjectNR* in *MeasConfig* which is associated to the serving cell. If the serving cell is configured with *absoluteFrequencySSB*, the following relationship applies between the corresponding *MeasObjectNR* and *frequencyInfoDL* in *ServingCellConfigCommon/ServingCellConfigCommonSIB* of the serving cell: if *ssbFrequency* is configured, its value is the same as the *absoluteFrequencySSB* and if *csi-rs-ResourceConfigMobility* is configured, the value of its *subcarrierSpacing* is present in one entry of the *scs-SpecificCarrierList*, *csi-RS-CellListMobility* includes an entry corresponding to the serving cell (with *cellId* equal to *physCellId* in *ServingCellConfigCommon*) and the frequency range indicated by the *csi-rs-MeasurementBW* of the entry in *csi-RS-CellListMobility* is included in the frequency range indicated by the entry of the *scs-SpecificCarrierList*.

If the serving cell is an SSB-less SCell, the carrier frequency indicated by *ssbFrequency* of the corresponding *MeasObjectNR*, if configured, is within the frequency range indicated by any entry of the *scs-SpecificCarrierList*.

servingCellMO-OD

measObjectId of the *MeasObjectNR* in *MeasConfig* which is associated to the serving cell instead of *servingCellMO* in IE *ServingCellConfig*.

supplementaryUplink

Network may configure this field only when *supplementaryUplinkConfig* is configured in *ServingCellConfigCommon* or *supplementaryUplink* is configured in *ServingCellConfigCommonSIB*.

supplementaryUplinkRelease

If this field is included, the UE shall release the uplink configuration configured by *supplementaryUplink*. The network only includes either *supplementaryUplinkRelease* or *supplementaryUplink* at a time.

tag-Id

Timing Advance Group ID, as specified in TS 38.321 [3], which this cell or set of TCI-States of this cell are associated with.

tag2

This field is used to indicate the second TAG information for the serving cell. It is optionally configured in a serving cell if *coresetPoolIndex* for a BWP is configured with more than one value. The network always configures this field if *twoTA-Without-MultiDCI-MultiTRP* is configured for a BWP.

tci-ActivatedConfig

If configured for an SCell, or if configured for the PSCell when the SCG is being activated upon the reception of the containing message, the UE shall consider the TCI states provided in this field as the activated TCI states for PDCCH/PDSCH reception on this serving cell.

If configured for the PSCell when the SCG is indicated as deactivated in the containing message:

- the UE shall consider the TCI states provided in this field as the TCI states to be activated for PDCCH/PDSCH reception upon a later SCG activation in which *tci-ActivatedConfig* is absent

- if *bfd-and-RLM* is configured and no RS is configured in *RadioLinkMonitoringConfig* for RLM, respectively for BFD, the UE shall use the TCI states provided in this field for PDCCH as RS for RLM, respectively for BFD.

When this field is absent for the PSCell and the SCG is being deactivated:

- the UE shall consider the previously activated TCI states as the TCI states to be activated for PDCCH/PDSCH reception upon a later SCG activation in which *tci-ActivatedConfig* is absent

- if *bfd-and-RLM* is configured and no RS is configured in *RadioLinkMonitoringConfig* for RLM, respectively for BFD, the UE shall use the previously activated TCI states for PDCCH as RS for RLM, respectively for BFD.

tdd-UL-DL-ConfigurationDedicated-IAB-MT

Resource configuration per IAB-MT D/U/F overrides all symbols (with a limitation that effectively only flexible symbols can be overwritten in Rel-16) per slot over the number of slots as provided by *TDD-UL-DL ConfigurationCommon*.

unifiedTCI-StateType

Indicates the unified TCI state type the UE is configured for this serving cell. The value *separate* means this serving cell is configured with *dl-OrJointTCI-StateList* for DL TCI state and *ul-TCI-StateList* for UL TCI state. The value *joint* means this serving cell is configured with *dl-OrJointTCI-StateList* for joint TCI state for UL and DL operation.

uplinkConfig

Network may configure this field only when *uplinkConfigCommon* is configured in *ServingCellConfigCommon* or *ServingCellConfigCommonSIB*. Addition or release of this field can only be done upon SCell addition or release (respectively).

uplink-PowerControlToAddModList, uplink-PowerControlToAddModListExt

Configures UL power control parameters for PUSCH, PUCCH and SRS when field *unifiedTCI-StateType* is configured for this serving cell. If the network includes *uplink-PowerControlToAddModListExt*, it includes the same number of entries, and listed in the same order, as in *uplink-PowerControlToAddModList*.

Tag2 field descriptions

n-TimingAdvanceOffset2

The *N_TA-Offset2* to be applied for PDCCH order CFRA towards the active *additionalPCI* as specified in TS 38.133 [14] clause 7.1.1 and for all uplink transmissions on this serving cell associated to *tag2* as specified in TS 38.213 [13] clause 4.2. This field is always present if *SSB-MTC-AdditionalPCI* is configured. It is absent otherwise. If absent, the *N_TA-Offset* is applied for all uplink transmissions on this serving cell associated to *tag2*.

tag2-flag

If this field is set to true, the *tag2-Id* is associated to value 0 and *tag-Id* is associated to value 1 of field TI bit in RAR, fallbackRAR and in the absolute TAC MAC CE, see TS 38.321 [3]. Otherwise, the *tag2-Id* is associated to value 1 and *tag-Id* is associated to value 0 of field TI bit in RAR, fallbackRAR and in the absolute TAC MAC CE, see TS 38.321 [3].

tag2-Id

Timing Advance Group ID, as specified in TS 38.321 [3], which this cell or set of TCI-States of this cell are associated with.

<i>UplinkConfig</i> field descriptions
carrierSwitching Includes parameters for configuration of carrier based SRS switching (see TS 38.214 [19], clause 6.2.1.3).
enableDefaultBeamPL-ForPUSCH0-0, enableDefaultBeamPL-ForPUCCH, enableDefaultBeamPL-ForSRS When the parameter is present, UE derives the spatial relation and the corresponding pathloss reference Rs as specified in 38.213, clauses 7.1.1, 7.2.1, 7.3.1 and 9.2.2. The network only configures these parameters for FR2.
enablePL-RS-UpdateForPUSCH-SRS When this parameter is present, the Rel-16 feature of MAC CE based pathloss RS updates for PUSCH/SRS is enabled. Network only configures this parameter when the UE is configured with <i>sri-PUSCH-PowerControl</i> . If this field is not configured, network configures at most 4 pathloss RS resources for PUSCH/PUCCH/SRS transmissions per BWP, not including pathloss RS resources for SRS transmissions for positioning. (See TS 38.213 [13], clause 7).
enablePL-RS-UpdateForType1CG-PUSCH When this parameter is present, the Rel-18 feature of MAC CE based pathloss RS updates for Type 1 CG-PUSCH is enabled. The network only configures this parameter, when the parameter <i>enablePL-RS-UpdateForPUSCH-SRS</i> is configured. (See TS 38.213 [13], clause 7).
firstActiveUplinkBWP-Id If configured for an SpCell, this field contains the ID of the UL BWP to be activated upon performing the RRC (re-)configuration. If the field is absent, the RRC (re-)configuration does not impose a BWP switch. If configured for an SCell, this field contains the ID of the uplink bandwidth part to be used upon activation of an SCell. The initial bandwidth part is referred to by <i>BandwidthPartId</i> = 0.
initialUplinkBWP The dedicated (UE-specific) configuration for the initial uplink bandwidth-part (i.e. UL BWP#0). If any of the optional IEs are configured within this IE as part of the IE <i>uplinkConfig</i> , the UE considers the BWP#0 to be an RRC configured BWP (from UE capability viewpoint). Otherwise, the UE does not consider the BWP#0 as an RRC configured BWP (from UE capability viewpoint). Network always configures the UE with a value for this field if no other BWPs are configured. NOTE1
moreThanOneNackOnlyMode Indicates the mode of NACK-only feedback in the PUCCH transmission, as specified in TS 38.213 [13], clause 18. If multicast CFR is not configured, this field is not included. Otherwise, if the field is absent, UE uses mode 1 for multicast CFR.
mpr-PowerBoost-FR2 Indicates whether UE is allowed to boost uplink transmission power by suspending in-band emission (IBE) requirements as specified in TS 38.101-2 [39]. Network only configures this field for FR2 serving cells.
powerBoostPi2BPSK If this field is set to <i>true</i> , the UE determines the maximum output power for PUCCH/PUSCH transmissions that use pi/2 BPSK modulation according to TS 38.101-1 [15] /TS 38.101-5 [75], clause 6.2.4. The network ensures that <i>powerBoostPi2BPSK</i> and <i>powerBoostPi2BPSK-r18</i> are not configured at the same time for a UE.
powerBoostQPSK If this field is set to <i>true</i> , the UE determines the maximum output power for PUSCH transmissions that use QPSK modulation according to TS 38.101-1 [15], clause 6.2.4.
pusch-ServingCellConfig PUSCH related parameters that are not BWP-specific.
srs-PosTx-Hopping Contains configuration related to the SRS for Positioning with frequency hopping for RRC_CONNECTED state. When this field is present for a certain uplink carrier, and SP positioning SRS is configured, other positioning SRS resource sets configured in the uplink BWP configurations (i.e., <i>BWP-UplinkDedicated</i>) on this uplink carrier cannot be configured as <i>semi-persistent</i> .
uplinkBWP-ToAddModList The additional bandwidth parts for uplink to be added or modified. In case of TDD uplink- and downlink BWP with the same <i>bandwidthPartId</i> are considered as a BWP pair and must have the same center frequency.
uplinkBWP-ToReleaseList The additional bandwidth parts for uplink to be released.
uplinkChannelBW-PerSCS-List

A set of UE specific channel bandwidth and location configurations for different subcarrier spacings (numerologies). Defined in relation to Point A. The UE uses the configuration provided in this field only for the purpose of channel bandwidth and location determination. If absent, UE uses the configuration indicated in *scs-SpecificCarrierList* in *UplinkConfigCommon* / *UplinkConfigCommonSIB*. Network only configures channel bandwidth that corresponds to the channel bandwidth values defined in TS 38.101-1 [15], TS 38.101-2 [39], and TS 38.101-5 [75]. If the UE is an (e)RedCap UE and needs to autonomously switch to its initial uplink bandwidth part to perform a random access procedure but its current UE specific channel bandwidth does not cover the initial uplink bandwidth part, the UE autonomously changes its UE specific channel bandwidth to cover the initial uplink bandwidth part. In that case, after completion of the random access procedure, the network ensures that the UE specific channel bandwidth fully covers the UE's active uplink bandwidth part in subsequent bandwidth part switch operations.

uplinkTxSwitchingPeriodLocation

Indicates whether the location of UL Tx switching period is configured in this uplink carrier in case of inter-band UL CA, SUL, or (NG)EN-DC, as specified in TS 38.101-1 [15] and TS 38.101-3 [34].

In case of (NG)EN-DC, network always configures this field to TRUE for NR carrier (i.e. with (NG)EN-DC, the UL switching period always occurs on the NR carrier).

In case of inter-band UL CA or SUL, for dynamic uplink Tx switching between 2 bands with 2 uplink carriers or 3 uplink carriers as defined in TS 38.101-1 [15], network configures this field to TRUE for the uplink carrier(s) on one band and configures this field to FALSE for the uplink carrier(s) on the other band. This field is set to the same value for the carriers on the same band.

uplinkTxSwitchingCarrier

Indicates that the configured carrier is carrier1 or carrier2 for dynamic uplink Tx switching, as defined in TS 38.101-1 [15] and TS 38.101-3 [34]. In case of (NG)EN-DC, network always configures the NR carrier as carrier 2.

In case of inter-band UL CA or SUL, for dynamic uplink Tx switching between 2 bands with 2 uplink carriers or 3 uplink carriers as defined in TS 38.101-1 [15], network configures the uplink carrier(s) on one band as carrier1 and the uplink carrier(s) on the other band as carrier2. This field is set to the same value for the carriers on the same band.

***DormantBWP-Config* field descriptions**

dormancyGroupWithinActiveTime

This field contains the ID of an SCell group for Dormancy within active time, to which this SCell belongs. The use of the Dormancy within active time for SCell groups is specified in TS 38.213 [13].

dormancyGroupOutsideActiveTime

This field contains the ID of an SCell group for Dormancy outside active time, to which this SCell belongs. The use of the Dormancy outside active time for SCell groups is specified in TS 38.213 [13].

dormantBWP-Id

This field contains the ID of the downlink bandwidth part to be used as dormant BWP. If this field is configured, its value is different from *defaultDownlinkBWP-Id*, and at least one of the *withinActiveTimeConfig* and *outsideActiveTimeConfig* should be configured.

firstOutsideActiveTimeBWP-Id

This field contains the ID of the downlink bandwidth part to be activated when receiving a DCI indication for SCell dormancy outside active time.

firstWithinActiveTimeBWP-Id

This field contains the ID of the downlink bandwidth part to be activated when receiving a DCI indication for SCell dormancy within active time.

outsideActiveTimeConfig

This field contains the configuration to be used for SCell dormancy outside active time, as specified in TS 38.213 [13]. The field can only be configured when the cell group the SCell belongs to is configured with *dcp-Config*.

withinActiveTimeConfig

This field contains the configuration to be used for SCell dormancy within active time, as specified in TS 38.213 [13].

<i>GuardBand</i> field descriptions	
<i>startCRB</i>	Indicates the starting RB of the guard band.
<i>nrofCRB</i>	Indicates the length of the guard band in RBs. When set to 0, zero-size guard band is used.

MC-DCI-SetOfCells field descriptions	
antennaPortsDCI1-3, antennaPortsDCI0-3	Configure the indication type for antenna port(s) field in DCI format 1_3 and DCI format 0_3, respectively (see TS 38.212, clauses 7.3.1.2.4 and 7.3.1.1.4).
dormancyDCI-1-3, dormancyDCI-0-3	Configure the presence of Scell dormancy indication field in DCI format 1_3 and DCI format 0_3, respectively.
minimumSchedulingOffsetK0DCI-1-3, minimumSchedulingOffsetK0DCI-0-3	Configure the presence of minimum applicable scheduling offset indicator field in DCI format 1_3 and DCI format 0_3, respectively.
nCI-Value	Configure n_CI value used for the set of cells, where unique n_CI value is configured for each set of cells.
pdccchMonAdaptDCI-1-3, pdccchMonAdaptDCI-0-3	Configure the presence of PDCCH monitoring adaptation indication field in DCI format 1_3 and DCI format 0_3, respectively.
pdsch-HARQ-ACK-enhType3DCI-1-3	Enable the enhanced Type 3 HARQ-ACK codebook triggering using DCI format 1_3.
pdsch-HARQ-ACK-enhType3DCIfieldDCI-1-3	Enables the enhanced Type 3 CB through a new DCI field to indicate the enhanced Type 3 HARQ-ACK codebook in DCI format 1_3 if the more than one enhanced Type HARQ-ACK codebook is configured for the primary PUCCH cell group.
pdsch-HARQ-ACK-OneShotFeedbackDCI-1-3	When configured, the DCI format 1_3 can request the UE to report A/N for all HARQ processes and all CCs configured in the PUCCH group.
pdsch-HARQ-ACK-retxDCI-1-3	When configured, the DCI format 1_3 can request the UE to perform a HARQ-ACK re-transmission on a PUCCH resource (see TS 38.213 [13], clause 9.1.5).
priorityIndicatorDCI-1-3, priorityIndicatorDCI-0-3	Configure the presence of priority indicator field in DCI format 1_3 and DCI format 0_3, respectively (see TS 38.212 [17], clauses 7.3.1.2.4 and 7.3.1.1.4 and TS 38.213 [13] clause 9).
pucch-sSCellDynDCI-1-3	Configure the UE with PUCCH cell switching based on dynamic indication in DCI format 1_3 (see TS 38.213 [13], clause 9.A).
RateMatchDCI-1-3	Configure each row of the joint rate matching indication table for DL scheduling via DCI format 1_3, where bitmap for a cell points to a corresponding rate matching indication applicable for DCI format 1_1 (i.e., MSB and LSB of bitmap refer <i>rateMatchPatternGroup1</i> and <i>rateMatchPatternGroup2</i> for a cell, respectively), the order of rate matching indication bitmap in each row refers the order of cells in <i>ScheduledCellListDCI-1-3</i> , that are configured with <i>rateMatchPatternGroup1</i> or <i>rateMatchPatternGroup2</i> on at least one DL BWP (i.e., first bitmap is for the first cell in <i>ScheduledCellListDCI-1-X</i> , that are configured with <i>rateMatchPatternGroup1</i> or <i>rateMatchPatternGroup2</i> on at least one DL BWP and so on), the number of entries in a row of <i>rateMatchDCI-1-3</i> should be the same as the number of cells, that are configured with <i>rateMatchPatternGroup1</i> or <i>rateMatchPatternGroup2</i> on at least one DL BWP, included in <i>ScheduledCellListDCI-1-3</i> , and entries for co-scheduled cells in a row of <i>rateMatchDCI-1-3</i> are interpreted based on the BWPs of co-scheduled cells on which the UE operates based on the BWP indicator field of DCI format 1_3 (see TS 38.212 [17], clause 7.3.1.2.4 and TS 38.213 [13], clause 12).
rateMatchListDCI-1-3	Configure joint rate matching indication table for DL scheduling via DCI format 1_3.
ScheduledCellCombo	Configure each row of the table for combinations of co-scheduled cells for DL scheduling via DCI format 1_3 and for UL scheduling via DCI format 0_3, where index with value INTEGER (0...3) of co-scheduled cell refers to <i>scheduledCellListDCI-1-3</i> for DL and <i>scheduledCellListDCI-0-3</i> for UL.
scheduledCellComboListDCI-1-3, scheduledCellComboListDCI-0-3	Configure the table for combinations of co-scheduled cells for DL scheduling via DCI format 1_3 and UL scheduling via DCI format 0_3, respectively.
scheduledCellListDCI-1-3, scheduledCellListDCI-0-3	Configure the list of possible co-scheduled cells in the set for DL scheduling via DCI format 1_3 and UL scheduling via DCI format 0_3 respectively, where the serving cells in the list are in ascending order of serving cell indices and are mapped to index {0, 1, 2, 3} in the set. Total number of cells within the same set of cells i.e., in <i>scheduledCellListDCI-1-3</i> and <i>scheduledCellListDCI-0-3</i> , is up to 4.

When a cell is included in either or both of *scheduledCellListDCI-1-3* or *scheduledCellListDCI-0-3* for one set of cells *MC-DCI-SetofCells*, the cell cannot be included in any of *scheduledCellListDCI-1-3* or *scheduledCellListDCI-0-3* for any other set of cells.

setOfCellsId

Configure index of the set of cells to be indicated in DCI format 0_3/1_3.

sri-DCI0-3

Configure the indication type for SRS resource indicator field in DCI format 0_3 (See TS 38.212, clause 7.3.1.1.4).

SRS-OffsetCombo

Configure each row of the joint SRS offset indicator table for DL scheduling via DCI format 1_3 and for UL scheduling via DCI format 0_3, where index for a cell points to a corresponding SRS offset indicator applicable for DCI formats 1_1 and 0_1, and the order of SRS offset indicator index in each row refers the order of cells in *scheduledCellListDCI-1-3* (i.e., first index is for the first cell in *scheduledCellListDCI-1-3*, that are configured with more than one entry in *availableSlotOffsetList* for at least one aperiodic SRS resource set on at least one UL BWP and so on) for DL and *scheduledCellListDCI-0-3* for UL, included in *scheduledCellListDCI-1-3* for *srs-OffsetListDCI-1-3* and *scheduledCellListDCI-0-3* for *srs-OffsetListDCI-0-3*, and entries for co-scheduled cells in a row of *SRS-OffsetCombo* are interpreted based on the BWPs of co-scheduled cells on which the UE operates based on the BWP indicator field of DCI format 1_3 and 0_3 (see TS 38.212 [17], clause 7.3.1.2.4 and clause 7.3.1.1.4, and TS 38.213 [13], clause 12).

srs-OffsetListDCI-1-3, srs-OffsetListDCI-0-3

Configure joint SRS offset indicator table for DL scheduling via DCI format 1_3 and UL scheduling via DCI format 0_3, respectively.

SRS-RequestCombo

Configure each row of the joint SRS request table for DL scheduling via DCI format 1_3 and for UL scheduling via DCI format 0_3, where index for a cell points to a corresponding SRS request applicable for DCI formats 1_1 and 0_1, and the order of SRS request index in each row refers the order of cells in *scheduledCellListDCI-1-3* (i.e., first index is for the first cell in *scheduledCellListDCI-1-3* and so on) for DL and *scheduledCellListDCI-0-3* for UL. The number of entries in a row of *SRS-RequestCombo* should be the same as the number of cells included in *scheduledCellListDCI-1-3* for *srs-RequestListDCI-1-3* and *scheduledCellListDCI-0-3* for *srs-RequestListDCI-0-3*, and entries for co-scheduled cells in a row of *SRS-RequestCombo* are interpreted based on the BWPs of co-scheduled cells on which the UE operates based on the BWP indicator field of DCI format 1_3 and 0_3 (see TS 38.212 [17], clause 7.3.1.2.4 and clause 7.3.1.1.4, and TS 38.213 [13], clause 12).

srs-RequestListDCI-1-3, srs-RequestListDCI-0-3

Configure joint SRS request table for DL scheduling via DCI format 1_3 and UL scheduling via DCI format 0_3, respectively.

TCI-DCI-1-3

Configure each row of the joint TCI table for DL scheduling via DCI format 1_3, where index for a cell points to a corresponding TCI applicable for DCI format 1_1, and the order of TCI index in each row refers the order of cells in *scheduledCellListDCI-1-3* (i.e., first index is for the first cell in *scheduledCellListDCI-1-3* that configured with *tc-StatesToAddModList* or *dl-OrJointTCI-StateList* and so on), the number of entries in a row of *TCI-DCI-1-3* should be the same as the number of cells that configured with *tc-StatesToAddModList* or *dl-OrJointTCI-StateList* on at least one DL BWP, included in *scheduledCellListDCI-1-3*, and entries for cells in a row of *TCI-DCI-1-3* are interpreted based on the BWPs of cells in *scheduledCellListDCI-1-3* on which the UE operates based on the BWP indicator field of DCI format 1_3 (see TS 38.212 [17], clause 7.3.1.2.4, and TS 38.213 [13], clause 12).

tc-ListDCI-1-3

Configure joint TCI table for DL scheduling via DCI format 1_3

TDRA-FieldIndexDCI-0-3

Configure each row of the joint TDRA field table for UL scheduling via DCI format 0_3 containing the applicable TDRA field indexes for multiple BWPs/cells, where the TDRA index for a BWP of a cell points to a corresponding TDRA in the TDRA table applicable for DCI format 0_1 when *TDRA-FieldIndexDCI-0-3-r18* is configured or for DCI format 0_3 when *TDRA-FieldIndexDCI-0-3-r19* is configured, the order of TDRA index in each row refers the *BWP-Id* for a cell and the order of cells in *scheduledCellListDCI-0-3* (i.e., first TDRA index in a row is for the smallest BWP-Id that can be scheduled by the DCI format 0_3, as specified in TS 38.212 [17], of the first cell in *scheduledCellListDCI-0-3*, second TDRA index in a row is for the second smallest BWP-Id that can be scheduled by the DCI format 0_3, as specified in TS 38.212 [17], of the first cell and so on), and the number of TDRA indices in a row of *TDRA-FieldIndexDCI-0-3* should be the same as the total number of BWPs that can be scheduled by the DCI format 0_3, as specified in TS 38.212 [17], across cells included in *scheduledCellListDCI-0-3*.

TDRA-FieldIndexDCI-1-3

Configure each row of the joint TDRA field table for DL scheduling via DCI format 1_3 containing the applicable TDRA field indexes for multiple BWPs/cells, where the TDRA index for a BWP of a cell points to a corresponding TDRA in the TDRA table applicable for DCI format 1_1 when *TDRA-FieldIndexDCI-1-3-r18* is configured or for DCI format

1_3 when *TDRA-FieldIndexDCI-1-3-r19* is configured, the order of TDRA index in each row refers the BWP-Id for a cell and the order of cells in *scheduledCellListDCI-1-3* (i.e., first TDRA index in a row is for the smallest BWP-Id that can be scheduled by the DCI format 1_3, as specified in TS 38.212 [17], of the first cell in *scheduledCellListDCI-1-3*, second TDRA index in a row is for the second smallest BWP-Id that can be scheduled by the DCI format 1_3, as specified in TS 38.212 [17], of the first cell and so on), and the number of TDRA indices in a row of *TDRA-FieldIndexDCI-1-3* should be the same as the total number of BWPs that can be scheduled by the DCI format 1_3, as specified in TS 38.212 [17], across cells included in *scheduledCellListDCI-1-3*.

tdra-FieldIndexListDCI-1-3, tdra-FieldIndexListDCI-0-3

Configure joint TDRA table for DL scheduling via DCI format 1_3 and UL scheduling via DCI format 0_3, respectively.

tpmi-DCI0-3

Configure the indication type for precoding information and number of layers field in DCI format 0_3 (See TS 38.212 [17], clause 7.3.1.1.4).

ZP-CSI-DCI-1-3

Configure each row of the joint ZP-CSI-RS trigger table for DL scheduling via DCI format 1_3, where index for a cell points to a corresponding ZP-CSI-RS trigger applicable for DCI format 1_1, and the order of ZP-CSI-RS trigger index in each row refers the order of cells in *scheduledCellListDCI-1-3* (i.e., first index is for the first cell in *scheduledCellListDCI-1-3*, that are configured with *aperiodic-ZP-CSI-RS-ResourceSetsToAddModList* on at least one DL BWP and so on), the number of entries in a row of *ZP-CSI-DCI-1-3* should be the same as the number of cells, that are configured with *aperiodic-ZP-CSI-RS-ResourceSetsToAddModList* on at least one DL BWP, included in *scheduledCellListDCI-1-3*, and entries for co-scheduled cells in a row of *ZP-CSI-DCI-1-3* are interpreted based on the BWPs of co-scheduled cells on which the UE operates based on the BWP indicator field of DCI format 1_3 (see TS 38.212 [17], clause 7.3.1.2.4 and TS 38.213 [13], clause 12).

zp-CSI-RSListDCI-1-3

Configure joint ZP-CSI-RS trigger table for DL scheduling via DCI format 1_3.

NOTE 1: If the dedicated part of initial UL/DL BWP configuration is absent, the initial BWP can be used but with some limitations. For example, changing to another BWP requires *RRCReconfiguration* since DCI format 1_0 doesn't support DCI-based switching.

Conditional Presence	Explanation
<i>2TA-TDD-Only</i>	The field is optionally present, Need N, for a TDD cell, in the <i>mimoParam-v1850</i> if <i>additionalPCI-ToAddModList</i> is present in <i>ServingCellConfig</i> and if <i>tag2</i> is present in <i>ServingCellConfig</i> . It is absent otherwise.
<i>AsyncCA</i>	This field is mandatory present for SCells whose slot offset between the SpCell is not 0. Otherwise it is absent, Need S.
<i>MeasObject</i>	This field is mandatory present for the SpCell if the UE has a <i>measConfig</i> , and it is optionally present, Need M, for SCells. For (e)RedCap UEs, this field is optionally present, Need M. For SSB-less SCell(s), this field is not present if <i>intraF-NeighMeasForSCellWithoutSSB</i> is not supported by the UE, and if <i>OD-SSB</i> is not configured in IE <i>SCellConfig</i> , otherwise this field is optionally present, Need M.
<i>MeasObjectOD</i>	This field is mandatory present if <i>od-SSB-AbsoluteFrequency</i> indicates different frequency than <i>absoluteFrequencySSB</i> of the serving cell or if <i>absoluteFrequencySSB</i> is absent and OD-SSB is configured in IE <i>CellGroupConfig</i> . It is absent otherwise.
<i>SCellOnly</i>	This field is optionally present, Need R, for SCells. It is absent otherwise.
<i>ServingCellWithoutPUCCH</i>	This field is optionally present, Need S, for SCells except PUCCH SCells. It is absent otherwise.
<i>SyncAndCellAdd</i>	This field is mandatory present for a SpCell upon reconfiguration with <i>reconfigurationWithSync</i> and upon <i>RRCSetup/RRCResume</i> . The field is optionally present for an SpCell, Need N, upon reconfiguration without <i>reconfigurationWithSync</i> . The field is mandatory present for an SCell upon addition, and absent for SCell in other cases, Need M.
<i>TCI_ActivatedConfig</i>	This field is optional Need N for SCells if <i>sCellState</i> is configured, otherwise it is absent. This field is optional Need S for the PCell when the SCG is indicated as deactivated or is being activated, otherwise it is absent. This field is absent for the PCell.
<i>TDD</i>	This field is optionally present, Need R, for TDD cells. It is absent otherwise.
<i>TDD_IAB</i>	For IAB-MT, this field is optionally present, Need R, for TDD cells. It is absent otherwise.
<i>TypeDCI0-3</i>	This field is mandatory present if <i>ScheduledCellListDCI0-3</i> is configured, otherwise it is absent, Need R.
<i>TypeDCI1-3</i>	This field is mandatory present if <i>ScheduledCellListDCI1-3</i> is configured, otherwise it is absent, Need R.

– ServingCellConfigCommon

The IE *ServingCellConfigCommon* is used to configure cell specific parameters of a UE's serving cell. The IE contains parameters which a UE would typically acquire from SSB, MIB or SIBs when accessing the cell from IDLE. With this IE, the network provides this information in dedicated signalling when configuring a UE with a SCells or with an additional cell group (SCG). It also provides it for SpCells (MCG and SCG) upon reconfiguration with sync.

ServingCellConfigCommon field descriptions	
channelAccessMode	If present, this field indicates which channel access procedures to apply for operation with shared spectrum channel access as defined in TS 37.213 [48]. If the field is configured as "semiStatic", the UE shall apply the channel access procedures for semi-static channel occupancy as described in clause 4.3 in TS 37.213. If the field is configured as "dynamic", the UE shall apply the channel access procedures as defined in TS 37.213, clause 4.1 and 4.2.
channelAccessMode2	If present, the UE shall apply channel access procedures for operation with shared spectrum channel access in accordance with TS 37.213 [48], clause 4.4 for FR2-2. If absent, the UE shall not apply any channel access procedure. The network always configures this field if channel access procedures are required for the serving cell within this region by regulations.
dmrs-TypeA-Position	Position of (first) DM-RS for downlink (see TS 38.211 [16], clause 7.4.1.1.1) and uplink (TS 38.211 [16], clause 6.4.1.1.3).
downlinkConfigCommon	The common downlink configuration of the serving cell, including the frequency information configuration and the initial downlink BWP common configuration. The parameters provided herein should match the parameters configured by MIB and SIB1 (if provided) of the serving cell, with the exception of <i>controlResourceSetZero</i> and <i>searchSpaceZero</i> which can be configured in <i>ServingCellConfigCommon</i> even if MIB indicates that they are absent.
discoveryBurstWindowLength	Indicates the window length of the discovery burst in ms (see TS 37.213 [48]). The field <i>discoveryBurstWindowLength-r17</i> is applicable to SCS 480 kHz and SCS 960 kHz.
featurePriorities	Indicates priorities for features, such as (e)RedCap, Slicing, SDT, MSG1-Repetitions, and MSG3-Repetitions for Coverage Enhancements. These priorities are used to determine which <i>FeatureCombinationPreambles</i> the UE shall use when a feature maps to more than one <i>FeatureCombinationPreambles</i> , as specified in TS 38.321 [3]. A lower value means a higher priority. The network does not signal the same priority for more than one feature. The network signals a priority for all feature that map to at least one <i>FeatureCombinationPreambles</i> .
longBitmap	Bitmap when maximum number of SS/PBCH blocks per half frame equals to 64 as defined in TS 38.213 [13], clause 4.1.
lte-CRS-ToMatchAround	Parameters to determine an LTE CRS pattern that the UE shall rate match around.
mediumBitmap	Bitmap when maximum number of SS/PBCH blocks per half frame equals to 8 as defined in TS 38.213 [13], clause 4.1.
n-TimingAdvanceOffset	The N_TA-Offset to be applied for all uplink transmissions on this serving cell if <i>n-TimingAdvanceOffset2</i> is not configured. If <i>tag2</i> is configured for this serving cell, this field is to be applied to all uplink transmissions associated to <i>tag-id</i> configured for this serving cell. If the field is absent, the UE applies the value defined for the duplex mode and frequency range of this serving cell. See TS 38.133 [14], table 7.1.2-2/table 7.1C.2-4.
ra-ChannelAccess	If present, this field indicates that the UE shall apply channel access procedures before msg1/msgA transmission for operation with shared spectrum channel access in accordance with TS 37.213 [48], clause 4.4.5 for FR2-2.
rateMatchPatternToAddModList	Resources patterns which the UE should rate match PDSCH around. The UE rate matches around the union of all resources indicated in the rate match patterns. Rate match patterns defined here on cell level apply only to PDSCH of the same numerology (see TS 38.214 [19], clause 5.1.4.1). If a <i>RateMatchPattern</i> with the same <i>RateMatchPatternId</i> is configured in both <i>ServingCellConfig/ServingCellConfigCommon</i> and in SIB20/MCCH, the entire <i>RateMatchPattern</i> configuration, including the set of RBs/REs indicated by the patterns for the rate matching around, shall be the same and they are counted as a single rate match pattern in the total configured rate match patterns as defined in TS 38.214 [19].
shortBitmap	Bitmap when maximum number of SS/PBCH blocks per half frame equals to 4 as defined in TS 38.213 [13], clause 4.1.
ss-PBCH-BlockPower	Average EPRE of the resources elements that carry secondary synchronization signals in dBm that the NW used for SSB transmission, see TS 38.213 [13], clause 7.

<i>ssb-periodicityServingCell</i>
The SSB periodicity in ms for the rate matching purpose. If the field is absent, the UE applies the value ms5. (see TS 38.213 [13], clause 4.1)
<i>ssb-PositionQCL</i>
Indicates the QCL relation between SSB positions for this serving cell as specified in TS 38.213 [13], clause 4.1.
<i>ssb-PositionsInBurst</i>
For operation in licensed spectrum, indicates the time domain positions of the transmitted SS-blocks in a half frame with SS/PBCH blocks as defined in TS 38.213 [13], clause 4.1. The first/leftmost bit corresponds to SS/PBCH block index 0, the second bit corresponds to SS/PBCH block index 1, and so on. Value 0 in the bitmap indicates that the corresponding SS/PBCH block is not transmitted while value 1 indicates that the corresponding SS/PBCH block is transmitted. The network configures the same pattern in this field as in the corresponding field in <i>ServingCellConfigCommonSIB</i> .
For operation with shared spectrum channel access, the UE assumes that one or more SS/PBCH blocks indicated by <i>ssb-PositionsInBurst</i> may be transmitted within the discovery burst transmission window and have candidate SS/PBCH blocks indexes corresponding to SS/PBCH block indexes provided by <i>ssb-PositionsInBurst</i> (see TS 38.213 [13], clause 4.1). If the k-th bit of <i>ssb-PositionsInBurst</i> is set to 1, the UE assumes that one or more SS/PBCH blocks within the discovery burst transmission window with candidate SS/PBCH block indexes corresponding to SS/PBCH block index equal to k – 1 may be transmitted; if the kt-th bit is set to 0, the UE assumes that the corresponding SS/PBCH block(s) are not transmitted. The k-th bit is set to 0, where k > <i>ssb-PositionQCL</i> and the number of actually transmitted SS/PBCH blocks is not larger than the number of 1's in the bitmap. The network configures the same pattern in this field as in the corresponding field in <i>ServingCellConfigCommonSIB</i> . For operation with shared spectrum channel access in FR1, only <i>mediumBitmap</i> is used, and for FR2-2, <i>longBitmap</i> is used.
<i>ssbSubcarrierSpacing</i>
Subcarrier spacing of SSB. Only the following values are applicable depending on the used frequency: FR1/FR1-NTN: 15 or 30 kHz FR2-1/FR2-NTN: 120 or 240 kHz FR2-2: 120, 480, or 960 kHz
<i>supplementaryUplinkConfig</i>
The network configures this field only if <i>uplinkConfigCommon</i> is configured. If this field is absent, the UE shall release the <i>supplementaryUplinkConfig</i> and the <i>supplementaryUplink</i> configured in <i>ServingCellConfig</i> of this serving cell, if configured.
<i>tdd-UL-DL-ConfigurationCommon</i>
A cell-specific TDD UL/DL configuration, see TS 38.213 [13], clause 11.1.

Conditional Presence	Explanation
<i>AbsFreqSSB</i>	The field is absent when <i>absoluteFrequencySSB</i> in <i>frequencyInfoDL</i> is absent, otherwise the field is mandatory present.
<i>HOAndServCellAdd</i>	This field is mandatory present upon SpCell change (including path switch between a serving cell and a L2 U2N Relay UE) and upon serving cell (PSCell/SCell) addition. Otherwise, the field is absent.
<i>HOAndServCellWithSSB</i>	This field is mandatory present upon SpCell change and upon serving cell (SCell with SSB or PSCell) addition. Otherwise, the field is absent.
<i>SharedSpectrum</i>	This field is mandatory present if this cell operates with shared spectrum channel access in FR1. Otherwise, it is absent, Need R.
<i>SharedSpectrum2</i>	This field is optionally present if this cell operates with shared spectrum channel access in FR2-2, Need R. Otherwise, it is absent, Need R.
<i>TDD</i>	The field is optionally present, Need R, for TDD cells; otherwise it is absent.

– ServingCellConfigCommonSIB

The IE *ServingCellConfigCommonSIB* is used to configure cell specific parameters of a UE's serving cell in SIB1.

ServingCellConfigCommonSIB information element

```
-- ASN1START
-- TAG-SERVINGCELLCONFIGCOMMONSIB-START

ServingCellConfigCommonSIB ::= SEQUENCE {

<i>ServingCellConfigCommonSIB</i> field descriptions
channelAccessMode If present, this field indicates which channel access procedures to apply for operation with shared spectrum channel access as defined in TS 37.213 [48]. If the field is configured as "semiStatic", the UE shall apply the channel access procedures for semi-static channel occupancy as described in clause 4.3 in TS 37.213. If the field is configured as "dynamic", the UE shall apply the channel access procedures as defined in TS 37.213, clause 4.1 and 4.2.
channelAccessMode2 If present, this field indicates that the UE shall apply channel access procedures for operation with shared spectrum channel access in accordance with TS 37.213 [48], clause 4.4 for FR2-2. If absent, the UE shall not apply any channel access procedure. The network always configures this field if channel access procedures are required for the serving cell within this region by regulations.
discoveryBurstWindowLength Indicates the window length of the discovery burst in ms (see TS 37.213 [48]). The field <i>discoveryBurstWindowLength-v1700</i> is applicable to SCS 480 kHz and SCS 960 kHz.
enhancedMeasurementNGSO If the field is present and UE supports the enhanced cell reselection requirements for NTN NGSO in RRC_IDLE/RRC_INACTIVE, the UE shall apply the enhanced cell reselection requirements for NTN NGSO as specified in TS 38.133 [14], clauses 4.2C.2.3 and 4.2C.2.4.
groupPresence This field is present when maximum number of SS/PBCH blocks per half frame equals to 64 as defined in TS 38.213 [13], clause 4.1. The first/leftmost bit corresponds to the SS/PBCH index 0-7, the second bit corresponds to SS/PBCH block 8-15, and so on. Value 0 in the bitmap indicates that the SSBs according to <i>inOneGroup</i> are absent. Value 1 indicates that the SS/PBCH blocks are transmitted in accordance with <i>inOneGroup</i>.
inOneGroup When maximum number of SS/PBCH blocks per half frame equals to 4 as defined in TS 38.213 [13], clause 4.1, only the 4 leftmost bits are valid; the UE ignores the 4 rightmost bits. When maximum number of SS/PBCH blocks per half frame equals to 8 as defined in TS 38.213 [13], clause 4.1, all 8 bits are valid. The first/ leftmost bit corresponds to SS/PBCH block index 0, the second bit corresponds to SS/PBCH block index 1, and so on. When maximum number of SS/PBCH blocks per half frame equals to 64 as defined in TS 38.213 [13], clause 4.1, all 8 bit are valid; The first/ leftmost bit corresponds to the first SS/PBCH block index in the group (i.e., to SSB index 0, 8, and so on); the second bit corresponds to the second SS/PBCH block index in the group (i.e., to SSB index 1, 9, and so on), and so on. Value 0 in the bitmap indicates that the corresponding SS/PBCH block is not transmitted while value 1 indicates that the corresponding SS/PBCH block is transmitted.
n-TimingAdvanceOffset The N_TA-Offset to be applied for random access on this serving cell. If the field is absent, the UE applies the value defined for the duplex mode and frequency range of this serving cell. See TS 38.133 [14], table 7.1.2-2/table 7.1C.2-4.
ra-ChannelAccess If present, this field indicates that the UE shall apply channel access procedures before msg1/msgA transmission for operation with shared spectrum channel access in accordance with TS 37.213 [48], clause 4.4.5 for FR2-2.
ssb-PositionsInBurst Time domain positions of the transmitted SS-blocks in an SS-burst as defined in TS 38.213 [13], clause 4.1. For operation with shared spectrum channel access in FR1, only <i>inOneGroup</i> is used and the UE interprets this field same as <i>mediumBitmap</i> in <i>ServingCellConfigCommon</i>. The UE assumes that a bit in <i>inOneGroup</i> at position $k > N_{SSB}^{QCL}$ is 0, where N_{SSB}^{QCL} is obtained from <i>MIB</i> as specified in TS 38.213 [13], clause 4.1. For operation with shared spectrum channel access in FR2-2, the m-th bit in <i>groupPresence</i> is set to 0 for $m > N_{SSB}^{QCL}/8$, where N_{SSB}^{QCL} is obtained from <i>MIB</i> as specified in TS 38.213 [13], clause 4.1.
ss-PBCH-BlockPower Average EPRE of the resources elements that carry secondary synchronization signals in dBm that the NW used for SSB transmission, see TS 38.213 [13], clause 7.

Conditional Presence	Explanation
<i>FR2-Only</i>	This field is mandatory present for an FR2 carrier frequency. It is absent otherwise and UE releases any configured value.
<i>SharedSpectrum</i>	This field is mandatory present if this cell operates with shared spectrum channel access in FR1. Otherwise, it is absent, Need R.
<i>SharedSpectrum2</i>	This field is optionally present if this cell operates with shared spectrum channel access in FR2-2, Need R. Otherwise, it is absent, Need R.
<i>TDD</i>	The field is optionally present, Need R, for TDD cells; otherwise it is absent.

– *ShortI-RNTI-Value*

The IE *ShortI-RNTI-Value* is used to identify the suspended UE context of a UE in RRC_INACTIVE using fewer bits compared to I-RNTI-Value.

ShortI-RNTI-Value information element

```
-- ASN1START
-- TAG-SHORTI-RNTI-VALUE-START

ShortI-RNTI-Value ::=  BIT STRING (SIZE(24))

-- TAG-SHORTI-RNTI-VALUE-STOP
-- ASN1STOP
```

– *ShortMAC-I*

The IE *ShortMAC-I* is used to identify and verify the UE at RRC connection re-establishment. The 16 least significant bits of the MAC-I calculated using the AS security configuration of the source PCell, as specified in 5.3.7.4.

ShortMAC-I information element

```
-- ASN1START
-- TAG-SHORTMAC-I-START

ShortMAC-I ::=  BIT STRING (SIZE (16))

-- TAG-SHORTMAC-I-STOP
-- ASN1STOP
```

– *SINR-Range*

The IE *SINR-Range* specifies the value range used in SINR measurements and thresholds. For measurements, integer value for SINR measurements is according to Table 10.1.16.1-1 in TS 38.133 [14]. For thresholds, the actual value is (IE value – 46) / 2 dB.

SINR-Range information element

```
-- ASN1START
-- TAG-SINR-RANGE-START
```

```

SINR-Range ::=
    INTEGER (0..127)

-- TAG-SINR-RANGE-STOP
-- ASN1STOP

```

– *SI-RequestConfig*

The IE *SI-RequestConfig* contains configuration for Msg1 based SI request without Msg1 repetition. For the random access parameters (e.g. *prach-RootSequenceIndex*, *msg1-SubcarrierSpacing*, etc.) not configured in *SI-RequestConfig*, the UE applies the parameters configured in *rach-ConfigCommon* corresponding to the RACH resource set selected upon RACH initialization (as specified in TS 38.321 [3]), of the initial uplink BWP unless otherwise specified.

SI-RequestConfig information element

```

-- ASN1START
-- TAG-SI-REQUESTCONFIG-START

SI-RequestConfig ::=
    SEQUENCE {
        rach-OccasionsSI
            SEQUENCE {
                rach-ConfigSI
                    RACH-ConfigGeneric,
                ssb-perRACH-Occasion
                    ENUMERATED {oneEighth, oneFourth, oneHalf, one, two, four, eight, sixteen}
            }
            OPTIONAL, -- Need R
        si-RequestPeriod
            ENUMERATED {one, two, four, six, eight, ten, twelve, sixteen}
            OPTIONAL, -- Need R

SI-RequestConfig field descriptions***rach-OccasionsSI***

Configuration of dedicated RACH Occasions for SI. If the field is absent, the UE uses the corresponding parameters configured in *rach-ConfigCommon* corresponding to the RACH resource set selected upon RACH initialization (as specified in TS 38.321 [3]), of the initial uplink BWP.

si-RequestPeriod

Periodicity of the *SI-Request* configuration in number of association periods.

si-RequestResources

If there is only one entry in the list, the configuration is used for all SI messages for which *si-BroadcastStatus* or *posSI-BroadcastStatus* is set to *notBroadcasting*. Otherwise:

- If *si-SchedulingInfo-v1700* is not present and the *SI-RequestConfig* is used for on-demand SI request in *SI-SchedulingInfo* or *PosSI-SchedulingInfo*, the 1st entry in the list corresponds to the first SI message in *schedulingInfoList* or *posSchedulingInfoList* for which *si-BroadcastStatus* or *posSI-BroadcastStatus* is set to *notBroadcasting*, 2nd entry in the list corresponds to the second SI message in *schedulingInfoList* or *posSchedulingInfoList* for which *si-BroadcastStatus* or *posSI-BroadcastStatus* is set to *notBroadcasting* and so on.
- If *si-SchedulingInfo-v1700* is present and *SI-RequestConfig* is configured in *SI-SchedulingInfo* for on-demand SI request, the UE generates a list of concatenated SI messages by appending the SI messages containing type1 SIB configured by *schedulingInfoList2* in *si-SchedulingInfo-v1700* to the SI messages configured by *schedulingInfoList* in *si-SchedulingInfo*. The 1st entry in the list corresponds to the first SI message for which *si-BroadcastStatus* is set to *notBroadcasting*, 2nd entry in the list corresponds to the second SI message for which *si-BroadcastStatus* is set to *notBroadcasting* and so on.
- If *si-SchedulingInfo-v1700* is present and *SI-RequestConfig* is configured in *PosSI-SchedulingInfo* for on-demand SI request, the UE generates a list of concatenated SI messages by appending the SI messages containing type2 SIB configured by *schedulingInfoList2* in *si-SchedulingInfo-v1700* to the SI messages configured by *posSchedulingInfoList* in *posSI-SchedulingInfo*. The 1st entry in the list corresponds to the first SI message for which *posSI-BroadcastStatus* or *si-BroadcastStatus* is set to *notBroadcasting*, 2nd entry in the list corresponds to the second SI message for which *posSI-BroadcastStatus* or *si-BroadcastStatus* is set to *notBroadcasting* and so on.

Change of *si-RequestResources* should not result in system information change notification.

SI-RequestResources field descriptions***ra-AssociationPeriodIndex***

Index of the association period in the *si-RequestPeriod* in which the UE can send the SI request for SI message(s) corresponding to this *SI-RequestResources*, using the preambles indicated by *ra-PreambleStartIndex* and rach occasions indicated by *ra-ssb-OccasionMaskIndex*.

ra-PreambleStartIndex

If N SSBs are associated with a RACH occasion, where $N \geq 1$, for the i -th SSB ($i=0, \dots, N-1$) the preamble with preamble index = *ra-PreambleStartIndex* + i is used for SI request; For $N < 1$, the preamble with preamble index = *ra-PreambleStartIndex* is used for SI request.

– SI-RequestConfigRepetition

The IE *SI-RequestConfigRepetition* contains configuration for Msg1 based SI request with Msg1 repetition. For the random access parameters (e.g. *prach-RootSequenceIndex*, *msg1-SubcarrierSpacing* and *msg1-RepetitionTimeOffsetROGroup*, etc.) not configured in *SI-RequestConfigRepetition*, the UE applies the parameters configured in *rach-ConfigCommon* corresponding to the RACH resource set selected upon RACH initialization (as specified in TS 38.321 [3]), of the initial uplink BWP unless otherwise specified.

SI-RequestConfigRepetition field descriptions

rach-OccasionsSI

Configuration of dedicated RACH Occasions for SI. If the field is absent, the UE uses the corresponding parameters configured in *rach-ConfigCommon* corresponding to the RACH resource set selected upon RACH initialization (as specified in TS 38.321 [3]), of the initial uplink BWP.

si-RequestResourcesRepetitionNum2*, *si-RequestResourcesRepetitionNum4*, *si-RequestResourcesRepetitionNum8

Indicates the configurations for Msg1-based SI request with Msg1 repetition for repetition number 2, 4 and 8, respectively.

If there is only one entry in the list, the configuration is used for all SI messages for which *si-BroadcastStatus* or *posSI-BroadcastStatus* is set to *notBroadcasting*. Otherwise:

- If *si-SchedulingInfo-v1700* is not present and the *si-RequestResourcesRepetitionNum2/si-RequestResourcesRepetitionNum4/si-RequestResourcesRepetitionNum8* is used for on-demand SI request in *SI-SchedulingInfo* or *PosSI-SchedulingInfo*, the 1st entry in the list corresponds to the first SI message in *schedulingInfoList* or *posSchedulingInfoList* for which *si-BroadcastStatus* or *posSI-BroadcastStatus* is set to *notBroadcasting*, 2nd entry in the list corresponds to the second SI message in *schedulingInfoList* or *posSchedulingInfoList* for which *si-BroadcastStatus* or *posSI-BroadcastStatus* is set to *notBroadcasting* and so on.
- If *si-SchedulingInfo-v1700* is present and *si-RequestResourcesRepetitionNum2/si-RequestResourcesRepetitionNum4/si-RequestResourcesRepetitionNum8* is configured in *SI-SchedulingInfo* for on-demand SI request, the UE generates a list of concatenated SI messages by appending the SI messages containing type1 SIB configured by *schedulingInfoList2* in *si-SchedulingInfo-v1700* to the SI messages configured by *schedulingInfoList* in *si-SchedulingInfo*. The 1st entry in the list corresponds to the first SI message for which *si-BroadcastStatus* is set to *notBroadcasting*, 2nd entry in the list corresponds to the second SI message for which *si-BroadcastStatus* is set to *notBroadcasting* and so on.
- If *si-SchedulingInfo-v1700* is present and *si-RequestResourcesRepetitionNum2/si-RequestResourcesRepetitionNum4/si-RequestResourcesRepetitionNum8* is configured in *PosSI-SchedulingInfo* for on-demand SI request, the UE generates a list of concatenated SI messages by appending the SI messages containing type2 SIB configured by *schedulingInfoList2* in *si-SchedulingInfo-v1700* to the SI messages configured by *posSchedulingInfoList* in *posSI-SchedulingInfo*. The 1st entry in the list corresponds to the first SI message for which *posSI-BroadcastStatus* or *si-BroadcastStatus* is set to *notBroadcasting*, 2nd entry in the list corresponds to the second SI message for which *posSI-BroadcastStatus* or *si-BroadcastStatus* is set to *notBroadcasting* and so on.

Change of *si-RequestResourcesRepetitionNum2/si-RequestResourcesRepetitionNum4/si-RequestResourcesRepetitionNum8* should not result in system information change notification.

SI-RequestResourcesRepetition field descriptions***ra-PreambleStartIndex***

If N SSBs are associated with a RACH occasion, where $N \geq 1$, for the i -th SSB ($i=0, \dots, N-1$) the preamble with preamble index = *ra-PreambleStartIndex* + i is used for SI request with Msg1 repetition; For $N < 1$, the preamble with preamble index = *ra-PreambleStartIndex* is used for SI request with Msg1 repetition.

– ***SI-SchedulingInfo***

The IE *SI-SchedulingInfo* contains information needed for acquisition of SI messages.

***SI-SchedulingInfo* information element**

```
-- ASN1START
-- TAG-SI-SCHEDULINGINFO-START

    }

-- TAG-SI-SCHEDULINGINFO-STOP
-- ASN1STOP

```

SchedulingInfo field descriptions
areaScope Indicates that a SIB is area specific. If the field is absent, the SIB is cell specific.
si-BroadcastStatus Indicates if the SI message is being broadcasted or not. Change of <i>si-BroadcastStatus</i> should not result in system information change notifications in Short Message transmitted with P-RNTI over DCI (see clause 6.5). The value of the indication is valid until the end of the BCCH modification period when set to <i>broadcasting</i> . When <i>SIB19</i> is scheduled in an NTN cell, the <i>si-BroadcastStatus</i> for the mapped <i>SIB19</i> is set to <i>broadcasting</i> . When <i>SIB22</i> is scheduled in an ATG cell, the <i>si-broadcastStatus</i> for the mapped <i>SIB22</i> is set to <i>broadcasting</i> . The UE supporting OD-SIB1 in RRC_CONNECTED considers the stored <i>SIB1</i> as the latest <i>SIB1</i> if <i>ssb-SubcarrierOffset</i> indicates that <i>SIB1</i> is not scheduled in the cell and if the UE has a stored valid version of <i>od-sib1-Config</i> for this cell.
si-Periodicity Periodicity of the SI-message in radio frames. Value <i>rf8</i> corresponds to 8 radio frames, value <i>rf16</i> corresponds to 16 radio frames, and so on.
SI-SchedulingInfo field descriptions
dummy This field is not used in this specification. If received, it is ignored by the UE.
schedulingInfoList, schedulingInfoList2 List of scheduling information for SI messages. If <i>si-SchedulingInfo-v1700</i> is present, the network ensures that the total number of SI messages in the list of concatenated SI messages configured by <i>schedulingInfoList</i> in <i>si-SchedulingInfo</i> and SI messages containing type1 SIB configured by <i>schedulingInfoList2</i> in <i>si-SchedulingInfo-v1700</i> does not exceed the limit of <i>maxSI-Message</i> .
si-RequestConfig Configuration of Msg1 resources that the UE uses for requesting SI-messages for which <i>si-BroadcastStatus</i> is set to <i>notBroadcasting</i> .
si-RequestConfigMSG1-Repetition Configuration of Msg1 repetition resources on NUL that the UE uses for requesting SI-messages for which <i>si-BroadcastStatus</i> is set to <i>notBroadcasting</i> . This field is only applicable when Msg1 repetition resources can be used for requesting SI-messages.
si-RequestConfigRedCap Configuration of Msg1 resources for <i>initialUplinkBWP-RedCap</i> that the (e)RedCap UE uses for requesting SI-messages for which <i>si-BroadcastStatus</i> is set to <i>notBroadcasting</i> .
si-RequestConfigRedCap-MSG1-Repetition Configuration of Msg1 repetition resources for <i>initialUplinkBWP-RedCap</i> that the (e)RedCap UE uses for requesting SI-messages for which <i>si-BroadcastStatus</i> is set to <i>notBroadcasting</i> . This field is only applicable when Msg1 repetition resources can be used for requesting SI-messages.
si-RequestConfigSUL Configuration of Msg1 resources that the UE uses for requesting SI-messages for which <i>si-BroadcastStatus</i> is set to <i>notBroadcasting</i> .
si-RequestConfigSUL-MSG1-Repetition Configuration of Msg1 repetition resources on SUL that the UE uses for requesting SI-messages for which <i>si-BroadcastStatus</i> is set to <i>notBroadcasting</i> . This field is only applicable when Msg1 repetition resources can be used for requesting SI-messages.
si-WindowLength The length of the SI scheduling window. Value <i>s5</i> corresponds to 5 slots, value <i>s10</i> corresponds to 10 slots and so on. The network always configures <i>si-WindowLength</i> to be shorter than or equal to the <i>si-Periodicity</i> . The values <i>s2560-v1710</i> and <i>s5120-v1710</i> are only applicable for SCS 480 kHz.
systemInformationAreaID Indicates the system information area that the cell belongs to, if any. Any SIB with <i>areaScope</i> within the SI is considered to belong to this <i>systemInformationAreaID</i> . The <i>systemInformationAreaID</i> is unique within a PLMN/SNPN.

SchedulingInfo2 field descriptions	
encrypted	The presence of this field indicates that the pos-sib-type is encrypted as specified in TS 37.355 [49].
gnss-id	The presence of this field indicates that the positioning SIB type is for a specific GNSS. Indicates a specific GNSS (see also TS 37.355 [49]).
posSibType	The posSIBs as defined in TS 37.355 [49] mapped to SI for scheduling using <i>schedulingInfoList2</i> .
sbas-id	The presence of this field indicates that the positioning SIB type is for a specific SBAS. Indicates a specific SBAS (see also TS 37.355 [49]).
si-WindowPosition	This field indicates the SI window position of the associated SI-message. The network provides <i>si-WindowPosition</i> in an ascending order, i.e. <i>si-WindowPosition</i> in the subsequent entry in <i>schedulingInfoList2</i> has always value higher than in the previous entry of <i>schedulingInfoList2</i> . The network configures this field in a way that ensures that SI messages scheduled by <i>schedulingInfoList</i> and/or <i>posSchedulingInfoList</i> do not overlap with SI messages scheduled by <i>schedulingInfoList2</i> .
sib-MappingInfo	Indicates which SIBs or posSIBs are contained in the SI message.
sibType	The type of SIB(s) mapped to SI for scheduling using <i>schedulingInfoList2</i> . Value <i>type1</i> indicates SIBs and value <i>type2</i> indicates posSIBs.

Conditional presence	Explanation
GNSS-ID-SBAS	The field is mandatory present if <i>gnss-id</i> is set to <i>sbas</i> . It is absent otherwise.
MSG-1	The field is optionally present, Need R, if <i>si-BroadcastStatus</i> is set to <i>notBroadcasting</i> for any SI-message included in <i>schedulingInfoList</i> or any SI-message containing type1 SIB included in <i>schedulingInfoList2</i> . It is absent otherwise.
SIB-TYPE	The field is mandatory present if the SIB type is different from <i>SIB6</i> , <i>SIB7</i> or <i>SIB8</i> . For <i>SIB6</i> , <i>SIB7</i> and <i>SIB8</i> it is absent.
NonPosSIB	The field is mandatory present if the SIB type is <i>type1</i> . For <i>type2</i> it is absent.
SUL-MSG-1	The field is optionally present, Need R, if <i>supplementaryUplink</i> is configured in <i>ServingCellConfigCommonSIB</i> and if <i>si-BroadcastStatus</i> is set to <i>notBroadcasting</i> for any SI-message included in <i>schedulingInfoList</i> or any SI-message containing type1 SIB included in <i>schedulingInfoList2</i> . It is absent otherwise.
REDCAP-MSG-1	The field is optionally present, Need R, if <i>initialUplinkBWP-RedCap</i> is configured in <i>UplinkConfigCommonSIB</i> and if <i>si-BroadcastStatus</i> is set to <i>notBroadcasting</i> for any SI-message included in <i>schedulingInfoList</i> or any SI-message containing type1 SIB included in <i>schedulingInfoList2</i> . It is absent otherwise.

– SK-Counter

The IE *SK-Counter* is a counter used upon initial configuration of SN security for NR-DC and NE-DC, as well as upon refresh of $S\text{-}K_{\text{gNB}}$ or $S\text{-}K_{\text{eNB}}$ based on the current or newly derived K_{gNB} during RRC Resume or RRC Reconfiguration, as defined in TS 33.501 [11].

```
-- ASN1START
-- TAG-SKCOUNTER-START

SK-Counter ::= INTEGER (0..65535)

-- TAG-SKCOUNTER-STOP
-- ASN1STOP
```

– *SK-CounterConfigLTM*

The IE *SK-CounterConfigLTM* is used to configure a list of *sk-Counter* values used to derive the $S\text{-}K_{\text{gNB}}$.

SK-CounterConfigLTM information element

```
-- ASN1START
-- TAG-SK-COUNTERCONFIGLTM-START

SK-CounterConfigLTM-r19 ::=      SEQUENCE {
    ltm-NoSecurityChangeID-r19    LTM-NoSecurityChangeId-r19,
    sk-CounterList-r19            SEQUENCE (SIZE (1..maxSK-Counter-r18)) OF SK-Counter
}

-- TAG-SK-COUNTERCONFIGLTM-STOP
-- ASN1STOP
```

– *SlotFormatCombinationsPerCell*

The IE *SlotFormatCombinationsPerCell* is used to configure the SlotFormatCombinations applicable for one serving cell (see TS 38.213 [13], clause 11.1.1).

SlotFormatCombinationsPerCell information element

```
-- ASN1START
-- TAG-SLOTFORMATCOMBINATIONSPERCELL-START

SlotFormatCombinationsPerCell ::= SEQUENCE {
    servingCellId                ServCellIndex,
    subcarrierSpacing             SubcarrierSpacing,
    subcarrierSpacing2            SubcarrierSpacing,
    slotFormatCombinations       SEQUENCE (SIZE (1..maxNrofSlotFormatCombinationsPerSet)) OF SlotFormatCombination
                                OPTIONAL, -- Need R
    positionInDCI                INTEGER(0..maxSFI-DCI-PayloadSize-1)
                                OPTIONAL, -- Need M
    ...,
    [[
    enableConfiguredUL-r16       ENUMERATED {enabled}
                                OPTIONAL -- Need R
    ]]
}

SlotFormatCombination ::= SEQUENCE {
    slotFormatCombinationId      SlotFormatCombinationId,
    slotFormats                  SEQUENCE (SIZE (1..maxNrofSlotFormatsPerCombination)) OF INTEGER (0..255)
}

SlotFormatCombinationId ::= INTEGER (0..maxNrofSlotFormatCombinationsPerSet-1)
```

```
-- TAG-SLOTFORMATCOMBINATIONSPERCELL-STOP
-- ASN1STOP
```

SlotFormatCombination field descriptions
slotFormatCombinationId This ID is used in the DCI payload to dynamically select this <i>SlotFormatCombination</i> (see TS 38.213 [13], clause 11.1.1).
slotFormats Slot formats that occur in consecutive slots in time domain order as listed here (see TS 38.213 [13], clause 11.1.1 and TS 38.213 [13], clause 14 for IAB-MT).

SlotFormatCombinationsPerCell field descriptions
enableConfiguredUL If configured, the UE is allowed to transmit uplink signals/channels (SRS, PUCCH, CG-PUSCH) in the set of symbols of the slot when the UE does not detect a DCI format 2_0 providing a slot format for the set of symbols (see TS 38.213 [13], 11.1.1). This field is applicable only if <i>cg-RetransmissionTimer-r16</i> is configured.
positionInDCI The (starting) position (bit) of the slotFormatCombinationId (SFI-Index) for this serving cell (servingCellId) within the DCI payload (see TS 38.213 [13], clause 11.1.1).
servingCellId The ID of the serving cell for which the slotFormatCombinations are applicable.
slotFormatCombinations A list with <i>SlotFormatCombinations</i> . Each <i>SlotFormatCombination</i> comprises of one or more <i>SlotFormats</i> (see TS 38.211 [16], clause 4.3.2). The total number of <i>slotFormats</i> in the <i>slotFormatCombinations</i> list does not exceed 512.
subcarrierSpacing2 Reference subcarrier spacing for a Slot Format Combination on an FDD or SUL cell (see TS 38.213 [13], clause 11.1.1). For FDD, subcarrierSpacing (SFI-scs) is the reference SCS for DL BWP and subcarrierSpacing2 (SFI-scs2) is the reference SCS for UL BWP. For SUL, <i>subcarrierSpacing</i> (SFI-scs) is the reference SCS for non-SUL carrier and <i>subcarrierSpacing2</i> (SFI-scs2) is the reference SCS for SUL carrier. The network configures a value that is smaller than or equal to any SCS of configured BWPs of the serving cell that the command applies to. And the network configures a value that is smaller than or equal to the SCS of the serving cell which the UE monitors for SFI indications.
subcarrierSpacing Reference subcarrier spacing for this Slot Format Combination. The network configures a value that is smaller than or equal to any SCS of configured BWPs of the serving cell that the command applies to. And the network configures a value that is smaller than or equal to the SCS of the serving cell which the UE monitors for SFI indications (see TS 38.213 [13], clause 11.1.1).

– SlotFormatIndicator

The IE *SlotFormatIndicator* is used to configure monitoring a Group-Common-PDCCH for Slot-Format-Indicators (SFI).

SlotFormatIndicator information element

```
-- ASN1START
-- TAG-SLOTFORMATINDICATOR-START

SlotFormatIndicator ::= SEQUENCE {

-- TAG-SLOTFORMATINDICATOR-STOP
-- ASN1STOP

```

SlotFormatIndicator field descriptions
availableRB-SetsToAddModList A list of <i>AvailableRB-SetsPerCell</i> objects (see TS 38.213 [13], clause 11.1.1).
co-DurationsPerCellToAddModList A list of <i>CO-DurationsPerCell</i> objects. If not configured, the UE uses the slot format indicator (SFI), if available, to determine the channel occupancy duration (see TS 38.213 [13], clause 11.1.1).
co-DurationsPerCellToReleaseList A list of <i>CO-DurationsPerCell</i> objects to be released. An entry created using <i>co-DurationsPerCellToAddModList-r16</i> or <i>co-DurationsPerCellToAddModList-r17</i> can be deleted using <i>co-DurationsPerCellToReleaseList</i> .
dci-PayloadSize Total length of the DCI payload scrambled with SFI-RNTI (see TS 38.213 [13], clause 11.1.1).
sfi-RNTI RNTI used for SFI on the given cell (see TS 38.213 [13], clause 11.1.1).
slotFormatCombToAddModList A list of <i>SlotFormatCombinations</i> for the UE's serving cells (see TS 38.213 [13], clause 11.1.1).
switchTriggerToAddModList, switchTriggerToAddModListSizeExt A list of <i>SearchSpaceSwitchTrigger</i> objects. Each <i>SearchSpaceSwitchTrigger</i> object provides position in DCI of the bit field indicating search space switching flag for a serving cell or, if <i>cellGroupsForSwitchList</i> is configured, group of serving cells (see TS 38.213 [13], clause 10.4). If <i>cellGroupsForSwitchList</i> is configured, only one of the cells belonging to the same cell group is added/modified, and the configuration applies to all cells belonging to the <i>cellGroupsForSwitchList</i> (see TS 38.213 [13], clause 10.4). The network configures more than 4 <i>SearchSpaceSwitchTrigger</i> objects only if <i>cellGroupsForSwitchList</i> is not configured. The UE shall consider entries in <i>switchTriggerToAddModList</i> and in <i>switchTriggerToAddModListSizeExt</i> as a single list, i.e. an entry created using <i>switchTriggerToAddModList</i> can be modified using <i>switchTriggerToAddModListSizeExt</i> and vice-versa.
switchTriggerToReleaseModList, switchTriggerToReleaseListSizeExt A list of <i>SearchSpaceSwitchTriggers</i> to be released. If <i>cellGroupsForSwitchList</i> is configured, the <i>SearchSpaceSwitchTrigger</i> is released for all serving cells belonging to the same <i>CellGroupForSwitch</i> . The UE shall consider entries in <i>switchTriggerToReleaseList</i> and in <i>switchTriggerToReleaseListSizeExt</i> as a single list, i.e. an entry created using <i>switchTriggerToAddModList</i> or <i>switchTriggerToAddModListSizeExt</i> can be deleted using <i>switchTriggerToReleaseList</i> or <i>switchTriggerToReleaseListSizeExt</i> .

AvailableRB-SetsPerCell field descriptions
positionInDCI The (starting) position of the bits within DCI payload indicating the availability of the RB sets of a serving cell (see TS 38.213 [13], clause 11.1.1).
servingCellId The ID of the serving cell for which the configuration is applicable.

CO-DurationsPerCell field descriptions
co-DurationList A list of Channel Occupancy duration in symbols. The maximum duration that can be configured for the following SCS: - 15 kHz: 280. - 30 kHz: 560. - 60 kHz: 1120. - 120 kHz: 560. - 480 kHz: 2240. - 960 kHz: 4480.
positionInDCI Position in DCI of the bit field indicating Channel Occupancy duration for UE's serving cells (see TS 38.213 [13], clause 11.1.1).
servingCellId The ID of the serving cell for which the configuration is applicable.
subcarrierSpacing Reference subcarrier spacing for the list of Channel Occupancy durations (see TS 38.213 [13], clause 11.1.1). Only the following values are applicable depending on the used frequency range: FR1: 15, 30, or 60 kHz FR2-2: 120, 480, or 960 kHz

SearchSpaceSwitchTrigger field descriptions
positionInDCI The position of the bit within DCI payload containing a search space switching flag (see TS 38.213 [13], clause 11.1.1).
servingCellId The ID of the serving cell for which the configuration is applicable or the group of serving cells as indicated by <i>CellGroupsForSwitch-r16</i> containing this <i>servingCellId</i> .

– S-NSSAI

The IE *S-NSSAI* (*Single Network Slice Selection Assistance Information*) identifies a Network Slice end to end and comprises a slice/service type and a slice differentiator, see TS 23.003 [21].

S-NSSAI information element

```
-- ASN1START
-- TAG-S-NSSAI-START

S-NSSAI ::= CHOICE {
    sst          BIT STRING (SIZE (8)),
    sst-SD       BIT STRING (SIZE (32))
}

-- TAG-S-NSSAI-STOP
-- ASN1STOP
```

S-NSSAI field descriptions
sst Indicates the S-NSSAI consisting of Slice/Service Type, see TS 23.003 [21].
sst-SD Indicates the S-NSSAI consisting of Slice/Service Type and Slice Differentiator, see TS 23.003 [21].

– *SpeedStateScaleFactors*

The IE *SpeedStateScaleFactors* concerns factors, to be applied when the UE is in medium or high speed state, used for scaling a mobility control related parameter.

SpeedStateScaleFactors information element

```
-- ASN1START
-- TAG-SPEEDSTATESCALEFACTORS-START

SpeedStateScaleFactors ::=          SEQUENCE {
    sf-Medium          ENUMERATED {oDot25, oDot5, oDot75, lDot0},
    sf-High            ENUMERATED {oDot25, oDot5, oDot75, lDot0}
}

-- TAG-SPEEDSTATESCALEFACTORS-STOP
-- ASN1STOP
```

SpeedStateScaleFactors field descriptions
sf-High The concerned mobility control related parameter is multiplied with this factor if the UE is in High Mobility state as defined in TS 38.304 [20]. Value <i>oDot25</i> corresponds to 0.25, value <i>oDot5</i> corresponds to 0.5, <i>oDot75</i> corresponds to 0.75 and so on.
sf-Medium The concerned mobility control related parameter is multiplied with this factor if the UE is in Medium Mobility state as defined in TS 38.304 [20]. Value <i>oDot25</i> corresponds to 0.25, value <i>oDot5</i> corresponds to 0.5, value <i>oDot75</i> corresponds to 0.75, and so on.

– *SPS-Config*

The IE *SPS-Config* is used to configure downlink semi-persistent transmission. Multiple Downlink SPS configurations may be configured in one BWP of a serving cell.

SPS-Config information element

```
-- ASN1START
-- TAG-SPS-CONFIG-START

SPS-Config ::=
    periodicity          ENUMERATED {ms10, ms20, ms32, ms40, ms64, ms80, ms128, ms160, ms320, ms640,
                                     spare6, spare5, spare4, spare3, spare2, spare1},

periodicityExt-r17      INTEGER (1..40960)            OPTIONAL,  -- Need R
nrofHARQ-Processes-v1710 INTEGER (9..32)              OPTIONAL,  -- Need R
harq-ProcID-Offset-v1700 INTEGER (16..31)              OPTIONAL,  -- Need R
]]
]
}

-- TAG-SPS-CONFIG-STOP
-- ASN1STOP

```

SPS-Config field descriptions	
harq-CodebookID	Indicates the HARQ-ACK codebook index for the corresponding HARQ-ACK codebook for SPS PDSCH and ACK for SPS PDSCH release.
harq-ProcID-Offset	Indicates the offset used in deriving the HARQ process IDs, see TS 38.321 [3], clause 5.3.1.
mcs-Table	Indicates the MCS table the UE shall use for DL SPS (see TS 38.214 [19], clause 5.1.3.1. If present, the UE shall use the MCS table of low-SE 64QAM table indicated in Table 5.1.3.1-3 of TS 38.214 [19]. If this field is absent and field mcs-table in PDSCH-Config is set to 'qam256' and the activating DCI is of format 1_1, the UE applies the 256QAM table indicated in Table 5.1.3.1-2 of TS 38.214 [19]. If this field is absent and the field <i>mcs-Table-r17</i> in <i>PDSCH-Config</i> is set to 'qam1024' and the activating DCI is format 1_1, the UE applies the 1024QAM table indicated in Table 5.1.3.1-4 of TS 38.214 [19]. Otherwise, the UE applies the non-low-SE 64QAM table indicated in Table 5.1.3.1-1 of TS 38.214 [19].
n1PUCCH-AN	HARQ resource for PUCCH for DL SPS. The network configures the resource either as format0 or format1. The actual <i>PUCCH-Resource</i> is configured in <i>PUCCH-Config</i> and referred to by its ID. See TS 38.213 [13], clause 9.2.3.
n1PUCCH-AN-PUCCHsSCell	HARQ resource for PUCCH on PUCCH switching SCell (sSCell) for DL SPS. The network configures the resource either as format 0 or format 1. The actual PUCCH-Resource is configured in PUCCH-Config of the PUCCH sSCell and referred to by its ID. See TS 38.213 [13], clause 9.2.3.
nrofHARQ-Processes	Number of configured HARQ processes for SPS DL (see TS 38.321 [3], clause 5.8.1). If UE is configured with <i>nrofHARQ-Processes-v1710</i> UE shall ignore <i>nrofHARQ-Processes</i> (without suffix).
pdsch-AggregationFactor	Number of repetitions for SPS PDSCH (see TS 38.214 [19], clause 5.1.2.1). When the field is absent, the UE applies the value 1 for MBS multicast data and the <i>pdsch-AggregationFactor</i> in <i>pdsch-Config</i> for other data.
periodicity	Periodicity for DL SPS (see TS 38.214 [19] and TS 38.321 [3], clause 5.8.1).
periodicityExt	This field is used to calculate the periodicity for DL SPS (see TS 38.214 [19] and see TS 38.321 [3], clause 5.8.1). If this field is present, the field <i>periodicity</i> is ignored. The following periodicities are supported depending on the configured subcarrier spacing [ms]: 15 kHz: <i>periodicityExt</i> , where <i>periodicityExt</i> has a value between 1 and 640. 30 kHz: $0.5 \times \textit{periodicityExt}$, where <i>periodicityExt</i> has a value between 1 and 1280. 60 kHz with normal CP: $0.25 \times \textit{periodicityExt}$, where <i>periodicityExt</i> has a value between 1 and 2560. 60 kHz with ECP: $0.25 \times \textit{periodicityExt}$, where <i>periodicityExt</i> has a value between 1 and 2560. 120 kHz: $0.125 \times \textit{periodicityExt}$, where <i>periodicityExt</i> has a value between 1 and 5120. 480 kHz: $0.03125 \times \textit{periodicityExt}$, where <i>periodicityExt</i> has a value between 1 and 20480. 960 kHz: $0.015625 \times \textit{periodicityExt}$, where <i>periodicityExt</i> has a value between 1 and 40960. <i>periodicityExt-r17</i> is only applicable for SCS 480 kHz and 960 kHz.
sps-ConfigIndex	Indicates the index of one of multiple SPS configurations.
sps-HARQ-Deferral	Indicates the maximum number of slots or subslots the transmission of DL SPS HARQ-ACK in a slot or subslot can be deferred (see TS 38.213 [13], clause 9.2.5.4).

Conditional Presence	Explanation
<i>SPS-List</i>	The field is mandatory present when included in <i>sps-ConfigToAddModList-r16</i> or <i>sps-ConfigMulticastToAddModList-r17</i> , otherwise the field is absent.

— *SPS-ConfigIndex*

The IE *SPS-ConfigIndex* is used to indicate the index of one of multiple DL SPS configurations in one BWP.

SPS-ConfigIndex information element

```
-- ASN1START
-- TAG-SPS-CONFIGINDEX-START

SPS-ConfigIndex-r16 ::= INTEGER (0.. maxNrofSPS-Config-1-r16)

-- TAG-SPS-CONFIGINDEX-STOP
-- ASN1STOP
```

— *SPS-PUCCH-AN*

The IE *SPS-PUCCH-AN* is used to indicate a PUCCH resource for HARQ ACK and configure the corresponding maximum payload size for the PUCCH resource.

SPS-PUCCH-AN information element

```
-- ASN1START
-- TAG-SPS-PUCCH-AN-START

SPS-PUCCH-AN-r16 ::= SEQUENCE {
    sps-PUCCH-AN-ResourceID-r16 PUCCH-ResourceId,
    maxPayloadSize-r16 INTEGER (4..256) OPTIONAL -- Need R
}

-- TAG-SPS-PUCCH-AN-STOP
-- ASN1STOP
```

<i>SPS-PUCCH-AN</i> field descriptions
maxPayloadSize Indicates the maximum payload size for the corresponding PUCCH resource ID.
sps-PUCCH-AN-ResourceID Indicates the PUCCH resource ID

– *SPS-PUCCH-AN-List*

The IE *SPS-PUCCH-AN-List* is used to configure the list of PUCCH resources per HARQ ACK codebook

***SPS-PUCCH-AN-List* information element**

```
-- ASN1START
-- TAG-SPS-PUCCH-AN-LIST-START

SPS-PUCCH-AN-List-r16 ::=      SEQUENCE (SIZE (1..4)) OF SPS-PUCCH-AN-r16

-- TAG-SPS-PUCCH-AN-LIST-STOP
-- ASN1STOP
```

– *SRB-Identity*

The IE *SRB-Identity* is used to identify a Signalling Radio Bearer (SRB) used by a UE.

***SRB-Identity* information element**

```
-- ASN1START
-- TAG-SRB-IDENTITY-START

SRB-Identity ::=              INTEGER (1..3)

SRB-Identity-v1700 ::=        INTEGER (4)

SRB-Identity-v1800 ::=        INTEGER (5)

SRB-Identity-v1900 ::=        INTEGER (6)

-- TAG-SRB-IDENTITY-STOP
-- ASN1STOP
```

– *SRS-CarrierSwitching*

The IE *SRS-CarrierSwitching* is used to configure SRS carrier switching when PUSCH is not configured or to configure independent SRS power control from that of PUSCH.

***SRS-CarrierSwitching* information element**

```
-- ASN1START
-- TAG-SRS-CARRIERSWITCHING-START

SRS-CarrierSwitching ::=      SEQUENCE {
    srs-SwitchFromServCellIndex  INTEGER (0..31)                OPTIONAL,  -- Need M
    srs-SwitchFromCarrier         ENUMERATED {sUL, nUL},

```

```
srs-TPC-PDCCH-Group          CHOICE {
    typeA                     SEQUENCE (SIZE (1..32)) OF SRS-TPC-PDCCH-Config,
    typeB                     SRS-TPC-PDCCH-Config
}
monitoringCells              SEQUENCE (SIZE (1..maxNrofServingCells)) OF ServCellIndex OPTIONAL, -- Need M
...
}

SRS-TPC-PDCCH-Config ::=    SEQUENCE {
    srs-CC-SetIndexlist      SEQUENCE (SIZE (1..4)) OF SRS-CC-SetIndex OPTIONAL -- Need M
}

SRS-CC-SetIndex ::=         SEQUENCE {
    cc-SetIndex              INTEGER (0..3) OPTIONAL, -- Need M
    cc-IndexInOneCC-Set      INTEGER (0..7) OPTIONAL -- Need M
}

-- TAG-SRS-CARRIERSWITCHING-STOP
-- ASN1STOP
```

SRS-CC-SetIndex field descriptions
cc-IndexInOneCC-Set Indicates the CC index in one CC set for Type A (see TS 38.212 [17], TS 38.213 [13], clause 7.3.1, 11.4). The network always includes this field when the <i>srs-TPC-PDCCH-Group</i> is set to <i>typeA</i> .
cc-SetIndex Indicates the CC set index for Type A associated (see TS 38.212 [17], TS 38.213 [13], clause 7.3.1, 11.4). The network always includes this field when the <i>srs-TPC-PDCCH-Group</i> is set to <i>typeA</i> . The network does not configure this field to 3 in this release of specification.

SRS-CarrierSwitching field descriptions
monitoringCells A set of serving cells for monitoring PDCCH conveying SRS DCI format with CRC scrambled by TPC-SRS-RNTI (see TS 38.212 [17], TS 38.213 [13], clause 7.3.1, 11.4).
srs-SwitchFromCarrier The UE ignores this field in case of independent SRS power control from that of PUSCH.
srs-SwitchFromServCellIndex Indicates the serving cell whose UL transmission may be interrupted during SRS transmission on a PUSCH-less SCell. During SRS transmission on a PUSCH-less SCell, the UE may temporarily suspend the UL transmission on a serving cell with PUSCH in the same CG to allow the PUSCH-less SCell to transmit SRS. (see TS 38.214 [19], clause 6.2.1.3).
srs-TPC-PDCCH-Group Network configures the UE with either typeA-SRS-TPC-PDCCH-Group or typeB-SRS-TPC-PDCCH-Group, if any.
typeA Type A trigger configuration for SRS transmission on a PUSCH-less SCell, or for SRS transmission on a serving cell with independent SRS power control from that of PUSCH (see TS 38.213 [13], clause 11.4). In this release, the network configures at most one entry (the first entry) of <i>typeA</i> , and the first entry corresponds to the serving cell in which the <i>SRS-CarrierSwitching</i> field is configured. SRS carrier switching to SUL carrier is not supported in this version of the specification.
typeB Type B trigger configuration for SRS transmission on a PUSCH-less SCell, or for SRS transmission on a serving cell with independent SRS power control from that of PUSCH (see TS 38.213 [13], clause 11.4).

SRS-TPC-PDCCH-Config field descriptions
srs-CC-SetIndexlist A list of pairs of [cc-SetIndex; cc-IndexInOneCC-Set] (see TS 38.212 [17], TS 38.213 [13], clause 7.3.1, 11.4). The network does not configure this field for <i>typeB</i> .

– SRS-Config

The IE *SRS-Config* is used to configure sounding reference signal transmissions. The configuration defines a list of SRS-Resources, a list of SRS-PosResources, a list of SRS-PosResourceSets and a list of SRS-ResourceSets. Each resource set defines a set of SRS-Resources or SRS-PosResources. The network triggers the transmission of the set of SRS-Resources or SRS-PosResources using a configured aperiodicSRS-ResourceTrigger (L1 DCI). The network does not configure SRS specific power control parameters *alpha* (without suffix) or *pathlossReferenceRS* if *unifiedTCI-StateType* is configured for the serving cell.

SRS-Config information element

```
-- ASN1START
-- TAG-SRS-CONFIG-START

SRS-Config ::=

```

SRS-Config field descriptions
dc-TriggeringPosResourceSetLink Indicates whether the single DCI-triggering SRS positioning resource sets across the linked carriers is enabled or not for bandwidth aggregation.
srs-ClosedLoopIndexIndicatorInDCI-1-1 Enables the presence of 1-bit SRS closed loop index indicator in DCI format 1_1 (see TS 38.212 [17], clause 7.3.1). This field is only present if srs-TwoSeparatePowerControlAdjustmentStates is configured.
srs-TwoSeparatePowerControlAdjustmentStates Indicates that two separate SRS power control adjustment states are configured (see TS 38.213 [13], clause 7.3.1).
tpc-Accumulation If the field is absent, UE applies TPC commands via accumulation. If disabled, UE applies the TPC command without accumulation (this applies to SRS when a separate closed loop is configured for SRS) (see TS 38.213 [13], clause 7.3).
tpc-OfSRS-ClosedLoopIndexInDCI-1-1 Enables the presence of 2-bit TPC command for separate SRS closed loop adjustment state(s) in DCI format 1_1 (see TS 38.212 [17], clause 7.3.1).

SRS-Resource, SRS-PosResource field descriptions
cyclicShift-n2 Cyclic shift configuration (see TS 38.214 [19], clause 6.2.1).
cyclicShift-n4 Cyclic shift configuration (see TS 38.214 [19], clause 6.2.1).
cyclicShift-n8 Cyclic shift configuration (see TS 38.214 [19], clause 6.2.1).
combOffsetHopping Configures UE with comb offset hopping. The <i>hoppingId</i> is used to initialize pseudo random comb offset hopping. If UE is configured with both comb offset and cyclic shift hopping, only one <i>hoppingId</i> is configured. The <i>hoppingWithRepetition</i> configures time-domain hopping behavior for repetition factor $R > 1$. The <i>hoppingSubset</i> indicates a set of comb offset by a bit string (see clause 6.4.1.4.3 of TS 38.211 [16]). The i -th bit in the bit string is set to 1 to indicate the $s_{coh}^{SRS}(t) = i - 1$, where t is determined by its ordinary position among the positive bits in bit string, i.e., if the i -th bit is a first positive bit, $t=0$; if the i -th bit is a second positive bit, $t=1$, and so on.
cyclicShiftHopping Configures UE with cyclic shift hopping. The <i>hoppingId</i> is used to initialize pseudo random cyclic shift hopping. If UE is configured with both comb offset and cyclic shift hopping, only one <i>hoppingId</i> is configured. The <i>hoppingFinerGranularity</i> enables finer granular hopping, see TS 38.211 [16], clause 6.4.1.4.2. If <i>hoppingSubset</i> is configured, <i>hoppingFinerGranularity</i> is not configured. The <i>hoppingSubset</i> indicates a set of cyclic shift by a bit string (see clause 6.4.1.4.2 of TS 38.211 [16]). The i -th bit in the bit string is set to 1 to indicate the $s_{csh}^{SRS}(t) = i - 1$, where t is determined by its ordinary position among the positive bits in bit string, i.e., if the i -th bit is a first positive bit, $t=0$; if the i -th bit is a second positive bit, $t=1$, and so on.
enableStartRBHopping When this RRC parameter is configured, start RB location hopping is enabled for partial frequency sounding in different SRS frequency hopping periods for periodic/semi-persistent/aperiodic SRS as described in clause 6.4.1.4 in TS 38.211.
freqHopping Includes parameters capturing SRS frequency hopping (see TS 38.214 [19], clause 6.2.1). For CLI SRS-RSRP measurement, the network always configures this field such that $b-hop > b-SRS$. For SRS for positioning configuration in multiple cells, the value of this field applies to all cells in the validity area. <i>c-SRS</i> Indicates the maximum bandwidth per hop. When <i>TxHoppingConfig</i> is configured for RedCap UE, the valid values for <i>c-SRS</i> are such that the maximum bandwidth is: 104 PRBs, 48 PRBs, 132 PRBs, 64 PRBs, for 15,30,60,120 KHz respectively. The same value for <i>c-SRS</i> is configured for all the hops when <i>TxHoppingConfig</i> is configured.
groupOrSequenceHopping Parameter(s) for configuring group or sequence hopping (see TS 38.211 [16], clause 6.4.1.4.2). For CLI SRS-RSRP measurement, the network always configures this parameter to 'neither'. For SRS for positioning configuration in multiple cells, the value of this field applies to all cells in the validity area.
nrofSRS-Ports Number of ports. For CLI SRS-RSRP measurement, the network always configures this parameter to 'port1'.
nrofSRS-Ports-n8 Number of ports if the number of antenna ports is 8. The value 'ports8' configures UE with 8 antenna ports and the value 'ports8tdm' configures the UE with 8 antenna ports which are partitioned into 2 subsets with each subset having 4 different ports, and the subsets are mapped to different OFDM symbols, see TS 38.211 [16], clause 6.4.1.4.2. If <i>combOffsetHopping-r18</i> or <i>cyclicShiftHopping-r18</i> is configured, this field is not set to <i>ports8tdm</i> . If this field is present UE ignores the field <i>nrofSRS-Ports</i> .
periodicityAndOffset-p, periodicityAndOffset-p-Ext Periodicity and slot offset for this SRS resource. All values are in "number of slots". Value <i>s1</i> corresponds to a periodicity of 1 slot, value <i>s2</i> corresponds to a periodicity of 2 slots, and so on. For each periodicity the corresponding offset is given in number of slots. For periodicity <i>s1</i> the offset is 0 slots (see TS 38.214 [19], clause 6.2.1). For CLI SRS-RSRP measurement, <i>s1280</i> and <i>s12560</i> cannot be configured. For <i>SRS-PosResource</i> , values <i>s120480</i> , <i>s140960</i> and <i>s181920</i> cannot be configured for SCS=15kHz, values <i>s140960</i> and <i>s181920</i> cannot be configured for SCS=30kHz, and value <i>s181920</i> cannot be configured for SCS=60kHz except when periodicity of 20480ms is configured. When <i>periodicityAndOffset-p-Ext</i> is present, <i>periodicityAndOffset-p</i> shall be ignored by the UE.
periodicityAndOffset-sp, periodicityAndOffset-sp-Ext Periodicity and slot offset for this SRS resource. All values are in "number of slots". Value <i>s1</i> corresponds to a periodicity of 1 slot, value <i>s2</i> corresponds to a periodicity of 2 slots, and so on. For each periodicity the corresponding offset is given in number of slots. For periodicity <i>s1</i> the offset is 0 slots (see TS 38.214 [19], clause 6.2.1). For SRS-

PosResource, values *s/20480*, *s/40960* and *s/81920* cannot be configured for SCS=15kHz, values *s/40960* and *s/81920* cannot be configured for SCS=30kHz, and value *s/81920* cannot be configured for SCS=60kHz.

When *periodicityAndOffset-sp-Ext* is present, *periodicityAndOffset-sp* shall be ignored by the UE.

ptrs-PortIndex

The PTRS port index for this SRS resource for non-codebook based UL MIMO. This is only applicable when the corresponding *PTRS-UplinkConfig* is set to CP-OFDM. The *ptrs-PortIndex* configured here must be smaller than the *maxNrofPorts* configured in the *PTRS-UplinkConfig* (see TS 38.214 [19], clause 6.2.3.1). This parameter is not applicable to CLI SRS-RSRP measurement.

resourceMapping

OFDM symbol location of the SRS resource within a slot including *nrofSymbols* (number of OFDM symbols), *startPosition* (value 0 refers to the last symbol, value 1 refers to the second last symbol, and so on) and *repetitionFactor* (see TS 38.214 [19], clause 6.2.1 and TS 38.211 [16], clause 6.4.1.4). The configured SRS resource does not exceed the slot boundary. If *resourceMapping-r16* is signalled, UE shall ignore the *resourceMapping* (without suffix). If *resourceMapping-r17* is signalled, *resourceMapping-r16* is not signalled and the UE shall ignore the *resourceMapping* (without suffix) and only the values of *nrofSymbols* which are integer multiples of the configured *repetitionFactor* can be configured. The network can only signal *repetitionFactor-v1730* if *resourceMapping-r17* is signalled. When *repetitionFactor-v1730* is signalled, the UE shall ignore *repetitionFactor-r17*. For CLI SRS-RSRP measurement, the network always configures *nrofSymbols* and *repetitionFactor* to 'n1'. If *srs-PosRRC-InactiveValidityAreaPreConfigList* or *srs-PosRRC-InactiveValidityAreaNonPreConfig* is configured, the value of this field applies to all cells in the validity area. *nrofSymbols* is same for all the hops when *TxHoppingConfig* is configured.

resourceType

Periodicity and offset for semi-persistent and periodic SRS resource, or slot offset for aperiodic SRS resource for positioning (see TS 38.214 [19], clause 6.2.1). For CLI SRS-RSRP measurement, only 'periodic' is applicable for *resourceType*. If *srs-PosRRC-InactiveValidityAreaPreConfigList* or *srs-PosRRC-InactiveValidityAreaNonPreConfig* is configured, the value of this field applies to all cells in the validity area.

sequenceId

Sequence ID used to initialize pseudo random group and sequence hopping (see TS 38.214 [19], clause 6.2.1). If *srs-PosRRC-InactiveValidityAreaPreConfigList* or *srs-PosRRC-InactiveValidityAreaNonPreConfig* is configured, the value of this field applies to all cells in the validity area.

slotOffset

An offset in number of slots between the triggering DCI and the actual transmission of this *SRS-PosResource*. If the field is absent the UE applies no offset (value 0).

spatialRelationInfo

Configuration of the spatial relation between a reference RS and the target SRS. Reference RS can be SSB/CSI-RS/SRS (see TS 38.214 [19], clause 6.2.1). This parameter is not applicable to CLI SRS-RSRP measurement. This field is not configured if *unifiedTCI-StateType* is configured for the serving cell.

spatialRelationInfo-PDC

Configuration of the spatial relation between a reference RS and the target SRS. Reference RS can be SSB/CSI-RS/SRS/DL-PRS-PDC (see TS 38.214 [19], clause 6.2.1). The field is present in case of *resourceType=periodic* and *usagePDC-r17=true* in the *SRS-ResourceSet*, otherwise the field is absent.

spatialRelationInfoPos

Configuration of the spatial relation between a reference RS and the target SRS. Reference RS can be SSB/CSI-RS/SRS/DL-PRS (see TS 38.214 [19], clause 6.2.1). If the IE *srs-ResourceId-Ext* is present, the IE *srs-ResourceId* in *spatialRelationInfoPos* represents the index from 0 to 63. Otherwise the IE *srs-ResourceId* in *spatialRelationInfoPos* represents the index from 0 to 31. If the SRS for positioning is configured for RRC_INACTIVE state, the *srs-ResourceId* and *csi-RS-IndexServing* are not included in this field.

srs-PosPeriodicConfigHyperSFN-Index

Indicates even or odd hyper SFN in which the SRS for positioning is transmitted for the periodicity value of 20480m. If this field is not configured, the UE assumes that SRS for positioning periodicity longer than one Hyper SFN is not configured.

srs-RequestDCI-0-2

Indicate the number of bits for "SRS request" in DCI format 0_2. When the field is absent, then the value of 0 bit for "SRS request" in DCI format 0_2 is applied. If the parameter *srs-RequestDCI-0-2* is configured to value 1, 1 bit is used to indicate one of the first two rows of Table 7.3.1.1.2-24 in TS 38.212 [17] for triggered aperiodic SRS resource set. If the value 2 is configured, 2 bits are used to indicate one of the rows of Table 7.3.1.1.2-24 in TS 38.212 [17]. When UE is configured with *supplementaryUplink*, an extra bit (the first bit of the SRS request field) is used for the non-SUL/SUL indication.

srs-RequestDCI-1-2

Indicate the number of bits for "SRS request" in DCI format 1_2. When the field is absent, then the value of 0 bit for "SRS request" in DCI format 1_2 is applied. When the UE is configured with *supplementaryUplink*, an extra bit (the first bit of the SRS request field) is used for the non-SUL/SUL indication (see TS 38.214 [19], clause 6.1.1.2).

srs-ResourceSetToAddModListDCI-0-2

List of SRS resource set to be added or modified for DCI format 0_2 (see TS 38.212 [17], clause 7.3.1).

srs-ResourceSetToReleaseListDCI-0-2

List of SRS resource set to be released for DCI format 0_2 (see TS 38.212 [17], clause 7.3.1).

srs-TCI-State

Configuration of either a UL TCI state or a joint TCI state for the SRS resource. In case of *UL TCI-State*, refers to the TCI state defined in *ul-TCI-StateList* in the *BWP-UplinkDedicated* where the *SRS-Config* is configured. In case of joint TCI state, refers to a TCI state defined in *dl-OrJointTCI-StateList* in *pdsch-Config* of the *BWP-DownlinkDedicated* and serving cell indicated by *cellAndBWP*. This field is absent when the SRS resource is in an *SRS-ResourceSet* configured with *followUnifiedTCI-StateSRS-r17* or *applyIndicatedTCI-State*, or when the field *unifiedTCI-StateType* is not configured to the serving cell which the SRS resource is located in.

startRBIndexAndFreqScalingFactor

Configures the UE with the *startRBIndex* and *freqScalingFactor* for partial frequency sounding as described in Clause 6.4.1.4 in TS 38.211. The *startRBIndexForFScaling2* gives the *startRBIndex* when *freqScalingFactor* is 2 and the *startRBIndexForFScaling4* gives the *startRBIndex* when *FreqScalingFactor* is 4

transmissionComb, transmissionComb-n2, transmissionComb-n4, transmissionComb-n8

Comb value (2 or 4 or 8) and comb offset (0..combValue-1) (see TS 38.214 [19], clause 6.2.1). If network configures field *transmissionComb-n8*, the UE ignores *transmissionComb*. If *srs-PosRRC-InactiveValidityAreaPreConfig* or *srs-PosRRC-InactiveValidityAreaNonPreConfig* is configured, the value of this field applies to all cells in the validity area.

SRS-ResourceSet, SRS-PosResourceSet field descriptions	
alpha	alpha value for SRS power control (see TS 38.213 [13], clause 7.3). When the field is absent the UE applies the value 1. If <i>srs-PosRRC-InactiveValidityAreaPreConfigList</i> or <i>srs-PosRRC-InactiveValidityAreaNonPreConfig</i> is configured, the value of this field applies to all cells in the validity area.
aperiodicSRS-ResourceTriggerList	An additional list of DCI "code points" upon which the UE shall transmit SRS according to this SRS resource set configuration (see TS 38.214 [19], clause 6). When the field is not included during a reconfiguration of <i>SRS-ResourceSet</i> of <i>resourceType</i> set to <i>aperiodic</i> , UE maintains this value based on the Need M; that is, this list is not considered as an extension of <i>aperiodicSRS-ResourceTrigger</i> for purpose of applying the general rule for extended list in clause 6.1.3.
aperiodicSRS-ResourceTrigger	The DCI "code point" upon which the UE shall transmit SRS according to this SRS resource set configuration (see TS 38.214 [19], clause 6).
applyIndicatedTCI-State	This field indicates, for an SRS-ResourceSet, if UE applies the first or the second "indicated" UL only TCI or joint TCI as specified in TS 38.214 [19], clause 6.2.1.
associatedCSI-RS	ID of CSI-RS resource associated with this SRS resource set in non-codebook based operation (see TS 38.214 [19], clause 6.1.1.2).
associatedCSI-RS-Set	ID of CSI-RS resource set associated with this SRS resource set in non-codebook based operation (see TS 38.214 [19], clause 6.1.1.2).
availableSlotOffsetList	Indicates a list of up to four different available slot offset values from slot n+k to the slot where the aperiodic SRS resource set is transmitted, where slot n is the slot with the triggering DCI, and k is the <i>slotOffset</i> (without suffix) as described in clause 6.2.1 of TS 38.214 [19].
csi-RS	ID of CSI-RS resource associated with this SRS resource set (see TS 38.214 [19], clause 6.1.1.2).
dl-PRS	This field indicates a PRS configuration.
followUnifiedTCI-StateSRS	When set to enabled, for SRS resource Set, the UE applies the "indicated" UL only TCI or joint TCI as specified in TS 38.214 [19], clause 5.1.5. This parameter may be configured for aperiodic SRS for BM or SRS of any time-domain behavior for codebook, non-codebook, and antenna switching.
fourPortSRS-3Tx	Indicates whether port 1003 is disabled for all SRS resources in the SRS resource set with <i>usage</i> set to <i>codebook</i> or <i>antennaSwitching</i> , or whether 3Tx transmission is enabled for a configured SRS resource set with <i>usage</i> set to <i>nonCodebook</i> . This field can only be configured if <i>nrofSRS-Ports</i> for each SRS resource in the SRS resource set is set to <i>ports4</i> .
p0	P0 value for SRS power control. The value is in dBm. Only even values (step size 2) are allowed (see TS 38.213 [13], clause 7.3). If <i>srs-PosRRC-InactiveValidityAreaPreConfigList</i> or <i>srs-PosRRC-InactiveValidityAreaNonPreConfig</i> is configured, the value of this field applies to all cells in the validity area.
pathlossReferenceRS	A reference signal (e.g. a CSI-RS config or a SS block) to be used for SRS path loss estimation (see TS 38.213 [13], clause 7.3).
pathlossReferenceRS-Pos	A reference signal (e.g. a SS block or a DL-PRS config) to be used for SRS path loss estimation (see TS 38.213 [13], clause 7.3).
pathlossReferenceRSList	Multiple candidate pathloss reference RS(s) for SRS power control, where one candidate RS can be mapped to SRS Resource Set via MAC CE (clause 6.1.3.27 in TS 38.321 [3]). The network can only configure this field if <i>pathlossReferenceRS</i> is not configured in the same <i>SRS-ResourceSet</i> .
resourceType	Time domain behavior of SRS resource configuration, see TS 38.214 [19], clause 6.2.1. The network configures SRS resources in the same resource set with the same time domain behavior on periodic, aperiodic and semi-persistent SRS. The aperiodic SRS is not applicable for the UE in RRC_INACTIVE. If <i>srs-PosRRC-InactiveValidityAreaPreConfigList</i> or <i>srs-PosRRC-InactiveValidityAreaNonPreConfig</i> is configured, the value of this field applies to all cells in the validity area.
slotOffset	

An offset in number of slots between the triggering DCI and the actual transmission of this <i>SRS-ResourceSet</i> . If the field is absent the UE applies no offset (value 0).
srs-PortGrouping Indicates that SRS port grouping is enabled. This field can be configured only if <i>reportQuantity</i> is set to <i>cri-RI-CQI</i> and the <i>usage</i> of the SRS resource set is set to <i>antennaSwitching</i> (see TS 38.214 [19], clause 5.2.2.5).
srs-PowerControlAdjustmentStates Indicates whether $h_{srs,c(i)} = f_c(i,1)$ or $h_{srs,c(i)} = f_c(i,2)$ (if two PUSCH-PC-AdjustmentStates are configured) or separate close loop is configured for SRS. This parameter is applicable only for Uls on which UE also transmits PUSCH. If absent or release, the UE applies the value <i>sameAs-Fci1</i> (see TS 38.213 [13], clause 7.3).
srs-ResourceIdList, srs-PosResourceIdList The IDs of the SRS-Resources/SRS-PosResource used in this <i>SRS-ResourceSet</i> / <i>SRS-PosResourceSet</i> . If this <i>SRS-ResourceSet</i> is configured with <i>usage</i> set to <i>codebook</i> , the <i>srs-ResourceIdList</i> contains at most 2 entries. If this <i>SRS-ResourceSet</i> is configured with <i>usage</i> set to <i>nonCodebook</i> , the <i>srs-ResourceIdList</i> contains at most 4 entries. If <i>srs-PosRRC-InactiveValidityAreaPreConfigList</i> or <i>srs-PosRRC-InactiveValidityAreaNonPreConfig</i> is configured, <i>srs-PosResourceIdList</i> is commonly configured across cells within the validity area.
srs-ResourceSetId, srs-PosResourceSetId The ID of this resource set. It is unique in the context of the BWP in which the parent <i>SRS-Config</i> is defined. If <i>srs-PosRRC-InactiveValidityAreaPreConfigList</i> or <i>srs-PosRRC-InactiveValidityAreaNonPreConfig</i> is configured, <i>srs-PosResourceSetId</i> is commonly configured across cells within the validity area.
ssb-IndexServing Indicates SSB index belonging to a serving cell where the SRS is configured.
ssb-Ncell This field indicates a CD-SSB configuration from neighboring cell or the index of the NCD-SSB for the serving cell. If this field indicates NCD-SSB for the serving cell, this NCD-SSB is only used for RedCap UE to determine pathloss reference for SRS for positioning configured with validity area in <i>RRC_INACTIVE</i> state.
symbolType Configures the valid symbol type for SRS resources in the SRS resource set. The network does not configure this field if <i>usage</i> set to ' <i>antennaSwitching</i> ' (see TS 38.214, clause 6).
usage Indicates if the SRS resource set is used for beam management, codebook based or non-codebook based transmission or antenna switching. See TS 38.214 [19], clause 6.2.1. Reconfiguration between codebook based and non-codebook based transmission is not supported.
usagePDC If configured, it indicates that this SRS resource set is used for propagation delay compensation. The field can be present in only one <i>SRS-ResourceSet</i> .

<i>SRS-SpatialRelationInfoPos</i> field descriptions
<i>csi-RS-IndexServing</i> Indicates CSI-RS index belonging to a serving cell.
<i>dl-PRS</i> This field indicates a PRS configuration.
<i>resourceSelection</i> Indicates whether the configured SRS spatial relation resource is a <i>SRS-Resource</i> or <i>SRS-PosResource</i> .
<i>servingCellId</i> The serving Cell ID of the source SSB, CSI-RS, or SRS for the spatial relation of the target SRS resource. If this field is absent the SSB, the CSI-RS, or the SRS is from the same serving cell where the SRS is configured.
<i>ssb-IndexServing</i> Indicates SSB index belonging to a serving cell.
<i>ssb-Ncell</i> This field indicates a SSB configuration from neighboring cell.

<i>SSB-InfoNCell</i> field descriptions
<i>physicalCellId</i> This field specifies the physical cell ID of the neighbour cell or NCD-SSB of the serving cell for which SSB configuration is provided.
<i>ssb-IndexNcell</i> This field specifies the index of the SSB for a neighbour cell or NCD-SSB of the serving cell. See TS 38.213 [13]. If this field is absent, the UE determines the <i>ssb-IndexNcell</i> of the <i>physicalCellId</i> based on its SSB measurement from the cell.
<i>ssb-Configuration</i> This field specifies the full configuration of the SSB. If this field is absent, the UE obtains the configuration for the SSB from <i>nr-SSB-Config</i> received as part of DL-PRS assistance data in LPP, see TS 37.355 [49], by looking up the corresponding SSB configuration using the field <i>physicalCellId</i> .

<i>DL-PRS-Info</i> field descriptions
<i>dl-PRS-ID</i> This field specifies the UE specific TRP ID (see TS 37.355 [49]) for which PRS configuration is provided.
<i>dl-PRS-ResourceSetId</i> This field specifies the PRS-ResourceSet ID of a PRS resourceSet.
<i>dl-PRS-ResourceId</i> This field specifies the PRS-Resource ID of a PRS resource. If this field is absent, the UE determines the <i>dl-PRS-ResourceID</i> based on its PRS measurement from the TRP (see TS 37.355 [49]) and DL-PRS Resource Set.

<i>SSB-Configuration</i> field descriptions
<i>halfFrameIndex</i> Indicates whether SSB is in the first half or the second half of the frame. Value zero indicates the first half and value 1 indicates the second half.
<i>integerSubframeOffset</i> Indicates the subframe boundary offset of the cell in which SSB is transmitted.
<i>sfn0-Offset</i>

Indicates the time offset of the SFN0 slot 0 for the cell with respect to SFN0 slot 0 of serving cell.
<i>sfn-Offset</i> Specifies the SFN offset between the cell in which SSB is transmitted and serving cell. The offset corresponds to the number of full radio frames counted from the beginning of a radio frame #0 of serving cell to the beginning of the closest subsequent radio frame #0 of the cell in which SSB is transmitted.
<i>sfn-SSB-Offset</i> Indicates the SFN offset of the transmitted SSB relative to the start of the SSB period. Value 0 indicates that the SSB is transmitted in the first system frame, value 1 indicates that SSB is transmitted in the second system frame and so on. The network configures this field according to the field <i>ssb-Periodicity</i> such that the indicated system frame does not exceed the configured SSB periodicity.
<i>ssb-Freq</i> Indicates the frequency of the SSB.
<i>ss-PBCH-BlockPower</i> Average EPRE of the resources elements that carry secondary synchronization signals in dBm that the NW used for SSB transmission, see TS 38.213 [13], clause 7.
<i>ssb-Periodicity</i> Indicates the periodicity of the SSB. If the field is absent, the UE applies the value ms5. (see TS 38.213 [13], clause 4.1)
<i>ssbSubcarrierSpacing</i> Subcarrier spacing of SSB. Only the following values are applicable depending on the used frequency: FR1/FR1-NTN: 15 or 30 kHz FR2-1/FR2-NTN: 120 or 240 kHz FR2-2: 120, 480, or 960 kHz

<i>TxHoppingConfig</i> field descriptions
<i>numberOfHops</i> This field specifies the number of hops. Value 1 indicates one hop, value 2 indicates two hops and so on.
<i>overlapValue</i> This field specifies the overlap during SRS transmission in terms of number of <i>resource blocks</i> . Value <i>zeroRB</i> implies 0 RB, value <i>oneRB</i> corresponds to 1 RB, value <i>twoRB</i> corresponds to 2 RBs and so on. The same value for the <i>overlapValue</i> is configured to all the hops.
<i>slotOffsetForRemainingHopsList</i> This field specifies the starting slot offset and starting symbol for the SRS resource with tx hopping for different resource types (aperiodic, semi-persistent or periodic SRS transmission). Each hop is configured with the same periodicity.

Conditional Presence	Explanation
<i>DLorJointTCI-SRS</i>	The field is mandatory present if srs-DLorJointTCI-State is configured, otherwise it is absent Need R.
<i>FollowUTC</i>	The field is optionally present, Need R, if the field <i>followUnifiedTCI-StateSRS</i> is present. Otherwise, it is absent.
<i>NonCodebook</i>	This field is optionally present, Need M, in case of non-codebook based transmission, otherwise the field is absent.
<i>Pathloss</i>	The field is mandatory present if the IE <i>SSB-InfoNcell</i> for neighboring cell is included in <i>pathlossReferenceRS-Pos</i> ; otherwise it is optionally present, Need R
<i>Setup</i>	This field is mandatory present upon configuration of SRS-ResourceSet or SRS-Resource and optionally present, Need M, otherwise.

– SRS-PosTx-Hopping

The IE *SRS-PosTx-Hopping* specifies the uplink Tx frequency hopping configuration for SRS for positioning transmission.

SRS-PosTx-Hopping information element

```
-- ASN1START
-- TAG-SRS-PosTx-Hopping-START

SRS-PosTx-Hopping-r18 ::=
    srs-PosConfig-r18
    bwp-r18

    SRS-PeriodicityAndOffsetExt-r16
},
ENUMERATED {s11, s12, s14, s16},
...

-- TAG-SRS-PosTx-Hopping-STOP
-- ASN1STOP
```

SRS-PosTx-Hopping field descriptions
bwp For RRC_CONNECTED state, it indicates the frequency region outside of active BWP for SRS for positioning frequency hopping. For RRC_INACTIVE state, it indicates the BWP configuration for SRS for positioning frequency hopping. The network always configures this field when <i>srs-PosTx-Hopping</i> is configured.
inactivePosSRS-RSRP-ChangeThreshold RSRP threshold for the increase/decrease of RSRP for time alignment validation as specified in TS 38.321 [3].
inactivePosSRS-TimeAlignmentTimer TAT value for SRS for positioning transmission during RRC_INACTIVE state as specified in TS 38.321 [3]. The network always configures this field when <i>srs-PosRRC-Inactive</i> is configured.
srs-PosConfig Provides the SRS configuration to be used for frequency hopping.
srs-PosUplinkTransmissionWindowConfig Used to setup and release the configuration of the periodic uplink transmission window for SRS for positioning with Tx frequency hopping in RRC_CONNECTED state.

SRS-PosUplinkTransmissionWindowConfig* field descriptions**dummy***

This field is not used in the specification and the UE ignores the received value.

duration

Indicates the duration of the uplink transmission window for SRS for positioning with Tx frequency hopping. Value *s/1* indicates 1 slot, *s/2* indicates 2 slots and so on.

periodicityAndOffset, periodicityAndOffsetExt

Indicates the periodicity and slot offset with respect to SFN#0 slot#0 for uplink transmission window for SRS for positioning with Tx frequency hopping. The UL transmission window starts in the first symbol of the slot for which the following condition is satisfied:

$$\text{CURRENT_slot modulo (periodicity)} = \text{slot offset}$$

where CURRENT_slot = current SFN × number of slots per frame + slot number in the frame, and number of slots per frame refers to the number of consecutive slots per frame as specified in TS 38.211[16].

– ***SRS-PosResourceSetLinkedForAggBW***

The IE *SRS-PosResourceSetLinkedForAggBW* provides the SRS Positioning Resource Sets that are linked for bandwidth aggregation across two or three component carriers.

***SRS-PosResourceSetLinkedForAggBW* information element**

```
-- ASN1START
-- TAG-SRS-POSRESOURCESETLINKEDFORAGGBW-START

SRS-PosResourceSetLinkedForAggBW-r18 ::= SEQUENCE {
    srs-PosResourceSetLinked-r18      SRS-PosResourceSetId-r16,
    srs-LinkedConfig-r18              CHOICE {
        rrc-connectedState-r18       SEQUENCE {
            servingCellAndBWP-Id-r18  ServingCellAndBWP-Id-r17,
            ...
        },
        rrc-inactiveState-r18         SEQUENCE {
            scs-SpecificCarrier-r18    SCS-SpecificCarrier,
            freqInfo-r18               ARFCN-ValueNR,
            ...
        }
    },
    ...
}

-- TAG-SRS-POSRESOURCESETLINKEDFORAGGBW-STOP
-- ASN1STOP
```

<i>SRS-PosResourceSetLinkedForAggBW</i> field descriptions
freqInfo Indicates the SRS Positioning Resource set carrier frequency that is linked for bandwidth aggregation.
scs-SpecificCarrier A set of UE specific channel bandwidth and location configurations for different subcarrier spacings (numerologies). Defined in relation to Point A and to be used for SRS for positioning bandwidth aggregation.
servingCellAndBWP-Id Provides the serving cell and BWP config for SRS for positioning transmission using aggregated bandwidth in RRC_CONNECTED state.
srs-LinkedConfig Provides the linked bandwidth aggregation configuration for RRC_CONNECTED or RRC_INACTIVE state for the SRS for positioning transmission.
srs-PosResourceSetLinked Indicates the SRS Positioning Resource set that is linked for bandwidth aggregation.

– *SRS-RSRP-MeasResource*

The IE *SRS-RSRP-MeasResource* specifies SRS-RSRP measurement resource based on *SRS-Resource* in *SRS-Config*, which the UE may be configured to measure L1 SRS-RSRP.

SRS-RSRP-MeasResource information element

```
-- ASN1START
-- TAG-SRS-RSRP-MEASRESOURCE-START

SRS-RSRP-MeasResource-r19 ::= SEQUENCE {
    srs-RSRP-MeasResourceId-r19    SRS-RSRP-MeasResourceId-r19          OPTIONAL, -- Need R
    srs-Resource-r19              SRS-Resource                        OPTIONAL, -- Need R
    qcl-InfoPeriodicSRS-RSRP-MeasResource-r19  TCI-StateId              OPTIONAL, -- Need R
    ...
}

-- TAG-SRS-RSRP-MEASRESOURCE-STOP
-- ASN1STOP
```

<i>SRS-RSRP-MeasResource</i> field descriptions
qcl-InfoPeriodicSRS-RSRP-MeasResource Indicates a reference to one TCI-State in TCI-States for providing the QCL source and QCL type for a target periodic SRS-RSRP-MeasResource.
srs-Resource Indicates the SRS-RSRP measurement resources based on SRS-Resource configuration in SRS-Config.
srs-RSRP-MeasResourceId Identifies SRS-RSRP measurement resource.

– *SRS-RSRP-MeasResourceId*

The IE *SRS-RSRP-MeasResourceId* is used to identify a *SRS-RSRP-MeasResource*.

***SRS-RSRP-MeasResourceId* information element**

```
-- ASN1START
-- TAG-SRS-RSRP-MEASRESOURCEID-START

SRS-RSRP-MeasResourceId-r19 ::=      INTEGER(0..maxNrofSRS-RSRP-MeasResources-1-r19)

-- TAG-SRS-RSRP-MEASRESOURCEID-STOP
-- ASN1STOP
```

– *SRS-RSRP-MeasResourceSet*

The IE *SRS-RSRP-MeasResourceSet* specifies a set of SRS-RSRP measurement resources (their IDs) for L1 SRS-RSRP measurement and set-specific parameters.

***SRS-RSRP-MeasResourceSet* information element**

```
-- ASN1START
-- TAG-SRS-RSRP-MEASRESOURCESET-START

SRS-RSRP-MeasResourceSet-r19 ::=      SEQUENCE {
    aperiodicTriggeringOffset-r19      INTEGER (1..31)                                OPTIONAL, -- Need R
    srs-RSRP-MeasResourceSetId-r19     SRS-RSRP-MeasResourceSetId-r19                OPTIONAL, -- Need R
    srs-RSRP-MeasResourceIdList-r19    SEQUENCE (SIZE (1..maxNrofSRS-RSRP-MeasResourcesPerSet-r19) ) OF SRS-RSRP-MeasResourceId-r19
                                         OPTIONAL, -- Need R
    ...
}

-- TAG-SRS-RSRP-MEASRESOURCESET-STOP
-- ASN1STOP
```

<i>SRS-RSRP-MeasResourceSet</i> field descriptions
<i>aperiodicTriggeringOffset</i> Indicates a slot offset between the slot containing the DCI that triggers a set of aperiodic SRS-RSRP resources and the slot in which the SRS-RSRP resource set is measured.
<i>srs-RSRP-MeasResourceIdList</i> Indicates the SRS-RSRP measurement resources associated with this SRS-RSRP measurement resource set.
<i>srs-RSRP-MeasResourceSetId</i> Indicates ID of SRS-RSRP measurement resource set.

– *SRS-RSRP-MeasResourceSetId*

The IE *SRS-RSRP-MeasResourceSetId* is used to identify a *SRS-RSRP-MeasResourceSet*.

***SRS-RSRP-MeasResourceSetId* information element**

```
-- ASN1START
-- TAG-SRS-RSRP-MEASRESOURCESETID-START

SRS-RSRP-MeasResourceSetId-r19 ::=      INTEGER (0..maxNrofSRS-RSRP-MeasResourceSets-1-r19)

-- TAG-SRS-RSRP-MEASRESOURCESETID-STOP
-- ASN1STOP
```

– *SRS-RSRP-Range*

The IE *SRS-RSRP-Range* specifies the value range used in SRS-RSRP measurements and thresholds. The integer value for SRS-RSRP measurements is according to Table 10.1.22.1.2-1 in TS 38.133 [14]. For thresholds, the actual value is (IE value –140) dBm, except for the IE value 98, in which case the actual value is infinity.

***SRS-RSRP-Range* information element**

```
-- ASN1START
-- TAG-SRS-RSRP-RANGE-START

SRS-RSRP-Range-r16 ::=                  INTEGER (0..98)

-- TAG-SRS-RSRP-RANGE-STOP
-- ASN1STOP
```

– *SRS-TPC-CommandConfig*

The IE *SRS-TPC-CommandConfig* is used to configure the UE for extracting TPC commands for SRS from a group-TPC messages on DCI.

***SRS-TPC-CommandConfig* information element**

```
-- ASN1START
-- TAG-SRS-TPC-COMMANDCONFIG-START

SRS-TPC-CommandConfig ::=
    SEQUENCE {
        startingBitOfFormat2-3          INTEGER (1..31)                OPTIONAL,  -- Need R
        fieldTypeFormat2-3               INTEGER (0..1)                OPTIONAL,  -- Need R
        ...
        [[
            startingBitOfFormat2-3SUL    INTEGER (1..31)                OPTIONAL  -- Need R
        ]],
        [[
```

```
startingBitOfFormat2-3-r19          INTEGER (1..45)          OPTIONAL    -- Need R
]]
}

-- TAG-SRS-TPC-COMMANDCONFIG-STOP
-- ASN1STOP
```

SRS-TPC-CommandConfig field descriptions
fieldTypeFormat2-3 The type of a field within the group DCI with SRS request fields (optional), which indicates how many bits in the field are for SRS request (0 or 2). Note that for Type A, there is a common SRS request field for all SCells in the set, but each SCell has its own TPC command bits. See TS 38.212 [17] clause 7.3.1 and , TS 38.213 [13], clause 11.4.
startingBitOfFormat2-3 The starting bit position of a block within the group DCI with SRS request fields (optional) and TPC commands. The value 1 of the field corresponds to the first/left most bit of format2-3. The value 2 of the field corresponds to the second bit format2-3, and so on (see TS 38.212 [17], clause 7.3.1 and TS 38.213 [13], clause 11.4). The network does not configure both <i>startingBitOfFormat2-3</i> and <i>startingBitOfFormat2-3-r19</i> simultaneously. The network does not include <i>startingBitOfFormat2-3-r19</i> set to a value lower than 32.
startingBitOfFormat2-3SUL The starting bit position of a block within the group DCI with SRS request fields (optional) and TPC commands for SUL carrier (see TS 38.212 [17], clause 7.3.1 and TS 38.213 [13], clause 11.4).

– SSB-Index

The IE *SSB-Index* identifies an SS-Block within an SS-Burst. See TS 38.213 [13], clause 4.1.

SSB-Index information element

```
-- ASN1START
-- TAG-SSB-INDEX-START

SSB-Index ::=
    INTEGER (0..maxNrofSSBs-1)

-- TAG-SSB-INDEX-STOP
-- ASN1STOP
```

– SSB-MTC

The IE *SSB-MTC* is used to configure measurement timing configurations, i.e., timing occasions at which the UE measures SSBs.

SSB-MTC information element

```
-- ASN1START

-- TAG-SSB-MTC-STOP
-- ASN1STOP

```

SSB-MTC field descriptions**duration**

Duration of the measurement window in which to receive SS/PBCH blocks. It is given in number of subframes (see TS 38.213 [13], clause 4.1).

periodicityAndOffset

Periodicity and offset of the measurement window in which to receive SS/PBCH blocks, see 5.5.2.10. Periodicity and offset are given in number of subframes.

SSB-MTC2 field descriptions**pci-List**

PCIs that follow this SMTC.

SSB-MTC3 field descriptions**duration**

Duration of the measurement window in which to receive SS/PBCH blocks. It is given in number of subframes (see TS 38.213 [13], clause 4.1).

pci-List

PCIs that follow this SMTC, used for IAB-node discovery.

periodicityAndOffset

Periodicity and offset of the measurement window in which to receive SS/PBCH blocks, see 5.5.2.10. Periodicity and offset are given in number of subframes.

ssb-ToMeasure

The set of SS blocks to be measured within the SMTC measurement duration. The first/leftmost bit corresponds to SS block index 0, the second bit corresponds to SS block index 1, and so on. Value 0 in the bitmap indicates that the corresponding SS block is not to be measured while value 1 indicates that the corresponding SS block is to be measured (see TS 38.215 [9]). When the field is not configured the IAB-MT measures on all SS blocks. Regardless of the value of this field, SS blocks outside of the applicable *smtc* are not to be measured. See TS 38.215 [9] clause 5.1.1.

SSB-MTC4 field descriptions**pci-List**

PCIs that follow this SMTC.

offset

Offset of the measurement window in which to receive SS/PBCH blocks, see 5.5.2.10. Offset is given in number of subframes.

<i>SSB-MTC5</i> field descriptions
offset Offset of the measurement window in which to receive SS/PBCH blocks, see 5.5.2.10. Offset is given in number of subframes.
pci-List PCIs that follow this SMTc.
periodicity Periodicity of the measurement window in which to receive SS/PBCH blocks, see 5.5.2.10.

<i>SSB-MTC-AdditionalPCI</i> field descriptions
additionalPCI PCI of the additional SSB different from serving cell PCI.
periodicity Periodicity of the SS/PBCH blocks, see 5.5.2.10. Periodicity is given in number of subframes.
ssb-PositionsInBurst Indicates the time domain positions of the transmitted SS-blocks in a half frame with SS/PBCH blocks as defined in TS 38.213 [13], clause 4.1. The first/leftmost bit corresponds to SS/PBCH block index 0, the second bit corresponds to SS/PBCH block index 1, and so on. Value 0 in the bitmap indicates that the corresponding SS/PBCH block is not transmitted while value 1 indicates that the corresponding SS/PBCH block is transmitted.
ss-PBCH-BlockPower Average EPRE of the resources elements that carry secondary synchronization signals in dBm that the NW used for SSB transmission, see TS 38.213 [13], clause 7.

– *SSB-PositionQCL-Relation*

The IE *SSB-PositionQCL-Relation* is used to indicate the QCL relationship between SSB positions on the frequency indicated by *ssbFrequency* (see TS 38.213 [13], clause 4.1) for operation with shared spectrum channel access. Value n1 corresponds to 1, value n2 corresponds to 2 and so on.

SSB-PositionQCL-Relation information element

```
-- ASN1START
-- TAG-SSB-POSITIONQCL-RELATION-START

SSB-PositionQCL-Relation-r16 ::= ENUMERATED {n1,n2,n4,n8}

SSB-PositionQCL-Relation-r17 ::= ENUMERATED {n32, n64}

-- TAG-SSB-POSITIONQCL-RELATION-STOP
-- ASN1STOP
```

– *SSB-ToMeasure*

The IE *SSB-ToMeasure* is used to configure a pattern of SSBs. For operation with shared spectrum channel access in FR1, only *mediumBitmap* is used, and for FR2-2, *longBitmap* is used.

SSB-ToMeasure information element

```
-- ASN1START
-- TAG-SSB-TOMEASURE-START

SSB-ToMeasure ::=
    shortBitmap
    mediumBitmap
    longBitmap
}

-- TAG-SSB-TOMEASURE-STOP
-- ASN1STOP
```

```
CHOICE {
    BIT STRING (SIZE (4)),
    BIT STRING (SIZE (8)),
    BIT STRING (SIZE (64))
}
```

SSB-ToMeasure field descriptions**longBitmap**

Bitmap when maximum number of SS/PBCH blocks per half frame equals to 64 as defined in TS 38.213 [13], clause 4.1. For operation with shared spectrum channel access in FR2-2, if the k-th bit is set to 1, the UE assumes that one or more SS/PBCH blocks within the SMTC measurement duration with candidate SS/PBCH block indexes corresponding to SS/PBCH block index equal to (k- 1) may be transmitted; if the k-th bit is set to 0, the UE assumes that the corresponding SS/PBCH block(s) are not transmitted.

mediumBitmap

Bitmap when maximum number of SS/PBCH blocks per half frame equals to 8 as defined in TS 38.213 [13], clause 4.1. For operation with shared spectrum channel access, if the k-th bit is set to 1, the UE assumes that one or more SS/PBCH blocks within the SMTC measurement duration with candidate SS/PBCH block indexes corresponding to SS/PBCH block index equal to k - 1 may be transmitted; if the kt-th bit is set to 0, the UE assumes that the corresponding SS/PBCH block(s) are not transmitted. The k-th bit is set to 0, where k > *ssb-PositionQCL-Common* and the number of actually transmitted SS/PBCH blocks is not larger than the number of 1's in the bitmap. If *ssb-PositionQCL* is configured with a value smaller than *ssb-PositionQCL-Common*, only the leftmost K bits (K = *ssb-PositionQCL*) are applicable for the corresponding cell.

shortBitmap

Bitmap when maximum number of SS/PBCH blocks per half frame equals to 4 as defined in TS 38.213 [13], clause 4.1.

– **SS-RSSI-Measurement**

The IE *SS-RSSI-Measurement* is used to configure RSSI measurements based on synchronization reference signals.

SS-RSSI-Measurement information element

```
-- ASN1START
-- TAG-SS-RSSI-MEASUREMENT-START

SS-RSSI-Measurement ::=
    measurementSlots
    endSymbol
}

-- TAG-SS-RSSI-MEASUREMENT-STOP
-- ASN1STOP
```

```
SEQUENCE {
    BIT STRING (SIZE (1..80)),
    INTEGER (0..3)
}
```

SS-RSSI-Measurement field descriptions
endSymbol Within a slot that is configured for RSSI measurements (see <i>measurementSlots</i>) the UE measures the RSSI from symbol 0 to symbol <i>endSymbol</i> . This field identifies the entry in Table 5.1.3-1 in TS 38.215 [9], which determines the actual end symbol.
measurementSlots Indicates the slots in which the UE can perform RSSI measurements. The length of the BIT STRING is equal to the number of slots in the configured SMTC window (determined by the duration and by the subcarrierSpacing). The first (left-most / most significant) bit in the bitmap corresponds to the first slot in the SMTC window, the second bit in the bitmap corresponds to the second slot in the SMTC window, and so on. The UE measures in slots for which the corresponding bit in the bitmap is set to 1. In case this field is configured for a SCell with <i>ca-SlotOffset-r16</i> , the bits in the bitmap corresponds to the slots that are fully contained in the SMTC window.

— SubcarrierSpacing

The IE *SubcarrierSpacing* determines the subcarrier spacing. Restrictions applicable for certain frequencies, channels or signals are clarified in the fields that use this IE.

SubcarrierSpacing information element

```
-- ASN1START
-- TAG-SUBCARRIERSPACING-START

SubcarrierSpacing ::=          ENUMERATED {kHz15, kHz30, kHz60, kHz120, kHz240, kHz480-v1700, kHz960-v1700, spare1}

-- TAG-SUBCARRIERSPACING-STOP
-- ASN1STOP
```

— T-Reselection

The IE *T-Reselection* concerns the cell reselection timer $T_{\text{reselection}}_{\text{RAT}}$ for NR and E-UTRA. Value in seconds. For value 0, behaviour as specified in 7.1.2 applies.

T-Reselection information element

```
-- ASN1START
-- TAG-TRESELECTION-START

T-Reselection ::=          INTEGER (0..7)

-- TAG-TRESELECTION-STOP
-- ASN1STOP
```

— TAG-Config

The IE *TAG-Config* is used to configure parameters for a time-alignment group.

TAG-Config information element

```
-- ASN1START
-- TAG-TAG-CONFIG-START

TAG-Config ::=
    tag-ToReleaseList      SEQUENCE {
        tag-ToReleaseList  SEQUENCE (SIZE (1..maxNrofTAGs)) OF TAG-Id      OPTIONAL, -- Need N
        tag-ToAddModList    SEQUENCE (SIZE (1..maxNrofTAGs)) OF TAG        OPTIONAL, -- Need N
    }

TAG ::=
    tag-Id                SEQUENCE {
        tag-Id             TAG-Id,
        timeAlignmentTimer  TimeAlignmentTimer,
        ...
    }

TAG-Id ::=
    INTEGER (0..maxNrofTAGs-1)

-- TAG-TAG-CONFIG-STOP
-- ASN1STOP
```

TAG field descriptions	
tag-Id	Indicates the TAG of the SpCell or an SCell, see TS 38.321 [3]. Uniquely identifies the TAG within the scope of a Cell Group (i.e. MCG or SCG).
timeAlignmentTimer	The <i>timeAlignmentTimer</i> for TAG with ID <i>tag-Id</i> , as specified in TS 38.321 [3].

– TAR-Config

The IE *TAR-Config* is used to configure Timing Advance reporting in non-terrestrial networks and ATG network.

TAR-Config information element

```
-- ASN1START
-- TAG-TAR-CONFIG-START

TAR-Config-r17 ::=
    offsetThresholdTA-r17  SEQUENCE {
        offsetThresholdTA-r17  ENUMERATED {ms0dot5, ms1, ms2, ms3, ms4, ms5, ms6 ,ms7, ms8, ms9, ms10, ms11, ms12,
        ms13, ms14, ms15, spare13, spare12, spare11, spare10, spare9, spare8, spare7,
        spare6, spare5, spare4, spare3, spare2, spare1}      OPTIONAL, -- Need R
        timingAdvanceSR-r17    ENUMERATED {enabled}          OPTIONAL, -- Need R
        ...
    }

TAR-Config-r18 ::=
    offsetThresholdTA-r18  SEQUENCE {
        offsetThresholdTA-r18  INTEGER (1..56)              OPTIONAL, -- Need R
        timingAdvanceSR-r18    ENUMERATED {enabled}          OPTIONAL, -- Need R
        ...
    }
```

```

}
-- TAG-TAR-CONFIG-STOP
-- ASN1STOP

```

***TAR-Config* field descriptions**

offsetThresholdTA

Offset for TA reporting as specified in TS 38.321 [3]. Network only configures this parameter for MCG. For *offsetThresholdTA-r17*, value *ms0dot5* corresponds to 0.5 ms, value *ms1* corresponds to 1 ms, and so on.

Network only configures *offsetThresholdTA-r18* for ATG, which is in unit of symbols based on the subcarrier spacing of the BWP indicated by *firstActiveDownlinkBWP-Id* if received in the same RRC message, otherwise, it is based on the subcarrier spacing of the active DL BWP of the PCell when *offsetThresholdTA-r18* is received. Once configured, the value of TA offset threshold does not change autonomously by the UE with BWP switching.

timingAdvanceSR

Used to configure whether a Timing Advance report may trigger a Scheduling Request as specified in TS 38.321 [3].

– ***TCI-ActivatedConfig***

The IE *TCI-ActivatedConfig* is used to provide activated TCI states for PDSCH and/or PDCCH of the PSCell or of an SCell.

***TCI-ActivatedConfig* information element**

```

-- ASN1START
-- TAG-TCI-ACTIVATEDCONFIG-START

TCI-ActivatedConfig-r17 ::= SEQUENCE {
    pdcch-TCI-r17          SEQUENCE (SIZE (1..5)) OF TCI-StateId,
    pdsch-TCI-r17         BIT STRING (SIZE (1..maxNrofTCI-States))
}

-- TAG-TCI-ACTIVATEDCONFIG-STOP
-- ASN1STOP

```

***TCI-ActivatedConfig* field descriptions**

pdcch-TCI

Indicates the TCI state for PDCCH for each configured CORESET of the DL BWP to be activated at SCell activation, to be activated for the PSCell at SCG activation and/or to be used for BFD, RLM and measurements while the SCG is deactivated. The list includes exactly as many entries as CORESETs configured in this BWP, ordered by increasing values of *ControlResourceSet-Id*, i.e. the first entry indicates the TCI state for the configured CORESET with the lowest *ControlResourceSet-Id* value, the second value indicates the TCI states for the configured CORESET with the second lowest *ControlResourceSet-Id* value, and so on.

pdsch-TCI

Indicates TCI states for PDSCH reception at SCell addition/activation or of the PSCell at SCG activation. This field indicates activated TCI state(s) for this BWP ordered by increasing values of *TCI-StateId*, i.e. the first bit indicates the activation state of the TCI state with the lowest *TCI-StateId* value, the second value indicates the activation status of the TCI state with the second lowest *TCI-StateId* value, and so on. A bit set to 0 indicates that the corresponding TCI state is deactivated, a bit set to 1 indicates that the TCI state is activated.

– *TCI-State*

The IE *TCI-State* associates one or two DL reference signals with a corresponding quasi-colocation (QCL) type.

***TCI-State* information element**

```
-- ASN1START
-- TAG-TCI-STATE-START

    ENUMERATED {typeA, typeB, typeC, typeD},
}

-- TAG-TCI-STATE-STOP
-- ASN1STOP
```

QCL-Info field descriptions	
<i>bwp-Id</i>	The DL BWP which the RS is located in. If the field is absent, the RS is located in the DL BWP in which the <i>TCI-State</i> is applied by the UE.
<i>cell</i>	The UE's serving cell in which the <i>referenceSignal</i> is configured. If the field is absent, the <i>referenceSignal</i> is configured in the serving cell in which the <i>TCI-State</i> is applied by the UE. The RS can be located on a serving cell other than the serving cell for which the <i>TCI-State</i> is applied by the UE only if the <i>qcl-Type</i> is configured as <i>typeC</i> or <i>typeD</i> . If the <i>referenceSignal</i> is set to <i>csi-rs</i> and <i>unifiedTCI-StateType</i> is configured, either both <i>cell</i> and <i>bwp-Id</i> are present or both <i>cell</i> and <i>bwp-Id</i> are absent. See TS 38.214 [19] clause 5.1.5.
<i>referenceSignal</i>	Reference signal with which quasi-collocation information is provided as specified in TS 38.214 [19] clause 5.1.5.
<i>qcl-Type</i>	QCL type as specified in TS 38.214 [19] clause 5.1.5.

TCI-State field descriptions	
<i>additionalPCI</i>	Indicates the physical cell IDs (PCI) of the SSBs when <i>referenceSignal</i> is configured as SSB for both QCL-Type1 and QCL-Type2. In case the <i>cell</i> is present, the <i>additionalPCI</i> refers to a PCI value configured in the list configured using <i>additionalPCI-ToAddModList</i> in the serving cell indicated by the field <i>cell</i> . Otherwise, it refers to a PCI value configured in a list <i>additionalPCI-ToAddModList</i> configured in the serving cell where the <i>TCI-State</i> is applied by the UE. When this field is present the <i>cell</i> for <i>qcl-Type1</i> and <i>qcl-Type2</i> is configured with same value, if present.
<i>pathlossOffset</i>	Indicates the pathloss offset applied to the TCI state of an UL TRP (see TS 38.213 [13], clause 7). Value dB-12 corresponds to -12 dB, dB-8 corresponds to -8 dB and so on.
<i>pathlossReferenceRS-Id</i>	The ID of the reference signal (e.g. a CSI-RS or an SS block) used for PUSCH, PUCCH and SRS path loss estimation. This field refers to an element in the list configured using <i>pathlossReferenceRSToAddModList</i> in the serving cell and UL BWP where the TCI State is applied by the UE.
<i>qcl-Type1, qcl-Type2</i>	QCL information for the TCI state as specified in TS 38.214 [19] clause 5.1.5.
<i>tag-Id-ptr</i>	It indicates the TAG that is associated with this TCI state, value n0 means the TCI state associate with the TAG indicated by <i>tag-Id</i> , value n1 means this TCI state associated with the TAG indicated by <i>tag2-Id</i> . The <i>tag-Id-ptr</i> refers to the TAG of the serving cell where the TCI state is applied.
<i>tcid-StateId</i>	ID number of the TCI state.
<i>ul-PowerControl</i>	Configures power control parameters for PUCCH, PUSCH and SRS for this TCI state. The field is present here only if <i>ul-powerControl</i> is not configured in any <i>BWP-Uplink-Dedicated</i> of this serving cell. This field refers to an element in the list configured using <i>uplink-PowerControlToAddModList</i> in the serving cell where the <i>dl-OrJointTCI-StateToAddModList</i> is configured. For each serving cell, <i>ul-powerControl</i> is either configured in each <i>TCI-State</i> configured or referred to in <i>dl-OrJointTCI-StateList</i> in each DL BWP, or it is not configured in any <i>TCI-State</i> configured or referred to in <i>dl-OrJointTCI-StateList</i> in any DL BWP.

Conditional Presence	Explanation
<i>2TA</i>	This field is mandatory present if <i>tag2</i> is present for the serving cell and the serving cell is configured with <i>unifiedTCI-StateType</i> set to <i>joint</i> . It is absent, Need R, otherwise.
<i>CSI-RS-Indicated</i>	This field is mandatory present if <i>csi-rs</i> is included and <i>unifiedTCI-StateType</i> is not configured. This field is optionally present, Need R, if <i>csi-rs</i> is included and <i>unifiedTCI-StateType</i> is configured. Otherwise, it is absent, Need R.
<i>JointTCI</i>	This field is optionally present, Need R, if this serving cell is configured with <i>unifiedTCI-StateType</i> set to ' <i>joint</i> '. It is absent, Need R, otherwise.
<i>JointTCI1</i>	This field is mandatory present, if this serving cell is configured with <i>unifiedTCI-StateType</i> set to ' <i>joint</i> '. It is absent, Need R, otherwise.

– *TCI-StateId*

The IE *TCI-StateId* is used to identify one *TCI-State* configuration.

TCI-StateId information element

```
-- ASN1START
-- TAG-TCI-STATEID-START

TCI-StateId ::=
    INTEGER (0..maxNrofTCI-States-1)

-- TAG-TCI-STATEID-STOP
-- ASN1STOP
```

– *TCI-UL-State*

The IE *TCI-UL-State* indicates the TCI state information for UL transmission.

TCI-UL-State information element

```
-- ASN1START
-- TAG-TCI-UL-STATE-START

TCI-UL-State-r17 ::=

dB40, dB44, dB48, dB52, dB56, dB60}          OPTIONAL    -- Need R
]]
]
}

-- TAG-TCI-UL-STATE-STOP
-- ASN1STOP

```

TCI-UL-State field descriptions	
additionalPCI	Indicates the physical cell IDs (PCI) of the SSBs when <i>referenceSignal</i> is configured as SSB. In case the <i>servingCellId</i> is present, the <i>additionalPCI</i> refers to a PCI value configured in the list configured using <i>additionalPCI-ToAddModList</i> in the serving cell indicated by the field <i>servingCellId</i> . Otherwise, it refers to a PCI value configured in the list configured using <i>additionalPCI-ToAddModList</i> in the serving cell where the <i>ul-TCI-StateList</i> is applied by the UE.
bwp-Id	The DL BWP which the CSI-RS is located in or UL BWP where the SRS is located in.
pathlossOffset	Indicates the pathloss offset applied to the TCI state of an UL TRP (see TS 38.213 [13], clause 7). Value dB-12 corresponds to -12 dB, dB-8 corresponds to -8 dB and so on.
pathlossReferenceRS-Id	The ID of the reference Signal (e.g. a CSI-RS or a SS block) used for PUSCH, PUCCH and SRS path loss estimation. This field refers to an element in the list configured using <i>pathlossReferenceRSToAddModList</i> in the serving cell and UL BWP where the UL TCI State is applied by the UE.
servingCellId	The UE's serving cell in which the <i>referenceSignal</i> is configured. If the field is absent, the <i>referenceSignal</i> is configured in the serving cell in which the <i>TCI-UL-State</i> is applied by the UE.
tag-Id-ptr	It indicates the TAG that is associated with this TCI state, value n0 means the TCI state associate with the TAG indicated by <i>tag-Id</i> , value n1 means this TCI state associated with the TAG indicated by <i>tag2-Id</i> . The <i>tag-Id-ptr</i> refers to the TAG of the serving cell where the TCI state is applied.
ul-powerControl	Configures power control parameters for PUCCH, PUSCH and SRS for this TCI state. The field is present here only if <i>ul-powerControl</i> is not configured in any <i>BWP-Uplink-Dedicated</i> of this serving cell. This field refers to an element in the list configured using <i>uplink-PowerControlToAddModList</i> in the serving cell where the <i>ul-TCI-ToAddModList</i> is configured. For each serving cell, <i>ul-powerControl</i> is either configured in each <i>TCI-UL-State</i> configured or referred to in <i>ul-OrJointTCI-StateList</i> in each UL BWP, or it is not configured in any <i>TCI-UL-State</i> configured or referred to in <i>ul-OrJointTCI-StateList</i> in any UL BWP.

Conditional Presence	Explanation
2TA	This field is mandatory present if tag2 is present for the serving cell. It is absent, Need R, otherwise.
CSI-RS or SRS-Indicated	This field is mandatory present if <i>referenceSignal</i> is set to <i>csi-RS-index</i> or to <i>srs</i> , absent otherwise
Mandatory	The field is mandatory present.

– *TCI-UL-StateId*

The IE *TCI-UL-StateId* is used to identify one *TCI-UL-State* configuration.

TCI-UL-StateId information element

```
-- ASN1START
-- TAG-TCI-UL-STATEID-START

TCI-UL-StateId-r17 ::=                INTEGER (0..maxUL-TCI-1-r17)

-- TAG-TCI-UL-STATEID-STOP
-- ASN1STOP
```

– *TDD-UL-DL-ConfigCommon*

The IE *TDD-UL-DL-ConfigCommon* determines the cell specific Uplink/Downlink TDD configuration.

TDD-UL-DL-ConfigCommon information element

```
-- ASN1START
-- TAG-TDD-UL-DL-CONFIGCOMMON-START

TDD-UL-DL-ConfigCommon ::=            SEQUENCE {
    referenceSubcarrierSpacing          SubcarrierSpacing,
    pattern1                           TDD-UL-DL-Pattern,
    pattern2                           TDD-UL-DL-Pattern                OPTIONAL, -- Need R
    ...
}

TDD-UL-DL-Pattern ::=                 SEQUENCE {

        sbfd-EndingSlotIndex-r19              INTEGER (0..maxNrofSlots-1)                OPTIONAL, -- Need R
        sbfd-EndingSymbolIndex-r19            INTEGER (0..maxNrofSymbols-1)            OPTIONAL -- Need R
    ]]
}

-- TAG-TDD-UL-DL-CONFIGCOMMON-STOP
```

-- ASN1STOP

TDD-UL-DL-ConfigCommon field descriptions
referenceSubcarrierSpacing Reference SCS used to determine the time domain boundaries in the UL-DL pattern which must be common across all subcarrier specific carriers, i.e., independent of the actual subcarrier spacing using for data transmission. Only the following values are applicable depending on the used frequency: FR1: 15, 30, or 60 kHz FR2-1: 60 or 120 kHz FR2-2: 120, 480, or 960 kHz The network configures a not larger than any SCS of configured BWPs for the serving cell. The network or <i>SL-PreconfigGeneral</i> configures a not larger than the SCS of (pre-)configured SL BWP. See TS 38.213 [13], clause 11.1.

TDD-UL-DL-Pattern field descriptions
dl-UL-TransmissionPeriodicity Periodicity of the DL-UL pattern, see TS 38.213 [13], clause 11.1. If the <i>dl-UL-TransmissionPeriodicity-v1530</i> is signalled, UE shall ignore the <i>dl-UL-TransmissionPeriodicity</i> (without suffix).
nrofDownlinkSlots Number of consecutive full DL slots at the beginning of each DL-UL pattern, see TS 38.213 [13], clause 11.1. In this release, the maximum value for this field is 320.
nrofDownlinkSymbols Number of consecutive DL symbols in the beginning of the slot following the last full DL slot (as derived from <i>nrofDownlinkSlots</i>). The value 0 indicates that there is no partial-downlink slot. (see TS 38.213 [13], clause 11.1).
nrofUplinkSlots Number of consecutive full UL slots at the end of each DL-UL pattern, see TS 38.213 [13], clause 11.1. In this release, the maximum value for this field is 320.
nrofUplinkSymbols Number of consecutive UL symbols in the end of the slot preceding the first full UL slot (as derived from <i>nrofUplinkSlots</i>). The value 0 indicates that there is no partial-uplink slot. (see TS 38.213 [13], clause 11.1).
sbfd-StartingSlotIndex, sbfd-EndingSlotIndex Configures the starting slot index and the ending slot index of SBFD subbands within a TDD-UL-DL period.
sbfd-StartingSymbolIndex, sbfd-EndingSymbolIndex Configures the starting symbol index within the starting slot, the ending symbol index within the ending slot of SBFD subbands within a TDD-UL-DL period.

– TDD-UL-DL-ConfigDedicated

The IE *TDD-UL-DL-ConfigDedicated* determines the UE-specific Uplink/Downlink TDD configuration.

TDD-UL-DL-ConfigDedicated information element

-- ASN1START
-- TAG-TDD-UL-DL-CONFIGDEDICATED-START

```
TDD-UL-DL-ConfigDedicated ::= SEQUENCE {
    slotSpecificConfigurationsToAddModList SEQUENCE (SIZE (1..maxNrofSlots)) OF TDD-UL-DL-SlotConfig OPTIONAL, -- Need N
    slotSpecificConfigurationsToReleaseList SEQUENCE (SIZE (1..maxNrofSlots)) OF TDD-UL-DL-SlotIndex OPTIONAL, -- Need N
    ...
}

TDD-UL-DL-ConfigDedicated-IAB-MT-r16 ::= SEQUENCE {

        }
    }
}

TDD-UL-DL-SlotIndex ::= INTEGER (0..maxNrofSlots-1)

-- TAG-TDD-UL-DL-CONFIGDEDICATED-STOP
-- ASN1STOP
```

TDD-UL-DL-ConfigDedicated field descriptions
slotSpecificConfigurationsToAddModList The <i>slotSpecificConfigurationToAddModList</i> allows overriding UL/DL allocations provided in tdd-UL-DL-configurationCommon, see TS 38.213 [13], clause 11.1.

TDD-UL-DL-ConfigDedicated-IAB-MT field descriptions
slotSpecificConfigurationsToAddModList-IAB-MT The <i>slotSpecificConfigurationToAddModList-IAB-MT</i> allows overriding UL/DL allocations provided in <i>tdd-UL-DL-configurationCommon</i> with a limitation that effectively only flexible symbols can be overwritten in Rel-16.
slotSpecificConfigurationsToReleaseList-IAB-MT The <i>slotSpecificConfigurationsToReleaseList-IAB-MT</i> allows release of a set of slot configuration previously add with <i>slotSpecificConfigurationToAddModList-IAB-MT</i> .

TDD-UL-DL-SlotConfig field descriptions
nrofDownlinkSymbols Number of consecutive DL symbols in the beginning of the slot identified by <i>slotIndex</i> . If the field is absent the UE assumes that there are no leading DL symbols. (see TS 38.213 [13], clause 11.1).
nrofUplinkSymbols Number of consecutive UL symbols in the end of the slot identified by <i>slotIndex</i> . If the field is absent the UE assumes that there are no trailing UL symbols. (see TS 38.213 [13], clause 11.1).
slotIndex Identifies a slot within a slot configuration period given in <i>tdd-UL-DL-configurationCommon</i> , see TS 38.213 [13], clause 11.1.
symbols The direction (downlink or uplink) for the symbols in this slot. Value <i>allDownlink</i> indicates that all symbols in this slot are used for downlink; value <i>allUplink</i> indicates that all symbols in this slot are used for uplink; value <i>explicit</i> indicates explicitly how many symbols in the beginning and end of this slot are allocated to downlink and uplink, respectively.

TDD-UL-DL-SlotConfig-IAB-MT field descriptions
symbols-IAB-MT The <i>symbols-IAB-MT</i> is used to configure an IAB-MT with the SlotConfig applicable for one serving cell. Value <i>allDownlink</i> indicates that all symbols in this slot are used for downlink; value <i>allUplink</i> indicates that all symbols in this slot are used for uplink; value <i>explicit</i> indicates explicitly how many symbols in the beginning and end of this slot are allocated to downlink and uplink, respectively; value <i>explicit-IAB-MT</i> indicates explicitly how many symbols in the beginning and end of this slot are allocated to uplink and downlink, respectively.

– ThresholdP-LR

The IE *ThresholdLR* is used to indicate a measured RSRP threshold for LP-WUS. Actual value of threshold = field value * 2 [dBm].

ThresholdP-LR information element

```
-- ASN1START
-- TAG-THRESHOLDP-LR-START

ThresholdP-LR-r19 ::=          INTEGER  (-80..0)

-- TAG-THRESHOLDP-LR-STOP
-- ASN1STOP
```

– *ThresholdQ-LR*

The IE *ThresholdQ-LR* is used to indicate a measured RSRQ threshold for LP-WUS. Actual value of threshold = field value [dB].

***ThresholdQ-LR* information element**

```
-- ASN1START
-- TAG-THRESHOLDQ-LR-START
ThresholdQ-LR-r19 ::=          INTEGER (-34..0)
-- TAG-THRESHOLDQ-LR-STOP
-- ASN1STOP
```

– *TimeAlignmentTimer*

The IE *TimeAlignmentTimer* is used to configure the time alignment timer as specified in TS 38.321 [3]. The values are in ms.

***TimeAlignmentTimer* information element**

```
-- ASN1START
-- TAG-TIMEALIGNMENTTIMER-START
TimeAlignmentTimer ::=          ENUMERATED {ms500, ms750, ms1280, ms1920, ms2560, ms5120, ms10240, infinity}
-- TAG-TIMEALIGNMENTTIMER-STOP
-- ASN1STOP
```

– *TimeToTrigger*

The IE *TimeToTrigger* specifies the value range used for time to trigger parameter, which concerns the time during which specific criteria for the event needs to be met in order to trigger a measurement report either by the RRC message *MeasurementReport* or by MAC CE in TS 38.321 [3] or start/stop logging of measurements for network-side data collection. Value *ms0* corresponds to 0 ms and behaviour as specified in 7.1.2 applies, value *ms40* corresponds to 40 ms, and so on.

***TimeToTrigger* information element**

```
-- ASN1START
-- TAG-TIME TOTRIGGER-START
TimeToTrigger ::=          ENUMERATED {
    ms0, ms40, ms64, ms80, ms100, ms128, ms160, ms256,
    ms320, ms480, ms512, ms640, ms1024, ms1280, ms2560,
    ms5120}
-- TAG-TIME TOTRIGGER-STOP
-- ASN1STOP
```

```
-- TAG-TIMETOTRIGGER-STOP
-- ASN1STOP
```

– *TN-AreaId*

The IE *TN-AreaId* is used to identify a TN coverage area in an NTN system.

TN-AreaId information element

```
-- ASN1START
-- TAG-TN-AREAID-START

TN-AreaId-r18 ::=                INTEGER (1..maxTN-AreaInfo-r18)

-- TAG-TN-AREAID-STOP
-- ASN1STOP
```

– *TrackingAreaCode*

The IE *TrackingAreaCode* is used to identify a tracking area within the scope of a PLMN/SNP, see TS 24.501 [23].

TrackingAreaCode information element

```
-- ASN1START
-- TAG-TRACKINGAREACODE-START

TrackingAreaCode ::= BIT STRING (SIZE (24))

-- TAG-TRACKINGAREACODE-STOP
-- ASN1STOP
```

– *UAC-BarringInfoSetIndex*

The IE *UAC-BarringInfoSetIndex* provides the index of the entry in *uac-BarringInfoSetList*. Value 1 corresponds to the first entry in *uac-BarringInfoSetList*, value 2 corresponds to the second entry in this list and so on. An index value referring to an entry not included in *uac-BarringInfoSetList* indicates no barring.

UAC-BarringInfoSetIndex information element

```
-- ASN1START
-- TAG-UAC-BARRINGINFOSETINDEX-START

UAC-BarringInfoSetIndex ::=                INTEGER (1..maxBarringInfoSet)

-- TAG-UAC-BARRINGINFOSETINDEX-STOP
-- ASN1STOP
```

– *UAC-BarringInfoSetList*

The IE *UAC-BarringInfoSetList* provides a list of access control parameter sets. An access category can be configured with access parameters according to one of the sets.

UAC-BarringInfoSetList information element

```
-- ASN1START
-- TAG-UAC-BARRINGINFOSETLIST-START

UAC-BarringInfoSetList ::=          SEQUENCE (SIZE(1..maxBarringInfoSet)) OF UAC-BarringInfoSet

UAC-BarringInfoSetList-v1700 ::= SEQUENCE (SIZE(1..maxBarringInfoSet)) OF UAC-BarringInfoSet-v1700

UAC-BarringInfoSet ::=              SEQUENCE {
    uac-BarringFactor                ENUMERATED {p00, p05, p10, p15, p20, p25, p30, p40,
                                                p50, p60, p70, p75, p80, p85, p90, p95},
    uac-BarringTime                  ENUMERATED {s4, s8, s16, s32, s64, s128, s256, s512},
    uac-BarringForAccessIdentity     BIT STRING (SIZE(7))
}

UAC-BarringInfoSet-v1700 ::= SEQUENCE {
    uac-BarringFactorForAI3-r17      ENUMERATED {p00, p05, p10, p15, p20, p25, p30, p40, p50, p60, p70, p75, p80, p85, p90, p95}
                                     OPTIONAL -- Need S
}

-- TAG-UAC-BARRINGINFOSETLIST-STOP
-- ASN1STOP
```

UAC-BarringInfoSetList field descriptions
uac-BarringInfoSetList List of access control parameter sets. Each access category can be configured with access parameters corresponding to a particular set by <i>uac-barringInfoSetIndex</i> . Association of an access category with an index that has no corresponding entry in the <i>uac-BarringInfoSetList</i> is valid configuration and indicates no barring.
uac-BarringForAccessIdentity Indicates whether access attempt is allowed for each Access Identity. The leftmost bit, bit 0 in the bit string corresponds to Access Identity 1, bit 1 in the bit string corresponds to Access Identity 2, bit 2 in the bit string corresponds to Access Identity 11, bit 3 in the bit string corresponds to Access Identity 12, bit 4 in the bit string corresponds to Access Identity 13, bit 5 in the bit string corresponds to Access Identity 14, and bit 6 in the bit string corresponds to Access Identity 15. Value 0 means that access attempt is allowed for the corresponding access identity.
uac-BarringFactor Represents the probability that access attempt would be allowed during access barring check.
uac-BarringFactorForAI3 Barring factor applicable for Access Identity 3. Represents the probability that access attempt would be allowed during access barring check. If absent, the UE considers the access attempt as allowed.
uac-BarringTime The average time in seconds before a new access attempt is to be performed after an access attempt was barred at access barring check for the same access category, see 5.3.14.5.

– UAC-BarringPerCatList

The IE *UAC-BarringPerCatList* provides access control parameters for a list of access categories.

UAC-BarringPerCatList information element

```
-- ASN1START
-- TAG-UAC-BARRINGPERCATLIST-START

UAC-BarringPerCatList ::=
    SEQUENCE (SIZE (1..maxAccessCat-1)) OF UAC-BarringPerCat

UAC-BarringPerCat ::=
    SEQUENCE {
        accessCategory          INTEGER (1..maxAccessCat-1),
        uac-barringInfoSetIndex UAC-BarringInfoSetIndex
    }

-- TAG-UAC-BARRINGPERCATLIST-STOP
-- ASN1STOP
```

UAC-BarringPerCatList field descriptions
accessCategory The Access Category according to TS 22.261 [25].

– UAC-BarringPerPLMN-List

The IE *UAC-BarringPerPLMN-List* provides access category specific access control parameters, which are configured per PLMN/SNPN.

UAC-BarringPerPLMN-List information element

```
-- ASN1START
-- TAG-UAC-BARRINGPERPLMN-LIST-START

UAC-BarringPerPLMN-List ::=
    SEQUENCE (SIZE (1.. maxPLMN)) OF UAC-BarringPerPLMN

UAC-BarringPerPLMN ::=
    SEQUENCE {
        plmn-IdentityIndex      INTEGER (1..maxPLMN),
        uac-ACBarringListType   CHOICE{
            uac-ImplicitACBarringList    SEQUENCE (SIZE(maxAccessCat-1)) OF UAC-BarringInfoSetIndex,
            uac-ExplicitACBarringList    UAC-BarringPerCatList
        }
    }
-- TAG-UAC-BARRINGPERPLMN-LIST-STOP
-- ASN1STOP
```

UAC-BarringPerPLMN-List field descriptions
uac-ACBarringListType Access control parameters for each access category valid only for a specific PLMN or SNP. UE behaviour upon absence of this field is specified in clause 5.3.14.2.
plmn-IdentityIndex Index of the PLMN or SNP across the <i>plmn-IdentityInfoList</i> and <i>npn-IdentityInfoList</i> fields included in SIB1.

– UE-TimersAndConstants

The IE *UE-TimersAndConstants* contains timers and constants used by the UE in RRC_CONNECTED, RRC_INACTIVE and RRC_IDLE.

UE-TimersAndConstants information element

```
-- ASN1START
-- TAG-UE-TIMERSANDCONSTANTS-START

UE-TimersAndConstants ::=
    SEQUENCE {
        t300      ENUMERATED {ms100, ms200, ms300, ms400, ms600, ms1000, ms1500, ms2000},
        t301      ENUMERATED {ms100, ms200, ms300, ms400, ms600, ms1000, ms1500, ms2000},
        t310      ENUMERATED {ms0, ms50, ms100, ms200, ms500, ms1000, ms2000},
        n310      ENUMERATED {n1, n2, n3, n4, n6, n8, n10, n20},
        t311      ENUMERATED {ms1000, ms3000, ms5000, ms10000, ms15000, ms20000, ms30000},
        n311      ENUMERATED {n1, n2, n3, n4, n5, n6, n8, n10},
        t319      ENUMERATED {ms100, ms200, ms300, ms400, ms600, ms1000, ms1500, ms2000},
        ...
    }
```

```
}
-- TAG-UE-TIMERSANDCONSTANTS-STOP
-- ASN1STOP
```

– *UE-TimersAndConstantsRemoteUE*

The IE *UE-TimersAndConstantsRemoteUE* contains timers and constants used by the L2 U2N Remote UE in RRC_CONNECTED, RRC_INACTIVE and RRC_IDLE.

***UE-TimersAndConstantsRemoteUE* information element**

```
-- ASN1START
-- TAG-UE-TIMERSANDCONSTANTSREMOTEUE-START

UE-TimersAndConstantsRemoteUE-r17 ::= SEQUENCE {
    t300-RemoteUE-r17      ENUMERATED {ms100, ms200, ms300, ms400, ms600, ms1000, ms1500, ms2000} OPTIONAL, -- Need S
    t301-RemoteUE-r17      ENUMERATED {ms100, ms200, ms300, ms400, ms600, ms1000, ms1500, ms2000} OPTIONAL, -- Need S
    t319-RemoteUE-r17      ENUMERATED {ms100, ms200, ms300, ms400, ms600, ms1000, ms1500, ms2000} OPTIONAL, -- Need S
    ...
}

-- TAG-UE-TIMERSANDCONSTANTSREMOTEUE-STOP
-- ASN1STOP
```

<i>UE-TimersAndConstantsRemoteUE</i> field descriptions
<i>t300-RemoteUE</i> Indicates the timer value of T300 used by L2 U2N Remote UE. If the field is absent, the timer value indicated in t300 applies to L2 U2N Remote UE for the single hop case. The effective T300 value for the L2 U2N Remote UE, accounting for both the Uu and PC5 hop components, is obtained by multiplying the base T300 timer value by the Hop Count. For a single-hop scenario involving one Relay UE, the Hop Count is 1. For multi-hop scenarios involving two or three Relay UEs, the Hop Count is 2 or 3, respectively. If the field is absent, the timer value indicated in t300 multiplied by the Hop Count applies to L2 U2N Remote UE for the multihop hop case.
<i>t301-RemoteUE</i> Indicates the timer value of T301 used by L2 U2N Remote UE. If the field is absent, the timer value indicated in t301 applies to L2 U2N Remote UE for the single hop case. The effective T301 value for the L2 U2N Remote UE, accounting for both the Uu and PC5 hop components, is obtained by multiplying the base T301 timer value by the Hop Count. For a single-hop scenario involving one Relay UE, the Hop Count is 1. For multi-hop scenarios involving two or three Relay UEs, the Hop Count is 2 or 3, respectively. If the field is absent, the timer value indicated in t301 multiplied by the Hop Count applies to L2 U2N Remote UE for the multihop hop case.
<i>t319-RemoteUE</i> Indicates the timer value of T319 used by L2 U2N Remote UE. If the field is absent, the timer value indicated in t319 applies to L2 U2N Remote UE for the single hop case. The effective T319 value for the L2 U2N Remote UE, accounting for both the Uu and PC5 hop components, is obtained by multiplying the base T319 timer value by the Hop Count. For a single-hop scenario involving one Relay UE, the Hop Count is 1. For multi-hop scenarios involving two or three Relay UEs, the Hop Count is 2 or 3, respectively. If the field is absent, the timer value indicated in t319 multiplied by the Hop Count applies to L2 U2N Remote UE for the multihop hop case.

– *UL-DelayValueConfig*

The IE *UL-DelayValueConfig* specifies the configuration of the UL PDCP Packet Delay value per DRB measurement specified in TS 38.314 [53].

UL-DelayValueConfig information element

```
-- ASN1START
-- TAG-ULDELAYVALUECONFIG-START

UL-DelayValueConfig-r16 ::= SEQUENCE {
    delay-DRBlist-r16          SEQUENCE (SIZE (1..maxDRB)) OF DRB-Identity
}

-- TAG-ULDELAYVALUECONFIG-STOP
-- ASN1STOP
```

UL-DelayValueConfig field descriptions
delay-DRBlist Indicates the DRB IDs used by UE to provide results of UL PDCP Packet Delay value per DRB measurement as specified in TS 38.314 [53].

– UL-ExcessDelayConfig

The IE *UL-ExcessDelayConfig* IE specifies the configuration of the UL PDCP Excess Packet Delay per DRB measurement specified in TS 38.314 [53].

UL-ExcessDelayConfig information element

```
-- ASN1START
-- TAG-ULEXCESSDELAYCONFIG-START

UL-ExcessDelayConfig-r17 ::= SEQUENCE {
    excessDelay-DRBlist-r17      SEQUENCE (SIZE (1..maxDRB)) OF ExcessDelay-DRB-IdentityInfo-r17
}

ExcessDelay-DRB-IdentityInfo-r17 ::= SEQUENCE {
    drb-IdentityList             SEQUENCE (SIZE (1..maxDRB)) OF DRB-Identity,
    delayThreshold               ENUMERATED {ms0dot25, ms0dot5, ms1, ms2, ms4, ms5, ms10, ms20, ms30, ms40, ms50, ms60, ms70,
                                           ms80, ms90, ms100, ms150, ms300, ms500}
}

-- TAG-ULEXCESSDELAYCONFIG-STOP
-- ASN1STOP
```

UL-ExcessDelayConfig field descriptions
drb-IdentityList Indicates the DRB IDs used by UE to provide results of UL PDCP Excess Packet Delay per DRB measurement as specified in TS 38.314 [53].
delayThreshold Indicates the delay threshold for the DRB IDs indicated in DRB-IdentityList. Value ms0dot25 corresponds to 0.25ms, ms0dot5 corresponds to 0.5ms, ms1 corresponds to 1ms and so on.

– *UL-GapFR2-Config*

The IE *UL-GapFR2-Config* specifies the FR2 uplink gap configuration.

***UL-GapFR2-Config* information element**

```
-- ASN1START
-- TAG-UL-GAPFR2-CONFIG-START

UL-GapFR2-Config-r17 ::= SEQUENCE {
    gapOffset-r17          INTEGER (0..159),
    ugl-r17                ENUMERATED {ms0dot125, ms0dot25, ms0dot5, ms1},
    ugrp-r17               ENUMERATED {ms5, ms20, ms40, ms160},
    refFR2-ServCellAsyncCA-r17 ServCellIndex
}
-- TAG-UL-GAPFR2-CONFIG-STOP
-- ASN1STOP
```

UL-GapFR2-Config field descriptions	
gapOffset	Value <i>gapOffset</i> is the gap offset of the FR2 UL gap pattern with UGRP indicated in the field <i>ugrp</i> . The value range is from 0 to <i>ugrp</i> -1.
refFR2-ServCellAsyncCA	Indicates the FR2 serving cell identifier whose SFN and subframe is used for FR2 UL gap calculation for this gap pattern with asynchronous CA involving FR2 carrier(s).
ugl	Value <i>ugl</i> is the gap length in ms of the FR2 UL gap. The FR2 UL gap length is according to Table 9.1.11-1 in TS 38.133 [14]. Value <i>ms0dot125</i> corresponds to 0.125 ms, <i>ms0dot25</i> corresponds to 0.25 ms and so on.
ugrp	Value <i>ugrp</i> is the gap repetition period in (ms) of the FR2 UL gap. The FR2 UL gap repetition period is according to Table 9.1.11-1 in TS 38.133 [14].

Conditional Presence	Explanation
<i>AsyncCA</i>	This field is mandatory present when configuring FR2 UL gap pattern to UE in: - (NG)EN-DC, NR SA, NE-DC or NR-DC without FR2-FR2 band combination, with asynchronous CA involving FR2 carriers. Otherwise, it is absent.

– *UplinkCancellation*

The IE *UplinkCancellation* is used to configure the UE to monitor PDCCH for the CI-RNTI.

***UplinkCancellation* information element**

```
-- ASN1START
-- TAG-ULINKCANCELLATION-START
```

```
UplinkCancellation-r16 ::= SEQUENCE {
    ci-RNTI-r16 RNTI-Value,
    dci-PayloadSizeForCI-r16 INTEGER (0..maxCI-DCI-PayloadSize-r16),
    ci-ConfigurationPerServingCell-r16 SEQUENCE (SIZE (1..maxNrofServingCells)) OF CI-ConfigurationPerServingCell-r16,
    ...
}

CI-ConfigurationPerServingCell-r16 ::= SEQUENCE {
    servingCellId ServCellIndex,
    positionInDCI-r16 INTEGER (0..maxCI-DCI-PayloadSize-1-r16),
    positionInDCI-ForSUL-r16 INTEGER (0..maxCI-DCI-PayloadSize-1-r16) OPTIONAL, -- Cond SUL-Only
    ci-PayloadSize-r16 ENUMERATED {n1, n2, n4, n5, n7, n8, n10, n14, n16, n20, n28, n32, n35, n42, n56, n112},
    timeFrequencyRegion-r16 SEQUENCE {
        timeDurationForCI-r16 ENUMERATED {n2, n4, n7, n14} OPTIONAL, -- Cond SymbolPeriodicity
        timeGranularityForCI-r16 ENUMERATED {n1, n2, n4, n7, n14, n28},
        frequencyRegionForCI-r16 INTEGER (0..37949),
        deltaOffset-r16 INTEGER (0..2),
        ...
    },
    uplinkCancellationPriority-v1610 ENUMERATED {enabled} OPTIONAL -- Need S
}

-- TAG-ULINKCANCELLATION-STOP
-- ASN1STOP
```

UplinkCancellation field descriptions	
ci-ConfigurationPerServingCell	Indicates (per serving cell) the position of the <i>ci-PayloadSize</i> bit CI values inside the DCI payload (see TS 38.213 [13], clause 11.2A).
ci-RNTI	RNTI used for indication cancellation in UL (see TS 38.212 [17] clause 7.3.1 and TS 38.213 [13], clause 11.2A).
dci-PayloadSizeForCI	Total length of the DCI payload scrambled with CI-RNTI (see TS 38.213 [13], clause 11.2A).

<i>CI-ConfigurationPerServingCell</i> field descriptions	
<i>ci-PayloadSize</i>	Configures the field size for each UL cancellation indicator of this serving cell (<i>servingCellId</i>) (see TS 38.213 [13], clause 11.2A).
<i>deltaOffset</i>	Configures the additional offset from the end of a PDCCH reception where the UE detects the DCI format 2_4 and the first symbol of the T_"CI" symbols, in the unit of OFDM symbols (see TS 38.213 [13], clause 11.2A).
<i>frequencyRegionForCI</i>	Configures the reference frequency region where a detected UL CI is applicable (see TS 38.213 [13], clause 11.2A). It is defined in the same way as <i>locationAndBandwidth</i> .
<i>positionInDCI</i>	Starting position (in number of bit) of the <i>ci-PayloadSize</i> bit CI value applicable for this serving cell (<i>servingCellId</i>) within the DCI payload (see TS 38.213 [13], clause 11.2A).
<i>positionInDCI-ForSUL</i>	Starting position (in number of bit) of the <i>ci-PayloadSize</i> bit CI value applicable for SUL of this serving cell (<i>servingCellId</i>) within the DCI payload (see TS 38.213 [13], clause 11.2A).
<i>timeDurationForCI</i>	Configures the duration of the reference time region in symbols where a detected UL CI is applicable of this serving cell (<i>servingCellId</i>) (see TS 38.213 [13], clause 11.2A). If the field is absent, i.e., the configured UL CI monitoring periodicity indicated by <i>monitoringSlotPeriodicityAndOffset</i> for DCI format 2_4 is larger than 1 slot or 1 slot with only one monitoring occasion, the UE applies the value of the configured UL CI monitoring periodicity,
<i>timeFrequencyRegion</i>	Configures the reference time and frequency region where a detected UL CI is applicable of this serving cell (<i>servingCellId</i>) (see TS 38.213 [13], clause 11.2A).
<i>timeGranularityForCI</i>	Configures the number of partitions within the time region of this serving cell (<i>servingCellId</i>) (see TS 38.213 [13], clause 11.2A).
<i>uplinkCancellationPriority</i>	Configures uplink cancellation behavior if both UL CI and intra-UE priority indicator are configured for a given UE. If the field is present, then UL CI is only applicable to the UL transmissions indicated/configured as low priority level. If the field is absent, UL CI is applicable to UL transmission irrespective of its priority level (see TS 38.213 [13], clause 11.2A).

Conditional Presence	Explanation
<i>SUL-Only</i>	The field is optionally present, Need R, if <i>supplementaryUplink</i> is configured in <i>ServingCellConfig</i> . It is absent otherwise.
<i>SymbolPeriodicity</i>	This field is mandatory present if the configured UL CI monitoring periodicity indicated by <i>monitoringSlotPeriodicityAndOffset</i> for DCI format 2_4 is 1 slot with more than one monitoring occasion, otherwise absent.

– *UplinkConfigCommon*

The IE *UplinkConfigCommon* provides common uplink parameters of a cell.

UplinkConfigCommon information element

```
-- ASN1START
-- TAG-ULINKCONFIGCOMMON-START

UplinkConfigCommon ::=
    SEQUENCE {
        frequencyInfoUL          FrequencyInfoUL          OPTIONAL, -- Cond InterFreqHOAndServCellAdd
        initialUplinkBWP          BWP-UplinkCommon          OPTIONAL, -- Cond ServCellAdd
    }
```

```
dummy                TimeAlignmentTimer
}

UplinkConfigCommon-v1700 ::=      SEQUENCE {
  initialUplinkBWP-RedCap-r17      BWP-UplinkCommon                OPTIONAL  -- Need R
}

-- TAG-UPLINKCONFIGCOMMON-STOP
-- ASN1STOP
```

UplinkConfigCommon field descriptions	
frequencyInfoUL	Absolute uplink frequency configuration and subcarrier specific virtual carriers.
initialUplinkBWP	The initial uplink BWP configuration for a serving cell (see TS 38.213 [13], clause 12).
initialUplinkBWP-RedCap	If present, (e)RedCap UEs use this UL BWP instead of <i>initialUplinkBWP</i> . If absent, (e)RedCap UEs use <i>initialUplinkBWP</i> provided that it does not exceed the (e)RedCap UE maximum bandwidth (see also clause 5.2.2.4.2).

Conditional Presence	Explanation
<i>InterFreqHOAndServCellAdd</i>	This field is mandatory present for inter-frequency handover and upon serving cell (PSCell/SCell) addition. Otherwise, the field is optionally present, Need M.
<i>ServCellAdd</i>	This field is mandatory present upon serving cell addition (for PSCell and SCell) and upon handover from E-UTRA to NR. It is optionally present, Need M otherwise.

– UplinkConfigCommonSIB

The IE *UplinkConfigCommonSIB* provides common uplink parameters of a cell.

UplinkConfigCommonSIB information element

```
-- ASN1START
-- TAG-UPLINKCONFIGCOMMONSIB-START

UplinkConfigCommonSIB ::=      SEQUENCE {
  frequencyInfoUL              FrequencyInfoUL-SIB,
  initialUplinkBWP              BWP-UplinkCommon,

```
frequencyInfoUL-v1760      FrequencyInfoUL-SIB-v1760
}

-- TAG-UPLINKCONFIGCOMMONSIB-STOP
-- ASN1STOP
```

UplinkConfigCommonSIB field descriptions
frequencyInfoUL Absolute uplink frequency configuration and subcarrier specific virtual carriers.
InitialUplinkBWP The initial uplink BWP configuration for a PCell (see TS 38.213 [13], clause 12).
initialUplinkBWP-RedCap If present, (e)RedCap UEs use this UL BWP instead of <i>initialUplinkBWP</i> . If absent, (e)RedCap UEs use <i>initialUplinkBWP</i> provided that it does not exceed the (e)RedCap UE maximum bandwidth (see also clause 5.2.2.4.2).

– Uplink-PowerControl

The IE *Uplink-PowerControl* is used to configure UE specific power control parameter for PUSCH, PUCCH and SRS.

Uplink-PowerControl information element

```
-- ASN1START
-- TAG-UPLINK-POWERCONTROL-START

Uplink-powerControl-r17 ::= SEQUENCE {
    ul-powercontrolId-r17      Uplink-powerControlId-r17,
    p0AlphaSetforPUSCH-r17     P0AlphaSet-r17                OPTIONAL, -- Need R
    p0AlphaSetforPUCCH-r17     P0AlphaSet-r17                OPTIONAL, -- Need R

}

-- TAG-UPLINK-POWERCONTROL-STOP
-- ASN1STOP
```

Uplink-PowerControl, Uplink-powerControlExt field descriptions***p0AlphaSetforPUSCH, p0AlphaSetforPUCCH, p0AlphaSetforSRS***

Configures power control parameters for PUSCH, PUCCH and SRS (see TS 38.213 [13], clause 7.2). When the field *alpha* is absent in *p0AlphaSetforPUSCH*, the UE applies the value 1 for PUSCH power control. When the field *alpha* is absent in *p0AlphaSetforSRS*, the UE applies the value 1 for SRS power control. In *p0AlphaSetforPUCCH*, the field *alpha* is absent (not used). If *srs-TwoSeparatePowerControlAdjustmentStates* is configured and *srs-PowerControlAdjustmentStates* is set to *separateClosedLoop*, the field *closedLoopIndex* in *p0AlphaSetforSRS* indicates one of the separate SRS power control adjustment states i.e. value of *i0* and *i1* refer to the first and the second power control adjustment state separate from PUSCH, respectively.

p0AlphaSetforPUSCH-SBFD, p0AlphaSetforPUCCH-SBFD, p0AlphaSetforSRS-SBFD

Configures separate UL power control parameters for PUSCH, PUCCH and SRS transmissions in SBFD symbols (see TS 38.213 [13], clause 6 and clause 7). When the field *alpha* is absent in *p0AlphaSetforPUSCH-SBFD*, the UE applies the value 1 for PUSCH power control. When the field *alpha* is absent in *p0AlphaSetforSRS-SBFD*, the UE applies the value 1 for SRS power control. In *p0AlphaSetforPUCCH-SBFD*, the field *alpha* is absent (not used).

– ***Uu-RelayRLC-ChannelConfig***

The IE *Uu-RelayRLC-ChannelConfig* is used to configure an RLC entity, a corresponding logical channel in MAC for Uu Relay RLC channel between L2 U2N Relay UE and network, or between a N3C relay UE and network in case of MP.

***Uu-RelayRLC-ChannelConfig* information element**

```
-- ASN1START
-- TAG-UU-RELAYRLC-CHANNELCONFIG-START

Uu-RelayRLC-ChannelConfig-r17 ::= SEQUENCE {
    uu-LogicalChannelIdentity-r17      LogicalChannelIdentity          OPTIONAL, -- Cond RelayLCH-SetupOnly
    uu-RelayRLC-ChannelID-r17          Uu-RelayRLC-ChannelID-r17,
    reestablishRLC-r17                 ENUMERATED {true}              OPTIONAL, -- Need N
    rlc-Config-r17                    RLC-Config                     OPTIONAL, -- Cond RelayLCH-Setup
    mac-LogicalChannelConfig-r17       LogicalChannelConfig           OPTIONAL, -- Cond RelayLCH-Setup
    ...
}

-- TAG-UU-RELAYRLC-CHANNELCONFIG-STOP
-- ASN1STOP
```

Uu-RelayRLC-ChannelConfig field descriptions	
uu-LogicalChannelIdentity	Indicates the logical channel id for Uu Relay RLC channel of the L2 U2N Relay UE or of the L2 Last U2N Relay UE.
uu-RelayRLC-ChannelID	Indicates the Uu Relay RLC channel in the link between L2 U2N Relay UE and network or between L2 Last U2N Relay UE and network.
reestablishRLC	Indicates that RLC should be re-established.
rlc-Config	Determines the RLC mode (UM, AM) and provides corresponding parameters.

Conditional Presence	Explanation
<i>RelayLCH-Setup</i>	This field is mandatory present upon creation of a new logical channel for a Uu Relay RLC channel. It is optionally present, Need M, otherwise.
<i>RelayLCH-SetupOnly</i>	This field is mandatory present upon creation of a new logical channel for a Uu Relay RLC channel. It is absent otherwise.

– *Uu-RelayRLC-ChannelID*

The IE *Uu-RelayRLC-ChannelID* is used to identify a Uu Relay RLC channel in the link between L2 U2N Relay UE and network or between L2 Last U2N Relay UE and network.

***Uu-RelayRLC-ChannelID* information element**

```
-- ASN1START
-- TAG-UU-RELAYRLC-CHANNELID-START

Uu-RelayRLC-ChannelID-r17 ::= INTEGER (1..maxLC-ID)

-- TAG-UU-RELAYRLC-CHANNELID-STOP
-- ASN1STOP
```

– *UplinkTxDirectCurrentList*

The IE *UplinkTxDirectCurrentList* indicates the Tx Direct Current locations per serving cell for each configured UL BWP in the serving cell, based on the BWP numerology and the associated carrier bandwidth.

***UplinkTxDirectCurrentList* information element**

```
-- ASN1START
-- TAG-UPLINKTXDIRECTCURRENTLIST-START

UplinkTxDirectCurrentList ::= SEQUENCE (SIZE (1..maxNrofServingCells)) OF UplinkTxDirectCurrentCell

UplinkTxDirectCurrentCell ::= SEQUENCE {
```

```
servCellIndex          ServCellIndex,
uplinkDirectCurrentBWP SEQUENCE (SIZE (1..maxNrofBWPs)) OF UplinkTxDirectCurrentBWP,
...
[[
uplinkDirectCurrentBWP-SUL SEQUENCE (SIZE (1..maxNrofBWPs)) OF UplinkTxDirectCurrentBWP OPTIONAL
]]
]
}

UplinkTxDirectCurrentBWP ::= SEQUENCE {
  bwp-Id          BWP-Id,
  shift7dot5kHz   BOOLEAN,
  txDirectCurrentLocation INTEGER (0..3301)
}

-- TAG-UPLINKTXDIRECTCURRENTLIST-STOP
-- ASN1STOP
```

UplinkTxDirectCurrentBWP field descriptions
bwp-Id The BWP-Id of the corresponding uplink BWP.
shift7dot5kHz Indicates whether there is 7.5 kHz shift or not. 7.5 kHz shift is applied if the field is set to <i>true</i> . Otherwise 7.5 kHz shift is not applied.
txDirectCurrentLocation The uplink Tx Direct Current location for the carrier. Only values in the value range of this field between 0 and 3299, which indicate the subcarrier index within the carrier corresponding to the numerology of the corresponding uplink BWP and value 3300, which indicates "Outside the carrier" and value 3301, which indicates "Undetermined position within the carrier" are used in this version of the specification.

UplinkTxDirectCurrentCell field descriptions
servCellIndex The serving cell ID of the serving cell corresponding to the <i>uplinkDirectCurrentBWP</i> .
uplinkDirectCurrentBWP The Tx Direct Current locations for all the uplink BWPs configured at the corresponding serving cell.
uplinkDirectCurrentBWP-SUL The Tx Direct Current locations for all the supplementary uplink BWPs configured at the corresponding serving cell.

– UplinkTxDirectCurrentMoreCarrierList

The IE *UplinkTxDirectCurrentMoreCarrierList* indicates the Tx Direct Current locations for intra-band CA including one, two or more uplink carriers. The UE does not report the uplink Direct Current location information for SUL carrier(s).

UplinkTxDirectCurrentMoreCarrierList information element

```
-- ASN1START
-- TAG-UPLINKTXDIRECTCURRENTMORECARRIERLIST-START
```

```

UplinkTxDirectCurrentMoreCarrierList-r17 ::= SEQUENCE (SIZE (1..maxNrofCC-Group-r17)) OF CC-Group-r17

CC-Group-r17 ::= SEQUENCE {
    servCellIndexLower-r17 ServCellIndex,
    servCellIndexHigher-r17 ServCellIndex OPTIONAL,
    defaultDC-Location-r17 DefaultDC-Location-r17,

}

FrequencyComponent-r17 ::= ENUMERATED {activeCarrier,configuredCarrier,activeBWP,configuredBWP}

-- TAG-UPLINKTXDIRECTCURRENTMORECARRIERLIST-STOP
-- ASN1STOP

```

<i>UplinkTxDirectCurrentMoreCarrierList</i> and <i>CC-Group</i> field descriptions
CC-Group The contiguous carriers sharing the same PA in an intra-band UL CA configuration. The UE shall report only one DC location for an intra-band CC combination with one active uplink carrier in case <i>DefaultDC-Location</i> is set to <i>activeCarrier</i> or <i>activeBWP</i> .
defaultDC-Location Indicates the default DC location derivation option. The default Tx Direct Current is located at the mathematical center of the UE bandwidth, i.e. between the lower edge of the lowest subcarrier of the lowest frequency component and the upper edge of the highest subcarrier of the highest frequency component, rounded to the subcarrier grid of the lowest SCS defined for the component carrier on which the default Direct Current is located. The lowest and highest frequency components used for derivation of mathematical center are indicated by <i>FrequencyComponent</i> in the associated <i>CC-Group</i> , where the lowest frequency component and the highest frequency component may be the same. If the mathematical center of the UE bandwidth lands on frequencies where there is no subcarrier grid defined, the subcarrier grid of the lowest SCS of the nearest lower frequency component carrier shall be extended to cover the frequency of the mathematical default Direct Current location.
offsetToDefault Indicates the DC location offset to the default DC location derived from <i>defaultDC-Location</i> . The lowest SCS in the CC group is used as the offset granularity. Value 0 represents no offset. offsetValue is used in case <i>DefaultDC-Location</i> is set to <i>configuredCarrier</i> or <i>configuredBWP</i> . <i>offsetlist</i> is used in case <i>DefaultDC-Location</i> is set to <i>activeCarrier</i> or <i>activeBWP</i> . Each entity in this list corresponds to the entry in carriers combination in <i>IntraBandCC-CombinationReqList</i> of the intra-band CA component. For each CC group, the UE shall include the same number of entries, and listed in the same order as in <i>CC-CombinationList</i> . If <i>DefaultDC-Location</i> is set the <i>activeCarrier</i> , same offsetValue is signalled for all requested carriers combinations with same active carriers states(regardless of the active BWP index).
servCellIndexHigher Indicates the serving cell index of the highest edge of the <i>CC-Group</i> . If absent, there is only one carrier in this group indicated by <i>servCellIndexLower</i> .
servCellIndexLower Indicates the serving cell index of the lowest edge of the <i>CC-Group</i> .
shift7dot5kHz Indicates whether there is 7.5 kHz shift or not. 7.5 kHz shift is applied if the field is set to true, otherwise 7.5 kHz shift is not applied.

<i>DefaultDC-Location</i> field descriptions
dl Indicates that the default DC location is derived based on the DL frequencies of the frequency component.
ul Indicates that the default DC location is derived based on the UL frequencies of the frequency component.
ulAndDL Indicates that the default DC location is derived based on the edge most frequencies among any DL and UL frequency components.

– *UplinkTxDirectCurrentTwoCarrierList*

The IE *UplinkTxDirectCurrentTwoCarrierList* indicates the Tx Direct Current locations when uplink intra-band CA with two carriers is configured, based on the configured carriers and BWP numerology and the associated carrier bandwidth of the carriers. The UE does not report the uplink Direct Current location information for SUL carrier(s).

***UplinkTxDirectCurrentTwoCarrierList* information element**

```
-- ASN1START
-- TAG-UPLINKTXDIRECTCURRENTTWCARRIERLIST-START
```

```
UplinkTxDirectCurrentTwoCarrierList-r16 ::= SEQUENCE (SIZE (1..maxNrofTxDC-TwoCarrier-r16)) OF UplinkTxDirectCurrentTwoCarrier-r16

UplinkTxDirectCurrentTwoCarrier-r16 ::= SEQUENCE {
    carrierOneInfo-r16          UplinkTxDirectCurrentCarrierInfo-r16,

    txDirectCurrentLocation-r16 INTEGER (0..3301)
}

-- TAG-UPLINKTXDIRECTCURRENTTWOARRIERLIST-STOP
-- ASN1STOP
```

UplinkTxDirectCurrentTwoCarrierInfo field descriptions	
referenceCarrierIndex	The serving cell ID of the carrier which is to be used as the reference for interpreting the Tx Direction Current location as reported using <i>txDirectCurrentLocation-r16</i> . The numerology of the uplink BWP ID reported with <i>bwp-Id-r16</i> for this serving cell is the numerology used for interpreting the reported subcarrier location.
shift7dot5kHz	Indicates whether there is 7.5 kHz shift or not. 7.5 kHz shift is applied if the field is set to <i>true</i> . Otherwise 7.5 kHz shift is not applied.
txDirectCurrentLocation	The uplink Tx Direct Current location for the two carrier uplink CA with the serving cells reported using <i>carrierOneInfo-r16</i> and <i>carrierTwoInfo-r16</i> . Values in the range of this field between 0 and 3299 indicate the subcarrier index of the uplink Tx Direct Current location with the subcarrier taken from the serving cell with ID <i>referenceCarrierIndex</i> and the numerology of the corresponding uplink BWP reported for this serving cell. Value 3300 indicates "Outside the carrier" and value 3301 indicates "Undetermined position within the carrier".

UplinkTxDirectCurrentCarrierInfo field descriptions**bwp-Id**

The BWP ID of the serving cell which is part of the two carrier uplink carrier aggregation. The UE shall not report this field if the serving cell is reported as deactivated using *deactivatedCarrier-r16*.

deactivatedCarrier

For the reported uplink Tx Direct Current location(s) corresponding to *singlePA-TxDirectCurrent-r16*, indicates whether the carrier is deactivated or not for this serving cell. If the carrier refers to the PCell, the UE shall not set this field to *deactivated*.

servCellIndex

The serving cell ID of the serving cell which is part of the two carrier uplink carrier aggregation.

UplinkTxDirectCurrentTwoCarrier field descriptions**carrierOneInfo**

The serving cell ID and BWP ID of the first carrier of the uplink carrier aggregation for which the uplink Tx Direct Current location(s) are being reported.

carrierTwoInfo

The serving cell ID and BWP ID of the second carrier of the uplink carrier aggregation for which the uplink Tx Direct Current location(s) are being reported.

singlePA-TxDirectCurrent

The uplink Tx Direct Current location for the UE which support single PA for this uplink carrier aggregation. For the UEs which support dual PA for this uplink carrier aggregation, this field is for reporting the uplink Tx Direct Current location of the first PA.

secondPA-TxDirectCurrent

The uplink Tx Direct Current location used by the UE with the second PA for the UEs which support dual PA for this uplink carrier aggregation. This field shall be absent for the *UplinkTxDirectCurrentTwoCarrier* entity where *deactivatedCarrier* of *carrierOneInfo* or *carrierTwoInfo* is set to *deactivated*.

– ZP-CSI-RS-Resource

The IE *ZP-CSI-RS-Resource* is used to configure a Zero-Power (ZP) CSI-RS resource (see TS 38.214 [19], clause 5.1.4.2). Reconfiguration of a *ZP-CSI-RS-Resource* between periodic or semi-persistent and aperiodic is not supported.

ZP-CSI-RS-Resource information element

```
-- ASN1START
-- TAG-ZP-CSI-RS-RESOURCE-START

ZP-CSI-RS-Resource ::=
    SEQUENCE {
        zp-CSI-RS-ResourceId          ZP-CSI-RS-ResourceId,
        resourceMapping               CSI-RS-ResourceMapping,
        periodicityAndOffset          CSI-ResourcePeriodicityAndOffset    OPTIONAL, --Cond PeriodicOrSemiPersistent
        ...
    }

ZP-CSI-RS-ResourceId ::=
    INTEGER (0..maxNrofZP-CSI-RS-Resources-1)

-- TAG-ZP-CSI-RS-RESOURCE-STOP
-- ASN1STOP
```

ZP-CSI-RS-Resource field descriptions
periodicityAndOffset Periodicity and slot offset for periodic/semi-persistent ZP-CSI-RS (see TS 38.214 [19], clause 5.1.4.2). Network always configures the UE with a value for this field for periodic and semi-persistent ZP-CSI-RS resource (as indicated in PDSCH-Config).
resourceMapping OFDM symbol and subcarrier occupancy of the ZP-CSI-RS resource within a slot.
zp-CSI-RS-ResourceId ZP CSI-RS resource configuration ID (see TS 38.214 [19], clause 5.1.4.2).

Conditional Presence	Explanation
<i>PeriodicOrSemiPersistent</i>	The field is optionally present, Need M, for periodic and semi-persistent ZP-CSI-RS-Resources (as indicated in PDSCH-Config). The field is absent otherwise.

– ZP-CSI-RS-ResourceSet

The IE *ZP-CSI-RS-ResourceSet* refers to a set of *ZP-CSI-RS-Resources* using their *ZP-CSI-RS-ResourceIds*.

ZP-CSI-RS-ResourceSet information element

```
-- ASN1START
-- TAG-ZP-CSI-RS-RESOURCESET-START

ZP-CSI-RS-ResourceSet ::=
    SEQUENCE {
        zp-CSI-RS-ResourceSetId      ZP-CSI-RS-ResourceSetId,

```

– *BandCombinationList*

The IE *BandCombinationList* contains a list of NR CA, NR non-CA and/or MR-DC band combinations (also including DL only or UL only band).

BandCombinationList information element

```

BandCombination field descriptions
BandCombinationList-v1540, BandCombinationList-v1550, BandCombinationList-v1560, BandCombinationList-v1570, BandCombinationList-v1580, BandCombinationList-v1590, BandCombinationList-v15g0, BandCombinationList-v15n0, BandCombinationList-v1610, BandCombinationList-v1630, BandCombinationList-v1640, BandCombinationList-v1650, BandCombinationList-v1680, BandCombinationList-v1690, BandCombinationList-v16a0, BandCombinationList-v16j0, BandCombinationList-v1700, BandCombinationList-v1720, BandCombinationList-v1730, BandCombinationList-v1760, BandCombinationList-v1780, BandCombinationList-v1790, BandCombinationList-v17b0, BandCombinationList-v1800, BandCombinationList-v1830, BandCombinationList-v1840, BandCombinationList-v1860, BandCombinationList-v1900 The UE shall include the same number of entries, and listed in the same order, as in <i>BandCombinationList</i> (without suffix). If the field is included in <i>supportedBandCombinationListNEDC-Only-v1610</i>, the UE shall include the same number of entries, and listed in the same order, as in <i>BandCombinationList</i> of <i>supportedBandCombinationListNEDC-Only</i> (without suffix) field. If the field is included in <i>supportedBandCombinationListNEDC-Only-v15a0</i>, the UE shall include the same number of entries, and listed in the same order, as in <i>BandCombinationList</i> (without suffix) of <i>supportedBandCombinationListNEDC-Only</i> (without suffix) field.
BandCombinationList-UplinkTxSwitch-r16, BandCombinationList-UplinkTxSwitch-v1630, BandCombinationList-UplinkTxSwitch-v1640, BandCombinationList-UplinkTxSwitch-v1650, BandCombinationList-UplinkTxSwitch-v1690, BandCombinationList-UplinkTxSwitch-v16a0, BandCombinationList-UplinkTxSwitch-v16e0, BandCombinationList-UplinkTxSwitch-v16j0, BandCombinationList-UplinkTxSwitch-v1700, BandCombinationList-UplinkTxSwitch-v1720, BandCombinationList-UplinkTxSwitch-v1730, BandCombinationList-UplinkTxSwitch-v1760, BandCombinationList-UplinkTxSwitch-v1780, BandCombinationList-UplinkTxSwitch-v1790, BandCombinationList-UplinkTxSwitch-v17b0, BandCombinationList-UplinkTxSwitch-v1800, BandCombinationList-UplinkTxSwitch-v1830, BandCombinationList-UplinkTxSwitch-v1840, BandCombinationList-UplinkTxSwitch-v1860, BandCombinationList-UplinkTxSwitch-v1900 The UE shall include the same number of entries, and listed in the same order, as in <i>BandCombinationList-UplinkTxSwitch-r16</i>. For the field of <i>supportedBandCombinationList-UplinkTxSwitch-v1700</i>, if the UE does not support 2Tx-2Tx switching for a given band combination, the field of <i>supportedBandPairListNR-v1700</i> in the corresponding entry is absent.
ca-ParametersNRDC If the field (without suffix) is included for a band combination in the NR capability container, the field (without suffix) indicates support of NR-DC. Otherwise, the field is absent. If a version of the field (with suffix) is absent for a band combination, <i>ca-ParametersNR</i> field version in <i>BandCombination</i> corresponding to the <i>ca-ParametersNR-ForDC</i> field version in the field (with suffix) is applicable to the UE configured with NR-DC for the band combination.
featureSetCombinationDAPS If this field is present for a band combination, it reports the feature set combination supported for the band combination when any DAPS bearer is configured.
featureSetCombinationLowBandSwitching If this field is present for a band combination, it reports the feature set combination supported for the band combination for low band CA via switching as defined in TS 38.101-1 [15].
ne-DC-BC If the field is included for a band combination in the MR-DC capability container, the field indicates support of NE-DC. Otherwise, the field is absent.
supportedBandPairListNR-r16, supportedBandPairListNR-v1700, supportedBandPairListNR-v1900 Indicates a list of band pair supporting UL Tx switching as defined in TS 38.101-1 [15] for a given band combination. A UE supporting 2Tx-2Tx switching should include both of <i>supportedBandPairListNR-r16</i> and <i>supportedBandPairListNR-v1700</i>. And the UE shall include the same number of entries listed in the same order as in <i>supportedBandPairListNR-r16</i>. If the UE does not support 2Tx-2Tx switching for a given band pair, the field of <i>uplinkTxSwitchingPeriod2T2T</i> in the corresponding entry is absent. A 3Tx UE supporting Tx switching between 2 UL bands with up to 2Tx per band should indicate both of <i>supportedBandPairListNR-r16</i> and <i>supportedBandPairListNR-v1900</i>. And the UE shall include the same number of entries listed in the same order as in <i>supportedBandPairListNR-r16</i>.
supportedBandPairListNR-r18, supportedBandPairListNR-v1840 Indicates a list of band pair supporting UL Tx switching up to 4 bands as defined in TS 38.101-1 [15] for a given band combination. The UE shall include all the possible band pairs among the UL band entries (e.g. if the UE supports this feature in a band combination with UL support on bands A, B, C and D, the UE shall include the band pairs A+B, A+C, A+D, B+C, B+D and C+D). If <i>supportedBandPairListNR-v1840</i> is included, the UE shall include the same number of entries listed in the same order as in <i>supportedBandPairListNR-r18</i>. For a band pair only supporting 1Tx-1Tx switching, the UE should include <i>switchingPeriodFor1T</i> in <i>ULTxSwitchingBandPair-r18</i>.

For a band pair supporting 1Tx-2Tx switching, the UE always supports 1Tx-1Tx switching, and the UE should include *switchingPeriodFor1T* in *ULTxSwitchingBandPair-r18*. For a band pair supporting 2Tx-2Tx switching, the UE always supports 1Tx-2Tx switching and 1Tx-1Tx switching, the UE should include *switchingPeriodFor2T* as well as *switchingPeriodFor1T* in *ULTxSwitchingBandPair-r18*.

srs-SwitchingSimultaneousList

Indicates, for a particular pair of NR bands, the RF retuning time when switching between a NR carrier corresponding to this band entry and another (PUSCH-less) NR carrier corresponding to the band entry in the order indicated below:

- For the first NR band, the UE shall include the same number of entries for NR bands as in *bandList*, i.e. first entry corresponds to first NR band in *bandList* and so on,
- For the second NR band, the UE shall include one entry less, i.e. first entry corresponds to the second NR band in *bandList* and so on
- And so on

srs-SwitchingTimesListNR

Indicates, for a particular pair of NR bands, the RF retuning time when switching between a NR carrier corresponding to this band entry and another (PUSCH-less) NR carrier corresponding to the band entry in the order indicated below:

- For the first NR band, the UE shall include the same number of entries for NR bands as in *bandList*, i.e. first entry corresponds to first NR band in *bandList* and so on,
- For the second NR band, the UE shall include one entry less, i.e. first entry corresponds to the second NR band in *bandList* and so on
- And so on

srs-SwitchingTimesListEUTRA

Indicates, for a particular pair of E-UTRA bands, the RF retuning time when switching between an E-UTRA carrier corresponding to this band entry and another (PUSCH-less) E-UTRA carrier corresponding to the band entry in the order indicated below:

- For the first E-UTRA band, the UE shall include the same number of entries for E-UTRA bands as in *bandList*, i.e. first entry corresponds to first E-UTRA band in *bandList* and so on,
- For the second E-UTRA band, the UE shall include one entry less, i.e. first entry corresponds to the second E-UTRA band in *bandList* and so on
- And so on

srs-TxSwitch

Indicates supported SRS antenna switch capability for the associated band. If the UE indicates support of *SRS-SwitchingTimeNR*, the UE is allowed to set this field for a band with associated *FeatureSetUplinkId* set to 0 for SRS carrier switching.

supportedIntraENDC-BandCombinationList

Indicates BCS and/or spectrum contiguity capability for each entry in a list of intra-band (NG)EN-DC components in an inter-band (NG)EN-DC band combination. The UE shall include the entries in the order corresponding to the order of NR band entries of the intra-band (NG)EN-DC components in the *bandList* in the inter-band (NG)EN-DC band combination (i.e., *BandCombination* without suffix).

uplinkTxSwitchingBandParametersList-v1700, uplinkTxSwitchingBandParametersList-v1900

Indicates a list of per band per band combination capabilities for UL Tx switching.

– *BandCombinationListSidelinkEUTRA-NR*

The IE *BandCombinationListSidelinkEUTRA-NR* contains a list of V2X sidelink and NR sidelink band combinations.

```

<i>CA-ParametersNR</i> field description
codebookParametersPerBC For a given supported band combination, this field indicates the alternative list of <i>SupportedCSI-RS-Resource</i> supported for each codebook type, amongst the supported CSI-RS resources included in <i>codebookParametersPerBand</i> in <i>MIMO-ParametersPerBand</i> .
dummy The field is not used in the specification and the network ignores the received value.

– *CA-ParametersNRDC*

The IE *CA-ParametersNRDC* contains dual connectivity related capabilities that are defined per band combination.

CA-ParametersNRDC field descriptions
ca-ParametersNR-forDC (with and without suffix) If this field is present for a band combination, it reports the UE capabilities when NR-DC is configured with the band combination. If a version of this field (i.e., with or without suffix) is absent for a band combination, the corresponding <i>ca-ParametersNR</i> field version in <i>BandCombination</i> is applicable to the UE configured with NR-DC for the band combination. If a version of this field (i.e., with or without suffix) is present for a band combination but does not contain any parameters, the UE does not support the corresponding field version when configured with NR-DC for the band combination.
featureSetCombinationDC If this field is present for a band combination, it reports the feature set combination supported for the band combination when NR-DC is configured. If this field is absent for a band combination, the <i>featureSetCombination</i> in <i>BandCombination</i> (without suffix) is applicable to the UE configured with NR-DC for the band combination.

– **CarrierAggregationVariant**

The IE *CarrierAggregationVariant* informs the network about supported "placement" of the SpCell in an NR cell group.

CarrierAggregationVariant information element

```
-- ASN1START
-- TAG-CARRIERAGGREGATIONVARIANT-START

CodebookParameters field descriptions**supportedCSI-RS-ResourceListAlt**

This field indicates the alternative list of *SupportedCSI-RS-Resource* supported for each codebook type. The supported CSI-RS resource is indicated by an integer value which pinpoints *SupportedCSI-RS-Resource* defined in *CodebookVariantsList*. The value 0 corresponds to the first entry of *CodebookVariantsList*. The value 1 corresponds to the second entry of *CodebookVariantsList*, and so on. For each codebook type, the field shall be included in both *codebookParametersPerBC* (but optional for single CC) and *codebookParametersPerBand*.

supportedCSI-RS-ResourceExtList-r19, supportedCSI-RS-ResourceListPerCC-r19

This field indicates the alternative list of *SupportedCSI-RS-ResourceExt* supported for each codebook type. The supported CSI-RS resource is indicated by an integer value which pinpoints *SupportedCSI-RS-ResourceExt* defined in *CodebookVariantsListExt*. The value 0 corresponds to the first entry of *CodebookVariantsListExt*. The value 1 corresponds to the second entry of *CodebookVariantsListExt*, and so on. For each codebook type, the field shall be included in both *codebookParametersPerBC* (but optional for single CC) and *codebookParametersPerBand*.

supportedCSI-RS-ResourceHybridList-r19

This field indicates the alternative list of *SupportedCSI-RS-ResourceHybrid* supported for each codebook type. The supported CSI-RS resource is indicated by an integer value which pinpoints *SupportedCSI-RS-ResourceHybrid* defined in *CodebookVariantsListHybrid*. The value 0 corresponds to the first entry of *CodebookVariantsListHybrid*. The value 1 corresponds to the second entry of *CodebookVariantsListHybrid*, and so on. For each codebook type, the field shall be included in both *codebookParametersPerBC* (but optional for single CC) and *codebookParametersPerBand*.

– **DL-PRS-MeasurementWithRxFH-RRC-Connected**

The IE *DL-PRS-MeasurementWithRxFH-RRC-Connected* is used to convey the capabilities supported by the UE for PRS measurement with Rx frequency hopping within a measurement gap and measurement reporting in RRC_CONNECTED for RedCap UEs.

DL-PRS-MeasurementWithRxFH-RRC-Connected information element

```

– *FeatureSetCombination*

The IE *FeatureSetCombination* is a two-dimensional matrix of *FeatureSet* entries.

Each *FeatureSetsPerBand* contains a list of feature sets applicable to the carrier(s) of one band entry of the associated band combination. Across the associated bands, the UE shall support the combination of *FeatureSets* at the same position in the *FeatureSetsPerBand*. All *FeatureSetsPerBand* in one *FeatureSetCombination* must have the same number of entries.

The number of *FeatureSetsPerBand* in the *FeatureSetCombination* must be equal to the number of band entries in an associated band combination. The first *FeatureSetPerBand* applies to the first band entry of the band combination, and so on.

Each *FeatureSet* contains either a pair of NR or E-UTRA feature set IDs for UL and DL.

In case of NR, the actual feature sets for UL and DL are defined in the *FeatureSets* IE and referred to from here by their ID, i.e., their position in the *featureSetsUplink* / *featureSetsDownlink* list in the *FeatureSet* IE.

In case of E-UTRA, the feature sets referred to from this list are defined in TS 36.331 [10] and conveyed as part of the *UE-EUTRA-Capability* container.

The *FeatureSetUplink* and *FeatureSetDownlink* referred to from the *FeatureSet* comprise, among other information, a set of *FeatureSetUplinkPerCC-Ids* and *FeatureSetDownlinkPerCC-Ids*. The number of these per-CC IDs determines the number of carriers that the UE is able to aggregate contiguously in frequency domain in the corresponding band. The number of carriers supported by the UE is also restricted by the bandwidth class indicated in the associated *BandCombination*, if present.

In feature set combinations the UE shall exclude entries with same or lower capabilities, since the network may anyway assume that the UE supports those.

- NOTE 1: The UE may advertise fallback band-combinations in which it supports additional functionality explicitly in two ways: Either by setting FeatureSet IDs to zero (inter-band and intra-band non-contiguous fallback) and by reducing the number of FeatureSet-PerCC Ids in a Feature Set (intra-band contiguous fallback). Or by separate *BandCombination* entries with associated *FeatureSetCombinations*.
- NOTE 2: The UE may advertise a *FeatureSetCombination* containing only fallback band combinations. That means, in a *FeatureSetCombination*, each group of *FeatureSets* across the bands may contain at least one pair of *FeatureSetUplinkId* and *FeatureSetDownlinkId* which is set to 0/0.
- NOTE 3: The Network configures serving cell(s) and BWP(s) configuration to comply with capabilities derived from the combination of FeatureSets at the same position in the *FeatureSetsPerBand*, regardless of activated/deactivated serving cell(s) and BWP(s).

***FeatureSetCombination* information element**

```
-- ASN1START
-- TAG-FEATURESETCOMBINATION-START

FeatureSetCombination ::=      SEQUENCE (SIZE (1..maxSimultaneousBands)) OF FeatureSetsPerBand
FeatureSetsPerBand ::=        SEQUENCE (SIZE (1..maxFeatureSetsPerBand)) OF FeatureSet
FeatureSet ::=                 CHOICE {
    eutra                       SEQUENCE {
        downlinkSetEUTRA       FeatureSetEUTRA-DownlinkId,
        uplinkSetEUTRA         FeatureSetEUTRA-UplinkId
    },
    nr                          SEQUENCE {
        downlinkSetNR          FeatureSetDownlinkId,
        uplinkSetNR            FeatureSetUplinkId
    }
}

-- TAG-FEATURESETCOMBINATION-STOP
-- ASN1STOP
```

FeatureSetCombinationId

The IE *FeatureSetCombinationId* identifies a *FeatureSetCombination*. The *FeatureSetCombinationId* of a *FeatureSetCombination* is the position of the *FeatureSetCombination* in the *featureSetCombinations* list (in *UE-NR-Capability* or *UE-MRDC-Capability*). The *FeatureSetCombinationId* = 0 refers to the first entry in the *featureSetCombinations* list (in *UE-NR-Capability* or *UE-MRDC-Capability*).

NOTE: The *FeatureSetCombinationId* = 1024 is not used due to the maximum entry number of *featureSetCombinations*.

***FeatureSetCombinationId* information element**

FeatureSetDownlink field descriptions
featureSetListPerDownlinkCC Indicates which features the UE supports on the individual DL carriers of the feature set (and hence of a band entry that refer to the feature set). The UE shall hence include at least as many <i>FeatureSetDownlinkPerCC-Id</i> in this list as the number of carriers it supports according to the <i>ca-BandwidthClassDL</i> , except if indicating additional functionality by reducing the number of <i>FeatureSetDownlinkPerCC-Id</i> in the feature set (see NOTE 1 in <i>FeatureSetCombination</i> IE description). The order of the elements in this list is not relevant, i.e., the network may configure any of the carriers in accordance with any of the <i>FeatureSetDownlinkPerCC-Id</i> in this list.
supportedSRS-Resources Indicates supported SRS resources for SRS carrier switching to the band associated with this <i>FeatureSetDownlink</i> . The UE is only allowed to set this field for a band with associated <i>FeatureSetUplinkId</i> set to 0.

– FeatureSetDownlinkId

The IE *FeatureSetDownlinkId* identifies a downlink feature set. The *FeatureSetDownlinkId* of a *FeatureSetDownlink* is the index position of the *FeatureSetDownlink* in the *featureSetsDownlink* list in the *FeatureSets* IE. The first element in that list is referred to by *FeatureSetDownlinkId* = 1. The *FeatureSetDownlinkId*=0 is not used by an actual *FeatureSetDownlink* but means that the UE does not support a carrier in this band of a band combination.

FeatureSetDownlinkId information element

```
-- ASN1START
```

```
-- TAG-FEATURESETDOWNLINKID-START

FeatureSetDownlinkId ::=                INTEGER (0..maxDownlinkFeatureSets)

-- TAG-FEATURESETDOWNLINKID-STOP
-- ASN1STOP
```

– FeatureSetDownlinkPerCC

The IE *FeatureSetDownlinkPerCC* indicates a set of features that the UE supports on the corresponding carrier of one band entry of a band combination.

FeatureSetDownlinkPerCC information element

}

-- TAG-FEATURESETDOWNLINKPERCC-STOP
-- ASN1STOP

```

– *FeatureSetDownlinkPerCC-Id*

The IE *FeatureSetDownlinkPerCC-Id* identifies a set of features applicable to one carrier of a feature set. The *FeatureSetDownlinkPerCC-Id* of a *FeatureSetDownlinkPerCC* is the index position of the *FeatureSetDownlinkPerCC* in the *featureSetsDownlinkPerCC*. The first element in the list is referred to by *FeatureSetDownlinkPerCC-Id* = 1, and so on.

FeatureSetDownlinkPerCC-Id information element

```

-- ASN1START
-- TAG-FEATURESETDOWNLINKPERCC-ID-START

FeatureSetDownlinkPerCC-Id ::= INTEGER (1..maxPerCC-FeatureSets)

-- TAG-FEATURESETDOWNLINKPERCC-ID-STOP
-- ASN1STOP

```

– *FeatureSetEUTRA-DownlinkId*

The IE *FeatureSetEUTRA-DownlinkId* identifies a downlink feature set in E-UTRA list (see TS 36.331 [10]). The first element in that list is referred to by *FeatureSetEUTRA-DownlinkId* = 1. The *FeatureSetEUTRA-DownlinkId*=0 is used when the UE does not support a carrier in this band of a band combination.

FeatureSetEUTRA-DownlinkId information element

```

-- ASN1START
-- TAG-FEATURESETEUTRADOWNLINKID-START

FeatureSetEUTRA-DownlinkId ::= INTEGER (0..maxEUTRA-DL-FeatureSets)

-- TAG-FEATURESETEUTRADOWNLINKID-STOP
-- ASN1STOP

```

– FeatureSetEUTRA-UplinkId

The IE *FeatureSetEUTRA-UplinkId* identifies an uplink feature set in E-UTRA list (see TS 36.331 [10]). The first element in that list is referred to by *FeatureSetEUTRA-UplinkId* = 1. The *FeatureSetEUTRA-UplinkId* = 0 is used when the UE does not support a carrier in this band of a band combination.

FeatureSetEUTRA-UplinkId information element

```
-- ASN1START
-- TAG-FEATURESETEUTRAUPLINKID-START

FeatureSetEUTRA-UplinkId ::=                INTEGER (0..maxEUTRA-UL-FeatureSets)

-- TAG-FEATURESETEUTRAUPLINKID-STOP
-- ASN1STOP
```

– FeatureSets

The IE *FeatureSets* is used to provide pools of downlink and uplink features sets. A *FeatureSetCombination* refers to the IDs of the feature set(s) that the UE supports in that *FeatureSetCombination*. The *BandCombination* entries in the *BandCombinationList* then indicate the ID of the *FeatureSetCombination* that the UE supports for that band combination.

The entries in the lists in this IE are identified by their index position. For example, the *FeatureSetUplinkPerCC-Id* = 4 identifies the 4th element in the *featureSetsUplinkPerCC* list.

NOTE: When feature sets (per CC) IEs require extension in future versions of the specification, new versions of the *FeatureSetDownlink*, *FeatureSetUplink*, *FeatureSets*, *FeatureSetDownlinkPerCC* and/or *FeatureSetUplinkPerCC* will be created and instantiated in corresponding new lists in the *FeatureSets* IE. For example, if new capability bits are to be added to the *FeatureSetDownlink*, they will instead be defined in a new *FeatureSetDownlink-rxy* which will be instantiated in a new *featureSetDownlinkList-rxy* list. If a UE indicates in a *FeatureSetCombination* that it supports the *FeatureSetDownlink* with ID #5, it implies that it supports both the features in *FeatureSetDownlink* #5 and *FeatureSetDownlink-rxy* #5 (if present). The number of entries in the new list(s) shall be the same as in the original list(s).

FeatureSetUplink field descriptions

featureSetListPerUplinkCC

Indicates which features the UE supports on the individual UL carriers of the feature set (and hence of a band entry that refers to the feature set). The UE shall hence include at least as many *FeatureSetUplinkPerCC-Id* in this list as the number of carriers it supports according to the *ca-BandwidthClassUL*, except if indicating additional functionality by reducing the number of *FeatureSetUplinkPerCC-Id* in the feature set (see NOTE 1 in *FeatureSetCombination* IE description). The order of the elements in this list is not relevant, i.e., the network may configure any of the carriers in accordance with any of the *FeatureSetUplinkPerCC-Id* in this list.

– FeatureSetUplinkId

The IE *FeatureSetUplinkId* identifies an uplink feature set. The *FeatureSetUplinkId* of a *FeatureSetUplink* is the index position of the *FeatureSetUplink* in the *featureSetsUplink* list in the *FeatureSets* IE. The first element in the list is referred to by *FeatureSetUplinkId* = 1, and so on. The *FeatureSetUplinkId* = 0 is not used by an actual *FeatureSetUplink* but means that the UE does not support a carrier in this band of a band combination.

FeatureSetUplinkId information element

```

-- ASN1START
-- TAG-FEATURESETUPLINKID-START

FeatureSetUplinkId ::=
    INTEGER (0..maxUplinkFeatureSets)

-- TAG-FEATURESETUPLINKID-STOP
-- ASN1STOP

```

– FeatureSetUplinkPerCC

The IE *FeatureSetUplinkPerCC* indicates a set of features that the UE supports on the corresponding carrier of one band entry of a band combination.

```

– FeatureSetUplinkPerCC-Id

The IE *FeatureSetUplinkPerCC-Id* identifies a set of features applicable to one carrier of a feature set. The *FeatureSetUplinkPerCC-Id* of a *FeatureSetUplinkPerCC* is the index position of the *FeatureSetUplinkPerCC* in the *featureSetsUplinkPerCC*. The first element in the list is referred to by *FeatureSetUplinkPerCC-Id* = 1, and so on.

FeatureSetUplinkPerCC-Id information element

```

-- ASN1START
-- TAG-FEATURESETUPLINKPERCC-ID-START

FeatureSetUplinkPerCC-Id ::= INTEGER (1..maxPerCC-FeatureSets)

-- TAG-FEATURESETUPLINKPERCC-ID-STOP

```

– FreqBandIndicatorEUTRA

```
-- ASN1START
```

```
-- TAG-FREQBANDINDICATOREUTRA-START
FreqBandIndicatorEUTRA ::= INTEGER (1..maxBandsEUTRA)
-- TAG-FREQBANDINDICATOREUTRA-STOP
-- ASN1STOP
```

– *FreqBandList*

The IE *FreqBandList* is used by the network to request NR CA, NR non-CA and/or MR-DC band combinations for specific NR and/or E-UTRA frequency bands and/or up to a specific number of carriers and/or up to specific aggregated bandwidth. This is also used to request feature sets (for NR) and feature set combinations (for NR and MR-DC). For NR sidelink communication, this is used by the initiating UE to request sidelink UE radio access capabilities from the peer UE. This is also used to request lower MSD capability for specific NR frequency bands for the UE supporting lower MSD.

FreqBandList information element

```
-- ASN1START
-- TAG-FREQBANDLIST-START
FreqBandList ::=
    SEQUENCE (SIZE (1..maxBandsMRDC)) OF FreqBandInformation

MIMO-ParametersPerBand field descriptions**codebookParametersPerBand**

For a given frequency band, this field indicates the alternative list of *SupportedCSI-RS-Resource* supported for each codebook type. The supported CSI-RS resources indicated by this field are referred by *codebookParametersperBC* in *CA-ParametersNR* to indicate the supported CSI-RS resource per band combination.

csi-RS-IM-ReceptionForFeedback/ csi-RS-ProcFrameworkForSRS/ csi-ReportFramework

CSI related capabilities which the UE supports on each of the carriers operated on this band. If the network configures the UE with serving cells on both FR1 and FR2 bands these values may be further limited by the corresponding fields in *fr1-fr2-Add-UE-NR-Capabilities*.

dummy-TimeGap

The field is not used in the specification and the network ignores the received value.

supportNewDMRS-Port

Presence of this field set to *supported1*, *supported2* or *supported3* indicates that the UE supports the new DMRS port entry {0,2,3}.

– **ModulationOrder**

The IE *ModulationOrder* is used to convey the maximum supported modulation order.

ModulationOrder information element

```
-- ASN1START
-- TAG-MODULATIONORDER-START

ModulationOrder ::= ENUMERATED {bpsk-halfpi, bpsk, qpsk, qam16, qam64, qam256}

-- TAG-MODULATIONORDER-STOP
-- ASN1STOP
```

– **MRDC-Parameters**

The IE *MRDC-Parameters* contains the band combination parameters specific to MR-DC for a given MR-DC band combination.

MRDC-Parameters information element

```
-- ASN1START
-- TAG-MRDC-PARAMETERS-START

Phy-ParametersFRX-Diff field descriptions
csi-RS-IM-ReceptionForFeedback/ csi-RS-ProcFrameworkForSRS/ csi-ReportFramework These fields are optionally present in <i>fr1-fr2-Add-UE-NR-Capabilities</i> in <i>UE-NR-Capability</i> . They shall not be set in any other instance of the IE <i>Phy-ParametersFRX-Diff</i> . If the network configures the UE with serving cells on both FR1 and FR2 bands, these parameters, if present, limit the corresponding parameters in <i>MIMO-ParametersPerBand</i> .
dummy-EnableTx-RxDuringMeasGap The field is not used in the specification and the network ignores the received value.

– *Phy-ParametersMRDC*

The IE *Phy-ParametersMRDC* is used to convey physical layer capabilities for MR-DC.

Phy-ParametersMRDC information element

```
